al-anjus wa 'l-asdidd, a compendium of medicine which he dedicated to al-Baysanl, the vizier of Saladin, and which was completed by his son Abū Tahir Ismā'īl; it consists of four parts and deals with simple and compound medicines, dietetics, hygiene, therapeutics, etc. (for manuscripts see Brockelmann). (2) al-Maknun fi tankih al-Kdnun, a commentary on Avicenna. He wrote also a certain number of risālas of minor importance, on the description of Alexandria, on what to do when no physician is available, on the lemon and its sorbets, on rhubarb, etc. One of his treatises was used by Ibn al-Baytar [g.v.] and was translated into Latin by Alpagus.

Bibliography: Ibn Abī Usaybi'ā, i, 112; Brockelmann, I, 489, S.1, 892; Sarton, Introduction, ii, 432; Wüstenfeld, Arabische Arznei, 183; Leclerc, Médécine arabe, iii, 53-5; Steinschneider, Arabeische Literatur der Juden, 178-81; Meyerhof, Notes, in Isis, xii (1929), 123. (J. VERNET)

IBN DJANAH, ABU 'L-WALID MARWAN (Hebrew name Yōnāh, Latin name Marbinus [?]). Jewish physician and philologist, born at Cordova circa 380/990, died at Saragossa about fifty years later. His very important works, written in Arabic, as a grammarian and lexicographer of the Hebrew language do not concern us here. Šāʾīd b. Abī Ahmad Ibn Sāʾīd al-Andalusi (whose notice was reproduced by Ibn Abī Usaybi'ā), however, praises him as a logician and the author of an epitome of pharmacology, which is mentioned also by Ibn al-Baytar.

IBN DJARRAH, ABU 'ABD ALLAH MUSHAYHIB, secretary of state of the 'Abbāsid caliphs and uncle of the famous vizier 'Ali b. 'Isā [g.v.]. He belonged to a family of Iranian origin which had formerly been converted to Christianity and then embraced Islam. His father Dāwūd had been secretary under al-Mutawakkil and he himself began his career in government service during the caliphate of al-Mutawakkil and was vizirate of 'Ubayd Allāh b. Sulaymān, whose son-in-law he became. He was director of taxes for the eastern provinces and accompanied the vizier to the Dījbāl in 285/898; on his return from this expedition, he succeeded in getting his section (which until then had been attached to the office of the Palace directed by Abū 'Abd Allāh Ibn al-Furāt) formed into an independent department. This promotion enabled him, during the last years of the caliphate, to defend physicians against degrees of success, born of the fiercely Shi'ī brothers the Banū 'l-Furāt, the Sunni secretaries or governors whose accounts had been submitted to strict inspection.

He retained this office under al-Muktatf, then became secretary of the army, occupying this post when, in 294/906, the Pilgrim caravan was attacked by the Karmajāts.

Muhammad b. Dāwūd, who on the death of al-Muktatf had supported the succession of Ibn al-Mu'taz [g.v.], was some months afterwards one of the promoters of the conspiracy to depose the young al-Muktadīr; soon he became vizier at a time to avoid the pursuit of his old enemy, Ibn al-Furāt [g.v.], who had become vizier when al-Muktadiir returned to the throne, Muhammad b. Dāwūd was finally captured and executed in 296/908.

An administrator whose competence was universally recognized, he was also a highly esteemed man of letters, the author of a poetic anthology, the K. al-Waraka (published in Cairo in 1953), as well as a Book of visiers, of which only a few fragments survive.

Bibliography: D. Sourdrel, Vizirat, index (bibli., at p. 372, n. 3). (D. SOURDREL)

IBN DJARRAH [see DJARRAHIDS].

IBN AL-DJASSAS, "the plasterer's son", the by-name of at least two persons who should be distinguished:

I.—ABU YAHKŪB ISHĀR B. 'AMMĀR AL-KUṬ, who handed down poetry and was very closely connected with the 'Abbāsid prince 'Īsā b. Mūsā [g.v.].

Bibliography: Yākūt, Udadāb, vi, 74-6 (= Irshād, ii, 232).

II.—ABU 'ABD ALLĀH ḤUSAYN (or Ḥasan) B. 'ABBĀD B. AL-DJASSAS AL-DJAWHARI, a celebrated jeweller and financier of the 'Abbāsid period. Originally a broker in attendance on the harem of the Tūlūnī Khumārawy [g.v.], he seems to have owed the start of his fortune to a necklace; when he was ordered to reduce the bulk of the pearls in it, he merely replaced them by smaller ones, and the difference in value won him a considerable profit. When instructed by his master to negotiate the marriage of his daughter Kāt al-nādā to Mu'tadīd's son, he himself brought the girl to Baghdad in 280/893—incidentally she became the caliph's wife—and settled in the 'Abbāsid capital. Having taken Kāt al-nādā's jewels into his keeping, he retained them after her death, which occurred a few years later, and his fortune was correspondingly augmented. In 296/908 he was arrested and fined for giving refuge to Ibn al-Mu'taz [g.v.], but the financial difficulties of al-Muktadiir soon involved him in more serious straits; in 302/914-5, he was again arrested, his palace, situated in the Suk Yahya, and his other possessions, which had reached a fabulous total value (several million dinārs), were confiscated, but he managed to safeguard part of his fortune and lived the rest of his life in comfort. He died in 315/927-8.

However, it was not his vast wealth and the unusual luxury in which he lived that have primarily brought this man to the notice of posterity; his fame in fact rests mainly on a series of anecdotes of which he is the hero and which present him as a feeble-witted fellow given to absurd and ridiculous observations; such characteristics certainly do not tally with his real personality and, insofar as these repartees are authentic, they were probably dictated by the desire of Ibn al-Djassas, a particularly witty individual, to protect his fortune by passing himself off as an insubordinate creature. Certain anecdotes connected with his name are also attributed to other personalities, but the essential point is to note this curious occurrence of his name among a class of jesters, in which financiers would hardly seem to belong.

IBN AL-DJAWZI

ʿAbd al-Rahmān b. ʿAlī b. Mūṣafār al-Djawzī, jurist, consultant, traditionist, historian and preacher, was one of the most famous Hanbalis of Baghdaḍ, where he was born in 510/1126 and died in 597/1200 after a life of great intellectual, religious and political activity. He belonged to a fairly wealthy family and received a very thorough education.

Among his chief teachers (cf. Dīyāʾ, i, 401) were some of the most famous 'ulamāʾ of his time: Ibn al-Zahārāʿ (d. 532/1142), Abū Bakr al-Djawzī (d. 532/1137-8), Abū Maṣūr al-Djawzī (d. 539/1144-5), who introduced him to adab, Abu ʿl-Fadl b. al-Nāṣir (d. 550/1155), Abū Ḥakīm al-Nahrawānī (d. 556/1162) and Abū Yaʿṣāʾ the younger (d. 558/1163; grandson of the kāfī, Abū Yaʿṣāʾ b. al-Farrāʾ).

In addition to his direct teachers, Ibn al-Djawzī was much influenced by three men whom he did not know personally but whose work he admired and often made use of: the Shafiʿīs Aḥšāʿī Abū Nuʿaym al-Isfahānī (d. 430/1038-9), the author of the Hilyat al-aʿlāyī, the historian and traditionist al-Khaṭīb al-Baghdādī (d. 463/1070-1), a Hanbali who had changed to Shafiʿism, and the Hanbali Ibn ʿAklī (d. 513/1121-20), whom he followed in the majority of his works while at the same time criticizing or refuting his ideas (Dīyāʾ, i, 414). Ibn al-Djawzī had only a slight knowledge of kalām, of which he was a severe critic.

Ibn al-Djawzī began his career in the reign of the caliph al-Muṭṭafī (530-555/1136-60), mainly thanks to the patronage of the Hanbali vizier Ibn Hubayra, whom the caliph al-Mustangīd (555-665/1160-70) retained in office until his death in 560/1165.

He began his teaching career as assistant to his teacher Abū Ḥakīm al-Nahrawānī, who taught him in his house. Abū ʿl-Fardāʾ al-Djawzī, jurist and the jurist of his death, in madrasa built for him at the Māḥmūnīya. On Nahrawānī's death, in 556/1162, soon after the accession of al-Mustangīd, Ibn al-Djawzī succeeded him as master of these two colleges (Dīyāʾ, i, 404).

It was during the reign of the Muṭṭafī, however, with the encouragement of Ibn Hubayra, whose policy for the preservation of the caliphate and for a Sunni revival he supported, that Ibn al-Djawzī began his career as a preacher (waʿīz), holding each Friday a session of waʿīz in Ibn Hubayra's own house (Dīyāʾ, i, 402). The caliph al-Mustandjid, during whose reign there occurred Nūr al-Dīn's [q.v.] three interventions against the Fātimids of Egypt, in 559, 562 and 564, authorized Ibn al-Djawzī to preach sermons in the Palace mosque—sermons in which the following year he defended the Sunna and criticized, not only all those whom he considered to be schismatics, but also the fubakāʾ who were too blindly attached to their own magḥhabs.

It was during the reign of al-Mustandi (566-74/1171-9), who moreover did a great deal for the development of Hanbalism, that Ibn al-Djawzī, as much through his activity in the university as through his preaching, became one of the most influential persons in Baghdaḍ. At the beginning of 567/1171-2, when Sālāḥ al-Dīn al-Ayyūbī (d. 585/1193) re-established the 'Abbāsīd Muḥṣīl in Cairo, Ibn al-Djawzī celebrated this event by a work which he presented to the caliph: the Kūṭāb al-Ṣaʿā al-Misrī (Dīyāʾ, i, 404). He wrote also, at a date which is not known, another work to the glory of this caliph: al-Misḥāb al-muḍīrī fi dawlat al-Mustaḍī (Dīyāʾ, i, 420).

On 10 Muharram 568/1 September 1172—the day of al-ʿashūrā—he preached a popular sermon of exhortation to a very large crowd; in the same year he was arrested by the caliph, a series of sermons at the Badr gate (Dīyāʾ, i, 405). The year 569 was also one in which he preached many sermons, and in 570 both his teaching and his sermons continued to be received enthusiastically; he taught in two new madrasas and the caliph had a daix (dakka) constructed for him in the Palace mosque. In 571, the caliph conferred on him virtually inquisitorial powers: Ibn al-Djawzī then encouraged his hearers to denounce to him all those who, by their words or their attitude, impugned the reputation of the Companions—a measure aimed directly at the Shiʿism which still flourished in Baghdaḍ (Dīyāʾ, i, 407). In 572, during Ramadān, he preached in addition sermons in the mosque of al-Maṣūr and, in the caliph's presence, in the house of Zahir al-Dīn, the sābī al-maḥkāmīn (Dīyāʾ, i, 407-8). Again in 573 he preached many sermons.

The year 574/1178-9 marked the zeuth of Ibn al-Djawzī's career at Baghdaḍ. He was then directing five madrasas and had already written more than one hundred and fifty works; he enjoyed excellent relations with al-Mustandi, and with the vizier, the ṣāḥib al-maḥkāmīn and the chief 'ulama'. Under his influence, Hanbalism enjoyed great popular prestige in Baghdaḍ; in 574 the caliph had an inscription engraved on the tomb of Ibn Hanbal, on whom he bestowed the title of imām (Bidāya, xii, 300), and erected a dakka for the Hanbali juristconsultus Ibn al-Munā in the mosque of al-Maṣūr (Dīyāʾ, i, 409). But the supporters of the other madhābis complained, seeing this act as the result of Ibn al-Djawzī's influence over the caliph and the latter's growing sympathy with Hanbalism. In addition troubles broke out between Sunnis and Shiʿis (Bidāya, xiii, 300-1). During this year (575/1179-80), a session of al-Mudāṣirī (d. 1224), who gave a new turn to the policy of the caliph but who had many Hanbalīs in his entourage or in his service, Ibn al-Djawzī, though by now old and less active, did not disappear from the political scene. He had, in particular, the support of the Hanbalī vizier Abū l-Muṣafār b. Yūnūs (d. 595/1197), who also had been a pupil of Abū Ḥakīm al-Nahrawānī. He seems to have taken an active part in the condemnation of the shaykh Rukn al-Dīn b. Abū ʿl-Kādir al-Dīlī (d. 561/1160), who was accused of harbouring in his madrasa suspect books of philosophy and of sandāba, in particular the Rasāʿīl of the Ikhwan al-safa (Dīyāʾ, i, 425-6). The Diliyya madrasa was taken away from Rukn al-Dīn and given to Ibn al-Djawzī.

The dismissal and arrest of the vizier Ibn Yūnūs and the appointment to the vizierate of the Shiʿī Ibn al-Kassābī in 590/1194 marked the beginning of disgrace for Ibn al-Djawzī, who had written, it is not known precisely when, a refutation of al-Nāṣir's al-Tāhīr (Dīyāʾ, i, 409).
IBN AL-DJAWZI — IBN AL-DJAWZI, SIBT

until he was set free in 955/1158-9 on the intervention of the caliph’s mother, a very devout woman whose sympathy had been gained by one of the preacher’s sons, the ḥakīm Muḥyī l-Dīn Yūsūf, who took to making his career in the service of the caliphate. But soon after his triumphant return to Baghhdād Ibn al-Djawzī died, in 597/1200.

Ibn al-Djawzī was one of the most prolific writers of Arabic literature. Ibn Radjab, in his Dhayl (1, 415-20), lists more than 200 works (cf. Brockelmann, I, 659-66 and S I, 914-20). Ibn Taymiyya, moreover, when he was still in Cairo, had counted and been acquainted with more than 1,000 works, varying greatly in length, and later learned of still more. All the great Islamic disciplines are represented in this prodigious output, which includes some major works.

His Munāṣaṣam, part of which has survived (ed. Krenkow, Haydarārābd 1357-9/1938-40, 6 vols.), is an exceptionally rich source for the history of the caliphate from 257/875 to 574/1189. His Siyāṣat al-ṣaṣāfe (Haydarārābd 1355-6/1936-7), which makes great use of the work of Abu Naṣr al-Isfahānī, is a well-documented history of ʿṢifism if his aims to demonstrate that the true ʿṢifs in Islam were primarily in fact those who set themselves to follow faithfully the teaching of the great Companions.

But his best historical work, inseparable from his sermons, is found, as Ibn Taymiyya emphasized, in his laudatory biographies (mandāfīb); even the choice of subject is in itself instructive: the first four caliphs and the Umayyad ʿUmar b. ʿAbd al-ʿAzīz; al-Ṣāḥibī and Aḥmad b. Ḥanbal (with some Ḥanbalī jāhāds); also several ʿshābūd or ʿṣakhbūd such as al-Ḥasan al-ʿAṣṣrī, Fudayl b. Ṭiyād, Ibrāhīm b. ʿAdham, Sufyān al-Ṭawwārī, Ḥishr b. Ḥālīf, Maʿṣūf al-Karchī and Rabīʿa al-ʾAdawīyya.

His zeal as a catalogue of heresies and as a polemicist, which appears throughout his work and prompted him to write refutations of al-Hallādī and of ʿAbd al-Kādir al-Dīlī, appears with particular intensity in one of the major works of Ḥanbali polemic, Taḥlīls al-Bis (Cairo 1365/1936; Eng. tr. by D. S. Margoliouth, The Devil’s Handmaid, in IC V1, xxi-xlii (1935)-xii (1938)), in which he attacks not only the various sects more or less outside Sunnism (khawāridj, rawāfīd, muṣlaṣṣa, faḍlsafa, bāṣmīyya, etc.), but also, within Sunnism, all those whom he considered responsible for having introduced into the dogma or the law of Islam innovations which were to be condemned (bidaʾa): ḥabādī, traditionists, statesmen and, above all, ṣafyīyya, among whom men such as ʿAbū Tālīb al-Makki, al-Kuḥayri and al-Ghazzālī, with many others, are vigorously attacked. Ibn al-Djawzī left, together with an excellent manual of Ḥanbali ḥikāh, several collections of sermons.

Ibn al-Djawzī had very many disciples and his influence on the Hanbalism of the Ayyūbid period was considerable. The traditionist ʿAbd al-Ḥanī al-Makdisī (d. 600/1203-4) and the juristconsult Muwaffak al-Dīn b. Kuḍāmā (d. 620/1223) went to Baghhdād to study under him or his disciples. Ibn Taymiyya (d. 728/1328) also had a profound knowledge of his works.

**Bibliography:** Ibn Radjab, Dhayl al-ʿalā Tabākāt al-anbāba, Cairo 1372/1953, i, 399-434; Ibn Ṭabīḥ, Bidaṣṣa, Cairo 1351-8/1932-9, xii, 28-30; Ibn al-ʿImād, Ṣahāḥara, iv, 329-30; Brockelmann, I, 656-66 and S I, 914-20; ʿAbd al-Ḥamīd al-ʿAllāghī, Muṣalāfāt Ibn al-Djawzī, Baghhdād 1385/1965. (H. LAOUST)
and it is still on this one alone that the printed edition of Haydarabad is based (1952); in the Recueil des historiens des Croisades a manuscript of the al-Yünini group was used, but the part published (and translated) covered only about forty years, from the First Crusade onwards. The part based on Ghars al-Nīma is still unpublished and little known, although an edition of it is planned by G. Makdisi and Cl. Cahen.

The Mirāṭ al-zaman is the basic source for all the wealth of the later historiography of Damascus as well as of various other historical works. It was the source in particular already of the two parts of the Two Gardens by the contemporaries of Sibt, ʿAbū Shāma. Much used by al-Dhabài, it was almost the sole source of Ibn ʿAṣir and of very large sections of the Nūdūj of Ibn Ṭabarī. The Mirāṭ and the Muṣāfārīḍ of Ibn Wāsĩl alone between them provide nine-tenths of the information known to later writers on the Ayyubids.

There are attributed to Sibt Ibn al-Dżawzǐ a “Mirror for princes” written for al-Muẓārī: ed. Bergstrasser Cawnpore 1288/1871, 392; Brockelmann, II, 201-3, S II, 274-8; F. Bustani, Dārīr al-muṣāfārīḍ, ii, 405-6. (M. BEN CHENEB*)

48

in 774/1373, from Diya al-ʿald al-Mawlid al-kabīr, a biography of the conversion; Muhammad ibn al-Dżawzǐ, on the subject of his parents’ works on the Prophet: the orthodoxy of Ibn al-Dżawzǐ, a treatise on pronunciation, in the margin of Ibn ʿAṣir, ed. Bergstrasser Cawnpore 1288/1871, 392; Brockelmann, II, 201-3, S II, 274-8; F. Bustani, Dārīr al-muṣāfārīḍ, ii, 405-6. (M. BEN CHENEB*)

The Muṣāfārīḍ of Ibn Wāsĩl alone between them provide nine-tenths of the information known to later writers on the Ayyubids.

IBN DJAZLA, Abu 'Ali Yahya b. Isä, Arab physician of Baghdad, known in the West under the names of Ben Guela, Bungaasha, Buhaaisha, etc. Of Christian origin, he embraced Islam under the influence of his teacher, the Mu'tazili Abu 'Ali ibn al-Walid, on 11 Djamada II 466/11 February 784. He was secretary to the Harafi käf of Baghdaad and studied medicine with Şüfi'd b. Hihat Alläh, court physician to al-Muktadi. He lived in the al-Karkh quarter, where he attended his neighbours and his friends without payment and even obtained the necessary medicines for them. He died in Şa'bân 493/June 1100. Ibn Djazla is the author of: (1) Ta'kwim al-abdân fi ta'dib al-insân (printed in Damascus in 3333/1944), which was translated into Latin by the Sicilian Jewish physician, Faradj b. Salim (Magister Farachi) in 1074. He was secretary to the Hanafi of Baghdad which was translated into Latin by the Sicilian Jewish physician, Faradj b. Salim (Magister Farachi) in 1074 (M. D.). (2) Fadâ'il al-jirb (a) al-Radd us'a l-'Naṣârâ', a work in praise of Islam and criticizing Christianity and, in passing, also Judaism; it is apparent from the author's attitude that the basic reason for his conversion to Islam was his identification of Muham- mad with the prophet announced in the books of the Pentateuch and the Gospels. (5) al-Ishâra fi tâlqib al-Ýibâra. (6) Mukhâr Mukhâlasa Tarîkh Baghdaad, a work of the author of al-Khatîb al-Baghdâdi.

Bibliography: Ibn Abî Usaybi'a, ed. Müller, i, 255; Ibn al-Kifî, 356; Ibn al-Khâlikîn, no. 822; Zirikî, A'dâm, ix, 203; Brockelmann, i, 485, S 1, 888; Leclerc, Histoire de la médecine, ii, 1, 493; Stein- scheider, nos. 40 and 41; J. von Sontheimer, Schriften, nos. 40 and 4f. (on succedanea) and, especially, his famous Zâd al-musâfîr ("Viaticum"). The latter was introduced into Spain by his pupil 'Umar b. Hafs b. Bariik, became known in Italy, and was translated into Greek during the author's lifetime. Later it was translated also into Latin and Hebrew. Several philosophical works of his are also cited. He composed three historical works: Kitâb Maqâsir Irsîbya (on the Arab conquest), K. Aḥbâr al-dawla (on the Fatimid dynasty), and K. al-Tarîkh bi-bâbak al-târîkh (collection of biographies), consulted by Yakût; probably also a K. Ta'labâ al-budûd ("classes" of kädîs); and a geographical work: K. Aḥdâjîb al-bulîdân. These books have not survived, but were used by the anonymous author of the Kitâb al-Qiyân, al-Bakri, Ibn Hâyân, Abû Bakr al-Mâlikî, and al-Safadî.

IBN DJILIKI (see 'ABD AL-RAHMAN B. MARWAN).

IBN DJINNI, Abu 'L-Fath 'Uthmân, was born in Mosul before 300/913 (Pröster, p. x, ca. 320), the son of a Greek slave belonging to Sulaymân b. Fahd b. Ahmad al-Asdi. His teacher was the Basran Abu 'Ali al-Farisi, with whom he was associated for forty years till the latter's death, partly at the court of Sayl al-Dawla at Aleppo and partly at the court of 'Adud al-Dawla in Fârs; according to Yakût, he held the post of Kâtib al-ínhâq at the court of the latter and of Şamsâm al-Dawla. In both places he was on friendly terms with al-Mutanabbi, with whom he discussed grammatical questions and on whose Du'ân he wrote two commentaries; as they were merely grammatical, it was criticized by Abû Hayyân al-Tawhidi. He also sought other teachers (Rescher, 5 f.). He succeeded al-Farisi in Baghdad and died in 392/1002. He devoted himself especially to grammar and is celebrated as the most learned authority on tarsîf; he occupied a position midway between the Kûfa and the Þarsha schools. He founded the science of etymology (al-tâbîjib al-askâb), see J. Goldzehir, in ZDMG, xxxi (1877), 546. His most important works are K. ūlûm al-lugâa (on classical rules (quotation from Khashâ'is, in al-Suyûtî, Mu'ṣirî, ii, 494). Besides other philological works he also wrote poems.

(J. PEDERSEN)
IBN DJUBAYR, ABU 'L-HUSAYN MUHAMMAD B. AHMAD B. DJUBAYR AL-KINANI, Andalusian traveller and writer, born at Valencia 540/1145, into a family which had settled in Spain in 1233/740.

He studied at Játiva, where his father was a civil servant, and received the traditional instruction of young men of his class, that is to say he learnt the rudiments of the religious sciences and of belles-lettres at the same time, but not without learning how to exercise his poetical skill. His talents won for him the post of secretary to the governor of Granada, Abu Sa'd Uthman b. 'Abd al-Mu'min, but having been induced to drink wine on a certain occasion, he repented bitterly, and to expiate this sin decided to make the pilgrimage to Mecca. His fame rests on his account of this fairly eventful journey, the Rihla.

Leaving Granada on 19 Shawwal 578/3 February 1183 in the company of his friend Ahmad b. Hassân, he proceeded to Ceuta via Tarif and there embarked for Alexandria on a Genoese ship, which took a month to reach its destination by way of Sardinia, Sicily, and Crete. At Alexandria Ibn Djubayr had to endure vexations at the hands of the Egyptian customs of which he gives a highly lively picture. To reach Mecca he then had to pass through Cairo, Kus, and 'Aydhab, and then cross the Red Sea to Djudda. After staying for nine months in the holy city and performing the pilgrimage, he visited Medina and continued his journey across the desert as far as Kufa; from there he went to Baghdad and Mosul, crossed the Djafrat to Aleppo, came down to Damascus, and went thence to Acre to wait for a ship to take him back to his native land. He embarked there, again in a Genoese vessel, on 10 Rajab 580/18 October 1184, bound for Italy; he narrowly escaped with his life in a dramatic shipwreck in the straits of Messina. Re-embarking at Venice, he arrived at Cartagena on 15 Dhu 'l-Hijjah 580/15 March 1185 and returned to Granada on 22 Muharram 581/25 April 1185.

Four years later he undertook a second voyage to the east, which lasted from 585/1185 to 587/1187, but he has left no account of this journey. In 614/1217 he set off once more and stopped at Alexandria in order to teach there; it is there that he died on 27 Shawwâl 614/29 November 1217.

Ibn Djubayr's Rihla is the first and one of the best of the kinds of books which have been as model to many other pilgrims, and many later authors have borrowed from it shamelessly, beginning with Ibn Djuzayy [q.v.], the editor of the Rihla of Ibn Batûta [q.v.], who had no scruples in copying from it, especially in expressing the sentiments and in giving generalities on a country, desert towns, and also in expressing the sentiments which storms inspire in this poet; on the other hand, he is skilful at seizing the characteristic and picturesque traits of an animated crowd, and on these occasions his colourful and simple style gives an entirely modern air to his narrative. The verses which have been preserved are of traditional type and of generally sententious character, this dedicated traveller sighing for homesickness for his native land and advising his contemporaries never to go abroad.

The Rihla became known in Europe in the middle of the 19th century. A fragment was published and translated in Les Historiens orientaux des Croisades, iii, and M. Amari also edited and translated an extract under the title of Voyage en Sicule sous le règne de Guillaume le Bon, 1846; the whole was published in full by M. Gaudefroy-Demombynes, 3 vols., Paris 1949-56.

(Ch. Pellat)

IBN DJULDJUN, ABU DAWUD SULAYMAN B. HASSAN AL-ANDALUSI, Arab physician, perhaps of Spanish extraction, born in Cordova 332/944, died after 384/994. He began the study of grammar and tradition in Cordova in 349/954, but already at the age of 15 turned to medicine, in which field ten years later he was acknowledged as the personal physician of al-Mu'ayyad bi'llâh Hishâm (336-99/977-1009). It was during this period that he wrote most of his works, such as the Tafsir anwâr al-adâwya al-muwfrada min kitâb Dizwahûrûd, composed in 372/982 (of which only extracts survive, in Ms Madrid 233) and the Tabakkat al-âdîbbîn wa 'l-ibhamâm, composed in 377/987 (ed. Fu'âd Sâyyid, Les générations des médecins et des sages, Cairo 1955). Further works are: Maðâla fi al-âdîwya allâtî lam yadhkurû Dizwahûrûd (perhaps extant in the manuscript of mixed contents Bodl. 573); Maðâla fi al-adâwya al-tîrîdâk (in Bodl. 573); Risâlât al-tâbûbîn fi mî lâklâl fîhi bâm al-mu'atlabûbûn (lost). Among these works the History of Physicians (Tabakkat al-âdîbbûn) can claim especial interest; firstly, it is, after the Ta'rikh al-âdîbbîn of Ishâk b. Hunayn (ed. F. Rosenthal, in Orientis, vii (1954), 55-80), probably the oldest collection of biographies of physicians in Arabic, and secondly it is the earliest example of the use of Arabic translations from Latin (Orosius, Chronicle of Hieronymus, Eutychiologiae of Isidorus of Seville).

Bibliography (in addition to works mentioned above): Ibn Abî Usaybiya, 'Uyûn al-anbâ, ii, 46-8; Ibn al-Qâfi, Ta'rikh, ed Lippert, 190; Sà'id al-

IBN DIJUJYIL [see IBN DIHYA].

IBN DJUZAY, Abû 'Abd Allâh Muhammad b. Muhammad b. Ahmad al-Kalbi, Arab writer, born in 721/1321 at Granada of a literary family. His father, Abû 'l-Kâsim Muhammad b. Ahmad, was known also as a poet and as a sâhib; born in 693/1294-5, he was one of the teachers of Liân al-Dîn Ibn al-Khatîb and died at the battle of Rio Salado in 741/1340 (cf. al-Makâri, *Nafr al-jib*, ed. M. M. 'Abd Allâh Muhammad b. Ahmad, Cairo 1367-9, 10 vols., viii, 28-31; Brockelmann, ii, 342, S II, 377; U. R. Khabbâla, *Mu'jam al-muwâllâfîn*, Damascus 1376-81/1956-71, 13 vols., i-xi). His three sons, Ahmad, Muhammad and 'Abd Allâh, carried on the family's literary and juristic traditions (cf. Makâri, ibid., 31 f.; Liân al-Dîn Ibn al-Khatîb, *al-Îdâ' fi 'ashbâr Khûrânâ*, ed. by M. A. 'Inân, i, Cairo 1375/1955, 163-48, 411). Of the three, it was Muhammad (Abû 'Abd Allâh) whose fame chiefly survived. Having served as sâhib during the reign of the Nasir Abû 'l-Hâjîdîdî Yûsûf (723-35/1323-54), he then went to Fez, where the Marinid Abû 'l-'Inân (750-9/1349-58) commanded him to take down in writing the text of the *Râf'îla* of Ibn al-Abbar (q.v.). Besides his redaction of this work, Abû 'Abd Allâh wrote poems and various other works, particularly on history, law and philology. He died circa 756/1355-7.

IBN DUKMÂK, Șârîm al-Dîn Ibrahim b. Muhammad b. Aydâmur al-‘âlî al-mîşrî (the name is derived from the Turkish șâkim “hammer”, cf. Hâdidî Khallîa, ed. Flûgè, i, 102), b. about 750/1350, was a zealous Hanafi and wrote a work on the *Taba'kat* of the Hanafis, *Nafr al-dîmmân*, in three volumes, the first of which deals with Abû Hânîfa (Hâdidî Khallîa, i, 136; vi, 377); on account of his depreciatory references to al-Shâfî'î he was haggled and thrown into prison. His history of Egypt, *Nuzhât al-anâm*, in about 12 vols. to the year 779, was of great importance (Hâdidî Khallîa, i, 102; vi, 323). By command of the Sultan al-Malîk al-Zâhir Barqûk he wrote a history of the rulers of Egypt to the year 805; he further wrote a separate history of this Sultan, *'îbâl al-dîwâhir*; he started al-Malîk al-Zâhir Barqûk, abbreviated under the title Yânbâ' al-masákîsh (Hâdidî Khallîa, ii, 102; iv, 230; vi, 514). According to Hâdidî Khallîa, his historical works were largely utilized by al-'Aynî and al-Askalâni (i, 447; ii, 118). He wrote a large work on ten cities of Islam, *Kisâb al-inâshir il-wââsîf 'ibâl l-amârs*, devoting one volume to each city; of these volumes the 4th and 5th describing Cairo and Alexandria are preserved in Cairo and have been published by Vollets (Cairo 1314/1893). According to Vollets (p. 5) he used better authorities than al-Mâşrî. The latter, for a time his pupil, seems not to have used his work. Ibn Dukmâk also wrote a work on Sûfi biographies, *Câmî al-makfûsîyya fi 'i'tânî al-Sâfîyya* (Vollers, 4), also a book on the organization of the army, *Târîkh al-sâmân* (Hâdidî Khallîa, ii, 277), and a book on the interpretation of dreams, *Fârâkîl* (op. cit., 392). According to al-Suyûtî, *Husn al-muhâdara* fi 'îbâl Mîr wa l-Khûrânâ, Cairo 1321/1903, i, 266, he died in 790/1388, aged over 80; so also Hâdidî Khallîa, i, 447; ii, 102, 277; but in any case he was still alive in 793 (see Vollers, *Introduction*) and Hâdidî Khallîa elsewhere gives the date of his death at 809/1406 (ii, 149; iv, 350; 192; vi, 353, 357, 514).

IBN AL-DUMAYNA, one of the lesser poets of the late Umayyad and the early 'Abbâsid.
periods. His name was Abu 'l-Sari 'Abd Allah b. 'Ubayd Allah b. Ahmad. He belonged to the Banu 'Amir b. Taym Allah, a clan of the Kharijite tribe. His mottled way of Dumayna bist Budhaya al-Saliliyya. His notoriety rests on the story of how he murdered the seducer of his wife, killed her and her little daughter, and was finally slain in the ensuing blood-feud. This story is told with many differences in the details and embellished with spurious poems in Aghâni, xv, 151-4.

In his verses he deals mainly with love and its sorrows, with personal and picturesque writing reminiscent of poetry. Owing to this affinity in style and sentiment, some of his verses and even whole poems are attributed to other authors, whilst he is reported to have usurped one basida from his contemporary Ibn al-Taghriyya (see Bakrî, Simt al-la‘dî, 490; cf. also ibîd., 49). Some verses of his (often interpolated) became popular love-songs (Aghâni, x, 161; xv, 155; xix, 82 f.; xxi, 252, 17). Al-Zubayr b. Bakkar collected 100 difficult couplets together with their exegesis in his Kasida (see J. Kraemer in ZDMG, ex, 259-73) to al-Maksur wa’l-Mamdûd (see Fihrist, 49). Some verses of his (often interpolated) were collected in the Kitâb al-Mudânt (without introduction)—The other work of the same title was written by Ibn Abi Tahir (Fihrist, 147). His diwan was published in Cairo in 1337/1918 (see Mackriq, 1920 49) on the basis of two manuscripts of the Dâr al-Kutub but the oldest known manuscript (Istanbul Asir Ef. 950, cf. Ö. Rescher in MFOB, v, 515), containing the recension of Tha‘lab and Muh. b. ‘Abd Allah, has been used as basis for a good edition by A. R. al-Naffakh, Cairo 1379/1960.

IBN DURAYD, ABU BAKR MUHAMMAD B. AL-HASÂN AL-AZDÎ, Arab philologist and lexicographer, born at Basra in 225/847 as son of a nafs of some standing and wealth. He was a pure Arab belonging to the Azd (q.v.) of Umân and tracing his pedigree back to Kahtag (Ta‘rîkh Baţhâdâd, ii, 195). He was educated by his uncle al-Husayn b. Durayd who engaged for him as tutor the philologist Abu ‘Uthman al-Ushnandani of the Banu ‘Umara (reigned 237-273; Zambaur, 202). Ibn Durayd went back to ‘Irak and settled in Baghdad. Al-Muqtadir granted him a monthly stipend of 50 dinar so that he could carry on his studies and his teaching. His profound know-ledge of the language and poetry of the Arabs attracted many students. Among the more famous of his pupils are: Abû Sa‘îd al-Shâfî (284-368), al-Marzbân, Fârîq al-Askari (q.v.) (284-356), Abû ‘Ali al-Baţhâdî al-Khalî [q.v.] (288-356), who made Ibn Durayd’s works known in Spain (see Ibn Khayr, Fahrasa, 348 f., 366, 398, 400), al-Zâdîdî[; (d. 337), Ibn Khâlawayh [q.v.], Abû Ahmad al-A’askarî [q.v.].

Ibn Durayd’s chief work is his monumental dictionary al-Dajmahara (Haydarâbâd 1344), which contains some materials not to be found in our dictionaries; in it Ibn Durayd made use of the Kitâb al-‘Ayn of Khallî—which gave his enemies a pretext for their slander—but in selecting and arranging the words he followed his own judgement. He included a large number of loanwords, tracing as far as possible their origins. His Kitâb al-Ishbâhî (ed. Wustenfeld, Göttingen 1854) was prompted by the assertion of some (non-Arabs) that the names of the Arabs had on the whole no meaning; therefore, Ibn Durayd gives in this book the etymology of their proper names, arranging them according to the genealogical system.—His Kitâb al-Malakânî (Cairo 1347) contains about 400 ambiguous words for the benefit of such persons who, when unjustly forced to take an oath, want to take refuge in mental reservation.—The Kitâb al-Mujtânî (ed. Krenkow, Haydarâbâd 1342) is a miscellany of remarkable sayings of the Prophet and his successors. There are also some apoplectic fits, he died at the age of 98 in Baghdad. Al-Muqtadir was courageous, generous and kind. He was also a cultured man, enjoying good books (see Yakût, Udadâb, vi, 493) as well as singing and music. After two apoplectic fits, he died at the age of 98 in Baghdad on Wednesday, 17 Shawâb 352/2 August 931 on the same day as Abû ‘Uthman al-Dujûbâb, the leading Mu’tazili.

IBN DURAYD — IBN FADL ALLĀH AL-'UMARI

J. W. Fock

IBN DURUSTAWAYH, important grammarian born in 258/871, died at Baghdad in 346/957, all of whose works are lost, with the exception of a Kūtub al-Kutūb (referred to in the works of the Sons of Mekhā and also of his contemporary, the famous al-Darākūtmi). These compilations still existed in the time of al-Khālid al-Baghdādī (5th/11th century). Ibn Durustawayh was also an exegetist of the Korān, in which he was a transmitter of the ancient masters 'Abbās b. Dūrī and Ya'qūb b. Sufyān al-Nasawl, and also of his contemporary, the famous al-Dārākūtmi. His learning was very extensive; it embraced hadīth, and also of his father al-Adham, who was appointed to replace him as head of chancery in Cairo. As for Aḥmad, it was not long before he was thrown in prison, having further incurred the displeasure of the Sultan.

Released from prison in the early months of 749/1349, Shihāb al-Dīn Aḥmad was soon after appointed head of chancery in Damascus, taking charge at the start of the next year. He remained in that office until 743/1342, when he was dismissed and replaced by his brother Ḍar al-Dīn Muḥammad. Aḥmad remained out of office until his death, of a fever, on 9 Dhu 'l-Hijjah 749/1 March 1349. His principal works may well have been the product of the leisure of his last years, while he was living in retirement in Damascus.

Shihāb al-Dīn Aḥmad, as a government official, was not as successful as his father or his two brothers. Obstinate and outspoken, he was not the sort of man to win easy favour with a sovereign, and he was quick to make enemies of people with whom he dealt. It was the frequent complaints against him that finally brought about his dismissal from the chancery of Damascus. However, he outlived other members of his family by his brilliance as a writer and expert on a wide variety of subjects related to politics and administration. It is with these subjects that his principal works deal. The compendium al-Ta'rif bi 'l-muṣaḥtāb al-ṣaḥīf (ed. Cairo 1312 A.H.) is a manual of administration which describes the organization of the Mamluk empire in its various provinces and explains the manner of correspondence between the central chancery in Cairo and the other central and provincial offices. The book also explains the manner of correspondence with tribal chiefs, heads of Muslim and dhimmī sects, and foreign rulers. The encyclopaedic Masālik al-abṣār fi mamdlik al-ṣaḥār (vol. i, ed. Cairo 1924) touches on many subjects (literature, history, geography, religion and law, politics and administration), and is designed to serve the same purpose as al-Ta'rif. The two works continued to be regarded as authoritative on the subject of administration during the Mamluk period, and were imitated with due reference by al-Kalākshandi (q.v.) in his well-known Ṣubh al-ṣābīfi ikhbāt al-inṣāb. Apart from al-Ta'rif and Masālik, Aḥmad Ibn Fadl Allah left a history of his family (whose ancestry he traced to the Ḍar al-Dīn Muḥammad, whence the nisba al-'Umari), a number of other essays and letters, and some verse of little importance. His over-ornate Arabic prose style was highly esteemed by writers of the Mamluk period.

IBN FAḌL ALLĀH AL-'UMARI, distinguished author and administrator of the Mamluk period, who served al-Nāṣir Muḥammad b. Kālāwūn (q.v.) in the chancery of Cairo and Damascus and left important works on the organization and administration of the Mamluk state.

Shihāb al-Dīn Abu ʿAbbās Aḥmad b. Yaḥyā Ibn Fadl Allah al-Kurābādī al-'Umārī, a distinguished author and official of the Mamluk period, was born in Damascus on 3 Sha'wwal 779/12 June 1301, of a Shīfī family already distinguished in the Mamluk civil service [see Faḍl Allāh]. His father, Muḥyī al-Dīn Yaḥyā Ibn Fadl Allah, was head of chancery (ḥālib al-sirr) first in Damascus, and after 729/1329 in Cairo, and Shihāb al-Dīn Aḥmad began his public career as an assistant in Cairo as his father's personal secretary and replacement by his brother ʿAlī al-Dīn ʿAlī. When Muḥyī al-Dīn Yaḥyā died in 738/1337 it was ʿAlī who was appointed to replace him as head of chancery in Cairo. As for Aḥmad, it was not long before he was thrown in prison, having further incurred the displeasure of the Sultan.

Released from prison in the early months of 749/1349, Shihāb al-Dīn Aḥmad was soon after appointed head of chancery in Damascus, taking charge at the start of the next year. He remained in that office until 743/1342, when he was dismissed and replaced by his brother ʿAlī al-Dīn ʿAlī. When Muḥyī al-Dīn Yaḥyā died in 738/1337 it was ʿAlī who was appointed to replace him as head of chancery in Cairo. As for Aḥmad, it was not long before he was thrown in prison, having further incurred the displeasure of the Sultan.

IBN FA_DL ALL_Á_I-IBN FAHD

IBN FAHD, an important Meccan family whose activities during a period of two hundred years in the 8th-10th/14th-16th centuries are known in quite considerable detail. The family claimed Alid descent through Muhammad b. al-Hanafiyya. Its members were all well trained in the traditional subjects and learned mainly in Shi'í but also in Hanafi law. Through four successive generations, they boasted of productive historians whose chief interest lay in local history and biography. Through marriage, the Banu Fahd were closely allied to many other influential Meccan families as well as to scholars from other countries who had come to settle in Mecca. Many of them made their living as merchants. Travel on business took them on frequent trips not only all over Arabia, Syria, and Egypt, but also as far as India and the Red Sea port of Suakin.

"Ibn Fadlan's Reisebericht, Leipzig 1939; Quatremère, Notices de l'ouvrage ... to teach the Bulghars the laws of Islam. The embassy left Baghdad on 11 Safar 309/21 June 921, eunuch Susan al-Rassl, a client of Nadhir al-Harami (s.vv. Itil, Bashgard, Bulghur, Khazar, Khwarazm, Rūz), in whose time several copies of it had been in circulation. Since the discovery of a manuscript at Mashhad which was perhaps an official report addressed to the chancellery at Baghdad, nor a complete text, since it lacks the account of the return journey, and although the quotations from it by Persian writers do not correspond to this text but to an abridged version thought to be the work of a Sāmānid vizier, the account, even so, is of great historical, geographical and ethnographic interest and shows that Ibn Fadlan possessed extraordinary powers of observation and an enquiring mind, which led him to bring back a mass of extremely important information on the peoples, including the Rūz and the Khazars, whom he had been able to see himself or of whom he had heard accounts during his journey.

The judge Muhammad b. Muhammad b. 'Abd Allah b. Muhammad (ca. 735/736-812/856), and his grandson 'Abd al-Rahman b. Yusuf (767/843-1350), a Shafi'i scholar from Asfūn in Upper Egypt, who had taken up residence in Mecca (Ibn Hajjar, Durar, ii, 350; Ibn al-'Imād, Shahrā'ī, vi, 168; Brockelmann, S II, 227). His son 'Abd al-Rahman had a son Yahyā (789-843/1387-1439), who engaged in the Indian trade (al-Sakhwī, Daww, v, 233); he married the daughter of a Meccan merchant, al-Dūkā (Daww, v, 240 f.), and had a son 'Abd al-Kāfi (909-988/1500-1569), a rather unsuccessful merchant, who died in Sūakin on a business trip (Daww, iv, 299). Another son of the judge Muhammad, also named Muhammad (ca. 760-812/1358(9)-1408) (Daww, ii, 211), had a son 'Atiyah (804-874/1402-1469) (Daww, v, 148 f.), who married Fatīmah, the daughter of a man of Indian ancestry (Daww, ii, 167, no. 477). They had two sons, Hasan (843-922/1443-1516) (Daww, iii, 105; Ibn al-'Imād, Shahrā'ī, vii, 98 f.) and al-Hāfiz, who died as an infant in 849/1445 (Daww, iii, 148).

'Atiyah's elder brother,

1. TAKI 'L-DIN MUHAMMAD, born in Asfūn on Tuesday, 5 Rabī' 1 II 787/16 May 1385, collected a very large library in Mecca and was a prolific author. He wrote on Muhammad's biography, the stories of the prophets, the glyphs of the Kurayshī, the history of local scholars and the history of various places in and around Mecca, and many other subjects. A list of his works is said to be contained in his 'Umādash al-muntahābi (preserved in Cairo). Among his surviving works deals with Dībalā Thawr near Mecca (Brockelmann, S II, 538, where the work is listed), and writing on his great-grandson Djar Allah. His Labīs al-āhās, a continuation of al-Dhahabi's Tabāhāti al-bu'fās, has been published in Damascus (Daww, ii, 347 [pp. 69-94]), it consists of a number of biographies, interspersed with repeated brief notices of the dates of death of scholars in various regions of the Muslim world, and was transmitted by his great-grandson Djar Allah through his grandson 'Abd al-'Azīz and al-Sakhwī. Taki 'l-Dīn died on Saturday, 7 Rābī' 1 II 817/15 January 1406 (Daww, ix, 281-83; Brockelmann, II, 225, S II, 225, III, 1267, 1387-1439), who engaged in the Indian trade (al-Sakhwī, Daww, xi, 93), served, ostensibly in his own handwriting, in Yale University Library L-235 (Nemoy 1292, 1592) and the MS L-234 in Yale University Library. He died in 885/10 November 1480 (Daww, vi, 126).—

2. NADJM AL-DIN C. ABU 'L-KASIM 'AZIZ, born on Saturday, 26 Shawwāl 850/14 January 1447. He closely followed his father in collecting a Muḏjam, making an index to al-Dhahabi's Tabāhāti al-bu'fās, and writing on the history of Mecca. He also compiled a history of Egypt as well as an annalistic history starting with the year 872/1467. Among manuscripts written by him is the Muǧjam of his father in Bankiroke (xii, no. 727) and the MS L-234 in Yale University Library. He died in 921/1415 (Daww, iv, 224-6; al-Ghazalī, al-Kawākib al-sawāra, ed. J. S. Jabbar, i, 238 f.; Ibn al-'Imād, Shahrā'ī, viii, 100-102; Brockelmann, II, 224, S II, 224). Of his children from his marriage to his cousin Kamīliyya bint Abī Bakr, Yahyā died as an infant (Daww, x, 234). His successor as the family scholar, Ibn al-'Imād, Djar Allah, owned after him the manuscript written by 'Abd al-'Azīz (no. 3) preserved in the Yale Library L-234 (fol. 13, 128a, 1655).—

A certain Taki 'l-Dīn Abū Bakr b. Fahd, who died in 946/1340-91, also seems wrongly, under his great-grandson Djar Allah. His Tāhklk al-radjb li-^uluww al-makarr Karādāğ, a work on the history of the sanctuary in Mecca, a Kasāh al-Kird fi awwiyat Umm al-Kurā (incomplete) and on the ribāb of al-'Abbās in Mecca (related to the work mentioned above? ) are preserved, ostensibly in his own handwriting, in Yale University Library L-235 (Nemoy 1292, 1592) (Daww, iii, 52; al-Aydarūsī, al-Nār al-safīr, 241 f.; al-Ghazalī, Kawākib, ii, 131; Ibn al-'Imād, Shahrā'ī, vii, 302; Brockelmann, II, 516, S II, 538, 1295). A son of Djar Allah, Muḥammad, owned after him the manuscript written by 'Abd al-'Azīz (no. 3) preserved in the Yale Library L-234 (fol. 13, 128a, 1655).—

Bibliography: In the article, which is based mainly on al-Sakhwī, Daww (cf. also Daww, xi, 265). More manuscripts of works by members of the family than are hitherto known will no doubt be identified in the future.

(F. ROSENTHAL)

IBN AL-FAHĀM, ABU 'L-KASIM 'AHD AL-
RAHMÁN B. ‘ATÍB b. KHÁLAF AL-ṢÍLÍLLI (422-516/1030-1122), mufrí*, was probably born in Sicily but soon emigrated to Egypt, where we find him in 438/1046-7, that is, in the time of al-Mustansir (427/1036-94) ‘Alā al-bīrādī, say the sources, the traditional science for which he was able to follow the lectures of such scholars as Ahmad b. ‘Alī b. Hāshim, Ibn Nafis, ‘Abd al-Bākī b. Fāris and Abu ‘l-Ḥusayn al-Ṣāfīrī al-Shirāzī. His master in grammar was the famous ‘Aṭhir b. Aḥmad b. Bābāshād (q.v.) and Ibn al-Faḥhām had the distinction of transmitting to his own country the two redactions of the commentaries of the celebrated Muḥaddās, which the pupil had taken down at the master’s dictation (the other commentary is connected with the name of Khaṭāb al-Ibrāhīm, d. 511/1121).

We know scarcely anything of his life in Sicily and nothing of the main phases of his long stay in Egypt, which he left in 504/1110-11 for an unknown destination. The biographers merely tell us that his fame in Alexandria as a master of ḥurūf was so great that he acquired the title of shaykh al-Isbrandaryya. Among his disciples in that town, two may be mentioned: ‘Aṭār ‘Aṭār al-Silāfī (q.v.) and another scholar of Sicilian origin, ‘Uṯmān b. ‘Alī b. ‘Umar al-Sarāqūši al-Ṣūlīlī, philologist and grammarian who lived in the 5th/9th-11th/12th centuries.

Ibn al-Faḥhām is best known by his work on the science of ḥurūf, which is entitled al-Taḍ̄rīḍ fi bughṭat al-murid, while his Muṣraḍḍat Yaḥḥāb have been almost forgotten in the literature of the traditional Muslim sciences.

*Biography:* For the biographical sources, the MSS, commentaries, versifications etc., of the work of Bābāshād, as well as for the argument and a summary of the chapters of the Taḍ̄rīḍ, see U. Rizzitano, Ibn al-Fakih muqri* “siciliano”, in Studi Or. in onore di G. Levi Della Vida, Rome 1956, II, 403-24. (U. Rizzitano)

**IBN AL-FAKIH**, Iranian author of a geography written in Arabic, who lived in the 3rd/9th century. Nothing is known of his life and only one of his works survives, in an abridged form. De Goeje introduced his edition of this work with an authoritative preface in which he reproduced the information, of varying reliability, which Ibn al-Nadim and the geographer al-Muṣaddadī provide on Ibn al-Fakih, and the biographies of al-Mukaddasi (Aṣbah al-taḥāsūm, ed. De Goeje, 4-5) attributes to him a work in five books, that is, in the time of his native country, the digressions are: the “passing from the serious to the sweet, from the jesting to the serious” (41), a debate between the Syrians and the people of Baṣra, and the superiority of the palm tree over the date palm (118), praise of building (151), the duties of an author and the virtues of a good book—a digression which could serve as an introduction to the whole work (153), al-Maqṣūdī’s donation (520-1), which gives to each country a gift, to the exclusion of others (251).

According to al-Muṣaddadī, Ibn al-Fakih borrowed a great deal from al-Dījbiz (whom he mentions only three times: 116, 165, 253). But these digressions lead to the conclusion that, without borrowing directly from al-Dījbiz, he was influenced by him.

The general content of the work may be described here in the assessment by De Goeje, who made a
IBN AL-FAKIH — IBN FARADJ AL-DJAYYANI

The profound study of it: "... I thought that some extracts would suffice, but a more detailed inspection makes me change my mind: this work provides a very important contribution to the history of culture in the second part of the 3rd/9th century..." To this may be added the opinion of the works towards the world of Islam.

"Chronologically, Ibn al-Fakih occupies an essential place in the history of Arabic geography: appearing after the first, basically technical, works, ... on the one hand he reinforced the trend of technical geography towards an inclusion of the themes of adab, and on the other he helped to direct the interest of writers towards the world of Islam."

IBN AL-FAKIH, Compendium libri Kitab al-boldan, ed. M. J. De Goeje (= BGA, v), Leiden 1885; Breckenmann, I, 121, no. 4, S. 1, 405 no. 4—406 (= a new edition is in preparation by E. Bräunlich); R. Blachère, Extraits des principaux geographes arabes du moyen-âge, 70 ff. ("Ibn-al-Fakih has reproduced a large number of the legends, beliefs and ideas concerning the geographical folklore of his time")

"A French translation based on the four manuscripts is now (1967) in the course of revision."

(H. MASSÉ)

IBN AL-FARADJ, ABU 'L-WALID 'ABD ALLAH B. MUHAMMAD B. YUSUF B. NAŠR AL-ĂZdí R. B. AL-FARADJ, Andalusian scholar, was born at Cordova on the night of Monday-Tuesday 22-3 Dhu 'il-Ka'b 351/22-3 December 962. He studied law, Tradition, literature, and history; in the course of his travels he had gathered together a rich library. Of his works we possess only the Ta'rikh al-Andalús, ed. Coder, BAH, vii-viii, Madrid 1897. The scrupulous exactitude of this work and the abundant information which it provides made Ibn al-Faradji the initiator of a series of geographical works embracing the whole of the Iberian peninsula. This success, being continued and amplified in the course of the 5th/11th and 6th/12th centuries by Ibn Baghkwil (q.v.) with his Silâ, Ibn al-Abbâr (q.v.) in his turn supplemented this Silâ with his Takmilat al-Sîla down to the middle of the 7th/13th century and finally this series of supplements to Ibn al-Faradji's 'Arâf received a final revision in the 8th/14th century by Ibn al-Zubâr, of which the incomplete manuscript belonging to the library of the famous bibliophile Sîdî Muhammad b. 'Abd al-Hayy al-Kattânî was edited by Lévi-Provençal in a partial edition beginning with the letter 'ayn, Rabat 1937.

Bibliography: Ibn Khallikân, Wafayât, Cairo 1310/1892, i, 268; Dhahâbil, 'Ulfâs, ii, 277; Mâkânî, Nahf al-fib, Cairo 1302, i, 383; Ibn Baghkwil, Silâ, no. 567; Ibn Farhun, Dâhid, Fez 1356/1898, 149 = Cairo 1351/1932, 143; Ibn Khâkân, Majmâ' al-anfus, Istanbul 1302/1884, 57; Dâbî, no. 888; Sûyûtî, Tabâbût al-buṣfâs, xiii, 51; Wüstenfeld, Geschichtsschreiber, no. 165; P. Boigues, no. 71; Brockelmann, 133, 757-138; Ibn Bassâm, Dâhidhâ, 1/2, 130-2.

IBN FARADJ AL-DJAYYANI, ABU UMAR AHMAD B. MUHAMMAD, poet, anthologist and historian of Muslim Spain. The only information we have on his life is provided by the few lines inserted by al-Ḥumaydî in his Diwânhâl al-mu'takabis and reproduced by the other sources; all that is known is that he was among the poets attached to the court of al-Ḥakam II al-Mustanṣîr (350-669/961-70). Either his misfortune or his irascible nature led him to compose so wounding a satire on al-Ḥakam that the latter consigned him to prison for the rest of his life, where he continued to write poems and books. He had two brothers, also poets: Abu Saʿîd ʿUhmân and Abu Muhammad ʿAbd Allâh, of whom we know only the names and a few verses.

Ibn al-Faradjî al-Djâyânî owes his fame to a remarkable anthology of Andalusian poetry entitled Kitâb al-Haddâk (the Gardens) and quoted by all subsequent authors; a library by the self-awareness it had acquired and of the bitterness Ibn Faradjî felt towards the caliph. Written in prison, and it probably expressed the self-awareness it had acquired and of the bitterness Ibn Faradjî felt towards the caliph. (R. A. Nicholson [J. Pedersen])

**IBN FĀRĪS, ABU 'L-HUSAYN ABDAR B. FĀRĪS B. ZAKARIYYA** b. MūH. b. RAKIB, al-S̱afi, later (in Rayy) al-Mālik, al-Lugāwī, Arab philologist.

The date of his birth in unknown and the place uncertain: on the one hand, according to one of his poems (Nallino, op. cit., 91), the place was a village of Kursūf, in the district of al-Zahrāw, and in an early nisba, al-Zahrāwī, is derived; in any case he was certainly of peasant origin (according to Yākūt, op. cit., 92, lines 12-3); on the other hand, Ibn Fāris himself, in his sources for the Makhāyor (his Mūhadimān, 1, 5) names Fāris b. Zarkariyyā as his father] as the person who transmitted to him the nisba, al-lugāwī. He wrote some forty works, which have been published, 2 of these in part only, 7 are both long and short; the most carefully prepared list of his works is by the editor of the Ḵalīf in his review of Di Matteo's version, in RSO, VIII (1929-30), 1-106 and 501-62. See also, Pearson, nos. 23631, 23634.

Ibn Fāris pursued his activities in many fields—grammar, poetry, fāṣīḥ, tafsīr—but lexicography was his favourite domain and to the Arab world he remained al-lugāwī. He wrote some forty works, both long and short: the most carefully prepared list is by the editor of the Makhāyor (i, 25-37): 11 works have been published, 2 of these in part only, 7 are still in manuscript; there are 24 of which only the title is known at present. We may particularly regret the Ḵif̱āf̱ay al-muhādhimān, which has been published in the Ḵalīf and the Ḵalīf of the Makhāyor and the Ḵalīf of the Makhāyor, referred to above and mentioned by the Fihrīṣ (80). Published works: (I) Ḵalīf al-Muḏjam fi l-lugāwī, published in part, Cairo, i vol., 1331 (according to the editor of the Makhāyor, i, 35), 1332/1914, 119 pp. (according to Sarkis, 200), numerous MSS, see Brockelmann, I 136, r 256, S I, 198. Ibn Fāris endeavoured to present the vocabulary in a clear and
authentic fashion (al-wāḏib, al-safray), by means of brief definitions, illustrated with numerous poetic literals; al-Fīruzābādī, who loved and praised Ibn Paris (Type 122), then first radical consonant and begins with 'hamza', frequently of the triliteral, then the quadriliteral and quinquiliteral (see Fihrist, i, 407) and he must evidently have incorporated a certain amount of it into the Kīmās. The work is certainly of great value and deserves a scholarly edition. (2) K. Mafrūūs al-lugha, published by Abd al-Salām Muh. Harūi, 6 vols., Cairo 1366-71; like the latter, it is arranged according to the Djīlām; an etymological study of this word which may serve as proverbs in relevant situations; published by the editor of the Makāyīs, in Nāwdār al-makhtūdī, i, 137-61 (2nd series, Cairo 1371/1951). Not mentioned in the historical sources under this title, it is perhaps the same as the K. Dḥakkār al-halaimāt of Yākūt, Udbādī, iv, 84 (according to the editor, i, 138). (10) K. al-Nayrās, an etymological study of this muṣ̱rūr word which has a large area of use which may serve as proverbs in relevant situations; published by the editor of the Makāyīs, in Nāwdār al-makhtūdī, i, 137-61 (2nd series, Cairo 1371/1951). Not mentioned in the historical sources under this title, it is perhaps the same as the K. Dḥakkār al-halaimāt of Yākūt, Udbādī, iv, 84 (according to the editor, i, 138). 

For the works of Ibn Fāris in MS, see Brockelmann, i, 130, 1, 135-6, S I, 197-8; J. Kraemer, Studien zur arabischen Lexikographie, in Oriens, vi (1953), 215-26; Zakl Mubarak, La prose arabe au IV* siècle de l'Hégire (Xe siècle), Paris 1931, 203-9, unreliable, should be checked; bibliographical notice at the beginning of the ed. of al-Sāhibī and in the Mukaddima of the Makāyīs, i, 3-47; Yākūt, Muṣ̱rūr al-udbādī, iv, 90-98 = Ḥibdā, ii, 6-15; Suyūtī, Buzhya, 153; Ibn Khallākīn, Cairo 1367/1946, i, 100-1 (no. 49); Ibn al-Anbārī, Nuzhat al-awdād, Bagdād 1959 (1960), 219-21; Ibn al-Imād, Shkhdhār al-jīhāb, Cairo 1350, i, 132-3; Kifīt, Inbīl al-ruwāt, Cairo 1369/1950, i, 92-5, other references in note at p. 92.—On the Mukaddima, see J. Kraemer, op. cit.; Makāyīs, i, 21; Husayn Naṣṣār, al-Muṣ̱rūr al-udbādī, Cairo 1375/1956, ii, 432-43. On the Makāyīs: the Mukaddima, i, 39-45; H. Naṣṣār, op. cit., ii, 401-31. On al-Sāhibī: J. Kraemer, 215, and the references given. The Arabic philological dictionary has been made by M. Chouémī (Bibliotheca Philologica Arabica, i, Beirut 1383/1964. References in this article are to this edition but its Mukaddima was not available.

(2) K. al-Limālī, the use of la-, li- in grammar, published by G. Bergsträsser, in Islamica, i (1925), 77-99; a short ch. in al-Sāhibī, 112-6 (see the discussion of the two texts by Bergsträsser, ibid., 97-9). (5) Makhlālī kālā wa-mā dāmā minhā fi Kīlāū al-lāh (mentioned in al-Sāhibī, 162, l. 16), published by Abd al-'Azīz al-Maymānī (A. Memon) al-Rašīdkūtī, in Thulīt rasā'il, Cairo 1344. (6) K. al-līlīa wa-l-māsadwajja, a collection of words of the same pattern always used in pairs, published by R. Brünnow, in Oriens. Stud. Th. Noldeke... gewidmet, i, Giessen 1906, 225-48. See the study by Ch. Pellat, in Arabicca, iv (1957), 131-49 and ch. 28 of the Musīr of al-Suyūtī. (7) K. Sirat al-Nābi, a short sira, published under the title Awdās al-siyar ishār al-bāshār, Algiers 1301, Bombay 1311. According to the editor of the Makāyīs (i, 31), the K. al-lāhār al-Nābi is a different work. (8) K. Fūṣā jāfīl al-lāhār, a collection of questions, juridical riddles so to speak, based on a rare meaning of a word (a genre imitated by al-Hārī in his 32nd Maḥāma, cf. al-Suyūtī, Mushīr, i, 622-37); published by Husayn 'Alī Maḥfūz, Damascus 1373/1956, 52 pp. in 8°. (9) K. Abīyād al-īshīqād, a collection of verses of a genre which may serve as proverbs in relevant situations; published by the editor of the Makāyīs, in Nāwdār al-makhtūdī, i, 137-61 (2nd series, Cairo 1371/1951). Not mentioned in the historical sources under this title, it is perhaps the same as the K. Dḥakkār al-halaimāt of Yākūt, Udbādī, iv, 84 (according to the editor, i, 138). (10) K. al-Nayrās, an etymological study of this muṣ̱rūr word which has a large area of use which may serve as proverbs in relevant situations; published by the editor of the Makāyīs, in Nāwdār al-makhtūdī, i, 137-61 (2nd series, Cairo 1371/1951). Not mentioned in the historical sources under this title, it is perhaps the same as the K. Dḥakkār al-halaimāt of Yākūt, Udbādī, iv, 84 (according to the editor, i, 138).
he refused the post of shahid to the Janafi Chief Kadi Abu 'Abd Allah b. Makula (d. 430/1039). In 430/1039 he finally accepted this post, however, some years later, probably in 428/1037, as a result of the intervention of the great patrons of Hanbalism Abu Mansur b. Yusuf (d. 400/1010) and Abu 'Abd Allah b. Djarada (d. 470/1077). In 429/1038 he was fiercely attacked by a group of Ash'ari theologians, who accused him of having supported, according to other sources, in 433/1041, he formed part of a large audience, which included the famous Shahid Abu 'l-Hasan al-Kazwini (d. 442/1050), at the solemn reading of the Kadiiriya in the caliph's palace. He is also mentioned as being present, in 445/1053, at the meeting which was held in the Dar al-Khilafa under the presidency of Ibn al-Mushtari, who remained in office until his death, also a member of the entourage of the vizier Ibn al-Mushtari.

It was in fact at the suggestion of Ibn al-Mushtari and through the good offices of Abu Mansur b. Yusuf that Ibn al-Farrak, in 447/1055, after the death of Ibn Makal, agreed to become ka'idi of the Harim, a section of the caliph's palace, but stipulating his own conditions: that he should not be expected to take part in official processions or to meet the important persons received by the caliph, and should be excused from attending in person at the palace; that he should be allowed to spend one day each month at Nahr al-Mu'd and another at Bab al-Hajar, nominating during his absence a deputy (kadi) at the Harim. To his duties there, was later added responsibility for Harran and Hulwan. Ibn al-Farrak, who remained in office until his death, also taught kadidh each Friday in the al-Mansur mosque.

Ibn al-Farrak produced many works. The principal ones are listed in the Tabakdt al-Handbila (ii, 205; cf. Brockelmann, I, 502 and S I, 686) by his son, the amir i, who remained in office until his death, also the al-Isbahani. From Iraq he went to Rayy, then to Nishapur, where a redaction of unequal length (the shorter is preserved under the title of al-kadidh, the traditionist Abu 'l-Fath al-Ijarani (d. 476/1083), who was one of the most obstinate opponents of the nascent Ash'arism; Abu 'l-Fath al-Harrani (d. 476/1083), who was ka'didh of Harran and was killed, with his two sons, in his struggle against the Shii amir Muslim b. Kuraysih; Abu 'l-Faradj al-Shirazi (d. 486/1094), who worked actively in spreading Hanbalism in Palestine and Syria, with the support of the amir Tutush. Abu Muhammad al-Tamini (d. 486/1095), Abu 'l-Fath al-Hulwani (d. 505/1112) and Abu 'l-Khattab al-Kalwadhani (d. 510/1116), together with many others, are also often considered as followers of Ibn al-Farrak.

Ibn al-Farrak left three sons who are mentioned in the history of his madhhab. The most famous of them was the gawiy Abu 'l-Husayn (d. 525/1131; Dhahih, i, 212-4; Brockelmann, S I, 557), the author of Tabakht al-Handbila.

A brother of Ibn al-Farrak, the traditionist Abu Khazim Ibn al-Farrak (d. 430/1041; Munirsam, vii, 102), is sometimes mentioned as being a Mu'tazili. He should not be confused with his nephew, Abu Khazim Ibn Abu Ya'la (d. 527/1133), known as a jurisconsult and traditionist.

Ibn al-Farrak's prestige, within his school, was such that for three centuries, until the middle of the 8th/14th century, he was referred to by all the Hanbalis simply as "al-ka'didh"; afterwards, however, Muhammad al-Din b. Kudama (d. 620/1222) grew in importance with his Maghani, and the Hanbalis of the end of the 9th/15th century tended to give the title of al-ka'didh to al-Mardawi (d. 885/1480; Brockelmann, S I, 130).

IBN FIRISHTHE [see FIRISHTHE-OGHLU].

IBN FORAK, Abu Bakr Muhammad b. al-Hasan b. FORAK al-ANASHIRI AL-ISHBAHANI, Ash'arite theologian and traditionist, was born about 330/941, perhaps in Isfahan. In Iraq, both at Basra and at Baghdad, he studied Ash'arite kalim under Abu 'l-Hasan al-Bakili along with al-Bakili (q.v.) and al-Istarafini (q.v.), and also traditions under 'Abd Allah b. Dja'far al-Ishbahani. From Iraq he went to Rayy, then to Nishapur, where a madrasa was built for him beside the khansakh of the sii al-Bashandhi. He was in Nishapur before the death of the sii Abu 'Ugman al-Maghribi in 373/983, and probably remained there until shortly before his
own death in 406/1015, when he was summoned to Ghazna by the sultan Mahmūd. This was probably at the instance of members of the Karrāmīyya sect, against whom he had been fighting at Nishāpur. They tried to persuade the sultan Mahmūd that he was a heretic, but he seems to have defended himself successfully, and to have been poisoned by the Karrāmīs on his way back to Nishāpur. The version, according to which Mahmūd was responsible for poisoning him, is improbable.

Writings. His main work in the eyes of later generations was Kūtūb Muḥṣīlūl-baḍīḥ wa-bayānišīnī (with many variants of the title). This attempt is to explain difficult phrases in such a way as to avoid both anthropomorphism and a Muḥtāzīlī view (extracts with German translation, Raimund Robert, Analecta Orientalia 22, Rome 1941; full Arabic text, Hyderabad 1362/1943; cf. R. Arnoldes, Grammaire et théologie chez Ibn Hanem de Cordoue, Paris 1956, 30 f.). The titles of other extant works and stray references in heresiographers (Ibn ʿĀṣīm, Pīṣāl, iv, 209, 214, 215, 224; Abu ʿl-Ḥāmid, Ḥaḍīrāt, 281; Ibn Ṭabāṭabāʾī, al-Rawda al-bahiyya, 14, 44) show that he took a part in contemporary theological discussions on such questions as: the use of the istiḥāḍ in respect of one’s faith; whether a saint may know he is a saint (cf. also Ḥujwi ʾrī, Kāhjī fī al-mahdījūb, tr. R. A. Nicholson, 214); the application of atomistic conceptions to man; the sinlessness of prophets; the relation of God’s attributes and names to human attributes. Much of his disputation was against Karrāmīs in Nishāpur and Ghazna; but his views differed slightly at certain points from other Aḥṣārīs. He was a Šīʿī, but wrote a book on liawfi fī ḥikm, and on the strength of this receives a brief notice (no. 185) in Ibn ʿArifūbūgī Ḥaʾī’s Tāḍī al-ṭarāḍīṣīm.

Influence. It seems improbable that al-Aṣḥārī was a mere eponym (as suggested by J. Schacht, in Stud. Isl., i, 33-5), but the early development of Aḥṣārī theology is obscure. A lost work by Ibn ʿFurak entitled Ṭabāṭabāʾī al-mutakallimin is the main source for our knowledge of al-Aṣḥārī and his writings, and was extensively used by Ibn ʿAṣīkīr in his Ṭabāṭabāʾī al-muṣtaflatī (esp. 123; cf. also R. J. McCarthy, The theology of al-ʿAshīrī, Beirut 1953, index). Since Ibn ʿFurak’s master al-Bāhili was a pupil of al-Aṣḥārī, and since Ibn ʿAṣīkīr has other early sources which could seem to indicate Ibn ʿFurak’s material can be relied on. At Nishāpur Ibn ʿFurak seems to have played a part in securing the adoption of Aḥṣārī theology by a group of mystics (cf. L. Massignon, Essai1, 315), which included al-Maghribī and al-Dāḥkīk; the famous ʿUkhayrī q.v.] was a pupil.

( W. Montgomery Watt

Ibn al-Furāt, name of a number of persons who held the offices of secretary or vizier under the ʿAbbāsid caliphs or the ʿIkhshīdīd amirs and who belonged to the ʿIshī family. The earliest member of the family of whom anything is known is ʿUmar b. al-Furāt, who represented the ʿAlīd ʿAlī al-Riṣād and was executed in Baṣydīd in 203/818-9, on the orders of ʿIbrāhīm b. al-Mahdī at the time when the ʿIrāqīs were in revolt against the ʿIshī policy of al-Maʿmūn. A certain Muḥammad b. Mūsā b. al-Ḥasan b. al-Furāt, imprisoned at the end of the caliphate of al-Muʿtaḍīd following the fall from power of his brother ʿAbd Allāh b. Bulbul, was set free by the caliph al-Muʿtaḍīd, who, at the beginning of his reign, commissioned him to restore the state finances, entrusting him with the direction of the land department of ʿIrāq, then, for some months, with the control of that of the whole empire. Abu ʿl-ʿAbbās, assisted by his brother Abu ʿl-Ḥasan ʿAll, then proceeded to obtain financial statements from the Sunni secretaries, particularly from the members of the Banu ʿAbd Allāh; he became the right-hand man of the vizier al-ʿAbdāb b. al-Ḥasan, and then was himself chosen as vizier by the young al-Muṣṭadīr after the failure of the plot of Ibn al-Muṭazz (Rabiʿ1 296/December 908). Ibn al-Furāt, all-powerful during this first period as vizier and controlled only from a distance by the group of the Dignitaries (Ṣadāt), which included in particular the caliph’s mother and the chief eunuchs of the Palace, made the mistake of indulging imprudently, and on several occasions, in embezzlement of large sums, which led to his dismissal in Ḥaʿī ʿIīdīdī Ḥaʿīdī Ḥaʿīdī Ḥaʿīdī (July 912). He was re-appointed vizier in Ḥaʿī ʿIīdīdī Ḥaʿīdī Ḥaʿīdī Ḥaʿīdī (June 917, and this time became the victim of the difficulties caused by the revolt of the governor of ʿAḍhārīyān; he was again dismissed in ʿIīdīdī Ḥaʿīdī Ḥaʿīdī Ḥaʿīdī (November 918. He was imprisoned in the Palace throughout the vizierate of his successor and released at the time of the revolution of Ḥaḍīdī Ḥaʿīdī Ḥaʿīdī (August 923). This third and final vizierate of Ibn al-Furāt was to prove a particularly dramatic one: the minister, assisted by his son al-Muḥāsīn, had no hesitation in taking a brutal revenge on those who, in the preceding years, had treated him badly, nor in using violence to extort large sums of money from all those who had accepted office during his predecessor’s vizierate.

The methods which Ibn al-Furāt and his son used this time soon aroused among the caliph’s entourage high feelings, which were increased still more by the news of the attack on the Pilgrims by the Karmātīs in Muḥarram 312/April-May 924. Under pressure from the chamberlain and some of the officials in charge of the guards, al-Muṣṭadīr therefore decided to arrest the vizier (Rabiʿ1 312/June 924). Ibn al-Furāt and his son were brought to trial, but the somewhat insolent attitude of the former minister had the effect of turning the caliph against him, while the newly-appointed vizier instigated some sections of the army to demand that the prisoners be executed without further ado. The caliph, yielding
to popular fury, gave orders to the Prefect of the Police, Nāzūk, to put them to death (Râbic II 372/ July 924). Ibn al-Furat was the ignominious end of a man who had been a prominent financier and a politician, but had never shown himself to be a loyal servant of the caliph. An educated man of great culture, an experienced administrator in the organization of the financial services, he had demonstrated his ability to solve rapidly what appeared to be the most complicated problems, restraining effectively when necessary the frauds which seem to have been very common at this time at the various levels of the central organization; remarks attributed to him indicate also that he had a clear grasp of the conditions of economic life in the 'Abbâsid empire and of the measures which would permanently increase the resources of its Treasury.

Highly intelligent and of great eloquence, Ibn al-Furat had gained the sympathy of the young al-Muktadir, whose mentor he had been and who showed, until the last moment, his admiration for al-Furat. An educated man of great culture, an experienced man who was always to exert a sort of fascination over him. He was moreover a perfect courtier, whose ostentatious generosity and seeking after luxury were part of a policy of enhancing his prestige. Concerned with his own personal glory, which at times coincided with that of the caliph, he restored the authority of the central government in a province such as Pars, but was too often concerned primarily with increasing his own wealth, that of his collaborators and that of the members of the secret political-religious party to which he belonged and which was an extremist sect of the Twelver movement.

Bowen, The life and times of 'Ali ibn Isâ, the Good Vizier, Cambridge and London 1928, index; D. Sourdel, Vizirat, index.

(3) Abu 'l-Khattâb Dâ'far b. Muhammad, brother of the above, was in 296/908 put in charge of the land department of the East and of the West, but died in 297/909-10.

(4) Tâdân Fâdî b. Dâ'far, called also Ibû Hinâzâra (from his mother's name), son of the above and nephew of the vizier, replaced his father in 297/909-10 at the head of the land department for the East, where he remained until 299/911-2, and again held this office from 304/917 to 306/918 during the second vizirate of his uncle, then from 315/927 to 318/930, during the second vizirate of 'Ali b. Isâ [g.8], and the vizirate of Ibn Mukhâ [g.7]; he was put in charge of the land department of the Sawad in 319/931, thanks to the influence of the amir Mu'nis, then again of that of the East from 319/931 to 320/932, under the vizirate of al-Husayn b. al-Kâsim, a minister of Shi'i sympathies who surrounded himself with former collaborators of Ibn al-Furat. He finally became himself vizier, in 320/932, but only for a few months. Unable to improve the very dangerous political and financial situation, he had to evacuate the caliph to relax the advance of the commander-in-chief Mu'nis, who had then returned from Upper Mesopotamia, and to march at the head of his own troops against the rebellious leader: during the fighting which ensued the caliph was killed. Al-Fadl was next, during the caliphate of al-Râdî, put in control of Egypt and Syria with the title of inspector; he then restored the emirate of Egypt to Muhammad b. 'Uthmân, then appointed to the vizirate in 325/937 by the shirî amîr Ibn Râdî, to whom he had married his son. In 326/937, he retired and left for('rās for Egypt. He died and was buried at Ramla in Palestine in 327/938.

(5) Abu 'l-Fadîl Dâ'far b. al-Fadîl, son of the above, born in 308/921, was vizier of the Ikhshidids of Egypt, in charge of the administration of the country in the time of the amirs Anûdîr (334/945-6) and 'Ali (340/950), then of the eunuch Kâfir (355-7/966-8), who, after having been regent, succeeded in getting himself recognized as ruler by the caliph of Baghdad, but died soon after this. Dâ'far remained in office during the eventful year between the death of Kâfir and the arrival of the Fâtimids, but was unable to remain in command of the situation created by the political, economic and social crisis of the outside. Various extortions led to mutinies by the Kâfirid and Ikhshidid contingents, which took place on two occasions, ending in the pillage of Dâ'far's palace and obliging him to go into hiding. Al-Hasan b. 'Ubayd Allâh, a relative of the new amir and governor of Syria, thought it his duty to intervene and had Dâ'far arrested. He was, however, released soon afterwards and appointed governor of Egypt. As such he received the emissaries of the Fatimid general Djawhar [q.v.] and facilitated the entry of the Fatimid troops into Egypt, but he later refused the vizirate which was offered to him. He died in 391/1001, during the reign of the caliph al-îhâkîm, who was to execute his son Abu '1-Abbas in 405/1014-5 after having appointed him vizier for a few days.

Dâ'far b. al-Fadîl left behind him the reputation of a generous patron of poets and scholars, having in particular invited to Egypt the traditionalist al-Dârâkûni, but also that of an eccentric who had acquired a collection of snakes and scorpions which terrified his neighbours.

(4) D. Sourdel

IBN AL-FURAT, NASIR AL-DIN MUHAMMAD B. 'ABD AL-RÂMÎ B. 'ALI AL-MISRÎ AL-HANAFI (735- 807/1334-1405), Egyptian historian, author of a vast universal history, Ta'rikh al-duwal wa'l-mulûk, of which he finished completely only the volumes covering the years after 500/1106-7. The majority of the fragments which survive (mainly in Vienna) are autographs and the work does not seem to have been much copied, or indeed much valued in its own time (perhaps because of suspicions concerning its style and orthodoxy), although it was used by al-Mâkrizi and others. Its value rests not only in its being very detailed, but also in the wide range of its sources, which are often cited side by side verbatim and chosen with great broad-miss and choice, the Shi'i Ibn Abî Tayyî and the Christian Ibn al-'Amîd, for example, appearing together with writers of irreproachable Muslim orthodoxy. Not all the volumes are of equal interest today, their value varying according to whether or not the sources used themselves survive: the volumes covering the first two-
thirds of the 6th/12th century are of considerable interest owing to the wide use made of the lost chronicle of the Shi'ifting of Aleppo, Ibn Abi Tayyib, of the Egyptian Ibn Tuwayr, etc.; those concerning the Ayyubid period and that of the early Mamlikhs are of less importance, though not without interest, while those concerning the period of the author's own life are once again important. Apart from a few extracts here and there, there have, up to now, been published only two volumes (vol. ix of Vienna) covering the years 789-90/1387-97 (by C. K. Zurayk, Beirut), and two others (vols. vi and vii) covering the years 672-96/1274-97 (same editors, 1939-42); nothing has been found on the period of over a century which separates them. There do exist, however, in addition to a few volumes on the early periods (Paris, London, Bursa), the whole of those for the years 500-65 and 585-696 (the lacuna which until recently existed between 625 and 638 has just been filled by the discovery of a volume in Morocco, of which photographs have been sent to the American University of Beirut, which published the volumes edited by Zurayk). Similarly, the years 663-8 and 585 (which come together in vol. iv of the Vienna MS) have been published by M. Hasan M. al-Shamma' in Basra 1967. The manuscripts for the 6th/12th, 7th/13th, and 8th/14th centuries all belong to the autograph series Vienna AF 841-16, which may be inserted in the MS Vatican V 720 (years 639-58) and the manuscript of Morocco. Al-Saighawi (see, e.g., F. Rosenthal, *Historiography*, 419) accuses Ibn al-Furat of vulgarity of style, but this can apply only to the later years, the remainder of the work consisting of extracts from earlier writers.

Ibn al-Fuwat also wrote a centennial history, apparently the first to be expressly designated as such in the title, al-Ḥawaddith al-dimāma wa-l-tājaddār al-māʾinīa fī l-maʾa al-sābīa. An annalistic history covering the years 626-700/1228-1301 was published as this work by Muṣṭafā Dījadi in Baghdad in 1351. There is no manuscript authority whatever for the ascription of this published text to Ibn al-Fuwat, and more recently it has been shown by Muṣṭafā Dījadi that Dījadi was wrong in his statement that his work was compiled from the uncorrected ascription cannot be correct. The work, which, in particular through its reports on unusual occurrences of daily life in Baghdad, is of very great interest, goes back to a contemporary or near-contemporary writer, but its true authorship remains to be ascertained. Ibn al-Fuwat refers, in connection with an event of the year 712, to his annalistically arranged al-Tawīlī wa-l-hawaddith (Talḥīs, iv, 139), which may be identical with al-Ḥawaddith al-dimāmā (cf. Dīhabi, *Husfās, iv, 274-6: Ḥawaddith al-maiʿa al-sābīa wa-šīd an māt), or another more comprehensive historical work of his.

Other works, known by title or through rare quotations, are a poetical-biographical anthology, *Naṣm al-durar al-nasīʿa fī ḥudārā ish-al-maiʿa al-sābīa* (Talḥīs, iv, 253, 244, 961, 1101; 280, pars. 151 f., 436, and, probably, 57, 62, 88), and a collection possibly of similar contents, *Durar al-aẓāzāl fī ḍawʿar al-aʿussāl* (Talḥīs, iv, 280). He wrote genealogical tables (Kītab al-nasab al-muḥaddjadiy, *Talḥīs*, iv, introd. 59 f.), on the men named ʿAbd al-Karim (al-Durr al-naṣīm fī man tasamāʿ ʿAbd al-Kurim, *Talḥīs*, iv, 1195), and on scholars with gentilics derived from the professions and crafts (like his own, "maker of fuwat, cloth wrappers of various kinds") (Baddāl al-tufaaf fi ʿabād man maṣbuṭ min al-ulāma").
iba 'l-sandu wa- 'l-biraf, cf. Talkhis, iv, intro. 60 f.), as well as a list of homonyms in tabular form (al-Muwalla wa-'l-muwalla), and other works. His early works, written while he was still in his teens, was in praise of wax candles (fi wasaf al-hawwas) (Talkhis, iv, 45). Another early work written in Macagha was, it seems, a handbook for those working in the Observatory there, Kitab Man basada 'l-rasad (Talkhis, iv, 569).

Bibliography: In addition to all the later reference works in which Ibn al-Fuwati is listed, the most accurate data on his life can be found in the Talkhis, a history of Muslim historiography, by Y. Djalow in the detailed biography prefixed to his edition. See further: Brockelmann, II, 208, II, 202 (contrary to S J, 590 f., there is no apparent connexion between Ibn al-Fuwati and the Muhhataras akhdhar al-halafa of Ibn al-Sali, Bilal 1309); M. Iqbal, in IC, xi (1937), 516-22; Muhammad Ridal al-Shabibi, Muwarrid 'l-Yaik Ibn al-Fuwati, 2 vols. (Baghdad 1930-70/1950-58); F. Rosenthal, A History of Muslim Historiography, Leiden 1952, 414; Kurdis 'Awmdaw, in Sumer, xiii (1957), 53 f. (F. Rosenthal).

*IBN GABIROL*, ABU 'AVYVb SALAYMI b. YAHYA (in Hebrew: Shelomoh ben Yehudah; the public) the usual commonplaces of this literary genre [see AKHLAK], a collection of ethical sentences, which is preserved, apart from a few fragments, in a Hebrew version (Mibhar ha-penim "Selected texts"); the attribution of which is, however, uncertain; and, most important, a lengthy metaphysical treatise in dialogue form: the Arabic original of this, which is preserved, apart from a few fragments, in a Hebrew version (Mihbar ka-paninim "Selected pearls")... The Hebrew extracts, made by Shemtob Ibn Palkera, lost, most probably had as its title Yedidat al-andalus, K. Tabakat al-umum, ed. L. Cheikho, Beirut 1912, 89 (tr. R. Blanchere, Livre des categories des nations, Paris 1935, 159; Eng. tr. by J. Finkel in JR, n. s., xviii (1927-8), 45 f.); the notice by Moses Ibn Ezra has been translated into French by Munk, Mlndges de philosophie juive et arabe, Paris 1857 (the later editions are only unaltered reproductions of the first), 1-306; M. Steinschneider, Heb. Ub., §219, pp. 379-88, and Arab. Lit. Jud., §81, 125-9. Biographical notice by Ibn Sadi al-Andalusi, ed. L. Cheikho, Beirut 1912, 89 (tr. R. Blanchere, Livre des categories des nations, Paris 1935, 159; Eng. tr. by J. Finkel in JR, n. s., xviii (1927-8), 45 f.); the notice by Moses Ibn Ezra has been translated into French by Munk, Mlndges, 263 f., and into Spanish by J. M. Millas Vallicrosa, Selomo Ibn Gabirol como poeta y filosofo, Madrid 1945, 13. Latin text of the Fons vitae, ed. C. Bumkner, Munster 182-5; Islah al-akhdhar, Art. text ed. S. Wise, New York 1901. To the bibliographical notices by Steinschneider and by G. Vajda, Juiddische Philosophie, Berne 1950, 14-6, may be added F. Brunner, Ibn Gabirol-Avicembron, La Source de Vie, Livre III (annotated Fr. tr.), Paris 1950; idem, Fons Vitae d'Avicembron (Ibn Gabirol) livre III, in Studia Philosophica, xii (1953), 171-83; La Doctrine de la matiere chez Avicèbron, in Revue de Théologie et de Philosophie, 1956, 201-79 (cf. ibid., 285-93); Études sur le sens et la structutre du "Coetus" d'Avicèbron, in Bulletin John Dil em, Année de Documentation Médavorite, i (1958), 295-317; the article in Hebrew by S. Fines, Fragments of the Arabic original of Fons Vitae in Moses Ibn Ezra's work Arugat Habbosam, in Tarbiz, xxvii (1957-8), 218-23; J. The Arnetis Press, Zurich-Stuttgart, have now (1957) announced Salomo ibn Gabirol et sein Kreis, by F. P. Bargebuhr. (G. Vajda)

*IBN GHALBUN*, Muwallad leader who, at the time of the reyes de taifas, emerged as the leader of the Molina de Aragón, the small town situated at the highest point of the land lying between the Tagus and Jalon rivers, its territory belonging partly to Aragon in the north and partly to Castile in the south. El Cir, on settling at el Poyo de Calamocha, conquered Ibn Ghalbun, who became his exceedingly loyal subject, as is related with striking emphasis by el Cantar del mio Cir.
he had been known hitherto only by his ma‘rifa, but it is now known that his name was ‘Azzūn, since one of his two sons was called Abu ‘l-‘ghamr b. ‘Azzūn and the other ‘Azzūn. Among the outstanding figures of the Mamluk administration of al-Mansūr bi ‘l-imānma. All these names are honorific additions in - on, so frequent in the Hispano-Muslim upper classes, such as Ibn Badrūn, Ibn Zaydūn, Ibn Khaldūn, and many others.

When Dona Jimena and her daughters went to Valencia to join the Campeador, who had just conquered the city, ‘Azzūn b. ‘Ghāblūn would not have welcomed the horsemen sent to escort the ladies and added two hundred cavalry to their retinue; from Medinaceli onwards, he honoured the wife and daughters of El Cid, with Alvar Fañez, and had them splendidly accommodated at Molina. When the Almoravid army took up its position in front of Valencia with the purpose of reconquering the city, Ibn Ghalbūn did not follow the example of the petty kings of Albarracín, Alpuente, Lérida and Tortosa, who complied with the order to join the army sent by Yusuf b. Tāshfīn against El Cid; the Cantar praised him yet again for the noble way in which he welcomed and accompanied the daughters of El Cid and the princes of Carrion on their unfortunate wedding journey, but the minstrel, instead of dealing passionately with this episode—so ill-fated in its outcome—clowns it in a legend and, carried away by his manifest hatred when dealing with the courtly faction of El Cid’s enemies, he derides the princes’ cowardice at the battle of Cuarte and their panic before the lion let loose at the Valencian court, and lingers over the scene at Corpes, as cruel as it was unjust; such is his hatred that he goes so far as to ascribe to the princes the intention of killing Ibn Ghalbūn in order to steal from him the riches with which he had so splendidly regaled them; after the failure of this plan as a result of the denunciation of a Latiuized Moor, he depicts El Cid’s faithful friend as a perfect gentleman who cast their dishonourable conduct in their teeth, yet refrained from punishing them because they were the sons-in-law of his great friend El Cid to whom he restored his daughters.

So ends, in the Cantar, the passage through history of this Muslim who, transformed for his loyalty and devotion to the Campeador, but we have strong reasons to tone down these eulogies, since the same person affirms: “Even if we wish him to take part in the battle of Cutanda against the Aragonese on the battlefield; without hesitation, he hastened with his men to take part in the battle of Cutanda against Alfonso I, el Batallador, in the summer of the year 514/1120, alongside the governors of Lérida, Valencia and Granada, with the other local leaders who, like himself, had acknowledged and supported with their arms the rule of ‘Ali b. Yusuf. This interesting unpublished item of information is revealed by al-Bayān al-mugrib.

Nothing more is known about Ibn Ghalbūn, as the territory of Molina de Aragón was before long occupied by the conqueror of Cutanda and subsequently became the domain of Enrique de Lara and his descendants. It is very probable that he retired to Andalusia where we find two of his sons who, at the collapse of the Almoravide empire, following in their father’s footsteps, succeeded in setting themselves up as petty kings of tā’ifas at Jerez and Ronda. The elder, Abu ‘l-‘Ghamr ‘Azzūn, was quick to acknowledge the Almohades when they landed in Spain and gave them proofs of the sincerity of his allegiance, which were far greater and more effective than the gallant courtesies of his father towards El Cid. In contrast to the other petty Andalusian kings who rose up against ‘Abd al-Mu‘min, from the moment that he learnt of the revolt of al-Masal and of his victory, he not only remained loyal, but also collaborated with Barrāz in the capture of Seville and with the brothers of al-Mahdī in expelling the Almoravids from Algeciras; he even accompanied them when they went to present themselves in Marrākush.

When Alfonso VII besieged Cordova, he contributed with great decisiveness and speed to the lifting of the siege by bringing into the stronghold the Almohad troops which were stationed in the Sierra de Cordova; finally, at the side of Sayyid Yusuf, the son and future successor of ‘Abd al-Mu’min, he took part in the battle of Za’bula or Zaghabbula in Rabī‘ I 553/April-May 1158, in the region of el Viso and Mairena del Alcor, to the north of Alcalá de Guadaira, against the army from Avila commanded by the famous count Sancho Jimeno, the Hunchback; during the rout, this son of Ibn Ghalbūn died a martyr’s death.

His brother Abu ‘l-‘Ali, who helped him to seize Ronda, as well as the descendants of both brothers, occupied high posts in the Almohade administration and distinguished themselves by their loyalty, to whom the Caliph Ya‘qūb al-Mansūr bore witness most vividly when, in his testamentary speech, he recommended one of them as being “among the most intelligent and perfect men who have given their allegiance to the cause of Ibn Tūmarī”.

Khalīl]. IBN GHALĪB, Muḥammad b. Ayyūb al-Ghār-nāṭī, historian and geographer, living in Grana- da in the 12th century. His fame rests on an excellent work entitled Farhat (or Fardāţ) al-anfus fi tarīkh al-Andalus; the text has been lost, but lengthy extracts have been reproduced by al-Maḳḳārī, Ibn Sa‘īd, Ibn al-Khāǰīb and others, and an abridged version of the geographical part, Ta’ilik munštah min Farhat al-anfus fi tarīkh al-Andalus, has been preserved (ed. Lutfi ‘Abd al-Qadī in RIMA, i/2 (1955), 272-310). The passages quoted by al-Maḳḳārī are numerous, but the most extensive (Analectes, i, 84-90) gives interesting details about the habitats of the Arab tribes in Spain. The abridged version of the geographical part is much more valuable, for it contains the most important passages of th. “Description of Spain” by Ahmad b. Muḥammad al-Rāzī [see al-Rāzī] the text of which E. Lévi-Provençal tried to reconstruct without being able to take advantage of Ibn Ghalbūn’s work, which was still unpublished and unknown (see La “Description de
IBN GHALIB

I'Espagne" d'Ahmad al-Rdzlt in al-Andalus, xviii/i (1953), 5i-108.

IBN GHANNAM, ABū Tahir Ibrāhīm b. Yahyā b.

IBN GHANNAM, Abū l-Hasan al-Rāzī fī 'l-‘alāmār fī ‘l-muṣāfār wa’t-taṣbih wa’t-‘adām wa’t-taḥqīq wa’t-nū‘ūd, i (1220/1805-6); Baghdad, 1221 (1221/1807; 1810). The author of a long commentary, he expanded the text of this treatise for the benefit of his disciple, the shaykh Muhammad b. Sulayman, one of the two famous 'ulama? of the Wahhabīyya, where he at first attended the lectures of Shaykh Muhammad b. 'Abd al-Wahhab, were among his pupils at al-Dirīyya. The first Wahhābī capital in Najd (Ibn Bishr, 1940), was a faithful adherent of the Wahhābīyya & its first authentic chronicler. Little is known about his early life at al-Abāt except that he studied theology and philology under the 'ulama? there. He later moved to al-Dirīyya, where he at first attended the lectures of Shaykh Muhammad b. 'Abd al-Wahhāb, and thereafter taught Arabic and theology. The Shaykhs 'Abd al-Raḥmān and Sulay-
The Rawda is in two volumes:

(1) Rawdat al-afkdr, a theological exposition of Wahhabism divided into five chapters; the first reveals the religious situation in Arabia and the neighbouring Muslim territories where, according to the Rawda, Muslims are "sunk in the abyss of paganism, steeped in shame and defiled by the taint of corruption". Chapter two details the genealogy of Ibn 'Abd al-Wahhab and his rise to fame. The Rawda differs markedly from another contemporary account, the Lam'i al-ghikab. The comments of the author in the final three chapters reveal his vast theological knowledge. He is here commenting on some letters of Ibn 'Abd al-Wahhab sent to various dignitaries within and outside the Arabian peninsula. From internal evidence it is clear that the Rawda was written after the death of Ibn 'Abd al-Wahhab.

(2) al-Ghazawdt al-bayaniyya wa-l-futuhdt al-sudur, the geographical and historical account of the Wahhabism divided into five chapters; the first reveals the religious situation in Arabia and the neighbouring Muslim territories where, according to the author, Muslims are "sunk in the abyss of paganism, steeped in shame and defiled by the taint of corruption". It is curious that the latter author, though not yet 20 years old, was not yet an adult, and the events of 1212/1797, despite the fact that the author lived until 1225/1810. It is an invaluable source for the 18th century history of Arabia, which surpasses in wealth of detail Ibn Bishr's 'Unudn al-majd.l. It is curious that the latter author, though a Wahhabi, does not mention Ibn Ghannam's history. Close examination of the two texts, however, reveals that Ibn Bishr modelled his work, which carries the Wahhabi history down to 1851, on Ibn Ghannam's Ghasawut (with the principal differences that Ibn Bishr does not digress to describe religious matters).

Ibn Ghannam's Ghasawut was used extensively by H. St. J. Philby and other writers in western Arabia, e.g., Amin al-Rihani, G. Rentz and R. B. Winder, in compiling their works on Arabia (cf. Bibliography).

(A. M. Abu-Hakima)

**IBN AL-GHARABIL** [see IBN KASIM AL-GHASSIL].

**IBN GHARISSA,** Abu 'Amir Ahmad, Andalusian writer and poet, who spent his life at Denia and the service of the Slav (and former slave) Mudjadh al-'Amir [q.v.], the ruler of this province from 400/1010 to 436/1044, and of his son 'Ali Ikbil al-Dawla (436-68/1044-76). Both father and son had need of authors and poets to exalt the merits of the Slavs and to contest the alleged superiority of the other reyes de taifas of Arab origin; Ibn Gharissa offered himself for this and, seizing the opportunity of an argument that had taken place between himself and a man of letters from Cordova called Abu Dharar Ahmad b. al-Dirar (or al-Kharraz according to Ibn Bashkawal, Sia, 9; Ibn al-Abbâr, Tahmi.ta, 157, and al-Mâk'ar, Analectes, ii, 280, 327), he wrote a violent, insulting and bitter risâla against the Arabs, glorifying the Slavs, the Rûm and all the non-Arabs ('andâm); this risâla is perhaps the most violent and characteristic of Shu'ubiyya in Muslim Spain; it takes up all the arguments against the Arabs put forward by all the Shu'ubîs of the East, and presents them in a complicated style. This work brought fame to Ibn Gharissa and provoked a number of contemporary authors to draw up even more violent replies in favour of the Arabs. Ibn Bassâm reproduced the risâla and several of its replies in his Shahârîra, and MS coll. Gayangos de la Real Acad. de la Historia, Madrid, no. 12, fols. 120 ff.; the text with some replies can be found again in MS 538 of the Escorial.

Besides the risâla we have some verses by Ibn Gharissa, reproduced by Ibn Sa'id, in praise of Ikbil al-Dawla (also called Mu'tizz al-Dawla). According to Ibn Sa'id (Mugrib, ii, 406-7) and Yusuf b. al-Shaykh al-Balawi (Alif bâ', Cairo 2827, i, 350), Ibn Gharissa was of Basque origin; having been taken prisoner in his childhood he was brought up in the Islamic faith. Although he was proud of his non-Arab origin he was a fervent Muslim, very much attached to the Arabic language. No further information has come to light about his life and work.

**Bibliography:** mentioned in the text. The Risala was published for the first time by I. Goldzweber with a study on the Shu'ubiyya in Muslim Spain in his article: Die Shu'ubiyya unter den Muhemedandern in Spanien, in ZDMG, 1898; ed by 'Abd al-Salam Hârân, Cairo 1950, with the replies; ed. by Ahmad Muhtâr al-Abbâdî in his essay: al-Sakâliba fi Isbâniyya (publ. of the IEF Madrid), 1950, 31 ff. (H. Monès)

**IBN GHÂSÎL** [see 'Abd Allâh b. Hanzala].

**IBN GHÂZÂR** Abu 'Abd Allah Muhammad b. Ahmad al-'Uthmânî, Moroccan scholar of the 15th century, was born at Meknès in 858/1454 and died in 910/1513 at Fez, where his tomb may still be seen. Of his many works (full list in Cordes, p. 230, n. 2) the most useful to present-day scholars is al-Raud al-hatât fi ahdâr Muhâmasât al-Zaytûn (Fez 1320/1908; partial tr. Houdas, Monographie de Mequinez, in J.d., i, 1889, 101-47).

(J. F. P. Hopkins)
previous post and manoeuvred his less-talented older brother, Fakhir al-Dīn Madjīd (d. 511/1409), into the position of vizier. Owing to internal Mamluk squabbles after Barkūk's death, ʿAbd al-ʿAzīz reigned, ʿIrābīm was again in trouble a year later but recovered his political position to such an extent that within a short time he became the real power in the state (cf. Ibn Iyās, i. 347). He was named Privy Secretary (kābiṭ al-ṭīr) and Head of the Advisory Council (raʿa masqūwara). Temporarily distanced during the two and a half month period in which Sultan Farādīd was deposed and his younger brother ʿAbd al-ʿAzīz reigned, ʿIrābīm was instrumental in returning Farādīd to the throne and was rewarded with the rank of Emir of the First Class. Shortly thereafter, he fell ill and died after a long illness, not yet thirty years old. At the time of his death he was referred to as “al-kādī al-āmir ...”.

The Arabic sources are sharply divided in their attitude towards Ibn Ḥurāb. His personal generosity, especially during the great plague of 807/1405, is highly praised by Ibn Taghribirdi (Manhal, i, 93) and Ibn Iyās (Tawārikh, i, 348), and his character is lauded (Ibn Taghribirdi, vi, 277), but he is also sharply denounced as having ruined the countryside by his rapacious levies (cf. Allāh al-Asmār, al-ṣafāl fī ṣaḥīḥ Kaltta wa-Dimna, i, 43) and his manipulation of the price of gold (Maḳrizi, Khtāf, ii, 420). His tomb in Kirman; here he addressed his eulogies to the first two genres the poet imitates Ibn al-Ḥabbariyya, which must have

IBN AL-HABBARIYYA, ABū YA’leader of the Mamluk dynasty of the Ayyubids, from ca. 1240 to 1260. He was a member of the family of Qalawun, and played a significant role in the affairs of the Ayyubid Empire. Ibn al-Ḥabbariyya is in fact the author not only of one of the earliest works on poetry, but also of the first two genres the poet imitates Ibn al-Ḥaddājī (q.v.), as ʿImād al-Dīn noticed, but he seems, like his model, to present a curious example of split personality, for he can on occasion compose more respectable poems and, what is more, set himself to poetry. In order to obtain the money necessary for his life of pleasure he was forced to sing the praises of the great men of his day, at first of the Ayyubid rulers (see Šīb Ibn al-Djurwi), but his inclination for satire made him unsuited to this kind of servile flattery and he soon fell foul of his patrons; when, for example, the young Ibn al-Djāhr became for the second time vizier of the caliph in 484/1091, he greeted this appointment with a biting satire which was soon on everyone's lips. His habit of attacking his contemporaries soon made him unbearable to Sultan Farādīd, who was forced to go and try his fortunes in Isfahān, in the court of Nizām al-Mulk (q.v.), who finally admitted him to his entourage; by his taciturnity, however, he incurred the wrath of his patron, who, after having ordered his execution, finally pardoned him thanks to the intervention of the ʿalāʾ al-ʿadl al-Mulk al-Khus̱andī. He also enjoyed the patronage of Tādž al-Mulk and of Nizām al-Mulk, but in the latter he was forced to leave Isfahān and go, at a date unknown, to Kirman; here he addressed his eulogies to the vizier Mukram b. al-ʿĀla and particularly to the Saljuqšah ʿA lã, who reigned there from 489 to 494/1096 to 1101. But it was to his former patron, Madjīd al-Mulk, that he dedicated, between 489 and 492, his verse rendering of Kāliṭa wa-Dimma entitled Nāṭeṣ al-ṣafā fī nasr Kāliṭa wa-Dimma; and it was to the Mazyādīd Sadaqa b. Maṣūr that, after the foundation of al-Ḥilīa (495/1101-2), he sent his other book al-ṣāḥīḥ wa-l-bāghīm. At this time he had not left Kirman, where he died probably in 509/1115-6 (rather than 504/1110-1) at a very advanced age (95 years, it is said).

Ibn al-Ḥabbariyya left a Dīnān which must have been very extensive, since it consisted of three or four volumes, but there remain only a few extracts from it, which have survived thanks to ʿImād al-Dīn al-Isfahānī (Kharīdāt al-Kāsī, MS Leiden Or. 21a); the genre most fully represented are ṣafā (q.v.), satire, and next parodies and panegyrics. For a brief biography of his brother Madjīd, see the obituary notice in Ibn Taghribirdi, vi, 290; al-Salāḥwī, Danāʾ, v, 234. (W. M. Brinner)
IBN AL-HABBARIYYA — IBN AL-HADDAD

Yakut (Irshad, vi, 297) mentions in passing a K. al-Lakd*it, which was probably a work of lexicon. His works on the formed part of the Sādak, it is to be found at the end of the Paris manuscript of the Kharidat al-ṣadīqīb.

**Bibliography:** besides the references in the text: Samānī, Amāb, 587b; Ibn al-Anbārī, Nushal al-alībba', Cairo 1249, 437; 'Imād al-Dīn al-Isfahānī, Nurāt al-fatra, MS Paris 2146, 35a, 60a, 103a, 104-5; Yākūt, i, 555, 694, ii, 46, iv, 509; 'Askalānī, īṣām al-Mīṣrī, v, 367-8; Ibn Abhāakhir, i, 283, ii, 386-7; Ibn Thīrāk, Fāḥiri, i, 266-7; ʿAṣāfī, Baghdad 1261, i, 124-45 and index. **IBN AL-HABIB** [see URAYD ALLĀH B. AL-HABBAR] 775

IBN HABB, Abū Marwān Ābd al-Malik b. Hābīb al-Sulami, Andalusian scholar claiming descent from the Arab family of Sulaym b. Manṣūr; he was born at ʿIṣīn Wāṭ (identified by Simonet with Huétor Vega), about 180/796 and died at Cordova in 238/853. He studied at Elvira and Cordova, and after he had made the pilgrimage and become acquainted with the doctrine of Mālikī [q.v.] at Medina became one of his most ardent propagandists in Muslim Spain, where the school of al-Awzā[1]ī [q.v.] had dominated until then. By virtue of his exceptional erudition he became known as the scholar of Spain par excellence and was compared with Sahlīn b. Sādīq [q.v.], the famous jurist of Ḥirṣiyā. According to his own account, his works numbered 1050, but of these none remain but an unpublished manuscript preserved in the Bodleian at Oxford, which, despite its antiquity, is of little value. This account, in which he mingleth Biblical history with that of Muḥammad and the first Caliphs, the history of al-Andalus with theological questions, is full of fabulous material. Travellers from Spain, greeted in the East as ignorant rustics, accepted as historical truth Egyptian legends which he had received from his library of manuscripts, of moving statues, and of devils imprisoned in boxes by Satan, such as are reproduced in the History of the conquests of Egypt and the Maghrib by the Egyptian Ibn Ābd al-Hakam [q.v.].

**IBN HABB, BADR AL-DIN Abū Muḥammad al-Ḥassān B. ʿUMAR AL-DIMAYYIṢ ʿAL-ḤALABI al-SHAFII** [760-1007] 777

This author of several historical, juridical, and poetic works, was born in Damascus. His father Zayn al-Dīn Abī Muḥammad ʿAbd Allāh Muḥammad al-Ḥassān Ābd al-Malik b. Sumādī, 443-90/1051-97). He became a well-known writer in his own lifetime. In 753/1354 he visited Tripoli, where he was honoured and rewarded by the Mamluk viceroy of that town, Manqāl b. ʿAbī Maqīb, and persuaded him to remain there for two years. In 759/1358, after Manqāl became viceroy of Damascus, he invited Ibn Habbīb to that city from his home in Aleppo and the scholar, once more the centre of attention and respect, remained there for three years before returning to Aleppo, where he lived until his death in 779/1377.

IBN HABB, Muḥammad [see Muḥammad B. Ḥassān].

A most critical evaluation of his work as an historian comes from Ibn Taghbūrīdī, who wrote (Nudīm, v, 331): "He was the paragon of his age in the scirbal art (inṣāha) and in formulating judicial decisions (ḥurūfī) . . . His History is in ragās-metre and is of little worth and quite inexact. I have, therefore, cited it only if rhyme did not please him he would omit a datum. This is not my way of writing history!" 

**Bibliography:** Ibn Taggbūrīdī, Mankal (Wiet), no. 1720; Ibn Ḥadījar, Durrā, ii, 20; Quatremère, Histoire des Sultans Mamluks, i/b, 204 (incorrect dates given there); Wüstenfeld, Geschichtsschreiber, no. 440; Brokkelman, ii, 36; S. II, 35; Orientaalia, Leiden 1846, ii, 197-489; P. Leander, Aus . . . bin Habīb's Durrat al-ṣadīqī, in Le Monde Oriental, vii (1913), i-51, 242-3.

(W. M. Brinner)

**IBN HABB, MUḤAMMAD** [see Muḥammad b. Ḥassān]. B. ʿAbd Allāh Muḥammad al-Ḥassān B. ʿAbd al-Malik b. Sumādī, 443-90/1051-97. Towards 461/1068-9 he had to flee from Almeria and was persuaded to remain there for two years. In 759/1358, after Manqāl became viceroy of Damascus, he invited Ibn Habbīb to that city from his home in Aleppo and the scholar, once more the centre of attention and respect, remained there for three years before returning to Aleppo, where he lived until his death in 779/1377.

(W. M. Brinner)
known among his poems are those dedicated to a Christian nun called Nuwayra who, according to Ibn Faḍl Allāh ibn ʿUmari (Masālik al-ʿabār, Cairo 1924, i, 385), was a Coptic nun living in the convent of al-Ṣawār in the valley of the Nile. Ibn al-Ḥadād had seen her while going through Kūs to ʿAyyūh in order to embark for the Highār; her beauty dazzled him to the extent that he forgot to make his pilgrimage and settled near the convent for a long time; she continued to inspire him long after his return to Spain. The odes addressed to Nuwayra are his best poetry. The divān of al-Ḥadād was written in the latter half of the thirteenth century, and the passages reproduced by Ibn Bassam show a deep far-fetched images and expressions; most of the prose passages reproduced by Ibn Bassam and the pamphlets which he called hadīfrat al-hakīka were even arranged in alphabetical order of the rhymes. He was particularly proud of a ʿāṣida in sin which he called ṭabāh al-baḥīth (garden of truth) and of which we only possess two verses; they show his tendency to meditation and his liking for ḥikma poetry which he called falsafiyātī (my philosophical prose). His prose is pedantic and encumbered with non-professional but very intense interest in religious learning that was characteristic of the Muslim upper middle classes. The loss of his parents meant no material disadvantage for him, on the contrary, he was able to stay in the house in which he was born until he married. It seems to have had a somewhat retardant influence on his early education inasmuch as he went to school only when he was five. He had memorized the Qurʾān by the age of nine. The sojourn in Arabia with Zaki al-Din ordered by his father meant 110 interruption of his studies. These began in earnest after his return to Egypt and Zaki al-Din's death. According to the custom of the time, he recorded his studies in the minutest detail, with the names of all his teachers and the books he read, in a series of works, such as al-Muṣṭafid al-muḥāras (autograph Istanbul, Murad Molla 603, cf. Ritter, loc. cit.; important ms. in Cairo, muṣṭalḥ al-ḥādīṯ 82, and in Leningrad, cf. V. Rosen, in Bulletin de l'Acad. Impér. des Sciences de St. Petersbourg xvi (1880), 18-26, reprinted in Mélanges Asiatiques, vili (1881), 691-702), the Madīma al-muʿassas bi(l)-i-Muṣṭafid al-muḥāraṣ (Cairo, muṣṭalḥ al-ḥādīṯ 75; M. Weissweiler, Istanbuler Handschriftensstudien, Leipzig 1937, no. 105), the Maḥāṣīd al-ṣiyāṣīyya (al-ṣiyāṣa fi firḥist al-murāżiyya (al-kutub wa-l-ʿadād) al-murāziyya) (= ms. Berlin 1023; Y. al-Ṭishk, Fīris al-Maddal Dār al-Kutub al-Sāhiryiyya, Damascus 1366/1947, 310), and the Madīna (Istanbul, Feyzullah 534, cf. Ritter,
to which should be added his *Tadhkira* with
the autograph iddāzas of his teacher, Shams al-Dīn Muhammad b. ‘Ali Ibn al-Kāṭṭān, influenced the direction of his studies in an important
respect. He introduced him to historical literature and
stimulated his interest in the historical side of
religious studies. When Ibn Ḥadījārt decided to
specialize in *kāḥith*, Zayn al-Dīn al-‘Irākī (d. 806/1400) became his principal teacher. He also seems to
have profited greatly from his contact with ‘Īz al-Dīn Ibn Dīmāša with whom he studied from
790/1388 until Ibn Dīmāša’s death in 819/1416. However, none of his teachers exercised upon him
the overpowering influence which he himself came to exercise later on upon some of his students.

Ibn Ḥadījārt took his first steps into scholarly
*pādth* research at the age of twenty. The decision
to devote himself entirely to it came three years later,
in 796/1393-4. In Shaybān 798/May 1396 his guardian
and teacher, Ibn al-Kāṭṭān, arranged for him to
marry a girl from a highly respected family, then
about eighteen years old, Uns, a daughter of the
Inspector of the Army (*nāṣir al-dīwāy*) ‘Ībād al-
Karīm b. Ahmad. On her mother’s side, she was a
great-granddaughter of a daughter of Mankūṭmir, who had introduced the Evening Prayer after him shortly before his death in 698/1298. Ibn Ḥadījārt
moved into the family mansion of his wife, where he
lived until he died. There were later marriages,
but no other wife of his was ever brought into the house
to live with Uns under the same roof. Uns herself
survived him by almost fourteen years (d. Rabi’ī 1
867/November-December 1462, cf. *Daw*[*i*], xii, 10 f.). He had spent the months preceding his marriage in Alexandria, in study and research, and the following
year, in Shawwāl 799/July 1397, he left for the
Ḥidījārt and the Yemen on a journey which extended
into 801/1398. The year thereafter, he studied in
Palestine and Syria. Although he later went on the
Pilgrimage several times, re-visited the Yemen in 806/1403, and undertook a lecture and study tour of
Syria in 836-7/1432-3 in the entourage of Barsbay[97] (g.v.), his student travels ended when he
returned from Syria in 803/1400. The last years of
the eighth century also saw the beginnings of his
qualities of character as well as his religious and
standards of Islam, and there seem to have been few
influences which Ibn Ḥadījārt considered as completely conforming to the ideal
of the Baybarsiya was an alphabetical filing system
for the beneficaries of the institution, which was
imitated by other colleges and by the *Dīwān al-
Dīwāy*. In addition to other lecturerships in *pādth* and, occasionally, in *tāfṣir* and *fiqh*, Ibn Ḥadījārt held the office of *muftī* in the Dār al-ʾAdl from 812/1409-9
until his death, and that of associate preacher and
māzām in the Mosque of al-ʾAzhar and the Mosque
of ‘Amr. In 826/1423, he took over the administration
of the library of the Māḥmūdīya with its approximately 4,000 valuable manuscripts. During his
librarianship, which lasted until his death, he
compiled two catalogues, one arranged alphabetically and the other according to topics.

A judgeship, which he did not accept, was offered
to him in the Yemen in his early years. Reluctantly,
he had been holding an associate judgeship in conjunction with Dījālāl al-Dīn al-Bulkīnī when his great opportunity came on 27 Muharram 827/31
December 1423 (*Dīwān al-Ḥidījārt*: Saturday, 22 Muharram/Sunday, 26 December). He was dismissed for the first time less than eleven months later, but the office of Chief Judge of Egypt (and Syria) remained his for a combined total of about twenty-one years.

In 816/1413, he lost the position but was re-instated
in 817/1414; and re-instated in 819/1419 and 820
and 821/1420-1 after two days out of office (followed by another even briefer period out of office
in Rabi’ī 821/1422). He lost the office finally on 25 Dīdūmād I 822/26 August 1424. A few months later, about an hour after the evening prayer in the night of Saturday, on 26 Dīdūmād I 822/26
August 1424. He had been re-instated on 2 Radjab 820/20 May 1425; dismissed on 26 Safar 831/24 November 1429, and re-instated on 26 Dīdūmād I 834/16 February 1431; dismissed on 5 Shawwāl 840/12 April 1437, and re-instated on 6 Shawwāl 841/2 April 1438; dismissed in Muharram 844/June 1440, and re-instated on 26 Safar 844/July 1440; dismissed on 15 Dūl ‘l-Ka’dā 846/17 March 1443, and re-instated and followed by another even brief period out of office in Rabi’ī 848/1June 1444); dismissed on 17 Muharram 849/19 April 1445 (after the collapse of a minaret with much loss of life, when attempts were made to hold
the office of the Chief Judge responsible for the safety
of the structure), and re-instated on 5 Safar 850/2
May 1446; dismissed in Dūl ‘l-Hidījārt 850/March
1447, and re-instated on 8 Rabī’ī 852/19 June 1448.
He lost the office finally on 25 Dīdūmād II 852/26
August 1448. A few months later, about an hour after
the evening prayer in the night of Saturday, on 28
Dūl ‘l-Hidījārt 852/Saturday, 22 February 1449, he
died. His last will and testament, with a variety of
individual bequests, has been preserved (*Dīwān al-Ḥidījārt*, fols. 324b-325b; also ms. Istanbul, Reis-iil-kütatp 498, fols. 173b-175a). His physical appearance and
his qualities of character as well as his religious and
moral behaviour are described by his pupil al-
Sakhāwī as completely conforming to the ideal
standards of Islam, and there seem to have been few
dissenting voices among his biographers, al-Biṣārī
being a notable exception (cf. *Daw*[*i*], i, 104 f.). He
was a good chess player, and he seems to have remained
fond of poetry throughout his life.

Amidst all the success and acclaim which he found
as a scholar, teacher, and official, his family life
was not free of great disappointments. His wife,
Uns, bore him no living male children but only five daughters, and...
IBN HADJAR AL-HAYTAMI — IBN AL-HADJDJ

IBN HADJAR AL-HAYTAMI — IBN AL-HADJDJ

	hadjar al-Sa’di (after the Banu Sa’d in the Sharkiya province of Lower Egypt, where his family was originally settled), a famous scholar and prolific writer of the Shafi’i school. On account of the linguistic and religious enterprise of the Fathiyia, who was nicknamed Hadjar because of his taciturnity, moved to the village of Mahallat Abi l-Haytam in Sharkiya province, and there Ibn Hadjar was born towards the end of the year 909/1504 (some say in Raqib, the month in which he was to die). While still a child, he lost his father and then his grandfather, but his father’s teachers, Shams al-Din b. Abi l-Haytam (the Shafi’i of a city), and Shams al-Din Muhammed al-Shanawi, a disciple of this last, looked after his maintenance and education. Al-Shanawi placed him in the sanctuary of Sayyid Ahmad al-Badawi in Tanand and, after he had completed his elementary education there, sent him to the Azhar mosque in Cairo where he continued his studies from 924/1518, having a very hard time at first. His main teacher at the Azhar mosque was Zakariyya al-Muhasibi (d. 932/1526), and performed the Pilgrimage in 933/1527, remaining in Mecca during the following year. During this stay in Mecca, he started writing on fikhs, but not before Harith al-Muhasibi had given him in his sleep and encouraged him. When he was still a student, Ibn Hadjar had expressed his ambitions as an author on fikh in a Freudian dream which stated that “an act of worship consists of two parts: an act of worship without the exact application of the principles of the Shafi’i school, and it has often been printed. Whereas the followers of Ibn Hadjar (chiefly in Hizlas, Yaman, Hadramawt and East Africa) and the followers of al-Ramli had at first disputed fiercely with one another, the opinion finally prevailed that both were to be regarded as equally authoritative and indispensable expounders of the correct Shafi’i doctrine. Of almost equal importance are his fatwas on fikh, al-Fatwasy al-Hubara al-Fikhraya, Cairo 1308, collected by one of his disciples; they include several lengthy treatises with separate titles, e.g. his two polemics against Ibn Ziyad; many of the fatwas, and also, incidentally, some of Ibn Hadjar’s other writings, are concerned with contemporary problems. One of these writings is al-Sa’idah al-mubarsa fi ar-radd ‘ala ahl al-sagy (or ar-rafai) wa- Donald, a defence of the legitimacy of the offices of the first four Caliphs against the claims of the Shi’as; this work, completed in Shawwal 950/January 1544, gave out of lectures which Ibn Hadjar gave, in answer to numerous requests, in the Great Mosque of Mecca; it had an immediate success, spread in a few years “in innumerable copies to the remotest countries”, and has often been printed. Another is the Kaff al-nu’ra‘an (on muharammadi al-lahu wa’l-zandaka, al-rafd) wa’l-samd, a director of conscience, being one who considered “knowledge” and “action” to be inseparable. He also based his work on the principles according to which “an act of worship without the exact intention cannot be in accordance with the Law”, and he stated that “an act of worship consists of two parts: the first is the attitude of the body, the second the intention of the heart, but it is the second which is the more important”. In this can be clearly seen the application of the principles of the Ibay (he quotes al-Ghazali, i, 12) to the Maliki formalism which was very ready to identify, in the name of intention (niiyya), the science of law with the analysis of spiritual and practical music and games as practised in the Mamluk period and a poet and theologian who wrote a commentary on al-Sanusi.

The Maliki jurist was Abu Abd Allah Muhammad al-‘Abdari al-Fasi, born in Cairo in 732/1336. He is known especially for his Kitab al-Zawaj (printed in Cairo in 1329). In it he appears as a scholarly anxious to popularize his learning, as a jurist who was to a certain extent a director of conscience, being one who considered “knowledge” and “action” to be inseparable. He also based his work on the principles according to which “an act of worship without the exact intention cannot be in accordance with the Law”, and he stated that “an act of worship consists of two parts: the first is the attitude of the body, the second the intention of the heart, but it is the second which is the more important”. In this can be clearly seen the application of the principles of the Ibay (he quotes al-Ghazali, i, 12) to the Maliki formalism which was very ready to identify, in the name of intention (niiyya), the science of law with the analysis of spiritual and practical music and games as practised in the Mamluk period and a poet and theologian who wrote a commentary on al-Sanusi.

IBN AL-HADJDJ, name of several persons, including in particular a famous Maliki jurist, four grammarians, two Andalusi men of letters of the Nasrid period and a poet and theologian who wrote a commentary on al-Sanusi.

Bibliography: Brockelmann, C. van Arendonk (J. Schacht)
Sulayman b. Ibrahim b. Muhammad b. Haydara al-Kinawi al-Kifri (d. 598 or 599 H/1002-3), was a poet, a wit and a traditionist as well as a grammarian. He was the pupil of Abu Tahir Ibn al-Salt of Alexandria. He seems to have excelled in didactic poetry, which accorded particularly well with the wide extent of his learning. This specialist in adab and grammar, himself an eminent stylist, was the author of various treatises on philology as well as of a homily addressed to Sahl al-Din. He also wrote on Maliki law (see Ya'qub, Cairo ed., xi, 278); cf. al-Suyuti, Bughya, 567.

The 9th and 10th century grammarians were also called Ibn al-Hajj. They were Abu 'L-Abbas Ahmad b. Muhammad al-Sulami (d. 1273/1856) and Abu 'Abd Allah Muhammad b. Hamdu'l-Sulami (d. 1274/1857). They both wrote commentaries on the classic al-Afiyya (see Sarkis, 70).

Among the Andalusians, Abu 'L-Barakat Muhammad al-Balafi (d. 771/1370) was one of the persons who were most characteristic of his period. Musa al-Sabi has written an exhaustive monograph on him in al-Andalus, xxvii (1963), 381-424. Ibn Dzari considered him to be, in addition to his other talents, an outstanding "reader" of the Qur'an (ed. Bergstrasser, no. 3391).

Abd al-Mu'min b. Ya'qub b. Sa'id produced a poetic version of the little 'Abida of al-Sanusi [q.v.]; see Brockelmann, S II, 355; Burstani, Dala'il ma'drif ii, 442. (J.-C. Vade)

IBN AL-HADJIDJ. Abu Ishak Ibrahim b. 'Abd Allah al-Numi, Andalusian scholar and poet of the 8th/14th century. Born at Granada in 713/1313, he left Spain in 737/1337 and did not return until 759/1358, having during his absence made two journeys to the East and served as kadi under the Marinids and Hafids. Until his death in about 785/1383 he held the office of kadi and undertook various ambassadorial missions for the Nasrids.

Of his literary output, known by twenty titles, nothing is known to remain but fragments of verse scattered through various anthologies, biographical dictionaries, etc. This corpus has yet to be examined in detail. It is divided into three distinct groups and it is not firmly established that they are all by the same Ibn al-Hadji.

IBN AL-HADJIDJIDJ. Abu 'Abd Allah al-Husayn b. Ahmad b. Muhammad b. Da'far b. Muhammad, a Shi'ite Arab poet in the time of the Buyids [q.v.]. Born in Baghdad in about 330/941-2, of the family of government officials and secretaries, he completed the traditional studies and was partly trained by Abu Ishak Ismail al-Sabiri (213/829-925/929 [see al-Sabri]) who made him take up an administrative career, but he very quickly perceived that his poetic talents could prove more profitable and resigned his post. At first he was connected with the vizier al-Muhallabi [q.v.] for whom he wrote a panegyric and a satire on al-Mutanabbi (see R. Blachere, Abu l-Tayyib al-Mutanabbi, Paris 1935, 224-5), and whose death (353/965) he lamented. He next attached himself to the viziers Abu l-Fadl al-'Abbass al-Shirazi and Abu l-'Abbass Muhammad b. al-'Abbass, for whom he acted as a kind of enter-tainer, and fell out with a kadi of 'izz al-Dawla [q.v.] as a result of which he was committed to prison for a time. Shortly afterwards, on the strength of a poem addressed to the last-named, he succeeded in getting himself appointed muhtasib of Baghdad, under the vizierate of Ibn Bakriyya (362/973-7 [q.v.]) and even in resuming this position after being compelled to surrender it. At this period he also came in touch with Abu Tahir Ibn al-Amid (see Ibn al-'Amid, II) who greatly admired his poetry, and then received some kind of pension from Ibn 'Abbâd [q.v.] and profited from the bounty of the Buyid rulers; but it was principally the viziers and other eminent persons whose company he sought, living very familiarly with them and enjoying their protection and liberality, and this appears to have been his real objective. He even received 1,000 dinars from a Fâhimiyya who obtained a eulogy for him and feared his attacks. Thus, by the practice of what was perhaps a kind of blackmail, he succeeded in amassing a fortune, which he was clever enough to make still more productive, purchased estates, and even farmed the taxes in certain villages; in short, he became an influential man of affairs, and lived in prosperity until his death, which took place on one of his estates in Qumâdâ 1139/1725 May 1001; he was buried in Baghhdâd at the feet of Músâ al-Kâzîm [q.v.].

A mu'tasib and man of affairs, a family man devoted to his kin, such is one aspect of Ibn al-Hadjijidji's personality; but there is another, entirely different one which leads to the eye as soon as one begins to read his poetry, so different indeed that some have found it possible to speak of a dual personality. But his poetry, very extensive since his Diwan comprised ten volumes, also presents itself in two contradictory aspects: on the one hand, Ibn al-Hadjidji wrote mediocre and traditional panegyrics, following the neo-classical line; on the other hand, and of greater importance, he made himself the champion of a new type of poetry characterized by what he himself called sukfi [q.v.], giving to this term the sense of obscenity in scurrilous and vulgar language, lewdness, insolent grossness, cynical and aggressive non-conformism; sexuality and scatology are the basic features of this poetry, which respects nothing, neither Islam, nor the most honourable personages, nor even the poet himself. This sukfi is either the sole component of a short piece, or else one of the elements of a poem apparently serious. In Ibn al-Hadjidji there are thus two men, two poets, even two styles; in the traditional poetry, the expression is polished, the resources of a Âdâf are called into play, while in the sukfi the poet abandons himself to the inspiration of a fleeting and does not hesitate to use gutter slang, which gives his work a completely original flavour and makes him the master of the genre; an innovator, he had scarcely any rivals, and Ibn al-Habbâriyya [q.v.], who might come to mind, is far from possessing his verve.

The Diwan of Ibn al-Hadjidji has always been very much sought after, to the point that certain authorities have had to forbid the reading of it (see Machriq, x, 1085), but it has not yet been published, despite the existence of a complete manuscript in Baghhdâd, in the Library of Wâkfs; other libraries possess odd volumes (Dâr al-kutub, Cairo, Adab 7342, Maktaba Taymuriyya, 468, 606, 657; Brit. Mus. Or. 4591, Add. 7388; Göttingen, ar. 76). His contemporary and friend al-Sharîf al-Râdí (d. 406/1016/17) had made a collection of serious poetry under the title al-Nasîf min al-suhfî, while al-Astu'ri (d. 534/1139-40) had concerned himself more particularly with the sukfi; his collection entitled Durrat al-lâdig fi shir Ibn al-Hadjidji (MS Paris B.N., 5913) copied and glossed by Ibn al-Khshshâb [q.v.] was the subject of an unpublished work, presented as a thôse complémentaire at the Sorbonne in 1953, by 'Ali 'l-Tâhir who introduced it.
with a study on Ibn al-Ḥāḍjdjādī. Finally, Ibn Nubātā al-Miṣrī (586-768/1237-1336) et al. also made a selection of poems under the title Lāḥad il-ḥālij (MS Copenhagen, 260).

Bibliography: Thālibī, Yatīma, iii, 30-102.

IBN AL-ḤĀDJDJĀDĪ, Dmāl al-Ḏīn Ābuʾ ʾAmr Ūṯmān b. ʿUmar b. ʿAbī Bakr al-semblies, Mālikī fāṣḥī and grammarians who owes his popular name to the fact that his father, a Kūd, was chamberlain (ḥāджīdī) to the amirs ʿIzz al-Ḏīn Mūsā al-Ṣaḥlāḥ. He was born at ʿAṣnā, a village in Upper Egypt, after, 570/1174-5. He studied the Islamic sciences in Cairo with great success, particularly with al-Shāṭībī and Muḥammad al-Ūṯmānī. After that, at least for some years, he must have lived and taught in Cairo, as is shown by the Amālī dated from that town, the earliest in 609/1212-3, the latest in 616/1219-20. Ibn Kādī Shuhba (401) places his departure from that town. In Damascus, Ibn al-Ḥāḍjdjādī taught in the Maliki school; in manuscript (Brockelmann, S, i, 539; 541). (7) K. al-Makhdūr al-ṣalīl fi ʿilm al-khalil: an account of Arabic prosody, versified (in the Basīt metre); in manuscript in several libraries (Böckelmann, S, i, 371, S 1, 537); moreover (s优于) references to the manuscripts of seven commentators. Freytag published this Arabic prosody in verse (334-43), with German translation. Darstellung der arabischen Verseitung (Bonn 1830). (8) An Ṣāḥība: profession of Muslim faith; in MS (Böckelmann, S, i, 539; 541), for correction, Esc.1 1561, 6. (9) ʿI ṣbā bikdī ḍām min al-ʿKurʾ an al-ʿazīm, in manuscript at Aleppo, in the ʿŪṯmānīyya madrasa (and not in Mecca); see MMIA, xii, 470 and 471 foot. (10) Munḥahal ʿi-sūl wa al-nāmāl fi ʿilm al-ʿazīm wa ʿi-sūl: a treatise on the sources of law according to the Maʾlikī school; in manuscript (Böckelmann, S, i, 372 and S 1, 537). Ibn Ḥāḍjdjādī made extracts from it: Yūḥūn al-adīliya (MS, Paris, 5318) and an abridgment, Muḥḥāṣar al-Munḥahal fi ʿi-sūl (numerous MSS, Böckelmann, ibid.). This Muḥḥāṣar was the subject of numerous commentators (and then of glosses on the commentaries, and super-glosses; see ibid.). It has been published (Bölak 1316-9), with the Commentary of Aḥmad b. al-Ṭajīl (al-Muṣībāḥiyin, and different glosses; also published, Cairo 1326, (11) al-Muḥṭāṣar fi ʿi-sūrā or Dīmās al-Ummāhāt or simply al-Muḥḥāṣar al-ṣalīl (titles as given by Mūḥ. Ben Čeneb, in El1, s. v. Ibn al-Ḥāḍjdjādī). This compendium of Maliki law is still in manuscript (see Brockelmann, S, i, 373 and S 1, 538-9). It was commented on (al-Tawṣīḥ) by Khawāl b. ʿI ṣbā al-Dinī (Ṣīr Khawāl in Algeria) who, in regard to law, looked on Ibn al-Ḥāḍjdjādī as his model; also in manuscript, as are the glosses (see Brockelmann, ibid.).

Bibliography: In addition to the references in the text: Brockelmann, S, i, 367-73 and S 1, 531-9; M. Ben Čeneb, Etude sur les personnages mentionnés dans l’Idāsīa du Cheikh ʿAbd al-Qādir al-Fāṣī, Paris 1907, no. 191; M. Morand, Le droit musulman algérien (role malikite), Les origines, Algiers 1913, 9 ff. Arabic sources: first Sūyūṭī, Bāṣbq, 323 and Ibn Ḥaḍjdjādī, Wafṣāf, Cairo, ii, 413-4 (no. 386); then Taṣīr “īn Diḥār al-Kādī al-Shuhba, Taḥākāt al-nuḥāt wa ʿal-ḥuqqaṭiyin, MS. Damascus, Zāḥīriyya, 438 taʿrīh, 401-2, and Ibn Fārūn, al-Diḥīb, Cairo 1239, 157-9; then Ibn Khālidīn, Muḥāṣar, iii, 13-14 (tr. Rosenthal, iii, 18-19). Further, M. S. Howell, Gr. of the Classical Arabic Language (1990 edition, see ibid.).

IBN ḤĀDJDJĀDĪ, Aḥī b. Aḥīb al-ʿĀṣīr b. Ibrāhīm b. al-Nūmān, called Ibn Ḥāḍjdjādī al-Nūmān, 1275, 2 vols. But there is still no really convenient edition of this remarkable work, such as that of the Sharḥ on the Shafīʿiya referred to above.—On the manuscripts of the treatise of Ibn Ḥāḍjdjādī, see Brockelmann, S, i, 367-8, S 1, 531-5. (5) Amālī: his oral teaching, dictated to his hearers or to his son al-Muḥdjdal. Böckelmann here distinguishes two series, including different dates (unpublished; MSS: 2, 372-1, S 1, 537): (a) on the Kūrʾan, al-Mutanabbī and other poets, etc. (b) on some passages from the Kūrʾan and especially on the Mufassāl of al-Zamakhshāri. (4) al-Ṭāṣīd al-muṣāf al-zamān and ʿl-maṣāf al-zamān, a versified enumeration (in Kāmil) of feminine nouns without a feminine termination; published in A. Haffner and L. Cheikh, Dix anciens traités de philosophie arabe (2nd ed., Beirut 1914), 157; reproduced in Dīwā-ul-maṣāfīr of F. A. al-Būsṭānī, i, 1958, 426.

Bibliography: In addition to the references in the text: Brockelmann, S, i, 367-73 and S 1, 531-9; M. Arabic sources: first Sūyūṭī, Bāṣbq, 323 and Ibn Ḥaḍjdjādī, Wafṣāf, Cairo, ii, 413-4 (no. 386); then Taṣīr “īn Diḥār al-Kādī al-Shuhba, Taḥākāt al-nuḥāt wa ʿal-ḥuqqaṭiyin, MS. Damascus, Zāḥīriyya, 438 taʿrīh, 401-2, and Ibn Fārūn, al-Diḥīb, Cairo 1239, 157-9; then Ibn Khālidīn, Muḥāṣar, iii, 13-14 (tr. Rosenthal, iii, 18-19). Further, M. S. Howell, Gr. of the Classical Arabic Language (1990 edition, see ibid.).
secretary, anthologist and wit of the Buyid period (340-423/951-1031). He came of a family of viziers and secretaries which was particularly in favour with the Buyids of Iran, who were probably the authors of his success. He also served the caliphs al-Tāhī and al-Kādir. He was a bitter rival of Abu 'l-Fālā ibn Turayk, who at one time succeeded in supplanting him at the court of al-Kādir. He had a very wide knowledge of literature. According to the Fihrist, 116, he compiled a sort of anthology of the al-imdār, Ibn al-Hadrami started to fight, but he had a temporary governor, Ziyad b. Abihi, was terrified and had to abandon the arbitration. After consulting 'Amar, he then decided to send Ibn al-Hadrarmi to Başra and gave him precise instructions: his agent was to base his propaganda on the recent successes of the Umayyads and the doleful memories of the Battle of the Camel [see qama]; he was to distract the Rabštā' (Abu al-Kays), win the friendship of the Azd and rely on the Mużāris (Tamil) in order to secure acceptance of the arbitration and to try to withdraw the town from 'Ali's authority. In fact, the Başrans were very divided, and their chief concern was to live in peace. Thus, from the time of his arrival, Ibn al-Hadrarmi encountered very strong opposition, and the neutrality of al-Ahnaf b. Kayy [q.v.] was not unconnected with his final failure. Nevertheless he succeeded in rallying part of the inhabitants who were ready to "avenge the cause" of 'Ali and was able to make the temporary governor, Ziyād b. Abī, terrified and had to abandon the dār al-imāra to seek refuge with the Azd. Ibn al-Hadrarmi's supporters then tried to seize the governor's residence, but al-Ahnaf intervened and order was temporarily restored. It was at that point that 'Amar sent to Başra Aṣ'yan b. Dubayya al-Muğāšī, who, for a day during which the opposing groups had not been sufficiently inflamed for any fighting to break out, was assassinated, probably by the Khārijīs. The lack of enthusiasm of the Azd, who refused to fight, delayed events still further, but the situation developed after the arrival of Dīrāya b. Kudāma [q.v.], sent by 'Amar. While the Azd were trying to bring Ziyād back to the dār al-imāra, Ibn al-Hadrarmi started to fight, but he was beaten and compelled to take refuge in the house of a certain Sunbī who had given him hospitality at the time of his arrival. Dīrāya, following up his advantage, surrounded and set fire to Ibn al-Hadrarmi's hiding-place, and he and his companions perished. Mużāwiyâ, his hopes disappointed, had to wait until 41/661, when at last Başra was brought under his authority, through the energetic intervention of Busr b. Abī Artā [q.v.].

**Bibliography:** Tabārī, i, 3413-7; Ibn Habīb, Muḥabbār, 290; Tabārī, Ansāb, i, 556a; Ibn Abī 'l-Ḥadīth, Sharḥ Naḥdī al-baladā, i, 348-55 (which makes use of Wâlid and the Kitāb al-Ghārid of Ismā'īl b. Hâlî al-Thâqafī); Ibn Sa'd, Tabārī, Yâsīn, vii, 450; Ibn Hāzīm, Dīmāhrâ, 210; Caetani, Annali, x, 151-67; see also Bibl. to Ḵārīya b. Kudâma. (Ch. Pellat)

**IBN HADFÎN** [see 'Umār b. Ḥafṣîn].

**IBN HÂMÂDÛ** [Ibn Ḥâmâdû], Abī 'Abd Allâh Muḥâammad b. 'Allâb āba b. Yâsîs b. 'Abî Bakr al-Sanârî, a Berber kâdi and historian related to the Banû Ḥamîdû [q.v.] and a native of a village near their Qal'a [q.v.]. After studying at the Kal'a and in Bougie, he was kâdi of Algiers and Salé (unless there is some confusion on the part of the writer of the Mafâkhir al-Barbar (65), who gives him the kunya of Abu 'l-Ḥasan, he was also kâdi of Azamûr in 616/1220), and he died in 628/1223. His Kitâb al-Nabûdâ al-muhâdîfîa fi ašhâr malîk Şâhândâ bi-Iṣâriyya wa-Baṣrîyya, which was used by several later historians, in particular Ibn Khâlîd (Ibars, vii, 43) and the anonymous author of the Mafâkhir al-Barbar (ed. E. Lévi-Provençal, Rabat 1934, 51), appears to be lost, but there survives his short history of the U'baydîs, written in 617/1220 and preserved in manuscript in Paris (Bibl. Nat., 1868) and Algiers (1988, 3); it was first translated in part by Cherbonneau (in JA, 1862, ii, 470 ff., 1869, i, 199 ff.), and later was edited and translated in full by M. Vonderheyden (Histoire des rois obâdites, Algiers-Paris 1927). Ibn Ḥâmâdû also wrote poems, some specimens of which have been preserved by al-Ṭîjâni (Rīhla, ed. H. H. Abî al-Wâhâb, Tunis 1372/1958, 126-7).

**Bibliography:** Qubrīnî, Umayān al-dârîya, ed. M. Ben Cheneb, Algiers 1910, 128-30; Amari, Bibliotheca arabo-sicula, 317-8; Saâdi, iv, 157-8, no. 1692; F. Bustâlî, Dâ'irat al-maṣâfîr, ii, 473-4; R. Brunschvig, in Mélanges Gaudefroy-Demombynes, Cairo 1935-45, 156, n. 2; H. R. Idris, Zîrîdîs, i, p. XIX.

This Ibn Ḥâmâdû should not be confused with his homonym Abî 'Abd Allâh Muḥâammad b. Ḥamîdû al-Burnûsî al-Sâbî who lived in the 6th/12th century and was the pupil of the kâdi 'Iyâd [q.v.]; he is the author of a large work entitled Hububîs fi ašhâr al-Mugâšî wa-l-'Andalus, now lost.

**Bibliography:** Ibn Uqhârî, Bayân, i, trans. 314, n. 1; Mafâkhir al-Barbar, 43, 46, 58, 64; E. Lévi-Provençal, in Arabica, i (1954), 25-6, n. 3; R. Brunschvig, in Mélanges Gaudefroy-Demombynes, 156, n. 2; H. R. Idris, Zîrîdîs, i, p. XIX. (Ed.)

**IBN HAMÁMÁ** [see BILÂL B. Râbab].

**IBN HâMÎDÎS** [Abî al-Dîrâbās Abî Muḥâmmad b. Abî Bakr al-Azdî, Arab poet of Muslim Sicily. From the date of his death (527/1132-3) and some verses in which he refers to himself as an octogenarian, it may be deduced that he was born, at Syracuse, in about 447/1055, i.e., just before the Christian conquest of the island, which was begun in 1066 and completed by the joint action of Robert and Roger d'Hauteville, called to Sicily by Ibn al-Thumân [q.v.], amir of Catania.

Practically nothing is known of the period of his youth, which the poet must have spent in Sicily, but judging from allusions in his poems (Didoé, ed. C. Schiaparelli, nos. 27, 110, 127, 157, 260, etc.) to revels and deep drinking, it seems to have been a gay one. And even allowing for the conventional use of these poetical motifs, which are found in almost all Baccanalian Arabic poetry, one thing is clear: the poet's sincere nostalgia for certain places on the
IBN HAMDIS — IBN HAMDUN

Island, objects of his longing, whose location remains unknown to us apart from Syracuse and Noto, which are occasionally mentioned in his poems. Nor is it known whether the poet took part in some of the battles against the Normans before he left Sicily for Spain in 471/1078-9. At Seville he was received at the court of the prince al-Mu’tamid Ibn ʿAbbad (Diwan, 344), who attracted to himself poets and men of letters. In this first exile he was fortunate to live in a literary circle of which the prince was the patron and animating spirit, to take part in the gay life of the ʿAbbadid capital, and to follow the political events of that time, which are reflected in his poetry. Ibn Hamdis declares (Diwan, no. 328) his aversion for satire and indeed no poems of hijād are found in the Diwan.

Ibn Hamdis’s style and his use of poetic language are both unequal: in his poems, together with great verbal and syntactical simplicity, is found the frequent use of an excessively precious vocabulary and of constructions which are merely tricks of paronomasia and alliteration, puns used to mask the poverty of the thought behind them. In this respect it is fairly certain that the charm, or rather the fashion, of the poetical neo-classicism represented by al-Mutanabbi, under whose influence the poet came, especially in panegyric; but his real poetic talent is seen more often in the descriptive fragments, which may have been influenced by the Andalusian poetic environment.

Bibliography: The first scholar to be interested in Ibn Hamdis was M. Amari, who in his Biblioteca arabo-sicula (Antwerp, 1891; Leipsig, 1857; Ital. tr., Turin 1888-2) published a certain number of poems relating to Sicily, and in his Storia dei Musulmani di Sicilia, Catania 1933-9, ii, 592-602 collected information on the poet’s life from different sources. Later, the whole of the Diwan was edited, on the basis of the two surviving manuscripts, by C. Schiaparelli (Rome 1897) who prepared a complete Italian translation of it, which remains unpublished. A new edition, based on only one of the manuscripts (that of the Vatican) and with a certain number of emendations, was published at Beirut in 1960, by Ihsan Abbās, who was able to add to the first edition of the Diwan about 100 verses from various sources. Translations into European languages of verses of Ibn Hamdis are found in: A. von Schack, Poesie e storia dell’Arabo in Spazien und Sicilien, Berlin 1855, ii, 16-33; L. Bercher, Le palais d’El-Mansour à Bougac, in RT, xxix (1922), 50-6; H. Massé, Un chapitre des anecdotes d’al-Maghrビ上 la littérature descriptive chez les Arabes, in Mélanges René Basset, Paris 1923, i, 235-58; F. IBN HAMDUN, name of the members of the family of the Banū Hamdun, a line of “boon-companions” (nadīm) of the caliphs, who flourished mainly in the first half of the 7th/13th century. A great deal of information is available on Aḥmad b. ʿIbrahim b. Dawūd b. Ḥamdun, a contemporary of the caliphs al-Muṭaṣim, al-Wāṣīk and al-Mutawakkil, but very little on the other members of the family. Unfortunately the Arabic sources, accepting the claims of the Banū Hamdūn to noble descent, have endowed them with a disproportionately long genealogical tree in which it is difficult to distinguish about Sicily and Andalusia, or various subjects such as nature, war, animals, hunting, etc. (Diwan, nos. 3, 6, 17, 21, 23, 31, 81, 116, 164). Ibn Hamdis declares (Diwan, no. 328) his aversion for satire and indeed no poems of hijād are found in the Diwan.

IBN HANI AL-ANDALUSI, MUHAMMAD B. HANI B. SADUN AL-ANDALUSI, famous court poet of the Banu Hamdun, rulers of al-Andalus and of the fourth Fatimid caliph, al-Mu'tizz li-din Allâh; he belonged to the Yemeni tribe of Azd, who, ever since the conflict between 'Ali and Mu'sâwiyah, many times supported the Shi'î cause. His Irâkîan descent was in a direct line from one of the most illustrious amirs of the famous family of the Muhallabids, Yazid b. Hatim, who governed Irîkiya for the Abbâsids from 155 to 171/772-87, distinguishing himself by an energetic policy of pacification and administrative reorganization.

Nevertheless, hardly anything is known of the life of Ibn Hânî. The information about him found in the Sunnî as well as the Ismâ'îlî sources is concerned almost exclusively with his career as a writer of panegyric poetry, at the court of Masila and then at that of al-Manşûriyya. The fact that he belonged to the Ismâ'îlî sect surrounded him, even in his own lifetime, with an aura of mystery which is very difficult to penetrate.

He was born in Seville in the reign of the first Umayyad caliph, al-Nâṣir li-din Allâh, probably between 322 and 326/934-8. His father, a native of Irîkiya, seems to have settled at Seville after having lived at Cordova, probably at the time when the young 'amir of al-Andalus, having pacified the kingdom of his ancestors, had just proclaimed himself caliph, while at the other end of Barbary the first Fâtîmid, al-Mahdî bi'llâh, was reasserting in his new capital of al-Mahdiyya, and after the failure of his two attempts against Egypt, his expansionist ambitions concerning the throne of Cordova. Such information as exists on the Fâtîmid propaganda seems to indicate that Hânî, himself a poet, was one of the many missionaries (das'âs) whom the Ismâ'îlî imâm maintained in Muslim Spain after the foundation of the Fâtîmid anti-caliphate in 297/909-10. Ismâ'îlî agents had already been working for a long time among the Mozarab supporters of Ibn Haşûn and with the Arab nobles of Kalbi descent, settled in Seville and other fortified towns, whom 'Abd al-Rahmân III, after his grandfather, the 'amir 'Abd Allâh, had great difficulty in reducing. Hânî, like the Mozarab and Arab nobles, was more at ease among the mystics, ascetics or men of science and letters, must have found, from Seville to Elvira and even Cordova, a fertile field for the dissemination of the Ismâ'îlî da'wâ. In addition, the intellectual development of the young Muhammads b. Hânî, at first at Seville itself, then in Cordova and Elvira, demonstrates the Ismâ'îlî influence which his father must have had on him, as well as the philosophic teaching which the disciples of Ibn Masârî (d. 319/931) continued to disseminate. The future panegyrist of al-Mu'tizz in fact pursued his studies in a period when the rationalist theories of Mu'tazilism and the metaphysical theories of Ibn Masârî, close to those of the Ismâ'îlî Bâtiniyya, were spread among a heterogenous population which was composed for the greater part of Mozarabs and of Arabs of Yemeni extraction, hostile to the power of the Umayyads and susceptible to Fâtîmid propaganda. At Elvira (near to Bobastro, a fief of the Mozarabs who had for long been in revolt against Cordova) as at Seville (a bastion of the Banu 'l-Hâdjîdâdî and other great families of the Yemeni nobility), the young poet lost no time in expressing publicly in a region so hostile to the Umayyads his Ismâ'îlî convictions. But having made himself conspicuous by publishing his pro-Fâtîmid sympathies, at a time when in Cordova, thanks to the energetic support of al-Nâṣir, the strictest type of Sunnî orthodoxy, that of Mâlikîm, had gained the ascendancy, the young Ibn Hânî was bound eventually to become the object of persecutions. Neither Seville nor Elvira, having finally submitted to the central power, could with impunity offer him protection, in spite of the great authority which its protectors, the Banu 'l-Hâdjîdâdî, had nevertheless retained.

Thus Ibn Hânî was obliged to leave al-Andalus for Irîkiya, particularly since, with the accession of al-Mu'tizz, 171/985-3, the fortunes of the Fâtîmids after a brief eclipse due to the Khâridjî insurrection of Abû Yazid [q.v.], were once more enjoying a brilliant success.

In 347/958, the Fâtîmid army, in a campaign in the extreme Maghrib under the command of Diawhar, had arrived in northern Morocco. After this, Ibn Hânî had no hesitation in leaving al-Andalus for good, to join, outside Ceuta, the Fâtîmid general, of whose glory he immediately began to write, vehemently condemning the "accursed" Umayyads. From this time there began for the young poet a brilliant career as a panegyrist, an ardent defender of the cause of the Fâtîmids, who were intensifying their imperialist propaganda in the West as well as in the Muslim East. The sources stress Ibn Hânî's role as propagandist. Among the lords of Masila, the brothers 'Ija'far and Yâhîya (the former being the foster-brother of al-Mu'tizz), Ibn Hânî received a great welcome.

At the court of al-Manşûriyya, where the talented poets included al-Faza'irî and Ibn al-Iyâdî, the young Ibn Hânî distinguished himself by the zeal which he showed in praising the merits of the imâms and in composing very extravagant panegyrics to the glory of al-Mu'tizz. His poems, which immediately became widely read, ensured that the imperial aims and the doctrines of the masters of Irîkiya became widely known within their territories, and also beyond their frontiers as far as Cordova to the west and Baghdad to the east.

Thus his poetry is of documentary value in providing information on the political propaganda of the Fâtîmids, who were certainly planning to oust the Umayyads. The 'Abbasids who also maintained an opportunity of making known their claims in Muslim Spain, where their hereditary enemies, the Umayyads, were attempting to prevent the infiltration of their doctrines and to put a stop to their subversive intrigues. In addition to their considerable use to the historian of the Fâtîmids, those famous panegyrics dedicated to al-Mu'tizz have also an undeniable literary value, despite the exaggerated condemnation of them by Ma'ârî and the more temperate criticism of Ibn Şaraf. There is no doubt that Ibn Hânî is a great poet, the first great poet of the Muslim West. His taste for hyperbole and the secret of his symbolism can be explained by his Ismâ'îlî faith and the sincerity of his adoration for his imâm. Ibn Hânî's works may for this reason form an enigma for readers who do not possess the knowledge, albeit elementary, of Ismâ'îlî doctrine which is required to understand his poetry and appreciate its true value.

His death also is shrouded in mystery. The circumstances of his death are not known; it may have been a political murder carried out by agents in the pay of the 'Abbasids or the Umayyads, or perhaps a crime passionnel after a quarrel. Even the date is uncertain. Ibn Khallîkân states that he tried in vain to establish it with certainty and found it only in the Kawkâlī.
al-dhahab of Ibn Rashik (where it does not in fact appear). The generally...  

IBN ḤABR [see 'Abd allāh b. Saba‘; al-Kindi, Ibn Ḥarr]  

IBN HARMA, Ibrāhim b. ‘Ali b. Salama (b. ‘Amir) b. Harma al-Fihrist, Abū ʿIṣāk, Arab poet of Medina, born in 90-909, who, if his genealogy is correct, was a distant relative of the tribe of Kuryah. Little is known of his life. A supporter of the ‘Alids, he attended and paneegyrised ‘Abd allāh b. al-Ḥasan [q.v.] and al-Ḥasan b. ʿAzīz [q.v.], but he is said to have refrained from giving his support to Muḥammad b. ‘Abd allāh [q.v.] when the latter revolted against the ‘Abbasids. The Aghānī names several persons for whom he had occasion to exercise his poetic gifts, but it must be remembered that after singing the praises of some Umayyads—especially al-Walid b. ʿAzīz—he tried in 140/757 to gain the favour of al-Maḥrūṣ, who pardoned his past conduct; perhaps he also approached al-Mahdī, for it is possible that he lived until about 170/786. He was buried at Bākī [q.v.], but by then he had fallen into such complete obscurity that no writer is able to give the exact date of his death. Al-Zubayr b. Bakhr, however, wrote a Kītaḥ Ḥabbār Ibn Harma (Fihrist, Cairo ed., 161).  

The physical and moral portrait of Ibn Harma is scarcely an attractive one. Ugly, small in stature, impolite and avaricious, he was furthermore addicted to drink, a vice which earned him some disapprobations, although it is related that al-Maḥrūṣ found a way to safeguard him by decreeing that he would be punished by 60 lashes of the whip if found drunk, but that the policeman who brought him before the governor of Medina would receive 20 lashes. Of his poetry, handed down by his rāwī Ibn Rubayh, and collected together by al-ʿAṣmā‘i, and later by Ibn al-Sikkil, al-Sukkari and al-Ṣūlī, all that survives is a small number of verses scattered through works of adab. His quite extensive Dīwān included free translations of Bedouin type, some rude tales, and some erotic and Bacchic poetry; but it is important to note that al-ʿAṣmā‘i and Abū ʿUbayda described Ibn Harma as one of the poets who have “sealed (khālama) poetry” and represent the rearguard (ṣāba) of classicism; he is thus one of the last to be regarded by philologists as an authority on the subject of the Arabic language. Al-Dāhibī gives particularly the text of his short fable of the lizard and the frog, and another context, places him in the same rank as Bashshār [q.v.] for the use of bādir [q.v.]; indeed, he seems to have been one of the first poets to exploit the resources of the “trade”, as is proved by a bāsid (poem) consisting solely of undotted letters.

IBN ḤASAN AL-NUBĀḤI [see al-Nubāḥ].  

IBN ḤAWRĀL, Abū ʿl-Ḥaṣim b. ‘Alī al-ʾNabīsī, }
Arab geographer of the second half of the 4th/10th century, one of the best exponents, with his contemporary al-Muṣṭaḍḍāsī (q.v.), of geography based on travel and direct observation (īṣān).

Ibn Ḥawkal was born in Naṣīḥīn (Nisibis) in Upper Mesopotamia (al-Dījāzira). He probably spent his early years in this region before beginning, on 7 Ramdān 332/15 May 943, an impressive series of journeys, the course of which it is possible to trace, at least in outline, by means of the few dates given in his work: North Africa, Spain and the southern edge of the Sahara (336-40/947-51), Egypt and the northern regions of Islam: Armenia and Ḥādibil bāydayn (about 344/955), al-Dījāzira, Ṭrāk, Ḫūzistān and Fārs (350-8/961-9), Ḫwāzām and Transoxania (about 358/969), and finally Sicily (362/973), after which we lose trace of him. It may be said with fair certainty that Ibn Ḥawkal was engaged in the activities of a merchant and missionary. As to the first, there may be noted the details (often with figures) of prices, products and of economic activity in general. As for his political-religious sympathies, the Fāṭimid professions of faith which are found in his work indicate that he was at least sincerely in sympathy with the movement; although it is difficult to state categorically that he was a Fāṭimid dā'ī, with the convinced and militant attitude which this implies, the interest which he took in Fāṭimid policy certainly appears quite clearly. It is within this context that it is possible to explain, among other details, the passages on Nubia or on the history of North Africa, also Ibn Ḥawkal’s opinions on Umayyad Spain and Kalbī Sicily, his occasional complaints against the administration of Fāṭimid Egypt being explained by strictly commercial considerations.

Apart from a work on Sicily, which has not survived, Ibn Ḥawkal’s main work was a description of the Islamic countries, known under the titles Kītāb al-Maṣālik wa l-mā’ālik or Kītāb Šarāt al-arḍ. It has so far been impossible to establish with certainty the history of the text; it nevertheless seems clear that it appeared in several successive redactions. The first is dedicated to the Ḥamdūnī Sayfī al-Dawla and is therefore earlier than 356/967, when this ruler died. The second, full of criticism of this dynasty and others of the Sabānīn who had borrowed his work must have appeared in about 367/977. Finally, a definitive and complete version of the work must have appeared in about 378/988. The appearance of the work in successive versions is clearly the reason for some of the obscurities to be found in it and in particular those which appear on more than one point in the description of Sicily.

Another, and perhaps the most important, source of confusion is to be found in his plagiarizing, more or less closely, the text of al-Ṭaḥkhrī (q.v.), which Ibn Ḥawkal took as the basis for his own description. No detail can be extracted from Ibn Ḥawkal’s work and no judgement pronounced on it before the origin of the passage in question has been determined. Moreover, the patient and systematic comparison of the two texts has the advantage of illustrating Ibn Ḥawkal’s originality compared with his predecessor. It appears on the whole that, leaving aside certain alterations of style intended, in Ibn Ḥawkal’s opinion, to raise the tone, to amplify a phrase or to form a complete break with convention; for one thing, Ibn Ḥawkal is much less interested in rare or precious products than in the basic agricultural and manufactured products, and secondly he was able to study on the spot a given economic situation in relation to a particular period or with reference to an implicit norm. He was the only Arab geographer of the period who really sketched a vivid picture of production.

To begin with, Ibn Ḥawkal probably intended nothing more than to make, in the form of corrections, his contribution to the corpus of the geographical school of al-Balḵāḵī (q.v.). To judge from the terms in which he describes his meeting with al-Ṭaḥkhrī and the encouragement which the latter gave him, it was as a collection of maps of the Islamic world alone that Ibn Ḥawkal first envisaged his geographical work. However, very soon the facts which he accumulated during his travels must have encouraged him to devote the greater part of his effort to the description of places in al-Ṭaḥkhrī, was only secondary, being primarily merely a commentary on the maps in the old tradition of the šūrah Na’mānīyya. Ibn Ḥawkal’s innovation therefore was first to transform this commentary into a work in its own right, considerably expanded and independent of the maps.

Another modification was that, without in the plan of the work going beyond either the general framework of Islam or, in the description of details, the boundaries of each province (ṣīrām) dealt with one by one, Ibn Ḥawkal, adopting in this an outlook of administrative geography as found for example in al-Dījahānī (q.v.), adds to his description remarks on various countries or peoples bordering on the Islamic world which he considers to be of particular importance: notable examples are the passages on the Turks, the Khazars, the towns of southern Italy, the Sudanese and the Nubians.

Within the Muslim region proper, he similarly provides additional facts, the important pages here being those devoted to the West (the Maghrib, Spain, Egypt, and Sicily) and the North-East (Ḵurāsān and Transoxania in particular). Nevertheless it would be wrong, however great their interest, to limit our attention to these pages. Everywhere, in fact, Ibn Ḥawkal imposes on the work of his predecessor, even if only by corrections of detail or of the order of words or lines, the stamp of his own work, the main aim of which is to place the book firmly within his own period. His constant care to depict a region precisely in the state and at the date that he himself had seen it, and occasional references to the distant or more recent past, give to his text, besides a vividness of description and the rigour which is a hallmark of his identification of geographical phenomena, an undoubted value for the historian. This is particularly true of the notes on economic matters, which form a complete break with convention; for one thing, Ibn Ḥawkal is much less interested in rare or precious products than in the basic agricultural and manufactured products, and secondly he was able to use the spot a given economic situation in relation to a particular period or with reference to an implicit norm. He was the only Arab geographer of the period who really sketched a vivid picture of production.

An edition of Ibn Ḥawkal was published by De Goeje (Leiden 1873). This is now superseded by that of Kramers (Leiden 1938). A translation of the text which had been prepared by Kramers was published with revisions by G. Wiet, Configuration de la terre (Paris-Beirut 1964).

Bibliography: In addition to the introductions by J. H. Kramers and by G. Wiet, we give here, from a relatively abundant bibliography, the most recent works, which discuss the points at issue: Brockelmann, I, 263, S I, 408; Kabībī, Muwilām al-mu‘allīfīn, xi, 5; R. Blachère and H. Damman, Extraits des principaux géographes arabes du Moyen Âge, Paris 1957, 134 ff.; I. Yu.

IBN HAWSHAB [see MANŞUR AL-YAMAN].

IBN AL-HAWWS, ‘Ali b. Nimra, was one of the khâdis who shared Sicily after the last Kalbi amir, al-Hakim (395-411/1005-21), was deposed in 444/1052-3 (according to Ibn Khaldun: 437/1043-4). This was the most obscure and chaotic period of Muslim Sicily, racked by civil wars and the rivalries of the local leaders who sought at the same time to bring about Byzantine intervention and the landing in the island of a Zirid army. In this same time to bring about Byzantine intervention and the landing in the island of a Zirid army. In this

Some time afterwards the two brothers-in-law fought each other over an entirely family matter; following his victory, near Castrogiovanni, over his adversary, Ibn al-Hawwas became the only powerful amir who shared Sicily after the last Kalbi amir, al-Hakim (395-411/1005-21), was deposed in 444/1052-3 (according to Ibn Khaldun: 437/1043-4). This was the most obscure and chaotic period of Muslim Sicily, racked by civil wars and the rivalries of the local leaders who sought at the same time to bring about Byzantine intervention and the landing in the island of a Zirid army. In this disturbed atmosphere, the khâdi Ibn al-Hawwas managed to remain lord of Agrigento, Castrogiovanni and Castronuovo with their surrounding districts, while his brother-in-law, Ibn al-Maklati, occupied Catania, which was soon taken from him—together with his wife (Maymûna, Ibn al-Hawwas’s sister) and his own life—by his rival Ibn al-Thumna [g.v.], lord of Syracuse.

The works best known to us are:—(1) Maâkla fi ‘istkhûrid samt al-kibla (cf. C. Schey, Abhandlung über die Bestimmung der Richtung der Qibla, in ZDMG, ixxv (1921), 242-53) in which he established the theorem of the cotangent:

\[
\begin{align*}
\sin \varphi & \pm \cos (\lambda_2 - \lambda_1) = \cos \varphi_1 \pm \varphi_2 \\
\sin (\lambda_2 - \lambda_1) & = \pm \cos \varphi_1 \pm \varphi_2 \\
\end{align*}
\]

(2) Maâkla fi hay‘at al-dîlâm (which had two Hebrew translations, one in 1572 by F. Risner under the title Thesaurus Opaticus. In the fifth maâkla Alhazen’s mathematical genius attained its highest development when he resolved the problem which today bears his name: two points, A and B, are fixed on the plane of a circle with centre O and radius R. Find in the circle (idealized in a mirror) the point M where the ray of light emitted by A must be reflected in order that it may pass through B. Alhazen’s demonstration, which is very complex, leads to an equation of the fourth degree which he solves by means of the intersection of an equilateral hyperbole with a circle. Leonardo da Vinci later became interested in the problem, which he could only solve mechanically, for lack of mathematical means. C. Huygens (d. 1695) finally gave the most elegant and simplest solution (cf. Encyclopédie delle matematiche elementari, i/2, 388-9). (4) Maâkla fi daw‘ al-kamar, an important work on account of the ideas expounded on light, colours and the celestial movements. (5) Fi ‘l-marâdî ‘l-murâfbîk bi-l-daw‘îr (cf. Schey, ii, 18 and iii, 8), translated by E. Wiedemann in Bibliotheca Mathematica, x (1910), 293-307. (6) Fi ‘l-marâdî ‘l-murâfbîk bi-l-hulûf on parabolic mirrors (translated by J. L. Heiberg and E. Wiedemann, in Bibliotheca Mathematica, x (1910), 201-37). (7) Fi anna ‘l-kura awsa* al-akhkhîl al-muqâjama allati šâha‘hâ mutasâsiwâ (translated and commented on by H. Dilgan (Actes IX* Congres Intern. d’Hist. des Sciences, 1959, 453-60). In it he demonstrates that “of two regular polygons inscribed in the same circle, that which has the greater number of sides has also the larger surface and the larger perimeter.” (8) Fi kâysfiyát al-isâlî (abridged translation by E. Wiedemann, in SBPEMS Ergl., xxxix (1907), 226-48). (9) Fi athar alladhi fi l-kamâr (tr. C. Schey, Hanover 1925). (10) Fi ‘l-daw‘ (ed. J. Baermann, in ZDMG xxxvi (1882), 195-237, ed. Cairo 1936). (11) Fi ‘l-ma‘âlîn (abbr. tr. by E. Wiedemann, in SBPEMS Ergl., xii (1909), i-25) which has no connexion with (12)
FI 'T-MA'KĀN WA 'T-ZAMĀN (cf. Schramm, ii, 2 and iii, 68).

Besides the contributions already mentioned, it should be noted that Ibn al-Haytham established that the astronomical twilight began or finished when the negative height of the sun reached 19° and, proceeding from there, he fixed the height of the atmosphere at 52,000 paces; he correctly explained atmospheric refraction and the augmentation of the apparent diameter of the sun and moon when they are seen in the horizon. In the field of mathematics he nearly resolved the problem of al-Mahani, wrote a treatise on parallax. In the field of mathematics he nearly resolved the problem of al-Mahani, wrote a treatise on parallax. In the field of astronomy he neatly explained the difficulties. But he did not consider the caustic curve; he determined that the Milky Way was very remote from the earth and that it did not belong to the atmosphere, since it had no apparent diameter, and that it outside the earth. Without him, we should not be able to check, thanks to numerous quotations, the greater part of the chronicle of Ibn Shubair. Without him, we should have no quotations from the Muktabis, which covers the history of his own time, namely, nearly the whole of the 9th/10th century, in sixty parts or volumes with an admirable attention to detail and an exactitude which are highlighted by a rare political understanding of events. Although all the volumes of the Muktabis are lost, the author's great admirer Ibn Bassam (d. 993) has preserved for us in his monograph and extensive passages that, thanks to the (still incomplete) edition of the Dhakhira published in Egypt, it has become possible to reconstruct—admittedly with difficulty—a large part of the vanished text: this arises from the scrupulous fidelity, rare in mediaeval literature, with which Ibn Bassam always indicates the beginning and end of the passages transcribed.

"Whenever one considers any particular aspect of the work of Ibn Hayyān," states its most authoritative historian, E. Lévi-Provençal, "one is nearly always obliged to revert to Ibn Hayyān. Without his Muktabis, we should have no quotations from the two Rāzāls, nor from two other chroniclers of the 10th century, almost as important and of the same school, the Kurayshī Mustawiya ibn Ṣīhar ibn al-Mahāni and another Cordovan of Arab stock, al-Ḥasan b. Mufarrid. Without him, we should not be able to check, thanks to numerous quotations, the greater part of the chronicle of Ibn al-Kūṭiya and extensive passages from the writings of al-Khushānī and Ibn al-Paradī in less abridged versions than those which have been published. Lastly, without Ibn Hayyān's skeletal compilation (tablātī) of Ibn 'Īdrīsī's al-muṣṭafā bi l-ma'ārif, we would never have known the light of day, nor probably, as a result, would Dozy's history."

The third part of the Muktabis has been published by M. M. Antuña, under the title: Chronique du
IBN HAYYÜS, ABU 'L-FİTYÂN MÜHAMMAD b. SÜLTAN b. MÜHAMMAD b. HAYYÜS b. GHAŅAWI, Syrian poet of the 5th/11th century. Born at Damascus in 394/1003, he seems to have been at first attached to the Banû 'Ammar [see 'AMMAR] of Tripoli in Syria, although he is referred to as being in Aleppo in 429/1037-8; his sympathy with the Fātimids of Egypt caused him to fall out of favour with the Banû 'Ammar, who had become independent, and in 464/1072 he was summoned to Aleppo by the Mīrādīs [q.v.]. Maḥmūd b. Naṣr (457/1065-75), in whose praise he began to write. On the death of his patron, he wrote a marthiya which was also an eulogy of Naṣr b. Maḥmūd (467-8/1075-6). After the latter had been assassinated, Ibn Hayyūs remained at the court of his successor, Sābīk b. Maḥmūd, though this did not prevent his addressing praises also to Muslim b. Kurayyah, who captured Aleppo in 473/1080; as a reward Muslim gave him al-Mawsil as a fief, but the poet died before he was able to take possession of it, in Sha'ban 473/January-February 1081.

Ibn Hayyūs, who is considered as one of the greatest Syrian poets of the 5th/11th century after al-Maṣrī, left a Dīwān which was published in Damascus by Khalîl Mardam in 1951 (2 vols.).

IBN HAZİM [see MÜHAMMAD b. HAZİM].

IBN HAZİM, patronymic of an Andalusian family, several members of which played an important rôle during the Umayyad caliphate. The most famous of them is without doubt Abû Mūḥāmmad 'All Ibn Ḥazım [see the following article], but some brief details on the Banû Ḥazım are given here, since confusions often arise.

(1) 'All's father was Abû 'Umar ʻAbd Allâh b. Šaʻd b. Ḥazım b. Ǧālīb b. Šalīh b. Ḥalāf. A dignitary at the court of the kādījī Banû Maṣṣûr Ibn Abl 'Amir and that of his son al-Muẓaffar, he was greatly affected by the serious events which occurred in 399/1009 [see AL-ANDALUS] and died on 28 Dhu 'l-Ka‘aḏa 402/21 June 1012. See Ibn Baqīṣū, Šīla, no. 40; Abû ʻAmir, Ḥalāf, and E. Lévi-Provençal, Hist. Exp. Mus., index; idem, En reisant le "Collier de la Colombie", in al-Andalus, xv/2 (1950), 345-7.

(2) 'All's elder brother, Abû Bârîk, of whom only the ḥimyā is known, was born in 379/989 and died at the age of 22 during the epidemic of plague which ravaged Cordova, in Dhu 'l-Ka‘aḏa 401/June 1011. It was to him that Ibn Shuḥayd [q.v.] dedicated his Risāla li-ta’āwūsī 'ša‘ la-‘uṣūsī, which indicates the date at which this work was written. See Ibn Ḥażım, Tawik al-ḥamāma, ed. and tr. L. Bercher, 303, 309; E. Lévi-Provençal, Hist. Exp. Mus., ii, 64-5; idem, En reisant, 358.

(3) 'All's son, Abû Râfî' al-Fâdîl, entered the service of the 'Abbâdîs of Seville and was killed at the battle of al-Zallâkât [q.v.] in Radjab 479/October 1086. He is the author of a historical work entitled al-Hādî tā mawrijat an-nasa‘ al-abbâdî. See Ibn al-Abâr, Ǧūlla, ed. Muḥnis, ii, 34.

(4) Another Ibn Ḥażım fairly often mentioned is 'All's cousin Abû 'L-Muqīyīr Abû al-Wâhîb Abû 'L-Muqīyīr Abû Ḥamād b. Abû al-Râhîm b. Ḥazım. Servant to the administration and a wit, he was appointed vizier by al-Muṣṭârīf during the brief caliphate of the latter (414/1023) and then entered the service of the petty kings of Saragossa; he was vizier of Munqīh b. Yâḥyâ when the town fell, in 431/1040, and was imprisoned and then probably released after a ransom had been paid. He died in 438/1046. He had belonged to the group of young Cordovan aristocrats of brilliant literary talent, and his relations with Ibn Shuḥayd were well-known; according to Ibn Khâkân (Majma‘, 22 = al-Mākārī, Analectes, i, 408-9), Ibn Shuḥayd was not a good influence on Abû 'l-Muqīyīr, who led a more sober life after his friend's death. Ibn Ḥazım (apud Ibn Bassām, Dhakhīra, i/i, 111), who thought very highly of his qualities as a poet and prose writer, states that he wrote in his youth a number of works and adds that he always won any arguments with his cousin because of his ready wit and his learning. It appears that he enjoyed some degree of fame even beyond the frontiers of Muslim Spain, since it was to him that the Ǧâyrawānī Ibn al-Râbī [q.v.] addressed the famous epistle in which he criticized the Andałūsīs for not perpetuating the memory of their famous men; Abû 'l-Muqīyīr replied to these criticisms at some length, but Ibn Bassām (Dhakhīra, i/i, 113-6) did not consider it necessary to preserve the whole of the text of this reply, and in particular made the regrettable decision to suppress the list of Andałūsī works with which it ended. It is known that 'All Ibn Ḥazım also replied to this letter and that the text of his reply survives, probably in full [see Ibn al-Râbī]. In addition Ibn Bassām and al-Mākārī wrote about Abû Ḥamād in a certain number of prose and verse texts by Abû 'l-Muqīyīr which clearly show considerable literary qualities. See Ibn Bassām, Dhakhīra, i/i, 110-52; Ibn Ḥazım, Tawik al-ḥamāma, ed. and tr. L. Bercher, 327; Ibn Khâkân, Majma‘, 22; al-Mākārī, Analectes, index; Ibn al-Ḳāṭīb, A‘mad al-‘ālām, 197; H. Pêres, Poésie, 14, n. 4, 57; E. Lévi-Provençal, Hist. Exp. Mus., ii, 334; Dozy, HME, ii, 330; Ch. Pellat, in al-Andalus, xii/1 (1954), 53. (Ch. Pellat)

IBN HAZİM, ABû MUHAMMAD 'ALI b. ABD ALLÂH b. ŠA‘D b. SÜLTAN b. MÜHAMMAD b. HAYYÜS b. GHAŅAWI, born at Cordova in 384/994, died at Manta Lishān 456/1064, Andalusian poet, historian, jurist, philosopher and theologian, one of the greatest thinkers of Arabo-Muslim civilization, who codified the Zâhîrī [see Zâhîriyya] doctrine and applied its method to all the Ǧur‘ānic sciences.

The life of Ibn Ḥażım and the political events of his time. E. García Gömez has pointed out the period in which Ibn Ḥażım lived corresponds to the "most tragic moments of Muslim Spain" and to "the decisive crisis of Islam in Andalusia". His family origins are obscure; the most probable suggestion is that he was descended from Christian converts to Islam. His grandfather Ša‘dī settled at Cordova; his father Ḥamād rose to a high position in the administrative hierarchy, becoming vizier to
al-Mansur and to his son al-Muzaffar: he had enough skill and pliability to remain faithful to the Umayyad caliph, who was officially on the throne, without arousing suspicions of the hādīth al-Mansūr Ibn Abī ʿAmir.

Ibn Hazm spent his early years in the surroundings of the harem. Asin Palacios and García Gómez have stressed this point: “an impressionable child and abnormally highly-strung”, the revelation of sexual matters and the discovery of the subtle feminine psychology were to have a profound influence on him. This is true; but Ibn Hazm should not all the same be regarded as having been a morbidly amoral person. Until the age of fourteen the child led a pampered and easy life; but after that he was to suffer from the repercussions of the political struggles between Andalusians, Berbers and Slavs. His father fell into disgrace after the fall of Amir. His experience as an adult of those in power or Slavs. It was in these unhappy circumstances that he died in 402/1012. A period of violence had begun; the house of Ibn Hazm’s family at Baḥr Mughīth was destroyed in 403/1013. He himself was forced to take refuge in Almeria, where he was able to enjoy a respite until 407/1016, the year in which the governor of this town made an agreement with the Berbers to overthrow Sulaymān. Ibn Hazm, suspected of carrying out pro-Umayyad propaganda, was imprisoned for some months and then banished.

Accompanied by his friend Muhammad b. Isāk, Ibn Hazm found refuge at Ḥiṣn al-ʿAṣr, which, according to Garcia Gómez, is not the present day Aznalcázar near Sanlúcar, but was in the region of Malaga or of Murcia. The two friends did not remain there for long: having heard that an Umayyad claimant to the throne, ʿAbd al-Rahmān IV al-Murtadā, who had been living in Valencia, was raising an army against the Berbers of Cordova, they set out to join him. Ibn Hazm became al-Murtadā’s vizier and advisor. He took part in the battles of Alarcón and of the Guadalquivir. He was taken prisoner and then released. In about 412/1022, Ibn Hazm, who had retreated to Jativa, began to write the Taʾṣīk al-ḥamāma, which contains many autobiographical passages relating to the above events.

The Berbers retained Cordova until 414/1023, when al-ʿAskīs b. Ḥannāmīd was overthrown. The new caliph ʿAbd al-Rahmān V al-Mustāsīrah appointed his friend Ibn Hazm as vizier; unfortunately, he was assassinated after seven weeks, and Ibn Hazm was once again put into prison. He re-appears in 418/1027 at Jativa. According to al-Ḥiyyānī, reported by Yākūṭ, he became vizier again under Ḥiṣam al-Muʿīzād. But his experience of political life had destroyed the ideals he had had in his youth. From now on he devoted himself, in semi-retirement, to intellectual work and study, to writing his books and teaching. His virulent attacks against the Mālikī ḫubāḥī, who, always supporting those in power, held sway in the schools and exerted their influence on political and social life, his stand against the ʿAṭḥādīs of Seville whose impostures he denounced, in short his radical non-conformity, earned him the hatred of the official thinkers and the hostility of the rulers, who found such a person undesirable in their territory. This was the period of the Mūlāk al-Taʾāṣīf (Reyes de Taifas), which began after the abolition of the caliphate of Cordova, so that the traditional legitimist party, always trusting those internal recesses of the soul in which are hidden unexpressed and unexpressible intentions, double meanings whose ambiguity leads to indecision. His experience as an adult of those in power or
seeking power confirmed in him a mournful scepticism. It may be said that the ideas which govern all men and society as a man passionately convinced of the truth, and all his researches led towards a truth supported by incontrovertible evidence with incontestable proofs. This Truth is the God of Islam, Who is the foundation of all the other truths. The Muslim faith, in its authenticity, is the basis of a truly human life; but it must be purified of all that may have been suppressed or modified. Although God is the basic refuge, Ibn Hazm, meditating in his own way on this faith, discovered in the statements of the law solid bases which can be relied on and used as arguments to combat error and deceit. First, in spite of, and perhaps even because of, his misanthropy, Ibn Hazm recognized friendship and gave it an important place in his ideal conception of human relations. He considered that true friendship is the source of truth, frankness, mutual understanding, and sincerity. It is in friendly relations that verbal statements may be taken at their face value, without any need to suspect something left unsaid or thoughts skilfully and shrewdly disguised. This strongly held opinion explains Ibn Hazm's religious respect for the language itself, in which his Zahir doctrine has its roots. In the same order of ideas, but at another level, Ibn Hazm was convinced that the supposedly rational arguments of the philosophers, of the theologians and of certain jurists merely revealed their passions, prejudices and personal preferences, all things unjustifiable in themselves but given a semblance of legitimacy by means of false reasoning. From them stem the innumerable deviations of those who, instead of listening to God, as he himself practised in his own day. He was taught by Islam that there is no refuge from such evils except in God and he adhered to this belief with all the force of his being. It should not be forgotten that he himself lived out his own belief with intensity before giving expression to it dogmatically in a vast system in which it is set out together with all its various consequences, and before defending it passionately against those people whom it is said he had attacked in their own defence.

Ibn Hazm confronted all these inconsistencies of man and society as a man passionately convinced of the truth. It may be criticized as being of this type, and Ibn Hazm does not seem to have avoided it entirely. But his powers of observation and analysis make him a very subtle psychologist and a notable moralist. This appears throughout his writings, but may be seen more particularly in two of his works: the Tawq al-hamamā and the Kitāb al-Ahālyā wa 'l-siyar. The first is a treatise on love and lovers. This subject was often treated by the commentators of the early poetry (naṣib of the kasida: ghazal); in this sense Ibn Hazm had predecessors, the most important of whom were al-Dirāzī and Ibn Dāwūd al-Isfahānī. His treatise belongs to a literary genre which was to become much favoured, that which may be termed the "Code of Love" and which very soon became a collection of clichés, anecdotes and observations, illustrated, more or less aptly, by numerous poetic quotations. Already the Kitāb al-Zahra of Ibn Dāwūd may be criticized as being of this type, and Ibn Hazm does not seem to have avoided it entirely. But
although from the time the genre was first used the theme was fairly trite, skilled writers like al-Dhâbî and Ibn Hazm were able to give it an original twist. The bibliography in Garcia Gómez lists the studies of the Taqwîm from this point of view. Here it may be mentioned that Ibn Hazm gradually detaches himself from the stereotyped productions of a light literature and that his discourse becomes increasingly serious. His secular subject becomes full of moral and religious reflections; the use of more personal examples and of direct observation lends it progressively more depth and reality. In this spirit, which grows out of the same time a hint of pessimism and of bitterness becomes more apparent. It is probable that the work was not written all at the same time, and that it reflects a certain development in the author's experience.

An example is the passage which begins with these words: wa 'aâbah raʾaʾuyuʾuʾ muʾaqqat an tawâsul màwaddatihâ fi ǧâzâri ʿiṭât Allâh (ed. L. Bercher, 348). In it he felt a certain religious and human feeling, an existentialist dialectic of love. The chapter entitled Kâth al-maṣâyiya contains completely personal autobiographical details which have the ring of truth, together with some very vivid notes on feminine psychology. Ibn Hazm's gifts as a psychologist and a moralist are well enough demonstrated by some remarks on apparent resignation (ch. 24, ed. Bercher, 238), also by some remarks on the apparent and the hidden meaning in the words of lovers (p. 180), and remarks on the diaphanous consolation (ḥumâ), in particular among poets who attempt to satisfy themselves "by means of externalizing the passion which grips them (gâhar); on the meaning of this word, cf. Dozy, Supp.), by displaying their mastery of profound ideas and extraordinary designs: each of them speaks according to the strength of his nature, but they merely use the language in an arbitrary way (tabâkhum biʾl-lishân), produce turgid discourses (tâqhâdâd fiʾl-hâlâm), and revel in rhetoric (istišâla biʾl-bayân), all of which is completely without authenticity"; they are demonstrated also by some remarks on the different motives which exist for apparently identical conduct and on the part played by ostentation (riyâ'), and by many other passages of the same type. These remarks however also indicate the way in which Ibn Hazm always shuns the ruthless analysis of the motives, intentions and secret meanings which reveals the reticences or dissimulations concealed under the cover of expression in speech. When a man speaks about himself, and in order to express himself, he does not follow the rules of a language which was made for accurate communication, but he distorts it to his own personal requirements to disimulate and deceive. When Ibn Hazm, in the Taqwîm, uses the term izhâr, it is always in a pejorative sense: a man does not show himself as he really is but adopts a mask. This is why, after criticizing human words, he seeks authentic truth...
of a system of logic capable of analysing the revealed and prophetic texts in the essence of their zabīr without the risk of debasing them by substituting for that which God means that which man wishes to understand. From this point of view, although he was acquainted with Aristotle and in spite of his own command of logic in the arguments which he advances against his opponents, his tendency is to reduce the importance and the range of application of logical procedures conceived as the instruments of an independent reason. He believes in the value of reason, but conceives its legitimate use only in the sense and in the manner of the Kur'ān (cf. the verses which include the verb yaṣlān); it is first the faculty of the necessary rational intuitions (the principle of contradiction, the principle that the whole is greater then the part, etc.). Next it is the faculty which understands the senses of creatures and, consequently, it must never in its use become divorced from the results of perception through the senses which it is its task to penetrate. It is reason also which understands words and to which the Word of God is addressed. Thus it has the power to distinguish the true from the false, but always in relation to a fact which is presented to it either by the experience of the senses or by speech. It has also the capacity to reach immediate inferences readily checked by the facts. But it has absolutely no power to discover a truth which has not been given to it, and still less to create or reconstruct one. It is unable to make any value judgement, particularly concerning the moral questions of good and evil. It does not carry with it any speculative or practical imperative which demands that God take it into consideration. Reason is not a ruler but a worker. Entirely subordinated to the service of the understanding of the “signs” of God, it is reason which performs tajwidh, but this personal effort contributes nothing, does not produce any material progress in knowledge; it must result only in a more perfect understanding of the revealed texts and in a knowledge of them which is formally more solid and clear.

Furthermore, Ibn Hazm does not recognize an area of logical realities consisting of genus and species, of specific differences, of characteristics. He does not use these words which he assigns always so in the sense which they have in language (fi 'l-tuğha) and never according to their technical acceptance, except in the case of polemic. Above all he refrains from building up a metaphysical system based on these so-called logical realities. There is no “Hazmian theory” of substance and accident, of act and power, of natures, etc. When he makes use of these words it is either in polemic, or to express a common idea, or in referring to the Kur'ān or to hadith. Thus, in his Fisal, there is a chapter in which he demonstrates that the word “nature” (labāa) may be used because the Prophet used it in referring to the character of some of his contemporaries. This is very far from the philosophic doctrine of the “natures” as the fāliṣṣa received it from the God of their predecessors. It is true that in his Kitāb al-Takrib Ibn Hazm presents a summary of Aristotelian logic, but it should not be concluded from this that he understood it in the spirit of Aristotle. The examples which he gives and which he draws from the Kur'ān and from hadith are already an important indication of this. But nevertheless it is undeniable that, regarded in itself, the logic of Aristotle is closely connected with language; as an instrument for the analysis of linguistic expression it is natural for a Muslim to take an interest in it, and on this point Ibn Hazm’s attitude is clear. In a dialogue preserved by al-Tawhidi between Abū Sa‘īd al-Da‘ūlī and Mutabb b. Yūnus, Abū Sa‘īd rejects Aristotelian logic on the ground that it is linked with the Greek language and could not be of the slightest use to the Arabs. In this work Ibn Hazm makes a point of mentioning several times that what he obtains from Aristotle is common to all languages and hence can be of profit in the study of Arabic. If the transmission of logic is a grace (lujf) of God, this is because this science is based on “the capacity for understanding which God has created in man”. This leads to the central importance of jahm. It is thus, for example, that the scientific difference is not at all to be regarded as a constituent element of a concept and still less, beyond the concept, as a constituent element of a nature or of a metaphysical essence, but merely as a means of distinguishing (lamyṣṣa) names and beings from one another.

Thus this recourse to Aristotle does not in the least contradict the logical conceptions set out elsewhere by Ibn Hazm (in particular in the Kitāb al-Ikhām). It should however be remembered that several Muslim writers on logic have claimed that Ibn Hazm’s conception of Aristotelian logic was not authentic, and indeed it is possible in one sense to say that he did not understand the full philosophical implications of Aristotle’s work. It is probably more exact to say that he did not wish to attribute such wide implications to logic.

Ibn Hazm regarded logic as intended to extract the precise meaning of the texts on which the Muslim faith is based and also (and this is perhaps his chief aim) to reconcile the various texts of the Kur’ān and of hadith whose agreement is not immediately obvious and which sometimes appear flatly contradictory. It is therefore a matter of a logic of the bayān. The zabīrin conception of language led to a zabīrī system of logic which, in its turn, produced a zabīrī theology and system of law.

The basic rule is that it is necessary at first to consider all the elements in a text in their general meaning (‘ala ‘l-‘umām). It applies in the first place to the ‘andisir al-kalām, which should be understood in their speech and in the sense in which they should be understood as a dissuasion. In the second place words are to be understood in the widest sense of their lexico-graphical meanings. If it is necessary to restrict them to a particular meaning (‘ala ‘l-khawṣṣa), a dalīl must be found. It can thus be seen that by “generality” Ibn Hazm does not mean a conceptual generality: in Arabic the various meanings of a word often have no semantic relation to one another; the ‘umām is thus only the sum of the meanings of a word. If there is no restrictive indication and if all possible meanings equally apply, then all may be retained. If certain of them do not apply, then concrete experience plays the part of dalīl, providing sufficient indication that these should be excluded. It is also the relations between the ‘umām and the khawṣṣa which are the basis of the theory of istīlāhā (exception). When two texts do not agree, the particular is discarded in favour of the general. These
are the basic principles of methodology which Ibn Hazm persisted in applying to all the problems of fiqh and kalām, adapting them with extreme ingenuity to each case.

Ibn Hazm and the sources of the law. As far as the Kur'an is concerned, Ibn Hazm's interpretation is always a literal one and a wide one, according to his system of applying the rule of generalization in the understanding of texts. In this way he succeeded in deriving, from verses which appear to have only a limited application, ideas on which he built a whole juridical system. Ibn Hazm (VI, 164): "wā-lā takṣiṣu kullu nafsīn iltī 'alā'yahā và (II, 280) "lá yakal[l]a 'iltī 'alā'yahī nafsīn iltī wusū'alā 'ahdī mā hasabat wa 'alā'yahī mā 'kasabat" are two verses proposed as the Kur'an's foundation for the doctrine of association (Kitāb al-Muhalld). It is clear that in these matters Ibn Hazm is not the only jurist to show great skill in exploiting the texts. In other cases he takes the verses in a very limited sense; for example in his treatise on loans and pledges, on the principle that, in a contract, any condition which is not found in the Book of God is null, he takes the terms of Sāra II, 282 in a very narrow sense.

To hadīth he applies very severe standards and, in his juridical controversies, he rejects the majority of those on which his adversaries rely. He applies moreover the ordinary rules of that criticism which he set out himself in his Kitāb al-Ikhān, showing in this an undeniable sense of history.

He was, in contrast to the Shafi'is, the great opponent of reasoning by analogy (ḥiyās), which he dismisses by demonstrating on the one hand the vagueness of the idea of resemblance and on the other the arbitrary element which exists in the wish to define a point of analogy. In his treatise on law (Kitāb al-Muhallā), when he is attacking a ḥiyās, he always concentrates on stressing the inconsistencies which it produces: why make use of analogy in one case and not in another?

He also reduced the scope of ẓidma' by bringing it back to the consensus of the Companions, the only one which is possible and certain.

Ibn Hazm as a jurist. He is the most representative of the Zāhirī school. On the theoretical level he built a whole juridical system. He was a lesser degree of Shafi'ism. But on the theoretical and the practical levels his great enemy was the Mālikism which was strong in Spain in his time. It may even be said that Ibn Hazm espoused Zāhirism because he saw in it an effective means of opposing and of condemning the tyranny of the Mālikī jurists. In this sense his work as a jurist constituted a liberation of the faithful. There are five akkām: the prescribed and the forbidden, that which is advised and that which is reprehended, and the permitted. In order to claim that an act falls into one of the first four categories, it is necessary to adduce a text in its ẓāhir. If no text can be brought, it is clear that the act in question falls into the final category, that of the muḥābā.

In response to the demands brought about by historical changes, Ibn Hazm applied himself to reconstructing a legal system stripped of all that he considered to be additions made by the jurists who came after the Prophet and the Companions. He therefore greatly simplifies the law on many points: particularly clear examples of this are found in the chapter on the zakāt in his Kitāb al-Muhallā, where, for agricultural products, he retains only wheat, barley, dates and zābīb, eliminating all the other types of cereals, fruits and fresh vegetables, and plants used for textiles, dyes and medicines, which other schools had included. Similarly in the walā', he limits considerably the forms of association by strict application of the principle that to each person is returned the fruit of his labour. His treatise on sale is also a return to a legislation inspired by such elementary forms of commerce as those for which the Prophet had laid down rules. On certain points, this return to the situation of the past presents great advantages: for example, in his treatise on marriage (Kitāb al-Muhallā), he set out himself in his Kitāb al-Ikhān, showing in this an undeniable sense of history.

He was, in contrast to the Shafi'is, the great opponent of reasoning by analogy (ḥiyās), which he dismisses by demonstrating on the one hand the vagueness of the idea of resemblance and on the other the arbitrary element which exists in the wish to define a point of analogy. In his treatise on law (Kitāb al-Muhallā), when he is attacking a ḥiyās, he always concentrates on stressing the inconsistencies which it produces: why make use of analogy in one case and not in another?

He also reduced the scope of ẓidma' by bringing it back to the consensus of the Companions, the only one which is possible and certain.

If no text can be brought, it is clear that the act in question falls into the final category, that of the muḥābā.

In response to the demands brought about by historical changes, Ibn Hazm applied himself to reconstructing a legal system stripped of all that he considered to be additions made by the jurists who came after the Prophet and the Companions. He therefore greatly simplifies the law on many points: particularly clear examples of this are found in the chapter on the zakāt in his Kitāb al-Muhallā, where, for agricultural products, he retains only wheat, barley, dates and zābīb, eliminating all the other types of cereals, fruits and fresh vegetables, and plants used for textiles, dyes and medicines, which other schools had included. Similarly in the walā', he limits considerably the forms of association by strict application of the principle that to each person is returned the fruit of his labour. His treatise on sale is also a return to a legislation inspired by such elementary forms of commerce as those for which the Prophet had laid down rules. On certain points, this return to the situation of the past presents great advantages: for example, in his treatise on marriage (Kitāb al-Muhallā), he set out himself in his Kitāb al-Ikhān, showing in this an undeniable sense of history.

He was, in contrast to the Shafi'is, the great opponent of reasoning by analogy (ḥiyās), which he dismisses by demonstrating on the one hand the vagueness of the idea of resemblance and on the other the arbitrary element which exists in the wish to define a point of analogy. In his treatise on law (Kitāb al-Muhallā), when he is attacking a ḥiyās, he always concentrates on stressing the inconsistencies which it produces: why make use of analogy in one case and not in another?

He also reduced the scope of ẓidma' by bringing it back to the consensus of the Companions, the only one which is possible and certain.

Ibn Hazm as a jurist. He is the most representative of the Zāhirī school. On the theoretical level he built a whole juridical system. He was a lesser degree of Shafi'ism. But on the theoretical and the practical levels his great enemy was the Mālikism which was strong in Spain in his time. It may even be said that Ibn Hazm espoused Zāhirism because he saw in it an effective means of opposing and of condemning the tyranny of the Mālikī jurists. In this sense his work as a jurist constituted a liberation of the faithful. There are five akkām: the prescribed and the forbidden, that which is advised and that which is reprehended, and the permitted. In order to claim that an act falls into one of the first four categories, it is necessary to adduce a text in its ẓāhir. If no text can be brought, it is clear that the act in question falls into the final category, that of the muḥābā.

In response to the demands brought about by historical changes, Ibn Hazm applied himself to reconstructing a legal system stripped of all that he considered to be additions made by the jurists who came after the Prophet and the Companions. He therefore greatly simplifies the law on many points: particularly clear examples of this are found in the chapter on the zakāt in his Kitāb al-Muhallā, where, for agricultural products, he retains only wheat, barley, dates and zābīb, eliminating all the other types of cereals, fruits and fresh vegetables, and plants used for textiles, dyes and medicines, which other schools had included. Similarly in the walā', he limits considerably the forms of association by strict application of the principle that to each person is returned the fruit of his labour. His treatise on sale is also a return to a legislation inspired by such elementary forms of commerce as those for which the Prophet had laid down rules. On certain points, this return to the situation of the past presents great advantages: for example, in his treatise on marriage (Kitāb al-Muhallā), he set out himself in his Kitāb al-Ikhān, showing in this an undeniable sense of history.

He was, in contrast to the Shafi'is, the great opponent of reasoning by analogy (ḥiyās), which he dismisses by demonstrating on the one hand the vagueness of the idea of resemblance and on the other the arbitrary element which exists in the wish to define a point of analogy. In his treatise on law (Kitāb al-Muhallā), when he is attacking a ḥiyās, he always concentrates on stressing the inconsistencies which it produces: why make use of analogy in one case and not in another?

He also reduced the scope of ẓidma' by bringing it back to the consensus of the Companions, the only one which is possible and certain.
Ibn Hazm had read widely, and he reveals that he had himself carried out some of the enquiries and that he is well informed both on the past history of these religions and on their present states. He does not omit, for example, to point out when an ancient doctrine is still held in his time or when it has been modified. His qualities as a historian are undoubted, but the Fisal is not only the work of a historian: it is that of a man inspired by a theological ideal. Its general plan is a sign of this: Ibn Hazm begins with basic philosophical questions, those concerning knowledge and the possibility of attaining a truth, then he classifies the answers which have been given, eliminating that of the "Sophists", that is the sceptics, and retaining that which admits that it is possible for man to apprehend the truth. He then proceeds to study the problem of the eternity of the universe and that of the Creation. He deduces this in favour of an examination of those which believe in a Creation; and by the same process, he deduces the truth of monotheism, and then the reality of a God Who sends to men a revelation through prophets. Thus by degrees he approaches the fundamental dogmas of Islam, whose features are stated more and more clearly as the errors are demolished. In pursuing this line Ibn Hazm examines, in order to criticize them, various philosophical and religious systems: speculations on time, space and bodily matter; the astral religions, dualism, metempsychosis, the Christian doctrine of the Trinity, the various conceptions of prophecy in Judaism and in Christianity (concerning the person of Jesus). Finally, when it begins to deal with Islam, the Fisal becomes a treatise of heresiography which concentrates on theological and juridical ideas and not on the history of the sects. The various controversial problems of Muslim theology are considered and resolved according to the principles of a systematic Zahirism. Two points should be mentioned: in discussing the non-Muslim religions, Ibn Hazm does not attempt to understand them in themselves; he is interested in them only in relation to dogmas or problems which enable him to compare them with Islam. Thus he attacks the Jews for their two confinements, on hearing the word of God, to take it in the manner prescribed, or fight against men until they testify "...". Only the tongue can be compelled by force; this being so, Ibn Hazm demonstrates by philosophic methods, by a study of temporality and of time, that the world is created (muhdath), that it has a Creator (muhdath), called also al-khidlik), and that this Creator is unique. Similarly, he attacks the Gospels, demonstrating that they show no guarantee of being a revealed text, since they have not the nature of one (the Qur'an being taken as the criterion), and that they do not even achieve the credibility of hadith, since they are totally lacking in tanda (Ibn Hazm demonstrates this from the prologue to St. Luke's Gospel). The second point to be noted arises from the first: Ibn Hazm is always well informed, whether he is writing of non-Muslims or of Muslims whom he is criticizing. He sets out the positions of his adversaries honestly, accurately, and often in detail: this shows him to be a good historian of ideas. Unfortunately he never attempts to understand the importance and the gravity of the problems which occupy the men with whom he disagrees. Starting from the Kur'anic principle that one may not question God, he regards philosophical and theological speculation as no more than the expression of the vain curiosity of a disobedient human spirit. Thus, from the beginning he has no sympathy with the basic steps which form the various points at issue. This is why his sole aim is to trap his interlocutors by means of his dialectic, to make them contradict themselves by processes which are merely splitting hairs, to confound them by confronting them with facts of experience which are striking rather than convincing. To give one simple example: he accuses the Mu'tazilis, who set a limit to the power of God, of attributing to God a weakness greater than that ever experienced by bugs, fleas or worms. Although he does not always go to such extremes, Ibn Hazm often has a tendency to do so. This seems more likely to be due to his impatient personality than to a genuine will to understand. Behind these exaggerations there lies a state of mind, an outlook on the world, and a Zahirist conviction. Ibn Hazm does not enter into the deeper thoughts of others but he is very well able to understand their methods of argument: he therefore skilfully makes use of the argumentum ad hominem.

The Islam of Ibn Hazm and his theology. At the beginning of the Kitab al-Muhallal there is a chapter almost identical to which is a summary of the shari'a of Ibn Hazm. The first obligation upon every man, without which there is no islam, is to know in his heart with certainty and complete sincerity, with a knowledge in which there remains no trace of doubt, and also to pronounce with his tongue, that there is no god but God and that Muhammad is His Messenger. He does not consider the question of the "akda bi 'l-kalb as implying the development of an inferior religious life. It is an "act of the soul" which, during religious worship, accompanies the actions of the body. This statement is based solely on the Kur'an (XCIII,5). Ibn Hazm's thinking on this point is clearly shown in another passage, on the subject of the nitya, of which he states that in order for it to be authentic there is no necessity for it to be guaranteed by another earlier nitya, since then there would be an intention of the intention, and this would proceed to infinity. He mistrusts the recesses of the human conscience. It is not necessary to cultivate in oneself, in one's heart, a perfect purity of intention: the heart intervenes only in order to extend itself beyond its own confines, on hearing the word of God, to take it in the manner prescribed, or fight against men until they testify "...". Only the tongue can be compelled by force; this being so, Ibn Hazm demonstrates by philosophic methods, by a study of temporality and of time, that the world is created (muhdath), that it has a Creator (muhdath), called also al-khidlik), and that this Creator is unique. He created the world without any reason forcing Him to do so (la-ghayr min 'illa awadabat 'alayhi). The soul is created; it is no different from the spirit: it is the living part of man, the part endowed with sensibility and with speech. Some hadiths refer indifferently to either the soul or the spirit as being in the hands of God when a person is asleep. The Throne is created, for it is said of God that He is the Ruler of the Throne (IX, 130), and whatever has a master is created. Finally, nothing may be likened to God.

Prophecy is a means by which true knowledge may be obtained. The proof of this is that there are many facts which we can know only if they are reported to us (knowledge by khabar). Muhammad is the seal of the prophets: God by his milla has cancelled all the others and He requires all men and all dhims to follow the Kur'anic Law. There have
been other prophets, some mentioned in the Kur‘an and others not (IV, 149). It is an obligation (fara‘) to believe in them all. They are men created like all other men and are servants of God.

Paradise is a place of sojourn created for the believers. Hell is a created abode, but no believer remains there eternally. God decides which Muslims remain there eternally. God decides which Muslims shall go there: those whose great sins are spoken of in the Book, even though the reader may not understand how they are so (nu‘minu bi-tä mäli‘ä nadri kâyta niya). Anyone who refuses to accept one letter of the Kur‘an which is in the hands of the Muslims, from the Fatihah or Umm al-Kitab right up to the two final sûras (al-mu‘awwādi‘atayn), is a kafir. No person possesses a secret concerning religion (cf. II, 159, 174 and III, 187). It is necessary to believe in the angels, in the dinmins, in the Resurrection, in the sûrat, in the scales, in the basin, in the pages on which the angels record the actions of men and in the final rendering of the account of those acts: all this is real. Examples of this account: if a man thinks of a good action and does not do it, this is recorded to his credit as one good action; if he performs it, it is recorded as ten; if he thinks of a bad action and refrains from committing it for God’s sake, this is recorded for him as a good action; if he is forced to refrain from it or refrains for any other reason, it is not recorded at all; if he commits it, it is recorded against him as one single bad action. If an unbeliever commits a bad action, then becomes a Muslim and continues in this evil, account is taken in the next life of what he did in his gharā and in his islam; if he repents in his islam, that which he did in his gharā is disregarded; if he has done good while an unbeliever and then repents in his islam, all is forgiven for his good works done both while he was an unbeliever and while he was a Muslim; if he remains an unbeliever, he is rewarded in this world for the good he has done, but gains nothing from it in the next life.

If anyone, through his ignorance or misunderstanding of Arabic, is incapable of knowing all this, he must, when it has been explained to him, believe in his heart and utter with his tongue the profession of faith, adding that all which Muhammad revealed is true and that all religions apart from his are false.

No person is allowed to refer to God by names other than those which He has used of Himself, nor to describe Him in different terms from those which He Himself has taught us. One may not use derogatory expressions (iqtibād) in order to apply to Him a name which He has not given to Himself. Thus, He is seated on the Throne, but he may not be invoked by calling him the Seated. On His attributes, Ibn Hazm states that God created istid‘ā. In short, man is created free in all his acts, and that wisely, for God puts each being in his rightful place. Freedom belongs to man while still remaining in the hand of God.

All these articles of faith, briefly set out in this chapter of the Muḥaddith, are developed in the course of many controversies, in particular with the Mu’tazils and the Ash‘aris, in the Fiṣal. Concerning the relations of faith with istid‘ā, it is stated, in this Kitab al-Ta‘awib, that he who believes firmly in his heart and who declares his faith with his tongue receives help from God, whether or not this is accompanied by recognizable indications. This question forms the subject of a very interesting risāla, on Faith, addressed by Ibn Hazm to his friend Ibn al-Hawwāth. In it Ibn Hazm studies the delicate problem of taklid and demonstrates that to follow the teaching of the Prophet is not to imitate blindly.

It can thus be seen that the principles of the zahir were extended from juridical methodology to theological. This simplifies the problems and may appear inadequate to a theoretician. But it is a fact that life has its own logic, which easily surmounts the insurmountable theoretical contradictions which defeat speculative logic. In following the teaching of language, which is the very expression of life, Ibn Hazm was able easily to deride the embarrassments of hâlām and condemn it.

Ibn Hāzm’s political ideas. By tradition and through the events of his life, Ibn Hāzm was a legitimist, a partisan of the Umayyads. It may seem
surprising that a religious thinker of such strict principles should have supported a dynasty which the Muslim historians have often reproached for its lack of scrupulousness. Ibn Hazm's reasons probably arose mainly from personal motives of loyalty and friendship. In addition however, he seems to have regarded the Umayyads as representing Arabism. All his religious thought moves against an Arab background. This appears in an unusual way in his work entitled Djamhurat ansab al-'Arab. He writes "God has said: We have created you from a male and a female and We have divided you into nations so that you may know each other, but assuredly the most noble among you in the eyes of God is the most devout. Although God has decreed that the most noble is the most devout, even if he be the son of a black prostitute, while the rebel and the unbeliever is placed at the lowest level, even if he be the son of prophets. He has nevertheless made it an aim, by creating us in nations and in tribes, that men should give recognition to each other. Consequently the science of genealogy is of necessity a science of great dignity". There are various types of genealogical research. Some are religious and obligatory for all Muslims, such as knowing the genealogy of the Prophet or making sure that the caliphate is in the hands of a Kuraysh, or of ascertaining the family connexions of the person with whom one wishes to marry in order to avoid entering the prohibited degrees. Others are fard *ala 'l-kifdya: thus it is necessary for the Umma to retain the memory of the genealogy of the Muhaddis-sun and the Ansâr. Another application which he gives is: "Certain jurists make a distinction, in regard to the levying of the poll-tax and the right to take into slavery, between Arabs and non-Arabs. Thus they make a distinction between the status of the Christians of the tribe of Taghib and that of the remainder of the People of the Book...". This being so, Ibn Hazm generalizes: "God has related to us in the Kur'ân the issue of the generations from which the prophets have emerged. This constitutes the science of genealogy. The Prophet himself spoke of ancestral descent: 'We are', he said, 'sons of al-Nâdîr b. Kinâna'; and he recalled the sub-divisions of the tribes of the Ansâr, when he assessed the numbers of the various types of genealogical research. Some are

This justification for research into the genealogies of the Arabs clearly shows that Ibn Hazm attached to it great importance. He delights in comparing the character of the Spaniards and the Kurayshs, in their good qualities and in their faults. The letter on the merits of the inhabitants of al-Andalus preserved by al-Maqaqzâ and Maqaqzâ contains some significant details on this point, while at the same time it reveals in Ibn Hazm a certain chauvinism. He certainly praises Bagdâd and Basra, which were in advance of the other towns in raising the standard of learning. He adds: "As for our own countries, they are in this matter in the situation referred to in the proverb: the people to whom least attention is paid in a country are its inhabitants. I have read in the Gospels that Jesus said: No one is a prophet in his own country". There was no better way of saying that it was time for Spain to stop admiring the East and to think of appreciating its own glories. It seems that the three ideals which were held by Ibn Hazm were Zâhirism, Arabism and Umayyad Spain. When his political ideal was lost, it can be understood how he devoted all his energies to the other two, seeing in them the only hope of salvation, or at any rate a sufficient reason for continuing the struggle.

After his death, Ibn Hazm was attacked by the hâkî Ibn al-Arabi [q.v.], who was much influenced by the thinking of al-Ghazâlî, and in a work entitled Kitâb al-Mu'âwila, written in the 6th/12th century, this great adversary of their school was attacked by some Mâlikî theologians: ʿAbd al-Hâjî b. ʿAbd Allâh and Ibn Zurîn (who wrote a Kitâb al-Mu'âwila, against the Muâwila). On the other hand, the botanist Ibn al-Rûmîyya and the great mystic of Murcia, Ibn al-'Arabi [q.v.], were supporters of Ibn Hazm. Ibn al-'Arabi wrote, under the title of Muâwila, a summary of the Muâwila. He showed himself to be of beneficial to contemporary Islamic thought and help it to solve many problems.

Bibliography: An analytical and descriptive bio-bibliography is to be found in appendix II of the Spanish tr. of the Ta'wîh al-hamâma by E. García Gómez: El Collar de la Paloma, Madrid 1952. This appendix is devoted especially to a bibliography of works concerning the Ta'wîh. It is completed by the most recent bibliography given by N. Tomiche at the end of her translation of the Kitâb al-Aakhir wa 'l-siyar: Épîtres morales, Beirut 1961. There may be added: Y. Linant de Belfondes, Ibn Hazm et le zahirisme juridique, in Revue Algérienne (Revue de la Faculté de Droit d'Alger), No. 1 (1960); R. Arnaldes, La guerre saint selon Ibn Hazm de Cordoue, in Études d'orientalisme dédiées à la mémoire de Léo-Provençal; idem, Sur une interprétation économique et sociale des thèories de la "zahâb" en Droit musulman, in Cahiers de l'Institut de Sciences Economiques et Appliquées: L'Islam, l'Economie et la Technique, no. 106 (October 1960) (Series v, no. 2); Fadhel Ben Ashour, Un ouvrage inconnu d'Ibn Hazm, in Actes du 22e Congrès des Orientalistes (1957), ii (1957). The works of Ibn Hazm: Ta'wîh al-hamâma, ed. D. Kaswârí w.s. Ibn al-Ashîr, Leiden 1944; A. R. Nykl, Paris 1931 and A. J. Arberry, London 1953; Russian tr. by A. Salie, Moscowleningrad 1933; German tr. by W. Weisweiler, Leiden 1941; Italian tr. by F. Gabrieli, Bari 1949; French tr. by L. Bercher (with a new edition of the Arabic text), Algiers 1949; new ed. by Hasan Kâmîl al-Sârîfî, Cairo 1950. Historical works: Djamhurat ansâb al-'aráb, ed. Lévi-Provençal, Cairo 1948; Naht al-'arás, ed. C. F. Seybold, in Revista del Centro de Estudios Históricos de Granada y su reino, 1911; Spanish tr. by L. Seco de Lucena, in Boletín de la Universidad de Granada, 1911; ed. Shawkal Dayf, Cairo 1951; Risâla fi fâdîl ahl al-Andalus, in Makkaâr, Analec, ii, 109 ff.; Fr. tr. by Ch. Pellat, in al-Andalus, xix/1 (1954). Works on morals, on law and on theology: Rasûl il-Hamâma, 1951; Ibn Hazm al-Andalusî, ed. lshâq Râshîd 'Abîrâhâm, Cairo 1952; one of the Arabic epistles has been translated into Spanish by M. Asin Palacios, Los caracteres y la conducta, tratado de moral práctica por Ibn Hazm de Cordoba, Madrid 1916; N. Tomiche has published a new ed. with Fr. tr.: op. cit.; on the history of the manuscripts and the text, cf. Introd., xlviii f.; Kitâb al-Ikhrâm fi usûl al-akhrâm, Cairo 1345-8;
systematically arranged than in the books of his predecessors. It was still studied in the 19th century (Shawkani, Ikhāl al-akhār, 69; see also Ibn Sālim al-Makki, al-Turāth al-sulā'i, al-Anām, Haydarābād 1328, 35). His (Ta'rikh) al-Takhrīr is an authoritative work on the trustworthiness of the transmitters of traditions, currently referred to by Dhabahi, Ibn Ḥadžjār and other critics. A short extract of it is the Kūṯāb Maḏahār ‘ulāmā al-ṣamāyār, ed. M. Fīlschhammer in Bibliotheca Islamica, xxii (1959). We also possess one of his books on adab, the Rawd al-‘ādīr (MS: Wetzlar, ii, 289), fol. 80 v.; Muntakhab min Ta’rikh Kutb al-Dīn al-Nahrawndī (MS: Leiden 17x-33)

Ibn Hibbān was a prolific writer, as is shown by his numerous volumes which the dependable editor E. M. Yacoubi devotes an entire chapter to (Ibn Hibbān, ibn al-Habbarīyya’s...)

Ibn Hibbān left an important body of works, both in prose and in poetry. Of his poems, which he collected under the title Ta’rikh Samarkand (see Idrisi, d. 405/1014, 331-405/933-1014), the most famous is his Bādī‘yya (or Tahdīr Abī Bakr), in praise of the Prophet; comprising 143 verses, it contains 196 figures of bādī‘, mentioned by name. On it, in 826/1423, the author wrote a commentary entitled Khisānāt al-adab wa ǧhayāt al-arab (publ. Calcutta 1920 as an appendix to the Diwan of al-Mutanabbi; Būlāk 1273, 1291; Cairo 1301). As his Bādī‘yya was written to rival those of ʿIzz al-Dīn al-Maṣūṣī and ʿAṣf al-Dīn Hilīl, he attempted to prove its superiority in the Diwan of Abū ʿĪsā (see also Ibn Salīm al-Mufīḍ al-Dīn, Itjāf al-akbār, 69; see also Ibn Salīm al-Mufīḍ al-Dīn, Itjāf al-akbār, 69; see also Ibn Salīm al-Mufīḍ al-Dīn, Itjāf al-akbār, 69)

Ibn Hibbān and Ibn Ḥadžjār are still visited in the days of Yākūt. Ibn Hibbān was a prolific writer, as is shown by his numerous volumes which the dependable editor E. M. Yacoubi devotes an entire chapter to (Ibn Hibbān, ibn al-Habbarīyya’s...)

IBN HINZÁBA [see IBN AL-FURÁT].

IBN HIRZÍHIM, ABU 'L-HASAN 'ALI B. ISMÁ'IL B. MUHAMMAD B. 'ABD ALLÁH, jurist and wázir, a native of Fás, to confer the benefits of his learning upon such brilliant, who, in Spain particularly and to a lesser extent in the Maghrib, had the courage and strength of character to make a solemn protest against the severities and abuses of the Almoravid inquisition, thus helping to prepare for the fall of the dynasty, which Ibn Támart, another 'áyáb, claiming kinship with the school of al-Ghazálí, was to overthrow.

Sirí 'All's tomb stands some fifteen kilometres to the south-east of Fás, at Sídi Harázer, where there is a hot spring much frequented by the townsfolk.

Bibliography: 'All b. 'AbúZar', Fás 1303/1886, 191; Ibn al-Kádí, Diámod al-shába, Fás 1309/1892, 293; Kátání, Salátí al-anfús, Fás 1316/1899, iii, 69; Ahmad Bááha, Náfíl al-shába, Fás 1317/1900, 182; on the form of the name Hirzíhím, see El-Maysád (Vies des saints du Rif), tr. with notes by G. S. Colin, in AM, xxvi (1926), 120, no. 385; Taddílí, Táshawwuf, ed. A. Faúre, Rabat 1958, 147 ff.; the first work to consult is this collection of the lives of saints, which constitutes the earliest biographical source concerned with the saintly personages, especially in the 13th and 14th centuries in the Maghrib, and more particularly in Morocco.

(A. Faúre)

IBN HISHÁM, ABÚ MUHAMMAD 'ABD AL-MALIK, a scholar best known for his work on the biography of Muhammad. His family was usually said to be of Himsirí origin, and had moved from Básra to Egypt, where he was born and spent his life. His knowledge of genealogy and grammar was outstanding. He died in Egypt on 13 Rabí‘ II 218/8 May 833 or in 213/828. His Kitáb al-Tidáján on South Arabian antiquities is extant. He is chiefly famous, however, for his edition of the Síra (Life of Muhammad) of Ibn Isták (q.v.), which became the basic work on this subject. The Síra of Ibn Isták is not preserved as a single work, but passages from it, which have been omitted by Ibn Hishám, are preserved in the writings of historians like al-Jabari and al-Azaráki. Comparison shows that what Ibn Hishám has omitted was chiefly material not directly relevant to the career of Muhammad. He also gave more accurate versions of some of the poems in the Síra, and explained difficult words and phrases. This accounts for the great popularity of Ibn Hishám's edition. (The additions by Ibn Hishám can be conveniently studied in A.
Guillaume’s translation of Ibn Isfahân, where they have been separated from the main text.) Ibn Hishám’s work was a pupil of his called Ibn al-Bârîki (see al-Dhâhâbî, Tadhkirat al-buhûs, Haydârâbâd 1955-5, class 9, nos. 45, 46). See also Sîra.

(W. Montgomery Wattr)

Ibn Hishâm lived in Cairo; we know of only two journeys, made to Mecca in 749/1348 and 756/1355. A Shâfî’s fîkhî, he became a professor of Tafṣîr (Kur’ânic exegesis) at the Kubba Mansûriyya. Being unable to obtain a professorship in a madrasa of his own madhhab, he went over to the Hanbalis, who provided what he was seeking in one of their madrasas in Cairo (according to Brockelmann, II, 27); this was five years before his death. It is not clear why this celebrated man was kept in the background. The reason may have been jealousy. In any case, it is certain that his reputation was very great. Ibn Khallikân (iii, 249; Eng. tr., Rosenthal, iii, 289) recognized Ibn Hishâm as one of those very rare men who, in the history of Arabic grammar, have succeeded in mastering the whole of their subject. He did indeed have an extremely good knowledge of its entire systematization. He for his part was not without envy: al-Shawkânî (i, 401) suggests that his hostility to Abû Hayyân was the result of a secret desire to gain recognition and greater eminence, by attacking a master with a great reputation for learning.

In grammar, Ibn Hishâm’s general method was one that had been long practised—résumé and commentary (or simply commentary). Just as Ibn al-Ḥâfîzî [g.v.] had composed and commented on al-Šâfiyya and al-Kâfîyya, Ibn Hishâm wrote the Kârâr al-nadâd and the Shu`dîr al-nahwîyya and commented on them; but he succeeded in producing a far-reaching work, with an unusual method of presentation, the Muqâm ‘l-labbūb, a description of syntax arranged to start from each particle, either conjunction, preposition or some other, in alphabetical order. This work won the complete admiration of Ibn Khaldûn (iii, 283; tr. Rosenthal, iii, 324-5).

Ibn Hishâm died in Cairo while still quite young on Friday 5 Dhu ‘l-Ka‘da 761/18 September 1360, on Friday 5 Dhu ‘l-Ka‘da 761/18 September 1360, leaving a considerable number of grammatical works, several of which are lost—nos. 4, 5, 7, 10, 13, 15, 21, 24, 25 (list, Tarjâmât Ibn Hishâm, 7-8, by the editor of the Shu`dîr al-nahwîyya and the Sharh Kârâr al-nadâd, see below).

Remarks: (1) In the Arabic historical sources on the question of Ibn Hishâm’s full name, two forms are to be distinguished, that of Ibn Ḥâджâr al-‘Askâfî, his earliest biographer, followed by Brockelmann II, 27, and S II, 16, and retained here; and that of al-Sûyûfî, BughÎa, 293, reproduced in EI in the corresponding article: it supersedes b. Yûsuf b. ‘Abd Allâh and adds the nuwa al-‘âdîr. With the evidence at present available the question cannot be settled. (2) Ibn Tâghribîridî (v, 173) speaks of an Ibn Hishâm who was at first Ḥanâfî, then Ḥanbalî. Brockelmann (II, 27 and S II, 16) concludes from this that Ibn Hishâm successively adopted the three madhabs, Ḥanâfî, Shâfî and Ḥanbalî. This is not evident: Ibn Tâghribîridî mentions only two rites and he may have been mistaken about the first.

Works: (1) Kârâr al-nadâd was published Cairo 1304, 1307, 1317, and 1348; 1385, 2nd ed. of Muḥ. Muḥyî ‘l-Dîn ‘Abd al-Hamîd, Cairo, 13th ed. 1961/1983 for the 1st; 5th ed. 1931/1971 for the 2nd. (2) Muqâm ‘l-labbūb ‘an kutub al-ṣârib, the great treatise on syntax. A first draft made in Mecca (749/1348) was lost on the return journey; the present text was rewritten, also in Mecca (256/1355; see the beginning of the work). This treatise was printed several times, notably at Cairo in 1302 (2 vols. with the commentary of Muḥ. al-‘Amîr in the margin), 1305, 1307, 1317, and 1348; 1385, 2nd ed. of Muḥ. Muḥyî ‘l-Dîn ‘Abd al-Ḥamîd, the most practical one. Numerous commentaries are in existence; note al-Fâhî ‘al-karîb of al-Sûyûtî, for the Shawkânî, published Cairo 1322, 1324, etc. (4) al-Tâfîr ‘an bawâsî’d al-ṣârib, an introduction to the study of the Arabic sentence, published (73-92) and translated into French (155-223) by S. de Sacy in his Anthologie grammaticale arabe (Paris 1829), published (after the Sharh Kârâr al-nadâd) Bûlak 1253; several commentaries. (5) Mâhid al-ahdâm wa-mâhid al-nasâ’în, on some grammatical difficulties, Cairo 1279, in a Madâjmûa. (6) Awâb al-masâlîlâ ila Ahîsfiyyal Ibn Mâlik, a commentary on this Ahîsfiyya (also known incorrectly under the title Tâwa’dîb); printed several times, particularly Cairo 1304, 1316.

The following studies, in manuscript, were included by al-Sûyûtî in al-ʿâdîr wa-’l-nâwî fi ’l-nahw (published Haydârâbâd, 2nd ed., 4 vols., 1359-61), respectively at ii, 298-316, iii, 187-205, iv, 32-40, and 111-22; references omitted by Brockelmann. (7) Sharh Kârâr al-nadâd wa-’l-kafta al-nahwîyya wa-’l-kafta al-nahwîyya, commentary on versified grammatical puzzles. (8) Risâla fi nisîb (ʿālîb) lughât wa-’l-mu’âkâl al-ḥadûm al-dawâ bi-hilâl wa-sâyîd wa-’l-kalâm ‘alîd halûmûa dijirâ, grammatical study on these expressions; it is the same as Masâdî ‘alî-’l-nawî wa-adwâjibâtuhû. (9) Mas’alât al-ṣîrâr al-ṣârib ‘alîd ‘al-ṣârib, discussion of a particular construction of conditional propositions. (10) Faṣîh al-ḥadâ’îd wa mas’alât al-ḥadâ’îd, a revised edition, on the question of khabî, of the K. al-Ṣâhib al-ḥadâ’îd wa-’l-kafta al-ḥadûm of Abî Hayyân. (11) Al-ḥaṣîb, a collection of grammatical difficulties dedicated to the sultan al-Malik al-Kâmil (d. 1275/1356), printed Cairo 1304. (12) Sharh Bûnât Su’d, commentary on the poem of Ka’b b. Zuhayr in honour of the Prophet, edited by I. Guidî (Leipzig 1871) and Cairo 1304, 1307.

In al-ʿâdîr wa-’l-nâwî of al-Sûyûtî, referred to above, iv, 2-32 and 41-50, various grammatical studies of Ibn Hishâm can also be read; we should note 2-9, on interrogation and its particles, 6-36.
and 28-9, on some verses of the Qur'an; then other studies, iv, 92-111. A list of the other works still in manuscript will be found under nos. 7, 8, 10, 17, 18, 21, 22, 24, and 25 of Brockelman; note no. 17 on a subject that is unusual for Ibn Hīṣam.

Note: Another edition of Shuḥdar al-ḥakab and its Sharh was published in Cairo 1381/1962, by ʿAbd al-Muṭafalʾ al-Šaʿdī.

Bibliography: In addition to the references in the text: first, Ibn Ḥādjar al-ʿAṣkalānī, al-Durar al-kāmima, ii, 308-10 (no. 2248), Haydārābād 1349; Suyūṭī refers to this and reproduces it, Bugāy, i, 339 f.; for the form of the name, in De Koning has published two chapters of it in his Da*irat al-maʿarib, ii, 141 ff.; Brockelmann, I, 490, S I, ii, 1453, 1456, 1471, 1481, 1488; Yāqūt, ii, 1944, 1984, iii, 2504, 2505; S. W. Müller, ii, 197-198, 205-206, 218-219; De Koning, ii, 21-22, 24, 25; Brockelmann, III, 27-31 and S II, 16-20, provide information about existing manuscripts and commentaries.

(Ḥ. FLEISCH)

IBN HUBAL, MUḤADDĪB AL-DIN ABU ʿL-ḤASĀN ʿALI B. AHMAD, physician, born in Baghdād in about 515/1122, who at first studied grammar and ʿilm in the Nīẓāmīyya but rapidly turned to medicine. He next became physician in ordinary to the ʿAbbāsī Arman in Khīlāṭ and acquired great wealth, then entered the service of Badr al-Dīn LuḤu, in Mardm, 650/1252-53, and finally went to al-Mawsil. At the age of 75 he had the misfortune to become blind, but lived on until 610/1213. His chief work is entitled al-Muḥaddīb fi ʿilām (ed. Haydārābād, 4 vols., 1362-4/1943-4); De Koning has published two chapters of it in his Traité sur le calcul dans les reiis et dans la vesse, 196 ff. Ibn Hubal, who was also a poet, left a son, Shams al-Dīn Abu ʿl-ʿAbbās Ahmad, who in his turn became a physician and practised at the court of the Sālджūkī Kāyāwūs, where he died.

IBN HUBAYRA, name of two persons, ʿUMAR B. HUBAYRA and his son YŪSUF B. ʿUMAR, who were both governors of ʿIrāk under the Umayyads; they both belonged to the Kaysi party [see KAYS], that is to say that of the Arabs of the north in their struggle against those of the south. Involved as they were in the great struggles for the succession on behalf of the caliphs who were the candidates of one or the other party, opposing the Yemenis solidly represented by the caliph Marwan II, was already lost and Ibn Hubayra had to abandon Marwan to his fate. ʿAmīr b. ʿAbdār, Ibn Hubayra's chief lieutenant, was killed at Diqābāl; Yūsuf was unable to hold Kufa, disturbed by the revolt of the Yemenis, and fled to Wāṣīt, where, after being besieged for over eleven months, he was compelled by his subordinate lieutenant, Ḥasan b. Khaṭṭaḥa. He was brutally killed with the officers of his entourage. Like his father, Yūsuf defended to the end the cause of the Arab aristocracy, of the "Arab empire", against the mawṣūlij, who had been able to win over to their cause a large section of the Yemeni party while deserting the leaders of this same party in favour of the new ʿAbbāsid propagandists. Although incapable of realizing the scope, and still less the development, of this conspiracy, the two Ibn Hubayras were not without energy or plannning ability.

IBN HUBAYRA, ʿĀWN AL-DIN ABU ʿL-MUẓAFFAR YĀḤYĀ B. MUḤAMMAD AL-ŠAYBAṈĪ AL-DURĪ AL-BADRĪ, wasir for sixteen years without interruption, until his death, under the ʿAbbāsid Caliphs al-Muktasim (330/1040-3/1140) and al-Mustādīḏ (555/1160-566/1170). He was born in Rabīʿ II 499/ Dec. 1105-Jan. 1106, in the village of Dūr in the

Kūrāsān forming also the subject of the area of which he was in charge, he began by delegating his responsibilities there, at the express command of the caliph, to a Kaysi lieutenant, Ṣaʿīd b. ʿAmīr al-Ḥarāshī, who was able to stir to enthusiasm the warriors of Ḥisān and strike terror into the people of Soghdiana, who were still hesitant to embrace the cause of their Arab conquerors. Nevertheless, Ṣaʿīd b. ʿAmīr was soon replaced by a Bakri, Muslim b. Ṣaʿīd b. Ṣamīl b. Zūrāʾ. Ibn Hubayra remained firm in his support of the Arabs of the north, al-Farāzūḏḵāš stating on one occasion that they were his glory and supreme support (Dhudūn, ed. Sawī, 416). Handsome in his treatment of those he conqueror, Ibn Hubayra seems to have governed in the name of Arabism and Islam, regarded as a religion of the sword. His methods of governing, however, were not above reproach, although in fact this great Arab nobleman, proud of belonging to the Ghatafān, was accused more of cynicism than of corruption. One of the first acts of the caliph Hīṣam, on his accession in 105/724, was to replace Ibn Hubayra by the Yemeni Ṣaʿīd al-Kāšī, who was well disposed towards the Kūrāṣījīs.

Yūsuf, the son of ʿUmār b. Hubayra, was also governor of ʿIrāk, from 129-32/741-9; before being appointed to this office, he had, on the orders of the caliph Hīṣam, taken extremely severe measures against Ḥālād al-Kāšī, who had profited from his father's fall from favour. His triumph came too late, however, and his term as governor was merely a lengthy struggle for a lost cause. He was obliged to conquer his province by degrees: he began by defeating the Ḥārādījīs at ʿAyn al-Tamr; in addition to thus pacifying the Sawād, he succeeded in regaining Ahwāz, the Dībāl and the Dijāzāra. He was less fortunate in his struggle against Abū Muslim, whose revolt occurred during his governorship. He did not hasten to the help of Naṣr b. Sayyār, the governor of Ḥīrāsān. When Ibn Hubayra's troops finally went into action the cause of the Umayyad caliphate, represented by the caliph Marwān II, was already lost and Ibn Hubayra had to abandon Marwān to his fate. ʿAmīr b. Ḍubūrā, Ibn Hubayra's chief lieutenant, was killed at Diqābāl; Yūsuf was unable to hold Kufa, disturbed by the revolt of the Yemenis, and fled to Wāṣīt, where, after being besieged for over eleven months, he was compelled by his subordinate lieutenant, Ḥasan b. Khaṭṭaḥa. He was brutally killed with the officers of his entourage. Like his father, Yūsuf defended to the end the cause of the Arab aristocracy, of the "Arab empire", against the mawṣūlij, who had been able to win over to their cause a large section of the Yemeni party while deserting the leaders of this same party in favour of the new ʿAbbāsid propagandists. Although incapable of realizing the scope, and still less the development, of this conspiracy, the two Ibn Hubayras were not without energy or planning ability.
district of Dudiayl, northwest of Baghdad, where he spent the early part of his youth. He went to Baghdad as a young man, and studied Ḥanbali fiqh under Abū Bakr al-Dinawari (d. 532/1142) and adab under the renowned Ḥanbali philologist al-Djawälī (d. 540/1145). He also studied traditions under several masters and was for some time the disciple of the ascetic preacher Abū Yaḥyā Muḥammad b. Yaḥyā al-Zabīdī, with whom he roamed the streets of Baghdad proclaiming the inapplicable attributes of God.

As the caliphate of al-Muqtafi, Ibn Hubayra entered government service and gradually worked his way up to this caliph's waṣīr. With Ibn Hubayra the influence of the last Ṣaljukids came to an end. He also had a hand in Nār al-Dīn's conquest of Fāṭimid Egypt. The Handali school flourished under his ministry and patronage, and its institutions of learning continued to multiply, a trend which had been taking place before his advent and which explains in part his accession to power. He had many enemies, who apparently succeeded in poisoning him through his own physician, who is said to have been killed six months later, also by poisoning. Ibn Hubayra died on 12 Dumatād I 560/ March 1165.

During his lifetime, Ibn Hubayra was no less active in the field of learning than he was in politics. He composed a commentary in several volumes of the two canonical collections of traditions, those of al-Bukhari and Muslim, entitled al-Ifṣāḥ ‘an ma‘ānī ‘l-Ṣīḥah. While commenting on one of the traditions which involved an explanation of the term fiqh, he digressed into a long treatise on questions of law, both those concerning which the founders of the four schools of law were in agreement, as well as those upon which they disagreed. The idea so interested him that he caused specialized scholars of all four schools of law to be brought to Baghdad from outlying provinces at a reputed expense of over one hundred thousand dinārs. This he allegedly did in order to be certain of the accuracy of his work; but this gathering of scholars from many parts of the Muslim world at the expense of waṣīr must have also had its political importance. Several copies were made of this work, which found its way into the libraries of governors and waṣirs of provinces, as well as those of the Caliph al-Mustanṣir and the Ayyubid Sultan Nūr al-Dīn al-Zangi. This work, properly called al-Ifṣāḥ, but also al-Ifṣāḥ, after the original and more voluminous work, was edited by Rāghib al-Tabbāšī (Aleppo 1829).

Ibn Hubayra has other works to his name: al-Muḥāṣṣad, a grammar for which Ibn al-Khaṣṣāḥī (d. 567/1172) wrote a commentary in four volumes; an abridgment of the Islāh al-manṣūk of Ibn al-Sikkit; al-Idādāt al-khams, according to the Handali school of law; Urjūsā fi ‘l-maḥṣūr wa ‘l-mamād; Urjūsā ft ‘al-kaḥlib. His contemporary Ibn al-Djawāl (d. 597/1200) compiled a work based exclusively, it would appear, on statements which he had heard from Ibn Hubayra, entitled it: al-Muṣṭabās min al-faṣṣād al-Aṣwāyya (i.e., ‘Awn al-Dīn Ibn Hubayra). In another work, Maḥd al-maḥd, Ibn al-Djawāl compiled an anthology of highlights from Ibn Hubayra’s original Ifṣāḥ, i.e., the commentary on the traditions of al-Buḫārī and Muslim.

Most of what we know of Ibn Hubayra comes to us from his contemporary Ibn al-Djawāl, but more extensively from his biographer, the Handali Ibn al-Mārisktānīyya (d. 599/1200), from whose work, not extant, much of the Dhayl of Ibn Ṣadīb is derived.

Ibn Hubaysh, Abu ‘l-Kāsim ‘Abd al-Aslām b. ‘Abd Allāh b. ‘Abd ‘ ISA al-ʾAnsārī al-Mursi, Spanish traditionist. Ibn Hubaysh was born in 504/1110 in Almeria of a family originally from Ṣahrīa (Jérica), Valencia. After preliminary studies in Almeria he passed to Córdoba in 530/1135 for three years, and having returned to Almeria, was present when in 542/1147 that city fell to the Christians under al-Sulayyīn, ‘the little Sultan’, i.e., Alphonsus VII of Leon. After an interview with the latter, during which he traced the genealogy of Alphonso back to the Emperor Heraclius, Ibn Hubaysh and his family were allowed to go free. He subsequently held posts in Dżarrat Shakir (Alcira), Valencia, for approximately 12 years. In or about 556/1161 he went to Murcia as preacher (ṣāḥib) in the principal mosque. Twenty years later he became Kādi of Murcia, and held the office till his death in 584/1188. One of his accomplishments, as recorded by a pupil (Ibn al-Abbār, Taḥmīla, ii, 574), was to have had by heart all or most of al-Taʾrīkh al-habir, an extensive work on Hadīth by Ibn Abi Khayyām (d. 279893, cf. Brockelmann, i, 272).

Ibn Hubaysh appears to have planned a continuation of the Kitāb al-Sīla of Ibn Bashkuwal (s.v.), which was never carried out. However, his notes and materials came into the hands of Ibn al-Abbār (s.v.), who made use of them in his own Takmīla (‘Completion’ of the Kitāb al-Sīla). The literary work of Ibn Hubaysh by which he is principally remembered was the Kitāb al-Qaḥṣawī, or Kitāb al-Maḥdīsī (‘Book of the Raids’), in full Kitāb (Dhikr) al-Qaḥṣawī al-dāmīna al-khafīla wa ‘l-futah al-dīlīma al-khafīla al-khāna fa ayyām al-khulsā, i.e., ‘Awn al-Dīn Ibn Hubaysh. This gave an account of the victorious expeditions in the first half of the 7th century A.D., for the most part, under the Caliphs Abū Bakr, ‘Umar and ‘Uṯmān. Ibn Hubaysh received a commission for the book from the Almohad Abū Yaḥyā Yusuf (s.v.) in 575/1179-80 on the same day as he was appointed Kādi (see above), i.e., when he was nearly 70.

The work survives in several manuscripts, and has been utilized by De Goeje (Memoire sur le Fotouh as-Shām, Leiden 1864; Mémoire sur la conquête de la Syrie, Leiden 1900) and by Caetani (Annales dell’ Islam, Milan 1905), the latter in extracts made by J. Horowitz. More recently W. Hoenerbach has underlined the use made by Ibn Hubaysh of the Kitāb al-Qaḥṣa of Wākidī, a good early source (Waqīma’s Kitāb ar-Raḍi wa Inb Hājr’s Isbā, Akad. d. Wissens. u. d. Lit. in Mainz, Abh. d. Geistes- u. Sozialwissenschafel, Kl., 1951, Nr. 4, 220 ff.). In general, though Ibn Hubaysh was acquainted with Ṭabarī’s Annals (Tarīkh al-rusul wa ‘l-mulūk), he disposed of further materials, and for the early period of the Islamic conquests is doubtless an authority who deserves to be consulted. Ibn Hubaysh, called by Ibn al-Abbār the last of the great traditionists of Western Islam (wa-kdnna ‘alimmati ‘l-muḥaddithīn bi ‘l-Maghrib), yet
had several pupils of at least respectable attainments, notably Ibn Dihya (Brockelmann, I, 310, cf. 371; Pons Boigues, No. 238), the two brothers Ibn Hawt Allah (Pons Boigues, Nos. 223 and 229) and al-Kalā'ī (Brockelmann, I, 371; Pons Boigues, No. 239). Al-Kalā'ī wrote a Kitāb al-1īfīfī bimā tadammamānu min maghāṣī rasāl Allāh wa-magḥāṣī thalāḥātī l-1īfīfīfīfī, in the second part of which he followed especially his teacher Ibn Hubyash. Existing manuscripts of the Kitāb al-1īfīfī, which are rather numerous, may therefore be consulted for the text of the Kitāb al-1īfīfīfī. Brockelmann, Verzeichniss der arabischen Handschriften der königl. Bibliothek zu Berlin, ii, 550 (11 A. H., § 78) and indices; D. M. Dunlop, The Spanish historian Ibn Hubyash, in JRAS, 1941, 359-62.

In addition to this master-work, which is of the highest importance for the knowledge of the equestrian and military art in mediaeval Islam, he also possesses several other works of Ibn Hubyash, of less interest, and concerned with veterinary science in the K. al-Fawdīd al-musāṭṭara fi ʾīm al-bayfara (Madrid 1935), with belles-lettres in the K. Mabādīl al-udābāP wa mundāṭārī al-μuḏābāP and with politics in the K. ʿAyn al-adāb wa ʿl-siyāsāP wa sayyin al-ḥasab wa ʿl-riyāsāP. Two other works, on piety, are also attributed to him, only the titles of which survive, the K. Tadhkīrat man ʿudābī wa l. Kāndīl al-bughyā ʿl-nayyīl.

Although almost nothing is known of the life of Ibn Hubyash, from the tenor of his writings it is easy to imagine him as the ideal type of Spanish Muslim gentleman at the end of the 8th/14th century, sprung from a noble family, of perfect education and highly cultured, the image of the man of gentle birth who differed from his Christian neighbour only in his faith.

IBN AL-ʿIBRĪ (BAR HEBRAEUS, SYRIAC BAR ʿEBRAYĀ) Gvnrhor (YUHANNAN) ABU ’L-FARADI, a author of a history in Arabic, translator and the last classic in Syriac literature, was born in A.D. 1225-6 at Malatya; he owes to the Jewish descent of his father the nickname under which he became famous. During the Mongol invasion of 1243 Ibn al-lbri’s father obtained the post of physician in the entourage of a Tatar general, and in the following year settled with his family at Antākiya, which was still in the hands of the Franks. The son was versed in Syriac, Arabic and Hebrew, and studied medicine and rhetoric as well as theology at Antākiya and Tarābulus (Syria). After having been a monk for about three years, he was ordained Jacobite bishop of Gubbāb near Malatya in September 1246, and was transferred to the neighbouring see of Lakābbīn a year later. In 1253 he was appointed Metropolitan of Aleppo, a position that he succeeded in retaining during the serious rifts in the Jacobite hierarchy at that period. Ibn al-ʿIbri was present at the capture of the city by the Latins in January 1260. In 1264 he became Maphrāyān, i.e., head of the Jacobite church in the territories formerly under Persian rule. Thenceforward he travelled widely throughout his vast diocese, protecting the fortunes of his co-religionists during that troubled epoch. He made prolonged visits to Bagdad and to the Mongol court, where he was acquainted with princes and princesses; he had attended the Mongol ruler as physician in 1263. He commissioned the building of several churches and monasteries. When Ibn al-ʿIbri died at Marakchah in the year 1290, the Nestorians, Greeks and Armenians, united with
Jacobites in paying tribute to his qualities of tolerance and energy and to his independence in the face of pressure by religious and political leaders. He was buried in the monastery of Mār Mattai at Mosul.

Ibn al-‘Ibrī’s brother enumerates thirty-one works—and this is not an exhaustive list—by the polymath, on theology, philosophy, history, grammar and science in addition to poetry and belles lettres. His principal work in Arabic is Mughazzar tarīkh al-duwal (Historia compendiæs historiarum) authored Gregorio Abul-Pharajio, ed. E. Pocock, Oxford 1663 (with an Arabic version, A. Šāhāb-DĪwān, London 1890), compiled at the request of Muslim friends. It is an abbreviated translation of the first part of his Syriac Chronography treating of political history from the Creation to his own times; the Arabic version has additions on history (which it was superfluous to incorporate in the Syriac original) and on the mathematical and medical literature of the Arabs. The first part of the Syriac Chronography itself uses Arabic and Persian sources (by Islamic historians), and quotes the Persian history of Shams al-Dīn Šāhīb-DĪwān (d. 683/1284) for the Mongol period. The second and third parts of the Chronography, dealing respectively with the history of the Western Jacobite church and that of the Eastern Jacobite and Nestorian churches, were not translated into Arabic.

The extent to which Ibn al-‘Ibrī adopted the literary tastes of his Muslim contemporaries is revealed by his K̲h̲b̲h̲b̲h̲h̲ d̲h̲ T̲h̲ a̲n̲ n̲ n̲ a̲ n̲ y̲ e̲ n̲ o̲ g̲ h̲ k̲ h̲ b̲ h̲ k̲ h̲ n̲ e̲ (Laughable stories, Syriac text with Eng. tr. by E. W. Budge, London 1897), a collection of anecdotes reminiscent of adab literature but unexpected from the pen of a distinguished Christian scholar. By the 7th/13th century, however, the revival of Syriac literature but unadorned by its sheer bulk and the fidelity with which it was written into Arabic. The Jacobite and Nestorian churches, were not transcribed into Arabic.

translated by E. García Gómez in *La toma de Valencia por el Cid, in al-Andalus*, xiii (1948), 97-156. The text of the Almohad Bayān, more complete, is contained in *El Almohadismo de Mawlāy Abd al-Rahmān*, Valencia 1917, which A. Huici has made known, in *Notes d'histoire almohade*, iii (1963), 313-30. (J. Bosch-Vila)

**IBN IDRIS** [II], Abu 'l-'Alā' Idrīs, son of the above, was born in Fās where he made a serious study of literature. As private secretary to sultan Muhammad b. 'Abd al-Rahmān, he was sent on a diplomatic mission to the French emperor Napoleon III. His task was to solicit his intervention with the Spanish government, in order to secure a reduction in the indemnity owed by Morocco after the unfortunate Hispano-Moroccan war of 1844. During July and August 1860, he spent six weeks in Paris where he left excellent impressions. From his journey he brought back an account (rīḥā) entitled *Tuwāfīt al-ma'iṣb bi-mamālik Barīz* in which, in elegant language, he described the French provinces through which he had travelled, the public buildings he had seen, the receptions he had attended, the customs he had observed, etc. This account was published in Fās in 1327/1907. Ibn Idrīs was entrusted with another diplomatic mission, to Spain; he died of the plague, in Rabat, on 14 Dzīdād II 1296/1879 June 1879.

**IBN AL-IFLIL** (or simply *al-IFLIL*), Abu 'l-Kāsim ibn B. Muḥammad b. Zakariyyā' al-Zunkri, ph. o. l. o. i. g. a. n. t. e. r. a. and man of
letters, born in Cordova in 352/963 of a family from al-Ifili, in Syria(?). After receiving a classical education, he acquired the reputation of a poet, but al-Hijjari [q.v.], though he was ignorant, it is said, of prosody, he prided himself on his poetry, but his verse and prose compositions as too lifeless, and to acquire a large library of their own. Owing to its late date of composition and its comprehensive character, it is still useful as a preliminary source of information, and as such it is often referred to in these pages. The absence of a serviceable index in the available edition (Cairo 1930-51) is, therefore, most regrettable.

IBN AL-IMAM, 'ABD AL-HAYY B. AHMAD, a Syrian teacher of the Hanbali school (1032-1089/1623-1679), completed, in 1680/1679, a large biographical history, entitled Shuhudat al-dhahab fi akhbar man dhahab, which is annalistically arranged and covers the Hijira years one to 1000. Although historical events are occasionally mentioned, the work concentrates on obituary notices, often rather detailed. The author intended it to be a help for impecunious scholars like himself who were unable to acquire a large library of their own. To judge by these extracts, the Simj is taken from the Mughrib, and it may be said that a quarter of the Specimens of poetry and prose reproduced by Ibn Mughrib Ibn Sa'id reproduces about 35 excerpts from the Simj, some of which are long enough to give an idea of its content and style. To judge by these extracts, the Simj is closer in style and character to the Dakhira of Ibn Bassam than to the Mathafy and the Matmafy, which are of the same type as those to be found in the Simj of Ibn Sa'id. Of his contemporaries Ibn Bassam (q.v.) and Ibn Khakan (see Al-Fath Ibn Khakan), he decided to write a sequel to their works, and to include the biographies that they had omitted and those of his contemporaries, as far as 550/1155-6 (he died shortly after that date). His work is now lost, but later compilers have preserved numerous extracts from it; the title appears in various forms but is generally abbreviated to Simj al-djumun, and the specimens reproduced by Ibn Mughrib are from this work. Ibn Mughrib's specimens of poetry and prose reproduced by Ibn Al-Imam are of the same type as those to be found in Ibn Sa'id, and it may be said that a quarter of the Mughrib is taken from the Simj.

IBN AL-IMAM AL-ASHAB, Abu 'Amr Uthman b. 'Ali b. Uthman, an Andalusi man of letters, biographer and historian of the 6th/12th century; born in Silves, he studied in Cordova and Seville, where he became a disciple of Abu Bakr Ibn al-'Arabi. As an admirer of his contemporaries Ibn Bassam (q.v.) and Ibn Khakan (see Al-Fath Ibn Khakan), he decided to write a sequel to their works, and to include the biographies that they had omitted and those of his contemporaries, as far as 550/1155-6 (he died shortly after that date). His work is now lost, but later compilers have preserved numerous extracts from it; the title appears in various forms but is generally abbreviated to Simj al-djumun, and the specimens reproduced by Ibn Mughrib are from this work. Ibn Mughrib's specimens of poetry and prose reproduced by Ibn Al-Imam are of the same type as those to be found in Ibn Sa'id, and it may be said that a quarter of the Mughrib is taken from the Simj.

IBN AL-IBN AL-IBNI, Abû Bakr Ahmad b. 'Ali b. Ma'ânî, Ma'tazîlî of Baghdad (270-326/883-938). He has a reputa. For information on the life and times of Ibn al-Imam, see his work in Spain (see al-Makkari, Analectes, 347-8; Ch. Pellat, in Dd^irat al-ma^drif, index; González, 173; Khatib Baghdad!, Takmila, Ibn al-Abbar, 1833; Ibn Sa'id, Mughrib, ed. Shawkî Dayîl, Cairo 1953, ii, index; Makkari, Fahrasa, Cairo 1953, ii, index; Makkari, 403-4; V. Bultot, in Dd'irat al-Mu'tazila, ii, 340 f.; F. Bustani, Ddrat al-Ma'arifî, 34, 186; Makkar, Alanez, index); González, 45, 46, 307; F. Bustani, Dwrat al-Ma'arifî, 34, i, 231; Ibn al-Murtada, Tabâhid, Beirut 1961, 100, 110; A. Nader, Mu'tazîlî, 45, 46, 307; F. Bustani, Dw'rat al-Ma'arifî, 206-7 = Pellat, in Dd'irat al-Ma'arifî, 206-7) who strongly criticizes the Si^s in the field of and addiction to the Minhâj al-'âlî wa-tawdbî, by Abu 'Amr Uthman Ibn Sa'id. Of his contemporaries Ibn Bassam (q.v.) and Ibn Khakan (see Al-Fath Ibn Khakan), he decided to write a sequel to their works, and to include the biographies that they had omitted and those of his contemporaries, as far as 550/1155-6 (he died shortly after that date). His work is now lost, but later compilers have preserved numerous extracts from it; the title appears in various forms but is generally abbreviated to Simj al-djumun, and the specimens reproduced by Ibn Mughrib are from this work. Ibn Mughrib's specimens of poetry and prose reproduced by Ibn Al-Imam are of the same type as those to be found in Ibn Sa'id, and it may be said that a quarter of the Mughrib is taken from the Simj.
IBN 'INABA — IBN 'IRS

became the pupil of Ibn Mu'ayyay and died at Kirman on 7 Safar 828/29 December 1424. He was the pupil of the genealogist Ahmad b. Muhammad al-Mutahhar al-Hilli and of Djialal al-Din Abu 'l-Kasim 'Ali b. 'Abd al-Hamid Ibn Fakhkhâr. The person who had the greatest influence on his education was his father-in-law Ibn Mu'ayyay (Tâdi al-Din Abu 'Abd Allâh Muhammâd b. al-Kasîm). The latter, who was connected with the jisra'awâ (q.v.), held an eminent position, as much because he had obtained sigdjas (petitions) notably from Ibn al-Mu'tahhar al-Hilli, Ibn Ta'ûs and Ibn Fakhkhâr. This is because he counted among his pupils al-shâhid al-'arsawal of the Twelvers, Shams al-Din Muhammad b. Makki al-'Ammîl; for twelve years he was Ibn 'Inaba's teacher in law, hadîth, genealogy, mathematics, poetry, etc.

Ibn 'Inaba's work sets a complex structure. According to the list in the A'yn al-'âlîfâ, it consists of: (1) 'Umdat al-fîlîb fi ansâb 'Abî 'Ali Tâlib (known as al-kuriib) completed in 814/1411-2. This is a copy of the collection of the Tajmîryâ; according to another tradition, the work is dedicated to Tîmûrâng, but it was in fact written for the Hussaynid Djâial al-Din al-Hasan b. 'Amid al-Din 'Ali b. 'Izâ al-Din al-Shârâf Muhammâd b. 'Abî 'I-Fadl 'Allî; this presumably corresponds to the edition of Bombay 1318/1900-1. (2) 'Umdat al-fîlîb ... al-nasab, dedicated to the Sâyyid Muhammâd b. Fallâh al-Muqsa'ahâ', al-Mahdî (or to his father); it is based, with some additions, according to the Kaghf al-pûnûn, on the Mu'khtâsar of Ibn al-Sûfî and the Ta'âlîf of Abû Nasr Şahî b. 'Abd Allâh al-Bukhrâî. This distinction between the two 'Umdas, denied by al-Kantûrî, who considers them to be identical, is supported by Khiyyânî and in the preface to the edition of Nadjîf 1918, in which the "little" 'Umda is regarded as the only one to have survived; it appears in the manuscripts with slight variations in the title (ansâb, or nasab or manâshib) and in the arrangement of the material, always, however, subdivided into five fasâls, corresponding to the five sons of Abî 'Ali Tâlib. This 'Umda seems to be that published in the Lucknow ed. (n.d. [1302/1884-5]), which dates it to 802/1399-1400, and in the undated but recent 'Umda al-kubrâ (ansâb, or nasab), and in the Vatican 1965, 80-1, n. 1672. (B. Scarcia Amoretti)

IBN 'IRÅK, ÂBÎ NÂSR MÅNÅSÖR b. 'ALÎ, an astronomer and mathematician who flourished ca. 1000 A.D. (the date of his death is uncertain), is best known as the teacher of al-Tawfîq (q.v.), the student of Abu 'l-Wafâ al-Buzgânî (q.v.). He was related to the Ibn 'Irâk family that ruled Khârazm before its conquest by Mâmmûd of Ghurân (q.v.), and this accounts for his titles: al-amir and mawla' amir al-mu'minân.

He is also known for his revision, completed in 1398/1007-8, of the Arabic version of Menelaus's Spherkî (ed. and trans. by Krause, 1936), of which the original Greek text is lost. Fifteen shorter mathematical and astronomical treatises, found in MS Banki'pore arab. 24/98, were published in 1948. These include treatises on the astrolabe; discussions of various problems in earlier sigjes (sets of astronomical tables); a solution of a difficulty in Euclid's Elements, Book XIII; and a treatise, jadâwal al-dâkhâbî, concerning special trigonometric functions.

In al-Birûnî's Treatise on chords, Ibn 'Irâk is cited as the discoverer of several mathematical proofs; in al-Birûnî's Chronology of ancient nations (ed. and trans. C. E. Sachau) he is credited with a method for determining solar apogee from three arbitrary points on the ecliptic "which is as much superior to that of the modern [Islamic] astronomers as the method of the latter is superior to that of the ancient astronomers"; and Nadjîf al-Din al-Tûsî [q.v.] cites his work in trigonometry.

IBN 'IRS (A.; pl. banát 'irs, rarely abûdân 'irs), denotes the weasel, Mustela nivalis, the smallest of the mustelidae (sammûr, pl. sarâtîb), whose area of distribution includes almost all the countries of Islam. The geographical forms of the weasel, with Mustela nivalis nivalis and minuta in the North and Mustela nivalis boccamela and subpalmata in the Mediterranean zone, present only slight differences of coat and size, and the species possesses a character of uniformity which is also found in the dialectal names of 'irs in Egypt, balîrîs in Syria and 'Irâk, and ben-l-îrs and sarsâal al-fîrân in the Maghrib. The terms sun'ûs and kalkasa are now entirely obsolete; and it is only in Palestine that it may be confused with the sable, Mustela sibirina, under the name smâmr, and in Algeria with the polecat, Mustela putorius, under the descriptive name fîrâj al-khayl (= "rat/mouse of horses").

(B. R. Goldstein)
The Arab authors, both encyclopaedists and naturalists, are very laconic on the subject of the weasel and for the most part are content to repeat, in this connexion, the fabulous inventions of the Greeks on its habit of dropping its young through the throat or ear, its precaution of chewing some rue (sagdhab) before attacking snakes (cf. Aristotle, Hist. des animaux, tr. J. Tricot, Paris 1957, ii, 60r and al-Dhahiri, Hayawan, iv, 228), the way in which it inserts itself into the crocodile's belly when the creature yawns, in order to devour its entrails, a practice attributed to the ichneumon (Herpestes ichneumon) of Egypt (nims), and its determined pursuit of shrews and field-mice to the very end of branches of trees to make them fall off into the mouth of its companion which has remained on the ground.

The pelt of the weasel has never been an article of furriery, and certain translators have been mistaken in identifying it with the fanak [q.e.]—and thereby confusing it with the fur of the stoat or ermine, Mustela erminea, in its summer coat, which at that season differs only in the black tip of the tail that is peculiar to itself and that it retains all the year round, in spite of its white winter colouration: fanak also denoted the furs imported from central Europe, of the mink, Mustela lutreola, and those of some canidae, such as the fennec, the jackal and the fox, from the Maghrib [see IBN AWA].

On the other hand, it is in the realm of hunting that the weasel has played a part in Islam, for its name in the list of beasts of prey or carnivores that are "accredited" (mu'allamad, dawwir*, djawwir), recognised as lawful instruments of the chase, on the same footing as fowling-birds (see BAYZARA and FAHD). Indeed, if we remember that the weasel was, with the beech-marten, Martes foina (dalah, sinsár), and long before the domestic cat, with the civet, Viverra civetta (sahhida, sina'ar zabdá), the genet Genetta genetta (djarwit, haft al-zahhäd, badis, zuwarjáh*) and the ichneumon or Egyptian mongoose, Herpestes ichneumon (nims, fár Fir'awm), a familiar guest attached to the hearth in all oriental and Mediterranean antiquity (for people sought, by adopting these little birds, (ytfyu*), was the indispensable aid in hunting wheatear (fakdák) with the merlin (ya'yuw), for these little birds, at sight of the falcon, darted into thorny bushes, and only the appearance of the weasel, held on a leash, forced them to fly out. This very diverting method of hunting was much appreciated since, being very inexpensive, it could be practised by the most impoverished and by children. Following the same procedure, the weasel, fastened at the neck or waist to a long leash, was used to dissuade the fox when it had gone to ground in its earth; terror made it take to flight, or else, its throat having been seized by these little jaws of steel, it was forcibly dragged out by the leash fastened to its assailant, which would never release its hold.

In the light of these texts, it can be said that the part taken by the weasel in hunting, in the East, was more important than that taken in the West by the ferret, Mustela putorius furo (ibn mihrad; Maghrib: nims through confusion with the ichneumon), a form that, through domestic isolation, has degenerated from a race of polecats imported, as early as the Roman epoch, from the mountain massifs of the Maghrib. Moreover, the certainty of the essentially European origin of the ferret, provided by the scientific data of modern mammalogy, rules out any simple connexion between ibn *ırs and this bastard member of the mustelidae which is incapable of living in freedom and, at most, is good only for driving rabbits out of their burrows.

The flesh of the weasel, like that of all carnivores, is forbidden as food in Islam, but early medicine recognized certain therapeutic properties in it, as also in the organs of this hunter which, as soon had the idea of taking advantage of the extremely bloodthirsty instincts of this miniature wild beast, its feline suppleness, its agility in creeping noiselessly into the narrowest fissure, the lightning speed of its leap, the inerorable vice-like grip of its jaws, its great aptitude for being trained, the few attentions

(F. VIRE)

IBN ʾĪSÂ, MAḤMĀD (sic) b. ṬABĀD b. ʾĪSÂ b. ʾAbū-ʾAbd Allāh, a MÛTOCCAN man of letters (to be distinguished from his homonymy, Abū ʾAbd Allāh Muḥammad b. Ahmad b. ʾĪsā al-Maghribi, d. in Damascus in 1867; Brockel-
The prince of Tabaristan. By including in his History a translation into Persian of the epistle, he has preserved for us this significant piece of Pahlavi literature (see A. Christensen, Iran sous les Sassanides, Paris 1944, pr. 119-209, and Parakh). The Ta’rikh-i Tabaristan, which he was still writing in 613/1216-7, contains much useful historical, geographical and biographical information. It is also of literary interest, and preserves a number of verses in Tabar dialect. A later and anonymous hand has brought the history of events from 605/1209, when the first domination of the Al-I Bâvand ended (81/1453-4), to 750/1349, when the second domination came to an end. The added section, found in most manuscripts, is taken mostly from Awiyâr. Allâh Amlû’s Ta’rikh-i Râyân, completed apparently in 784/1382.

**Bibliography:** Ta’rikh-i Tabaristan, ed. A. Ikbîlî, Tehran 1941, intro. and 1-8; An abridged translation of the History of Tabaristan, by E. G. Browne, London 1905; Storey, ii/3, 359-61. (J. SCHACHT)

**IBN ISHÄK, MUHAMMAD B. ISHÄK B. YAŞÄ B. KHYÄR** (according to some sources, b. KHAEBBÄR, or KÖMÄN, or KÖTÄN), one of the main authorities on al-sîra al-nabawiyyä, along with Musä b. Úkba and al-Wâkidî. His kurna is variously given as Abû “Abd Allâh or Abû Bakr. On the whole, the former is the better substantiated and the confusion may have resulted from the fact that he had a brother called Abû Bakr (Udähâ’b, vi, 400). He was born in Medina in about 85/794, and, according to the majority of the sources, died in Baghdäd in 150/767—alternatively dates for his death are 151, 153 and, in one case (Wââyût, i, 162), as early as 144/761-2. He was buried in the cemetery of Khûzûrân, near the grave of Abû Hanîfâ.

His grandfather, Yaşär, was among those taken prisoner at “Ayn al-Tamr in 12/634 and, according to Yâkût and al-Baghâdädî, was one of the first captives sent by Khâlid b. al-Walîd to Abû Bakr in Medina. He became the slave of Kays b. Mukhrâma b. al-Mu’tallîb b. Abû Manûl b. Kûsâyî and, having accepted Islam, was manumitted and became his masâl, thus acquiring the niza al-Mu’tallîbi. His three sons, Musä, “Abd al-Rahmân, and Ishäk, were all known as transmitters of âbbâr. Ishäk married the daughter of one of his predecessors and from this marriage Ibn Ishäk was born.

There are no details of his early life, but in view of the family nature of early âbbâr and hadith transmission, it was natural that he should follow in the footsteps of his father and uncles and become specialized in these branches of knowledge. He must have acquired an early reputation as a scholar for al-Zuhrî, who died in 124/741-2, to have spoken of him as “the most knowledgeable of men in maghâsî” (“Uyun al-athar, i, 1). In 119/737 he came to Alexandria and studied under Yâzîd b. Abî Habîb. Subsequently, as Ibn Hâdîj puts it, “he related on the authority of a group of the people of Egypt traditions which no one else related on their authority, so far as I know” (Tahâhîb, ix, 441). J. Fûck has suggested that Ibn Ishäk returned to Medina from Egypt, before departing finally for Irâq. There are frequent references to his having left Medina “of old”. This is substantiated by the fact that he has only one transmitter among the people of Medina, Ibrahim b. Sa’d (Udâhâ’b, vi, 399). His leaving Medina is usually attributed to the enmity of two men, Highâm b. Úrwa and Mâlik b. Anas. Highäm b. Úrwa is said to have objected to Ibn Ishäk relating traditions on
the authority of his wife, Fatima bint al-Mundhir b. al-Zubayr. As J. Horovitz has pointed out, Yahya was mistaken in identifying Hisham with the governor of Medina who ordered Ibn Ishak to be scourged for dallying with women at the rear of the mosque, since Hisham was governor of Medina for a four-year period up to 86/705, the approximate date of Ibn Ishak's birth; if the story has any validity, it might refer to Hisham's son, Isma'il, who was governor from 106/722-5 (op. cit. in Bibl., 169).

The antithesis towards Ibn Ishak was of a different order. It could have been due to professional jealousy, as the story related by 'Abd Allah b. Idris suggests: "I was with Mlik b. Anas when a man said to him: 'Muhammad b. Ishak says: Present to me the knowledge of Mlik, for I am the man to check it'. Mlik said: 'Look at this anti-

Christ saying 'Present to me the knowledge of Mlik' (Udaba, vi, 400). Another possibility, as A. Guillaume has suggested (Life of Muhammad, Introd., xiii), is that differences may have arisen between them over the contents of Ibn Ishak's lost book of Sunan. This could well have been so, for although later authorities such as Ibn Hanbal did not accept Ibn Ishak as an authority on legal matters, the latter did lay claim to being an authority on fiqh, as we can see from the reference in Ibn Hajar: "Ibrahim b. Sa'd had, on the authority of Ibn Ishak, about 100 hadith legal decisions, apart from maghazi" (Tahdhib, ix, 41). Another suggestion is that Mlik "objected to Ibn Ishak tracing the ghassawat of the Prophet by the means of the sons of the Jews who had become Muslims and remembered the story of Khaybar and other matters" (Tahdhib, ix, 43). Yet another explanation of Mlik's enmity towards Ibn Ishak is based upon the fact that Mlik objected to his having the grounds of his knowledge from a Shafi'i and a Kadaari (Udaba, vi, 400; 'Uyun, i, 9; Tahdhib, ix, 42). The same charge was levelled against al-Wakidi and others ...

Ahmad b. Yunos said: The scholars of maghazi were Shafi'i, like Ibn Ishak and Abu Ma'amhar and Yahya b. Sa'd al-Uumawi and others" (Udaba, vi, 400).

Having left (or been forced to leave) Medina, Ibn Ishak went first to al-'Abbas b. Muhammad, governor of Syria during the reign of al-Mansur, then to al-Hira, before finally settling in Baghdad. These peregrinations are reflected in the different riwayat of his Sira. There are some fifteen of these, with Kufa, Rayy and Basra figuring most prominently (Fuck, 44) and with only a single Medina riwayt. In addition to the Sira, he is credited with a Kitab al-Khulafa', which al-Uumawi related on his authority (Fihrist, 92; Udaba, vi, 401) and a book of Sunan (Haididj Khalifa, ii, 1088). As usual in the literature of ijar wa ta'dil, we find the usual early critics expressing diametrically opposed judgments on Ibn Ishak. In addition to the favourable assessment of al-ZuhrI referred to earlier, 'Asim b. Umar b. Katada was of the opinion that "knowledge will remain amongst us as long as Ibn Ishak lives" ('Uyun, i, 9; Udaba, vi, 400; Tahdhib, ix, 44). Shu'ba regarded him as "amir al-muwminin in tradition" (Tahdhib, ix, 44). Abu Zura', al-Madini, Ibn Ma'in and Ibn Sa'd regarded him as sound in tradition. On the other hand, al-Nisai and Yahya b. Ka'than did not accept him in matters of hadith. Al-Ahram, Sulayman al-Taymi and Muhyab b. Kholid regarded him as a liar—a charge which relates to hadith and is separate from the oft-quoted accusation contained in al-Dhunjabi, Ibn al-Nadmi and Yahya that Ibn Ishak included verses in his Sira knowing them to be forged. Al-Bulghari and Muhammad b. 'Abd Allah b. Numayr were not satisfied with his riwayt. Ibn Hanbal, whilst accepting him on matters relating to maghazi, did not draw upon him for hadith because he objected to his use of the collective inSad: "I see him relating on the authority of a group of people a single hadith and he does not distinguish the words of this one from the words of that" (Tahdhib, ix, 43). To single out Ibn Ishak on this score is an unfairluar, since the use of the collective inSad is a not uncommon feature in the writings of the early authorities on the sira-maghazi.

( J. M. B. Jones)
in praise of his grandson, 'Abd al-Mun'im al-Khayri. He once claimed authorship of a poem by his contemporary and rival Muhammad b. 'Abd al-Mun'im al-Khayri (d. 685/1286), and the matter had to be submitted to the arbitration of Ibn al-Farîd, who discovered the truth.

Bibliography: Ibn Shâkir al-Kutubi, Fawâdi, Cairo 1283, ii, 269-74, 287-95; Ibn Taghribirdî, Nûdjîm, Cairo 1936, vi, 360, vii, 282-3, 369-70; 'Umarî, Masâlih al-abŷbûr (MS Cairo Lib. 559), xiv-xv; Diwan, Escurial 457; Brockelmann, I, 257; B. Lewis, in Arabica, xiii (1966), 257; F. Bustani, Diwâr al-ma'sârif, 1 (H. Mowâd). Ibn al-'Itnâbah al-Khazâ'irî, 'Amîr b. 'Amîr b. 'Azîd Manâth (see his genealogy in Ibn Sa'd, vii, 264, 2 in the article on his granddaughter Kabîsha bint Wâlik b. 'Amîr, wife of 'Abd Allâh b. Râwâha [g.e.], a pagan Arab poet named after his mother al-'Itnâbah, who belonged to the Banu al-Qayyâma. He was leader of al-Khazâ'irî [g.e.] in their feuds with al-Aws b. al-Nu'aym b. Zalîm (Agzdîn, 1973, etc.).

The author's father, Ahmad, as the grandson of one Mamlûk amir and the son of another, was no longer eligible for inclusion among the military élite of amîrs but became one of the awlâd al-nâs [g.e.] which, according to Ibn Iyâs, was equivalent to the âdîndâl al-balâh and served, in his time, as a sort of military reserve responsive to the Sultan's command. Ibn Iyâs cites an instance, under Sultan al-Zâhir Barkûq, Iyâs (ca. 750-830/1350-1427) rose to the rank of Second Executive Secretary (dawâdâr tînî) under Sultan al-Nâşir Farajî, the son of Barkûq (cf. Ibn Taghribirdî, fol. 278; Wiet, Mankan, no. 563). The author's father, Ahmad, as the grandson of one Mamlûk amir and the son of another, was no longer eligible for inclusion among the military élite of amîrs but became one of the awlâd al-nâs [g.e.] which, according to Ibn Iyâs, was equivalent to the âdîndâl al-balâh and served, in his time, as a sort of military reserve responsive to the Sultan's command. Ibn Taghribirdî, fol. 278; Wiet, Mankan, no. 563).
BADÎ' AL-ZUHUR FI WAQİ' AL-DUHUR, a perfunctory survey of all Egyptian history down to the Mamlûk period, followed by a brief year by year summary of events, growing progressively more detailed as he nears his own time. In the first published versions in three volumes (Cairo, 1301-06/1884-88; reprinted Bülkû, 1311-12/1894), the history of Egypt from the beginning to the year 815/1412 is covered in the first volume, the second deals with the years 815-906/1412-1501, the end of the reign of al-Âdîl Tûmân Bây, and the third with the years 910-17, the reign of the last Mamlûk sultan al-Âshraf Tûmân Bây, omitting the reign of Sultan al-Ghawrî (906-21/1501-15). This brief résumé both indicates the disproportionate coverage allotted to various periods and points to the problem whether the entire work is to be attributed to Ibn Iyâs. The account of al-Ghawrî’s reign, while missing from the manuscripts on which the Cairo-Bûlûkk editions were based, is found in other manuscripts and was included in a re-edition of the parts of the work dealing with the years 872-928/1467-1522, i.e., that period of which Ibn Iyâs was an eyewitness observer (3 vols. ed. by P. Kahle, M. Mostafa, M. Sobernheim, Bibliotheca Islamica, v, 1931-39; revised ed., M. Mostafa, 1960-63). While earlier portions of the work (from the reign of Kâ‘ît Bây) are written in a brief, almost vernacular style, the final section, from 922/1516 onwards, is portioniîly fuller and more detailed, but also more finished and polished in style, leading K. Vollers (in Revue d’Égypte, 1895, 544-73) to the conclusion that Ibn Iyâs may not have been the author of this later section, a view disputed by M. Sobernheim (ET¹, ii, 414), who saw in this difference in style the possible conflation of two versions or the combination of a personal diary with a court circular. These later portions include detailed reports on life in Cairo, especially at the Mamlûk court, obituaries, extracts from Djawîhir al-sulûk’, Nuzhat al-umam fi ‘l-*adja’?ib wa ‘l-hikam; of the patriarchs and prophets, perhaps not by Ibn Iyâs; Nasîkh al-azhâr fi *adâ‘îd al-akhîr, a cosmography with specific reference to Egypt, written in 922/1517 and much used by 19th-century scholars; a little-known work of which only one manuscript is extant: Nuzhat al-umam fi ‘l-*adâ‘îd wa ‘l-hikam; extracts from Badî‘, entitled Dja’âshir al-sulûk; and Muntazam bâd al-dunyâ wa-lati’rîkh al-umam in three volumes (attribution uncertain, cf. C. Cahen, in REI, iii (1936), 358), these last two extant in one copy each in Istanbul.

IBN KABTûRNû, (KABTûRNû, KUBTûRNû or KURTûRNû), the name of three brothers, all Andalûsi men of letters. They were natives of Badajoz, where their family was said to be one of the oldest and most illustrious in the whole western part of al-Andalus. To judge by the name, this family is of Iberian origin; Dozy (Suppl., ii, 302) and Simonet (Glosario, 97) suggest that Kabtûrnû represents the classical Latin caput followed by the mediaeval Latin formo (‘I turn’); hence the tentative interpretation of E. Garcia Gómez, vuelvo la cabeza, a family name which need not astonish us since we know the equally curious Ibn Arfa’i Râsû.

Of the three brothers, Abu l-Hasan Muhammed b. Sa’d b. ‘Abd al-Âzîz is the least known. Apart from a brief notice in the Rûyât of Ibn Sa’d (no. xxxv, Arabic text, 30, Spanish tr., 163) and two verses reproduced in almost all the anthologies, nothing is known about him.

Abû Bakr ‘Abd al-Âzîz is the most eminent of the three brothers. He is held in high regard both as prose-writer and as poet, and it is often said that ‘Abd al-Maqîjd Ibn ‘Abdûn (d. 520/1126 or 529/1134) and he are the two greatest writers of the western part of al-Andalus. Yet the few specimens of his prose which we possess do not justify this claim. On the contrary, his poetry is artificial and cold, while his prose is pedantic and superficial. Very probably he owes his fame to his wealth and political influence in his capacity of secretary to ‘Umar al-Mutawakkil, petty king of Badajoz (464-88/1072-94). With his brothers he was later employed in the chancellery of the Almoravids. He died in the reign of ‘Ali b. Yusuf b. Tâghîin after 540/1126 (Ibn al-Abbâr, Tahmîa, no. 1743).

His brother Abû Muhammed Tâlîya was of even slighter talent and importance. He too was secretary in the chancellery and died before him (Ibn al-Abbâr, Tahmîa, no. 259).

In spite of the tragic circumstances in which they lived, the Banû Kabtûrnû enjoyed an easy and carefree existence, as if they were unaware of—or indifferent to—the tragic events of their time. Our sources portray the three brothers as irresolutely free men, leading a somewhat decadent dolce vita, scenes from which they describe in short verses of rococo style. This child-like vision of an unbroken life of pleasure has ever since stimulated the imagination of later poets and writers and has led them to repeat, over and over again, verses similar to those of the Banû Kabtûrnû.

Bibliography: In addition to the sources

**IBN AL-Kâdi**, Shûhâb al-Dîn A'bâd, 'L-'Abbâs, Ahmad b. Muhammad b. Ahmad b. Sayd b. 'Abd al-Rahmân b. A'bâd 'l-Sâ'îya al-Mu'akhsân, a Moroccan geographer whose biographical works are highly regarded, was born in Fâs in 960/1553, of a famous family belonging to the large tribe of the Zanata [q.v.]. His father supervised his education and made him undertake serious study with the best teachers in the Maghrib, in particular with ghâyâb Abu 'l-Mâhsân Yûsuf al-Fâsî. After this he even won a certain renown as an expert on arithmetic and the division of inheritances. Being anxious to complete his education, Ibn al-Kâdî took advantage of his pilgrimage to Mecca to spend two years studying with the great doctors of the Muslim East. His return, in 968/1558, coincided with the accession of the Sa'did sultan Ahmad al-Mansûr [q.v.] with whom he became intimately acquainted. In 944/1538 he wished to return to the East by sea, but was captured by Christian pirates. After eleven months of painful experiences, almost certainly in Spain, his master ransomed him for 20,000 ounces. In gratitude, Ibn al-Kâdî dedicated all his works to his royal benefactor, in whose entourage he continued to live, apparently without any official duties. At some undetermined date he was appointed khâbî of Salâ (Salé), but was recalled for an unknown reason. He then finally settled in his native town and devoted himself to teaching. His biographers record that at the end of his life he was expounding the Sâhibî of al-Buthârî [q.v.] and that he had the honour to have as his disciple al-Makkarî [q.v.], the distinguished author of the Nafîh al-âyâ, the distinguished author of the Nafîh al-âyâ who compiled the important work, the distinguished author of the Nafîh al-âyâ which is regarded as the most widely known member of this family  (Brockelmann, S II, 25). Badr al-Din's son, Tâki al-Dîn Muhammad, wrote a biography of his father and a few other works which are mentioned in Brockelmann, S II, 37, S II, 25. Badr al-Dîn's son, Ta'ki al-Din Muhammad, is also attested as an author (Brockelmann, S II, 25).

2. His son, Bâd al-Dîn Muhammad, d. 874/1470, wrote a biography of his father and a few other works which are mentioned in Brockelmann, ii, 37, S II, 25. Badr al-Dîn's son, Ta'ki al-Din Muhammad, is also attested as an author (Brockelmann, S II, 25).

3. The uncle of no. 1, Yûsûf b. Muhammad b. Umár, d. 789/1387, made extracts from the Kitâb al-Maghâzî of Musâ b. 'Ukbâ [q.v.]; cf. E. Sachau, SFBer. Ak W., Phil.-hist. Kl., 1904, xi, 6; Brockelmann, I, 144. (J. Schacht)

**IBN KALAKIS**, Abu 'l-Fath (var. Futûb) Nasr (Allâh) b. 'Abd Allâh, an Arab poet, writer and letter-writer known by the familiar name of Ibn Kalâkis (or also al-Kâdi al-dâ'im). Born in 532/1137 in Alexandria, where he spent his childhood, he afterwards went to Cairo to study, and the sources record that he had Abu Tahir al-Silâfi [q.v.] as his ghâyâb. We do not know for what reason Ibn Kalâkis in about the middle of 1169 visited Sicily, where he lived until the end of the following year, but it may be conjectured that he went there at the invitation of certain friends who will be mentioned below.

Towards the end of 1169, or at the beginning of 1170, the poet was in the Yemen, at Aden and Zâbût, and also in Aydhâb on the Egyptian Red Sea coast, for reasons which may have been both commercial and political, and which have been widely used by later writers, particularly by al-Ífrâîn [q.v.] and al-Nâṣîrî [q.v.].

**Bibliography:** In addition to the references in the text: E. Lévi-Provençal, Les historiens des Chorfa, Paris 1922 (essential); Ibn Zaydân, Ibâd, al-álam al-dâ'im ... i, Rabat 1920, 336-8; 'Abd b. Idrâhîm, al-Ílam bi man halâ Marra-kush ... , ii, Fâs 1936, 93-6; 'Abd al-Sâlâm Ibn Sûdâ, Dâ'il mu'arrîth al-Maghrîb al-aštâ, Tetuan 1950 (particularly nos. 61, 62, 466, 490, 840, 1362, 1363); I. S. Allouche and A. Regragui, Catalogues des manuscrits arabes de Rabat, ii, Rabat 1958. (G. Derudder)
Ibn Kalâkis has left a record of his stay in certain towns in Sicily (Termini, Cefalù, Caronia, Fati, Oliveri—rather than "Lipari", as M. Amari has preferred to read, see *Storia dei Musulmani di Sicilia*, Catania 1933, i, 790—Malazzo, Messina and Syracusa). Occasionally in all his letters, but most distinctly in his letter to the sultan of the Dahlak Islands in the Red Sea, he expressed his desire to go back to Egypt, to which he was well disposed and which was his second home. Ibn al-Kalâkis' father, Abu 'I-Hār, also had connections in Sicily, which is why the poet mentions not only in *makaddimâ* as a description of the poet's travels in Sicily as well as of his sojourn with a patron of the period, the sultan 'Abd al-Rahmân, but also his brother 'Abd al-Hājjar (see M. Amari, *op. cit., passim*) to whom, as to his sons 'Abd al-Bakr, 'Ummar and Uthmân, the poet dedicated his *kasidas*.

It still remains to identify the other persons encountered at Palermo and mentioned not only in the work named above, but also in his *Dimân* (ed. Khalil Mu'târân, Cairo 1903; a more comprehensive ed. has been prepared in Paris), and above all in his unpublished collection of letters (Tarassul Ibn Kalâkis, MS of the Dâr al-Kutub in Cairo: al-Maktaba al-Taymûriyya, *Adab* no. 617). This consists of letters addressed to: (1) Djurdânnâ in al-Zahr al-bâsim (Kharidâ, i, 165, where it is so vocalized by the editors; in the *dimân*, it is چرَحْ), described as *wasir* to the "shâbik Şikilliyâ", which suggests a "Giordano" (a very common name in the Norman period), one of William's ministers, a name not, however, mentioned in that king's entourage; (2) Ghâtar b. Djâwhân or Dîshân (Tarassul, fol. 34), an eminent personage at the court of William; (3) al-Sadîd al-Şârî (ibid., fol. 47-8), which suggests the "Sedîcuctus" mentioned in M. Amari, *op. cit., iii*, 510 and n. 2; (4) Ibn Fâthî (ibid., fol. 43), who is described as a fâbih.

**Bibliography:** To the sources named by M. Amari, mention should be made of: (a) *Tankih al-abhadth li 'l-milal al-thâldth*, a preface. For the earlier part of the History, see C. Cahen, in *Arabic and Islamic studies in honor of Hamilton A. R. Gibb*, Leiden 1965, 156-67. (C. CAHEN)

**IBN AL-KALBI** [see *AL-KALBI*].

**IBN KAMÂL** [see *KEMALPASHA-ZADE*].

**IBN KAMMÔNA**, Sa'd b. Mansûr, oculist and philosopher, lived in Baghdaţ in the 12th/13th century, under pagan Mongol rule. His works, mostly manuals of philosophy and commentaries on Ibn Sinâ and Suhrâwardî, secured him a place in Islamic philosophical discussions.

A strong tendency toward rationalist deism pervades his *Tanbih al-abhadth li 'l-milal al-thâldth*, in which the author, who was a Jew, discusses religion and prophethood in general (drawing on Ibn Sinâ, al-'Ghazâlî, Maimonides, and Fâkhr al-Dîn al-Râzî), and devotes a separate chapter to each of the monotheistic faiths, treating the subject with a remarkable show of objectivity. Steinschneider considered the work "the most interesting tract of inter-religious polemics in Arabic". Most of it is devoted to Islam, and the cumulative effect of the discussion was hardly apt to please a Muslim. Written in 679/1280, the book served as a pretext for a mob outbreak against the author, who died shortly thereafter (683/1284-5).

The same qualities of calm discourse, a certain conscious pride in the capacity for adducing detachedly pro and contra arguments, an appeal to common sense and an appreciation of the essential good, to be found in various creeds are evident in his treatise on the differences between Rabbinic and Karaita Jews.

**Bibliography:** see *Examination of the inquiries into the three faiths*, ed. M. Perlmann (Un. of Calif. Publ. Near East. St. 1967). (M. PERLMANN)

**IBN KÂSI**, patronymic of the members of the Banû Kâsi family which, according to the *Jami' al-bulûk* of Ibn Hazm, is descended from a Visigothic count, Kasi; the latter gave his name to a long line of *muwallad* descendants settled in the regions lying between the Pyrenees and the valley of the Ebro; their superficial Islamization allowed them to preserve old connexions and even family ties with the noble houses of Vasconia. The most outstanding member of this family was Mûsâ b. Mûsâ Ibn Kâsi
who, from his fief at Tudela, declared war on 'Abd al-Rahmân II, forming an alliance with García Iniguez of Navarre; after a series of submissions and rebellions, he was officially acknowledged lord of Tudela. A rebellion by Almoravids of the Umayyad amir Muḥammad I, he led an expedition against Catalonia and, at the height of his power, succeeded in becoming known as the third king of Spain. As a protection against attacks from Asturias, he built the fortress of Albelda two leagues south of Logroño. He was attacked by Ordoño I, and was put to flight and severely wounded in the outskirts of Clavijo; he died shortly afterwards and was succeeded by his son Lope, who acknowledged the suzerainty of Ordoño I, himself dying soon after. His brothers, Muṭarrif and Isma‘îl, had themselves proclaimed at Tudela and Saragossa, while Muḥammad b. Lope, grandson of Mūsā b. Mūsā, yielded to the authority of Muḥammad I; appointed governor of Saragossa, he rebelled again and then, under pressure from the Tugjibîs of 'Abd al-Rahmân b. 'Abd al-'Azîz, submitted again to the authority of the latter, he was eventually killed, after having made repeated attacks on the capital of the Ethro which was occupied by the Tugjibîs. From his death onwards, the numerous descendants of Mūsâ b. Mūsâ Ibn Kasî, divided and in rivalry, grew increasingly weak and ended in obscurity, during the reign of 'Abd al-Rahmân III. A son of Muḥammad b. Lope, lord of Tudela, died in 309/923, the same year that his brother Muṭarrif was assassinated by his nephew Muḥammad, son of his brother 'Abd Allâh. A princess of the same lineage, Urракa, married Fruela II, and the other members of this turbulent family were led to Cordova to serve in the army of 'Abd al-Rahmân III or were converted to Christianity and frequented the courts of León and Navarre.

(Á. Huici Miranda)

IBN KASI, Abu l-‘Kāsim Ahmed b. Husayn, one of the many rebels who helped to precipitate the fall of the Almoravid dynasty in Spain, during the critical period which preceded the landing of the Almohad troops at Cadiz in 541/1146. In his lifetime as Ibn Barradjan before he had had time to put his plans into operation, he was severely wounded in the outskirts of Clavijo; he died shortly afterwards and was succeeded by his son Lope, who acknowledged the suzerainty of Ordoño I, himself dying soon after. His brothers, Muṭarrif and Isma‘îl, had themselves proclaimed at Tudela and Saragossa, while Muḥammad b. Lope, grandson of Mūsā b. Mūsā, yielded to the authority of Muḥammad I; appointed governor of Saragossa, he rebelled again and then, under pressure from the Tugjibîs of 'Abd al-Rahmân b. IBN KASIM — IBN KATHIR

M. Asin Palacios, Paris 1933, 5; Ibn al-Khatib, A'mdl al-aHdm, ed. E. Levi-Provencal, Rabat 1934, 285 ff.; J. Bosch Vilà, Los almordvides, Terrassa 2000, 291 ff. (the author mentions very briefly, besides the works referred to above, also: Ibn Khaledun, Berrioles, ii, 184; Marrakushi, Mu'djib, tr. Fagnan, 182; Codera, Decadencia y desaparición de los almordvides en España, 33-52; Valdeavellano, Historia de España, 914-7; F. Nyra, Notes sur quelques fragments inédits de la correspondance d'Ibn al-Arif avec Ibn Barrajain, in Hespèrs, 1936, 211-21. (J. Schacht)

IBN AL-KASIM, Abu 'Abd Allah 'Abd al-Rahman b. Al-Kasim b. Kalid b. Dinada al-Utaki, the most prominent disciple of Malik b. Anas [q.v.], and considered the most reliable transmitter of Malik's opinions. He was a mawla affiliated by Muhammad. He was born in 128/746 or, more probably, in 132/749 in Ramla, and died in Cairo in 1306. He is reported to have studied with Malik for twenty years, and he was the main agent in spreading Malikite doctrine to Egypt and from there to North Africa and the Maghrib. A main work of the Malikite school, the Mudawwana, is based on the answers which Ibn al-Kasim gave, first, to Asad b. Farhat, or, later, to Sa'dun [q.v.]; the version of this last, properly called al-Mudawwana wa 'l-mukhtaliqa, because its author had not been able to complete its revision and editing before his death, gained public acclaim and is commonly referred to as the Mudawwana, and only a few fragments of the version of Asad b. Farhat, called Asadiyya, have survived. The Mudawwana of Sa'dun was often commented upon by later scholars. Ibn al-Kasim is also the author of one of the versions (ahdith) of al-Nasafi's Ghdyat al-ikhtisdr or Mukhtasar, referred to as the "seven readers" [see KIRA'A] of the Kur'an. His authorities were the Companion Abd al-Rahman al-Makhzumi, called Kunbul.

Both of these became connected with the Shafi'i Ibn Mujahid, who procured Ibn Kathir's recognition as a "canonical reader" (al-Subki, i, 102). Bazzi and Kunbul are referred to under the name of Harymiyani [al-Dani, Taysir, ed. Pretzel, 3]. Ibn Kathir had a definite influence on contemporary traditionists, Bajars as well as Kufans, such as Sufyan b. Uyayna, the two Hammâds, and the grammarians al-Khalî and al-Ashâfî. The Ba'ri reader Abu 'Amr b. 'Aliâ (in 700/1306) became one of the best-known historians and traditionists of Syria under the Bahri Mamlûk dynasty. Educated at Damascus, where he went to live with his elder brother in 700/1306, after the death of their father, he had as his main teacher, in fîh, the Shafi'i Burhan al-Din al-Fazari (in 729), but next fell strongly, and very early, under the influence of Ibn Taymiyya (d. 728/1328) and his school. In addition, through his marriage with the daughter of Diamal al-Din al-Mizzi (d. 742/1342) he became the son-in-law of one of the most famous traditionists of Syria.

His own career, as one of the Syrian 'ulamâ', was for long a modest one. Towards the end of the year 741/1341, after the death of Tankiz and before that of Muhammad b. Kalâwûn, Ibn Kathir took part in two enquiries which were held, under the presidency of the governor Aljunubghâ al-Nâsirî, to pass judgement on a zindik accused of incarnationism (bâliâ) [Bidâya, xiv, 189-90; E. Strauss, L'inquisition dans l'État mamlinek, in RDSO, xxv (1950), 16-7].

In Muhabbarr 740/May 1345, he was appointed khâfa in the mosque founded at Mâzik (in 729), but next fell strongly, and very early, under the influence of Ibn Taymiyya (d. 728/1328) and his school. In addition, through his marriage with the daughter of Diamal al-Din al-Mizzi (d. 742/1342) he became the son-in-law of one of the most famous traditionists of Syria. His own career, as one of the Syrian 'ulamâ', was for long a modest one. Towards the end of the year 741/1341, after the death of Tankiz and before that of Muhammad b. Kalâwûn, Ibn Kathir took part in two enquiries which were held, under the presidency of the governor Aljunubghâ al-Nâsirî, to pass judgement on a zindik accused of incarnationism (bâliâ) [Bidâya, xiv, 189-90; E. Strauss, L'inquisition dans l'État mamlinek, in RDSO, xxv (1950), 16-7].

the governorship of Arghun Shâh (d. 750/1349), he succeeded his teacher al-Dhahabi, who had just died, as teacher of hadîth at the turba of Umm Sâlih and, according to some other sources, in 755/1354, for a very short time, the post of director of the Dar al-hadîth al-Aghrâfiyya after the death of the hâdîth Taqî al-Din al-Sulbî. In 752/1351, after the failure of the revolt of the amir Baybughâr Urûs, he was received at the Dâmâghîyya madrasâ by the caliph al-Mu'taḍâd (d. 762/1362-3), who arrived in Damascus, accompanied by the four hâdîth al-bu'dât of Egypt, to restore order there. Under the first governorship of Imam al-Sâlim Shâh (d. 766/April-May 1365, a very short time, the post of director of the Dar al-hadîth al-Aghrâfiyya was continued and completed, but the project was taken up again by Ibn Hâджar al-Áskâlânî. The latter states (al-Durâr al-kâmîna, i, 373) that Ibn Kâthîr had also made a collection of the hadîth quoted in the Tanbîh of al-Shirzâri (d. 752), a work which he himself had studied, at the beginning of his career, with al-Fazârî.

Ibn Hâджar al-Áskâlânî also reports that Ibn Kâthîr had begun work on a vast commentary on the Quran. His Tâfsîr (Cairo 1342/1923), essentially a philological work, is very elementary and for- shadows, in its style, that which al-Suyûtî wrote later. His K. Fâdîl al-Kûrân (Cairo 1348/1929) is a short manual consisting of a summary of the history of the Quran.

Ibn Kâthîr was also interested in jurisprudence. He had planned to write a vast treatise on fiqh based on the Quran and hadîth, but did not get further than the chapter on the Pilgrimage, in the section on 'ibâdât. He also alludes, in the Biddîa (xii, 124), to a commentary on the Tanbîh of al-Shirzâri. In his fatâwa, mentioned above, on the dîwân, he was inspired by the K. al-Sûfîsâ al-dharîsyya of Ibn Taymiyya. The Tanbîh al-kâfîsîyya are lost, but often mentioned in the obituaries of the Biddîa; they were continued and completed by Ibn Kâdî Shubba.

Bibliography: further to the references in the text: Shahrârî, vi, 231; Brockelmann, ii, 60-1, S II, 48-9; H. Laoust, Ibn Kathir historien, in Arabica, ii (1955), 42-98. (H. Laoust)

Ibn AL-KÂTTA'î, Ali b. Dâr al-Far b. Ali al-ShanTari, al-Shijâlî, is a philologist, historian, grammarian and lexicographer (we have very little information about his work as a poet), who was born in Sicily in 433/1041, at a time when the island was ravaged by civil war. He devoted himself to the study of lexicography and grammar under the direction of such scholars as Ibn al-Bîr [g.v.] who, according to the sources, made him fa- miliar with the Shîhâdat al-Djâwari [g.v.]. But, as soon as the Norman forces began their conquest of the island in 1061, Ibn al-Kâţtâ'î, together with a certain number of the Muslim elite, left Sicily. After a short stay in Andalusia he proceeded to Egypt, where he is known to have been at the beginning of the 6th/12th century.

On the subject of his life in his new home we have only a few items of information, which tell us that he was soon chosen to be tutor to the sons of the Fatimid wasir al-Afdal b. Badr al-Djâmîl [g.v.] and that he devoted himself to the teaching of prosody, grammar and lexicography; several distinguished pupils were educated at his school, among whom Abû Mûh. Abu Allâh b. Barrî [see IBN BARRî] is noteworthy. Ibn al-Kâţtâ'î died in Egypt in 515/1121 and was buried not far from the tomb of the imâm al-Shîhâdât.

Apart from a certain number of works named in a catalogue of the first Muslim traditionists, used the Tanbîhât of al-Mizzi and the work of al-Dhahabi. But his principal work in this field is his K. al-Djâmîm, an enormous compilation in which were listed, in alphabetical order of the Companions who had transmitted them, the traditions contained in the Musnad of Ibn Hanbal, the “Six Books” and some other less well-known works. In addition, Ibn Kâthîr summarized in his Mukhtasar (Cairo 1355/1357), the Muhammada n l-îlâm al-hadîth of Ibn al-Sâlim Shâh (d. 643/1245). He himself refers, in the Biddîa (xi, 24), to a commentary on the Shîhâdât of al-Bukhari which he was engaged; this commentary was not completed, but the project was taken up again by Ibn Hâджar al-Áskâlânî. The latter states (al-Durâr al-kâmîna, i, 373) that Ibn Kâthîr had also made a collection of the hadîth quoted in the Tanbîh of al-Shirzâri (d. 752), a work which he himself had studied, at the beginning of his career, with al-Fazârî.

Ibn Hâджar al-Áskâlânî also reports that Ibn Kâthîr had begun work on a vast commentary on the Quran. His Tâfsîr (Cairo 1342/1923), essentially a philological work, is very elementary and for- shadows, in its style, that which al-Suyûtî wrote later. His K. Fâdîl al-Kûrân (Cairo 1348/1929) is a short manual consisting of a summary of the history of the Quran.

Ibn Kâthîr was also interested in jurisprudence. He had planned to write a vast treatise on fiqh based on the Quran and hadîth, but did not get further than the chapter on the Pilgrimage, in the section on 'ibâdât. He also alludes, in the Biddîa (xii, 124), to a commentary on the Tanbîh of al-Shirzâri. In his fatâwa, mentioned above, on the dîwân, he was inspired by the K. al-Sûfîsâ al-dharîsyya of Ibn Taymiyya. The Tanbîh al-kâfîsîyya are lost, but often mentioned in the obituaries of the Biddîa; they were continued and completed by Ibn Kâdî Shubba.

the various sources but thought to be lost (a list of these will be found in U. Rizzitano, Notizie bio-bibliografiche, see Bibl.), two of his writings have partially survived: the Kitāb al-Durrat al-khālīna min ẓayd al-Dhakhrī (Ibn al-Dhakhrī, an anthology of Arab-Siculo-Persian poetry, of which there survive only extracts as a result of the activity of later compilers (see Notizie bio-bibliografiche, 275-80), and al-Maḥāl al-ʿasīrīyya. His other writings have been transmitted in their entirety, but almost all are unpublished: they are the Madīmuʿ min ẓīr al-Musalābī wa-khawāmīdihī (a short commentary on some verses of the poet of Sayf al-Dawla, see Bibl.), a group of five short treatises on metre (see Notizie bio-bibliografiche, 284-282), the Kitāb al-Afsāl, which was first noticed by E. Griffin (see Centenario della nascita di M. Amari, Palermo 1910, i, 431 fl. and from which we possess an edition (Haydarābād 1354), and lastly the unpublished Abnīyāt al-āsmaʿ (see Notizie bio-bibliografiche, 85-92, where the dihāga, the list of the characters and the conclusion are published).

IBN AL-KATTA, ʿĪsā b. Saʿīd al-Yarabūsī, Andalusian vizier of humble extraction but of Arab origin. Although he was the son of a simple schoolmaster, he succeeded in raising himself in the social scale thanks to al-Manṣūr [q.v.], who gave him important posts and even entrusted to him the command of an army sent to Morocco in 386/997 to bring it under the domination of the Umayyads. While he incurred the resentment of the Banū Sulaym (Ibn al-Washsha 3, 207), who gave rise to a love-story about Ibn Kays al-Rukayyāt and Kathira (Ibn al-Washsha 3, 207), he was extended to the family, even gave his youngest sister in marriage to the poet Abū ʿAbd Allāh al-Faḍl b. ʿAbd al-ʿAzīz b. Mūhammād b. al-Husayn b. ʿAlī al-Baghdādī, traditionist, ulim, and especially poet, of Baghdad, born in 476 or 479/1086, died 28 Ramadan 538/1040 August 1135. Although he was the author of medical works which have not survived, and also transmitted hadīths without incurring the reproof of critics, Ibn al-Katān is known chiefly for his vigorous satires which, as Goldāher says (Muh. St., ii, 60), "spared neither the caliph nor anyone else", for his muqāfāt and for his wit, as well as for his dealing with the later compilers (see ibid.). He was the first to use the term fīṣīn/muṣafāt/ṣīnʃuḥṣuṣ [ṣuḥṣuṣ] characteristic of the dābāt [see Rubāṭ], with the omission of the final foot, as often used by Bahāʾ al-Dīn Zubayr [q.v.].

IBN KAYS AL-RUKAYYĀT, ʿUbayd Allāh (not ʿAbd Allāh, which was the name of his brother) b. Kays b. Ṣuqayyak, Arab poet of the Umayyad period. He belonged to the Banū ʿAmir b. Luʿayy, one of the lesser clans of the Kuraysh. He was born at Mecca, perhaps in the twenties (the anecdote Ghārāhī, v, 158, 20 which points to 12/633 is not authentic) and grew up in the Hijāz. In 379/1087 after the battle of Siffin he moved with some of his kinsmen to al-Raḵḵa in the Dzāfra (Mesopotamia) amongst them ʿAbd al-Wahīd b. Abī Saʿīd, whose daughter Rukayya is the lady from whom together with some of her namesakes the poet took his strange surname (see Nīkēās, Zur Grammatik, 29). He remained in Mesopotamia for about 30 years, making, however, occasional journeys to the Hijāz. In 62/683 two sons of his brother ʿAbd Allāh and some other kinsmen of his were slain in the battle on the Ḥarra, and he mourned their loss (poems 40 and 41). Towards the end of the sixties, those of the Banū ʿAmir b. Luʿayy who dwelt in Mesopotamia became involved in the conflict between the Umayyads and the Zubayrids. When Harb b. ʿAbd al-Wahīd, the brother of Rukayya, killed one of the Banū Sulaym, ʿUmayr b. al-Ḥuǧbāl al-Sulāmī (d. 70/690) bade the Banū ʿAmir in the Wādī l-ʿAbrār in the neighbourhood of al-Raḵḵa; on this occasion Ibn Kays al-Rukayyāt was taken prisoner, but he was set free thanks to the intervention of two Sulāms (poem 43). He then moved with his kinsmen to Syria; but already in 77/695 we find him in the ʿIrāk on the side of Muṣāb b. al-Zubayr. He took part in the battle of Dayr al-Dāḥalik near Maskin, where Muṣāb fell (77/695). After the battle he fled to Kūfa and found shelter in the house of a lady hailing from the Khaṛṣaḏ, whom he calls in his poems Khaḥrās. This sojourn gave rise to a long story about Ibn Kays al-Rukayyāt and Khaḥrās (Ibn ʿAbī ʿAlī, al-Zubayr, vii, 54, 15). After a year he ventured to return to Medina and found in ʿAbd Allāh b. ʿAṣfar and Abī Ṭālīb a generous patron. He now sang the praise of the Umayyads. ʿAbd Allāh b. ʿAṣfar interceded for him with ʿAbd al-Malik, and the caliph pardoned him, though he did not grant him his former annuity. So Ibn Kays al-Rukayyāt went to the court of ʿAbd al-ʿAzīz b. Marwān, the governor of Egypt, and...
composed panegyrics on him. In the dispute between the caliph and his brother 'Abd al-As'iz he supported the latter's claim to the throne (poems III, 9, 16 and XI, 12). The poet's death is unknown.

Though a considerable part of the nearly 1000 verses of Ibn Kays al-Ru'ayyât which have come down to us consists of panegyrics, yet he begins first and foremost to the erotic poets who flourished at his time in the Hijjâz. With 'Umar b. Abî Rabi'a, by whom he is otherwise easily surpassed, he has some traits in common; his style is lucid and fluent, and the latter's claim to the throne (poems III, 9, 16 and XI, 12). The poet's death is unknown.

IBN AL-KAYSARANI (the nisba refers to Kaysariyya, Caesarea in Palestine; see Samani, Kitab al-Ansab, s.v. Kayyim, the father being the superintendent of the university. Ibn al-Kayyim refers to this nisba) was a specialist in traditions. He was born in Jerusalem in 448/1058, studied in Baghdad from 468/1075 onwards, and travelled widely in the eastern part of the Islamic world in order to collect traditions. Being an indefatigable walker, he made all his journeys in search of traditions on foot, and he refrained from asking for alms, accepting only what was offered to him, so that he often suffered hardship; he also earned money as a professional copyist of collections of traditions. He finally settled in Hamadhan where he built a house. He went to Jerusalem in order to take the shahada on what proved to be his last pilgrimage, and he died on the return journey in Baghdad in 507/1113.

Whilst the unequalled extent of his knowledge of traditions and his personal integrity are generally recognized, his reliability is judged variously by the critics. Al-Ansari al-Harawi [q.v.] is reported to have spoken well of him as a young man, and he was praised by Ibn Manda [q.v.], who related traditions from him, and by others. Other critics, however, such as Abu 'l-Fadl Muhammad b. Nasir al-Salami, Ibn 'Asakir [q.v.], and al-Samani [q.v.] mentions meeting him (Kitab al-Ansab, s.v. al-Kaysari); he was also knowledgeable in astronomy, geometry and arithmetic. Much of his poetry consisted of panegyrics of princes, in particular of the Wazirs and Mamluks. Ibn Shaddad, in his biographical dictionary, the autograph of his diwan in Aleppo, and he quotes some lines from his poetry; more extensive quotations are given by Yaqut, and several of his hadisas are quoted by Abu Shama [q.v. in the Kitab al-Rau'datayn. Only one copy (badly preserved) of his diwan seems to have survived (Cairo, iii, 111).

IBN KAYYIM AL-DJAWIZIYYA, SHAMS AL-DIN IBN BAKR MUHAMMAD B. ABU BAKR AL-ZAR'INI, Hanball theologian and jurisconsult, born at Damascus on 7 Safar 691/20 January 1292 and died there in 751/1350. He was of humble origin, his father being the superintendent (kayyim) of the Jawiziyya madrasa, which served as a court of law for the Hanball school of thought. Ibn al-Kayyim's education was particularly wide and sound. There are mentioned, among his main teachers, the kadi Sulayman b. Hamza (d. 711/1312) and the shaykh Abu Bakr (d. 728/1328), son of the traditionist Ibn 'Abd al-Da'im, but in particular he was, from 733/1333, the most famous pupil of Ahmad Ibn Taymiyya, all of whose ideas he can be said to have absorbed and whose work he helped to popularize, while retaining his own personality. Well-versed, like his master, in all the main disciplines of the time—Kur'anic exegesis, hadith, usul al-fikh and jurisprudence—and like him an adversary of the monastic school (ittidadyya) which had arisen from the teaching of Ibn al-'Arabi (d. 638/1240), Ibn al-Kayyim was, unlike his master, much more strongly influenced by Sunnism.

He was interested particularly in the Manasil of al-Ansari (d. 485/1096), who enjoyed great prestige under the Mamluks. Much less of a polemicist than his master and much more a preacher ('adiz), Ibn al-Kayyim finally left behind him the justified reputation of a writer of great talent, whose eloquence contrasts with the incisive dryness of the succinct prose of his famous master.

In 726/1325, Ibn al-Kayyim was imprisoned in the citadel of Damascus, at the same time as Ibn Taymiyya, and was not released until 728/1328,
after the latter's death. In 731/1331-2, he made the Pilgrimage to Mecca; it ... always with only superficial emotion, as when he expresses, in terms which may be called romantic, his emotion in the

in

in

lism of Ibn Taymiyya encountered in the govern-

caravan, which left Damascus under the leadership

hampered by the opposition which the neo-IJanba-

able number of jurisconsults and traditionists (Ibn

Khalil had recently founded in the gardens of the

outside Bâb Sharki and Bâb Tûma (Bidâya, xiv, 174). On 6 Safar 743/11 July 1342, he gave his inaugural lecture at the Sadrîyya madrassa, where he was to teach until his death (ibid., xiv, 202).

On two occasions he was in disagreement with Takî al-Dîn al-Subkî (d. 777/1378), the Shâfi'î chief kâdi of Damascus, on points of fîkî, without however becoming involved in serious quarrels.

In Muharram 746/4 May-2 June 1345, he had a disagreement with al-Subkî on the question of whether a race or a contest of shooting (mustâtâbaa), in which each of the two competitors puts down his stake, is permitted without the participation of a third competitor (known as mukhâliî) who himself takes part without contributing a stake and thus makes lawful an operation which otherwise might be regarded as constituting a game of chance (kumâda); expressing the ideas of Ibn Taymiyya, Ibn al-Kayyim maintained that the presence of this mukhâliî was not necessary (Bidâya, xiv, 216). However, when summoned by the Shâfi'î kâdi 'l-hudâî, he had to submit to the opinion of the majority.

A little later, in 750/1349, he was again in dis-

agreement with al-Subkî, for having given some fatawa on the problem of replediation (faldî) in conformity with the doctrine of Ibn Taymiyya (Bidâya, xiv, 235); the Bedouin amîr Sayf al-Dîn b. Fadî reconciled him with his adversary.

Ibn al-Kayyim died at Damascus on 23 Radjab 751/26 September 1350; he was buried beside his mother in the cemetery of Bâb Saghir. His son Djalîl al-Dîn al-Kayyim (d. 755/1355) succeeded him in his teaching at the Sadrîyya.

Ibn al-Kayyim’s career was modest, and was hampered by the opposition which the neo-Hanbalism of Ibn Taymiyya encountered in the governmental circles of the Mamlûk state. On 2 Radjab 757/15 February 1336, he delivered for the first time the khutba in the mosque of this city. Ibn Dîn al-Khaliîkhîn had recently founded in the gardens of the Chtûta outside Bâb Sharki and Bâb Totmâ (Bidâya, xiv, 174). In 6 Safar 743/11 July 1342, he gave his inaugural lecture at the Sa'driyya madrassa, where he was to teach until his death (ibid., xiv, 202).

Several Muslim scholars of the Mamlûk period were among Ibn Kayyim’s pupils or were in varying degrees influenced by him: among them were the Shâfi’î traditionist and historian Ibn Kâhir (d. 777/1377; cf. Bidâya, xiv, 234-5), Zayn al-Dîn Ibn Radjab (d. 795/1397), the last great representative of mediæval Hanbalism, and Ibn Radjab al-

filling such an important role. It is known for

personality of Ibn Khafif was such as to justify his

few of his inspiration from Eastern poets such as al-Shafii al-Ra’di, ʿAbd al-Muhsin al-Šūrī or Mīrār al-Daylamī, and probably also from al-Buhṭurī and al-Šanawbarsī, in the case of the last two he does not admit it (cf. H. Pères, *Poēsie andalousose*, 36). He in his turn influenced a series of Andalusian poets, beginning with his nephew Ibn al-Zakki, with whom, together with Ibn ʿAlī ʿAntabi, he in his turn competed, upon an occasion described by al-Maḵkārī (Analectes, ii, 424). He has been described as the creator of the “School of Levante”. Garcia Gómez states that the *khafadja* style continued until the end of the kingdom of Granada.

IBN KHAFIF, ABū ʿABBĀS ʿALĀʾ MUḤAMMAD AL-ŠARĪʿAṬ, also called al-Shafīʿī al-Kafrī or al-Šaykh al-Šarīʿaʾ, famous mystic of Shirāz, died 371/982 in his native town, it is said at a very great age (Yāḵūt, s.v. Šarīʿaʾ). His works (26 titles preserved in the *Shād al-Šaʿr, 42-3*) are lost, with the exception of some sentences transmitted mainly by al-Sulami, Abū Nuʿaym and al-Kuṣayrī, from a biography written by his disciple, the Hallādī “philosopher” Abū l-Ḥasan al-Daylāmi and later re-written and translated into Persian by Ibn Djuñyād, the author of the *Shād al-Šaʿr* (St)get-y Ibn Khafīfī, ed. A. Schimmel, with two professions of faith). But this work is more reliable for information on the life of the master than on his teaching.

According to al-Hudūrī (1465/1603) however, Ibn Khafīfī was the founder of an independent school of mysticism (Kafīfī, GMS, xvii, 247; cf. *Taḏkhirat al-ašʿāyī*, ii, 135). He had a lasting influence on the Kazerūnī movement (*Vita Kazeruni*, ed. F. Meyer, 1901, 1945, 17), and he figured in the mystic genealogy of Suhravardīyya (Deport and Coppolani, *Confessions religieuses musulmanes*, 534). As a result, the name of Ibn Khafīfī found a place in the life of many later mystics, beginning with the less occult influence of Hallādī, thus penetrating deeply into the mystical life of Fāris until just before the Mongol invasion.

The question arises as to whether the historical personality of Ibn Khafīfī was such as to justify his filling such an important role. It is known for certain that he was Žāhirī in *fiqh*, an ʿAshʿārī in *kalam*, and an anti-Ṣālīmī in mystical theology (L. Massignon, *Essais*, 345). More simply, the life and the thought of this illustrious Shīrāzī can be said in principle to divide themselves into two successive periods. The first is dominated by the two basic aspects of his life. It seems probable to suppose his thought to have developed in harmony with these two broad phases of his life, leading him towards increasingly intellectualist theses (Djuñyādī and semi-Hallādī), than to attribute to him an eclecticism as vague as it was persistent. There are various indications to corroborate this hypothesis: Ibn Khafīfī used in turn two initiatory *insād*, the one purely Shīrāzī with the names of Djuñyād al-Hadhdhāʾ (Sīn, 149, 178, 202) and of Abū ʿAmr al-Iṣṭākhīrī (Sīn, 33, 35, 87, 152), the other artificially linked to al-Djuñyādī (L. Massignon, *Essais*, 129, rejected by the Kazerūnīs, *op. cit., 25*); Ibn Khafīfī retracted at the reading of a dissertation of al-Djuñyādī (*Aff*, ed. Vadez, 3), he hesitated between the school of al-Djuñyādī and the teaching of his first Baghdādī master Ruwaym, a Žāhirī mystic of Malāmātīyya tendencies who had close links with Abū ʿAmr al-Iṣṭākhīrī but was on rather bad terms with al-Djuñyādī (I. Goldziher, *Die Zdhiriten*, 179; al-Sulami, op. cit., 462; al-ʿAffī, Malāmātīyya, 60; Taʿrīḥ Baghdād, viii, 43; cf. Shaddārī-nāma, 95-6).

The mystic theology of Ibn Khafīfī, worked out from actual experience but rapidly codified at a later stage in a cult which was essentially devotional and in which the two basic aspects of his life. It seems to have been governed by the following propositions: (1) The necessity of poverty (*fāhr*) and the pre-eminence of this poverty over wealth (“poverty” is an imitation of the Prophet, it is also “to rid oneself of one’s attributes”, *Taḏkhirat al-awlīyāʾ*, 131; hence it is like a negative realization of *sawādīda*, “unification of the Divine names and attributes with verification in the heart”, Abū Nuʿaym, x, 386). (2) The “poor man” is not *npsoc fucto a sāfī, any more than the sāfī is himself a waḥī. (3) The impression of the “moment” (ghalaba) is not enough to constitute ecstasy (*waḥīd*), just as the latter is an insufficient basis for sanctity (*mīlāyā*). (4) Sanctity is much more a condition, and one not clearly defined, than a transitory and unstable “state” (*ḥlr*). Certainly, in the eyes of Ibn Khafīfī the “station” is preferable to the “state” in the same way that “sobriety” is of more worth than “drunkenness”. It is difficult to say whether Ibn Khafīfī gave anywhere in his works a valid definition of this “sanctity” which he considered to be the true end of “poverty”. It has been defined for him by his Hallādī disciples or pseudo-disciples on the basis of their conceptions of *mālgh and makhābah*. Ibn Khafīfī contented himself with an incomplete
synthesis. This fact helps to explain both the universal fame of the master of Shiraz and the almost total disappearance of his work.

The basic text remains the edition of the Strati Ibn Khafif by Dr A. Schimmel (Ankara 1955, with introd. and bibl.). This text, however, unfortunately does not supersede the notices by the two historians of Shiraz: Abu l-'Abbâb Zârûk (d. 734/1333; Shirâz-nâmâ, ed. Bahman Karimi) and Ibn Djinayd al-Shirazi. (d. 791/1388, Shadd al-Tasr). For Ibn Khafif’s ‘Hallajîdsyon’ there may be consulted L. Massignon, Aabhar al-Hallâjî, Paris 1957, 38 and 81, also Vie et œuvres de Râbîib Bâbî, in Studia Orientalia Ioannis Pedersen ..., Paris 1955.

The life and doctrine of Ibn Khafif are part of a group of wider questions which have not yet sufficiently answered. These are: (1) The opposition between the Djinayidism of Bagdad and the practical mysticism of Persia and Khurâsân in the 3rd/9th century (the memory of Abû Yazid al-Bîjîmî, Malâtâmisyya, the insistence on ‘poverty’ and ‘sincerity”, fawwaa; for a summary of their doctrine, see Abû Nu’aym, x, 387). (2) This opposition was not unconnected with the growing Ahšârîism and Zâhirism: at the time of Ibn Khafif these were the two militant and opposing wings of Shafi’ism, particularly that of İrâq, with which the school of al-Djinayd finally became integrated. (3) It is only when these first two questions have been answered that Ibn Khafif’s rather ambiguous attitude to Hallâjism will be better understood, and with it perhaps the internal evolution of this doctrine, at least in Fârs.

Bibliography: in the text. (J. C. Vadet)

IBN KHAFIF [see Muḥammad b. Khafif].

IBN KHÂKÂN, name of several secretaries and viziers in the Hamdanid period.

(1) Ya’âvî b. Khâkân, secretary of Khurâsân origin, was in the service of al-Hasan b. S. (q.v.) under the caliphate of Ma’mûn and became, under al-Mutawakkil, secretary to the office for land-taxes, and then director of the qâ'idîm-court, when his son ‘Ubâyîd Allâh became vizier.

(2) Ubâyîd Allâh b. Ya’âvî was the first member of the family to become vizier. Patronized by the caliph al-Mutawakkil, who had appointed him as his private secretary, he succeeded in about 256/871 in gaining appointment to the office of vizier, which he held for some years and obtained important rights, notably those permitting him to nominate the main government officials and thus to eliminate any possible rivals. He was tutor to one of the princes; at the end of al-Mutawakkil’s reign he exercised a considerable influence and seems to have encouraged the caliph in his anti-‘Âlid policy. Having withdrawn from political life after the assassination of al-Mutawakkil, he was exiled to Bârka in 248/862, and did not return to Bagdad until 253/867. The accession of the caliph al-Mutamid led to his being appointed once again to the office of vizier, which he occupied from 256/870 until his death in 265/877.

(3) Muḥammad b. Ubâyîd Allâh, Abû ‘Ali, known as al-Khâkânî, became vizier in the reign of al-Mukhtar in Dhû ‘l-Hijjâd 299/July 912 and remained in office until Muharram 301/August 913. He succeeded Ibn al-Furat, whose officials he dismissed, and attempted to replenish the treasury by imposing severe fines on these discredited officials. He also took measures against the Shi’i elements in the population of Bagdad and attempted to satisfy the aims of the Muslim scholars, but his administration did not please the caliph’s entourage. After his dismissal, he was imprisoned once by ‘Ali b. ‘Isâ and a second time by Ibn al-Furat, who had returned to power in 304/917. He died in 312/924.

(4) ‘Abd Allâh b. Muḥammad, Abû l-Kâsim, son of the above, had been secretary during his father’s vizierate and succeeded Ibn al-Furat in Rabi’ II 312/June 924, but encountered serious internal difficulties with which he was incapable of dealing, so that he was dismissed in Râdî 313/November 925 on the insistence of the amîr Muḥîṣ; after having been imprisoned and paying a fine, he died in 314/926.

Bibliography: D. Sourdel, Vissiras, index; G. Lecomte, Ibn Qutayba, index; Abû Ya’âlî, Tabâhât al-Hamâdânî, i, 204. (D. Sourdei)

IBN KHALAWAYH, ‘Abû ‘Abd Allâh al-Hamâdânî b. Aḥmad (but Muḥammad in Shirwâyw’s History of Hamadân, see Kifî, İnâbâ, i, 325, 12). The exact year of his birth is not known but it must have been in the ninth decade of the 3rd century A.H., since he went in 314/926, while still young, to study in Bagdad, where he found eminent teachers. Among his teachers of the Kûrân was the head of the Kurân readers of Bagdad, Ibn Mudjdîd (d. 324/936) and he studied grammar and lexicography not only with the representatives of the Kufân school Ibn al-Anbârî (q.v.) and Abû ’Umar al-Zâhidî al-Mutarrîz Qâlâm Thalîb (d. 345/956), but also with the famous Baṣrân Ibn Durayd (q.v.) and the latter’s pupil al-Sîrâfî (q.v.), and also with Niftawayh, who was already a representative of the mixed school (Ḫalâta l-madhabbâyan, Frihîr, 81, bottom; in Brockelmann, S I, 184 listed under the Kûfân; d. 329/942). Consequently he was himself an eclectic. There is named as one of his teachers ‘Abd Allâh al-‘Aţţâr (Ṭabkât Bagdad, iii, 310 f.; Dhahabi, Tabâhirt al-huffâs, Râbîh, no. 40, where Ahmad is incorrectly given instead of Makhlîd; d. 331/942-3). Subâlî lists him among the Şâfi’îs (Tabâhât, ii, 212 f.); according to Ibn Ḥaḍîr, however, he was an İmâmî, who pretended to be a Sunnî only in the presence of Sayy al-Dawla (Lisân al-Mizân, Haydarâbâd 1360, ii, 167; cf. a deed in a postscript to Ibn Khâlawayh, i, 250). From Bagdad he went to Syria, and in Aleppo was admitted to the court of the Hamdânî Sayy al-Dawla (q.v.), who appointed him tutor to one of his sons. After Sayy al-Dawla’s death he remained in the service of the Hamdânîs. Kifî (İnâbâ, i, 326, lines 5 ff.) records from the Kitâb al-Ursâdîya by Muslim b. Muḥammad al-Lahdîjî that Ibn Khâlawayh visited the Yemen, and Ibn al-Djazari (Tabâhât al-kurra, ii, 237, bottom) also mentions the precise place, Dîmâr. He died in 370/980-1 in Aleppo.

Already during his lifetime Ibn Khâlawayh was famous. His reputation as an expert in all branches of ‘ilm and adâb brought to him many pupils from far and near. The sources mention explicitly the İrâkî fâsh and man of letters al-Mu’âmmâ b. Zâkiyya (d. 360/971). The reader of the Kurân Ibn Ghalbân (a native of Aleppo, d. 386/999) and al-Hasan b. Sulaymân al-Antâkî (d. 399/1008-9) as well as the traditionalist Ibn ‘Adî, known also as Ibn al-Kâṭîn (Brockelmann, i, 167; d. 360/971). He is reputed also to have been a poet of ability, Tha’âlîbî (Yatima, Damascus 1304, i, 76 f.) and Yîkût (Irshâd, iv, 6) providing a few brief specimens of his work. The disputation which he is reported to have had with al-Mutanabbi (q.v.) in the presence of Sayf
al-Dawla are said to have led to blows (Ibn Khallikan in his biography of ... the sole aim of the young Ibn Khaldun was to leave Tunis for Fez, then the most brilliant capital of the Muslim West.

This deals, in numerous but mainly short chapters, with subjects of Arabic morphology and lexicography. Its name Laysa comes from a stereotyped formula which begins almost every chapter: laysa fi balam al-arab ... illa ... The British Museum manuscript was published by H. Delaporte in Berlin, x (1893-4), 235-105, A.J.S.I., xiv (1898), 81-93, xv (1898-9), 32-41, 215-23, xviii (1901), 35-51; it contains 111 abwab and breaks off in the 111th bab. The text printed by Shinkiti, Cairo 1327 (76 pp.), following an unspecified addition of 77 further abwab.

According to Suyuti, Muzhir, nawa' 40 at the beginning, the Kitab Laysa consisted of three substantial volumes, and Ibn Khallikan refers to it as kitab habib; the existing printed text can therefore be only a part of the whole work. Of the fifty or so quotations contained in the Muzhir about a third do not appear in the Cairo printed edition. (2) Kitab I'tibab al-Khalidin Sura min al-Kur'an al-karim (printed with istigdala, basmala, suras i and 86-114), printed Cairo 1300/1941. (3) Kitab al-Badi' fi 'l-khadi', a handbook of Kur'an readings, canonical (the "Seven" and Ya'qub al-Hadrani, the ninth of the "Ten" readers) and non-canonical, see A. I. Arberry, Ignace Goldziher memorial volume, i, Budapest 1948, 183-90. (4) Muhktasar thawabah al-Kur'an min kitab al-Badi' li-imn Khaldun, an extract from no. 3, not made by the author himself, and containing only the non-canonical readings, ed. G. Bergstrasser, Cairo 1934 (Ibn Haldawi's Sammlung nichthanothischer Koranlesarten = Bibliotheca Islamica 7; with foreword by A. Jeffery); on this see A. Jeffery, marginalia to Bergstrasser's edition of Ibn Haldawi, Islamica Schlussheft = Abh. KM, xxiii/6, Leipzig 1938, 130-5. (5) Kitab al-Khadi', MS Istanbul Murad Molla 1985, see H. Ritter, in Isl., xvi (1928), 249 (it is possible that this is identical with the Hududis fi kher'di al-amma listed from information by P. Kraus in Brockelmann, S I, 94, 11 lines from bottom, I, 130, no. 10). (6) Shaik Makāfir Ibn Durayd, for meditation and study, ed. A. Jeffery, Cairo 1922, 331-43. (8) His recension of the Diwan of Abu Firas with introduction and commentary, ed. Sāmī Dāhmān, 3 vols., Beirut 1944. On his transmission of works by other authors, see Brockelmann, S I, 190.

Denoncourt's preface to his edition of the Kitab Laysa. [From a book by R. 'Abd al-Tawwāb, Lāh-n al-cāmūna wa 'l-tawwuzzul-lugāt, Cairo 1926, 184 f. (published after this article was in type) it appears that the K. Laysa, in its fragmentary form, has now been published again, by A. 'Abd al-Qhādir 'Attur, Cairo 1957; and furthermore that there is in Istanbul a MS (Şehit Ali Pasa 2143), a fragment of five ġamā' in 171 fol., which is six times as long as the section printed and of entirely different content.] (A. SPITALER)

IBN KHALDUN, WALT AL-DIN 'ABD AL-RAHMĀN

b. MUHAMMAD b. MUHAMMAD b. ABD BAKR MUHAMMAD b. AL-ḤASAN (732-84/1332-82), one of the strongest personalities of Arabo-Muslim culture in the period of its decline. He is generally regarded as a historian, sociologist and philosopher. Thus his life and work have already formed the subject of innumerable studies and given rise to the most varied and even the most contradictory interpretations.

1. Life. Ibn Khaldun's life may be divided into three parts, the first of which (20 years) was occupied by his childhood and education, the second (23 years) by the continuation of his studies and by political adventures, and the third (31 years) by his life as a scholar, teacher and magistrate. The first two periods were spent in the Muslim West and the third was divided between the Maghrib and Egypt.

At Tunis. Ibn Khaldun was born in Tunis, on 1 Ramaḍān 732/27 May 1332, in an Arab family which came originally from the Ḥaḍramawt and had been settled at Seville since the beginning of the Muslim conquest (Ibn Hazm, Dāmashara, ed. Lévi-Provençal, 430), playing there an important political role. The family then left Seville for Ceuta immediately before the Reconquista. From there they went to Ifrikiya and settled in Tunis during the reign of the Ḥafsīd Abū Zakariyyā (625-47/1228-49). Ibn Khaldun's great-grandfather, Abū Bākrr Muḥammad b. al-Ḥasan, who wrote a treatise on Adab al-ḥālīb (see E. Lo renovated, in Arabica, ii (1925), 280-8), was put in charge of the finances during the reign of Abū Isḥāk (678-81/1279-83). The usurper Ibn Abī 'Umāra (681-2/1283-4) put an end to his career and to his life, having him strangled after confiscating his possessions and subjecting him to torture. His son, Muḥammad, also occupied various official positions, both at Bougie and Tunis, and died in 737/1337, after renouncing political life and the fall of Ibn al-Liblyān (717-71/1317-27). The latter's son, the father of our Ibn Khaldun, wisely avoided politics, leading the life of a fābih and man of letters (Ta'rīf, 10-15).

He was thus able to ensure that his son 'Abd al-Rahmān received a very thorough education. The latter also attended courses given by the most famous teachers of Tunis, to whom he devotion lengthly sections in his autobiography (Ta'rīf). He thus received a thorough grounding in the Arabic language and of fikr. The Marinid invasion (748-50/1347-9) resulted in the arrival in Tunis, in the sultan Abu 'l-Ḥasan, of a large number of theological and literary scholars. This widened the horizons of the young Ibn Khaldun, who was thus enabled, particularly under the supervision of al-Abīl, to learn about the philosophy and the main problems of Arabo-Muslim thought. He was however to undergo much suffering. The Marinid occupation ended in disorder and bloodshed, and in addition the terrible Black Death which ravaged the world in the middle of the century, coming from the East, claimed many victims in the country, among them Ibn Khaldun's parents. He was at this time 17 years of age and was cured of his life long memory of the horror of this event, which is reflected in many passages in his Ta'rīf and his Muhaddima. This was the first traumatic experience of his life, which was later to have an undoubtedly influence on the direction of his thought. In addition, the departure of the Marinid scholars left a great intellectual vacuum at Tunis, and it seems that at this time the sole aim of the young Ibn Khaldun was to leave Tunis for Fez, then the most brilliant capital of the Muslim West.
He states (Ta’rīf, 55) that he had a great thirst for learning. His elder brother, Muḥammad, dissuaded him from taking a post, but Ibn Khaldūn preferred not to take full advantage of the favours on offer. At the court of Fez. He was not yet 20 when, towards the end of 75/1350, the powerful chamberlain Ibn Tafrāğīn appointed him to the office of writer of the al-a‘āma (the ruler’s official signature) on behalf of the sultan Abū Iṣākh. He accepted, without, it seems (Ta’rīf, 562), the intention of remaining long in the post. The invasion of Ifriqiya by the amīr of Constantine, Abū Yazīd (753/1352), provided him with the desired opportunity. Undoubtedly, cover of the defeat, he parted company with his master, took refuge for a time at Ebba, then reached Tebessa, then Gafsa, before arriving at Biskra, where he spent the winter with his friends the Banū Muzni. Thus the second period of his life, which was both scholarly and adventurous, began with one of those changes of direction which were to recur on later occasions and which have been severely criticized by the majority of those who have made a study of his life and work. But it was in fact probably not a bad thing: intuitively, Ibn Khaldūn was refusing to be engulfed in an Ifriqiya which was then in the process of disintegration and whose court furthermore was far from providing an example of loyalty and good behaviour.

Meanwhile, the Marinid Abū ʿl-Ḥasan, after an unfortunate adventure, had been killed (755/1355), leaving the western territories of the Maghrib to his son Abū ʿl-Ḥānin, who in any case had not waited for his death before supplanting him in Fez. Once again the Marinid hegemony seemed to be consolidating itself. Abū ʿl-Ḥānin seized Tiemcen (753/1352) and reduced Bougie again to submission. From Biskra, Ibn Khaldūn offered him his services. On his journey he met the Marinid chamberlain Ibn Abī ʿAmr. Abī ʿAmr, appointed governor of Bougie, who invited him to his new residence, where he lived for some time (until the end of the winter of 754/1353-4), before being summoned to the court at Fez. He was officially part of the sultan’s literary circle (maḏḥilsuh al-simī) and soon afterwards also formed part of his secretariat (kībūbatuh), though without much enthusiasm it seems, for such a post was not in the nature of the office and that it was beneath their dignity. This remark reveals a far-reaching ambition in a young man of barely 23 years. Somewhat disappointed, he therefore continued to occupy himself mainly with his studies. “I devoted myself”, he writes (Ta’rīf, 59), “to reflection and to study, and to sitting at the feet of the great teachers, those of the Maghrib as well as those of Spain who were residing temporarily in Fez, and I benefited greatly from their teaching”. In brief, his desire for learning still took precedence over his political interests. Nevertheless, it may be that, taking advantage of the sultan’s illness, he took part in a plot aiming to liberate the former amīr of Bougie, Abū ʿAbd Allāh, and to re-install him in his former kingdom. He himself denies this and refers to intrigues, jealousy and malice (Ta’rīf, 67); he was certainly thrown into prison however, remaining there for two years (758-755/1357-8) until the death of Abū ʿl-Ḥānin. This was followed by disturbances, by clashes between the claimants to the throne, and by treachery and bloodshed. Ibn Khaldūn, now set free, took part in all this according to the custom of the time. Changes of loyalty were common and he was no exception and found himself appointed, in Shabān 760/July 1359, to the office of Secretary of the Chancellery (kībūbat al-sirr wa l-tarsīl) for the new sultan, Abū Sālim. In order the better to perform his rôle and consolidate his position, he even made the effort of becoming court-poet (al-khāṣṣī bi l-tāḥīrī, Ta’rīf, 70), and he quotes long extracts from his work as a panegyrist. But this was all wasted effort, since his fortune declined. Two years later he left the chancellery for a judicial post, the maṣālim. Then further disturbances resulted in the accession of a new sultan. Ibn Khaldūn changed his allegiance in time, and considered that he was unjustly deprived of any fruits of the victory. He did not hide his ill-disposition, and after many difficulties he obtained permission to withdraw to Granada (autumn 764/1362).

At the court of Granada. In Ramadan 760/August 1359, a palace revolt had driven Muḥammad b. al-ʿĀmmar from the throne, so that, in Muḥarram 761/December 1359, he had taken refuge in Fez with his famous vizier Ibn al-Khāṭib. There was formed at this time, between the latter and the young Ibn Khaldūn, a real friendship which, apart from inevitable spells of unpleasantness, was to withstand the test of time. In Dūmādā II 763/April 1362, Muḥammad b. al-ʿĀmmar regained his throne and Ibn al-Khāṭib his former rank. The friendship established at Fez ensured that Ibn Khaldūn, forced in his turn to flee to the other side of the Mediter- ranean, was received in Granada with the highest honours. At the end of 765/1365, he was even sent to Seville, charged with a delicate peace mission to Pedro the Cruel. This contact with the Christian world, then in the midst of a period of change, had an important influence on him. On his return, the Nasrid amīr showered favours on him (Ta’rīf, 85). Ibn Khaldūn then sent for his wife and children to come to Constantine. But Ibn al-Khāṭib felt some resentment at his part and the young friend and Ibn Khaldūn preferred not to take full advantage of his favoured position (spring 766/1365).

At the court of Bougie. It is true that at this time there arose a unique opportunity for him to satisfy his ambition. His friend, Abū ʿAbd Allāh Muḥammad, with whom he had already been in a conspiracy at Fez, had in fact regained his kingdom of Bougie, and offered him the office of kāfīrī (chamberlain). But this was not at the time the most important office in the state, and appointed to the vizierate his younger brother Yahyā [see next article]. Ibn Khaldūn held at the same time posts as teacher of fiqh and as preacher. But this success was short-lived. In the following year, the amīr of Constantine, Abū ʿl-ʿAbbās, took the offensive and inflicted a crushing defeat on his cousin Abū ʿAbd Allāh Muḥammad, who was killed in the battle. Ibn Khaldūn, refusing suggestions that he should continue the struggle in support of one of the younger sons of the dead ruler, handed over the town to the conqueror (Shābān 767/May 1366) and himself entered his service. This was not to be for long, however. Ibn Khaldūn saw which way the wind was blowing: he resigned in time, and took refuge at first with the Dawawīda Arabs, then with his friends the Banū Muzni at Biskra, whereas his brother Yahyā was arrested. To the offer by the sultan Abū Hammūn, in a letter of 17 Raddāb 769/8 March 1368 (Ta’rīf, 102-3) of the office of kāfīrī at Tiemcen, he replied with a courteous refusal, sending him instead his brother Yahyā, who had in the meantime been set free. He explains his motives thus: “I was in fact cured of the temptation of office (ghnūyat al-mu‘ārelated scholarly matters. I therefore ceased to involve myself in the
IBN KHALDÜN

affairs of kings and devoted all my energies to study "(al-nahāʾ al-gharīb) and teaching" (Taʾrif, 103).

Thus at Ḑīskra he attempted to lead the life of a man of letters. He must have written much, much ornamented by rhetorical flourishes, with his friend Ibn al-Khāṭīb (Taʾrif, 103-30). However he could not resist intrigue. He gave his support, against Abu ʿl-ʿAbbās, to the alliance between the Ḥaṣṣād of Tunis and the ʿAbd al-Wādī Abū Ḥammū of Tlemcen. He next took it upon himself to raise support for the Marinid Abū Fāris. He was constantly on the move, attempting to form from the small tribal units a force capable of supporting a really great power. But on each occasion events upset his calculations. The claimants were simply too numerous, and this resulted in a new series of changes of front which were basically perhaps only his unsuccessful attempts to back the winner. But in the Muslim West of the 8th/14th century no winner existed. Furthermore his friends the Banū Mūamir were beginning to object to the suspicious activities of their guest. Ibn Khaldūn tried once again to escape the lure of politics. He took refuge in the rībāt of Abū Madyan, "preferring" he writes, "to live in retirement and devote myself exclusively to learning, if only I might be left in peace" (Taʾrif, 134). He was not left in peace, nor was he of a temperament to remain so for long. Thus, after some new setbacks in the central Maghrib, he met with failure in Fez (774/1372). Welcomed at first, he was later arrested, then released, and finally permitted to withdraw to Muslim Spain (spring 776/1375), where he wished "to settle permanently, withdraw from the world, and devote my life to learning (ḥāṣa al-bāḥr wa-l-ʾinsāb wa-l-ʾuṣūf al-ḥāsaṭ al-ʾālim)" (Taʾrif, 228). Yet again he was disappointed. He had become a political personality with a reputation which could not fail to arouse mistrust. He was henceforward condemned to offer his services for hire, and to be regarded with mixed feelings never entirely free from suspicion, whereas apparently his only ambition now was to be left in peace to work out the conclusions to be drawn from his tumultuous experience and to put his ideas in order.

At the castle of Ibn Salāmā. Practically excludes him from the political scene, his continued studious occupation allowed him to lead a quiet life. He was once again appointed to the office of Malik chief (245). He was welcomed at the head of the khākhākh of Baybars, the most important Sūfī convent in Egypt. Then, after fourteen years devoted exclusively to teaching, he was once again appointed to the office of khādi (15 Ramaḍān 802/21 May 1399). He was again dismissed (Muharram 803/August-September 1400), and some months later (Rabiʿ II 803/November-December 1400) he was obliged to accompany al-Nāṣir on his expedition to relieve Damascus, which was being threatened by Timūr-lang, already master of Aleppo. Left in the besieged town—and abandoned without warning by al-Nāṣir, who suspected that a plot was being hatched in Cairo during his absence—he played a certain part in the surrender of the town under a false promise of amān, and has provided a detailed account of his interviews with the Mongol leader (Taʾrif, 356-83). He may in fact have thought that he saved Timūr-lang the man of the century who possessed enough
his Mukaddima and his Tarif, but he wrote other works which have not all survived.

In about 1403, Ibn Khaldun was attemptcd, under the influence of al-Abili, to make a resume of the theolclico-philosophical "summa" of al-Razi entitled Kitab Muhasal afbar al-mutabaddimin wa 'I-muta'-

"asabiyya to re-unite the Muslim world and to give

akhhiriin min al-ulama' wa 'I-bukama' wa 'I-muta-

new direction to history (Ta'rif, 372, 382). Finally,

kallimin (Cairo 1905), an outline which is a con-

after writing for Timurlang a description of the

clearly—to be in its death-throes. His adventures

produce a climate of co-operation

Maghrib and having witnessed the horrors of the

during this period, which is between 752-65/1351-64, the date at which Ibn al-Khatib's ihdta was finished (to which we owe the following information), he wrote five works:

produce in prose and in verse, from the letters sent to him by

friends, and preserved in particular long passages, in

Ibn Khaldun's life has been judged variously, and

in general rather severely. There is certainly no doubt

that he behaved in a detached, self-interested,

haughty, ambitious and equivocal manner. He

himself does not attempt to hide this, and openly
describes in his Tarif his successive changes of

allegiance. He has been accused of fickleness and a

lack of patriotism. But for such judgements to be

strictly applicable presupposes the existence of the

idea of "allegiance" to a country, which was not the case.
The very concept scarcely existed and was not to
appear in a new kind of thinking until it was affected by

contact with Europe. The only treason was apostasy,
nor was loyalty understood except in the context of

relations between one man and another, and examples

of felony were provided daily by those of the

highest rank. Ibn Khaldun was, moreover, readily

pardoned by those who wished to use his services—

he was in turn the enemy and the servant, now of one

and now of another, in the same way that men were

thought to have been quickly forgotten even during the

author's lifetime. Ibn Khaldun does not even mention

them in his Ta'rif, and his Egyptian biographers do

not appear to have heard of them.

They seem moreover to have been of a traditional

theologico-philosophical type, including the arith-
metic which a fakih had to know. Nothing up to this
time indicated that Ibn Khaldun would go down to

posterity as the brilliant founder of the science of

history and of other disciplines. The flowering of his
genius took place at the castle of Ibn Salama, as the

result of the fusion of the traditional disciplines in

which he had been educated with the rich harvest of

political experience which, through a bitter series

of failures and impasses, had made him aware of the

meaning and deep significance ('abar) of history.

They then began, in the calm of the castle of Ibn

Salama, the work of analysing the passionate and
disturbing events which certainly has his

grandeurs but of which he had experienced mainly

the miseries. Ibn Khaldun really changed as a thinker:

the pedestrian fakih which he might after all have

been has become some of the most productive of the modern

humanities. The first draft of his Introduction

(Mukaddima)—which contains the essence of his

thought—to his universal history (Kitab al-'abar),

as well as large sections of this history itself, were

written between 776/1375 and 780/1379 during his

retirement. He later continued without ceasing,

until the end of his life, to re-write this basic work,

and especially the Mukaddima. The Ta'rif, an

autobiography which stops in Dhu 'l-Ka\'da 807/May

1405 (ed. al-Tanji, Cairo 1951), and the Shifa' al-
sad\'i, a treatise on mysticism written towards the end

of his life (ed. al-Tanji, Istanbul 1958; and ed.

I. A. Khalife, Beirut 1959), are minor works compared

with his masterpiece, and their main interest is in the

light they throw on it. It should be mentioned that

the problem of the authenticity of the Shifa' al-sadi,

so important for the history of Ibn Khaldun's

thought, has not yet been definitely solved.

The Ottoman historian Na'im (q.v.) (d. 1728/1716)

praises Ibn Khaldun in the introduction to his work
and gives a summary of his ideas. (The first translation into Turkish, of part of the Mukaddima, was made by Necip Süleyman al-Islam Pirî and Mehmed Efendi in 1143/1730 (see L. A. S. V. Ibn Khaldun, col. 740b); the most recent, complete translation is by Zakir Kadir Ugan, 2 vols., Istanbul 1954.) Yet it was in Europe that Ibn Khaldun was discovered and the importance of his Mukaddima realized: by d’Herbelot (Bibliothèque Orientale, 1697), by Silvestre d’Herbelot (Bibliotheque Orientale, 1697), by Silvestre de Sacy (Chezomatique arabe, 1806), by von Hammer-Purgstall (Über den Verfall des Islam ... , 1812) and especially by Quatremère, who, in 1806, produced the first complete edition of the Mukaddima—another edition of it was published in the same year in Cairo by Naṣr al-Hūrīnī, based on another manuscript containing in particular the dedication to the sultan Abū Fāris of Fez (296-9/1394-5) and by de Slane, who, some years afterwards, produced the first French translation of it (Les Prologèmes, Paris 1863-6). Since then there has been a continual series of editions and studies on it, in both the East and the West, a proof of the increasing interest in Ibn Khaldūn’s thought, and there have recently been so many of them that bibliographical works on them (by H. Pérès and W. J. Fischel) became necessary. The most recent translation, by F. Rosenthal (into English, 3 vols. New York-London 1958), has the advantage of having been made from the Istanbul manuscript (Alif Efendi 1936), which contains a note in Ibn Khaldun’s writing stating that it had been “scientifically revised” by the author. There should also be mentioned the Portuguese translation by Khoury, in 3 vols., São Paulo 1956-60; a French translation by V. Monteil is being published.

The ‘Ibar, the Universal History itself, naturally aroused less interest. The first to produce an edition and translation of extensive passages from the ‘Ibar was Noël Desvignes, under the title Histoire de l’Afrique sous la dynastie des Aghlabites et de la Sisie sous la domination musulmane, Paris 1841. Another partial translation was published some years later by de Slane under the title Histoire des Berbères et des dynasties musulmanes de l’Afrique Septentrionale (4 vols., Algiers 1852-6), followed by an edition of the passages translated (2 vols., Algiers 1862). Next appeared the complete主力 edition (7 vols., 1868), and since then there have followed also some partial translations. There has not yet appeared, however, a truly critical edition of either the Mukaddima or the ‘Ibar. The latest edition, that of Beirut (1956-9)—from which our references are taken—is a commercial one, which is however provided with useful indexes.

The criticism generally made of the ‘Ibar is that it did not fulfil the promises made in the Mukaddima. This is obvious, but it could not have been otherwise. No one man could write alone a universal history according to the demands of the Mukaddima. But it has more serious shortcomings: Ibn Khaldun at times demonstrates a surprising lack of learning, for example, concerning the Almohads and their doctrine. In addition, precise dates are rarely given; the chronological details throughout the work are too often contradictory, and one is obliged to prefer on many occasions those provided in other more humble and much more succinct works’ (R. Brunschwig, Hafṣidas, ii, 392). Nevertheless, the Kitāb al-‘Ibar, through its intelligent arrangement of facts and the detail and scope of the account, remains, in the opinion of the specialist who has made most use of it, an incomparable tool, particularly “for the two centuries nearest to our author, the 13th and the 14th” (R. Brunschwig, op. cit., ii, 393). It should also be added that this work, often disappointing on the history of the East, is generally valuable especially for the Muslim West, and in particular for the Berbers.

But Ibn Khaldun’s main work, of universal value, is the Mukaddima. In the author’s intention, and as the title indicates, it is an Introduction to the historian’s craft. Thus it is presented as an encyclopaedic synthesis of the methodological and cultural knowledge necessary to enable the historian to produce a truly scientific work. Initially, in fact, Ibn Khaldun was preoccupied with epistemology. Then gradually, meditating on the method and the matter of history, he was led, in full consciousness of what he was doing, to create what he refers to as his “new science” (‘ilm mustaḥab al-nuṣūh, 63), which itself turned out to contain more or less implicitly the starting points of several avenues of research leading to the philosophy of history, sociology, economics and yet other disciplines.

In his preface to the Introduction proper (Mukaddimat al-Mukaddima, 1-68), Ibn Khaldun begins by defining history—which he expands to include the study of the whole of the human past, including its social, economic and cultural aspects—defining its interest, denouncing the lack of curiosity and of method in his predecessors, and setting out the rules of good and sound criticism. This criticism is based essentially, apart from the examination of evidence, on the criterion of conformity with reality (ānān al-muḥābaha, 61-2), that is of the probability of the facts reported and their conformity to the nature of things, which is the same as the current of history and of its evolution. Hence the necessity of bringing to light the laws which determine the direction of this current. The scientific capability of throwing light on this phenomenon is, he says, that of ‘umrān, “a science which may be described as independent (‘ilm mustaḥbil bi-nafsh), which is defined by its object: human civilization (al-‘umrān al-baṣārī) and social facts as a whole” (62).

All that follows, that is the main part of the Mukaddima itself, is only the detailed exposition of this new and independent science which the author developed and which he develops in his argument, contrary to some opinions, according to a strict plan, the broad lines of which he states and clearly explains (68) before beginning his exposition. This exposition is divided into six long chapters which in turn are subdivided into many paragraphs of varying lengths and often mathematically arranged. Chapter 1: a general treatise on human society. In it Ibn Khaldun makes an outline study of the influence of environment on human nature, an ethnological and an anthropological study. Chapter 2: on the societies of rural and, generally speaking, fairly primitive, civilization (‘umrān badwai). Chapter 3: on the different forms of government, on states and institutions. Chapter 4: on the societies of urban civilization (‘umrān ḥadari), that of the most developed and sophisticated forms of civilization. Chapter 5: on industries and economic affairs in general. Chapter 6: on scholarship, literature and cultural matters in general.

This plan clearly shows that Ibn Khaldun in his Mukaddima was inclined to concentrate on social phenomena in general. The central point around which his observations are built and to which his researches are directed is the study of the aetiology of decline, that is to say the symptoms and the nature of the ills from which civilizations die. Hence
the Mukaddima is very closely linked with the political experiences of its author, who had been in fact very vividly aware that he was witnessing a tremendous change in the course of history, which is why he thought it necessary to write a summary of the past of humanity and to draw lessons (’ibar) from it. He remarks that at certain exceptional moments in history the upheavals are such that one has the impression of being present at “a new creation (ha’innahu khalq djadd)” at an actual renaissance (majdi ’aswabdah), and at (the emergence of) a new world (sir ‘ilm muhaddath). It is so at present (li-hddha ’l-had). Thus the need is felt for someone to make a record of the situation of humanity and of the world (53). This “new world”, as Ibn Khaldûn knew (866), was coming to birth in other lands; he also realized that the civilization to which he belonged was nearing its end. Although unable to avert the catastrophe, he was anxious at least to understand what was taking place, and therefore felt it necessary to analyse the processes of history.

His main tool in this work of analysis is observation. Fairly recently there has been stressed the realistic aspect of his thought. Ibn Khaldûn, who has a thorough knowledge of the sources on logic and makes use of it, particular of induction, greatly mistrusts speculative reasoning. He admits that reasoning is a tool, he only within, the framework of its natural limits, which are those of the investigation and the interpretation of what is real. He was much concerned about the problem of knowledge and it led him finally, after a radical criticism, to a refutation of philosophy. “In casting doubts on the adequacy of universal rationality and of individual reality, Ibn Khaldûn at the same time casts doubts on the whole structure of speculative philosophy as it then existed” (N. Nassar, La pensée réaliste d’Ibn Khaldûn, 66). Having thus calmly dismissed Arabo-Muslim philosophy, he chose, in order to explore reality and arrive at its meaning, a type of empiricism which has no hesitation in “having recourse to the categories of rational explanation which derive from philosophy”. In short, Ibn Khaldûn rejects the traditional speculation of the philosophers which gets bogged down in fruitless argument and controversy, only to replace it by another type of speculation, the steps of which are more certain and the results more fruitful since it is directly related to concrete facts.

This new positive speculation which he suggests and of which he provides an example in the Mukaddima is operated through a dialectical process which has been referred to in several studies (see in particular the recent works of Y. Lacoste and N. Nassar). He could not in fact penetrate to the heart of reality, describe the struggles and conflicts, the tensions and the successive failures of states and civilizations produced by their internal dissensions without encountering, and calling attention to, the process of dialectic, especially since he had encountered logic in his earlier years and since the ideas of contradiction, anathesis, opposition, the complementariness of opposites, of ambiguity, of complexity and of confusion had long been familiar to the Muslim thinking in which he had been educated. They are thus often evoked as operative concepts permitting understanding and explanation. In surmounting the contradictions dialectically, and in attempting to explain them and hence to resolve them, Ibn Khaldûn’s view is that of the dialectic development of the destiny of man, and at a system of history which is retrospectively intelligible, rational and necessary. His famous cyclic schema of historical interpretation, which is itself not particularly original, must be included, in order for its true meaning to be seen, in this general view.

The wealth of the ideas provided in the Mukaddima has enabled several specialists to find in it the early beginnings of a number of disciplines which have become independent sciences only very recently. There is of course no argument about Ibn Khaldûn’s “contribution to sociology as a historian. Y. Lacoste writes: “If Theydides is the inventor of history, Ibn Khaldûn introduces history as a science”. But he has been regarded also as a philosopher, and it is surprising in particular to discover in his Mukaddima a very elaborate system of sociology. His “new science”, his ‘im al-umrân, the discovery of which dazzled even himself, is basically, strictly speaking, nothing but a system of sociology,—conceived it is true as an auxiliary science to history. He considers that the basic causes of historical evolution are in fact to be sought in the economic and social structures. He therefore set himself to analyse them, elaborating as he did so a certain number of new operative concepts, the most pregnant of which is incontestably that of ‘asabîyya [q.v.]. It should be mentioned that this concept of ‘asabîyya, and that of ‘umrân, have often been interpreted, particularly in recent years, in the spirit of dialectical materialism. But, in spite of the undoubted similarities, it would be difficult to regard Ibn Khaldûn as a forerunner of materialism. Moreover the explanation he gives is not exclusively a socio-economic one but also psychological. “The Prolegomena do not contain only a general sociology but also a very detailed and subtle social psychology which may be divided into political psychology, economic psychology, ethical psychology and general psychology. The intermingled and closely linked elements of this social psychology and this general sociology form a whole complex which it is difficult to disentangle” (N. Nassar, op. cit., 178).

There have been identified also, in this complex, economic doctrines sufficiently detailed to justify a study devoted to them, and a philosophy of history to which M. Mahdi has devoted an important work. It also provides ethnographic, anthropological and demographic information of real value.

Thus the atypical figure of Ibn Khaldûn in Arabo-Muslim culture has been unanimously considered, since his discovery in Europe, as that of an authentic genius, “un penseur génial et aberrant” (Brunschvig, op. cit., ii, 391), whose Mukaddima represents “one of the sources of the sociological thought of the 19th and 20th”. Certainly a “solitary genius”, he does not belong to any definite current of Arabo-Muslim
thought, since his works are in fact the product of a multitude of agonizing enquiries. His thinking represents a radical change, which unfortunately remained as unproductive as his political misadventures. "Just as he had no forerunners among Arabic writers, so he had no successors or emulators in this idiom until the contemporary period. Although he had a certain influence in Egypt on some writers of the end of the Middle Ages, it can be stated that, in his native Barbary, neither his *Mukaddima* nor his personal teaching left any permanent mark. And indeed the systematic lack of comprehension and the recension of his thought, the paucity of genius encountered among his own people forms one of the most moving dramas, one of the saddest and most significant pages in the history of Muslim culture" (R. Brunschvig, *op. cit.*, ii, 391).

IBN KHALDÜN, ABU ZAKARIYYA' YAHYA, brother of the above, was born in Tunis about 734/1333, died at Tlemcen in Ramadan 780/December 1378-January 1379. Like his brother and probably with him, he devoted himself industriously to study in his native town and was intimate with all the important scholars of his time in the Hafsid capital.

To judge from his book (on which see below), he seems to have had a special preference for poetry and belles lettres. We know very little of his personality; the references are scattered in various sources, especially 'Abd al-Rahmân's autobiography and that portion of the *Kitâb al-Thur* which deals with the history of the Berbers. This last book gives a detailed account of the murder of Yahyâ in Tlemcen; Yahyâ himself gives a few details of his career in his *Bughyat al-ruwâdîd*.

Yahyâ's political life did not begin until 757/1356, when he was with his brother (who was soon afterwards imprisoned) at the court of Abî Sâlim, sultan of Fez, and was admitted to the court of the Hafsid amirs, from Tlemcen back to Bougie. He accompanied these two princes in place of his brother, as chamberlain to one of them, the *amir* 'Abd Allâh. As the latter, in spite of a long siege, could not regain Bougie, he sent Yahyâ to Abî Hâmûnî II, king of Tlemcen, to ask for his assistance (764/1362). Yahyâ found a kindly reception in Tlemcen and his request was granted. After the Mawlid festival, which he attended there and commemorated in a poem, he went back to his master to bring him to the 'Abd al-Wâdîid court on 8 Dümâdîd II 764/26 March 1363. Both returned to Bougie with an expeditionary force sent by Abî Hâmûnî.

In 767/1365-6, the Hafsid *amir* of Constantine, after taking Bougie, imprisoned Yahyâ in Bona and confiscated his property; he escaped soon after and returned to Biskra to Ibn Mumlû and his brother. It was probably at this time that he made the pilgrimage to the tomb of 'Ukba, which he describes in his *Bughyat al-ruwâdîd*. In 769/1367 he returned from Biskra to Tlemcen at Abî Hâmûnî's request, arrived there in Radjab 769/February 1368, and was appointed *Kâhit al-indâqât*. When he learned that Tlemcen was threatened by the Marïids, he forgot
the kindness shown him by Abu Hammû and left him (early 772/1370-1) to enter the service of the Mardinid sultan, ʿAbd al-ʿAzîz, and afterwards of his successor Muḥammad al-Sâʿîd. It was only after the capture of Fâs al-Djadid by Sultan Abu ʿl-ʿAbbâs in 775/1373 that Yahyâ returned to Tlemcen, where Abû Hammû again welcomed him and gave him his former secretarial office. He soon won the king’s confidence again but thereby aroused the jealousy of the other court officials, and notably of Abû Hammû’s eldest son and probable successor, ʿAbd al-Thânhî (II). The latter, with a few hired assassins, fell upon Yahyâ as he was leaving the palace one night in Râmaḍân 780/1378 and murdered him. When Abû Hammû learned that his son had been the instigator of the crime, he did not have the courage to take steps against the murderers.

Although Yahyâ’s political career was shorter and less brilliant than that of his brother, yet it gave him the opportunity to write a historical work of great learning, the Bughyat al-ruwwâd fi ḥālir al-mulâk min Bani ʿAbd al-Wâd. It was much used by Brosserol and Bargès in their works on Tlemcen and A. Bel published the Arabic text with French translation under the title Histoire des Bens ʿAbd al-Wâd, rois de Tlemcen (2 vols., Algiers 1904-13). His history of the kingdom of Tlemcen is particularly important for its information on the long and often brilliant reign of Abû Hammû II, whose secretary and trusted adviser the writer was. In this capacity he was no doubt able to consult original political documents and he even quotes some in full in his book. Although the book neither covers so wide a field as that of his brother ʿAbd al-Râhmân nor shows such a lofty point of view or critical spirit, it is far superior in literary value. Yahyâ reveals in it not only literary but also poetical skill, his elegant style is often elevated and his narrative is adorned with quotations from the best ancient Arab writers. He not only gives us a picture of the political history of the central Maghrib kingdom, but he also preserves for us in his work poems by contemporary court poets and gives information about scholars of his time and about the poetical meetings at the court of Tlemcen — information hardly to be found elsewhere. He affording a poetical survey of the intellectual life of the ʿAbd al-Wâdi capital in the 8th/14th century.

Bibliography: further to works mentioned in the text: Bargès, Complément de l’histoire des Bens Zeytân, Paris 1887, 205-17. (A. Bel)

IBN KHALLAD, Abû ʿAllî Muḥammad b. ʿAbdal-Bâṣîk, a Muʿtazilî theologian. After a slow start, he became the most distinguished disciple of Abû Hâshîm (d. 321/1333; see Al-Djurâb?). First in al-ʾAskar and then in Baghdad. He is the author of a Kitâb al-Uṣûl and a Kitâb al-Shârûk; he was also a man of letters and of general culture (adab wa-maʿrûf). He did not live to an old age, and therefore seems to have died before the middle of the 4th/10th century. Two of his disciples, who also studied under Abû Hâshîm and in their turn were teachers of the kitâb ʿAbd al-Djâbâr, were Abû ʿAllî Abû Ḥusayn b. Abî ʿAllî and Abû ʿAllî Abû ʿAṣîrî. From the latter (mentioned by Ibn al-Murtâdâ, see below) it is probable that the Shârûk al-Uṣûl al-ḥamsa of the kitâb ʿAbd al-Djâbâr is a revision and completion of the (unfinished) Kitâb al-Shârûk of Ibn Khallâd. The same work was commented upon and supplemented by the Zaydî imâm al-Nâtlîq bi-l-Haqq (d. 242/1053; Brockelmann, S I, 697f.; F. Voorhoeve, Handlist, 407). In the official tinâd of the Muʿtazilî doctrine, Ibn Khallâd appears as the political authority of Abû ʿAllî Abû Ḥusayn, who is in his turn the authority of the kitâb ʿAbd al-Djâbâr. The record of details of his doctrine (see M. Horten, Die philosophischen Probleme der spekulativen Theologie im Islam, 1910, index, s.v. Ibn Hallâd) confirms his doctrinal position between Abû Hâshîm and ʿAbd al-Djâbâr.

IBN KHALLIKÂN, Ahmad b. Muḥammad b. Ibrâhîm Abû ʿl-ʿAbbâs Shaṁ al-Dîn al-Barmaḵî, Arabian biographer, b. 119 b. II Râbiʾ II 68/22 September 1211 at Irbil in a respectable family that claimed descent from the Barmakids. At the age of two, he lost his father, who was muwâdî in the Muṣâafarrîyya college founded by the Begteginid [q.v.] Muṣâfar al-Dîn Göktûrî (see Ibn Khallîkân, no. 558). He began his studies under his father’s successor Shâraf al-Dîn al-Irûfî (ibid., no. 44); he then continued them from 626/1229 in Aleppo under Ibn Shâdîd (ibid., no. 854) and Ibn Yaḥyâ (ibid., no. 842). After Ibn Shâdîd’s death in 632/1235 he went to Ibn al-Salâḥ (ibid., no. 422) in Damascus. He also visited Mosul several times and became acquainted with the historian Ibn al-Aṣghîr (d. 539/1243) and with Kamâl al-Dîn Ibn Yûnûs (Subkî, Tabâbât al-Shâfiʿîyya, v, 158 ff.). In 635 or 636 he went to Egypt and was in 645/1249 at the latest appointed deputy to the kâdî l-kâddî of Egypt Kâfî and his deputy. In 648/1250 he became kâdî of Irbil and a general amnesty was announced. Yet Ibn Khallîkân was again appointed kâdî l-kâddî of Syria and in 677/1278 was received in Damascus with great honours. But new troubles lay ahead. When Kâlûwân ascended the throne, the governor of Damascus Sunkûr al-Aṣghâr rose in rebellion and was suppressed by Ibn Khallîkân. The troops of Kâlûwân entered Damascus in 679/1280, and a general amnesty was announced. Yet Ibn Khallîkân was arrested and accused of having given a fatwâ which Sunkûr could use as a justification for his revolt; but three weeks later he was released and re-installed as kâdî l-kâddî by an immediate order of the Sultan. At the beginning of the next year (680/1281) Kâlûwân visited Damascus; three days later Ibn Khallîkân was dismissed. He died on...
It is not known how long he occupied this post. In 688/1293, the traveller al-Abdari, who was passing through Tlemcen and who had a great admiration for him, composed a poem in praise of him. Two years later, Tlemcen was invaded by the Marinid Abu Ya'qub Yusuf (685-706/1286-1307) and the siege lasted a hundred months, until the besieger was assassinated. Although the exact date and the manner are unknown, it was during this siege that Ibn Khams was invited by his native town, following an attempt on his life by those in power who accused him of being a supporter of a surrender of the city. This at least is what he himself insinuates in two of his poems. He went to Ceuta, at that time governed by Abu Talib Abd Allah b. Mub. b. Ahmad al-Azafi and his brother Abu al-Hadi; there he attempted to establish himself as a teacher, but his attempt failed, his own pupils, instigated by a rival named Abu l-Hasan Ali b. Ali l-Rabi, having baffled him from the start by hurling at him embarrassing grammatical questions. He went to Algier, then to Malaga and finally, in 703/1304, to Granada. Everywhere he earned his living by teaching and by writing poems in which he gives himself the ‘pleasure of praising’ the great. The ruler of Granada at this time was Muhammad III, known as al-Mahdi (707-1302-9), whose vizier, Ibn al-Hakim Mub. b. Abd al-Rabman b. Ibrahim (660-706/1226-1308), was an important personality of the period and by way of being a patron. Returning from a long voyage in the east, the latter had passed through Tlemcen where he had met Ibn Khams. At Granada his court was attended by scholars and men of letters; he invited Ibn Khams to join it, thus assuring him at last an easy life, in return of course for laudatory poems. In 706/1306, Ibn Khams returned to Malaga on a visit, then to Almora where the general Ibn Kumagha, a subordinate of Ibn al-Hakim, had welcomed him. He loved to travel—‘I am’, he said ‘like the blood; I put myself in motion every spring’. He never forgot Tlemcen, and dreamed of returning there. But, one morning, on the feast of the breaking of the fast in the year 708/1309, he was surprised in his dwelling at Granada by a riot resulting from the coup d’état provoked by Abu l-Duyugh b. Muhammad, who seized power (708-13/1309-14); a certain ‘Ali b. Naṣr, called al-Abkam (= the dumb), killed him with a lance. The reason for the murder was his connexion with Ibn al-Hakim, who was killed on the same day.

The biographers of Ibn Khams describe him as a scholar, philosopher, sage, astrologer, alchemist, heresiographer, and litterateur. But there is no positive evidence for these attributes and all that is certain is that he was a poet. All that have survived of any works he may have written are poems. They are said to have been collected by a certain badii Abu Abd Allah Mub. b. Ibrahim al-Hadrami, who has not been further identified, in a collection entitled al-Durr al-naṣif fi ḡyr Ibn Khams, of which nothing more is known. The poems of Ibn Khams are nevertheless accessible, if not entirely, at least in large part. They are scattered throughout the works of al-Abdari, Yahya b. Khaldun, Ibn al-Kadi and al-Maqqar, who reproduces Ibn al-Khaṭib. Ibn Mansur was able to collect of them sixteen hasidas, totalling more than 610 verses, ten of them each consisting of more than 30 verses and two reaching 80 verses each.

We find in them the traditional themes: madh, kifli, laili, sometimes preceded by nasib. He praises the Banu Zayyani of Tlemcen, the traveller
Ibn Rūshayd and especially the vizier Ibn al-Hākim, who has protected the poet and confounded his enemies, and who has power, courage, generosity, etc. ... He directs his satire against the Banū Yaghmūr (sic), who have attempted to have him assassinated and who are thus responsible for his exile far from his own small country, bruised by enemies, and who has power, courage, generosity, etc. ... He prides himself on his illustrious ancestry: Mudjahşi, Nābahal, Hīmyar, Sakāsik, etc.

Apart from this, his poems are embroidered with proper names and unusual words, revealing a depth of culture which it is surprising to find in a native of 7th/13th century Tlemcen of modest circumstances. His works are composed against a background of the stories of Arab, Persian and Greco-Roman antiquity: Hermes, Socrates, al-Fārābī, al-Subrawardi, Sayf b. Dhi Yazač, 'Amr b. Hind, Nu'mān, Ir'mu' al-Rāys and many others form a gallery of the famous. In addition, his guiding principle as regards form is summarized in a verse: "He who does not chew over obscure (ḥāğık) language does not taste the savour of the art of good expression (baldgha)". This strange precept was not merely a theoretical one, and some of his poems are impossible to understand without a good dictionary. This is probably the reason why he has formerly been classed, along with Shīnārī, Ta'hibba Sharrān and Sula'yk b. 'Āmir, among the "stallions" (fūḥāl) of Arabic poetry.

other authors mainly repetitions: Abu Ahmad al-Yafi, Mir'at al-dinan, Haydarabad 1338, iii, 381-2; Ibn al-Imad, Shahrastani, Cairo 1530, iv, 236; Muhammad ibn Ahmad al-Qashshab, ed. M. Yâkîn, references given above; etc. See references in Kifî, Inbâh, ii, 99, d. 1.

IBN AL-KHASIB, Ahmad b. AL-KHASIB and Ahmad b. Ubayd Allâh [see al-Khidib].

IBN AL-KHASIB, Abu 'Ali Ahmad b. Ismâ'îl b. Ibrahim b. al-Khäsib al-Anbârî, kâtib and man of letters of the 3rd/9th century, called Nattaqa and known also, as his grandson Ahmad in his own particular aptitudes, he succeeded in acquiring Ubayd Allâh b. 'Abd Allâh b. Tahir (d. 300/913); but this may have been the son of Ubayd Allâh (d. 301/914); however, no further details are available on this person, who has nevertheless a permanent place in Arabic epistolography (see e.g., A. Z. Sa'afwat, Qanharat rasâ'il 'arab, iv, 362-4). Ibn al-Nadîm (Cairo ed., 180) and, after him, YaÏkût (Udâbâ', ii, 227-30) attribute particularly to Nattaqa a voluminous collection of letters, a K. al-Tabîhâ, a K. Tabâdâl al-kâtibî, a K. Sifât al-nafs and a collection of private letters; Ibn al-Nadîm states that the majority of his letters are ikrhânâ-yâd and notes that he had carried on a correspondence with Ibn al-Mu'tazî. He was also well known as a poet, and several lines of his have survived.

Bibliography: in the article; see also Husri, Zahr, 113 (correcting balâha to Nattaqa). (Ed.)

IBN AL-KHASIB, Abu Bakr al-Hasan b. Al-Khäsib, astrologer who lived in the 2nd/8th century, in the circle of the Barmakids (cf. in Ibn al-Kifî the mention of a Kâtib al-Mawdhar dedicated to Ya'qûb b. Khâlid). He was known in Europe under the name of "Alcasin filius Alkasit" (cf. colophon of MS 1032; Suppl. to Bugisha, 276-7; copied Ya'kîn). Going beyond the apparently scientific reserve affected by Ptolemy in his Tetrabiblon (opus quadripartitum), he enjoyed speculating on the compatibility and incompatibility of the planets, signs and houses of the Zodiac, and "lots". He also used haylagijjhejeg. He was also bold enough to predict the duration of states and dynasties (lakhût sinî l-ilâm, an idea of Zurvanite or Indian origin). He earned thus the wrath of his biographer Ibn al-Kifî, who complains of having been misled by the falseness of these prophecies, based on the absolute confidence which Ibn al-Khäsib placed in the geographical dominance of the sign of Gemini over Egypt. He thus was a man of resource, with an ample supply of prescriptions of all kinds, whose enormous repertoire probably gained him the goodwill of his patrons and later the interested approbation of foreign civilizations. The work which earned him the most lasting success was the Muğhî fi 'l-maûlûd, De nativitasibus, an extract from a sort of astrological encyclopedia to which he had given the Persian name of Kâr-i mîhâr ("The Practice of the Prince")? The text of this work is preserved in a collection of astrological collections of the Escorial, in Latin translation in the manuscript in the Bibliothèque Nationale mentioned above and in the two Sessa editions published in Venice in 1492 and 1501. Ibn al-Khäsib's translator was the Jewish scholar Plato of Tivoli, whose manuscript was the basis for the works of Sessa. Two centuries later, the learned librarian of the Elector of Saxony, Johannes Millius, drew attention to and wrote a commentary on the works of Alubather. The De nativitasibus was from then on inseparable from the Centiloquium of the pseudo-Hermes Trismegistus, with which Sessa linked it in a single volume (Millius, Memoria bibliothecae venetiae suis Designatio manuscriptorum, 199). At the end of his career, as at the beginning, Alubather's works formed an integral part of Hermetic literature.

Bibliography: In addition to the works mentioned in the article, see Fihrist, 272; Ibn al-Kifî, ed. Khândjî, Cairo, 114; Brockelmann, I., 221, S. 1, 594.

IBN AL-KHÂTÎB, Abû 'Abd Allâh Muhammad b. 'Abd Allâh b. Sa'îd b. 'Abd Allâh b. Sa'îd b. 'Ali b. Ahmad al-Salmâni, vizier and historian of Granada, who bore the laqab of Lîsân al-Dîn and Dhu 'l-wâzâ'aratîn, apart from those by which he was designated after his death. Of Arab descent through the sub-tribe of the Salmân, a clan of the Murâd of the Yemen, he came from a family which was established in Syria and which arrived in the Iberian peninsula in the 2nd/8th century, took up residence in Cordova, and then moved successively to Toledo, Loja and Granada. At first the family was known by the name Banû Wâriz, but after Sa'dî al-Salmânî, with the name of Dhu 'l-wâzâ'aratîn. He was educated in Granada where his father had settled in order to enter the service of the sultan Abu 'l-Walîd Ismâ'îl. He had numerous eminent teachers who are listed by his biographers and, thanks to their instruction and to his own particular aptitudes, he succeeded in acquiring a vast fund of knowledge which later enabled him to win distinction in various branches of learning and to write many works, whose titles number more than 60. After his father's death in the battle of Salado or Tarifa on 7 Dîumâdâ I 741/30 October 1340, his talents and learning enabled him to enter the service of the sultan Abu al-Hâdîjâ Yûsuf b. Ismâ'îl and to serve under the administrative and technical direction of the vizier Abu al-Hâsan 'Ali b. al-Djâyâb; when the latter died of the plague in the middle of Shawwâl 749/med-January 1349, Ibn Khâtîb was appointed to the office of kâtib il-îshqa, head of the royal chancellery, with the title of vizier; he retained this office in the reign of Muhammad V al-Ghanî bi-l'îlâm who raised his rank, and it was then that he assumed the title of Dhu 'l-wâzâ'aratayn. Upon Muhammad V's deposition (760/1360-9), Ibn al-Khâtîb's fortune changed for some years; the
bādīb Rīdwa n, the protector of Ibn Khatīb, who had enjoyed greater influence and authority in that sovereign's reign before his fall, had been assassinated, and it was only as a result of the intervention of his friend Ibn Masrūq, secretary of the Marinid sultan Abū Sālim, that he regained his freedom and was permitted to go to Morocco, accompanying the dethroned sovereign into exile. He travelled throughout the territory of the Marinids and finally settled in Salé where he acquired estates and wrote some of his works (see a. M. al-Abbādī, Mālik al-'Ālam, Liān Ibn al-Khatīb fi 'l-Mağrib, in Ḥesābīrī, xli (1959), 247-53). When Muhammad V was restored to the throne in Djiūmādā II 763/March-April 1362, Ibn al-Khatīb returned to Granada where he was restored to the office of vizier and became the chief dignitary of the court. But some years later, finding himself the victim of intrigues and fearing the worst, he seized the opportunity provided by a tour of inspection of fortresses in the western part of the kingdom of Granada to cross over to Ceuta and, from there, to Tiemen (773/1371-2), where he was very favourably received by the sultan Abū Fāris 'Abd al-'Azīz; through the short reign of his son and successor Abū Zayyān Muhammad al-Sa'īd (a minor), he was safe from the demands of Muhammad V that he should be sent to Granada for trial, for he had been unjustly accused of heresy, among other crimes, as a result of the calumnies of his influential rivals in Granada, especially the kādī al-Nubāḥī and the vizier Ibn Zamrak. When Muhammad b. 'Abd al-'Azīz was dethroned, Abū 'l-'Adbāb Ahmad b. Abī Sālim was proclaimed his successor; then for a short time, through the hostility of one of his enemies, Sulaymān b. Dāwdūd, who held important offices at the Marinid court, Ibn al-Khatīb experienced the hardiest days of his life. Cast into prison, he was brought to trial, through the influence of Ibn Zamrak, who had succeeded him as chief minister of Granada and who had elected to be his accuser, before a private court set up for this purpose, and, although no conclusive sentence seems to have been pronounced in spite of the wishes of those who were in favour of his execution, he was put to death at the instigation of Sulaymān b. Dāwūd, who was imprisoned in the prison of the town and the biographies of celebrated personages, who were born or lived in Granada or who visited it, with most interesting historical notes, in some cases unique; only a number of incomplete editions have appeared: Cairo 1315/1901-2, 2 vols., very imperfect; Cairo 1955, one vol. by 'Abd Allāh 'Inān (on this ed. and the surviving ms. of the Ḥiṣa, see, in addition to the editor's introd., MIDE, iii (1950), 324-8). (2) al-Lamha al-badriyya fi 'l-dawla al-nası'iyā (Casiri has given long extracts from this, as well as from the Ḥiṣa, together with a Latin transl., in his Bibliotheca, ii, 71 ff., 177-246, 246-319. A fairly acceptable edition of the Lamha was published in Cairo in 1347/1928-9; i. s. Allouche translated some chapters from it in his article La vie économique et sociale à Grenade au XIVe siècle, in ME, d'hist. et d'archéol., Hommage à G. Marçais, Algiers 1957, 7-12.) This work of Ibn al-Khatīb presents a panorama of the civilization of Granada, with biographies of the Nasrid sovereigns, from approximately 628 to 765/1230 to 1363. (3) A'ālām al-'ālām fi-man būtīyā habīb al-ish'tīlām min mulūk al-islām, one of the last works written by Ibn al-Khatīb, in 774 and 776/1372-4 (partial ed. by h. h. 'Abd al-Wāḥhāb, in Centenario M. Amari, ii (1910), 456-72 (trans. r. Castrillo, El Afirca del Norte en el A'ālām al-'Aλamα de Ibn al-Jaθb, Madrid, 1906-7).
1958) and E. Lévi-Provençal, Histoire de l'Espagne musulmane extraite du Kitab 'Amdal al-Ilams, Rabat 1934; Beirut 1956; partial ed. by A. M. al-Khattab, T. M. al-Kattani, al-Maghrib al-Tabrî, fi l-Asr al-wasit, Casablanca 1964]. This is an unfinished history of Islam, the first part of which is devoted to the East, the second to Muslim Spain, and the third to North Africa and Sicily.

**Bibliography:** in addition to the works mentioned in the text and the references given there, the following should also be noted: M. M. Antuna, ‘Ibnu al-‘Adl wa ‘l-dawâr fi fi ‘l-wasâyîd wa ‘l-jiwjâm; study and Spanish trans. of the text, of a historical character, is al-Andalus, al-andaloussî, 1958, no. 1826); study and comm. on Rimd A, 2, 195; Littré, xii (1931), 1-32. In his Nayl al-tibbîhâd (Cairo 1350), 72, Ahmad Bâbâ gives the title of another work of Ibn Khâtima, on some questions of grammar, Ilâhâl al-‘âlî bi ‘l-kiss, of which nothing further is known.

The National Library of Madrid (ms. 511 gg. 3-50 Cat. Guillén Robles) possesses a poem of Ibn al-Khattâb, which is also included in the Al-Andalus, 73, 331-3; G. S. Colin, Quelques poètes arabes d’Occident au XIVe siècle, in Hesperis, 1931, 342; M. Antuna, Abenjdtima de Almeria y su tratado de la peste, in Religión y Cultura, Madrid, Oct. 1928. (S. GIBERT)

**IBN KHÂTTAB [see al-Khattâb].**

**IBN KHAYR al-ISBHILî, Abû Bakr Muham-$$^3$$d B. Khayr e ‘Umar B. KHALfA al-LâMÔnî al-ÁMÂWî, philologist and traditionist of Seville, where he was born in 1021/1108. He became imâm of the mosque at Cordova, and died in that city in 575/1179. Ibn Khayr, who studied under many teachers in different regions of al-Andalus, owes his fame to the catalogue (fahrasa [g.v.]) of the works which he had read and of the teachers who had given him their iđîzâ at Seville, Cordova, Almeria, Malaga, Granada, etc. This work, called Fahrasa mà rawâ’ih ân shuyuqihâ-ki min al-dawâ’în al-muṣâ’ân na filÎ “al-wm wa-awâd” al-mâ’âsirî, was published in Saragossa in 184-5 by J. Ribera y Tarragó (4 vols. with maps). Ibn Khayr gives the title Index librorum de diversis scientiarum ordinibus quos a magistris didicit. After an introduction studded with hadîth, the author enumerates the works he has studied on Kur’ânic sciences (readings, abrogating and abrogated verses, commentaries), goes on to hadîth, to which he devotes much space, together with the siyâr and the anâdil, then to Mâlikî fıkî. Next come grammar, lexicography, adab, poetry. Finally, he lists the fahrâsas which preceded his own. For each discipline he quotes the names of his masters, classifying them by region, but gives hardly any biographical information on them. This catalogue is a most important document for the study of the works known and taught in the author’s day in Muslim Spain (see H. Pérez, Poesía andalusí, 188). Ibn Khayr, in his turn had a great many pupils, a list of whom occupied, it is said, ten thirty-page notebooks.

**Bibliography:** in addition to the works referred to: Ibn al-Khatib, Ihdâ, Cairo 1939, i, 114-29; Makîrî, Naqf al-šûb, Cairo 1364/1949, viii, 139-48; idem, Azhâr al-riyâdî, Cairo 1358-59, 1940-2, i, 23, 250, ii, 254, 259, 302, 346, 395; Ibn al-Kâdi, Durrat al-hâjî, Rabat 1934, i, no. 126; Ibn Khayr, Tahâfût al-‘aql, Cairo 1350, 72; Djazarî, Khayyâ al-nihâya fi jabâbat al-kârâd, Paris 1932, i, 78; ‘Umarî, Masâ’il al-abâsî fi mamâlîk al-amsâr, Paris, no. 2327, xvii, fol. 210; Brockelmann, II, 259, SII, 396; Pons Boigues, Ensayo, 331-3; G. S. Colin, Quelques poètes arabes d’Occident au XIVe siècle, in Hesperis, 1931, 342; M. Antuna, Abenjdtima de Almeria y su tratado de la peste, in Religión y Cultura, Madrid, Oct. 1928. (S. GIBERT)
grammatician, a native of Samarqand who lived in Basra and Baghdad. In Baghdad he is said to have quarreled over grammatical matters with al-Zadijjij (ed. 316/928) and quarrelled with Abu 'Abd al-Farisi (ed. 376/985). Among his pupils are mentioned Abu 'Abd al-Kasim al-Zadijjij and Abu 'Ali al-Farisi. The latter, in a reply to Sayyf al-Dawla, denied having tried to denigrate Ibn al-Khayyat (see Yâkut); and from this we learn also that at a certain period of his life the grammarians became afflicted by complete deafness. But Yâkut also depicts Ibn al-Khayyat as endowed with a splendid physique and as being a pleasant companion. He died at Baghdad in 376/985.

Apart from the K. Ma'âni 'l-Kur'dân, all the works attributed to Ibn al-Khayyat are concerned with Arabic grammar: al-Nahw al-kabîr, al-Ma'dijis fi 'l-nahw, al-Mu'assas fi 'l-nahw. Since the time of the Fihrist (77 and 81), this grammarians has been classed minman hâllatâ 'l-maghabbayan, "among those who combine the two systems" of grammar: those of Basra and of Kufa. But this should not be misconstrued: it means that, while using the Basran method on certain points, he adopted certain Kûfan view-points, but not that he adopted a mixed grammatical system, since, properly speaking, there did not exist an eclectic grammatical system of grammar at Baghdad.

Biography: Ibn al-Khayyat is not mentioned in Brockelmann. All the references given in Kâbîlaha, i., 23, as 'Abd al-Illah b. Muhammad al-Mada'ini, are mentioned in U. Rizzitano, Arab poet who lived for 80 years. He was born in Basra, and it would appear that he was educated and also taught exclusively in his native city, not travelling to other cities as was then customary. This is indicated by the fact that al-Khâjib al-Baghdadi does not mention him in his History of Baghdad, nor does any other chronicler or biographer refer to any journey that he undertook; furthermore, most of his teachers were of Basri origin or had resided in Basra. He came of a well-educated family; his grandfather, who bore the same name, and also his father, were authorities in Tradition. Several men of outstanding culture were among his teachers, such as Yazdî b. 'Abd al-Razzîq, Sufîyân b. 'Uyayna, Muhammad b. Dja'far Ghundar, Highâm al-Kalbi, 'Ali b. Muhammad al-Mada'înî, etc., but he was closest to Yazdî b. Zuray'î (q.v.), who is described by Ibn Sa'd as a worthy man with 'Uthmânî tendencies. These tendencies are apparent, to some extent, in Ibn Khayyat's works.

On the whole Ibn Khayyat is regarded by scholars of traditions as honourable, straightforward and trustworthy. Among his many disciples were al-Bukhârî, 'Abd Allâh b. Ahmad, Ibn Hanbal and Bakî b. Makhîl.

According to Ibn al-Nadîm, he was the author of four books: Al-Tawrîkh, Tabakât al-Kurraj, Tawrîkh al-Zamânâ, wa 'l-nûrân wa 'l-nurdân wa 'l-samân, and Kubb Âji'da al-Kurraj wa 'l-adabîn wa 'l-istihlâm. It would appear that the Tabakât al-Kurraj mentioned by Ibn al-Nadîm is identical with the book which has survived under the title of Tabakât Kha'îsa b. Khayyat (the unique copy of this book is now in al-Zâhiriyya Library, Damascus). Al-Tawrîkh has also survived, in a copy found in Morocco (the only copy so far known). In a single volume of 168 fols., it was copied in Muslim Spain in 477/1084.

The author commences his book by defining the word tawrîkh. After discussing the birth of the Prophet he covers the period from the Hidjra to the year 235/846, thus ignoring the Meccan period of the Prophet's life. The importance of the work lies not only in the fact that it is the oldest complete Islamic survey of events which has reached us, but also in the materials it contains and the way in which it was written. The author gives special attention to the Umayyad Caliphate of Damascus and to Muslim foreign affairs, in particular to the extension of the Islamic Empire. He usually narrates each event from two points of view, local and official. He pays little attention to Islamic internal affairs, but he does deal with such decisive events as the death of 'Uthmân, the war between 'All and Mu'awiyah, the battle of al-Harra, the Kharijî movements, etc.

This book is a very important document for the study of Islamic administration in its early years, as the author, at the end of his account of each Caliph's reign, enumerates all the statesmen, generals and senior officials who held office under him. As for the biographical al-Tabâdîl, it too is the oldest complete book of its kind to have survived; Ibn Sa'd, though earlier, is incomplete. The unique
copy was made by one of the author’s disciples, probably during the author’s lifetime. It consists of 97 folios, written in a fine hand between hiṣāf and mawṣīḥ. Age and mishandling have made it very difficult to read. It contains the biographies of approximately 3375 men and women who were cited as authorities for Islamic traditions during the first 236 years of Islam. It is divided into two unequal parts, a very large one devoted to the men and a smaller to the women.

Ibn Khayyat composed his book in a different way from his contemporary and fellow-citizen Ibn Sa’d. He begins by enumerating the men who were authorities in tradition and lived in Medina, commencing with the Prophet, then the members of Kuraysh, group by group according to their pedigree and their relation to the Prophet; then the members of the other Arab tribes. He then takes the Muslim cities and centres and deals with them in a similar manner. The author’s biographical accounts are very brief but the significance of the book lies in the fact of its completeness and the close attention which the author pays to genealogy: he enumerates every Arab tribe, group and family who had migrated at the rise of Islam and names their place of settlement. Such information is most valuable for the study of the Islamic movement, the great Arab migration of the 1st/7th century and the history of the Umayyad Caliphate, because of the vital role played by the tribes under this dynasty. The book is of at least equal importance for the study of Islamic dogma, culture and society.

Both texts were edited, independently, by Suhayl Zakkar (Damascus 1967) and by Akram al-Umari (Baghdad 1967).

Bibliography: Ibn Sa’d, Tabakāt, vii, Beirut 1955, 258; al-Bakhtārī, al-Ta’rīkh al-kabir, Haydaraḏb 1360-76, 844; Ibn Abī Ḥāfīzm al-Rāzī, al-Dżarb wa l-laṭā’il, Haydarābd 1360-73, i, 378; Fihrist, 232; Ibn Khallikān, Wafaydt al-a‘jāmūn, i, 172; Ibn Ṭāl‘i, al-Kāmil, MS Zahiriyah, Damascus, fol. 125; Ibn Ḥaḍjar, Taḥdīb al-Taḥdīb, Haydarābd 1325-7, iii, 160-1; Dihāhabi, Ḥuffās, Haydarābd 1375-7, 436, 945, 973, 1405; Ṣiyar al-lum al-nubāla‘, MS Istanbul, Ahmad III, vii, fol. 126-b; Ibn Taqribībd, Cairo, li, 303; Ibn al-Naḍīm, al-Fihrist, fol. 123; Ibn Hādiār, ad-Dihr wa ‘l-maldī, edited from the unique manuscript by I. A. Khalīfī (Beirut 1964); it is presumably to this work that al-Ma‘arrī (q.v.) is alluding in his Risālat al-Ghurān when he speaks of the “class of singers” (tabābāl al-muqānhīn). In this book he treats of music and musicians, borrowing the basic technical vocabulary from Persian and giving allegedly historical information (which al-İsfahānī considered to be unacceptable). Al-Ma‘ṣūdī reproduces five pages from the text of a dissertation on the same subject given by Ibn Khurradadhbih in the presence of the caliph al-Mu‘tadīd. These have been edited by al-‘Azāzī under the title K. al-Lahw wa l-ma‘lādī. De Goeje translated this title as "Le livre du jeu et des instruments de musique" (The book of playing and of musical instruments). 7. K. al-Djjamārah (var. DIUMHAR) ansāb al-Furs wa l-nawabī (var. nawafîl) (= The book of the principal genealogies of the Persians and of the transplanted population). 8. K. al-Ta’rījh, regarded by al-Ma‘ṣūdī as "the best constructed and most exhaustive 'work of his kind yet done in Persia" (in Ibn al-Naḍīm’s list). These two works are frequently cited by al-Ṭaḥṣīlī and, no. 8 is cited once by Ibn Shaddād. 9. K. al-Masālid wa l-ma‘mālīk (= The book of itineraries and kingdoms), which made his reputation, often copied or used as a model for imitation and twice edited and translated into French in full, and once in part only; it has been the subject of a controversy that is still unresolved in regard to the date of its composition and the authenticity of the version which has survived; finally, in regard to its scientific value, it has given rise to contradictory appreciations by the early Arab writers and by modern orientalists.

Bibliography: Brockelmann, 1, 255-6; S 1, 404; Tabari, iii and passim; al-Ma‘ṣūdī, Murādī, i, 72, vii, 87, (Cairo ed., 1367/1956, i, 14, iv, 240, v; Aḡbānī, passim; Fihrist, 149 (Cairo ed., 1348/1929, 212); Ṣaḥībī, Qurān akhbār mutāl al-Furs (= History of the Kings of the Persians), Paris 1900, passim; Ma‘arrī, Risālāt al-Ghurān, Cairo 1950, 465; Ibn Shaddād, al-Aʿlāḏ al-lahw wa l-umara‘ al-Shām wa l-Dijāri (Ibn Shaddād’s description of Damascus), Damascus 1956, 25; C. **IBN KILLIS,** Abu ’l-Faradî Yaḥyâ b. Yūsūf, famous Fāṭimid vizier of the caliph al-ʿAzîz (q.v.). He was by origin a Jew, born in Baghdad in 318/930. He went with his father to Syria and settled at Ramla, becoming an agent for various merchants; but, according to one tradition, having appropriated their money and being unable to repay it, he fled to Egypt, where he entered the service of Kâfur Rashîk, Abu Saʿd al-Ṣirâfî, the vizier and adviser of Salâdîn (Salâdîn). During the years which he spent as a student there he was already collecting the material for his later works. He undertook only reluctantly, but which brought him the honorific title of al-Ṣâdî al-ʿAţîr (the illustrious vizier). He was by origin a Jew, born in Baghdad in 318/930. He entered the service of al-Muḥammad ibn Kâfur (q.v.), who thought highly of him and whose complete confidence he gained by enabling him to appropriate various inheritances which, if he were a Muslim, ought to be vizier, Ibn Killis aspired to the vizierate, embraced Islam in 356/967 and devoted himself to the cause of scholarship, for during these years he gave shelter in Aleppo to Yaḥyâ, who had fled from the Mongols, and gave him much help in the compilation of his great geographical dictionary. Dismissed at his own request in 628/1230, Ibn al-Kiftî was able to devote a few years to his own studies until he was appointed vizier by al-Malik al-ʿAzîz in 633/1236. He remained in this office until his death in 646/1248.

Of the 26 works of Ibn al-Kiftî of which the titles are known only two survive: (1) The Kitâb al-fawādî ilā-nimâma bi-ahkâb al-hubâmâ, usually referred to simply as Târîḵ al-hubâmâ, which exists in an epitome by al-Zawzawî (written in 647/1249), ed. J. Lipper, Leipzig 1903; it contains 414 biographies of physicians, philosophers and astronomers with many statements from Greek writers which have not survived in the original; (2) Indah al-mulûd li-ḥadîth anhâb al-nabât, parts i-iii ed. by Msh. Abu ’l-Fadl Ibrâhîm, Cairo 1365-74, which contains about a thousand biographies of scholars. Of the posthumous Aḥkâb al-Muḥammadin min il-ghwâra‘ there exist only fragments in Ms. Paris arab. 3335. The remaining titles are mainly of historical works: a history of Cairo until the reign of Shâb al-Dîn, a history of the Seljûqs, of the Mirdâsîs, of the Bûyûks, of Maḥmûd b. Sabuktakhin, of the Maghrib, of the Yemen; a comprehensive Târîḵ al-Kiftî in
Ibn Killis's foreign policy was expressed in the advice which he gave before he died to al-‘Aziz: to undertake nothing against the Byzantines so long as they themselves did not attack, to be satisfied with a vague acknowledgement of vassalage from the Hamdānids of Aleppo, but not to spare Mufarridj b. al-Diārrāb, the chief of the Ṣayyū Arabs of Palestine [see Diārrāhīdī]. He carried it out successfully but not without resorting to intrigue, to deception and even to attempts at assassination. He re-took Damascus from the Turk Alptakin, ally of the Fatimids, which he had seized in 371/982, and which he had given to the vizier al-Hakim because the latter was a favourite of the caliph in Egypt. He also gave the vizier of Damascus a corps of picked troops (the regiment which bore his name), and that he taught it in lectures al-Risāla al-wazirīyya, which he is said to have given on various occasions (references in Ibn Ishaq, ed. S. Munajjidj, Cairo 1962, 185-92, 235-6; Makrīzī, Khīṭāb, Būlibī ed., i, 439, ii, 5-6, 226, 341; idem, Iltīsā al-humūfā, ed. Shāyāyāl, 196, 198-9, 275, 279, 296; Quatremèere, Vie du calife fat. Meozi-lādīn-Allāh, in J.A, 3rd series, nos. 2 and 3; Wüstenfeld, Gesch. d. Fatimiden-Chalifen, 50-1, 133 ff.; idem, Die Statthalter von Ägypten, . . .; R. See also Hasan Ibrahim Ḥasan, Ta’rīḫ al-daula al-fātimīyya, Cairo 1958, 270-2, 298-300, 426-7, 536-7, 632-1 and index; Muhammad Kāmil Husayn, Fi adab Misr al-fātimīyya, Cairo 1950, 54-9, 174-6 and index. (M. Canard)

IBN AL-KIRRIYYA, ABU SULAYMAN AYYUB B. ZAYD, of the Zayd Manāt (al-Kirriyya was probably the name of his mother or of one of his grandmothers), is presented as an illiterate Bedouin whose eloquence was worthy of this; but the Egyptian populace did not believe him, and was either beheaded because he had had put to death the tenant of the lands which the vizier owned in the region of Damascus and had seized these lands) to leave Damascus [for details, see al-‘Aziz]. But Ibn Killis prevented the caliph from getting too deeply engaged in northern Syria.

In political policy, the favour which Ibn Killis enjoyed suffered only one eclipse of some months (373-4), the reasons for which were perhaps the caliph’s anger after the poisoning of Alptakin, or disturbances caused by a famine in Egypt. He soon recovered all his offices and his immense riches. Moreover Ibn Killis did not fail to flatter his master, as witness the episode of the cherries which he had reported however to have joined the party of Ibn Killis when this party was defeated in a race, a fact of which the vizier’s enemies and those of the dynasty. On his death, at the end of 380/February 991, al-‘Aziz, who led the funeral prayer for him, wept and showed great grief. The Christian Yabāy b. Sa‘d states that Ibn Killis was worthy of this; but the Egyptian populace focused on his eloquence more on his great favour to the Christians and to the Jews.

At the end of the reign of amir Muhammad I and throughout that of his successor 'Abd Allâh, the unity of the Umayyad emirate of Cordova was on the point of being destroyed. The disorderliness and incessant revolts of the Arab and Berber lords in the provinces made it possible for Alfonso III of Leon to extend his conquests from strategic bases at Colombra, Astorga, León and Amaya; in 280/893 he rebuilt the fortress of Zamora, and the garrison made continual raids on the Berbers in the vicinity. Moreover, the Banû Kasti in Aragon, Ibn Marwân in Extremadura and above all Ibn Hâfsûn [q.v.] in the mountainous region near Ronda were striving to break away from the central authority. At the same time, towards the borders of León, where the Berbers were more numerous, there came a stream of mystics and fanatics, while the doctrines of the Mû'tazilis were being introduced from the East and the philosopher Ibn Masarra [q.v.] was expounding his metaphysical ideas in the Sierra of Cordova. Amidst such disturbances in both the spiritual and political spheres, various adventurers, either zealots or impostors, made their appearance, declaring themselves the enemies of the régime; they found enthusiastic support among the Berbers of the mountainous zone in the centre of the peninsula. One of these figures, who, in the traditional manner, prepared to censure social behaviour and morality at the very time when the Fâtimid da'wa was spreading the Ismâ'î doctrine in North Africa, was the Andalusian missionary Abu 'Ali al-Sarrâj who, under pretext of preaching the holy war, worked against the régime, cunningly disguised as a Muslim ascetic. Dressed in coarse homespun, wearing rope sandals and riding a donkey, he travelled all over the country. In this disguise, "he worked actively to bring to fruition a projected alliance which had been planned in 283/898 between the Banû Kasti of Aragon and 'Umar b. Hâfsûn"; he did not succeed in carrying through his project [q.v.]; but, later, he was able to persuade the Umayyad prince Abû 'Abd Allâh mû'tawïya, a devotee of astrology who did not conceal his aspirations to the throne, to come out in open revolt. Ibn Sarrâj presented him as the reforming Mahdi, and the two of them traversed the district of Los Pedroches (Fâbûs-al-Balûtî) and the Sierra of Almâdîn (Djilal-al-Barânîs), where they were received with enthusiasm by the Berbers to whom they preached the holy war against Zamora. Ibn al-Kitî's displays of conjuring increased the number of his supporters (whom the Arab sources put at over 60,000), and this fanatical horde, before whom he had promised the seven walls of Zamora would crumble, approached the fortress. While al-Sarrâj prudently withdrew, Ibn al-Kitî invited Alfonso III to embrace Islam if he did not wish to be exterminated with all his men; Alfonso indignantly took up his position on the right bank of the Duero and, after a combat which according to Arabic sources was favourable to Ibn al-Kitî, siege was laid to Zamora. But the Berber leader Nafza, being disillusioned, left Ibn al-Kitî together with all his troops, and his departure provoked new desperations. After some indecisive skirmishes, Ibn al-Kitî, finding himself abandoned by almost all his followers, launched a desperate attack on the enemy and was killed, on 20 Rajab 288/10 July 901. For a long time his head remained hanging from the top of one of the gates of Zamora. "This tragi-comical expedition was no more than an isolated episode in the annals of the lower and central Marches" at the end of the 9th century and at the beginning of the 10th/10th, and its only repercussion is the expedition said to have been undertaken in the same year by the future Ordoño III, son of Alfonso III, who, setting out from Viseo, crossed the Tagus and then the Guadiana to reach the region of Seville, where he sacked and burned one of the mystic abodes of the Marches. A.G. Noury, "Les montagnes de la Cordoue" (in Rezo, no. 14, 1921, p. 9); L. Krüger, "Zum Beginn des Kreuzzugs" (in Archiv für Geschichtswissenschaft, co, 1922, p. 53). Bibliography: E. Ibn Kûtûrûn [see ibn katûrûn].

Ibn Kudâmâ al-MaÕdîsî, Muwaffâk al-Dîn Abû Muhammad 'Abd Allâh b. Ahmad b. Muhammad, Hanbali ascetic, jurist, consultant and traditionalist theologian. He was born in Dammâlî, near Jerusalem (Bayt al-Maûdîs, whence his ethnic name) in Sha'bân 541/Jan.-Feb. 1147, and died in Damascus on 5 or 6 Dîmuânâl II 620/6 or 7 July 1223.

In 551/1156, the Banû Kuddâma moved from Dammâlî to take up residence in Damascus. The chroniclers explain this exodus as caused by the bad treatment the Muslims were receiving at the hands of the Franks.

From the sources available to us at the present time it is possible to reconstruct two main branches of this large family from the 5th/11th to the 10th/16th centuries. At the head of one branch is Muwaffâk al-Dîn's father, the Shâhîy al-Maûdîs B. Muhammad b. Kudâmâ (491-558/1097-1162), the preacher (khâ'îrîj) of Dammâlî, a man known for his asceticism, for whom a mosque was built in Damascus (Nû'aymî, Darîs, ii, 354). On his brother Yusûf, who stands at the head of the other branch, the sources seem to be silent; but he is the ancestor of Yusuf b. 'Abd al-Hâdî (849-909/1436-1503), whose autobiograph, certifies of pilgrimage, is related to be seen on the margins and in the colophons of many of the manuscripts of the Zâhirîyya library in Damascus. The most numerous sub-branch of this family is by far that of Muwaffâk al-Dîn's brother, the ascetic Shâykh Abû 'Umâr (528-607/1133-1210). Regarding the other brother, 'Ubayd Allâh, our sources are silent, though other members of this sub-branch are known: the son Ahmad (573-613/1177-1216), the latter's two grandsons 'Abd al-Hâdî (641-687/1243-1288) and 'Ubayd Allâh (655-684/1255-1285), and the latter's grandson 'Abd Allâh (d. 803/1400).

The smallest sub-branch of all is that of Muwaffâk al-Dîn Ibn Kudâmâ, whose three sons died in his lifetime and who was survived by his grandson 'Abd al-Maûdîsî (605-643/1208-1245).

Muwaffâk al-Dîn received the first phase of his education in Damascus where he studied the Kûrân and bâdîlî. He made his first visit to Baghdad in 561 in the company of his maternal cousin, a well-known Hanbali traditionalist, 'Abd al-Ghanî al-Maûdîsî (541-600/1146-1203), also originally from Dammâlî, a member of a certain family tracing their origin back to a certain 'Ulûr b. Râfî. Arriving at Baghdad they were received by the leading Hanbali of the day, the celebrated mystic 'Abd al-Kâdir al-Dîlî [q.v.]. Their discipleship was cut short by the latter's death.
Brief though it may have been, this experience must have had its influence on the young Muwaффak al-Din, who was to receive a special place in his heart for mystics and mysticism. This is attested to by the present author regards as his condoning of Ibn 'Akkil's [g.v.] veneration for the great mystic al-Hallâj [g.v.]; and in a silsila preserved in a manuscript in the Zähiriyya library of Damascus (see Maghînî, 18, fol. 254b), Muwaффak al-Din figures as having received the khirka from 'Abd al-Kâdir al-Djâli and passed it on to another Hallâj, his cousin Ibrahim b. 'Abd al-Wâhid (543-614/1148-1217), brother of the above mentioned 'Abd al-Ghânî. On the other hand, Muwaффak al-Din did not condone what he believed to be the excessive rationalism of Ibn 'Akkil, against whom he wrote Ta'brîm al-nazar fi kutub ahl al-kalâm (see G. Makdisi, Ibn Qudamâ's censure of speculative theology, London 1962).

Muwaффak al-Din's first sojourn in Baghdad lasted four years. He is known to have visited it again in 567 and 574, making his pilgrimage to Mecca in the previous year 572, and finally settling in Damascus in 575. He left Damascus once again in 583 to take part in Saladin's expedition against the Franks, particularly in the conquest of Jerusalem, which occurred that year.

Muwaффak al-Din is known especially for his works and ideas, see Brockelmann, I, 398, SI, 26x68, which was much used by later writers and is probably the most famous was al-Kumayt (c. in Marrakush: 9. Abu Muhammad Abd Allah al-Wanaghîli, the blind, d. 779/1378; 4. Abu Muhammad al-Khatib, d. 776/1374); (c) in Marrakush: 9. Abu Muhammad Ibrâhîm al-Zukandari, d. 768/1367; (d) in Tlemcen: 10. Abu Abu 'Ibn al-Maghniyya, Cairo n.d., 155-62; F. Bustânî, Dâ'irat al-ma'dîrî, iii, 482-3. (Ch. Pellat)

IBN KUNFUDH, Abu l-'ABBAS AHMAD b. HASSAN (incorrect var. 'HASAWI), Abu l-'ABBAS AHMAD (c. in Marrakush: 9. Abu Muhammad Abd Allah al-Wanaghîli, the blind, d. 779/1378; 4. Abu Muhammad al-Khatib, d. 776/1374); (c) in Marrakush: 9. Abu Muhammad Ibrâhîm al-Zukandari, d. 768/1367; (d) in Tlemcen: 10. Abu Abu 'Ibn al-Maghniyya, Cairo n.d., 155-62; F. Bustânî, Dâ'irat al-ma'dîrî, iii, 482-3. (Ch. Pellat)
Abd Allah Muhammad b. Yafca, d. 771/1369; u. Abu Abd Allah Muhammad b. Afmad b. Marzuk, d. 780/1379; (6) in Tunis: 14. Abu l-Hasan Muhammad b. Ahmad al-Batarni (var. al-Batrunci, and al-Batwii), d. 793/1390; (5) in Casablanca: 19. Abu Abd Allah Muhammad b. Ahmad al-Jibril b. Abu Bakr, ... of the 26 titles contained in this list, at the present time, roughly speaking, we know only the following: (1) Bushyal al-farid min al-bisah wa l-farad, which is probably the same as the Mufaddal al-wad al-mabadi fi l-farad or again the Shaf'a al-manhaj al-mansur wa l-farad and which, according to M. Ben Cheneb, is said to exist in a private (?) library; (2) al-Faridiya fi l-mabadi; (3) al-Mafadha al-saniyya fi l-khidr al-abada-riyya, the source of Ahmad Baba, Nayl al-Ishadiyya, Fas ed., 394, Cairo ed., 70 and passim; (4) Sharaf al-talib min al-mabadi (see ms. in al-Faridiya, 74-7); (5) Tafsir al-matadhib fi ta'dil al-kawakib, ms. Rabat 512 bis; (6) Uns al-jabr wa l-aha, a biography of the Andalusian mystic Abu Madyan and his admirers; ms. Rabat, 385, Cairo, vi, 344 v. 45; ed. M. al-Fasi and A. Faure, Rabat 1965; (7) Sharaf al-talib min al-mabadi, a commentary on the Talhis al-mabadi al-bisah of Ibn al-Banna [q.v.], ms. Rabat 532 bis.

We believe that M. Hadj-Sadok attributes to him other works whose titles do not appear on his own list; (8) Takhil al-manhaj fi takmil al-madari, a commentary on (5) above; ms. Rabat 512 bis. (9) Sharaf urdjudat Ibn l-Ridadi [q.v.], ms. Rabat 466, 457, 512 bis; (10) Br. Mus. 977a. On the other hand, a number of mss have been discovered (see Introd. al-Faridiya), in particular: (10) Urdjudat fi l-tabis; (11) Tafsir al-matadhib li-khidr al-sharif min ibsal al-wad; (12) Tashil al-matadhib fi ta'dil al-kawakib; (13) Sirad al-talibat fi ilm al-talibat.

The remainder are now considered to be lost: (a) Alamad al-naqdah fi mabadi, al-issaliak; (b) Anekur al-salada fi usal al-salada; (c) Baas al-rumuz al-bisaha fi sharik urad al-khadariyya; (d) Hitiyat al-talib fi bayan Alifyat Ibn Malik; (e) Idadi al-ma'sini fi bayan al-mahani; (f) l-Ibrakimiyya fi mabadi. (f) l-Ibrakimiyya fi mabadi. (g) l-Kunfudhiyya fi ihli al-adilal fa-lafaqiyah; (h) l-Lubab fi l-khidr al-talibat; (i) Tashil al-talib fi usal al-ashay Ibn l-Ridadi; (j) Tashil al-talib fi sharik l-talibat; (k) Tashil al-talibat fi sharik l-risala; (l) Tashil al-talibat fi sharik l-Dimul al-khafadji (var. Brocklemann, i, 462); (m) Tashil al-talibat fi l-talibat al-salma; (n) Waktu al-mawakib wa-saniyati al-munakib. Bibliography: Ibn al-Kahd, Djiahvats al-

IBN KUTFAYBA, Abu Muhammad 'Abd Allah b. Muslim al-Dinawari (soe add al-Köfi, which refers to his place of birth, and al-Mawazi, which is probably the ethnic name of his father), one of the great Sunni polygraphs of the 3rd/9th century, being both a theologian and a writer of adab. He seems to have been descended, in the second or third generation, from an Arabized Iranian family from Khorasan which was connected on the female side with the Bahlis of Basra and may have come to Irak in the wake of the Abbasid armies during the second half of the 2nd/8th century. He was born at Kufa in 213/828, but little is known of his childhood and adolescence. At the most we are able to compile a list of his teachers which, on careful examination, provides much information on his education. Among the most important of them we find men who owe their reputations generally to their attachment to the Sunna, either as theologians, traditionalists or philologists, or usually as all three. The biographers and critics have produced long lists of them, but a few names should be mentioned here. The three persons who had the greatest influence on the young Ibn Kutayba are undoubtedly l-Isaib b. l-Ibrâhîm b. l-Ibarâhîm b. l-Ammâr b. l-Abd l-Hamid b. l-Abâd al-Siddîsî, a Sunni theologian, a disciple of Ibn Hanbal and protégé of the Tâhiris of Nisâbûr, where he appears to have spent most of his life, Abû Hâtim Sahl b. Muhammad al-Siddîsî (d. ca. 250/864), Sunni philologist and traditionalist and a master of everybody who in Irak was interested in philology and tradition, and finally al-Abbâs b. l-Farâji b. l-Râfiî (d. 257/872), one of the leaders of philological studies in Irak, transmitter of the works of al-'Asma, Abû Ubayda and other pioneers of the 2nd/8th century.

Very few details are available of Ibn Kutayba's career, but a comparison of information from different sources allows the following tentative reconstruction: after the change in ideology accepted by al-Mutawakkil and his chief henchmen from 232/846 onwards, Ibn Kutayba found himself without a patron. He seems to have been descended, in the second or third generation, from an Arabized Iranian family from Khorasan which was connected on the female side with the Bahlis of Basra and may have come to Irak in the wake of the Abbasid armies during the second half of the 2nd/8th century.
236/851. He seems to have remained in this office until 257/871, when he may have stayed for a short time in Basra until the sacking of this town by the Zandj, in Shawwal 257/871. He seems to have remained in this office until 256/870, when he may have stayed for a short time as inspector of Basra until his death in 276/889. Ibn Kutayba's son, Ahmad, appears to have been his chief disciple. He is certainly responsible, as is his son 'Abd al-Wahid, for the transmission to Egypt, indirectly to the West—especially through the intermediary of 'Abd al-Kamil—of the greater part of the works of Abū al-Muḥammad. In al-Andalus, the direct transmission of Ibn Kutayba's work was ensured by the famous Kāsim b. 'Abdābrahām, who had come to study in Baghdad in 274/887. Among the eastern disciples, 'Ubayd Allāh b. 'Abd al-Rahmān al-Sukkāri (d. 323/935) seems to have played a particularly important part, his name being found at the head of numerous manuscripts. But Ibn Kutayba should also be mentioned: Abu Ṭūl Allāh b. 'Abd Allāh b. Dījār, Ibn Durustawāyah [q.v.], and 'Ibrāhīm b. Muhammad b. 'Ayyūb al-Sā'īdī (d. 313/925), in addition to other minor disciples.

It can be stated that, with the exception of two titles, all the authentic works of Ibn Kutayba as at present known have been published. We list them here, giving for each the most useful edition and a brief description of the contents:

(1) K. Adab al-kāthīb (ed. Grünert, Leiden 1900), manual of philology for the use of secretaries, with a famous introduction which may be regarded as a politico-cultural profession of faith.

(2) K. al-Amālī (ed. Pellat-Hamidullah, Ḥaydarabād 1375/1956), treatise on practical astronomy and meteorology.

(3) K. al-Šā'ābī (ed. Kurd 'Allī, in Rasā'īl al-Būlahāq, Cairo 1325/1946, 344-77), treatise in the anti-Shi'i tradition on the relative merits of the Arabs, the Persians, and the inhabitants of Khurāsān.

(5) K. al-Īhtīlāf fi l-īlāf wa l-rādā' al-sūl l-Dhāliyya wa l-Muḥabbība (ed. Muhammad Zāhid al-Kawhārī, Cairo 1340), a theological pamphlet refuting the position of the Muḥabbība on attributes and that of the Mu'tazilis with Dhāliyya tendencies on the pronunciation of the Kurān.
Bukhālī. About the remainder one can only guess. Finally, it is not without interest to note that Ibn Kutayba's "theological" work and to pass in silence over his religious ideas. It seems clear however that at some stage Ibn Kutayba put his literary talents at the service of the enterprise of the restoration of Sunnism which was undertaken by al-Mutawakkil and his chief helpers. This meant that a number of his works were intended to expound a politico-religious doctrine which we might expect would take its place in the ideological line of the Sunna then coming into being, and particularly that represented by Ibn Hanbal and Isḥāq b. Rāhawayh.

Nevertheless, Ibn Kutayba, who admits to having been tempted in his youth by the quasi-rationalist ideologies which were in vogue at the time, was at times somewhat troubled by the dogmatic intransigence of the upholders of Tradition. Although his theology is fairly clearly "Hanbali", his attitude concerning the Kurān is orthodox, he is much less categorical on the problem of lafs (q.v.), which he states does not prevent membership of the Sunnī community; although his attitude concerning the Companions is that which remained in later times the touchstone of the Sunna, he nevertheless retained a deep and reverent respect for the family and descendants of the Prophet, so far as they were politically neutral. Even his opinions about the "national groups" (Shābīsibya) seem much more subtle than hath hitherto been admitted: whether he is writing of ethnic or of religious groups, one is led to think that he tends to gather together peacefully around the reigning dynasty those among them whom he considers it possible to win over politically. Culturally and stylistically the other hand, his method of exposition, of which he nowhere gives a systematic definition —certainly seems steadfastly to despise the rational or intellectual criteria held for example among the Ş̣̄̆fiʿis and the Ḥanafīs. The Kurān and the Sunna remain for him the two fundamental bases of doctrine; the third is idrād, of which his conception is perhaps nearer to that of Mālik than of Ibn Hanbal. The Ḥanafī raʿy and the Ş̣̄̆̆fiʿi ʿaṣyā are fiercely demolished in the Muhk̄̄h̄alīf, as are all their equivalents (naṣar, ʿabī, istiḥsān, etc.).

Thus all the religious, political and literary work of Ibn Kutayba combines to make him an eminent representative, if not the exclusive spokesman, of the aḥr al-Sunna waʾl-Dīmārā, who in fact from this period were the party of the "Abbasid dynasty which had already abandoned the Muṭtala'i ideology, and particularly in the Shīʿīs and al-Farābī, whereas in a more general way, in philology and especially in poetry, he does not hesitate to depart from the usually accepted views.

What has been said above on his religious position end of the 3rd/9th century, nothing has been found in Ibn Kutayba's philological work, or at least in what now survives, which could provide us with a point of view. Although he in effect contrasts them with the "Baṣrān", he regularly refers to those who were later to be attached to the "School of Kūfā" as "Baṣ̄hādīs", and the synthesis of which so much has been made is no more than a genuine eclecticism which never claimed to form a school.

All that can be said is that Ibn Kutayba in fact joins certain reputedly Kufi tendencies to others considered to be Baṣrān. His position may be summarized by stating that in grammar he remains on the whole a supporter of the norm, i.e., "Baṣrān", in spite of his attachment to the teaching of al-Kīṣāʾī and of al-Farābī, whereas in a more general way, in philology and especially in poetry, he does not hesitate to depart from the usually accepted views, an attitude considered to be "Kūfī".

Ibn Kutayba's writing on poetry is found mainly in two works: the K. Maʾādin li-šīʿr, a long anthology of poetic themes, and the K. al-Ş̣̄̆hīr waʾl-ş̣̄̆ʿawār, a mainly chronologically arranged anthology. It is possible that other works, now lost, were also on poetry. Thus there is frequently a K. Usyʿīn al-ş̣̄̆ḥīr of which nothing is known. It is usual (see Gaufroy-Demobynes, op. cit.) to attribute these to his youth, before he entered upon the introduction to the K. al-Ş̣̄̆hīr waʾl-ş̣̄̆ʿawār. It is true that it appears as a "veritable manuel de néo-classicisme" (R. Blache, HLA, i, 140) in the sense that it exhorts writers to "create antique verses on new thoughts" and contributes some original ideas on the ideal poetic technique. But one has no hesitation in saying that this text, though of some interest for the evidence it contains, is nevertheless grossly overrated as a treatise on style. Close inspection reveals that its few main ideas have nothing at all to do with poetic style. They concern in fact a great problem of cultural ethos, of the quarrel of Ancients and Moderns, and in addition an important problem of historical method, that of the documentary value of a literary work in the strict sense. There is nothing in this which truly concerns Ibn Kutayba. He composed no poetry at all himself, he continues to be regarded as a writer of prose.

Nevertheless, he must be regarded as an innovator, in the sense that he devotes in his anthologies, and particularly in the Shīʿī, at least as much space to the "modern" as to the "ancient" poets. Thus he professes a great admiration for writers such as Bashshār and Abū Nuwās, to mention only the greatest. In addition he has the merit of mentioning poets of whom otherwise almost nothing is known. Ibn Kutayba's reputation, especially in the West, is based mainly on his ability as a writer of adab. His adāb, which comprises an ethos and a culture in which are united all the intellectual currents of the Abbasid society at the beginning of the 3rd/9th century, and which displays an intent to popularize, at least for a certain literate public, is in this sense a kind of humanism. But it would be wrong, in the light of the eclectic professions of faith in the introductions of the Usyʿīn and the Adāb al-kūfī, to regard it as a secularist or even simply as a secular humanism, as some have tended to do in the West. What has been said above on his religious position and his attitude as defender of the Sunna clearly proves that in his mind there is no difference in kind between the religious and the secular aspect of his educational work.

Ibn Kutayba's culture amalgamates in several
ways the four great cultural trends of his period: the Arabic trend proper, which consists of the "Arabic" sciences, i.e., the religious sciences properly so-called, the sciences, the religious sciences properly so-called, and "historical" sciences; the Indo-Iranian current, which contributes a certain administrative culture and a certain conception of the social relations in a developed society; the Judaeo-Christian trend, which adds a certain spiritual ferment; and, in a lesser degree, the Hellenistic trend which contributes the taste for logic and experimental knowledge.

Similarly Ibn Kutayba's ethic brings together the great cultural trends as conveyed by these different cultures: the proud and pitiless ethic of the desert, that of the virile and sober qualities of the pre-Islamic mursawa, the civilized and opportunistic ethic of the Persian tradition, the spiritual and mystic ethic of the three revealed religions. Nevertheless, one seeks in vain in the resulting synthesis for any influence of Aristotelian or Platonic ethics, they being too clearly incompatible with the developing Sunni ideal.

It is usual to consider the style of a compiler as a mirror of his personality. In the case of Ibn Kutayba it is far more complicated. He was a man of the nascent Sunna. It is not surprising if, among the responsible people of his time, Ibn Kutayba, the "secular" and the "religious", which are however distinguished only for the purpose of explanation, reflect a double personality: with a mind open to all the current intellectual ideas, which he attempted to spread by an exaggerated respect for the norms of grammatical and rhetoric, see BALAGHA and AL-MAS'AMI WASIYYA.

(G. Lecomte)
Ibn al-Kutiyya was thus a mawlid of the Umayyads and a descendant of the Visigothic nobility. Born in Seville, he settled in Cordova after studying in his native town and in the capital of al-Andalus, under such famous teachers as Hasan b. 'Abd Allâh al-Zubayri, Muhammad b. 'Abd al-Malik b. Aymân, Muhammad b. 'Umar b. Lubbâa and Kâsim b. Ašâbâ. He lectured in Cordova and had several pupils, some of them well-known, especially the kādi Abu 'l-Hamzâ Khalaf b. 'Âsâl al-Washki and the kâdi al-Maksur wa 'l-mamdud, who held the office of chief justice during the life-time of Ibn al-Kutiyya. He died in Cordova, in old age, on Tuesday 23 Rabi' i 1367/1176 November 977.

Of his various works, among which was his Kitâb al-Mahsâr wa 'l-mamâd, the only ones to have survived are: (1) Kitâb Tašrîf al-af'lâl, published by I. Guidi (i libri dei verbi di ... Ibn al-Qutiliya, Leiden 1894) and re-edited recently by 'Ali Fawda under the title al-Aflatîl, Cairo 1953. (2) Ta'rîkht al-Hâdîbân wa al-Ansâb, a history of the conquest of the Iberian peninsula and of the emirate to the end of the reign of the amir 'Abd Allâh; the Arabic text, prepared from ms. Paris 706 by Gayangos, Saavedra and Codera, was printed in 1888, but it was published only by J. Ribera, with a Spanish trans. and a helpful introduction, under the title Historia de la conquista de Espana de Abenal- qadim wa 'l-mahsûr, Madrid 1926. Earlier, A. Cherbonneau had brought out an incomplete French trans. (Histoire de la conquête de l'Espagne par les Musulmans, in J.A, i (1853), 458-85 and viii (1856), 428-527); O. Houdas published the first part of the Arabic text with a French trans. (Histoire de la conquête de l'Andalousie, in Recueil de textes ... publié avec la collaboration de l'Académie Orientales, i, Paris 1889, 219-80); E. Fagnan also published a trans. of some fragments in his Extrait, 195 ff. The Ta'rîkh was re-edited recently by 'Abd Allâh Anîs al-Tabbâ, Beirut n.d. (1955).

The chronicle of Ibn al-Kuitiya was dictated in the second half of the 4th/10th century and was written down by one of his pupils; it consists of a series of detached notes taken down from dictation, and it is possible that there existed various recensions or copies made by other pupils; a hypothesis of this kind is supported by the fact that the incomplete edition of the Ta'rîkh fath al-Ansâb published in Cairo contains many variants (see Mub. Ibn 'Azzâz, Une edition parcell poco conocida de la “Historia de Ibn al-Qutiliya”, in al-Ansâb, xvii (1952), 233-7). This chronicle, which could not have been disseminated before the 5th/11th century, has a special value for the history of al-Andalus in the 3rd/9th century, since it contains traditions, anecdotes, observations and personal impressions, not to be found in any other authors, on specific aspects of life at the Cordovan court and of certain personages. However, it provides, in its first part particularly, only some what scanty, imprecise and uncertain information.

Bibliography: Ibn al-Faradî, Ta'rîkh 'ulamâ' al-Ansâb, no. 1356; Dabîî, Buğyât al-mudâhim, no. 223; Ibn Khallîkûn, Bûlûk, ii, 336 (de Slane, iii, 179); Thâriqat Fath al-Andalus, v. 1, 412; al-Bâth b. Khâlîk, Mâhâf, Istambul 1932, p. 48; Suyûtî, Buğyât, 84; Dozy, Hist. de l'Afrique et de l'Espagne, titubeil al-Bayano 'l-Mogib, Leiden 1848-51, i, 28-30 (still useful); Wüstenfeld, Geschichtsbeschreib, no. 141; Pons Boigues, Ensayo, no. 45; Brockelmann, i, 150, S I, 232; Muhammad Ben Cheneb, Él. sur les personnages menismes dans l'état du Cheikh 'Abd al-Qâdir al-Fâsi, no. 231; Sánchez Gayangos, Saavedra and Codera, was printed in Cairo 1953. (2) Ibn Hadjar. His travels, not very extensive ones, brought him to Damascus, Jerusalem, Alexandria, and Mecca. His professional career was not outstanding. He held only shortlived teaching appointments, for instance, in the Baybarsiyâ and in the madrasa al-Djiddawi. Equally shortlived stipends from influential friends, consisting in one instance of a monthly allowance of 800, and in another of 2000 dirhams, helped him to support his large family. But his scholarly prestige was great, and it seems that his writings and his legal advisory works yielded enough income for his needs. He had close Sufi connexions and, in the great debate about mysticism, took a stand favorable to Ibn al-'Arabî and Ibn al-Fârid. Death came to him on the night of Wednesday-Thursday, 4 Rabi' II 879/17-18 August 1474.

His literary production, begun in his nineteenth year, was voluminous, approaching, it would seem, that of Wednesday-Thursday, 4 Rabi' II 879/17-18 August 1474.

His literary production, begun in his nineteenth year, was voluminous, approaching, it would seem, that of another of 2000 dirhams, helped him to support his large family. But his scholarly prestige was great, and it seems that his writings and his legal advisory works yielded enough income for his needs. He had close Sufi connexions and, in the great debate about mysticism, took a stand favorable to Ibn al-'Arabî and Ibn al-Fârid. Death came to him on the night of Wednesday-Thursday, 4 Rabi' II 879/17-18 August 1474.
IBN KUTLÜBUGHA — IBN KUZMAN

Very little is known of the life of Ibn Kuzman. He himself merely mentions (ṣaḏl al no. 38, stanza 9) that he was not yet born at the time of the famous battle of al-Zallaka (479/1086). The only certain fact is that he died at Cordova on the penultimate day of Ramadan 553/October 1160 (see Ibn al-Khatīb, Ḥalālo, MS Esccorial, fol. 54).

Ibn Kuzman lived in a difficult time for poets. From 498/1096, the Almoravid Yusuf b. Tashfin had done away with the last “party kings” (mulak aljavāli) with their luxurious courts and their entourage of paid poets. Only the Ḥādis, in distant Saragossa, succeeded in maintaining precariously the tradition of the patron princes until 503/1110. The new masters of the country, sultans, viceroys, and governors, were Berber-speakers from the Sahara, who must have been unable to understand the subtleties of Arabic poetry (cf. Dozy, Hist. Mus. Esp. ii, 127, 135). It is doubtful, for example, how far the governor of eastern Spain, Ibn Tifarīt, of the Saharan tribe of the Massufa (d. 510/1116-7), could have appreciated the panegyrics which were addressed to him at Valencia by Ibn Khafadja.

Thus the only remaining persons to whom poets could turn for patronage were the members of the Hispano-Arab urban aristocracy, rich and powerful noblemen who held in rotation the office of chief magistrate (ṣādī al-dawla). Their liberality, however, did not always match their wealth. One of them, Muhammad Ibn Hamdun, was so miserly as to be the laughing stock of the famous philosopher, physician, and musicologist, Ibn Bāḍrīja (q.v.).
IBN KUZMÀN

(sadjal no. 84, stanza 1) to Seville, where there lived two of his chief patrons: Abu 'l-cAla3 Ibn Sa'd, who was intendant of finance there. It was at the house of the latter that Ibn Kuzman met the poetess Nazhm with whom he had a famous altercation (see al-Makkarl, Analectes, ii, 636). He may also have travelled to Jaen (no. 21, stanza 14). Thus the area of his travels in Muslim Spain was relatively restricted. He himself admits that he had never seen the sea (no. 145, stanza 10) but it is not clear from which period of his life this poem dates. He certainly mentions, in a comparison, the Gibralfaro which dominates Malaga (no. 142, stanza 3), but he may have known of it only by hearsay.

According to his own description, Ibn Kuzman was tall, with blue eyes and a red beard. Other sources describe him as having a squat and being very ugly; in this connexion there is related a comic anecdote which had already been told as applying to al-Djihiz (cf. Ch. Pellat, Le milieu basrien et la formation de Djihiz, 59).

Like those to whom he dedicated his sadjals, he must have had a good knowledge of the Romance dialect current in the south of Muslim Spain. He quotes from it not only isolated words, but also short phrases. Nor was he entirely ignorant of the Berber spoken by the immigrants from the Sahara: certain poems dedicated to Almoravid dignitaries have words from this language inserted in them—these words moreover are those which conquered peoples most readily borrow from their conquerors.

Ibn Kuzman was in no sense a troubadour singing of courtly love, that 'isbâl al-mursawa which he in fact derides. Like Abu Nuwâs and François Villon, he led the life of a needy bohemian, a reckless toper, and an epicene rake (shâli', shî, lawwàf). His licentious conduct caused him to be continually censured by his contemporaries, the fafâhs, who were particularly fomentors of disorder. In revolt against the Almoravids, he had himself proclaimed amîr al-musîlimin in 539/1145, but his reign was brief. In spite of the support of the king of Castile, he was unable to resist either the Almoravids or the Almohads.

Ibn Kuzman died in 555/1160, while Cordova was being besieged by Muhammad b. Sa'd Ibn Mardenîh, who was attempting to take the town from the Almohads.

In spite of his dissolute life, Ibn Kuzman seems to have reached a relatively advanced age. His first sadjal to which a definite date can be given (no. 83), an elegy on the death of Abu 'l-Kâsin Ibn Hamdîn was written in 521/1127. In verses in classical Arabic, he depsects himself as walking in a bent position "as if he were searching for his youth in the dust" (Analectes, ii, 437). If we are to take seriously what he says in his sadjal no. 147, the poet, towards the end of a not very exemplary life, reformed to the sense of "evil spirit, misfortune", and appears each time in contrast with sa'îd.

Thus the important part of his work consists of muwashshahs, a sort of lyric song (no. 143; affâfî; no. 11, st. 9: awâdî). Only one is known: Ahmad, a traditionist who died at Malaga shortly after 600/1204.

Works. Ibn Kuzman describes himself as a prose writer and a poet in the classical style as well as a composer of muwashshâhs [v.g.] and of sadjals. Of his prose there is known only the preface to the Diwân, in rhyming prose. Very few of his classical verses have survived and these do not show any remarkable talent. Only one of his muwashshâhs has been preserved (cf. Hoenerbach, 94).

Thus the important part of his work consists of his sadjals. There existed at one time a large collection (diwân kabîr) of these, possessed and used by al-Álî (cf. Hoenerbach, 68), but now apparently lost. Another (abridged?) diwân, entitled Isbât al-aghîrâd fî wafî al-a'dâd, was put together by the
author for an obscure friend of his, Ibrahim al-Washki, the only existing manuscript of which was discovered in the Geniza of Fustat. The 149 *sadqas* which are preserved in the *Dîwan* in its present form may be divided into two categories: those with a dedication and those without. Those without are fewer (27) and in general shorter: 5 or 6 stanzas, and, in this detail, are close to the norm of the *muwashshah*. They are the poems which S. M. Stern (Studies... , 385) rightly calls "muwashshah-like *sadqas*"; their themes are solely drinking or love.

The poems with dedications are of greatly varying length, most of them having from 5 to 9 stanzas. But they include some very long ones: 42 stanzas (no. 9), 40 stanzas (no. 38), and also some very short ones: 3 stanzas (no. 47), dedicated to the governor Tâghfin "since the Almoravids did not like prolixity." These poems with dedications are of bipartite structure, like the classical *basida*, but are divided into stanzas with varying rhymes and written in dialectic Arabic in metres which are often non-classical. Thus they have been described as "ballades". The first part is a light introduction (*ghassâl, taghâssâl*) which follows the old *nashâl*. The favourite themes for these are wine and love, also their common provider: money. The second is a panegyrical (madlâ, madâkh) of the person to whom the poem is dedicated and from whom the poet expects a generous reward. Between these two essential sections there is a brief "transition" (*dûhûl, bâurûd, takhâlûs*); it is in his ingenious choice of this link-passage that the poet's talent appears.

The panegyrics, often exaggerated, are not of great interest; they contain praise of beauty, of learning and above all of the generosity of the person to whom they are dedicated. Sometimes the author adds to them a personal *fakhr* in which he describes himself as the prince, and even the father, of the genre of the *sadâl* and complains of his plagiarizers.

On the other hand, the humorous introductions form the most original and interesting part of Ibn Kûzmân's work. They amount to vignettes describing scenes from the public and private lives of the inhabitants of the city, abounding in valuable details on houses, furniture, costume, food, etc. These vivid and often comic scenes are full of vivacity, variety and realism, interspersed with racy and amusing details which reveal extraordinary powers of observation and expression: drunken quarrels, preparations for a feast day (which provides the poet with the opportunity to complain of his chronic penury), rejoicing at a carnival, the consultation of a fortune-teller, romantic adventures and altercations with deceived husbands. The poet himself often appears on the scene, in a humorous part, without always trying to give himself a favourable role. Licentiousness is freely mingled with burlesque, but very rarely descends to real obscenity.

Unfortunately these sociological documents are not always very easy to understand, for the poet's impetuous and lively style, the incisive brevity of his phrases, the vivacity of his narration and the abruptness with which he jumps from one theme to another, all combine to make accurate translation difficult. Furthermore, allusions are made in these passages to popular characters of the time and to beliefs and customs of which no mention is found elsewhere. Also, it is in these "jets" that there appear most of the terms peculiar to the local dialects, either not to be found in dictionaries or deformed by Eastern copyists. It should also be mentioned that the Eastern anthologists who have included fragments or whole poems by Ibn Kûzmân have limited these to passages on drinking or love, *i.e.*, to the parts which contain the most clichés and the vocabulary of which belongs to the common stock of Arabic, with even a classical tendency. The real reason for their neglect of the descriptive sections, which are nevertheless those more representative of the poet's talent, is probably their inability to understand the really local vocabulary used in them.

Ibn Kûzmân, being essentially a townsman, provides no description of nature in its wild state. He had only unpleasant memories of his journeys from Cordova to Granada, accomplished in precarious and sometimes perilous conditions across the sierras and their ravines where he saw more bramble-bushes and oleanders than sweet-basil (no. 73, st. 5). As with the other poets of Spain (with the exception of his contemporary Ibn Khafadhâja), the nature which he likes and describes is that which he had the opportunity to enjoy during pleasure trips to the country (*nasâysh*), in the pleasure gardens (*mânâzik*) which his patrons owned on the outskirts of the large towns and cities, where he had to relax in spring and in autumn. The poet likes to describe the happy frolics of gay young drinkers and pretty girls, singing, dancing and swimming in an enchanting setting beside a fresh stream or a pool among flowers or in the shade of elm-trees full of singing birds. Poem no. 79, in which he reveals his knowledge of astronomy in a detailed description of the night sky of Andalusia, is exceptional.

His descriptions of battles against the Christians (nos. 38, 40, 47, 86, 102) are very vivid, but they seem to be based solely on imagination, since it is almost certain that he was not present at any but merely formed a part of the crowd at the triumphal reception (*bûrûs*) of the victorious troops.

This essentially humorous poet wrote also a rather touching elegy (no. 83, repeated in part in no. 38, stanzas 37 and 38) on the death of one of his chief Cordovan patrons, Abu 'l-Kâsim Ahmad Ibn Hamdîn, in 525/1127. One curious thing is that Ibn Kûzmân does not appear to have used the genre of satire, for which he would appear to have been so well-fitted; and his attacks on the *fäkhs*, his relentless critics, were always discreet and prudent.

The importance attached by writers of *muwashshahs* to the ascriptive selection of the cadence (or refrain) on which they subsequently constructed their poem is well known. This cadence became the poem's finale, its "sally" (*Sp. salida*), its "going-out" (*Ar. khârâdja*) and at the same time its "pivot" or centre (*markaz*), providing, as it did, both the metrical pattern for the whole poem and the rhyme which was repeated at the end of every verse. In this matter, Ibn Kûzmân did not attempt to be original. None of his "finales" is in the Romance language; some of them consist of a popular proverb. On three occasions, and without always mentioning his source, he has merely borrowed "finales" in dialect from his contemporary and compatriot Ibn Balîl, the famous author of *muwashshahs* (d. 540/1145).

It certainly seems, however, that the re-use of famous "finales", written in these "pivot" lines of the Romance, was a current practice among the poets of Spain, Jewish as well as Muslim. To borrow a
"finale" from a famous poet and reconstruct on it a new muwashshah or zadjal was regarded as an exercise in virtuosity and has nothing to do with plagiarism: it was a West-Andalusi. The structure and the metre of the zadjals of Ibn Kuzmán will be studied in the article ZADJAL.

The language used by Ibn Kuzmán in his zadjals is the Arabic dialect of southern Spain as it was spoken by the educated people of his time, that is to say with a vocabulary much enriched with borrowings from the classical language, but always observed of grammatical inflections (t'khb). In the ʿAfīl al-ḥālī, ʿSaḥī al-Dīn al-Hillī accused Ibn Kuzmán of straying too often from the pure Spanish dialect. But this Mesopotamian critic, living two centuries after Ibn Kuzmán, cannot have had any serious knowledge of the peculiarities of that idiom. The writer of this article has demonstrated elsewhere that practically all of these criticisms were unjustified. It is true that Ibn Kuzmán may be accused of having misused some initial hāmaz (hamzat al-ḥālī) in order to suit the metre, but this is a poetical licence used also by poets writing in the classical language. He may have made more frequent use of the conjunction fa- and the particle baḥ that the common people did. It should be remembered, however, that his zadjals were intended primarily for literate persons.

Ibn Kuzmán’s own estimate of his talent has been ratified by posterity. Both Eastern and Western Arabic-speaking peoples have pronounced him unsurpassed as a writer of zadjals. His works have become accepted as models of perfection in this genre, to such an extent that, for centuries, the Eastern composers of zadjals made it a rule to write in an approximation of the Spanish dialect.

Ibn Kuzmán’s powerful originality has never been equaled. No other poet has covered such a rich range of metrical combinations. Only his successor and compatriot, Madghalls, has been compared to him by the critics, and this was in order to put Ibn Kuzmán on a level with al-Mutanabbi in his choice of themes (maʿnā) and to raise Madghalls to that of Abū Tammān in matters of expression (lahf) (al-Mašršk, Anaqayet, ii, 190). But Ibn Kuzmán is regarded as being in the tradition of the Eastern poets writing in the classical language: Abū Nuwās, Ibn al-Muṭṭaf, Ibn al-Ḥaḍīd, Ibn Suṭṭakara, etc., who had the ability to shine even when not using well-worn themes.

Just as there are two strong points of view on the question of whether strophic poems (maqārah) and zadjals originated in the east or the west, so there are two conflicting opinions on the origin of the name of the eponymous ancestor, Kuzmán.

Some have regarded it as a transcription of the Spanish proper name Guzmán (the Arabic ḥāf being here merely the current form of transcription of the phoneme g), itself of Germanic origin. Ibn Kuzmán might, therefore, have been of Germanic ancestry (Visigothic perhaps), and the portrait which he had provided of himself would seem to confirm this hypothesis: tall, with blue eyes and red beard. Furthermore, the proper name Kuzmán is extremely rare in Arabic onomastics; it was, however, borne by a character in history, an ansārī, who died from wounds received at the battle of Uhud (al-Ṭabarī, i, 1423; Ibn Ḥīṣām, ii, 578; TA, under the radicals KZM). It is not clear why Lerchum und Simonet suggest that Ibn Kuzmán was of Jewish descent (Creostomátia arabico-española, 536). The question is not, however, of great interest. In the time of Ibn Kuzmán the old "Arab" families of Muslim Spain had interbred extensively with Iberian, Latin, Germanic, Berber, Jewish, and even Negro elements.

Ibn ʿAbd al-Malik al-Marrakushi, in his Kitāb al-Dhaly wa l-takmila, adds to the poet's name the ethnic name of al-Zuhri, which is that of many Spanish Muslims. This ethnic name is derived from the name of one of the main clans of the tribe of Kuraysh: the Zuhra. But we would perhaps not be justified in assuming a Kurayshī origin from this single piece of evidence. It is in fact very uncertain, since the nisba may not be a real one but merely a fictitious one, transmitted by a master to his freedman (walaʾwsm). It may be that there is a connection between this Christian name and that of the Sevillian family of the Banū Zuhr. Certainly of the four persons to whom the Diwan is dedicated, two are the Sevillian Abu l-ʿĀla Zuhr and Ibn al-Kurāshī al-Zuhrī.

In his Thāb al-ḥamāma (cf. ed. Bercher, Algiers 1949, 300-1, in which the translation is incorrect), Ibn Ḥazm mentions an Ibn Kuzmán, a kāhīb who died from his unrequited passion for a beautiful young man of Cordova, Aslam b. ʿAbd al-ʿAzīz. This Aslam was the second of the chief kādšū of Abū al-Rahmān III al-Nāṣir, who succeeded in 3009/10. In 314/926, Aslam was dismissed from office because of illness and died in 315/927 (cf. al-Dabbī, no. 571; Ibn Ḥīṣām, ii, 193). This Ibn Kuzmán, who died of love, might be an ancestor of Ṭisā (l).

Ibn Bashkūwāl (no. 149) mentions an Ahmad b. Ibrahim b. Ibn Kuzmán, of Toledo, who died circa 490/1097. He does not seem to have been an ancestor of the Cordovan family.

IBN AL-LABBÁD [see 'Abd al-Abbád al-Baghdádí].

IBN AL-LABBÁNA, 'Abd Bārī Muḥammad b. 'Iṣā al-Dání, Andalusian poet of the 5th/11th century, born in Denia, whence his nisba al-Dání, by which he is often called; but he is much better known under the name of Ibn al-Lubbána "son of the dairy-woman", his mother having been, as is stated by Ibn Bassám (Dhakhíra, III, apud Ibn Saʿd, Muḥrib, ed. Sh. Ẓayf, II, 409), a seller of milk. It is known that one of his brothers, 'Abd al-ʿAzīz, was also a poet, but he gave up this career to devote himself to commerce.

Little is known of the life of Ibn al-Lubbána; it probably however resembled that of many poets of the time, who sought an important personage to whom they might address poetic eulogies. He tried his fortune at the court of al-Muʾtaṣim of Almeria, the refuge of many poets, and at those of al-Maʾmūn of Toledo and al-Muttaqakkil of Badajoz, and addressed panegyrics to these princelings; the sources contain literary anecdotes on his (probably brief) sojourns in these towns, but his chief patron, to whom he was to remain attached for the rest of his life, was al-Muʾtaṣim Ibn 'Abbád [q.v.], ruler of Seville. Fairly numerous accounts of Ibn al-Lubbána's stay at this court show that he was treated with familiarity by the ruler and his sons, for whom he felt a loyal affection and to whom he dedicated eulogistic poems which have the mark of sincerity. In 484/1093, when al-Muʾtaṣim al-Labbána was deposed by the Almoravids, Ibn al-Lubbána—"one of the few Arabic poets possessing the 'gift of tears'", as García Gómez has put it—spoke, with a deep and moving sadness, of the departure of the ship which took the ruler and his family into exile. Ibn Lubbána's devotion to his former master did not end with this event: he continued to write in praise of the poet-king and went to visit him in his African exile in Aghmat.

After the death of al-Muʾtaṣim, Ibn al-Labbána went to Bougie, where he visited ʿIzz al-Dawla, a son of al-Muʾtaṣim, and described his visit in a pathetic way (al-Makkari, Analectes, II, 250). He next went, in 489/1096, to Majorca, where he wrote in praise of the ruler, Mubāṣṣal b. Sulaymān, but those poems do not bear comparison with those which he had dedicated to al-Muʾtaṣim, as is stated by al-Maʾkṣarī (op. cit., II, 609). A series of intrigues troubled the final years of his life, and he died in Majorca in 507/1113.

Although according to Ibn al-Abbār (Takmilā, no. 511) his work was collected in a divān, no copy of this has survived and his poems now survive only in anthologies. Of his other works, that all is known are the titles and the subjects, all relating to the Banū ʿAbbād.

All the criticals and the anthropologists agree in praising the excellent poetic gifts of Ibn al-Lubbána and the beauty of his poems, but his universal fame in Arabic literature is due to his loyalty to the ruler of Seville, which he retained until his death; Ibn al-İmmām, the author of Simḥ al-Dīwan, calls him for this reason "the Simḥal of the poets" (apud Ibn Saʿd, Muḥrib, II, 412) and all who write of him praise this quality.

Ibn al-Labbána was also the author of muwaṣṣalāt; one of those which have survived ends with a very fine bcharājī in Romance.

Bibliography: Further to the sources mentioned above, see the bibli. to al-Muʾṭamīd and 'Abbādīus; see also Dubbi, Bughya, no. 215; Ibn Dihyā, Muḥrib, Cairo ed. 1954, 178-9; Ibn Khābān, Kaḥāb, Būlāk 1283, 245-52; Pons Boeiques, Espanyol, 172-5; E. García Gómez, Qasidas ed Andalucía, Madrid 1940, 83-93. On Ibn Lubbána as a writer of muwaṣṣalāt, see also García Gómez, Romances de la Al-Andalus, Madrid 1965, 283-8; idem, in al-Andalus, xxvii (1962), 72-3, 75-9; S. M. Stern, in Arabica, ii (1955), 60.

IBN ṬAMĪY, 'Umar b. Ṭamīya b. Ḥudayr al-Taymi, of the Taym b. 'Abd Manāt, an Arāb poet of the 1st/7th century. Al-Dīḥāṣ emphasizes his skill in composing poems in nasrāj and ṣağīdas, and Ibn Sallān shows him in the Canon, fourth "class" of Islamic poets, but he has escaped oblivion chiefly owing to the inventives that he exchanged with Dirār [q.v.]; these fragments of hīdāyār are in part preserved in the Nābāṭī and in various anthologies, which for the most part ignore his other compositions; his rivalry with Dirār appears basically to have been of a literary character, indeed simply a quarrel between poets each convinced of his own talent, but it soon degenerated and passed from the individual to the tribal level. Ibn Ṭamīya is said to have died at Ahwāz, the date being unknown.

Bibliography: Dīḥāṣ, Bayān and Hayawān, indexes; Ibn Kutayba, Shīr, ed. De Goeje, 428-9; Ibn Sallān, Tabābāl, 533-72, 499-504 and index; Aḥmān,INDEX: Nābiyyā, 487-91, 907; Friḥīṣ, 225; Marzubān, Muwaṣṣalāt, 127; idem, Muṣḥām, 478; Baghdādī, Khtisna, Cairo ed., II, 259-62; Ibn Rāṣḥik, Umda, i, 123; Vākūt, vi, 60; Tallin, Letteratura, 92, 97.

IBN LĀḤIYA, 'Abd Allāh b. Lāḥiya b. Ῥeba, Egyptian traditionist and judge (b. ca. 96/688-90, d. Sunday, 15 Rabī I 174/1 August 790, or 12 Rmādi II 174/6 November 790). The few known facts about his life are that he was appointed judge in 155/772 with a monthly salary of thirty dinār, the appointment being the first direct appointment of a chief judge of Egypt by a caliph instead of the provincial governor; that he held the judgeship for over nine years; and that his "books"—that is, primarily, his scholarly notebooks and materials—perished all or to a large part in a conflagration that destroyed his house in 169 or rather in 170/776. We are told that he considered unbelievers those who preferred the createdness of the Kurān, and that he was ardently pro-Shī'a. His father, Lāḥiya, is said to have died in 100/Rabī I 718-19, and his brother, Ḥašīb, is mentioned as having transmitted traditions, in Shāhīlāw 145/December 762-January 763. Ḥašīb's son, Lāḥiya, was acting governor ala ʾ-l-salāfī for some time in 898/805 and judge of Egypt from the beginning of Qaḥbān 196/April 812 to his death in Dhul-ʾKāda 204/April-May 820, with an interruption lasting about one year in 1299/November 813-August or September 814.

'Abd Allāh b. Lāḥiya is believed to have been the author of published (written) works. He transmitted the history of the Prophet's raids. He may have been one of the authors of some traditional and historical texts preserved in papyrus. Much of the material of 'Abd al-Ḥakām's [q.v.] "Conquest of Egypt", especially the Prophetic traditions cited there, and of al-Kindi's "Governors and judges of Egypt" as well as other Egyptian local histories has passed through him. For all his authorities, he reliability as a transmitter of traditions was dubious.

IBN LĀḤIYA: al-Bukhari, Taḥrīr, i, 182 f.; Ibn ʿAbd al-Ḥakam, Futūḥ, ed. C. C. Torrey, 244, 246, index 334 f.; Ibn Kutayba, Muṣḥān, ed. Th. ʿUkāy, Cairo, 505, 624; Yaḥūb b. Suyūn, Taḥrīr, letter E5.2
IBN LAHICA — IBN LIZZA

IBN LANKAK (the son of the little lame man), *Abū ʿl-Ḥasan Muḥammad b. Muḥammad b. ʿAbd al-Rahman Ibn Ṣafīr Ibn Ṭabīb, and with Muḥammad b. Ṣafīr, who was his pupil and it is significant that in his commentary on the *Mwāllāha* of Imruʿ al-Kays, he cites Bundār eleven times (and al-ʾAṣmāʿi only twice); in particular, one of the two traditions on the genealogy of the poet is given according to Bundār (see *ZA*, xxix, 1914, 2), iii, 27 f.; similarly *ZA*, xvi (1902), 12. Al-Muṭawakkil (232-46/847-61) often gave audience to this scholar of Arab matters; al-Mubarrad, who had only recently left Basra, was introduced by him to this caliph, which (if the account is authentic) greatly contributed to his advancement.

According to Yāḥyā (*Maʿṣūm*, vii, 143), Bundār lived to a great age, but the dates of his birth and death are unknown. Nevertheless, what has been said here suffices to establish his place in literary history. The *Fīrās* (83) mentions four works by Bundār; there may be mentioned the *K. Ma′dīnī l-ṣuʿārāʾ* and the *K. Dārfr* al-*luqāfa* for lexicography. None has survived.
Bibliography: in the text. The Fihrist (83) and Yākūt, Muğjam al-Waḍābi, viii, 128-34 (= Irshād, ii, 390-3) are the two important sources; Suyūtī (Bayyana 1798) quotes the Fihrist in part, for the name.

(FL. Hirsch)

IBN LUYN [Spanish León ?], Ābu ‘Uṯmān Sa‘d b. Ābu Dī‘āfar Āhmād b. ‘Ībārīm al-Tūrīnī, Andalusian scholar, poet and mystic, born in Almeria in 681/1282 in a family from Lorca. He was one of the most learned men of his time and acquired a mastery of all branches of learning, although he hardly ever left his native Almeria, where he died during a plague epidemic in 750/1352. Deeply religious, he remained celibate, practised asceticism and, being naturally shy, he avoided people and saw only a few friends and pupils, among whom should be mentioned two important persons: Ibn Khātīma (q.v.) and Ibn al-Khaṭīf (q.v.). He succeeded in forming a splendid library, the best in Almeria in his time, and not content with merely acquiring manuscripts, he sought to compare them and to make editions in order to establish a correct text.

His production was very large, but the greater part of it was not original since it consists of compilations on hadīth, medicine, the sharing of inheritances, prosody, agriculture, etc. He was fond of writing summaries of important works, which he often wrote in verse. Almost all his work, which consisted of more than a hundred titles, is lost, and the part of it which has survived is practically all unpublished. Of especial interest is the urduj uṣūl entitled Kitāb Ibdā al-maḍāla wa-iḥkād al-radījāba fi uṣūl iḥkāt al-fīliṣā (cf. art. FILAHA, ii, 902a) of which an edition and translation was promised some years ago by J. Eguaras.

Ibn Luyun was an expert on poetical matters, but himself a mediocre poet, as one of his pupils, al-Hadrani, admits. A large part of one of his poetical works, the Kitāb Naṣiḥ al-aḥbāb wa-sahābih al-ādhāb, was included in a collection by al-Maḳkārī (Naḥf, Cairo ed. 1367/1949, viii, 58-80), who also reproduces (viii, 89-108) extracts from two other works, all in a sententious style and comparable to the modern orientalists (on this question, see S. M. Stern, Muhammad ibn ‘Ubāda al-Qazzāt, in Al-Andalus, xv (1950), 79 ff.).

Bibliography: In addition to the sources given in the article: Humaydī, Dīḏawat al-maḥābīb, no. 662; Dabbi, Buḥya, no. 1223; Ibn Bassām, Dabkha, i/2, 2-12; Abu ‘l-Walīd al-Himyari, ‘Alai-Baṣīrī, ‘Alai-rābi, ed. H. Pèrs, Rabat 1940, index; Ibn Khāḳān, Muḥammad al-nasīḥ, Cairo 1320, 95; Pons Boigues, Ensayo, 110-1; H. Pèrs, Poesie andalouse, Paris 1963, index. On his ši‘ī tendencies, see M. ‘All Makki, al-Taḥayyūr fī ‘l-Andalus, in Revista del Instituto Egipto de Estudios Islámicos en Madrid, ii (1954), 141-2. As a writer of muwaṣṣāhaḥ he appears in all the works and studies on this genre.

(F. DE LA GRANJA)

IBN MAḌA', Āḥmad b. ‘Ābd al-Raḥmān b. Muḥammad b. Sa‘d b. Ḥārīt b. Āṣim al-Lakhmī, Andalusian fakih and grammarian of the 6th/10th century, who is given indiscriminately the kunya of Abu ‘l-Ābāb, Abu Dī‘āfar and Abu ‘l-Kāsim. Born into a famous Cordovan family in 523/1129, he studied grammar at Seville with Ibn al-Rammání and hadīṯ at Ceuta with the kāfīḥ ‘Īyāḍ. He was kādi at Fes and at Bougie, until the Almohad caliph Yūsuf b. ‘Ābd al-Muʿmin appointed him kādi ‘l-‘Ajīmāʾa, an office which he retained under his son and successor Yaḥyū b. Yūsuf.

In spite of his wide education in all branches of learning, he limited his scholarly activity to the study of Arabic grammar, a subject on which he composed three works, only one of which has survived, the Kitāb al-Raḍū ta‘lā ‘l-nuḥāb, published in 754/1354. This book illustrates the clarity of thought and independence of judgement of Ibn Maḍa', who truly deserves the title of imām fī ‘l-naḥāb, which was given to him by his biographer al-Dabīb (Buḥya, no. 605), or of imām al-naḥwīyyin, which was twice applied to him by Ibn Dihya (Buḥya, Cairo 1554, 91, 284). This work, written by Ibn Maḍa' towards the end of his life (he died in 592/1195 at Seville), "is a violent, reasoned and eloquent attack on the complicated, obscure, casuistic and artificial theories of traditional Arabic grammar as it had been formulated by the great schools of the East" (E. Garcia Gómez). At the same time it calls for the building up of a new grammar, simpler and more clear, and based on the true facts of the language. Ibn Maḍa' s work, until recently not known to survive, has aroused a great interest in scholarly

(F. DE LA GRANJA)

IBN LIZZA — IBN MAḌA' 855
circles in the East because of the problems it poses and the solutions which it indicates, (taysir al-lugha). Each scholar is engaged in seeking a method of al-Sunan, (apud I AL-KAZWINI, author of the Kitdb al-Kutub al-khamsa, al-thamar, al-Sitta, by al-Diamma'ili (d. 600/1204) in his Kitdb Tahdhib al-Tahdhib; [q.v.]). Few commentaries were devoted to it by al-Amam, in Haydarabad in 1328: al-Kurani, al-Thamar, 46 f. In the Maghrib it was never recognized. Ibn Madia travelled in search of traditions and learned them from many authorities in 'Irak, Syria, Hijaz and Egypt. His Kitdb al-Sunan contains some 4000 traditions in about 150 chapters. It was criticized, because it contains many weak (dasif) traditions; it was even said that all traditions in it which do not belong to an illustrious family of navigators. His father and grandfather were both mu'allims ('master of navigation'), C. G. Ferrand, Instructions nautiques, ii, 182-3) by profession, and were well-known as experts of the Red Sea. They wrote treatises on navigation. Ibn Madjid improved and made additions to the urdjuza (piece of poetry in the radjias metre) entitled al-Hijaziyya written by his father (al-Fawaid, fol. 78a-b). This family tradition of navigational activity was kept up by the grandson, who seems to have surpassed both his father and his grandfather as to the field. It was during his lifetime that Ibn Madjid acquired the reputation of an expert navigator of the Indian Ocean. Siddi 'Ali Reis (q.v.), the Turkish navigator (d. 970/1562), in the Preface to his work "The Ocean" (al-Muhiti), says that during his sojourn at Baqra, he had collected the works of Ibn Madjid, namely Kitab al-Fawaid and Hawayat al-isbidsr, and some works of Sulaymân al-Mahi (written in the first half of the 10th/16th century) and had studied them thoroughly for, in his opinion, it was exceedingly difficult to navigate the Indian Ocean without them (see G. Ferrand in El', iv, 353). No wonder that Ibn Madjid gave himself the proud title of "the Fourth after the Three" (i.e., Muhammad b. Shâdân, Sahl b. Abân and Layyih b. Khâlin, see below) (al-Fawaid, f. 4b), or "the Successor of the Lions", or "the Lion of the Sea in fury" (Hawaiya, f. 88b). Ibn Madjid was an author of great merit, who wrote both in prose and verse. Of his known works those that have been published by G. Ferrand in the series Instructions nautiques et Routieres arabes et portugais des xve et xvi siecles, in vols. i and ii, Paris 1921-3 and 1925, are as follows:

(1) Kitâb al-Fawaid fi wasil 'im al-bahr wa 'l-basid (dated 859/1450). This prose work covers, among other subjects, the twenty-eight lunar mansions, the stars corresponding to the thirty-eight rhumbs (khannas) of the compass, the sea-routes of the Indian Ocean, the latitudes of a number of harbours, the landmarks (alâmâd) formed by birds and the outlines of coasts, the landfalls of the west coast of India, the ten large islands of the Indian Ocean (the "island" of Arabia, Madagascarsumatra, Java, Tahiti, Brazil, Zanzibar, Zendjbar, Gawan and Socotra), a survey of the coastal regions of Asia and Africa, monsoons favourable for the voyage and a description of the Red Sea with details of anchorages, shallows and reefs.

(2) Hawayat al-khattiisir fi wasil 'ilm al-bahr (dated 866/1462). The work deals with the signs of proximity of land, the lunar mansions and rhumbs, Arabian, Coptic, Byzantine and Persian years, bâghi (the elevation of the polar star in relation to its minimal height above the horizon, see Shumovsky, op. cit. in bibl., 154), the moons of the bâghi, the months in which the stars appear, the fixed character of their latitudes and their disappearance, the sea-routes along the coast of India up to Sumatra, China and Taiwan and those along the coasts of various islands of the Indian Ocean, the latitudes of the harbours of the encircling ocean (al-Makd), currents of the deep seas and nautical astronomy.

(3) al-Urdjuza called al-Mu'arrabba (dated 890/1485) deals with the navigation of the Gulf of Aden.

(4) Kitâb al-Islâm fi dijami at-dunyä (dated 859/1458) is devoted to the kâdis and deals with the direction of the Ka'ba for the purposes of prayer.

(5) Urdjuza bar al-Abâr fi Khâlid Fâris (not dated) deals with navigation along the Arabian coast and the islands.

(6) Urdjuza fi kismat al-djamma 'alâ...
Banât Naṣâh (dated 900/1494-5) deals with the constellation Ursa. (7) Urdiuza called Kanz al-Makdimah wa nadjat al-madjhuba wa 'l-arâdî, (undated, but from the context it appears that it was written before 894/1489) deals with the celestial sphere, the signs of the zodiac, the stars, etc. (8) Urdiuza fi 'l-natakhdt li-Barr al-Hind wa Barr al-ʻArab (not dated) deals with the landfalls on the western coast of India and the coast of Arabia from 25° N. to 60° N. (9) Urdiuza called Mimmiyât al-abâdî, dealing with certain northern stars. (10) Urdiuza Mukhammas, dealing with certain northern stars. (11) Urdiuza on the Byzantine months, rhyming in nãn. It is undated, but from the context it seems that it was written before 1475 or 1489. (12) Urdiuza called Daribat al-ardîb, undated, deals with the use of certain stars in navigation and with general instructions for navigators. (13) Urdiuza dedicated to the caliph 'Ali b. Abi Talib. It was written before 1475 or 1489, and deals with the lunar mansions, their exact positions in the sky, forms and numbers, etc. (14) al-ʻAsâda al-Makhiyya, not dated, deals with the sea-routes from Djidda to Cape Fartak, Cuticat, Dabul, Konkan, Gujdarat, Al-Atwâb, Hormuz and other places. (15) Urdiuza called Nâdirat al-ʻabdî on al-âdâb, Dabâbân and al-layyuk. (16) al-ʻAsâda al-Bâdîyya called al-Dhâhâbiyya (dated 10 Dhû l-Hijjah 882/21 March 1747), deals with the investigation of the reefs, great depths, signs indicating land such as birds and winds, landfalls on capes during monsoons, etc. (17) Urdiuza called al-Fâhka, not dated but written before 880/1475, deals with the observation of the Frog. (18) al-Šalîqa, not dated, deals with the observation of the constellation Canopus and the star Arcturus. (19) Nine short sections (fâsî) in prose, not dated: (a) and (b) deal with the mawâakhirâ; (c) with the landings by tawâbi (one tawâb = 1° 36' 25") of the dijâh (the Pole Star) on the coast of Gujdarat; (d) with the soundings of Gujdarat; (e) with the landings by tawâbi of the dijâh; (f) with landings; (g) with the soundings around Bâb al-Mandab; (h) with the soundings of Gujdarat by 10⁄34 tâbâ's of the dijâh; (i) with knowing the revolution of the Pole Star on leaving the capes of Arabia (60° N.). (20) al-Fâhka called al-Sabîyya, divided into seven sections based on the stars; it contains branches of nautical lore. (21) ʻAsâda without title or date, written before 1475, 1478 or 1489. (22) al-ʻAsâda called al-Hâliyya, not dated but written before 1475, 1478, or 1489. It deals with the stars that are useful for landfalls, with a description of the landfall points and with the coast from Djîd to Daybal.

In his Kitâb al-Fawâ'îd, Ibn Mâjdîd mentions the titles and cites verses from thirteen of his other works, which are not known to survive (for further details, see G. Ferrand, Instructions nautiques, iii, 298-221; cf. E.P., iv, 363-4).

Three urdjuzas of Ibn Mâjdîd were published by T. A. Shumovsky under the title Kûhât Râhâmân-nâgâdî al-mâkhâla [sic], Oriental Institute of the Academy of Sciences, U.S.R., Moscow-Leningrad 1957. They are based on the unique manuscript in the Library of the Oriental Institute. The texts are accompanied by Russian translations and valuable notes and commentaries by Shumovsky. There is a map showing the ports and harbours mentioned by Ibn Mâjdîd in his works. Of the three urdjuzas, the first is called al-Sâfîliyya (ff. 83a-96a) (on Sofala, on the east coast of Africa) and deals with the knowledge of the mahâdîs (day's journey by sea) and astronomical calculations from Malabar, Konkan, Gujdarât, Sind, al-Atwâb up to Somalia, and from there to the region of al-Sawârî (east coast of Africa), Zanjâbîl, Sofâla, Madagascar and its islands. It also deals with various other aspects of navigation and with the inhabitants, kings, monsoons, etc. of those regions. This urdjuza also devotes some pages towards the end to the Franks and the Portuguese navigators of the Indian Ocean. It is undated. The second urdjuza, entitled al-Mâshâbiyya (ff. 97b-104a, on Malacca), deals with the islands and ports north of Ceylon, the Andamans and Nicobars, Java and Sumatra, Siam, Malacca, and other gulfs and islands of these regions, up to Formosa, China and the Pacific Ocean. The third is called al-Tâ'îyya. It describes the sea-routes and calculations from Djîd to Aden (ff. 104b-105b).

Sources of his knowledge. Ibn Mâjdîd was as much interested in the theoretical aspects of navigation as he was in its practical side. The knowledge and experience that he inherited from his forefathers was enriched by his own personal experience of forty years or so. Furthermore, there is little doubt that he was a well-read man and was familiar with ancient Arabic poetry and literature and with works on history and other subjects. He made a particular study and use of the existing works on navigation, astronomy and geography. He considered the study of astronomy and geography as a pre-requisite for anyone who wished to become efficient in navigation, and hence recommended the following works to navigators and sea-captains who wished to become masters of the subject: Kitâb al-Mabûdî wa 'l-ďâdîl (Kitâb al-Mabûdî wa 'l-ďâdîl fi 'l-mâhâdî) by Abî 'All al-Hasan b. ʻUmâr al-Mârâkûshî al-Mâghribî (d. 660/1262); Kitâb al-Ṭâjîdat (swar al-arkâs al-ğhâsîa) by Abî ʻAbd al-Rahmân al-Sâfî (d. 376/986); al-Ḏâhâbîs al-Mâkhâliyya (7); the book of (Abd b. Daʾûd) Abû Ḥanîfa al-Dînawarî (d. 828/1420); the book of (Abd b. Daʾûd) Abû Ḥanîfa al-Dînawarî (d. 828/1420); the book of (Abd b. Daʾûd) Abû Ḥanîfa al-Dînawarî (d. 828/1420); the book of (Abd b. Daʾûd) Abû Ḥanîfa al-Dînawarî (d. 828/1420); the book of (Abd b. Daʾûd) Abû Ḥanîfa al-Dînawarî (d. 828/1420); the book of (Abd b. Daʾûd) Abû Ḥanîfa al-Dînawarî (d. 828/1420); the book of (Abd b. Daʾûd) Abû Ḥanîfa al-Dînawarî (d. 828/1420); the book of (Abd b. Daʾûd) Abû Ḥanîfa al-Dînawarî (d. 828/1420); the book of (Abd b. Daʾûd) Abû Ḥanîfa al-Dînawarî (d. 828/1420); the book of (Abd b. Daʾûd) Abû Ḥanîfa al-Dînawarî (d. 828/1420); the book of (Abd b. Daʾûd) Abû Ḥanîfa al-Dînawarî (d. 828/1420); the book of (Abd b. Daʾûd) Abû Ḥanîfa al-Dînawarî (d. 828/1420); the book of (Abd b. east coast of Africa, to the south of Sofala, turned towards the east instead of the west, and extended latitudinally as far east as China, leaving only a narrow passage between the African continent and the islands of the southern hemisphere. For centuries, this theory was accepted and hindered the progress of navigation in southern Africa. Again the terra incognita of the Indian Ocean and the Atlantic, south of the Mountains of the Moon. This fairly long channel, according to him, lay between Sofala and the cape called "al-Ra'sun" (Sarât al-Ma'mûra 'alâ l-Bîrûnî, 62-3; this cape could be no other than the region of the Agulhas currents of modern maps). Ibn Sa'id (d. 672/1274) placed the junction of the two seas (the Indian Ocean and the Atlantic) at Long. 117° 30' and Lat. 16° oo' where the sea was called "Sea of Ruin" or "Sea of Suhayl" and it also marked the end of the Mount of Regret (Nadâma) stretching between Long. 109° oo' and 117° 30' along the coast of Africa (this place, according to M. Reinaud, was the Cape of Good Hope, Geographie d'Aboulafia, p. cccxxvi). However, Ibn Madjid was the first Arab navigator to describe in more positive terms the coast of Africa south of Sofala. He seems to have acquired the information about the existence of a madkhâl (place of entry, from the Atlantic into the Indian Ocean) from the Portuguese (al-Suflîyya, ff. 93a, 94a), but he must also have been acquainted with al-Bîrûnî's ideas on the subject through Abu 'l-Fidill's Ta'kirim al-bulâdân, which he had consulted. Thus, Ibn Madjid believed that there existed a madkhâl which separated the African continent from the terra incognita in the southern hemisphere. Describing the coast of Africa, he says that when you reach the land of Sofala and the "gulfs", the island of al-Kumr (Madagascar) "passes by" to your left, and the island to your right (i.e., the coast of Africa as the ship sailed south) turns away towards the west and the north. This is the place where the "Darkness" (the region from which he was coming). From there, the land turns to the "land of al-Kâtîm" (Kanem). When you pass Kanem, you come to "the land of al-Wâtâhî" (Oases) near al-Maghârib (Maghrib) which begins at al-Ma'sâ. Leaving this behind, you arrive at Asîfi and finally Ceuta, at the entrance of the Mediterranean Sea (al-Fawdâdî, f. 64). It is obvious that Ibn Madjid conceived of Africa as being much smaller than it actually is, for according to his account the east coast of Africa turns sharply westward and emerges at Kanem (south of the land of the "Black People", i.e., Ghana, etc.) and from there it reaches Morocco.

Ibn Madjid surveys the coastal regions of the earth (dawrat al-ar'd, actually the landmass of Asia and Africa) systematically, beginning from southern Arabia. His survey of the sea-coasts of the Indian Ocean is much more detailed than that of the Mediterranean or the Caspian regions, for he did not have personal knowledge of the latter. He then describes the ten large islands of the Indian Ocean (see above) (al-Fawdâdî, ff. 67a-70b).

He does not refer to the terra incognita of the southern hemisphere, which indicates that he did not believe in it. His knowledge of astronomy was mainly derived from the works and astronomical tables of Ptolemy, al-Bâttânî,ILTER Beg, 'Abd al-Rahmân al-Sîfî and others, and he incorporates their theories and astronomical concepts in his works. Ibn Madjid's contribution lies mainly in the field of navigation. G. Ferrand rightly describes the Kitâb al-Fawdâdî as a "compendium of the known knowledge of theoretical and practical navigation". "We must regard it", he says, "as a kind of synthesis of nautical science of the latter years of the Middle Ages. Ibn Madjid is at the same time the earliest of modern writers on nautical science. The description of the Red Sea, for example, has never been passed or even examined since. Apart from the inevitable errors in latitude, by any of the writers of nautical guides for sailing boats. The information given on the monsoons, local winds, routes and latitudes for crossing the whole Indian Ocean is as precise and detailed as could be expected at this period" (EI', iv, 365). Most of the place-names given by Ibn Madjid in his works have almost their modern forms and hence are easily identifiable.

There is little doubt that Ibn Madjid used sea-charts and several instruments of navigation. But it is doubtful if he was the inventor of the compass (according to Nafis Ahmad, the Arabs were the inventors of this instrument, Muslim contribution to geography, 64). However, Ibn Madjid claims to have fixed the needle (al-maghdârat) itself on the case (al-Fawdâdî, f. 40b). He considered the compass used by the Arabs for navigation in the Indian Ocean much superior to the one used by the Egyptians and the Maghribis (North Africans) for the compass of the former was divided into thirty-two sections, whereas that of the latter was divided into only sixteen. Moreover, the latter only knew the use of the compass and were not capable of using the Arab boats whereas "we could easily navigate their boats" (al-Fawdâdî, f. 27). The Arab and the Portuguese instruments were probably equal in quality and accuracy but Ibn Madjid had shown the Portuguese an instrument which they had not seen before (G. Ferrand, EI', iv, 365 l.). Ibn Madjid's name however became legendary in later centuries and entered navigational lore. Sailors remembered him as Shaykh Madjid, the inventor of the mariners' compass, and recited the Fâtihâ in his memory when they embarked on certain seas (G. Ferrand, Instructions nautiques, iii, 227-8).

Ibn Madjid and the Portuguese. Ibn Madjid was fully aware of the several attempts made by the Portuguese to enter the Indian Ocean through what he calls the madkhâl (i.e., via the Cape of Good Hope) and also of their raids along the east coast of Africa. He says that in 900/1495 the Franks (i.e., the Europeans) arrived at the coast of Sofala, passing through the madkhâl that lies between it and al-Maghârib (North Africa) and the existence of which was proved by "the experienced ones" (the Portuguese). The Portuguese, he says, then went to India. Later, they returned to al-Zanjî (Zanzibar) and then went back via the same "passage of the Franks". In 906/1501, they again went to India, purchasing houses there, and settled down, making friends with the "Samri" kings (the Zamorins of Kerala) (al-Suflîyya, f. 94a). In his extant works, Ibn Madjid does not record the fact of his having guided Vasco da Gama from Malindi (east coast of Africa) to Calicut (Kerala). This fact is, however, proved by the contemporary Arabic and Portuguese sources. The Portuguese sources refer to him as "Malemo Cânaqua" (Castanheda and Goes) or "Malemo Câna" (Barros), both representing Ma'ullim Kunaka (i.e.,

Al-Ḥasan b. Mājual b. al-Darrāwān was a secretary of Christian origin and recently converted to Islam, who served the caliph al-Mutawakkl and became vizier under al-Mu'tamid, for the first time in 263/872, then in 264-5/878-9, and was dismissed from the government on the insistence of the regent al-Muwaḍḍa. He seems to have been exiled to Egypt, where he was at first welcomed by Ibn Tūlūn, then sent to Antioch, where he seems to have died in 269/882 in obscure circumstances.

Sulaymān b. al-Ḥasan, son of the above, was twice vizier under the caliph al-Muqtadīr, in 318-9/936-7 and 324/939-40, then during the amirate of Badjīm in 328-9/940-1, but was remarkably small for his iniquity.

Ṣādūq b. Mājual, secretary and vizier of Christian origin and recently converted to Islam, has been sometimes considered, without adequate proof, as the brother of al-Ḥasan b. Mājual. He belonged in fact to a different and quite inconspicuous family. He distinguished himself in the service of the regent al-Muwaḍḍa between 265/878 and 272/885, playing the role of vizier, even though he did not hold the title, and providing sufficient support for the prince in his military undertakings. He received, in 269/882, the honorific title of *al-Abbās b. al-Muwaḍḍa*, and his name appears on coins minted in *Jamāl*. But it is probable that he seems to have been connected with the activities of his brother Ṣāḥib, who, having remained a Christian, tried to obtain certain privileges for his fellow-Christians. He died in 276/889.

The only work attributed to Ibn Makki is the unpublished Tathfrif al-lisdn wa-talkih al-d&andn, which was composed with the aim of providing treatises produced by the specialists in the lbah al-ldn, as the study of which might perhaps reveal traces of the maghrbi dialect spoken in Sicily at the time of the author, i.e., the first half of the 5th/11th century. The muhaddima, which contains the reflexions of a philologist aware of the precarious situation of the Arabic language threatened as it was with corruption and adulteration through the constant effects of the ahd, is followed by the 50 chapters of the text, which has been the subject of three refutations and a commentary. On these, and for everything else concerning the author, the Tathfrif, the sources, etc. there may be consulted U. Rizzitano, Il “Tathfrif al-lisdn wa-talkih al-d&andn” di Abù Hafs ‘Umar b. Makki, in Studia Orientalia, Cairo 1956, 193-213 (to the two manuscripts mentioned on p. 207 should be added a third preserved in a library in Saudi Arabia of which only the title and the author are given in RIMA, i, 2 (1954), 154, n. 23).

(1) The earliest was Abıl-Hasan b. ‘Ali b. Da‘far al-Ijzi, the vizier of the Buyid Djalal al-Dawla (416-35/1035-44). He himself bore the honorific titles of Sa‘d al-Dawla and Yamin al-Dawla. They were not however sufficient to ensure his authority, and still less that of his master. The power of both was sapped by the raids of the Bedouins, both Arab and Kurdish, whose camps were outside the gates of the capital, by the turbulence of the Turkish guard, and by the continual intrigues which the caliph al-Kaddir (381-422/991-1031), with the support of a large group of jurists and of men of letters of traditional outlook (among them the famous al-Mawardi), pursed on behalf of the Sunni party. All of these were in the 5th/11th century. It is very probable that this happened because of the contradiction between Ibn al-Djawzi and Ibn al-Athir, in his famous biographical circles, who were much attached to traditionists and to the latter himself, who was to make such a remarkable contribution to the science of Traditions (Ibn al-Athir, ix, 281).

(2) The career of Abu ‘l-Kasim Hibat Allah was hardly more fortunate than that of his brother. Although the chronology of his vizierate is not very certain because of the contradictions between Ibn al-Djawzi and Ibn al-Athir, at least its chief events are known. Born in 365/976, he was appointed vizier in 423/1032, but was dismissed in the following year in favour of his rival, a convinced Shi‘i, Abu Sa‘d b. Muhammad al-Husayn b. ‘Abd al-Rahim. Restored to office shortly afterwards, he appears to have been vizier intermittently until 426/1035. Ibn al-Athir moreover considers that the vizierate of 424 was his fifth, while the data in the first chapter with a mutiny of the Turkish militia, that the same office was held in 423/1031 by a certain Abu Ishak al-Sahih. Hibat Allah’s career ended in 430/1038, after more than two years in captivity at Hit in the hands of the ‘Umayyid Karwâb b. al-Mukallad, the faithful ally of Djalal al-Dawla (Ibn Khaldûn, Itbar, iii, 450), who had become his gaoler on the latter’s orders and whose family always maintained Shi‘i sympathies (Ibn Khaldûn, ibid., 161) (see al-Basâshî, Karwâsh, Kuraysh, ‘Ukaylids).

The fate of the House of the Banû Makkl seems to have been to pledge loyalty in turn to both the rival parties, the Shi‘i and the Sunni, though inclining more and more towards the latter. This policy began by neglecting the sunna on fundamental points of economic life (illegal taxation of markets, measures contrary to the Kur‘anic prohibition of usury, ribâ) and it worked in favour of the Jewish element, which lived very amicably with the Shi‘i artisans of the House of Karkh quittance. (Ibn al-Athir, ix, 282).

However, the final disgrace of Hibat Allah seems to have been due to a sudden access of energy on the part of Djalal al-Dawla, who from then on, through dynastic interests, became reconciled with Abu Kâlidjâr and had decided to ally himself with the ‘Ukaylids and Mayzad Bedouin amis rather than suffer the pretensions and insolence of the Sunni party (Ibn Khâchîr, Bidâya, sub anno 428). It should be added that Hibat Allâh brought up his son ‘Ali in the best Sunni traditions and the latter very soon became famous in the science of Traditions (Ibn al-Athir, ix, 281).

Biography: on the vizierate of the Banû Makkl, see Ibn al-Djawzi, Munastâm, viii, 21, 60 (mentions al-Hasan but not Hibat Allâh), followed in part by Ka‘bula, Mun‘âm, iv, 25; Ibn al-Athir, ix, 287, 293-4, 296, 302, 307; Ibn Khâldûn, ‘Ibar, iii, 446, 447, in general based on Ibn al-Athir; Ibn Khâchîr, Bidâya, ed. Sa‘da, xii, 40, merely mentions Djalal al-Dawla’s change of policy in 428/1037. (3) Hibat Allâh’s son, ‘Ali, was one of the most famous exponents of hadîth and of ‘ilm al-ridâl. He was born in 422/1032 at ‘Ukbârâ. His teachers included such famous traditionists as Ibn Bishram (Broekelmann, S I, 281; Ibn al-Djawzi, Munastâm, viii, 18), the informant of the Hanbalî al-Kharî‘î (Broekelmann, S I, 250), Abu ‘l-Tayyib al-Ta‘barî (Ibn al-‘Imâm, Shadhrâdî, ii, 281), one of the masters of the famous Shafi‘î mystic al-Khushayri. He was on excellent terms with ‘Îbrâhîm b. Isbâk al-Habbâl (al-Dhâhabi, Tadhkira, iii, 382) to whom al-Sarrâdî al-Kâ‘î? (Broekelmann, S I, 594) owed a large part of his collection of mystico-profane love tales. He was also connected with the great master of Hanbalî hadîth, Muhammad b. Nâsîr, with al-‘Atîlî, the informant of al-Khatib al-Baghdadi [q.v.], not to mention the latter himself, who was to make such a remarkable contribution to the science of Traditions in the 5th/11th century. It is very probable that this Ibn Mâkûlî had close relations with half-Hanballî and half-Shafi‘î circles, who were much attached to traditionists and grouped around the vizier Ibn al-Musîma [q.v.] and the caliph al-Kâ‘îm [q.v.] of all these were in favour of a restoration of the authority of the caliph at the same time as they were working for the final dispossess of the heretic Bûyids, to whom paradoxically the family of Ibn Mâkûlî owed its fortune. ‘Ali gained fame by the production of a Râjî ‘Iyân al-makhâtîf wa ‘l-mu‘tâlif min asmâ‘ al-ridâl, on the onomastic of hadîth. In it he used the works of ‘Abd al-Ghani al-‘Arî (Broekelmann, S I, 281) and of al-Dârâjânî (ibid., I, 165), greatly esteemed in Hanballî and mystic circles. This work was used by al-Nawawî, one of the greatest authors of the Shafi‘î school, in his famous biographical dictionary (Broekelmann, S I, 680). The example of Ibn Mâkûlî would seem to indicate that the descendants of the most illustrious families found the best refuge, in the troubled period of the 5th/11th
century, in the practice and the study of the traditional disciplines of Islam. It was through them, at least in the eyes of the rigorists of the entourage of the caliph, that the real power seemed to be maintained.

**IBN MALAK** [see FIRISHTE-OGHLU].

**IBN MALIK**, ABU `ABD ALLAH DIA'AMAL AL-DIN MUHAMMAD B. `ABD ALLAH B. MALIK AL-TAHAYYAT (the name given by al-Makkiari, ii, 421; for his reasons see 427, lines 13-6), Arab grammarian. He was born in Jaen in 600 or 603/1204-5, according to the most generally accepted date, and was at first a Malikite. Al-Makkiari (ii, 421) gives the names of four of his teachers in his native town; to them may be added that of Abū `Ali Umar al-Shalawbini, in Seville. Very soon he left for the Near East (where he became a Shafi`i), and we find him in Aleppo, Hamat and Damascus. According to Ibn al-Dia`izari (ii, 180), he went first to Damascus where he studied, then stayed in Aleppo and afterwards in Hamat, and returned to Damascus where he settled. His journey to Cairo, which is not mentioned by Ibn al-Dia`izari, perhaps occurred some time before his death, which took place in Damascus on 12 Shawbân 672/22 February 1274.

In Damascus, Ibn Malik was a pupil of Abu `l-Hasan al-Safawi and other masters (see Ibn al-Dia`izari, ii, 180); in Aleppo, he studied under Ibn Ya`ish and his disciple Ibn Amur, and for a time taught `arabiyya; he composed a Šarh to al-Mukaddima al-Di`asiiyya (al-Kitti, Inbâh al-rusâl, Cairo 1371/1952, ii, 333). In Hamat also he taught `arabiyya for a time. But it is not clear whether he was a pupil of Ibn al-Hâjiq in Damascus. The sources consulted record only his remark about Ibn Malik's and his Di`asiiyya, which contains 2757 verses (rā`ds), a sequel to that work, with translation, notes and a supplement on morphology to the A Ifiyya, published by A. Goguyer as a sequel to that work, with translation, notes and memorization in those Arab countries where learning in grammar in the Alfiyya; this he owed to his philological knowledge, which was certainly very great, but also in large measure to a fact which in itself remains of secondary importance, his versification of Arabic grammar in the Alfiyya; rhyme was indeed an aid to memorization in those Arab countries where learning by heart was the usual method of instruction; for the verse was always obscure and often unintelligible" (Howell, *Ar. Gr.*, Preface XXVI), offered a choice of material to a host of commentators. Interest in grammar was revived.

From the point of view of grammatical method, Ibn Malik represents a new state of mind: from the start, Arab grammarians had sought for shawwâd, witnesses, to establish the authentic `arabiyya, in ancient poetry and Kur`ânic prose and not in hadith. Now Ibn Malik regarded hadith as conclusive, and made use of it, as did his contemporary Ra`di al-Din al-Astarabaghi. The initiator of this practice seems to have been Ibn Kharuf, who died in Aleppo at the beginning of the 7th/13th century (on this whole question, see `Abd al-Kâdir al-Baghdadi, *Khatîb al-adâb*, Böllâk 1290, i, 3-8 and J. Fück, *`Arabiyya*, 123-4, French tr. 189-90). One can understand the great interest Ibn Malik took in hadith: he collaborated with Shâraf al-Din Abu `l-Hasan `Ali al-Yanâni (d. 701/1301-2), for the edition of the Šâhib al-dhâhârî (Fück, in ZDMG, xxii (1913), 31-2), which led him to deal with difficult passages in a special work, number 7 in the following list (see also Brockelmann, I', 359-63 and S I, 532-7).

1. Tâshil al-fawâ`id wa-tahimîl al-ma`âsidîs (Fâs 1323), a résumé of an earlier work no longer surviving, al-fawâ`id fi `l-nahw, "a manual of grammar, the conciseness of which verges on obscurity" (Ben Cheneb, in E', sv. Ibn Malik). The Tâshil had a great reputation; there are at least 29 commentaries, by the author, by Abu Hayyân and by Ibn `Akil, among others, in manuscript.

2. al-Kâfiyya al-shafi`iya, a treatise on grammar in 2757 verses (râ`ds), according to Brockelmann (I', 363), with a commentary by the author, al-Wâfiyya, in manuscript.

3. al-Khalasa al-`afisyya or simply al-`Afisyya, a résumé of the preceding work in about a thousand verses (râ`ds), in imitation of al-Durra al-`afisyya of Abû Zakariyya; Ya`bîya b. Mu`tî according to al-Ma`kki (ii, 431) (cf. `Afisyya, verse 5). Al-`Aqlisi (quoted ibid.) denies that he wrote for his son Ta`ki al-Din Muhammed known as al-Asad, as al-`Ashâfi`i related, following al-Dhahabi (cf. al-Wâfiyya, ii, 206); he says that it was written for the hâlî `Şajar al-Din Hibat Allah b. `Abd al-Rahîm known as Ibn al-Ba`dî, in manuscript (see Ibn al-Sha`fawî, ii, 181). The famous `Afisyya exists in manuscript in a great many libraries and has been printed frequently. S. de Sacy published an edition with a commentary (Paris-London 1833) and reproduced and translated eight chapters from it in his *Anthologie grammaticale*, Paris 1829, 134-44 and 315-47; Arabic text and French translation by L. Fünt (Constantine 1869), by A. Goguyer (Beirut 1888) which adds the L`âmiyyat al-`afis`î; Italian translation and commentary by E. Vitto (Beirut 1898). The `Afisyya has been the subject of at least 43 commentaries; it will be sufficient to list the following:—that of Ibn Malik's son, Badr al-Din Muhammed, al-Durra al-mu`âdida, Beirut 1312, Cairo 1342; that of Abû Hayyân al-Andalusi, manhâj al-salikâ, published by S. Glazer, New Haven 1947; that of Ibn `Akil, which can be said to be a classic, ed. Fr. Dieterici, Leipzig 1851, German tr., Berlin 1852, and in the East in the very convenient ed. of Muhyi al-Din Mub. `Abd al-Hamid (6th. ed., Cairo 1370/1951); for the commentaries of Djâmil al-Din Ibn Hishâm, al-Makkûdî, al-Ushmûnî, al-Suyûtî and Da`ûlân, see nos. 3, 10, 12, 15 and 35 of Brockelmann (S I, 523-5).

4. L`âmiyyat al-`afis`î or al-`Afisyya fi `amâynat al-`afis`î, in 1144 verses (râ`ds), a complement on morphology to the `Afisyya, published by A. Goguyer as a sequel to that work, with translation, notes and
glossary of technical terms for both works; the Commentary of Badr al-Din Muḥ. was published by Kellgren (Helsingfor 1854), by Kellgren and Volck (St. Petersburg 1856) and by Volck (Leipzig 1866); the Lāmiyya has been printed several times in the East in collections; moreover other commentaries exist (see Brockelmann, I, 362 and S I 256).

5. HandlerContext al-mawdūd ̵t ʿl-maṣḥūr ̵t ʿl-mamādā, a versification in 162 verses (taṣfīl) of almost all the words of the same form terminating with alif maṣḥūr or alif mamādā and of different meaning, with a short commentary; ed. Cairo 1857 by Ibrāhīm al-Вāṣiṣ, then in 1839.

6. HandlerContext al-lām bi-thālāth (mushātāth) al-halām, a versification (in raqīṣ) of the words with triple vocalization and of different meaning, a work dedicated to al-Malik al-Nāṣr, grandson of Shallāl al-Dīn (ed. Cairo 1329, together with the preceding work). See Brockelmann’s no. XII for other similar works.

7. HandlerContext šahāsīd al-tauwīl ̵t wa ʿl-taṣfīl li-muṣḥaḥūt al-Ṣāḥib, a grammatical discussion of difficult passages from the Ṣāḥib of al-Bukhārī (Allāhābād 1319); in manuscript in Damascus under the title al-Tauwīl fi ʿrāb al-Bukhārī (Brockelmann, S I, 262, emend to ‘Um. 17 no. 101).—The following works exist only in manuscript:

8. HandlerContext Umīdat al-khāṣṣ wa-Sūdalat al-lāfīs, a résumé of sources, with a fairly long commentary by the author (Brockelmann, I, 365, IV, should read: Berlin 6531 and 6632).

10. HandlerContext al-Tuṭīd al ̵t ʿl-faṣr baṣīn al-zāʾ wa ʿl-dād, a versification in 62 verses (baṣīr) of words pronounced with šāʾ or dād, with a short commentary by the author (an extract from this work appears in the Muzhir, iii, 283-6, followed by two appendices, one fīmā yuḥāl bi-dād wa-šāʾ, the other fīmā yuḥāl bi-šāʾ wa-šāʾ).

11. K. al-ʿArūd, on Arabic prosody; only one MS, Escur. 330, 6, 4.

12. A summary of grammar, the Šabb al-manṣūm, of morphology (iṣāfī), the Ḥiṣāṣ al-ṭaʿtwīf (Brockelmann, nos. V, VI, and VII, and different short works, placed by the author in nos. XIII to XXVIII) (S I, 527). Versifications of words with grammatical or lexicographical peculiarities have been included by al-Suyūṭī in the Muzhir, ii, 113, 114, 115, 224; note 279-82, the 49 verses (kāmil) containing the verbs having a šāʾ or a dād without distinction as the 3rd radical consonant (printed in a Māṣīmī’a, Cairo 1306).

Several works of Ibn Mālīk, mentioned by his biographers, have not yet been reported in manuscript, in particular al-Muḥaddasa al-asādiyya (composed for his son known as al-Asād).

Bibliography: Makkari, Naṣf al-Thī, Cairo 1359/1949, ii, 427-33, has brought together almost all the items of information; Saḍaf, al-Waṭīf bi ʿl-waṣayaṭ [Bibl. Isc. 6c], iii, 359-64, important; Shamal al-Dīn Ibn al-Dīzan, ʿIṣāṣ al-mukhtala fi ṣawad al-kuraib, ii, 180-1, ed. Bergstrasser 1352/1933 (anastatic reprint, Baghdad, ii, 180-1, important for chronological data; Suyūṭī, Bughya, 53-7, repeats, adds little; the others mostly repeat or are useful for the date of Ibn Mālīk’s birth or his genealogy: Ibn ʿAṣḥār al-Kutūbī, Faṣdī al-waṣayaṭ, Cairo 1951, i, 452-4; Subēḥ, Ṣulhāt al-ḥafṣiyya al-hūrā, Cairo 1324, v, 28-9; Ibn Kādī Subhū, Ṣulhāt al-nuḥāt wa ʿl-muḥaddasa, Damascus (Zahiriyā Taḥṣīl 438), 54-6; Ibn ʿIbīdī, Muzhir al-Muḥaddasa, Cairo 1351, v, 339; other references will also be found in ‘U. R. ʿAlīṣhāla, Muḥṣīm al-muḥaddasa, Damascus 1379/1960, x, 234.

European works: Brockelmann, I, 359-63, S I, 521-7; in the short biographical notice, emend Baʿalbak, substitute Aṭṭōp, on the subject of Ibn Yaʿṣīh; M. S. Howell, Arabic Grammar, Preface, XIX-XXI (Allahabad 1883). (H. FLEISCH)

IBN MĀLĪK B. ʿABĪ ʿL-FĀḍĪL AL-YAMĀNĪ, MUḤMAḤĀD, a Sunni jurisconsult and minor historian of Yemen, best known for his derogatory tract against the Ismāʿīlīs in Yemen so as to warn others about them. The Kaḥṣ became the primary source concerning the history of the sect for all later SUNNI historians of Yemen, including al-Khāṣṣādī. The pamphlet has been printed twice (1939 and 1955) in Cairo from the manuscript preserved in the library of the small Egyptian town of Sawhāḏī. Another copy, with the title Risāla, is to be found in the University of Leiden library (Or. 6349).—Neither the author nor the book is mentioned by Brockelmann. All the information concerning Ibn Mālīk contained in al-Dīzan’s Sulhā and al-Khāṣṣādī’s Kaḥṣa, the two greatest biographical dictionaries of Yemen, is derived exclusively from the Kaḥṣ.

(F. L. GEDDES)

IBN MĀLKA [see ABU ʿL-BĀRAḴĀTES].

IBN MAMMĀṬĪ, name of three highly-placed officials of the same Coptic family from Asyūṭ who flourished under the later Fatimid and early Ayyūbid period. The first of the line was ABU ʿL-MĀLĪ, who became secretary and general intendent of the Diwān under Badr al-Dīzāmī during the reign of the Fatimid caliph al-Muṣṭanzi (427-32/1035-44). He was a popular administrator, and was eulogized by the poets of his time. He managed to retain his faith and his position until his death at an unknown date towards the turn of the century.

The second was his son, AL-MUḤADHDHAB ABU ʿL-MĀLĪ ṢAKARĪYĪ, who succeeded his father as secretary of the Diwān al-Dīzāmī during the decline of the Fatimid rule in Egypt. He apparently remained in office until the reign of the last caliph al-ʿAzīd (555-67/1160-71), during the critical transition between Fatimid and Ayyūbid rule when the Sunni Shīrkhūn assumed the vizierate of Shīʿī Egypt and brought his nephew Shallāl al-Dīn (Saladin) in his train. The ascent of Shīrkhūn to power was precipitated by the imminent danger of an invasion of Egypt by the crusaders under Amalric, the Latin king of Jerusalem. At that time, the situation of the Copts was worsened by the growing hatred shown by Muslims towards Christians as a result of the Second Crusade. Shīrkhūn, theizuṭ al-Kalīm, issued a new wave of persecution and al-Muḥadhdhāb, finding his position in jeopardy, embraced Islam and remained in power until his death, probably in the year 578/1182.

His son, the third and most famous of the line, took his place as head of the Diwān al-Dīzāmī and was later promoted to the secretariaship of all the other Diwāns during the sultanates of both Saladin (564-9/1169-93) and al-ʿAzīz (589-5/1193-98). His
full name, according to al-Makrizi, was Al-As'ad b. Muhaddhab b. Zakariyya. His fame was based not only on the fact that he took charge of all the diwans but also on his literary productivity, both as a writer and as a poet. At least twenty-three poets are listed under his name, though most of them are lost. He verified the life of Saladin and Kitab wa-Dinuma [q.e.]. He remained there until his death in 606/1209.

The surname Mammati is explained in the sources by Abu l-Mallah's gifts of food to the poor during a period of famine. However, it is possible that it is merely a corruption of the Coptic "Mahometti", i.e., "Muhammadan", since the family embraced Islam; this implies that the name must have appeared only in the lifetime of the second of the line.

Perhaps the most enduring contribution of Al-As'ad b. Mammati was his work entitled Kitab Kawadin al-Dawad wa'in, which, on al-Makrizi's authority, is said to have been composed for the sultan al-Aziz in four volumes. Amongst other items, he included in it a complete record of all Egyptian townships with their taxable acreage for the khadarji. The portions of the work including that confidential information have been lost, but the list of all inhabited towns and villages survives in numerous manuscripts. The value of the work is enhanced by other rare information on agricultural and irrigation systems, the mint and the weights and measures services, the Tiraz [q.e.] weaving centres, shipbuilding for the Ayyubid arsenal, alum and nitre, forests and animals, the science of surveying, together with some mathematics and geometry, and a whole host of interesting data. Yet perhaps the most valuable part of the book remains in the first and fullest mediaeval cadaster (edab) of all the inhabited sites of Egypt [see KAWK.]

Al-As'ad's self-inflicted exile with his family and his death in relative poverty ended the glory of his dynasty, of which we hear no more in subsequent ages.

**IBN MANDA**, a famous Işahān family of kadīs scholars and historians which was active for nearly three centuries. Descended from a Sassanian official, Djahārūbgah, said to have become a Muslim at nearly the time of the Conquest, the man after whom the family was named was Ibrāhīm (Manda) b. al-Walid b. Sanda b. Buṭṭa b. ustāndar b. Fērōzān b. Djahārūbgah. His death is placed during the caliphate of al-Mu'tasim (Abū Nu'aym, History of Iṣahn, ed. S. Dederer, i, 178; al-Dhahabi, Tadhkirat al-mu'āf, Hāydarābd 1335-4, iii, 222). His son, Abū Zakariyyā b. Yābūy, is counted the first prominent member of the family.

He travelled to Baghdad in 406/1015-6, and he visited Wasit, Mecca, Nisabur, Hamadhan, and so on. He started teaching at the age of sixty-two. He remained there until his death in 606/1209.

Abū 'Abd Allāh Muḥammad b. Iṣaḥāk, who was born in 30/952, his travels are said to have spanned a period of thirty years. They took him to such places as Marw, Bukhārā, Egypt, Taḥrībulus, and Mecca. He visited Nisābūr for the first time in 395/995-6, and again in 354 or 355/965-6. He married late in life and had four sons, 'Abd Allāh, 'Abd al-Rahmān, 'Abd al-Wahāb, and the little known 'Abd al-Raḥām. He died on 30 Dūḥ 'L-Kaḍa' 395/957 September 1005 (rather than in 996). His publications concerned history, biography, and ḥadīth. He wrote on the history of the Prophet and, like his grandson, Yābūy b. 'Abd al-Wahāb, a History of Iṣahān. Of his works there survives his commentaries on certain verses of the Kur'ān and some Prophetical traditions, under the title of al-Radd 'ala l-Tawārikh (yya) (Ms. Istanbul Topkapısaray, Revan Köşk 530, fols. 56b-66b), but it may be noted that his son, 'Abd al-Raḥmān, is credited with a similar if, apparently, different work. Further, al-Tawārikh wa-ma'rīfat asmā Allāh, preserved in Damascus; parts of his Mar'īfat al-sahābā, also in Damascus (cf. Y. al-Ṭish, Fihrist maqāřāf Dār al-Kutub al-Zāhiriyah, Damascus 1366/1947, 171 f.). His relationship to the Tāwārikh al-mustakhradh of his son, 'Abd al-Raḥmān, remains to be investigated; a treatise on "The men around Muḥammad who lived 120 years" (Cairo, Taymūr, tārīkh 677, 695), but a work of the same title is ascribed to his grandson; Fath al-bāb fi l-kunā wa-l-akāb (Berlin 9917), which may be identical with al-Asmā' wa-l-kunā cited repeatedly in the Tāwārikh Baghdād, although the few excerpts from the Fath published by S. Dederer (dissertation, Upsala 1927) do not suffice to establish the identity, al-Asmā' wa-l-kunā, of the names and surnames of Ibn Ḥanbal (Ms. Chester Beatty 5165 [2]); Ta'mīyat al-maṣāḥīh, on the authorities of al-Būghārī's Sāḥib (Ms. Chester Beatty 4411, 5165 [1]); and a list of transmitters on the authority of Shubba b. al-Haqqādā, incorporated by al-Dhahabi in his Tāwārikh al-Islām, Cairo 1307-8, vi, 195-200. 'Abd Allāh, the younger of his two sons, 'Asghār's ascension of Abū Ḥanifa's Masnad, cf. the MS in Djakarta described by P. S. van Ronkel, Suppli. to the Catalogue of the Arabic Manuscripts in the Museum of the Batavia Society of Arts and Sciences, Batavia-The Hague 1913, 41-4.

Muhammad's son Abu l-Kāsim 'Abd al-Raḥmān, was born in 38/991-2, or in 383. He travelled to Baghdad in 406/1015-6, and he visited Wāṣṭa, Mecca, Nisābūr, Hamadhan, and so on. He started teaching
in 407/1016-7 and was the author of many works, among them, it seems, a History of Mecca. He is said to be the author of the History of Mecca, a work which is evidently neither Arab nor Berber. According to Dozy, this name is a corruption of Martinez, whilst by Samani, iv, 31).

IBN MANZOR, Muhammad b. Mukarram b. ‘Ali b. Ahmad al-An`asri b. al-Ishghi b. al-Mi`raj al-Dim Abul l-Fadl, author of the famous dictionary al-Dim, was born in 568/1171-2. Ibn Mukarram, was born in Ramadan 630/June-July 1233 and died in Shaban 711/December 1311-January 1312. He claimed descent from Ruwayf b. Thabit, who had been after 48/668 governor of Tripolis in North Africa. According to Ibn Hadjar, Ibn Mukarram was hadi of Tripolis and "all his life" employed in the din al-inshah; so he is perhaps identical with Muhammad b. Mukarram, one of the kuttab al-inshah under Kalkashandi (see W. Bjorkman, Beitrage zur Geschichte der Staatskanzlei im mittelalterlichen Agypten, Hamburg 1926, index). Ibn Mukarram was fond of epitomizing voluminous works of earlier authors, e.g., the Aghani (Brockelmann, I, 226; Ibn ‘Asakir’s Ta’rikh Dimashq (Brockelmann, I, 331; S I, 562), Samani’s Dhayl Ta’rikh Bagdad (part XI is preserved in Ibn Mukarram’s autograph in Leiden, MS arab. no. 1023), the Diwans al-musfradat of Ibn Baytar (see A. Taimur, in RAAD, iii, 361). His Lisat al-‘Arab too (completed in 689/1290; printed Bulak 1300-8 and 1349-1350) is based on five earlier dictionaries, viz. Azhari’s Tahdhib al-luga, Ibn Sida’s Mukham, Dzhawari’s Kams (whom he followed in arranging the roots according to the third radical), Ibn Barri’s glosses to the Kams, and Dhahabi’s Nakha. He is on the whole exact in copying these works, but often omits the authorities mentioned therein, whilst Ibn Murtagh, who in his Tajdi al-‘Arus draws frequently upon the Lisat, often supplements the authorities omitted by Ibn Mukarram.

His Nihd ar-asbar si ‘l-layli wa ‘l-nahar, a short treatise on day and night, the stars and the zodiac, was printed in Istanbul 1268.

IBN MARDANISH, Abu ‘Abd Allah Muhammad b. Sa‘d b. Muhammad b. Ahmad al-Tujibi, mentioned in the Christian chronicles under the name Rey Lobo or Lope, was a Spanish Muslim leader who was active in political and military affairs in the Iberian Peninsula during the last decades of the Almoravid empire, made himself master of Valencia and Murcia, and for 25 years contended with the new North African rulers, the Almohads, for the territories in the centre of al-Andalus. In regard to his name Ibn Mardanish, various theories have been advanced concerning his origin, which is evidently neither Arab nor Berber. According to Dozy, this name is a corruption of Martinez, whilst
Codera supposes that it derives from Mardonius, one of his Byzantine ancestors. Both theories are improbable, as also is that proposed by Ibn Khallikan.

IBN MARYAM, Muhammad b. Muhammad b. Ahmad, North African hagiographer of the 11th/16th century (d. 1014/1605). Less is known of his life than of his literary output. He compiled a catalogue of local saints, al-Bustân fi dhâbî al-awliyâ' wa l-`ulamâ`, which deals mainly with those who had lived or studied at Tlemcen, the ancient capital of the Zanata. He was interested also in the neighbouring towns of Oran and Nedroma, as well as in the basically Berber cantons of the Djablea Tessala and the Trara, and, further towards Eastern Morocco, in the country of the Ghumara, the valley of the Sus, and, in a general way, in the Moroccan Atlas. The chronological details scattered through the work (e.g., at p. 45) do not permit its subject-matter to be traced to an earlier date than the 9th/15th century. Tlemcen was then the intellectual and religious metropolis of Barbary, whose influence reached as far as Fez (224) and Meknès (65). Tunisians (75) and even scholars from the Orient (190) were also drawn to Tlemcen. Because of the persistent struggle against the infidel, the Islamization and Arabization of the country were intensified. All races contributed to this and by the most diverse methods. The saints of Ibn Maryam, fierce and determined fighters, presented an idea of Islam well adapted to the mentality of the masses. Their devotion was intense (nights of prayer accompanied by conversions and various wonders), their frequent and marvellous miracles are reminiscent of the Fioretti: thus, e.g., the saints understood the language of animals. Their charity, reserved for Believers only, was inexhaustible. They practised unceasing internal prayer (dhâbî). They had naturally the gift of being present everywhere, especially for the Pilgrimage, and they communicated with spirits, evil as well as good. Whenever necessary, they made amulets (fyîz), coming to the help of their co-religionists by means of white magic. Always ready to protect the oppressed and to redress wrong, they were nevertheless prejudiced against the Bedouin invaders of Arab origin, who had been settled for three centuries on their soil (the term “Arab” is used only for the Bedouins, 75).

These men of miracles did not, however, neglect the learning and the practice of pious works which were inseparable from Malikî orthodoxy, and they devoted studied effort to it. Ibn al-Marzûk, for instance, knew the works of Ibn al-Hadjib and the early transmitters of Malik, Ibn al-Kasim and al-Asbagh. They often excelled in the science of law and in the apportioning of inheritance (fardâ'id). The most scholarly of them were theologians in law (usuli), rhetoricians andlogicians (38, 44). They knew the works of Ibn al-Hâdjib and the early transmitters of Malik, Ibn al-Kâsîm and al-Asbagh. They thought highly also of oriental scholars such as al-Damiri (Brockelmann, SII, 401) or even the Šâhîf al-Buñîkî, or, later, Šâhîf al-Wâhîh b. Šârâ`u (`confirmed by al-Nabhânî, Karâmaât al-awliyâ`, Cairo ed., ii, 420). These simple men, of whom Ibn Maryam gives a moving description, were both missionaries and visionaries, passing effortlessly from ordinary daily tasks to the most exalted piety.

IBN AL-MARZÜBÂN [see Muhammad b. Khalaf b. al-Marzûbân].

IBN MARZÙK, Shams al-Dîn Abû `Abd Allâh Muhammad b. Ahmad b. Muhammad b. Muhammad b. Abî Bakr b. Marzûk al-`Aḍîfis al-Tîlimsâni, known as al- rádâ (the grandfather), al-râ`b (the
Genealogical table of the principal Marazika

Marazik (end of 5th/11th century)
  - Abu Bakr, servant of Abu Madyan
  - Muhammad I
  - Muhammad II (629-81/1231-82)

Ahmad I (668-741/1228-1304)
  - Muhammad IV = al-Djadd, al-Ra’i’s, al-Khaliq (711-82/1311-79)

Ahmad II
  - Muhammad VI = al-Hafid (760-842/1364-1438)

Haifa
  - Muhammad VII = al-Kaff (824-901/1420-95)

Ahmad III
  - Muhammad VIII (d. 918/1511)

Al-Makkari

Muhammad VII (824-901/1420-95) was known as al-Kaff (the blind). He too is remembered as a traditionist and a famous preacher. Al-Makkari was proud to have him as his maternal grandfather.

Ahmad III, son of the above, who died shortly after him, was also a famous khaṭīb; he is known as Hafid al-Hafid.

Muhammad VIII, another grandson of the Hafid, but through his daughter Haifa, died in 918/1511. He is the last representative of this family of scholars on which any information is available.

The best known of the Marazika is, without question, Shams al-Din Muhammad IV. A contemporary of Ibn al-Khaliq [q.v.], who refers to himself as his disciple and who always showed him great respect, of the two brothers Ibn Khaldun [q.v.], who disliked him, of al-Makkar (the ancestor of the famous scholar of that name), of Shari’i al-Tilmans (q.v.) and of many others, he was certainly the member of this family who, by his strong personality, the roles he played and the positions he occupied, brought it fame and drew to it from this period on the attention of the biographers and historians. His career, like those of several of his contemporaries, was full of incident: travels throughout the Muslim world in search of knowledge and of honours, intrigues among the great, high politico-religious responsibilities, repeated spells in prison, favour and disgrace, etc.

At the age of two according to some, seven according to others, he was taken by his father Ahmad I to the East where he received, during periods spent at Mecca, Medina, Jerusalem, Hebron, Alexandria and Cairo, the basis of his education. He was given the title khaṭīb early, at the age of nineteen, when, in 729/1329 or 730/1330, he delivered, without preparation, his first sermon in the mosque. He is the last representative of this family of scholars on which any information is available.

The best known of the Marazika is, without question, Shams al-Din Muhammad IV. A contemporary of Ibn al-Khaliq [q.v.], who refers to himself as his disciple and who always showed him great respect, of the two brothers Ibn Khaldun [q.v.], who disliked him, of al-Makkar (the ancestor of the famous scholar of that name), of Shari’i al-Tilmans (q.v.) and of many others, he was certainly the member of this family who, by his strong personality, the roles he played and the positions he occupied, brought it fame and drew to it from this period on the attention of the biographers and historians. His career, like those of several of his contemporaries, was full of incident: travels throughout the Muslim world in search of knowledge and of honours, intrigues among the great, high politico-religious responsibilities, repeated spells in prison, favour and disgrace, etc.

At the age of two according to some, seven according to others, he was taken by his father Ahmad I to the East where he received, during periods spent at Mecca, Medina, Jerusalem, Hebron, Alexandria and Cairo, the basis of his education. He was given the title khaṭīb early, at the age of nineteen, when, in 729/1329 or 730/1330, he delivered, without preparation, his first sermon in the mosque. He is the last representative of this family of scholars on which any information is available.
of the latter he was present notably at the disaster of Tarifa (741/1340); after this he travelled to Castile to the peace treaty and the liberation of the prisoners of war, among whom was the prince Abu 'Umar Tāshfīn, Abu 'l-Hasan's own son.

On returning from this mission, he went to Constantine, where news reached him of another disaster suffered by the unfortunate Abu 'l-Hasan, that of al-Kayrawān. He then returned to Fās in a convoy of important persons, high officials and foreign dignitaries accompanying Abu 'l-Hasan's wife, who was rejoining her son Abu 'Inān [g.v.], who had just deposed his father and placed himself on his throne. Ibn Marzūk did not stay for long at the court of the young sultan. He returned to Tlemcen, then in the hands of the Zayyānid, Abū Sa'īd ʿUmmān b. ʿAbd al-Raḥmān, supported by his brother Abū Thābit as suʔīm. Soon he was charged by Abū Sa'īd to go and make contact with Abu 'l-Hasan, who was in Algiers and preparing to lay siege to Tlemcen. Abū Thābit and the notables of the Banū Zayyānīn, disapproving of the principle of this mission, had him arrested en route. He was brought back to Tlemcen and imprisoned in a mūbadāb [underground prison]. His sentence was later commuted to exile in Andalusia; this brought him into contact with Abu 'l-Hāḍirīdī and ʿAmamudāna, who had known him personally, who advise the Tarifa incident. This appointed him khaṭīb of the-al-Hamra mosque. There he formed a friendship with another exile, Abū Sulīm, brother of the sultan Abū ʿInān.

In 754/1353, Abū ʿInān recalled him to Fās and made him a court official. He sent him in 758/1357 to Tunis to ask on his behalf for the hand of the daughter of Abū Yābāy in his marriage. This mission ended in failure, where added to other causes for his ill-humour, aroused the sultan's wrath, and for the second time Ibn Marzūk found himself in a mūbadāb. He remained there for six months, being released, thanks to the intercessions of many people, only when he was near to death.

The death of Abū ʿInān in 759/1358 produced a crisis which finally destroyed the dynasty. His throne was disputed by several claimants, sons and brothers of his half-brother Thābit and Thābit's brother Abū Sulīm, the friend of Ibn Marzūk's exile. The latter unhappily did all he could to help him to seize power and after a year of manoeuvres they gained the throne, the one to reign and the other to govern. Ibn Marzūk was now at the summit of his career, and immediately he was surrounded by envy. The courtiers watched for an opportunity to act and, in 762/1361, Abū Sulīm was murdered and Ibn Marzūk was consigned to the mūbadāb for the third time. He regained his liberty only after two years, in 764/1363. He then hastened to embark for Tunis, where the sultan Abū ʿIsāk (751-70/1350-68) and his vizier Ibn Tafragīn appointed him khaṭīb of the al-Sāmānīn mosque. He remained there for seven years.

In 767/1367, following a palace revolution, he was removed from this office. He hesitated for two years and then in 773/1372 decided to set sail for Alexandria; thence he went to Cairo, where the sultan Thābit b. ʿHasān (764-78/1363-76) gave him employment as a judge and a teacher. He was simultaneously khaṭīb, khaṭīb and teacher in the three mosques of Sālāb al-Dīn: ʿAhdār Sharghī, Sarghat-māshīyya and Kāmbiyā. Thus the end of his life was spent in an atmosphere of calm and respect, and sheltered from want, after he had "preached on forty-eight pulpits of the Dār al-Islām". On his death, he was buried (a supreme honour) between Ibn al-Kāsim and Aghbāb in the cemetery at Cairo.

He himself compiled the list of his masters, who were many (more than 250), in his book Uḏḍāl al-mustawfīs. They included judges, preachers, imāms, genealogists, traditionists, historians, men of letters, mystics and at least three women, whose lessons he had attended in mosques or with whom he had had only had meetings at Medina, Mecca, Cairo, Alexandria, Baḥb, Jerusalem, Hebron, Damascus, Tripoli, Kairuān, Tunis, Zāh, Bougie, Tlemcen, and in Andalusia, etc. His disciples were even more numerous, and include such famous names as Ibn al-Khāṭīb, Ibn Zamrāk, Ibn ʿKunūfūd, al-Shābīlī[qq.v.], etc.

Of those of his works which survive, none is today printed in its entirety. They exist either as very rare manuscripts dispersed among various libraries or are to be found as extracts published in studies and editions of other writers. His known works are:

(1) al-Musnad al-sāhil al-hasan fī maḏḏīr sīrān Abī ʿAlī Ḥasan, MS Eṣorial 1666; extracts published with Fr. tr. by E. Lévi-Provençal in Hespéris, v (1923); chapter tr. by R. Blachère in Memorial Henri Bassot; source for Nāṣrī, Istīkhāsā.

(2) al-Tafrīf (see below). The al-Hamra mosque. There he formed a friendship with another exile, Abū Sulīm, brother of the sultan Abū ʿInān. In 754/1353, Abū ʿInān recalled him to Fās and made him a court official. He sent him in 758/1357 to Tunis to ask on his behalf for the hand of the daughter of Abū Yābāy in his marriage. This mission ended in failure, where added to other causes for his ill-humour, aroused the sultan's wrath, and for the second time Ibn Marzūk found himself in a mūbadāb. He remained there for six months, being released, thanks to the intercessions of many people, only when he was near to death.

The death of Abū ʿInān in 759/1358 produced a crisis which finally destroyed the dynasty. His throne was disputed by several claimants, sons and brothers of his half-brother Thābit and Thābit's brother Abū Sulīm, the friend of Ibn Marzūk's exile. The latter unhappily did all he could to help him to seize power and after a year of manoeuvres they gained the throne, the one to reign and the other to govern. Ibn Marzūk was now at the summit of his career, and immediately he was surrounded by envy. The courtiers watched for an opportunity to act and, in 762/1361, Abū Sulīm was murdered and Ibn Marzūk was consigned to the mūbadāb for the third time. He regained his liberty only after two years, in 764/1363. He then hastened to embark for Tunis, where the sultan Abū ʿIsāk (751-70/1350-68) and his vizier Ibn Tafragīn appointed him khaṭīb of the al-Sāmānīn mosque. He remained there for seven years.

In 767/1367, following a palace revolution, he was removed from this office. He hesitated for two years and then in 773/1372 decided to set sail for Alexandria; thence he went to Cairo, where the sultan Thābit b. ʿHasān (764-78/1363-76) gave him employment as a judge and a teacher. He was simultaneously khaṭīb, khaṭīb and teacher in the three mosques of Sālāb al-Dīn: ʿAhdār Sharghī, Sarghat-māshīyya and Kāmbiyā. Thus the end of his life was spent in an atmosphere of calm and respect, and sheltered from want, after he had "preached on
BI'N MARZOK — IBN MASARRA
bi-'bn Khaldun, ed. Tandjl, Cairo 1380/1951, 49-54; Ibn Ḥaddad, al-Durar al-kadimīa fi al-awāl qāma, Haydarābd 1349/1930, ii, 360, no. 92; Ibn Khālid al-Wahābi, Tārīkh al-ḥāmidīn, n.d., 86; H. P. Wadsworth, 78; Ibn al-Āzhār, Rawdāt al-nisār fī dawlat Bani Marīn, ed. with Fr. Fr. Gh. Bouali and G. Marçais, Paris 1917, 197; Suyuti, Bugyāt al-walā'ī, Cairo 1326, 16; idem, Huṣn al-maḥḍarā fī aḥkām al-Mīr wa-l-Kāhirā, Cairo 1299, ii, 104; Ibn al-Kādī, Dayādat al-ithbāt fī man ḥall min al-ʿām madīnīt Fās, Pes. 1309, 120-4; Ahmad Bābā, Nāṣiru l-ḥašāḥ fī tawāṣṣil al-Dīdāh, the manuscript is not known; it may have been at the time when, in his place of retreat on the mountain 300/912, when his biographers show him surrounded by disciples, probably on his return from the East.

According to Ibn al-Dawdari, from 539/1144-5, initial success, he was obliged to go to Upper Egypt, where he must have known a disciple of Djuñayd, Abu ʿAlī al-Aṣāf, who preached a much less esoteric doctrine than Ibn Maṣarrā, wrote a book against him refuting his ideas. The young Muhammad became his pupil and taught his doctrines had to take many precautions. He reserved initiation into the use of symbols for a more intimate group of disciples.

The young Muhammad became his pupil and received from him a theological education as well as training in asceticism. It can easily be imagined that in these circumstances Ibn Masarra acquired at quite an early age the habit of leading a secret life, withdrawn from the world, among initiates with whom he conversed by allusions and symbols.

To increase the number of his forces. Pursued by the troops of Ibn al-Salār, he was overtaken at Dalas in the province of Bahnasa (Yāḵût, ii, 501) and was defeated and killed on 19 Shawwāl 544/19 February 1150, his head being taken to Cairo. He had been vizier for only about fifty days.

It is not clear what connexion there was between him and Maḥmūd b. Maṣāl al-Lukkī who, at the beginning of the reign of al-Mustallī, gave his support to Nizār and, after the defeat of Nizār’s party, fled to the Maghrib; there is also an Ibn Maṣāl the diploma for whose appointment to the governorship of Alexandria was drawn up, at a date not given, by al-Kādī al-Fāḍil (al-Kalkashangi, Suḥḥ, x, 374-80).

IBN MASARRA, MUḤAMMAD B. ʿABD ALLĀH B. MAṢĀL AL-DIJĀBALI, Andalusian philosopher and mystic, born at Cordova in 29/887 and died in 319/934 in a hermitage on the Sierra near this town, to which he had retired long before. He lived during a period in which Muslim Spain suffered a veritable inquisition conducted by the Malīkī ḥubāba. His father, ʿAbd Allāh, who may have been of Christian descent, was a Muʿtazilī and in order to teach his doctrines had to take many precautions. The young Muhammad became his pupil and received from him a theological education as well as training in asceticism. It can easily be imagined that in these circumstances Ibn Masarra acquired at quite an early age the habit of leading a secret life, withdrawn from the world, among initiates with whom he conversed by allusions and symbols.

In 286/899, ʿAbd Allāh died in Mecca, where he had taken refuge from his creditors. Little is known of Ibn Masarra’s life between this date and about 300/912, when his biographers show him surrounded by disciples, probably on his return from the East. But already in this period he had left many of these matters which enabled him to enter a military career in Cairo, no details of which are known. According to Ibn al-Dawdārī, from 539/1144-5, during the reign of al-Hāfiz, he was entrusted with the direction of affairs without being given the title of vizier (nāṣir li-ʿl-ʿumār, nāṣir li-ʿl-maṣāḥih), this caliph having appointed no vizier since 333/1143. After the death of al-Hāfiz, in 544/1149, his successor al-Ẓāfīr chose Ibn Maṣāl as vizier (this was the last time that a vizier was appointed in this manner by a Fāṭimid caliph), and gave him the titles of al-sayyid al-adjall al-mufaḍḍal (or al-ʾāḥāl) and amīr al-dawāḥiṣ, that is of commander-in-chief. According to Usāma he was then an old man. He restored order after the quarrels between the Blacks and the Raybānīs in the army. But the governor of Alexandria was his contemporary Nahrāḏjari, a mystic with pantheistic tendencies who died there in 330/941; and he must have known a disciple of Dhuṇayd, Ahmad b. Ḥabīb, who had written a short work denouncing his errors, and Ibn Masarra had thought it prudent to leave for the East. Asīn Palacios thinks that the famous mystic and ascetic Dhu ‘l-Nūn al-Mijrī (d. 245/860) was still remembered as an example. Ibn Masarra could also have met in Mecca his contemporary Nahrāḏjari, a mystic with pantheistic tendencies who died there in 330/941: and he must have known a disciple of Dīnayd, Abū Saʿīd Ahmad b. Muḥammad b. Ziyād b. al-ʿArabī (died at Mecca in 341/952). This orthodox mystic, who preached a much less esoteric doctrine than Ibn Masarra, wrote a book against him refuting his ideas.

The exact date of Ibn Masarra’s return to Spain is not known; it may have been at the time when, during his accession, ʿAbd al-Rahmān III introduced a more tolerant policy in order to pacify the people (300/912). In his place of retreat on the mountain of Cordova, he seems to have taught a fairly large public, insisting on the importance of the ascetic life and disguising his thought on matters where his doctrine might have proved disturbing. He reserved initiation into the use of symbols for a more intimate group of disciples.
Ibn Masarra was attacked particularly after the promulgation of his works. The titles of two of them are known: the Kitāb al-Tahāra and the Kitāb al-Huwāf, but none of them have survived. He died, worn out by work and by the austerity of his life, without having had to undergo any physical suffering for his doctrine.

(1) The doctrine of the pseudo-Empedocles. Sa`id al-Andalusī, in his Tabābāt al-umam, reproduced by al-Kīfī in his Ta`rīkh al-ballām, compared his views to those of the pseudo-Empedocles. It was probably for having devoted too much attention to this philosophy that he was suspected of sandaba, and it may be considered as the core of his thinking. Although he was a Mu`tazillī, it should not be forgotten that one essential aspect of this theology was attributed to Empedocles: "He was the first to apprehend the union between the meanings of the attributes of God: all lead to a unique reality" (al-Kīfī, 16).

From these statements it is possible to form an idea of what Ibn Masarra's doctrine was. The philosophy of the pseudo-Empedocles has been set out by al-Shahrastānī, al-Shahrazūrī (Rawḍa, Leiden MS 1888, 13r-14r; extracts given by Asin Palacios), Ibn Abī Uṣaybi`a (Tabābāt al-`aibāb), and al-Kīfī (15-16).

The mind, which inquires into philosophy is illuminated by it with a divine light. It contains a mystic conception of the truth: it comes itself to the aid of whoever seeks to acquire it. Indeed, philosophy produces in the soul the desire to depart from this world, in a spiritual rihā; for the soul does not belong here but is imprisoned in the body; being a spiritual thing, it comes under the influence of the principle of pure love, whereas the body, like all corporeal things, is subject to the action of discord (here we find the two opposing principles which are the two poles of the philosophy of the authentic Empedocles). But, joined as it is to the body, the soul is in an intermediate (mutawassit) position; using it as a starting point, it is possible to understand the two limits of reality. But in order to understand the soul itself, it is necessary for man himself to have a pure soul (jahira = ẓawāar, without blemish), which is born in Masarra's thought with the union of the soul and body (sawwara). The knowledge of truth is the result not only of the use of the appropriate faculty, it is the expression of the ontological level attained by the being of the person who knows it: it is in fact the old idea that like is known by like. Hence the need for a principle of asceticism. The order of being is parallel to that of knowing and even penetrates it. This is a theme of Plotinus: the soul is simple, with an absolute simplicity which is comparable to that of light (mūr) opposed to fire (mār), or to lux (dīṣya) opposed to lumem (daw).

The individual soul is a part of the universal soul (cf. Plotinus, Enneads, iv, 3, 1). It is derived from a fairly complex system of "processions". At the summit is the Prime Being (al-`Abī), from which all emanations, or manifestations, are derived by the Creator (al-`Abī), who is eternally his own Being-Himself (lam yata` wawsyata`a): he is pure Knowledge, pure Will, Generosity, etc. He is the absolute Cause (sīla fakāh), but not through a sort of pre-existing will; the effect is subordinated to the cause and comes about after it (laht al-sīla wa ba`dahā); it has no essential co-existence with it (ma`yYahoo b`i `l-ghāl). The Creator is the cause of all causes. His first effect (ma`yYahoo) is the 'Unsur, which Asin Palacios translates as primary Matter: it is the Source of the potential being and of the multiplication of beings, although itself simple and intelligible (cf. the system of the Khwān al-Salāf, in which primary Matter is also placed among the intelligible emanations, but on the last degree after the Soul). The second effect of the prime Cause, produced through the intermediary of the 'Unsur, is the Intellect (`Aql); the third, through the intermediary of the first two, is the Soul. All these emanations are simple (bāsāw`), After them come Universal Nature (al-Tāb`a al-khuliyya) and the bodies; the purely spiritual souls are derived from the rinds and raising them into the spiritual body of the lower nature. The instruments of this action (TCO Troietv) without having within itself the multiplicity which it creates); the Intellect acts in the same way on the Soul, and the Soul on Universal Nature. In this nature manifested in this world there then emerge, by a process which is not defined, "rinds" or bodies (fa-hasalat frushur), which resemble neither the Soul nor the Intellect, but which enclose a "pulp" (lubb or spirit. Here al-Shahrastānī's exposition is far from clear. In a first text he seems to mean that the "pulp" forms are derived by the last generation of the forms in the lowest degree of nature; these would be the corporeal forms. The Intellect "looks" at the purely spiritual forms which resemble them in (a`hara) the "pulp". As a result of this "look", there spread on the bodies (f`alayhā) noble, beautiful and brilliant forms which are the individual souls, parts of the Universal Soul and not effects emanating from it, that is to say ontologically distinct from the forms which are effects of fasaw. They are directed by the Intellect and, through them, it sorts out (tawmi) the "pulp", separating them from the rinds and raising them into the spiritual world to which they belong. We have therefore a sort of recovery by the Intellect of all the realities of a spiritual and intelligible nature which inhabit the body of the lower nature. The instruments of this recovery are the individual souls, which in this way receive a mission to rescue the forms. The corporeal forms or pulps are enclosed within the bodies; the purely spiritual souls are on the bodies. But in a second text it is stated that the vegetative soul is the rind of the animal soul, which in its turn the rind of the dianoetic soul (al-nafs al-manfīyya), and the rind of the poetical soul (sāliyya); conversely, that which is above is the pulp of what is immediately below it, so that pulp and rind have a relative value and the intermediate souls (animal, dianoetic) may be considered as rinds or as pulps according to the relationship in which they are
considered. There is thus a hierarchy of souls which fit inside one another so as to enclose themselves all within the primary matter of the material body (secondary matter). Only the noetic soul has the possibility of叛逆within the prison of the material body (secondary matter). Here it is not a question of either rebellion or of the seduction of the souls, but of a cosmic salvation. The tradition in the second text is that of the philosophers of nature and of the physicians. The third tradition is connected with the religious gnostics, perhaps with the Manichaean gnostics, and is better adapted to Islam: the conception of the prophet and of his role presages the doctrine of al-Fârâbî. The rational soul is misled by the rebellion of the lower souls and, in spite of its spirituality, is unable to escape by its own efforts. Thus texts 2 and 3 are complementary. Text 1 retains a separate character. But another difficulty arises: the theology of the pseudo-Aristotle (Dieterici, p. 10 of the Arabic text) attributes to Empedocles the idea that souls fell in this world as the result of a sin committed during their first stay. It is true that Empedocles referred to himself as an inspired prophet who had come down to earth to escape the divine wrath (Katharmoi, fragment 115), who had become a Master, capable by his learning of extricating souls from the "earthly envelope" (έξωκάλυπτον, fragment 148 = high?). In al-Shahrastânî, on the other hand, it seems that the fault is that of rational souls slain). Bound to the animal and vegetable, that is corporeal, powers. The incarnation is considered here as the reason for the sin, but there as the punishment of a sin, in a sense which recalls certain Hindu points of view.

Finally, the authentic Empedoclean doctrine of Love (mababba) which unites (ivâlî) and Hate (gâlaba) which separates (akhlûfî) is joined to this system. These are the two principles which go to make up the primary Matter, which marks spiritual beings with the seal of pure Love and corporeal beings with that of Hate. In the composite beings, the proportion of Love and of Hate illustrates their degree of spirituality or of materiality. It should be pointed out that the cyclic rhythm of the cosmos which in Empedocles results from the interaction of these two principles is absent in the pseudo-Empedocles. Here gâlaba, in spite of its name, is less a factor of war and hostility, which appears wrongly placed at the level of the first emanation, than the simple fact of the multiplication and division issuing from the One in a Platonic perspective.

As for Empedocles, E. Breher had already pointed out that the connexion between the Phusis and the Katharmoi is not very clear. But in the pseudo-Empedocles, a completely unorganized compilation, the incoherence is still greater if one is to believe the presentation of al-Shahrastânî. It is not known whether Ibn Masarra was equally incoherent, or whether he attempted to produce a more harmonious synthesis. He may have made use of this many-faceted system in order not to arouse the suspicions of the orthodox. From the extent to which he inspired Ibn al-'Arabi, it may be supposed that he produced at least the beginnings of an organized system. Nevertheless prudence is necessary when attempting to reconstruct, as Asin Palacios has done, Ibn Masarra's thought by reading the doctrine of a text not very long ago considered pseudo-Empedocles into the brief passages in which Ibn Hazm and Ibn al-SÂ`ûf refer to this thought.

(2) Passages from Ibn Hazm. (a) Fisâl (iv, 198): "Ibn Masarra was in agreement with the Mu'tazilis on kâdâr. He stated that the knowledge of God and His power are two created temporal productions (mâhdisâ'atun makhbâ'atun) and that God has two types of knowledge: the one which He created in the universe and by which He alone knows the knowledge of the universal realities which cannot be grasped by the perception of the senses (= ghabâb), for example the fact that there will exist infidels and believers; the second type of knowledge is that of individual truths, the knowledge of vision (ghahâda), for example which God has of the unfaithfulness of Zayd and of the faith of 'Amr ... Ibn Masarra recalls the Word of God: "Îhîm al-gâhîb wa l-sâ'îhâda (Kur'an VI, 73; XlII, 9; XXXII, 6). But this does not mean what he thinks. In fact, the obvious meaning of this text is that God knows what you do even if you hide it from Him. He knows that which you cannot perceive of what was, or shall be. The reason which led Ibn Masarra to support this thesis is that he really pushed the principles of the Mu'tazlis to their extreme conclusions. For there existed among them those who say that God knows continually that a certain person will never believe and that another will never be unfaithful; and who then give man the power to make the Word of their Lord lie, and to make null and cancelled that which has never ceased to exist. This is an abominable contradiction!"

(b) Fisâl (ii, 126): "Disahm b. Şâfîwân, Iklâm b. al-Hâkâm (or Ibn Masarra) ... states that God's knowledge is something other than God, that is it is produced in time and created''.

The first of these texts is centred on the idea of kâdâr, and of human freedom: in order to safeguard it, it is necessary that man's acts should not be the object of an eternal knowledge which would determine them right down to each individual detail. The ascetic life demands the liberty of the faithful, at least at the beginning, and even although the ecstasy of the mystic must one day reveal that it is God Who does all. The problem of God's knowledge of individual and contingent facts occupied Mu'tazil thinking (cf. al-Ashârî, Mabâdîîî al-Islâmiyyîm). The majority of these theologians admitted, with various shades of opinion, that God never ceased to know things before they existed. An exception should perhaps be made for Iklâm b. 'Amr al-Fuwâlî al-Shâbîdânu. It is thus easy to understand why Ibn Hazm points out that Ibn Masarra pushed the Kadar doctrine of the Mu'tazilis to its ultimate conclusions, by removing its contradiction. Thus we cannot support Asin Palacios when he attributes to Ibn Masarra on this point the thesis which was later to be that of Avicenna. He writes: "Avicenna, like Ibn Masarra ... states that God knows individual
beings as such, _intentione secunda_, that is to say in so far as they are included in their universal causes (76, n. 1). Ibn Masarra's thought rather to be related to that of Christian theologians such as Fonseca and Molina: the knowledge of which he speaks here is the _scientia media_, or _scientia visionis_ that Leibnitz, taking the same attitude as Avicenna and those Mu'tazilis whose inconsequence Ibn Masarra intended to point out, was to describe as _scientia pure empirica_, which is it impossible to imagine.

The second text is entirely in the tradition of Plotinus and of the pseudo-Empedocles. God, the first principle, cannot possess knowledge, for this would introduce in Him multiplicity. It is the Intellect which knows, with an intelligible and universal knowledge (the knowledge of the _ghayb_ in the first text). It is not clear whether the _scientia media_ is added simply as a necessary element in order to safeguard freedom, or whether it is an integral part of Ibn Masarra's pseudo-Empedoclean system. It may be that the first knowledge derives from the _'Alī_ and the second from the universal Soul. In Ibn al-'Arabi, the divine _ahadiyya_ does not recognize the individual believer who prays; he must therefore address himself to the _Rubūbiyya_. The _Rubūbiyya_ could be considered as corresponding to the universal Soul which sends the prophets, and, through them, the Law addressed to individual men, in which God reveals himself as Lord.

(c) In a third text, Ibn Hazm states that he obtained from a disciple of Ibn Masarra, Isma'il b. 'Abd Allāh al-Ru'aynī, the following opinion of his master: "The Throne is what rules the world (al- _muḥādab_ li 'l- _ālam_); and God is too great for there to be attributed to Him the act of actually doing something". By "thing" ( _ghayb_ ) should be understood a reality of the material world. Asín Palacios attempted to identify the Throne, in this context, as the first emanation, the _'Unsur_ of the pseudo-Empedocles. All the same, for Ibn al-'Arabi from whom he quotes, the Throne is the universal body. The matter remains doubtful.

(3) Passages from _al-Futūhāt al-Makhlīyya_ of Ibn al-'Arabi. (a) On the _'Arūq_. After a quotation from the Kur'ān (LXIX, 17), God, as in the book of the Throne, writes: "It has been reported to us as coming from Ibn Masarra, one of the greatest masters of the mystic way in knowledge, states and revelation, that the Throne which is carried is in fact the divine Kingship ( _Mulk_ )". That which follows may also be considered as the opinion of Ibn Masarra: "The _Mulk_ is reduced to the following: Body, Spirit, Nourishment ( _ghābāl_), Degree ( _mārtaba_). Adam and Isrā'īl are in charge of the Forms ( _suwar_); Gabriel and Muḥammad of the Spirits; Michael and Ibrāhīm of the means of subsistence ( _arsāḥ_); Mālik and Riḍwān of the Promise and of the Threat ( _Wa'd_ and _Wa'id_ )... The bearers of the Throne are those who are in charge of its government. They thus govern an elemental form or a nourishment for the elemental form, and a palpable degree which rules the elemental form and a spirit which rules the luminous form, and a nourishment for the elemental form and the nourishment of the sciences and of the knowledge for the Spirits, and a palpable degree which is made from learning". The reason why everything is doubled is that, according to _ḥādi_, there are four "bearers" for the life here below and four for the life after the Resurrection. It seems that in Ibn al-'Arabi it is a case not of two worlds, ontologically separate, but of two aspects of the same life such as the life of the body and the life of the spirit in the mystic light. This having been said, the developments which follow, even though they are inspired by some of Ibn Masarra's ideas, derive entirely from Ibn al-'Arabi's thought, and it is almost impossible to find in them anything which indicates the doctrine of his predecessor. It would be equally arbitrary to look for similarities with the philosophy of the pseudo-Empedocles. Ibn al-'Arabi's system is much more complex: he gives an important place to angelology; he gives a meaning to the Pen ( _balām_ ) and to the Tablet ( _lawḥ_ ), also to the _Kursī_. Nevertheless, at least in order to show side by side both the possibilities of concordance and their weaknesses the following table is (see p. 872) inserted.

It may therefore be considered, without having actual proof, that Ibn Masarra's doctrine belonged somewhere between the theories of the pseudo-Empedocles and those of Ibn al-'Arabi, modifying the still very metaphysical and speculative cosmology of the former in the direction of the mystical cosmology of the latter.

(b) The second text mentions Ibn Masarra only in connexion with an image, a "visualization" as H. Corbin puts it ( _L'Imagination créatrice dans le Soufisme d'Ibn 'Arabi_, 179). Ibn al-'Arabi writes: "... like the temple which is built on five columns there is a raised roof which covers the temple, and walls in which there is no door. Thus there is absolutely no means of entry for anyone. But on the outside stands a column attached to the wall. The intuitive mysteries touch it as they kiss and touch the Black Stone...". The rest of the passage is certainly an amplification by Ibn al-'Arabi. Asín Palacios considered that the five columns might be the five emanations of the pseudo-Empedocles. But this is impossible to accept, since this image is the symbol, visualized mystically, of the absolute divine Unity, the _Ahadiyya_: it is evoked in the chapter of the _Futūhāt_ devoted to the _tansih al-Tawbah_ which is expressed in God by this formula: _tanazza_ _'an_ _tansih hull munazzah_. The temple cannot therefore signify the emanations. Moreover, the description is clear: the temple is made of walls which form a part of this closed building; they do not support it from the outside. The roof, and probably also the wall, covers them entirely. This is the divine mystery. It is therefore not surprising that we are not told what the five columns mean. It may be that the only significance of the number five is the fact that it is an odd number: "God loves the uneven", says a _ḥādi_, and Ibn al-'Arabi recalls that this is the expression of his _Fardiyya_ and of his _Ahadiyya_, providing a further commentary on verse 7 of Sūra LVIII: God comes to add Himself to every odd number of creatures, as a fourth or sixth, in order to make it even, for He jealously guards His own unevenseness as a unique and incomunicable attribute. H. Corbin in fact, and rightly, is interested only in the even number which "alone is able to translate to us the Invisible". It is a matter of mysticism, not of cosmology.

After the description of the _Bayt_, Ibn al-'Arabi writes: "_wa-bad nababbā 'ašā Ḟāliḥa 'inu Masarra"_. The demonstrative _fāliḥa_ could refer to the Temple, to the image, or to the general fact of visualization, of the visualizing intuition ( _ḥāfṣ_ _suwar_). The expression _nababbā 'ašā_, which means "draw attention to", points rather to the second hypothesis. Ibn Masarra

- Asín Palacios, *Abenmasarra y su escuela, Orígenes de la filosofía hispano-musulmana*, Madrid 1914. (R. Arnaldes)

**IBN MĀSAWAYH, Abū Zakariyyā' Yūhanānī, famous physician of the 3rd/9th century, died in 243/857. His career was begun under al-Rashid and lasted until the reign of al-Muktafi. He contributed to the translation of Greek scientific works which provided material for the famous bahāʾ al-bīhkhā [q.v.].** But Ibn Māsawayh was known particularly in his capacity as court physician, attending the high society which surrounded the caliph. His patients regarded him in particular as a specialist on diet. He lacked neither patrons nor wealth: he approached ʿIBRĀḤIM b. al-Maḥdī, the unsuccessful claimant to the caliphate, who was interested in Greek science as well as in Arabic poetry. He was introduced also to the sons of al-Raṣḥīd, among them Abu ʿl-ʿAbbās Muḥammad. The extent and the rapidity of his rise to fame did not go without criticism. It seems probable that he owed it to the powerful family of the Burḥīṭyāshīb, which supplied four generations of physicians to the court of the caliphs (Ibn Māsawayh's father was said to have been an assistant to Burḥīṭyāshīb at Dīnūdsābūr). The career of Ibn Māsawayh, who became the friend and counselor of the great as well as their physician, showed striking similarities to those of his influential protectors: all of them were convinced Nestorians, who did not abandon their religion when they were at the caliph's court. These Nestorians, in spite of the differences of creed which separated them from Byzantium, could easily keep in touch with Greek learning; they possessed the "16" treatises of Galen as put together by the Alexandrians, and even show a desire to penetrate beyond the commentators to the original teaching of the master (perhaps because of the disputes between the Jacobites of Alexandria and the Nestorians of the former Persian empire). Also, in addition to the Hellenic origins of their science and to its Christian contributions, they came under the influence also of the school of Dīnūdsābūr [q.v.], an outpost of Hellenism in the Persian empire and one of the centres of that eastern syncretism which united the practical prescriptions of the East with the mystical speculation of ancient Greek paganism. This syncretism also aimed to unite, in one single group, disciplines as different as astrology, alchemy and medicine, in the name of the supremacy attributed to the pseudo-Plato, derived from the Timaeus or from the false Democritus of Abdera, under which masqueraded the lucubrations of Bolus.
of Mendes (cf. maxims quoted at the beginning of De complessionibus; see Thordike). In this science, as full of fantasy as it was of empiricism and practical observation of the objects with which Ibn Masawayh became acquainted, pharmacy tends to take precedence over purely medical research. The remedy, like the malady, is ordained by providence, in the very order of nature. The knowledge of the four "qualities", to which is added that of the properties and the natures as well as the procedures prescribed by the art, enables the physician to penetrate the secret of universal harmony. This harmony acts on the human body through the medium of the humours, which themselves derive from the qualities. Pharmacy takes into account not only the temperaments but also the "seasons" which, thanks to the qualities, have a clearly perceptible affinity with the humours. The somewhat superstitious idea of an "art", which alone is capable of directing the behaviour of the properties, and that of a cosmic development, of which man is merely a reflexion, was that which inspired the two Arabic works of Ibn Masawayh which have survived under his name: al-Nawādir al-tibbiyya, a collection of medical aphorisms, and the Kitāb al-Azhima, a sort of description of the various seasons of the year, based on the twin theories of the humours and the "qualities". His Latin works are much longer, and it seems that "Mesue" was held in high esteem in the West. As late as the 9th/10th century, one Petrus Gulosius, a physician of Amalfi, stated that to read him was as instructive as it was pleasant (1474). Although Leclerc and others have sometimes hesitated on the ground of the testimony of Leo Africanus (in an unidentified passage; this may be a confusion with Constantine Africanus) to identify Ibn Masawayh with the Mesue of the Latin texts, and although, in spite of similarities, it has sometimes been considered that there was an elder and a younger Mesue, it may be said that on the whole the Arabic texts preserve what may be called the philosophical part of the author's production, whereas the Western readers were interested mainly in the teaching of Ibn Māsawīh as an eminent medical practitioner. Before them, al-Rāzī, in his Continens, had already extensively commented on the Kitāb al-humaydi, which contains (in many passages, especially for practical criticism of those fighters who were too greedy for plunder (al-Tabari, i, 1330 and 1395). After these two battles and until the death of the Prophet very little is heard of him among the triumphs of life in Medina and the large numbers of new converts to Islam. It is likely that Ibn Māsawīh built up at that time, through his personal influence, a number of firm friendships. They were probably made among the Ansār, the converts from distant provinces or the zealots of humble origin. Tradition names an important Anṣārī, Sa'd b. Mu'āsh, the leader of the Aths who had joined the Prophet; the Yemeni Abū Mūsā al-Asghāri, and his constant companions Mīkād, Āmmār b. Yāsīr, Hūdāyfa b. al-Yāmān, Abū Dharr, Abu 'l-Dardā' and Salmān al-Fārisī (al-Sakhāwī, 345; Isāba, s.v.). On the Prophet's death, Ibn Māsawīh came more into the foreground. His help was needed during the revolt of the Arab tribes encamped around Medina (al-Tabari, i, 1367). He took part, during the reign of the son of Abū Bakr in the battle of Uhud (year 3), where he was entrusted with guarding the foot (ibid.,
After the conquest of 'Irāq, he received, according to Sayf b. 'Umar, some land in the district (6/657, ibid., 2370). He was present at the founding of Kufa by his patron Sa'd b. Abi Wakkās, but returned shortly afterwards to Syria, where he was entrusted with a military and diplomatic mission to Hims (ibid., 2392). When he returned to 'Irāq, following the armies which were fighting on the two fronts, he very soon ensured the link between the new Arab colony of Kūfa and the central government at Medina (ibid., 2393). In 21/642 he settled permanently at Kufa, in the quarter of the Ḥūqayyls (Tabari, iv, 460; al-Walid b. al-Ćāhīr reports that he chose to live in preference to that of the Kurayyīls (al-Ćabarī, i, 2842) to which his Zuhri patrons could perhaps have given him admittance. He nevertheless served as lieutenant to his companion 'Ammār b. Yāsir (ibid., 2637, 2645 and 2647).

Throughout this phase of his life, which marked the zenith of his political career, his duties were those of an administrator, an ambassador, and a missionary, which is quite in accordance with the high opinion which was held of his shrewdness, his learning and above all of his integrity. But once the important conquests were over he became less necessary. In particular he was the object of the scorn of the Muhādīrūn, Kurayyīls of noble birth who had formerly emigrated, like him, from Mecca to Medina. Sa'd b. Abi Wakkās publicly criticized his financial administration, because of his parsimony (ibid., 2812). In the year 29, he criticized the new governor of Kūfa, al-Walid b. Ťukba, whose scandalously pagan behaviour shocked him and led him to protest (ibid., 2842). In the year 30 there appeared the first signs of a break with the caliph 'Uthmān (ibid., 2835). He then fell into disgrace, in circumstances of which little is known. A public scene ensued between Ibn Mas'ūd and the caliph, who had him ill-treated. It is not known whether he died in Medina, under a sort of house arrest, or at Kūfa (Ibn Ḥanbal, no. 4432), where his teaching was highly esteemed (in the year 32/652-3); al-Ćabarī favours the first report, while the Ḥanbālī Ibn Kaṭhīr, the mystic Munawwī and the Isābīa favour the second. It is difficult to reconstruct Ibn Mas'ūd's teaching because of the unreliability and the tendentious nature of the sources. There are many differences between the recensions of the hadith: (1) Kūfānic reading. There are two points, not though well established and subject to controversy, on which Ibn Mas'ūd's version appears to differ from the majority of 'Uthmānī text: the order of the sūras and some variants in the readings. On the first point, which would be by far the more important if sufficient details were available, information is found in the Fīhrīst. Th. Nöldeke (Geschichte d. Q., ii, 15, 48, 113, 144, 163) and R. Blachère (Introduction au Coran, 174-5) reached the same conclusions: there is nothing, or very little, in these variants which has not been systematically introduced or which could be of great importance for the study of the religious ideas of the 1st century. In particular, the order adopted by Ibn Mas'ūd is far from being a historical one, since, if the details in the Fīhrīst are correct and if the recension we possess of Ibn Mas'ūd is authentic, he neglected to make use of the close knowledge which he as a faithful Companion possessed of the biography of Muhammad and of the particular circumstances accompanying each revelation (cf. the chronological list of al-Ya'kūbī, which may be based on 'Uthmān reminiscences, i, 24). This may have been due to a lack of a sense of sequence, to negligence, to literary prejudice or to the intentional falsification of a document which had a 'Shīa bias, to the advantage of Sunnism. The question, for lack of datable documents, is of course insoluble; and until now it has not been possible to verify the reliability of the statements in its external form, the Kūfānic corpus of Ibn Mas'ūd (cf. A. Jeffery, Materials for the history of the text of the Qur'ān, 20-113; E. Beck, in Orientalia, xxi (1956), 352-83, xxvii (1959), 186-205, 230-56). The variant readings preserved by Ibn Khāla- wayh (Muhāhasa fī šayrār bāb al-dhātī, see as examples, ii, verses 24, 48, 91, 102, 108, 126, 177, 220, 222; iii, 7, 105, 137, etc.) concern only points of detail. At the most, on reading this work, we may credit Ibn Mas'ūd with a sort of prosiness, a fairly free use of the grammatical forms of Arabic, and a certain taste for juridical definitions, which sometimes lead him to seek for supplementary statements of meaning. But nothing of all this, if political opinions were not involved, could cause any very serious harm to the received text of 'Uthmān, or even justify the fanatical attachment which Ibn Mas'ūd's supporters had to his system. Nöldeke goes so far as to doubt, for chronological reasons, whether Ibn Mas'ūd was really as opposed to the promulgation of 'Uthmān's text as is stated in the sources. But even if we assume Ibn Mas'ūd to have been in agreement with 'Uthmān on the essentials of the Kūfānic message, it is not certain that he was so on the commentary which should be given on it.
(3) Qur'anic exegesis. It is particularly in this field that there can be attributed to Ibn Mas'ud some cautious Shī'ī tendencies. There is no doubt that Ibn Mas'ud's way of thinking must have been modified, clearly related to that which prevailed among the Aḥl al-bayt than to the aristocratic mentality of ʿUṯmān's entourage. Reference is made to Ibn Mas'ud's favourite passages, those which he probably developed most fully in his teaching: for example, verse 40 of sūra V, which is regarded by the Shī'īs as confirming the dignity of the ināmūn as supreme "witnesses" and lieutenants of God (al-Kulīn, 271). It goes without saying that Ibn Mas'ud, as an exegete, was fairly strongly criticized by al-Ṭabarī, more closely related to that which prevailed among the Wezāmis. He often classes Ibn Mas'ud with Murra al-Ash'arī in an indeterminate category to which ṭafsīr gives the broad name of "Companions of the Prophet". In reality, this division is not that which in which Ibn 'Abbas was artificially included. Even more cautiously, Ibn Mas'ud is separated from his pupil Masrūk, who, like him, was often questioned on the realities of the next world. Naturally, Ibn Mas'ud's witness is indispensable for commentary on the sūrat al-Kahf (XVIII), with its account of the Seven Sleepers, the most important eschatological passage (Ṭafsīr, xvi, 23, 58). From these few details it may be seen fairly clearly what was the basis for Ibn Mas'ud's reputation among those who, during his lifetime, were his pupils and followers in exegesis. As a specialist in tašrīḥ (allegorical or interpretative commentary) he foresaw (and even the Sunnis admit this) the dissensions which were to rend the Muslim community (Iṣdhā). Having been a witness of the occasions when the Prophet had been inspired and of the immediate consequences of this inspiration, he was in possession of important secrets on the latter end of things and of mankind (cf. a popular form of exegesis with a magical use of sūras in Ibn Ḥanbal, no. 4004).

Thus there emerges, from sources which may fairly be regarded as impartial concerning him, a clear picture of Ibn Mas'ud's personality. Unshakeable in his loyalty to the Prophet and his family, he found it difficult to suffer the intrigues of the Meccan aristocracy, in which those who seemed to have admitted him completely into their tribe. By nature the friend of the lowly and the humble, he was probably the supporter of a more inward, mystical and more Shī'ī type of Islam, as seems to be indicated by the surprising harmony which is apparent between the texts which appeared under his name and the vicissitudes of his life. His conduct, his hādhīḥ and his exegesis are certainly those of a man who, as al-Munāwī has said, placed more hope on the next world than on that which he saw reflected in his contemporaries.

BIBLIOGRAPHY. Abu l-Ḥasan Yāḥyā b. ʿIsā b. ʿIsā, Al-Matruh, Abu l-Ḥasan Yāḥyā b. ʿIsā b. ʿIsā, Al-Matruh. Al-Matruh, was born on 8 Ṣaʿdī 592/July 1196 at Asyūt, which he left while still young for Kūf. This town was at that time one of the most important cultural centres of Egypt, and it was probably there that Ibn Matruh continued, or began, his education. It was there also that he met the poet Bahāʾ al-Dīn Zubayr (q.v.), who became his friend, and that he began to write his famous collection of ḥadīṯ under the name of Madīj al-Dīn al-Lanṭī, the governor of the town, to whom he dedicated two poems which show his lack of experience. It is said that Madīj al-Dīn appointed the young poet to an administrative post but that he did not remain in it for long.

Seeking a more propitious atmosphere, Ibn Matruh set out for Cairo in about 626/1229 and was presented to al-Ṣāliḥ Ayyūb, who was representing his father at the Ayyūbī court in Egypt. In 629/1231, Ibn Matruh accompanied al-Ṣāliḥ Ayyūb when he was appointed by his father commander-in-chief of the army which was to conquer Mesopotamia and fight against the Mongols and the ʿAbbasīd caliph. He remained continuously with him, taking part in the military and political struggles and travelling between the conquered towns of Syria and Mesopotamia.

After the death of al-Malik al-Kāmil (655/1258), the rivalry between the Ayyūbī rulers increased and Ibn Matruh could not avoid taking part in the struggles. It was to uphold the point of view of al-Ṣāliḥ Ayyūb, under whom he was inspector-general of the army, that he returned to Cairo in 637/1239 with Ibn al-Ḥjawāzī, the envoy of the ʿAbbasīd caliph, to restore agreement between the Ayyūbī princes. His stay there was brief and he very soon returned to Syria.

In 639/1241, Ibn Matruh was again in Egypt. Al-Ṣāliḥ Ayyūb, who had become sultan of Cairo, appointed him treasurer of the city. This appointment was the beginning of a series of high official posts at the sultan's court. In 643/1245, when al-Ṣāliḥ Ayyūb gained control of Damascus, he appointed Ibn Matruh as vizier of the town. During this period Ibn Matruh enjoyed great prosperity and the esteem of his entourage. But when al-Ṣāliḥ Ayyūb went to Damascus in 646/1248, he relieved Ibn Matruh of the office which he held and sent him with the troops to Hims. At this time Ibn Matruh fell from favour. Scarcely had these troops arrived in Hims when they received orders from the sultan to return to Egypt to defend it against the Crusaders who were preparing to attack Damietta. Al-Ṣāliḥ Ayyūb, now seriously ill, also returned to Egypt and Ibn Matruh followed him.

After the death of al-Ṣāliḥ Ayyūb (15 Shāban 647/23 November 1249), Ibn Matruh retired to his own home, where he composed a number of short penitential poems. He died in Cairo at the beginning of Shābān 649/end of October 1251. Ibn Khallīkān was present at his burial.

The diwān of Ibn Matruh was published in Istanbul in 1298; the edition, a mediocre one, contains about 806 lines.

His work consists mainly of eulogistic and of erotic poems, which do not generally reach the level of exalted poetry. His political and official duties prevented his devoting himself entirely to his art. Nevertheless, in some of his best poems his abilities as a poet are apparent.
The text discusses the life of Moses Maimonides, a Jewish philosopher and physician, and his contributions to the fields of law, medicine, and philosophy. Maimonides was born in Muslim Spain and later moved to the Muslim East. He is known for his work on the interpretation of Judaism, the *Guide for the Perplexed*, and his legal treatises, such as *Mishneh Torah*. The text also mentions his education, his influence on Islamic and Jewish thought, and his role as a physician in the Muslim world.
still barely freed from the surrounding paganism, is nevertheless the most perfect that can exist and must remain in force eternally. Such, without any doubt, are the main themes reduced to their simplest expression in the "Guide". It must be emphasized, however, that, by the method of composition of this book and the contradictions in it that he has deliberately allowed to remain, as well as by various allusions, Maimonides sought to make the enlightened reader understand that his own true opinions were far from coinciding with what a superficial reader would suppose. There are thus strong reasons for believing that he did not reject the thesis of the eternity of the world (indeed he openly maintains its perpetuity) and that, in the final count, God was identified, in his belief, with the law of nature, and therefore with a certain necessity (but, it is true, an intelligent and not a blind necessity). The strictly negative attitude from which he never departed in regard to astrology, the occult sciences and non-philosophic mysticism equally testify to his basic rationalism. It is certain, moreover, as can be seen from his "Code of Laws" and his "Treatise on the resurrection", that he tended to minimize the traditional eschatology of Judaism and that he taught unequivocally the eternal survival of the soul alone and the wholly spiritual character of punishment in the after-life. In the soul, it is, somewhat like Ibn Rushd (q.v.), his contemporary and in several respects his counterpart among Muslim thinkers, he thought that intellectual souls, separated from their bodies and justified here below by the constant exercise of practical and dianoetic values, would be united in the after-life with the Active intellect; this is tantamount to a denial, with varying qualifications, of the individual immortality of the soul professed in common by the three great monotheistic religions. In both these philosophers, however, these radical views co-existed, without any sign of internal conflict, along with a sincere adherence to their respective religious laws, which they regarded as the best conceivable formula for regulating men's social lives and creating the climate in which the common man could live in peace, under a code of conduct in which the philosopher, co-operating in the maintenance of this discipline and himself submitting to it in the scrupulous observance of its rites, could harmoniously unite the life of contemplation with the life of action. But it is not surprising that these views should have seemed too bold, or even scandalously heterodox, and we know that the Muslim scholar 'Abd al-Latif al-Baghdadi (q.v.), who knew Maimonides in Cairo, stated bluntly that the latter had written an heretical book for his co-religionists. Despite the precautions taken to prevent the "Guide" being circulated outside the Jewish community, there were at least partial and abridged transcriptions of it in Arabic script which, at the very least, were circulated among Christian intellectual circles in Egypt. On the other hand, there are almost no traces of any use of the "Guide" by Muslim scholars, and nothing is known as to the identity of the "Tibriz" who commented on the twenty-five propositions taken from Aristotle and placed at the beginning of the second part; this commentary has incidentally survived only in the Hebrew version.

As we have said, Moses Maimonides drew his greatest inspiration from al-Fārābī, but one can also detect al-Ghazālī (Tuḫāfūt) and Ibn Bāḍīḍa. His knowledge of the work of Ibn Rushd (whom he held in great esteem) was incomplete, and for the most part was acquired too late to be utilised in the writing of the "Guide"—

One final point: in regard to Islam, Maimonides adopted (and this is in no way original) an attitude at once of total refusal to admit the prophetic inspiration of that religion's founder, and also of a certain subtly qualified sympathy for the strict monotheism which characterizes it; evidently he rejected the attempts to discover passages in the Bible announcing the coming of the Prophet of the Arabs, just as he bitterly reproached the Muslims for suspecting the integrity of the scriptural text [see Aḥl al-Kītāb and Tahrīf].

Bibliography: Ibn Abī Uṣaybi'ā, 'Usayn al-ansābī, ii, 117; Ibn al-Kīṭīfī, Ta'rīkh al-buḫāmā', 317-9; M. Steinschneider, Die arabische Literatur der Juden, Berlin 1902, 199-221 (for the Hebrew versions, idem, Die Hebräischen Übersetzungen des Mittellaters..., Berlin 1893, passages indicated in the index, p. 1, 1060, s.v. Maimonides); Broekelmann 1, 644-66, S, 893-4; add Shahr asma' al-sībār (Explanation of the names of drugs), edited with translation and commentary by M. Meyerhof, in MIE, xii (1940); the main part of the bibliography down to 1950 is given in G. Vajda, Jüdische Philosophie (Bibliographische Einführungen in das Studium der Philosophie, 19), Berne 1950, 20-4; the principal sources of information in particular those of I. Halkin, A history of midieval Jewish philosophy, Philadelphia 1916 (reprinted several times), J. Guttmann, Die Philosophie des Judentums, Munich 1933 (English trans., Philosophies of Judaism, London 1964) and G. Vajda, Introduction à la pensée juive du moyen âge, Paris 1947, include a chapter on Moses Maimonides; of a complete bibliography arranged according to subjects, by Jacob I. Dienstag, the only part to have appeared is Moses Maimonides, A topical bibliography, in Studies in Bibliography and Folklore, vi, Cincinnati 1966, 12-29 of the Hebrew part of the fascicule,—Texts published since 1950: Moses Maimonides' Epistle to Yemen. The Arabic Original and the Three Hebrew Versions edited... by Abraham S. Halkin and an English Translation, with an introduction (particularly important for the relationship of Maimonides' thought with Greek philosophy and Arab philosophy) by the translator. Of recent articles on Maimonides' thought, we mention only A. Altmann, Essence and Existence in Maimonides, in Bull. of the John Rylands Library, xxxv (1953), 294-315; M. Fakhry, The antinomy of the eternity of the world in Averroes, Maimonides and Aquinas, in Le Musée, xvi (1953), 139-55; some points of detail on Maimonides' biography: B. Lewis, Maimonides, Lionheart and Saladin, in Erets-Israel, vii (1963), 70-5; on the circulation of the Guide: G. Vajda, Un abrégé chrétien du "Guide des Égards", in JA, 1960, 115-36; idem, in JA, 1965, 43-50; finally, see S. W. Baron, A social and religious History of the Jews, vii, New York 1938, 249-52 and 259-62; M. Mohagheh, Maimonides against Galen/Radd-i Ibn Maimon and Avicenna's Ghaybat (Tuḫāfūt) and Ibn Bāḍīḍa, in Aḥl al-Kītāb and Tahrīf, kādā-i adabyāt va-ūlāmī-i insānī, xv (1967). Maimonides' Arabic has been the subject, among
IBN MAYYĀDA, ABU SHARĀḤIL (or SHURĀḤIL) AL-RAṂMĀḤ B. ABBĀD (Yazīd in Ibn al-Muʿādhhdhal b. Abī Sulma) AL-MURRI, of the Banū Murra b. Ḥadhramawt, is a Bedouin poet who lived in the Ḥijāz and in Najd from the reign of Hishām b. Abī Sulma to the time of the early ʿAbbasids; he produced a eulogy of the Khalif Walid b. Yazīd (125-6/743-4), to whom he paid his first panegyric. His love poetry, of the Madīfr, Ḥidādī, Ḥādī, Ṣamī, Ṣamīḥ, is praised by the critics; it is in general praised by the critics; it is in particular, one of which a few verses survive. His thirty-five compositions the model for his successors. The poet however claimed to have been Persian, boasting of belonging both to the line of the Chosroes and to the Arabs, his father being a descendant, through his grandmother, of Zuhayr ibn Khathīr and Nashīt, both of Persian origin. It is said that he was well-groomed. His poetry consists chiefly of nasīḥ, ḥijāzī, and madīḥ. His love poetry, of the Bedouin type and considered by Ibn Sharāḥil (ed. and tr. Pellat, 27) as superior to that of al-Kumayy, Nūṣayb or al-Ṭīrmāmāḥ, is addressed to several women, both free and slave, but especially to one called Umm Ḫaḍbar, who was finally married by her father to a Syrian. It was she who was the cause of an exchange of epigrams, nasāḥād, between Ibn Mayyāda and another poet, Ḥākam b. Ṭaḥṣīl b. Khudrī, but the ḥijāzī of al-Rammāḥ alludes also to other persons; it is said, moreover, that he was inclined to malice and enjoyed exchanging insults with those with whom he came into contact, without however descending to scurrilities.

Ibn Mayyāda’s poetry was long esteemed first to the Umayyad governor of Mecca, ʿAbd al-Wabīb b. Sulaymān. ʿAbd al-Malik, and especially to al-Walīd b. Yazīd (125-6/743-4), to whom he paid several visits; a poem much praised by the critics is a bāʿṣyya in which he lauds the generosity of the caliph, who had rewarded him with a hundred camels and a slave to look after them, a ḍāʾīrīya and a horse. On the death of al-Walīd, he wrote his funeral eulogy in a márṭiyya of which a few verses survive. His relations with the Umayyads did not prevent him from addressing his praises to the ʿAbbāsids, particularly since under the former he had been beaten for having in one verse given the family of the Prophet precedence over the Banū Marwān; thus he produced a eulogy of the ʿAbbāsids governor of Medina, Dīṣfār b. Sulaymān, and even attempted to gain the favour of al-Ḥanābal, but he did not renew the attempt, since the caliph had not the same interest in poetry as al-Walīd b. Yazīd.

He is accused of frequent lapses (ṣabat) in his poetry, but it is in general praised by the critics; several poems have been set to music, and the philologists cite a number of his verses as ẓawāqīd, Ibn Mayyāda being considered as one of the last of the classical poets, of those who "set the seal on" poetry.

IBN MAYYĀDA — IBN AL-MUʿĀDHHDHAL

IBN MISDJAH, SAʿĪD ABU ʿĪSĀ OR ABU ʿUṬMĀN, one of the great singers of the early Ḥijāzī school of Arabian music, was born in Mecca and died there in the reign of Walīd I (86-96/705-15). He was a half-breed of African descent (masāʾil adawwā). He was inclined to malice and enjoyed exchanging insults with those with whom he came into contact, without however descending to scurrilities. His love poetry, of the Madīfr, was born in Mecca and died there in the reign of Walīd I (86-96/705-15). He was a half-breed of African descent (masāʾil adawwā). He was inclined to malice and enjoyed exchanging insults with those with whom he came into contact, without however descending to scurrilities. His love poetry, of the Madīfr, but his ḥīdādī of al-Rammāḥ alludes also to other persons; it is said, moreover, that he was inclined to malice and enjoyed exchanging insults with those with whom he came into contact, without however descending to scurrilities. His love poetry, of the Madīfr, but his ḥīdādī of al-Rammāḥ alludes also to other persons; it is said, moreover, that he was inclined to malice and enjoyed exchanging insults with those with whom he came into contact, without however descending to scurrilities. His love poetry, of the Madīfr, but his ḥīdādī of al-Rammāḥ alludes also to other persons; it is said, moreover, that he was inclined to malice and enjoyed exchanging insults with those with whom he came into contact, without however descending to scurrilities. His love poetry, of the Madīfr, but his ḥīdādī of al-Rammāḥ alludes also to other persons; it is said, moreover, that he was inclined to malice and enjoyed exchanging insults with those with whom he came into contact, without however descending to scurrilities. His love poetry, of the Madīfr, but his ẓawāqīd, of Arabic music, was born in Mecca and died there in the reign of Walīd I (86-96/705-15). He was a half-breed of African descent (masāʾil adawwā). He was inclined to malice and enjoyed exchanging insults with those with whom he came into contact, without however descending to scurrilities. His love poetry, of the Madīfr,

Bibliography: Aḥkām, index and especially ii, 276-84 (based mainly on the Aḥkām Saʿīd b. Misḏijāḥ by ʿIṣāk b. al-Mawṣillī, see Aḥkām, xiv, 11, 26 and Ḥifīrīṣ, 141, 3); a Kūbī ʿIṣāḥ Misḏijāḥ by Abī Ayyūb al-Madīnī is mentioned in Fīhrīṣ, 148, 6. H. G. Farmer, A history of Arabian music, 69 t., 77 f. (J. W. Fück).
`Abd al-Šamad's brothers Ahmad, `Isa and `Abd Allah also rank as poets, but their output was very scanty, according to Ibn al-Nadim (ibid.), the first mention of `Abd al-Šamad, Ahmad and al-Mu'adhhdhal, followed the classical tradition, and some of his poems have been preserved, but he impresses mainly by his eloquence and his piety, which was in contrast to the moral laxity of `Abd al-Šamad; he appears to have enjoyed a certain renown in a milieu that was far removed from poetry: indeed, while the Aghdnl [q.v.], his piety, which was in contrast to the moral laxity of `Abd al-Šamad, whom al-Marzubanl [op. cit.] considered him as the poet (Zahr, 9-10; F. Bustani, Dirat al-ma'drif, i, 90; Husri, 'Umda, i, 175, 200, 259, 312; Ibn al-Shādīlārī, Hamāsīa, 91, 198, 224, 241; Ps.-Djahiz, al-Maḥbūsī wa l-maṣūdi, 383; Ibn 'Abd Rabbiḥ, 'Ibīd, Cairo 1940, ii, 144, 218, iii, 244, vii, 53; Ibn Rasīlī, 'Umda, i, 90; Ṣahrī, Zahr, 651-6; idem, Dījam, 310; Sirāfī, Nakhs-yusiniz, 33-5; `Askārī, Sinā'atayn, 231, 234, 455; idem, Diwān al-maṭāmīn, index; Thālālī, Thāmār al-bulbūl, 217; Āmidī, Muwāsāna, Istambul 1287, 136; Kutubī, Fawdh, i, 575; Nuwayrī, Nikāyā, iii, 90; Ghazzūlī, Mādīnī, i, 9-10; F. Bustānī, Dīvrat al-maṭārīf, iv, 52; Ch. Fellat, Mu'een, 168; idem, Ibn al-Mu'adhhdhal wa-ṣahrūr (forthcoming). (Ch. Fellat)

IBN AL-MU'ALLIM [see al-Muufīd].

IBN AL-MUBĀRĀK. `Abd Allāh b. `Abd al-Rajmān al-Ḥansālī (188 or 1175-1241 or 737-781/797), a merchant who combined his business a love of learning. He travelled widely, studying under many authorities, including Abū Ḥanīfa. Besides his large collection of traditions (20,000 according to Ibn Mu'īn), his interests included matters legal, religious and literary. He said that he heard traditions from 4,000 ṣayyids and transmitted from 1,000. Muslim has some of his traditions in his Saḥīh. Ibn al-Mubārak studied fihā with Sufyān al-Thawrī and Mālik b. Anās, whose Muwaṭṭa' he transmitted. He was a pious man, devoted to ascetic practices. He made the Pilgrimage and engaged in ḥajjāt in alternate years. He died at Hit on the Euphrates after an expedition.

IBN AL-MU'ALLIM [see al-Muufīd].
shortly afterwards he was created Director of Finance ('amli al-khardd) for Damascus and Urdunn and went to Damascus (for a poem of his praise of the city, see Yākūt, iii, 243). In 247/861 he took over the same office in Egypt; he introduced a number of new taxes (muhāda) such as one on cattle fodder (muhūs) as well as a monopoly on caustic soda (C. H. Becker, Beiträge, 144 ff.; cf. A. Grohmann, Aperçu..., 74 ff., discussing the papyrological evidence). Hence he became the most hated director of finances for centuries, but the most powerful man of his time in Egypt. When in Ramadan 254/September-October 868 Aḥmad b. Tūlūn entered al-Fustāṣ as the newly appointed governor, Aḥmad b. al-Mudabbir attempted to win him over by bribing him with valuable gifts, but in vain as Ibn Tūlūn rejected them. The struggle for power that now began between the two rivals was fought out in Egypt as well as at the court of Sāmarrā. Aḥmad b. Tūlūn emerged triumphant; he was able to overthrow Aḥmad b. al-Mudabbir, to imprison him, and to confiscate his wealth. In 258/872, at the latest, he was set free and transferred back to Syria as director of finances for Damascus, Urdunn and Palestine. When Aḥmad b. Tūlūn occupied Damascus, in 264/877, Ibn al-Mudabbir was after a short time again arrested (Ibn 'Asākir, ii, 62), sentenced to pay a muṣ̄ādara of 600,000 dirhams, sent to Egypt and kept in prison until his death. According to the Fihrist Aḥmad b. al-Mudabbir was the author of an unfortunately lost K. al-Mujālāsa wa l-muṣ̄ādara; some of his poems and anecdotes concerning him have been preserved in the Akhūn, the Murūǧi, the Taʾrīḫ Dimashq, etc.

(2) Abū Isḥāq (Abū Yusuf) ʿIbrāhīm (d. Shawwāl 279/December 892-January 893) was in favour with the caliph al-Mutawakkil and numbered among his boon companions (mudāmāb), so that he exercised great influence over the caliph and the affairs of state. The waṣīr ʿUbayd Allāh b. Khākān overthrew him, probably together with his brother Aḥmad, in about 240/855. ʿIbrāhīm was thrown into prison, where he remained for the next years; the circumstances of his liberation are not known. Some time later he was appointed tax-collector of the province of Akhwas, and it was probably while holding that position, brought to Basra, and put into prison there. He escaped by breaking through the prison wall, an exploit mentioned by al-Masʿūdī, ed. M. Kurd, ed. M. Kurd (Ibrahim only); Ibn al-Aṣākir, index; Yaʿkūbī, ii, 516, 599, 614.5; Aḥmad b. al-Mudabbir, ed. I. 103 f. 326 f. (Ibrahim); G. Gabrielli, Nota bibliografica, in Rand. Lit., xxii (1912), 373.

IBN MUDJĀHID, AḤMA D B. MŪṢĪ Ṣ. AL-TAʿRĪṢ ABū BAKR AL-TAMMĪ (245/859-324/936), was born in Bagdad and seems to have spent his life there. He is noted for his study of the various Kurʾān readings, for the large number of pupils who attended his classes, and for writing the first book on the seven Kurʾān readings. Al-Khaṭīb al-Baghdādī calls him a reliable authority (thāla maʿman), and quotes a statement made in 286/899 by the grammarians Aḥmad b. Yahyā to the effect that at that time no one knew more about the Kurʾān than Abū Bakr Ibn Mūḍāḫīḥ. Commentaries on his book about the seven readings were written by AbūʾAūlā (Al-Fārīsî (d. 377/987) in three volumes, and by Ibn Khālawayh (d. 370/980). ʿHādīdī Khālīfā (d. 1067/1657) says he possessed both of these and the text. The Fihrist ends its short notice by naming a number of books written by Ibn Mūḍāḫīḥ. As a result of his representations he was influential in persuading the authorities to proscribe the Kurʾān versions of Ibn Masʿūd, Abūyā b. Kaʿb and Abū ʿAlī b. Ṭālib. Bibliography: Fihrist, 31; al-Khaṭīb al-Baghdādī, Taʾrīḫ Bagdadī, v, 144-8 (no. 2580); al-Dīzawī, Ghāybat al-maḥyā (Bibl. isl. vil.) iii, 139 (no. 663); ʿHādīdī Khālīfā, ed. Fliigel, no. 2004; Ibn al-Balāq, al-Maṣāḥif, vii, 118 f. (Abū ʿAlī); Al-Aghāna, La passion d’al-Hallāj, i, 240-45; G. Bergsträsser and O. Pretzl, Geschichte des Qorans, iii, 210-13; Brockelmann, i, 203, s. i, 328. (J. Robson)

IBN AL-MUDJĀWIR, DIJĀMĀL (NĀḤĪM) AL-DIN ABū L-FATH YÚSūF b. YAʿKĪB MŪHMĀD AL-DHAYBĀNĪ AL-DIMASPīR, reputed author of Taʾrīḫ al-Mustāwhir (or al-Mustānisīr), an important source for the geography, history, and customs of western and southern Arabia in the early part of the 7th/12th century. Yūsūf b. Yaʿkīb, a native of Damascus said to have been of Persian descent, was born in 601/1204-5 and died in 690/1291. The brief biographical notices of him give little information on his career. The author of Taʾrīḫ al-Mustāwhir does not tell enough about himself to satisfy our curiosity. He was in India in 618, but he does not say how he got there or what he was doing there. At the end of 618/1222 he sailed from India to Aden. He visited Zabīd at least three times, in 619, 624, and 626; he was in Mecca in 621 and in Djuḍḍa both before and after the destruction of the tomb of Eve in that year. The only other place in Arabia he mentions having been in is the port of Ghulāfika in the Yemen. At no point does the author say what his business or pleasure in Arabia was. The latest date in the
narrative is Dhu 'l-Hijja 626/1229. Internal evidence indicates that the work was composed not long thereafter.

The usually accepted identification of Yusuf b. Ya'qūb b. Muhammad Ibn al-Mujawir al-Dimashqī as the author of the book would appear rational, were it not for a single sentence, on page 252 of O. Löfgren's edition (1951-4), in which the author speaks of "my father Muhammad b. Mas'ūd b. 'All b. Ahmad Ibn al-Mujawir al-Baghdādi al-Naysābūrī. A number of years before this edition came out, M. Jawād, who had noticed this sentence in the Paris MS of the work, disputed the attribution of authorship to Yusuf b. Ya'qūb. Jawād also remarked that it was hard to believe that such a book could have been written by a man in his early twenties, who for the remaining sixty-odd years of his life had nothing more to set forth on the subject. To Jawād's reservations may be added the fact that Ibn al-Imām in his obituary of Yusuf b. Ya'qūb says that he had a special interest in the history of Baghdad, but makes no reference to a corresponding interest in Arabia. Ibn Taghribirdi describes Yusuf b. Ya'qūb simply as a transmitter of hadīths.

Abū (Bā) Makhrama (d. 947/1540), whose writings on southern Arabia have also been edited by Löfgren, cites Ta'rikh al-Mustabsir a number of times, but he never names the miscellaneous information as the author; his standard reference is to "al-Mustabsir in his history". (There is no information on the life of Ibn al-Mujawir in Löfgren's 260 pages of biographies for southern Arabia by Abū Makhrama, al-Djanadi (d. 732/1332), and al-Ahdal (d. 855/1451)).

Ta'rikh al-Mustabsir, despite its title, is not so much a history as a collection of itineraries and a potpourri of miscellaneous information on the towns and tribes of western and southern Arabia and the life of the people there. Fragmentary historical data of some value are given on the later Ayyūbīds in Arabia, the early Rashīds of the Yamān, and the Katāūd Sharīfs, who had established themselves in Mecca just before the author's appearance on the scene. Much more space is allotted to routes between cities, with the length of each stage given in parasangs (farsakhs). The geographical material begins in the north with the environs of Medina, though there is no description of the Prophet's city itself. Details on Djudda, Zabid, and Aden are particularly copious, and stylized maps of all three, as well as similar maps of various other places, are provided. The southern coast of Arabia is treated more extensively than in most Arab geographers, as far around as al-Khāṭīb, Muskāt (Maskat), and Shūbār on the Gulf of 'Umrān. The only site in the Persian Gulf dealt with in great detail is the island of Kāys (Kīsh). The book closes with a short paragraph on al-Bāhrāyin, which was said to have 360 villages, with all but one being Imāmī (Twelver Shi'ī). The figure 360 for this small island is manifestly absurd.

The book contains an abundance of fascinating lore on Islamic sects, marriage customs, slavery, weights and measures, coins, cloth, wine, agriculture, shipping, and customs duties. Legends about the Hindu monkey-god Hanuman seem to put Aden in the place of Ceylon. Some of the stories are no doubt apocryphal, but many have an air of authenticity. The author derived much of his information from informants on the spot, both Bedouins and townspeople. He drew to a considerable extent on the works of earlier writers, such as al-Fārisī, the historian of Mecca, 'Umrā, the historian of Zabīl, and the geographer Ibn Hawūqal, who are sometimes quoted without acknowledgment.

The author of Ta'rikh al-Mustabsir obviously knew a great deal about western and southern Arabia. At the same time, his ignorance of the rest of the Arabian Peninsula was abysmal, as is indicated by his repeating the report he heard from a Jewish goldsmith in Aden about the Saturday River (Nahr al-Sābit) just beyond the Ḥijāz, a river of sand that flowed strongly for one day out of each week, on the other side of which lived a hundred million Jews descended from those who had fled from Khaybar and Wādi al-Kurā in the time of the Prophet. The author also retails with a straight face in half a dozen places information of a historical or geographical nature revealed to him in dreams (he is more precise in dating his dreams than in dating almost anything else in the book). The author demonstrates his accomplishments as a poet by quoting snatches of his own verses in Arabic and Persian.

The work was first brought to the attention of the Western world by A. Sprenger, who relied on it heavily for his exposition of routes in Arabia. F. Hunter in his book on Aden included a translation by S. B. Miles of a long passage in Ta'rikh al-Mustabsir. C. de Landberg printed a number of excerpts from the Arabic text with translations in French. O. Löfgren made a translation of material on Aden. Before editing the complete work, Löfgren published the section devoted to Aden in his Arabische Texte (1936), which should still be consulted for its elaborate notes.

The two candidates for the authorship of Ta'rikh al-Mustabsir are not the only men on record bearing the name Ibn al-Mujawir. Another was Nadim al-Din Abu 'l-Fath Yusuf b. al-Hasayn Ibn al-Mujawir al-Shirāzī, whose father had come to Damascus from Shirāz. As a teacher of boys in Damascus, Yusuf attracted the attention of Saladin, who appointed him tutor to his son al-`Azīz Uḥmān. When al-`Azīz became sovereign of Egypt, he made Yusuf his vizier. This Yusuf died in 601, the year of the birth of Yusuf b. Ya'qūb Ibn al-Mujawir. The family of Banū 'l-Mujawir in Damascus was said to have received its name from an ancestor who preferred residing in Mecca (Muhammad b. Isādūn)ara) to the earthly paradise of the Syrian capital.

IBN MUFARRIGH, Abū `Uthmān Yāzn b. Ziyād b. Rābī`a b. Mufarrigh al-Himyarī, minor poet of Beta in the 1st/7th century. There are doubts about his Himyaric origin, and it is possible that his ancestor Mufarrigh was a slave. Ibn Mufar-
righ's date of birth is not known, and the earliest traditions about him tell of his romantic attachment to a Persian woman, Abi Abl in approximately the years 36-40/657-66. Later he was attached to 'Ubayd Allah b. Abi Bakra [q.v.]. and Sa'id b. 'Uthman b. Affân, but his career took a completely different direction from the time when he decided to follow 'Abbâd b. Ziyâd [q.v.] to Sijjîstân, in 54/674; their relations very soon became embittered, and the poet spent some time in prison; after his release he fled to Damascus, where he spent some time in prison again, and was released only on the intervention of the Yemenis of Damascus. Yazîd b. Mu'awiya finally granted him his favour and, after obtaining the pardon of 'Ubayd Allah b. Ziyâd, he was permitted to return to Kirkûn. In 64/684, on the death of Yazîd, Ibn Mufarrigh returned to his native town, from which 'Ubayd Allah had been driven out, thus taking an easy revenge. He died in 59/689, during the 'Abd Allah b. Ziyad's career that took a completely different direction from the time when he decided to follow 'Abbâd b. Ziyâd [q.v.], who found an original way of punishing him: after forcing him to swallow a purgative, he had him mounted on a donkey to which he had tied a sow and a cat, and this grotesque procession was made to proceed through the streets of the town. Ibn Mufarrigh was then sent back to 'Abbâd, who put him into prison again, and was released only on the intervention of the Yemenis of Damascus. Yazîd b. Mu'awiya had been somewhat embroidered by legend, his life was nevertheless full of incident and this is reflected in the poems which have survived. Although he was probably originally destined to lead the uneventful existence of a provincial poet, whose chief preoccupation would be to secure for himself the bounty of the local aristocracy, he became, through the pressure of unforeseen circumstances, a sort of polymathic poet whose works, more valuable for their content than for their form, owe their partial preservation to the attacks which they contain against the family of Ziyâd and, indirectly, against the Umayyads. This opposition, which was the result of the bad treatment he received rather than of a systematic hostility, is nevertheless the sign of a belligerent temperament, which is more evident in the poems' descendants to take sides in an even more definite fashion; in fact his son Muhammad was to become a Khârijî, and his grandson, Ismâ'îl, became notorious as a Shi'i poet under the name of al-Sayyîd al-Himyarî [q.v.].

The Divan of Ibn Mufarrigh does not seem to have been assembled, and there remain of his work only about 300 verses scattered in works of adab, grammar and lexicography (for he is cited as an authority, particularly on the use of khabîd for al-ladî, in fragment xxxi, 1, and on the name of his mule, 'Adas). The love poems of his youth and the panegyrics of the invectives launched against his enemies on the other hand contain some original expressions which delighted the population of Başra, which was hostile to 'Ubayd Allah b. Ziyâd; they contain also three hemistichs in Persian, which prove that this language was well known in Başra. Finally it should be mentioned that al-Aṣma'î is said to have accused him of having invented the biography and the poems attributed to the Tubba' [q.v.]; but nothing certain is known about this.

IBN MUFLIH, SHAMS AL-DIN ABU 'ABD ALLAH MUHAMMAD B. MUFLIH AL-MARDISHI, Hanbali juristconsult who stands at the head of a large family of jurisconsults, the last of whom to die in the first half of the 11th/17th century. Shams al-Din married the daughter of the Hanbali Kâdi 'l-kudât Djâmî al-Din al-Mardâwî (700/1301-1369) and, according to his biographers, had seven children from this marriage, both boys and girls. The genealogy which emerges from the biographical sources available to us shows that he had five sons and that the family died out in 1038/1628 (or 1035) with Shihâb al-Dîn Ahmad, who lived to be 99 years of age and whose son 'Abd al-Latif (d. 1036/1626, or 1035) died during the lifetime of the father. (For father and son, see Şattî, Muhhâsar tabâbât al-kâmîbîsî, Damascus 1339/1921, 2 vols., index; for the latter's grandson is the last known Burhan al-Dîn, entitled al-Maksad al-arshad fi tāriqat al-ṣâbîb, has been preserved in manuscript (Berlin 4399) and his Kitâb al-Furû', 3 vols., 1339/1921 is one of the most important Hanbali works for the establishment of the true legal doctrine of Ahmad b. Hanbal. After a life of writing and teaching in Damascus in three Hanbali madrasas, al-Djâwîzîyî, al-Šâhîbîyâ and al-Ūmâriyî, he died in 765/1362.

The sâbîbîyâ and al-šâhîbîyâ names among the descendants of Shams al-Din is likely to lead to confusion, especially as regards those named Burhân al-Dîn Ibrîhîmî, of whom there are five.

Burhân al-Dîn Ibrîhîmî, who died in 803/1400, is the son of Shams al-Dîn and has the additional 'âbab of Tâkî al-Dîn. He held the post of kâdi 'l-kudât and wrote a history of the Hanbali school, Tabâbât asbâb al-Imâm Ahmad, the greater part of which is said to have been destroyed in a fire. This is not the work used extensively by Nu'aymi in his Dâris fi ta'rikh al-madârisî. (On him, see Ibn al-Imâd, Shadhartâ, vii, 22-3). This Burhân al-Dîn had a grandson (great-grandson of Shams al-Dîn) of the same name, who died in 917/1511 (see Shadhartâ, vii, 77). A third Burhân al-Dîn was the grandson of Shams al-Dîn and died in 876/1471 (see Shadhartâ, vii, 321). Another great-grandson of Shams al-Dîn was also a kâdi 'l-kudât like his ancestor, the first Burhân al-Dîn, and like him he wrote a history of the Hanbali school, entitled al-Mâsbad al-arqad fi târiqat asbâb Ahmad, used extensively by Nu'aymi in his Dâris (see Shadhartâ, vii, 328-9; for Nu'aymi, see Bibliography). The latter's grandson is the last known Burhân al-Dîn Ibrîhîmî and died in 966/1561. One of the last Ibn Muflihs, Akâm al-Dîn Muham- mad ibn Muhammad al-Mardâwî (926/1520-969/1562) who dealt with historical tracts dealing with Damascus and Cairo,
including an abridgment of Abū Shāma’s *Akbhār al-dawlatayn* (see *Shāfi‘ī, Mukhtāsr, 93-5*).

**Ibn Mufrih, Abu l-Khattāb ‘Abd Allah b. Muhammad Husayn b. ‘Ali, uncle of al-Mansur, whose brother Sulayman protesting in vain to the caliph at the murder of their mother, its criticism of religions and its defence of religious but by political and personal causes. Ibn al-Mukaffa is said to have been ordered by his patrons to draft the text of the *aman* which the caliph al-Mu‘āwīya had consented to grant to their brother ‘Abd Allāh b. ʿAli, who had revolted; and the secretary had performed this task with such zeal, hemming in with such binding commitments and such solemn oaths the promise of pardon to the rebel which the caliph himself was to sign, that it aroused the resentment of the suspicious al-Mu‘āwīya. He gave orders for the removal of this presumptuous secretary, and the new governor of Baṣra, Sufyān b. Mu‘āwiyah al-Mukhail, who himself had longstanding personal grievances against Ibn al-Mukaffa, took this opportunity to exact the most cruel vengeance: Ibn al-Mukaffa was taken to the governor’s palace and put to death under appalling torture, his patrons ʿĪsā and Sulaymān protesting in vain to the caliph at the murder of their mother). It seems that a son of his, Muḥammad was, later one of the caliph’s secretaries, and it is to him that should be attributed the versions (from Greek or Syriac into Arabic) of certain books of logic of Aristotle (or rather of ancient commentaries on these books) traditionally connected with the more famous name of his father.

Though he died at the age of thirty-six, Ibn al-Mukaffa left behind him a considerable quantity of translations, and original works, only part of which has survived, and even that in a form that is somewhat uncertain. We consider first his version of the *Kułla wa Dimma* (q.v.), the celebrated collection of Indian fables going back to the *Pantlantana* and the *Tantrākhyāyaka,* which this writer turned into Arabic from the Pahlavi version made in the time of Chosroes Anōḵgarwān. Without dwelling on the history of this well-known work, of which the Arabic version of Ibn al-Mukaffa is said to have been the link in its migration to the West, we merely recall that we possess no reliable and authentic text of this version, such as must have been when fresh from the pen of this its first translator, and it appears to be impossible that it can ever be successfully reconstructed: the earliest manuscripts available (that of Aya Soya of the 7th/8th century, reproduced by the *Azāzīk at least what part was the work of the Arabic version of Ibn al-Mukaffa in its entirety. Attempts have been made to discover at least what part was the work of the Arabic version of Ibn al-Mukaffa. The translator in his treatment of the material, and in the additions and modifications that he may have introduced into the Pahlavi text (of which we can form some idea, thanks to the ancient Syriac version of the 6th century A.D. which has been preserved); it has been claimed that the hand of Ibn al-Mukaffa may be seen particularly in the celebrated autobiography of Dūrūz (the translator from Sanscrit into Pahlavi) placed at the beginning of the work, with its criticism of religious and its defence of
human reason. A passage from al-Blrunl (India, 76) indeed leads one to attribute to the Arabic translation of the Indian Adab kabir (excluding that Ibn al-Mukaffa as of the other two works, is attributed in the ancient Iran, and recur in almost identical form in the name of their translator. These passages deal with the dynastic, military and social history of ancient Iran, and recur in almost identical form in other historians such as Eutychius (Sa'id b. al-Bi'tris) and al-Tabari who, together with Ibn Kutayba, drew from a common source. This source, in all probability the versions of Ibn al-Mukaffa, thus reveals itself as the principal means of translation to the Arabes of the epic, history and institutions of Iran which were subsequently to be the subject of many elaborations and developments, all more or less the work of the imagination, in later authors (al-Mas'udi, al-Tha'labi, etc.); while the same material passed directly from these ancient works in Pahlavi, through versions in neo-Persian, to Puslax's epic, history and famous letter of Tansar which too is included by Ibn Tayfur (d. 280/893) in his anthology Ktib al-Mantharb wa 'l-mansjam) is of the very greatest importance, although the personal and stylistic nature of his contribution is very difficult to evaluate. Ibn al-Mukaffa as here addresses himself to a caliph who is not named but who without doubt is al-Mansur, submitting to him a whole series of reflections on certain political religious and social problems arising from his time and milieu, and examined by the writer with a breadth and originality of mind that are very remarkable. The treatment of the military elite of Khurasân and their relations with the caliph, the choice of high officials and courtiers, the position of the 'Irâkis and Syriacs at the start of the 'Abbasid dynasty, juridical and administrative discrepancies among the schools and the different milieus of Muslim society. This subordination of the shari'a to the political authority, advocated by Ibn al-Mukaffa, was not to be realized, and the development of Muslim law followed the opposite path of 'iqâma, in theory shielded from any intervention by the sulân, in practice led to fiqh being fixed, out of touch with living reality. But even so, it is very remarkable that a contrary process should have been envisaged by this isolated voice, whether it be through the personal convictions of Ibn al-Mukaffa, or whether, as has been supposed, he lent his pen to the programs of others. The fact remains that these proposals so boldly advanced must have impressed themselves on the caliph's attention, and perhaps may even have offended his autocratic susceptibilities. It has even been suggested (Sourdel) that this pamphlet, although conceived and presented in a spirit of profound loyalty, may have contributed to the
disgrace and lamentable end of the writer. However that may be, the Adab habir and the Risāla fi 'l-Saḥāba are the most reliable items of evidence to enable us to form a judgement about the style of Ibn al-Muḳaffa—a supple and elegant style, although still marked by a certain archaic dryness: these two texts remain among the most fascinating innovations in Arabic prose adab, in the classical period, along with the rasā'il of 'Abd al-Ḥamīd b. Yaḥyā and other earlier ḥuṭṭāb.

One highly individual aspect of the spiritual interests of this great writer is, finally, revealed by the fragments (if they are authentic, as we believe) of a religious work, a Manichæan apologia, preserved in the refutation made a century later by the Zaydis imām al-Ḳasīm b. Ibrahim, in a treatise published by M. Guidi. We were already familiar with the charges brought against Ibn al-Muḳaffa of having attempted to make an "imitation" of the sacred Book of Islam: the work refuted by al-Ḳasīm appears rather, in our view, to be an attack on Muhammad, the Kurān and Islam in the name of another faith, namely the Manichæan faith which several of the friends of Ibn al-Muḳaffa had adopted and of which the writer himself was suspected. The cosmogony and mythology of the religion of Mani were indeed explicated upon in this work, but what above all is characteristic of it is the rationalistic criticism of fideism in general, such as emerges in one of the longer passages quoted by al-Ḳasīm (26-7 of the text) and presents a striking analogy with certain passages from the autobiography of Burzē in Kalīla wa-Dimma. The contradiction between this rationalism and adherence to the Manichæan faith can be resolved by regarding the rational and philosophical basis of the latter, beneath its colourful mythology, as a powerful aesthetic effort to provide a satisfactory solution to the mystery of the human condition and the universe. Yet we are aware of the problems that remain unanswered in this respect, in view of the obscurity that cloaks the spiritual evolution of Ibn al-Muḳaffa, the uncertain chronology of his writings, and even the authenticity of certain of them.

Although surrounded by these various reservations necessitated by the state of our knowledge, the figure of this writer appears before us as one of the most brilliant at the opening of the classical age of Arabic literature. Himself of non-Arab blood, Ibn al-Muḳaffa must have profoundly appreciated the cultural values of the Iranian civilization from which he sprang, and have endeavoured to make them known to the Arab world which had conquered his native land and relegated the religion of his fathers to a subsidiary position. In this sense, he can be regarded as a precursor of the Shū'ūbiyya [q.v.], although no polemical writing of his has survived on the subject of the superiority of the Shū'ūb, or, more specifically, of the Iranians and Indians, over the Arabs. He did in fact demonstrate this superiority, by revealing to the Arabs the treasures of India and Persia, and by himself following a refined and cultivated way of life (as several anecdotes relate), which incidentally characterized the whole new Persian élite of the early 'Abbasid period. But what sets him apart from the real Shū'ūbiyya is his love for the conquerors' language, which the Shū'ūbiyya themselves used in their anti-Arab polemics, but without making any impassioned study of it and without achieving the mastery over it that this mosaic from Fārs displayed so successfully. His works, both as translator and original writer, soon became classic in the great 'Abbasid civilization and, by their form as well as their subject-matter, exerted an influence that cannot be exaggerated on the cultural interests and ideals of the succeeding generations. Today, it is even possible to speak of an Ibn al-Muḳaffa myth which has dominated the renaissance of neo-Arabic literature. Even when stripped of this myth, the figure of this Persian, the master and almost the Demiurge of the language of the Kurān on the eve of its most astonishing flowering, retains a position of the very highest eminence in the literary history of Arabism.

Bibliography: The best modern editions of the text of Kalīla wa-Dimma are those of Cheikho, Beirut 1905 (2nd ed. 1923), and of 'A. 'Azīz, Cairo 1941. French translation by A. Miquel, Paris 1957, Russian by Kračkovskij and Kuzmin, Moscow-Leningrad 1934, Italian by M. M. Moreno, San Remo 1910. The surviving translations of Iranian material have been studied by Th. Nöldeke (Das iranische Nationalpos in Gr. Ir. Ph., ii, 170 ff., and in Geschichte der Perser und Araber) and by K. Inostreantev, Persidskaya literatura v pervie veka Islama, in Mémoires de l'Acad. des Sciences de St. Pétersbourg, 8th ser., vii (reprinted in the volume Sasanidskie Etiudi, St. Petersburg 1909) (see further Hamāsa ii). The Adab habir has been published by M. Kurd 'All in his Rasā'il al-bulugāt, Cairo 1923, and A. Zeki, Alexandria 1932, and in other modern editions of no critical value (tr. Rescher, in MSOS As. (1927), 35-82). The Risāla fi 'l-Saḥāba is published by Kurd 'All in the Rasā'il mentioned above. The anti-Manichæan refutation of al-Ḳasīm, with the fragments of the apologia of Ibn al-Muḳaffa, is published by M. Guidi, La lotta fra l'Islam e il Manicheismo, Rome 1927.

F. Gabrieli

IBN AL-MUḳAFFA, SEVERUS (Sawirs), his name before he became a monk being Abu (l)-Bighr. It is not known why he was called Ibn al-Muḳaffa ("son of the cripple"). He gave up his occupation as a clerk (kdtib), which for a Copt was an important step towards promotion in a career in the administration, in order to become a monk. No biography of him exists. It is however known that he was appointed by the patriarch Anbā Makkāra (932-52 A.D.) to be bishop of Ashmunayn, most probably before he had reached his fifteenth year (the age
Severus's History of the Patriarchs is an indispensable source for the history of Egypt, of the Egyptian national church, of the Abyssinian church and of Christianity in Nubia. This chronicle also adds many details and precise data to the source material for the political, social and economic history of Egypt. Some sections of the book have been many times published or used (e.g., by Renaudot, Seybold, and Evet). The latest and most careful edition of the book, with English translation, is being undertaken by A. S. Atiya, Jassa 'Abd al-Malīsh and O. H. E. Burmester.

Severus's works consist of 20 or 25 titles, which are listed by Brockelmann and, in more detail, by Graf, see Bibliography; it should however be noted that neither was able to take account of all the manuscripts existing in Egypt.

IBN MUKARRAM (see IBN MANZUR).

IBN MUKLA, ABU 'ALI MUHAMMAD b. 'ALI, vizier of the 'Abbadid period. Born in Baghdad in 272/885-6, he began his career as a collector of land-taxes in Fārs, then was given an important post as secretary in the central administration when Ibn al-Furat [q.v.] became vizier in 296/908; he was in fact in charge of the opening and the despatch of official letters. He also collaborated closely with Ibn al-Furat during the latter's second vizierate (from 304/917 to 306/919), but he never had anything to do with the administrative staff during Ibn al-Furat's third vizierate. However 'Ali b. 'Isā [q.v.], during his second vizierate (305-316/917-28), appointed him to take charge of the diwan of public estates. It was then that, having succeeded in attaching himself to the chamberlain Naṣr and in gaining his good opinion, he managed in 316/928 to get himself appointed to the vizierate, which he retained until 318/930. Although he was certainly dealing well with the financial difficulties which arose at this time, he was nevertheless unable to put an end to the rivalries between military leaders, and his vizierate saw the abortive palace revolution of 317/929, in the course of which al-Mu'zdīd was temporarily replaced by his brother. Ibn Mukla continued as vizier, but was obliged to act on the advice of 'Ali b. 'Isā, who was moreover put specially in charge of the jurisdiction of the masālim court, and his inability to free himself from the tutelage of the commander-in-chief Mu'nis led to his fall.

Ibn Mukla was re-appointed to the vizierate by al-Kāhir and was in charge of the government again for about six months (320-932-3). But the situation was very unsettled, and he encountered the opposition of the caliph; his intrigues, aimed at deposing al-Kāhir, failed, and he was obliged to flee. Some months later however, he succeeded in getting the caliph imprisoned and deposed; this was his third vizierate, which lasted from 322/934 to 324/936 during the reign of the new caliph al-Raḍī. In spite of his cunning, the vizier did not succeed in imposing his authority on the Ḥamdānī amirs of al-Mawši, or on the governor of Wāṣīt, Ibn Rāḍīq, and was unable to arrest the economic and financial crisis. His disgrace really marked the end of the independent...
rule of the caliphs: some months afterwards there was appointed the first amir al-umara* [q.v.]. Ibn Mukla’s efforts had produced no result, unless it was in the domain of religion, where he gave effective support to the Sunni reaction which took place after the end of the caliphate of al-Muktadir.

When Ibn Rā’il was appointed as amir al-umara*, Ibn Mukla’s possessions had been confiscated, together with those of his son, who had worked efficiently as his assistant during his second vizierate. As a protest, he intrigued against the new amir al-umara? with the words “Judgement belongs to God, O ‘Ali, and not to thee and thy companions”, succeeded in wounding “All on the crown of his head, after which he attempted to flee, but was soon thrown to the ground by a Hamdān, whom he regarded as being in error; spurred by an ardent desire to avenge their mother had become suspicious on seeing him unlace his silken band. Thus it was Ibn Muldiam only who, with the words “All replied that he saw Ibn Muldiam himself being killed with this sword and that he judged him to be the most evil of men.

The details given so far are a summary of the traditions related by al-Ṭabarí; in the other sources are found additional details and variants from which interesting observations may be made.

The conspiracy and the names of the conspirators. According to the Istīlab (48x) only, the plan to kill ‘All was conceived by a Khāridjī survivor of al-Nahrawān. Some verses by the poet al-Nādjaši (al-Baladhuri, 585v) praise Mu‘awiyya for initiating Ibn Muldiam to commit this crime. The murderer of ‘All, known under the patronymic of Ibn Muldiam, was in fact called ‘Abd al-Rahmān b. ‘Amr b. Muldiam b. ‘Abd Allah b. Bakr (according to al-Ṭabarí, 3468; al-Baladhuri, 576v; Ibn Kathir, 325); several nisbas are attributed to him: al-Ḥimyarī, al-Ḥimyarī, and al-Kindī since he was a connexion (kašif) of the Banū Ḥimyāl of Kinda (Ibn Sa’d, 33; al-Baladhuri, 577v; Ibn al-Ṭahir, Usd, 36) or perhaps of the Banū Ḥanifa of Kinda (Ibn Kathir, 325), and even al-Mṣrī (Ibn Kathir only, ibid.); al-Masūdī (426) adds al-Tujībī (the Tujīb being a clan of Murād), a nisba which the Istīlab (48x, followed by Ibn Shahrāshub, 93) transforms into al-Taḏjūbī, explaining that Taḏjūb was a branch of Ḥimyar which had been absorbed by Murād; this source adds a further nisba: al-Sakūnī. Al-Burak was a nickname: the real name of the conspirator who offered to kill Mu‘awiyya was al-Haḍīdī b. ‘Abd Allāh b. ‘Ubayd Allāh, or b. Bakr (according to al-Baladhuri, 576v and 577v) and his second nisba was al-Ṣaḥī. According to other sources he was a Persian, since they refer to him as Zādawayh or Zadhawayh (al-Mubarrad, 544, 549, 552; al-Masūdī, 427); al-Ṭamīmī al-Ṣaḥīlī (Ibn Kathir, 325); al-Dinawarī (227) alone refers to this conspirator by the name of al-Nazzāl b. ‘Amr. The third conspirator, the one who wished to kill ‘Amr b. al-‘Āṣ, according to Ibn Sa’d (33) was the son of Bukray (instead of Bakr) and, according to the Usd (36), he was called ‘Umar b. Bukray: his second nisba was al-Saḥī. According to other sources he was a Persian, since they refer to him as Ḥathawayh or Ḥadhawayh (al-Mubarrad, 553; al-Baladhuri, 576v, to “Dḥ̣ḥdḥḥaẉỵḥ” adds *Amr*, a mawla of the Banu ‘Anbar b. ‘Amr b. Tamīm (al-Baladhuri, 578 r-v)., specifies: mawla of the Banu Ḥāritha b. Ka‘b Ibn al-‘Anbar); al-Dinawarī differs from all the other sources in calling him ‘Abd Allāh Mālik al-Saṣ̣āỵḥī; the second name is of the Khāridjī (al-Baladhuri, fol. 584v), but which is certainly false (al-Mubarrad, 549), states that all three of the conspirators were sons of Muldiam and were called ‘Abd al-Rahmān, Kays and Yaṣīd, that their father Muldiam had forbidden them to commit the crime, but that their mother had encouraged them to do it. The conclusion to be drawn from all these variants

*al-Sourdel*
is that in general the differences are very slight and may often be explained as variant readings in Arabic sources, and therefore may therefore be recognized as the existence of a fairly precise historical tradition with regard to these fanatics.

'Ali's foreknowledge of his fate. 'Ali had known for a long time that he would be killed, since the Prophet had told him this, or he had himself had a premonition of it (Ibn Sa'd, 22; al-Baladhuri, 582r). Several authors, on the basis of numerous traditions, state that Muhammad (or 'Ali) had revealed that his death was destined with blood flowing from his head (Ibn Sa'd, 21, 22, 23; al-Baladhuri, 582 r and v; al-Mubarrad, 544, 579v; al-Mas'udi, 440; al-Iṣfahānī, Makātīl, 31; Ibn Shahrāshūb, 93, etc.). Another tradition with several variations explains that, according to Muhammad, the most evil man among the ancients was he who had killed the camel of the prophet Sālih (cf. Qur'an, XCI, 11-12 and XXVI, 155-7) and among his contemporaries, he who would kill his Sālih; in general it is the latter who speaks of the "most evil of men" (Ibn Sa'd, 22, 23 etc.). The characteristic themes of these two types of traditions (the blood-stained and the most evil of men) are sometimes fused into one single account (e.g., Ibn Sa'd, 21; al-Mu'īdī, 23; Ibn Abī 'l-Hadīd, 42). The night preceding the attempt, 'Ali declared that his destiny was about to be fulfilled, and when he left his house in the morning, geese followed him, cackling; he then said that they were the weepers for his funeral (al-Masʿūdī, 431; al-Yaʿqūbī, 252; al-Mu'īdī, 15). It is chiefly the Shi'ī authors who stress the fact that 'Ali knew of his approaching fate but did not wish to send another Muslim to lead the prayer at the mosque as he was advised to do, and that he finally went to meet his destiny reciting verses on how death is not to be feared (al-Mu'īdī, 15; Ibn Shahrāshūb, 93).

He was able to predict even more: he guessed Ibn Muldjam's attitude to him and knew in advance that he would be his murderer (al-Yaʿqūbī, 257; al-Mu'īdī, 13) or "the most evil of men"; twice or thrice he repulsed Ibn Muldjam, who wished to pay him a visit, and the third time his visit was prevented by a minor difference in the date of his visit (al-Mu'īdī, 22; al-Baladhuri, 582 r; Makātīl, 31). That the latter's beard would be stained with blood flowing from his head (Ibn Sa'd, 22, 23; al-Baladhuri, 578r, al-Akhdar was her brother who was killed at al-Nahrawān) b. Shidjna in the Makātīl (32), in al-Mufid (16), Ibn Shahrāshūb (94); or Sabīkha (sic) b. 'Ali b. 'Amīr b. al-Ṭalābā b. Sa'd b. Dīhil b. Taym al-Ribāb (Usd, 36; Ibn Sa'd, 23; 'Adī instead of 'Ali). Only al-Mas'ūdī (427) states that Katāmār's brother died at the moment of his death, which was decided by destiny (al-Baladhuri, 582r). Katāmār. Given the number of sources which mention her, there seems no doubt of the existence of this woman and her belonging to the Taym al-Ribāb; the variants concern mainly the name of her father and some secondary details. Instead of al-Shidjna (or Shidjna, as in Ibn Sa'd, 23, and in a tradition collected by al-Baladhuri, 578r), we find al-Kalama in al-Baladhuri (576 v) and al-Mubarrad (549); to be read perhaps Ullafa, since Ibn Durayd, al-Ṭalābā, ed. Wustenfeld, 214 f., states that she was the sister of Hīlāl and al-Mustawrid, the future Khāridjī rebels; or al-ʿAkhḍar (but according to al-Baladhuri, 578r, al-Akhdar was her brother who was killed at al-Nahrawān) b. Shidjna in the Makātīl (32), in al-Mufid (16), Ibn Shahrāshūb (94); or Sabīkha (sic) b. 'Ali b. 'Amīr b. al-Ṭalābā b. Sa'd b. Dīhil b. Taym al-Ribāb (Usd, 36; Ibn Sa'd, 23).

The Shi'īs, who have to find an explanation for the crime committed against 'Ali, relate that Katāmār prepared special food (drugged?) for the conspirators and that Wādān received a sum of money from an agent of 'Amīr b. al-Āṣ (Ibn Shahrāshūb, 95).

Al-ʿAṣ b. Ṭabīs b. Kays [q.v.] and the conspiracy. Several sources imply that this man was aware of the plot; Ibn Muldjam is said to have spent the preceding night in consultation with him in a corner of the Great Mosque; when dawn approached, he spoke to Ibn Muldjam a phrase which Ḥudjir b. 'Adī [q.v.] interpreted as an allusion to a plot; he then intended to warn the caliph, but he arrived too late. The majority of the sources give the ambiguous phrase "The dawn has risen for thee" but the Shi'ī authors or those of Shi'ī sympathies give it as a clear encouragement to Ibn Muldjam: "Deliverance, deliverance! The dawn has risen for thee." Makātīl, 33; al-Mu'īdī, 17; Ibn Abī 'l-Hadīd, 43). Variants are that the conversation between Ibn Muldjam and al-ʿĀṣ was simply a friendly talk, or the name of a desert place which was the meeting-place of the conspirators; or a description of al-ʿĀṣ as a man who was always looking for adventures or the like; or al-ʿĀṣ as a man who wished to give him gifts (Ibn Sa'd, 22; al-Baladhuri, 582v; Usd, 35); he merely replied to it in a poem that the Murād planned to kill him, whereas he wished to give him gifts (Ibn Sa'd, 22; al-Baladhuri, 582v; Makātīl, 31) and indeed did so (Iṣṭiṣāb, 484). Thus relations between 'Ali and Ibn Muldjam were strained; nevertheless the caliph took no measures against his enemy (Ibn Sa'd, 22; "Would you kill one who has not yet killed me?"); not even when he was warned of the plot by a member of the Murād (Ibn Sa'd, 22) or by someone who had heard a reference to it from Ibn Muldjam himself (al-Baladhuri, 579v; al-Ṭabarī, 3459-60; al-Mubarrad, 549, 555; cf. al-Dinawārī, 228); he merely replied that every man was guarded by two angels until the moment of his death, which was decided by destiny (al-Baladhuri, 582r).

Kaṭāmār. Since Ibn Malik's accomplices and their fates. Instead of 17 Ramāḍān, various dates are given as that fixed for the murder of 'Ali: Imāma (254 f.) gives 20 Ramāḍān, al-Mubarrad (549) 27 Ramāḍān, al-Mas'ūdī (427) 17 or 21, the Makātīl (33) 19 or 17 (cf. also al-Baladhuri, 578 v), but according to al-Mufid (16) the latter date is to be preferred. Ibn Abī 'l-Hadīd (43) adds that, since the conspirators believed that their deed was an offering to God and that God prefers an offering made at a time which is blessed, the 19 was chosen (the night of the 19th being that of al-kamār [see Ramāḍān]). Furthermore,
the day of 'Ali's death is not precisely known either, varying between 11 and 21 Ramadan (see Caetani, §§ 97-8). He died two or three days after the attack (al-Mubarrad, 551, etc.). Shabbih was the son of Nagida (instead of Badjara) and his nisbas were al-Ashdqi, al-Hurruri (al-Mas'udi, 428; Ibn Kathir, 326). One tradition states that it was Ibn Badjara who wounded 'Ali, but this is false (al-Baladhuri, 584r); in fact his sword missed its mark, after which he fled. It was only later that the governor al-Mughra (q.v.) arrested him and killed him, because he had become a seditious element operating in the district of Kufa; he terrorized people, questioning them about their religious opinions in the manner of the Azaqis (al-Baladhuri, 579 r). Wardan was the son of Muljailid (Mafrdtil, 32; al-Mufid, 16; Ibn Abi 'l-Hadid, 43); according to al-Mas'udi (427), he was called Muljaihil b. Wardan. Al-Dinawari mentions neither Shabbih nor Wardan. Al-Baladhuri relates a tradition in which Wardan is not mentioned (576 v) and another in which he is mentioned, together with the episode of the cousin who killed him (579 r). According to some sources (al-Mas'udi, 433; Mafrdtil, 35, and the Shi'ite authors who in general follow it: al-Mufid, 17, etc.), it was Shabbih and not Wardan who, returning home, was killed by a cousin or a brother, whereas Wardan escaped. There are divergent versions on the question of who seized Ibn Muljailid after the attempt: according to al-Mubarrad (549, 550 and cf. al-Baladhuri, 579 r, al-Mas'udi, 432, Mafrdtil, 35, etc.), it was al-Mughra b. Nawfal b. al-Harith b. 'Abd al-Mu'talib (and not the Hadramawti Abu Admād) and, according to al-Ya'kubī (252), Kusam b. al-'Abbās; Ibn Muljailid is said then to have shouted: "O 'Ali, deliver me from thy dog!"

The punishment of Ibn Muljailid. The sources describe 'Ali as always scrupulous in the application of the holy law, and, in the case of Ibn Muljailid, they are more or less unanimous in insisting on the fact that he ordered the strict observance of the lex talionis; nevertheless, some of them are at variance when they prepared to cut out his tongue because, though remaining still alive, he would no longer be able to mention God (Ibn Sa'd, 26; al-Dinawari, 280; al-Mubarrad, 551 f.; al-Mas'udi, 434 f.; Usdā, 37 f.; Ibn Kathir, 330, doubts the authenticity of the information on the torture, evidently because it contradicts the recommendations given by 'Ali). None of the sources casts doubt on Ibn Muljailid's religious fervour; on the contrary, those which describe his physical aspect do not omit to add that his forehead showed the marks of frequent prostrations for prayer (e.g. al-Baladhuri, 583v; Ibn Kathir, 326, etc.).

Verses inserted in the narrative. These verses are sometimes anonymous, sometimes attributed to Ibn Muljailid, and sometimes to well-known poets. They appear in the sources with variants and additions and even different attributions. There should be noted those of the Khariji Ibn Abi Maysā, which praise the murder of Ibn Muljailid and Ibn Taghribirdi (i, 119) and others (e.g. Usdā, 35) add that 'Ali recommended that the punishment should not be excessive. Umm Kuljum, the daughter of 'Ali, plays a certain role after the murder: she quarrelled with Ibn Muljailid; for example, she reproached him for having killed the Commander of the Faithful and Ibn Muljailid replied: "No, thy father!" (al-Baladhuri, 580r, 583v; al-Mubarrad, 551; Mafrdtil, 36; al-Mufid 18; Ibn Abi 'l-Hadid, 44, etc.). After the discussion with 'Ali, Ibn Muljailid was taken to prison; the people followed him, biting him like wild beasts and heaping reproaches on him; he did not reply (Mafrdtil, 36 f.; al-Mufid, 18; Ibn Abi 'l-Hadid on the other hand reports the verses which he recited, on leaving 'Ali, boasting of his action). The accounts of Ibn Muljailid's death, which according to al-Mubarrad (551) were fairly numerous, may in fact be reduced to two: Ibn Muljailid proposed to al-Hasan that when he became caliph he should set him free to go to Syria and there kill Mu'awiyah, if he had not already done so, the next day and return and give himself up to the caliph. Al-Hasan refused and killed Ibn Muljailid; the corpse was burned (in al-Tabari, 3464, a brief account; in the Mafrdtil, 41, with more details; see also al-Mufid, 18; Ibn Kathir, 330; Ibn Abi 'l-Hadid, 46; Ya'qubī, 254, states that al-Hasan killed Ibn Muljailid with his own hand; cf. also al-Baladhuri, 584r). The second version is that al-Husayn, Ibn Hanafiyya (q.v.) and 'Abd Allâh b. Dja'mar (q.v.) asked al-Hasan for permission to take their revenge and, having obtained it, it was this 'Abd Allâd, the nephew of 'Ali, who subjected Ibn Muljailid to a series of mutilations and tortures. The unfortunate Ibn Muljailid bore these sufferings with great courage and only complained when they prepared to cut out his tongue, because, though remaining still alive, he would no longer be able to mention God (Ibn Sa'd, 26; al-Dinawari, 280; al-Mubarrad, 551 f.; al-Mas'udi, 434 f.; Usdā, 37 f.; Ibn Kathir, 330, doubts the authenticity of the information on the torture, evidently because it contradicts the recommendations given by 'Ali). None of the sources casts doubt on Ibn Muljailid's religious fervour; on the contrary, those which describe his physical aspect do not omit to add that his forehead showed the marks of frequent prostrations for prayer (e.g. al-Baladhuri, 583v; Ibn Kathir, 326, etc.).

The attempts on the lives of Mu'awiyah and 'Amr b. al-Ask. The other conspirators kept their word, but one of them succeeded only in wounding Mu'awiyah, and the other killed in error, instead of the governor of Egypt, one of his officials. Without entering into details, we mention here the opinion of Caetani (Annali, 40 A.H., § 96; cf. Lammens, Études sur le règne du calife Omayyade Mu'awiyah I, Bruxelles 1909-10, 389), who attributes the triple attempt by the Kharijis: he considers that this is a legend created by tradition to prevent people thinking that, in the opinion of contemporary observers, 'Ali was the worst of the Muslim leaders, and to suggest that Mu'awiyah and 'Amr b. al-Ask also deserved to be killed; thus there were grouped together several independent incidents which occurred at different dates. It may be objected to this idea, while retaining Caetani's line of argument, that the authors of the
crime were merely some fanatical Kharidjis and that the traditionists were eventually interested in presenting the Kharidjis as persons to be despised for their 'opinion' concerning one as worthy of admiration as 'All, and thus not to diminish their admiration as Amr their victims as well. It may moreover be observed that a conspiracy like that of the three Kharidjis should not be out their attempts on the same day, it is possible that when they met at Mecca they fixed the date for their panegyric, and that if they did not rid the Muslims of all three persons simultaneously, they would open the way for the ambitions of the one, or ones, who survived and who would be masters of the situation—as did in fact happen with Mu'awiyah after the death of 'Ali. IBN MUNADHIR, MUHAMMAD, satirical poet, a native of 'Adan, who went to Baṣrah for his education, settled there and passed a. number of years of the Banū Subay b. Yarbūb (Tamīn). He spent a devout and studious youth, following the courses of the best teachers of Baṣrah, from whom he learnt grammar, Kur`ānic "readings", lexicography, ḥaḍīth, etc., but on the death of his friend 'Abd al-Muqaddam b. 'Abd al-Wahhab b. Ṣaḥḥaf (for whom he wrote a much-admired funeral oration), his attitude changed completely; applying their point of doctrine concerning the Ṭaḥkīr al-munkar, the Muṭāzilis were obliged to forbid him entry to the mosque, into which he threw scorpions and put ink in the water reserved by the fountains. He inveighed against the philologists, the fundamental spitefulness which led him to attack the honour of his fellow-citizens, and his impious conduct caused him to be accused of sandabah and expelled from Baṣrah; he took refuge in Mecca, where he died in poverty, probably in 198/813.

The praises which he addressed to al-Mahdī and to Hārūn al-Rašīd earned him some rewards, but his panegyrics brought him a second reproach after they fell into disgrace. According to Abu l-`Atāṭhāṣa ya[.], his poetry was of little value, while Abān al-Lāḥi[.], a son admitted that he had a certain talent for funeral orations, but his success was chiefly in satire, thanks to his lively and malicious wit. He attempted to imitate Abī l-Bayḍāʾ b. Zayy[.], and on his own admission, wrote very slowly. Bibliography: Diḥās, Bayān, Ḥayawān, Buhās, index/ex.; Ibn Kuttaiba, Shīrāz, 555-5; idem, `Uyun al-`aḥādīr, i, 63, 246, iii, 138; Ibn al-Muṭāsib, Tabakab, 49-53; Muḥarrab, Kāmil, 747 f.; Aḥsain, xvii, 7-30 (Beirut ed., xviii, 103-42); Ṣūl, `Aṣrāb, ed. IBN AL-MUNADHIR, Abū Bakr b. Badr, with the by-name al-Baytār al-Nāṣiri, was grand master and chief veterinary surgeon of the stables of the Mamlūk sultan of Egypt al-Nāṣir al-Dīn Muḥammad b. Ǧalāwūn (who ruled in 693/1294, from 698/1299 to 708/1309-10 and from 709/1310 to 741/1341). It was at this ruler's request that Ibn al-Munadhir wrote, in about 740/1339-40, his treatise on hippology entitled Ḳāḥīm hamm awwal fī muṣrif l'amārad al-ḥayl, a compilation from earlier sources and in particular from the Kāmil al-sīnā`ayin (al-baytār wa l-`arūf) of a certain Ibn Akḥī Ḳīẓān or Ibn Abī Ḳāzām of the 3rd/9th or 4th/10th century, and the Ḳaṭḥīb Bābdādā of the 4th/10th century, and to the work of the Mamlūk veterinary surgeon. It is found also called, more simply, Kitāb al-Nāṣiri (MS Paris, Bibli. Nat. 2813-14 and Vienna, Flügel 1481). A. Perron published a translation of this treatise, in three volumes, with a detailed introduction, under the title Le Nāṣiri: la perfection des deux arts ou traité complet d'hippologie et d'hippiatry araheb, trad. de l'arabe d'Abou Bekr Ibn Badr. The first volume, which appeared in 1852, contains an introduction much information on the Arab horse and the breeding of horses [see FURUSIYYA], stressing the special efforts made by the sultan al-Nāṣir to develop stud farms in Egypt; it contains in addition a large collection of verses selected from the abundant classical poetry on the horse. The introduction to this first volume received from J. von Hammer-Purgstall (in Das Pferd bei den Arabern, Denkschr. d. K. Akad. d. Wiss. zu Wien, 1855-6) a rather censuring criticism, which he would surely have modified if he had lived long enough to see the rest of the publication. The second volume (1859) contains the translation of the section on hippology and the third (1860) that on hippiatry. Although it is a good source richly documented, A. Perron's Le Nāṣiri is no longer a basic work for

890 IBN MULDJAM — IBN AL-MUNDHIR
the knowledge of early Arab hippology, in view of the number of works devoted to this subject which have been published during the last century; for a more complete list of works on this subject, see A. M. Abbadi, *Al-Makdmat al-^id li-'bn Muhammad b. Ihdta*, Cairo ed. 1949, vi, 315, viii, 209-13, 363-4; A. M. al-`Abbadi, *Bibliography: IBN AL-MUNDHIR, IBN AL-MUSLIMA 891. Ibn al-Khatib, by-name first given to Ahmad b. Umar (d. 415/1024), of the family of the Al al-Rakil, and name by which his descendants were known until the 6th/12th century. The most important member of the family was his grandson, Abu `l-Kásim `Ali b. al-Husayn, also known by the honorific title of ta'is al-ru'asád, vizier to the caliphate from 437 to 450/1045-58, concerning whom there have arisen a number of important questions which have not yet been satisfactorily answered. The conquest of Baghádád by the Bóyids in 334/945 had led to the evacuation of the office of vizier in the caliphate, and it was only the decadence of the dynasty and the rivalry among its later members which enabled the caliph al-Káhid to re-appoint one officially, and thus to recover a certain measure of real authority. But little is known either of the conditions under which this office was restored, or through what qualifications or services the caliph was led to choose Abu `l-Kásim, a lawyer sprung from a family of merchants, as the firstholder of the new vizierate. An unbigoted Hanbáli, who probably changed to Sháfí'ism while remaining Hálájí and anti-Ash'árí, Ibn al-Muslima certainly played an important role in the movement which arose at that time among the Sunnis in Baghádád towards a rebirth of Tradition in opposition to the mutakallimún of Sháfi'i tendency and towards a political and at first doctrinal stand against Isma'ilísm made by the caliphate and supported by the Büyíd "protectors". It would have been interesting to know what was the relationship between Ibn al-Muslima and Ibn al-Mutábi, to whom we owe one of the clearest expressions of the viewpoint of the caliphs at this period. But primarily, and certainly in part because of this politico-religious position, Ibn al-Muslima was regarded by his contemporaries as the man who introduced to Baghádád the Sáldjúkid sultan and his Turks. There is no doubt that he was the active agent and perhaps the initiator of this policy, even though later his interpretation of it or the inferences he drew from it did not exactly coincide with those of the new and powerful "protector"; but it is not clear what were the precise reasons which led him to do this or whether and, if so, to what extent he exceeded the instructions, if any, given by the caliph al-Káhid. It is certain that the years immediately prior to the entry of Toghríl-Beg into Baghádád (447/1054) saw a conflict between Ibn al-Muslima and the leader of the Turkish Búrid mercenaries, al-Básasírî (q.v.), who was continually in a state of semi-revolt; the latter finally recognized the Fátimids against the Sáldjúkíds, but it is not clear whether, or how far, he had originally been inclined in this direction. It is certain, however, that, from the time of his arrival on the political scene, Toghríl-Beg had been careful to emphasize his loyalty to the caliphate and its doctrine and thus to deserve the titles which Ibn al-Muslima had sent him long before and which set the seal on this loyalty.

When the Turks had established their power in Baghádád, Ibn al-Muslima seized the family and the possessions of al-Básasírî (who had fled) with a severity accentuated by the financial demands of the new rulers. When, therefore, Toghríl-Beg was obliged to withdraw from Baghdad and return to Iran, Ibn al-Muslima, supported by the Arabs of Mesopotamia and by Fátimíd money, had returned to Baghádád, al-Básasírî avenged himself on Ibn al-Muslima with a cruelty which was very different from the personal immunity which the 'Abbasíd caliph had enjoyed at the hands of an Arab prince. The vizier died under torture (450/1058) before he could be saved by the restoration of the Sáldjúkíd sultan. His son Abu `l-Fath al-Muqaffar was for some time vizier to the caliph, in 476/1083. His great-grandson, 'Adúd al-Dín Muhammad b. `Abd Alláh b. Híbat Alláh b. al-Muqaffar, also held this post for quite a long time under al-Mustádí, from 566 to 573/1171-8. It is true that the caliph was obliged by the Türk Kaymázh to dismiss him, the Turks taking advantage of this to sack the vizier's house; it was not until Kaymázh was forced to leave (570/1174) that Adúd al-Dín regained his post. A few years later, just as he was preparing to make the Pilgrimage to Mecca, he was murdered by a Bátíni (573/1178). Like other members of his family (to which 'Imád al-Dín devotes a special chapter in his *Kharída*) he had been a man of great learning, and the poet Síbí b. al-Táawdhi wrote various poems in praise of him.

Bibliography: For Ibn al-Muslima (ra*is al-
ru’asa3), the chief sources are the Muntazam of Ibn al-Djawzi, viii, the Kamil of Ibn al-‘Azhìr, vi, and the Muktazam of Sibî ibn al-Djawzi (unpublished); see also, for the Fâtîmid point of view, the Sîra of the missionary al-Mu’ayyad al-Shîrâzî, ed. Kâmil Husayn, Cairo 1940 (index). For a discussion of his rôle, see G. Makdisi, Ibn ‘Aqlî et la résurgence de l’Islam traditionniste, 1963, who seems, however, to have made too categorical an affirmation of Ibn al-Muslima’s difference of opinion with the caliph who kept his position. See also, for the article on IBN MUKTÂZ, for later members of the family see the Muntazam, ix and x (index) and the Kâmil, ix-x (index). (Cl. Câhen)

IBN MUCYÂR, ab. Husayn b. Mucyâr b. MUKAMMIL al-Asadi, Arabic poet of the 2nd/8th century. A muâwîa of the Banu Asad (following the origin. His grandfather al-Mutawakkil was killed in battle after the death of his father, Kabiha, who was deposed and put in prison where he was left to die. After the death of his father, Kabiha, the young prince and poet, son of the 13th caliph of the Abbasids who had to give up political aspirations, Ibn al-Mu’tazz except the conventional elegies by which he lamented the death of the latter (Dîwân, ed. Lewin, iv, 220, 222, 237, 255). In a more personal tone he lamented the death of his uncle Mu‘ammâd b. al-Mutawakkil (iv, 219, 221, 224, 250, 263), and of members of the al-Munadîdîm family, particularly the learned ‘Ali b. Yahyâ (d. 275/890, Yûkût, Ustabî, v, 459-77, Dîwân, iv, 213, 215, 224, 249, 271). After the death of the al-Muktâdîm in 279/892, he accepted an invitation of the new caliph al-Mu’utadîd to settle in Baghdad. This invitation was probably suggested to the caliph by the wa‘zîr ‘Ubâyid Allah Sulaymân b. Wahh, who was a friend of the poet (iv, 244, 256, 266, 268, 279), as was also his son and successor al-‘Askadî (iv, 246, 265, 267, 275-6, 281). The new and magnificent palace al-Thawāryyî built by al-Mu’tadîd (see BAGHDAD, 897-8) and its gardens were described by Ibn al-Mu’tazz in a poem (Dîwân, Cairo 1891, i, 115; Beirut 1913, 138-9; Yûkût, i, 924). In his Tabâshîr al-surâr, a collection of subjects discussed at the literary assemblies held at the court, he gives expression to his aristocratic attitude and to his personal experiences, often alluded to in his mu‘tâdîlîm poems, of an epoch in which the natural order of the old nobility and the vulgar had been disturbed. This epoch of disorder and humiliation had come to an end, according to the poet, with the glorious reign of al-Mu’utadîd. The restoration of the ‘Abbasîd empire and the defeat of its enemies are the themes of numerous fahrî and madîbî poems by the prince. His poetic attacks on the Shi‘a and other dissidents were remembered long afterwards (see, e.g., Yûkût, Ustabî, v, 254-7; Sadrî, v, 232). In his historical poem containing, in its present form, 417 strophes celebrating his life and work (ed. C. Lang in ZDMG, xi (1886), 563-611, xii (1887), 232-79) when the caliph died in 289/902 and was succeeded by his son al-Muktafi, Ibn al-Mu’tazz seems to have left public life to lead again a life of retirement. In the political emergencies, however, that followed upon the illness and death of al-Muktafi in 295/908, he was involved in the intrigues of those who desired to secure an influence over the new caliph. In Dhu ‘l-Ka‘da 295/August 908, a brother of al-Muktafi, Diafâr, was proclaimed caliph as al-Muktafi. Already during the illness of al-Muktafi, a group of officers, secretaries and judges, who were not satisfied with the young Diafâr, had formed a plot to proclaim Ibn al-Mu’tazz, and had won his acceptance provided that there should be no bloodshed. The wa‘zîr al-‘Abbâs b. al-Hasan, who had opposed the dethronement of al-Muktafi, was murdered and, on 20 Rabî‘î 296/12 December 908, Ibn al-Mu’tazz was proclaimed caliph and took the

Ahmad ibn Sa‘d b. al-Dimâshq!). who has handed down what is probably the first attempt of the highly gifted boy to write poetry (al-Mazbûzî, Dîwân, ed. Sébîlî, ii, 140-1, cf. Yûkût, Ustabî, i, 133-4), and the famous philologists al-Mubarrad and Thâlab. When his grandmother died in 264, Ibn al-Mu’tazz settled in Mâṭara near Sâmarra. Like many other young princes of the house of the ‘Abbâsîs who had to give up political aspirations, Ibn al-Mu’tazz devoted himself, in these years, to the pleasures described by him in his rich poetic "fî garden and ghâzî. Little is known about his relations with his uncle al-Muktâdîm and his Muwaffâk except the conventional elegies by which he lamented the death of the latter (Dîwân, ed. Lewin, iv, 220, 222, 237, 255). In a more personal tone he lamented the death of his uncle Mu‘ammâd b. al-Mutawakkil (iv, 219, 221, 224, 250, 263), and of members of the al-Munadîdîm family, particularly the learned ‘Ali b. Yahyâ (d. 275/890, Yûkût, Ustabî, v, 459-77, Dîwân, iv, 213, 215, 224, 249, 271). After the death of the al-Muktâdîm in 279/892, he accepted an invitation of the new caliph al-Mu’utadîd to settle in Baghdad. This invitation was probably suggested to the caliph by the wa‘zîr ‘Ubâyid Allah Sulaymân b. Wahh, who was a friend of the poet (iv, 244, 256, 266, 268, 279), as was also his son and successor al-‘Askadî (iv, 246, 265, 267, 275-6, 281). The new and magnificent palace al-Thawâryyî built by al-Mu’tadîd (see BAGHDAD, 897-8) and its gardens were described by Ibn al-Mu’tazz in a poem (Dîwân, Cairo 1891, i, 115; Beirut 1913, 138-9; Yûkût, i, 924). In his Tabâshîr al-surâr, a collection of subjects discussed at the literary assemblies held at the court, he gives expression to his aristocratic attitude and to his personal experiences, often alluded to in his mu‘tâdîlîm poems, of an epoch in which the natural order of the old nobility and the vulgar had been disturbed. This epoch of disorder and humiliation had come to an end, according to the poet, with the glorious reign of al-Mu’utadîd. The restoration of the ‘Abbasîd empire and the defeat of its enemies are the themes of numerous fahrî and madîbî poems by the prince. His poetic attacks on the Shi‘a and other dissidents were remembered long afterwards (see, e.g., Yûkût, Ustabî, v, 254-7; Sadrî, v, 232). In his historical poem containing, in its present form, 417 strophes celebrating his life and work (ed. C. Lang in ZDMG, xi (1886), 563-611, xii (1887), 232-79) when the caliph died in 289/902 and was succeeded by his son al-Muktafi, Ibn al-Mu’tazz seems to have left public life to lead again a life of retirement. In the political emergencies, however, that followed upon the illness and death of al-Muktafi in 295/908, he was involved in the intrigues of those who desired to secure an influence over the new caliph. In Dhu ‘l-Ka‘da 295/August 908, a brother of al-Muktafi, Diafâr, was proclaimed caliph as al-Muktafi. Already during the illness of al-Muktafi, a group of officers, secretaries and judges, who were not satisfied with the young Diafâr, had formed a plot to proclaim Ibn al-Mu’tazz, and had won his acceptance provided that there should be no bloodshed. The wa‘zîr al-‘Abbâs b. al-Hasan, who had opposed the dethronement of al-Muktafi, was murdered and, on 20 Rabî‘î 296/12 December 908, Ibn al-Mu’tazz was proclaimed caliph and took the
regnal name al-Muntasif bi'llah. But things changed rapidly as the guards of the caliph made a resolute resistance to attacks on the palace and set out to attack Ibn al-Mu'tazz and those who were with him in his house. These supporters abandoned him, and "the caliph of one day", who had taken refuge in the house of a jeweller, was found and strangled.

Ibn al-Mu'tazz's poetry did not fail to impress his contemporaries and later generations, who particularly admired his tashbihāt among his contemporaries and later generations, who particularly admired his tashbihāt and those who were with him in his house. These supporters abandoned him, and "the caliph of one day", who had taken refuge in the house of a jeweller, was found and strangled.

Ibn al-Mu'tazz did not aim at presenting a systematic summary of his "modernism", Ibn al-Mu'tazz's poetry remains within the traditional scope of Arab poetry, of which he had a profound knowledge.

The surviving specimens of his prose are in the strain of the fluent, simple and natural style that is known to have its earliest representatives in the famous risāla of 'Abd al-Hamid [q.v.] to the Secretaries and in the writings of Ibn al-Mukaffa [q.v.].

The verses of Ibn al-Mu'tazz were collected by his friend and other contemporary Sa'd ibn al-Mukaffa [q.v.], who edited them twice: (1) in a diwān divided into chapters in which the poems were arranged in an alphabetical order (parts iii-iv ed. B. Lewin, Istanbul 1943-50); (2) in an anthology containing specimens of poems of 'Abbasid princes and forming one part of his Kitāb al-Aṣrār (ed. J. Heyworth-Dunne, London 1936). There are traces also of another edition made by the philologist and historian Hamza al-Ifjarānī [q.v.].

For a copy of the poems that reached Isfahān in the early years of the 4th/10th century, see Yākūt, Udābā', vi, 285.

The rhetorical figures intentionally sought for and occurring with great frequency in the poetry of the Abbasid period with extensive quotations particularly of their lesser known works; the book, therefore, contains inter alia long poems which are not to be found in any other source.

**Bibliography:** In addition to the references given in the text and in Brockelmann, I, 79-80, S I, 128-130: Hilāl al-Sāhī, Kitāb al-Muṣārāt [q.v.], ed. H. F. Amedroz, Leiden 1904 (index); 'Arūb, Tabābarī, Zād al-adāb, ed. J. M. de Goeeée, Leiden 1897 (index); Miskawayh, The eclipse of the Abbasid caliphate, ed. H. F. Amedroz and D. S. Margoliouth, i-vii, Oxford 1920-21 (index). The titles of numerous papers by I. Krachkovsky on the subject are quoted in the Introduction to his edition of Kitāb al-Asba'd. (1) in a monograph devoted to "the newer ones" did not in fact begin with "the older ones"; the book, therefore, contains inter alia long poems which are not to be found in any other source.

**IBN AL-MU'TZI,** ABU 'L-ḤUSAYN YĀḤĪYĀ B. 'ABD AL-NĀ'R ZAYN AL-DIN AL-ZAWĀWi, grammarian of the Maghribi origin, b. 564/1168-9, d. in Cairo 628/1231. After studying in the west under al-Qurṣānī, he went to the east, where he taught grammar, first at Damascus and then in Cairo. Ibn Mu'tzi wrote commentaries on grammatical treatises and turned lexicographic works into verse; he seems to have been the first writer to compose a grammatical treatise in one thousand verses (al-fusūl). This treatise, al-Durra al-ala'fīyya wa'tirdthuh fi 'l-adāb wa'l-mafâyih, was printed also in Beirut 1961 (ed. Karam al-Bustānī).

**IBN AL-MUWAĞKIT,** MUḤAMMAD B. MUḤAMMAD B. 'ABBĀD ALLĀH AL-MARRĀKUSHĪ, born in Marrākush in 1894, where he died on 30 November 1949. His father held the office of muwağkit in the Ibn Yusuf mosque at Marrākush. Hence the son, at the start of his career as a writer, bore the surname Ibn al-Muwağkit, but when he came to hold the same position he was himself called al-Muwağkit.

From 1917, he became known to scholars interested in Morocco through the publication of four biographical works, the principal and most useful of which is entitled al-Sādāra al-abadīyya fi 'l-tā'īr bi-magāḥir al-ḥadār al-Marrākushīyya (lith. Fās 1917-20, 2 vols.); the second work, Ta'īr al-anfūs fi 'l-tā'īr bi 'l-ghayth Abī 'l-ʿAbbās, is a monograph devoted to the saint Abu ʿl-ʿAbbās al-Sabti, one of the seven patron saints of Marrākush; the author adds that in the margin, the biography of his own father, Muḥammad b. 'Abbād Allāh al-Mubarak, under the title type of adāb al-kāhīb, adāb al-nadīm etc.; it is a collection of anonymous sayings illustrating the moral qualities of an educated man.

In the field of the history of poetry, the subject of a vast literature of which only two specimens now remain, namely those of Ibn Kucbha [q.v.] and of Ibn Alīmān al-Djamāhi [q.v.], both dealing with poets of pre-Islamic and early Islamic times, Ibn al-Mu'tazz, in his last years, wrote Taḥbadd al-ṣūrār al-mubādāfiyya (facsimile of the unique and incomplete Esorial MS, ed. A. E. Ghebel, London 1939, GMS, n.s., xily; ed. A. A. Farrājdī, Cairo 1956, in which he collected anecdotes concerning poets of the Abbasid period with extensive quotations particularly of their lesser known works; the book, therefore, contains inter alia long poems which are not to be found in any other source.

**Bibliography:** In addition to the references given in the text and in Brockelmann, I, 79-80, S I, 128-130: Hilāl al-Sāhī, Kitāb al-Muṣārāt [q.v.], ed. H. F. Amedroz, Leiden 1904 (index); 'Arūb, Tabābarī, Zād al-adāb, ed. J. M. de Goeeée, Leiden 1897 (index); Miskawayh, The eclipse of the Abbasid caliphate, ed. H. F. Amedroz and D. S. Margoliouth, i-vii, Oxford 1920-21 (index). The titles of numerous papers by I. Krachkovsky on the subject are quoted in the Introduction to his edition of Kitāb al-Asba'd.
Ibn al-Muwakkit was brought up in the school of those 'ulama’ who, influenced by Sufi doctrines, were not reluctant to adhere to a religious confraternity. His father, a devoted reader of the Da'īd al-Majd al-Adil and al-Malik al-Muzaffar Ghazi.

In Ibn al-Muwakkit was brought up in the school of those 'ulama’ who, influenced by Sufi doctrines, were not reluctant to adhere to a religious confraternity. His father, a devoted reader of the Da'īd al-Majd al-Adil and al-Malik al-Muzaffar Ghazi.

In bn al-Muwakkit was contentedly following the saintly tradition of the biographers and hagiographers of his country as exemplified by Ibn 'Askar, Ibn al-Kādī and Ahmad Bāhā, when suddenly he discovered the writings of the great orthodox reformers of Cairo, Muhammad 'Abduh and Muhammad Rashid Riḍā, and the satirical novels of Muhammad Hāfiz Ibrāhīm and Muhammad al-Muwaqqit. At once he rallied to the viewpoint of the Muslims and, with the ardor of the convert, hurled himself into the battle then being waged by the orthodox reformers against the upholders of religious conservatism.

He started his new career with the publication of a short treatise on bida’, al-Kashf wa l-tibydn 'an bīt al-khāl al-zaman (Cairo 1932), followed almost immediately by al-Riḥla al-Marrakushiyya (Cairo 1933), in which, by means of a simple fable with a moral, he drew a pessimistic picture in the darkest colours of the Muslim society of his time. From then onwards, until his death, he kept up a relentless struggle, within his own country, against the confraternities, the marabouts, the kadis, and the marabouts, the kadis, and the marabouts, the kadis. It contains much valuable and original information on a history whose direct sources have disappeared.

Bibliography: E. Lévi-Provençal, Chorfa (particularly 45 and 46); A. Faure, Un réformateur marocain, Muhammad b. Muhammad b. Abd Allah al-Muwaqqit al-Marrakushi, in Hespéris, 1957, 1-2, with the bibliography of most of his works.
while occupying the office of royal letter-writer in the diwan al-inshad. Ibn al-Nabih lived the carefree and frivolous life which characterized the court of his patron. He dedicated himself to the pursuit of this fact in certain fragments the erotic genre has an important place, Ibn al-Nabih's work is mainly laudatory in character.

(J. Rikabi)

IBN AL-NADIM

Abd 'L-Faraq Muhammad b. Abi Ya'qub Ishtak al-Warrak al-Baghdadi, author of the well-known Kitab al-Fihrist, an "Index" of Arabic books, completed according to the author's own statement (p. 2, line 12; 38, 89; cf. also 132, 7 and 219, 7) in 377/987-8. Of his life very little is known. He died on 20 Sha'ban 385/17 September 995 according to Ibn al-Nadjjar, Dha'iri Ta'risih Bagdad (see Flügel's edition, i, XII, n. 2) or to others in 388/998 (see Ibn Hajar, Lisân al-Mizân, v, 72, where 38 is apparently a misprint); dates later than 385 (e.g., 87, 6; 169, 13, both lacking in codex B) are additions made by copyists; cf. 193, 17, where the author invites his readers to fill in the lacunae in his lists of books. At 237, 6 he mentions that in 340/951-2 he made the acquaintance of a certain scholar, so we may infer that he was born in 325/936-7 at the latest. Of his family nothing is known; there is no reason to connect him with Isbhâ [q.v.]. Ibrâhim al-Mawšil al-Nadim or with Yahyâ b. al-Nadim, a pupil of al-Bâja'juri; nor do we know to whom to whom the name al-nadim is given (i.e., the companion of a grande of the realm or even of the caliph) refers. He was a bookseller (warrâq), one who copies manuscripts and sells them, see Dozy) like his father (see p. 303, 24; 318, 7; 351, 14). He lived in Bagdad (see e.g., p. 337, 26 f.; 349, 7 where darr al-Râm means the quarter of the Byzantines in Bagdad). Sometimes he mentions a stay in Mosul (p. 56, 12; 190, 2; 265, 25 and modifiers 197, 4, because al-Safwani was, according to Ibn al-Nadjjar, d. 368/978-9), and one quatrain, of about 1590 verses. Ibn al-Nadim himself, was published in Beirut in 1299/1881 [q.v.]).

Although in the prologues to the panegyrics and in the last four discourses, in other words, the Arabic translations from Greek, Syriac and other languages, together with Arabic books composed on the model of these translations. Of the larger edition the first half (pp. 2-172, 7, Flügel) is extant in the manuscripts F = Paris (de Slane no. 4457) written in 617/1221-2, and B = Chester Beatty, described by A. J. Arberry, in Islamic Research Association Miscellany, i (I.R.A. Series no. 12, 1948, 19-45); B contains not the only text of pp. 2-172 (Flügel), with the exception of pp. 14, 22-29, 13 owing to the loss of some leaves, but also the beginning of the fifth discourse giving the text of the first section up to the article on the Nâsh al-Makhtûb (see bibl.). The second half of the larger edition (pp. 172, 11-360, Flügel) is extant in the manuscript S = Istanbul.

The shorter edition (pp. 2-213 and 238, 5-360, Flügel) is preserved in codex K = Istanbul, Köprülü 1135, written in 600/1203-4 (see Ritter, i.e., who shows that Flügel's manuscripts H, V, and C are also directly or indirectly derived from the Istanbul
manuscripts. In the larger edition the preface and the list of contents correspond ... connoisseur of history and polite literature; an excellent discourser and lecturer, and a composer of fine poetry.*

Ibn al-Nadim wrote also a Kitāb al-Anwa' wa l-tashbīḥāt (Fihrist, p. 12) which has not survived.

**Bibliography:** In addition to the references in the article: Kitāb al-Fihrist, vol. x, 1900, and xiv, 1902; M. Steinschneider, *Die griechischen Philosophen in der arabischen Überlieferung,* l, 147; S I, 226. (J.W. Fàcx)
(Iṣrāḥād, vii, 103). The esteem accorded to his erudition is attested by his having a following (maṣḥ-yahḥa) of three thousand men and four hundred women (Dhahabi, Ḫuffūs, iv, 213). In securing data for his history, therefore, he did not hesitate to use the authors' own handwriting; he carried on extensive correspondence with the authorities of his day and travelled widely to effect personal contact with his informants.

Ibn al-Najjdjar’s history of Baghdād, itself a dhāqāl to that of al-Khālīfah, was completed by Ibn al-Sā’a (d. 675/1275-6). Ibn al-Fuwātī (d. 723/1323), and Ibn Rāmī (d. 725/1325-7). His work on the Baghdad madrasa was carried on by Ibn Kūlī (d. 750/1350-1), Dhahabī (d. 764/1364-7) and Ibn Ḥadījl (d. 852/1448-9).

**Bibliography:** In addition to the works mentioned in the text: Ibn al-Ḥmad, Ṣhadharkhī, ii, 226; Ibn al-Fuwātī, Ḫawādith, 205; Ibn Ḥallīkān, Wafayāt, Cairo 1949, vi, 28-9; Ṭubūlī, Fawātī, Cairo 1952, ii, 522; Wustenfeld, Geschichteschreiber, 122-3; Brockelmann, S 1, 360; Hammer-Funga, Lit. des arab. Medizin, 257; Cl. Huart, Histoire, Paris 1901, 229. For a broader treatment see C. E. Farah, Ibn al-Najjdjar: a neglected Arabic historian, in JĀOS, 1964, 220-30. (C. E. Farah)

**IBN AL-NAFIS, ʿALĪ** AL-DĪN ʿABŪ ʿL-ʿALĀʾ ʿALI B. ABU ʿL-ḤARĀM AL-KURASHI AL-DIMASQĪ, a distinguished physician and many-sided author of the 7th/13th century. Except for the date of his death, only few facts of his life have been recorded; because Ibn Ḥusayn b. ʿAṣlah, although his contemporary, does not mention Ibn al-Nafis in his history of physicians; but al-ʿUmārī and al-Safādī give detailed though anecdotal accounts of him and his personal habits. Born in or near Damascus (presumably in the village of al-Kurashiyya), he studied medicine there under Muḥammad b. ʿAbd al-Ḥarīm b. ʿAlī known as al-Dakhwār (d. 629/1230; Ibn Ḥusayn b. Ṣalāḥ, ii, 239-46), who came from the school of Ibn al-Tilmidh [q.v.], who in turn had formed many disciples several of whom came from Baghdād to Damascus. Besides medicine, Ibn al-Nafis studied grammar, logic, and Islamic religious sciences. At an unknown date he moved to Cairo, where he was given the important post of Chief Physician of Egypt and became the personal physician of sultan Baybars I [q.v.]. He presumably worked at the Nāṣiri hospital and trained a number of pupils. The best known among them was Ibn al-Kūfī (Brockelmann, J 1, 649; S 1, 890), author of a work on surgery [see al-Djarrāh]. He lectured on Shāfīʾī law at the Masʿūrīyya madrasa. The famous grammarian, Abū Ḥayyān al-Dimashqī [q.v.], was his disciple in logic and praised his teaching. His contemporary, the philologist Ibn al-Naḥṣah [q.v.], praised his style in grammar. He became rich and had a luxurious house built for himself in Cairo. He died in Cairo, vii, 1287/16 January 1288 at the age of about 80 (lunar) years, and left his house, his fortune and his books to the Masʿūrī hospital there, founded by sultan Kālūwān and only recently completed (683/1284). In prescribing, "he never departed from the method to which he was accustomed; he did not prescribe a remedy as long as he could prescribe a diet, and he did not prescribe a compound remedy as long as he could content himself with a simple drug" (al-ʿUmārī). Notwithstanding these modern ideas on treatment, and although Ibn al-Nafis was exalted by his admirers as a second Avicenna, he seems to have been a learned theorist rather than a practical physician, but the range and depth of his general culture are impressive.

The literary activity of Ibn al-Nafis was important and extensive. He was mainly a commentator but one of independent mind and very extensive knowledge. He is said to have written most of his works out of his head, about five thousand books, although it seems to be confirmed by the fact that as a rule they contain, as far as they are not commentaries, very few references to earlier works. His main writings are: (1) the Kitāb al-Shāmil fi ʿl-fibb, an encyclopaedia of medicine which was to have consisted of three hundred volumes (this word to be taken in the conventional meaning of some ninety folios), of which only eighty-two volumes were compiled; the volumes exist, partly in the autograph of the author (see N. Heer, in RIMA, vi (1960), 203-10); (2) the Kitāb al-Muḥadhdhab fi ʿl-ḥukūm, a comprehensive but not very original record of the whole knowledge of the Arabs in ophthalmology; it was used by several later authors; (3) the Kitāb al-ʿUmārī, an extract from all parts of the Kanun of Ibn Sīnā [q.v.], omitting anatomy and physiology; it is a concise manual of medical practice and is very much used by the practitioner, and among the works of Ibn al-Nafis it has met with the greatest success in the Oriental medical world; it exists in numerous manuscripts, was printed or lithographed a number of times, was the subject of a series of commentaries and glosses, the most reputed of which, by Nafis b. Ṣawdāʾ al-Kirmānī (completed 641/1241-2), was lithographed in India for the last time as recently as 1928/1910; it was also translated into Turkish and into Hebrew. (4) Among the medical commentaries written by Ibn al-Nafis the most widely disseminated one is on the Aphorisms (Fusṣāl) of Hippocrates; he also wrote commentaries on Hippocrates's Prognostics, Epidemics, and De natura hominis; (5) he further commented upon the Masāʾil fi ʿl-fibb of Ḥusayn b. Iṣḥāq, (6) and he wrote an extensive commentary on the Kanun of Ibn Sīnā which exists in numerous manuscripts, improving the arrangement of the subject-matter and, in particular, collecting the passages relating to anatomy from the first three sections of the Kanun and commenting on them in a separate section, which was often copied as an independent book; in this section, Ibn al-Nafis sets out his theory of the lesser circulation of the blood (see below); his commentary on the fifth section of the Kanun was translated into Latin by the Renaissance physician and scholar, Anselm Alpagos, and posthumously printed in Venice 1547 (see M. T. d'Alverny, in Medioevo e Rinascimento, studi in onore di Bruno Nardi, i, Florence 1955, 195 f.). (7) Of the writings of Ibn al-Nafis on logic, there exists his commentary on his own Kitāb al-Wuraydhāt, a summary of the contents of Aristotle's Organon and Rhetoric; the section summarizing the Analytica Priora includes a discussion of the legal proofs in Islamic law and of the limited value of kifās [q.v.] from the point of view of logic. His writings on grammar and rhetoric, and his commentary on the Tanbih al-Shārikāt [q.v.] (if the mention of this last work by al-Subki is not merely the result of an error) do not seem to have survived, but the Muhāṣṣār fi ʿilm uṣūl al-ḥadīth, on the science of tradition, has been preserved. (8) There is, finally, al-Risāla al-ʿUmarīyya fi ʿl-sirr al-nabawwyya, which can be freely translated as The Theological Autodidactus.

In this intellectual tour de force, which was already admired by his contemporaries, Ibn al-Nafis set out to show, by abstract reasoning which he put into the mouth of a solitary person, called Kāmil, on a desert island, that the events in the life of the
Prophet and in the history of the community of Muslims, including the incursion of the Mongols in his own lifetime and even the physical appearance of the Muslim ruler, no doubt Sultan Baybars, were the best things that could possibly have happened and therefore, under divine providence, unavoidable. He ends with a naturalistic explanation of the Last Things.

The most important achievement of Ibn al-Nafis in the field of medicine is his theory of the lesser or pulmonary circulation of the blood, from the right ventricle of the heart through the pulmonary artery (arteria venae comitantes) to the left ventricle of the heart, boldly contradicting the accepted ideas of Galen and of Ibn Sīnā and anticipating part of William Harvey's fundamental discovery; in contrast with Harvey, who started from experiment, Ibn al-Nafis derived his theory from the same kind of abstract reasoning as in the Theologus Autodidactus. This remarkable theory, perhaps because of its unorthodox character, was almost ignored in the Arab and Islamic hospitals and medical authors, excepting only an anonymous commentator of the Kānūn (Bibliothèque Nationale, Arabe 5776) who agrees with it, and an otherwise unknown al-Fāḍil al-Baghdādī in his commentary on the Kānūn ga, an extract from the Kānūn by Maḥmūd b. Muhammad al-Caghminī (d. 745/1344), who made it his object to refute Ibn al-Nafis's criticisms of Ibn Sīnā (Berlin, Ahlwardt 6294). A theory of the lesser circulation, identical in all essential respects with that of Ibn al-Nafis and expressed in terms strangely reminiscent of those used by him, was formulated by Michael Servetus in his Christianismi restitutio (Vienna 1553), and an exposition of the same doctrine by Realdus Columbus (Realdo Colombo) in his De re anatomica libri XV (Venice 1559) forms a close parallel to this. Detailed philological analysis has made it probable that Servetus (and perhaps Columbus, too) had direct knowledge of the theory of Ibn al-Nafis, and it is likely that this knowledge was transmitted by Andrea Alpago, who spent more than 30 years in Syria, travelled widely in search of Arabic manuscripts, and is known to have translated from the Arabic numerous medical texts not all of which were printed posthumously (he died about 1524).

IBN AL-NAFIS, AHMAD B. MUHAMMAD B. ISMAIL (d. 338/950), Egyptian grammarian, expert in poetry, grammar, and mathematics. He was a pupil of Masoud b. Mufid, and is known to have translated (published in Cairo by Zaki Muǧāhid) an extract from the Kānūn, (Bibliotheque Nationale, Arabe 5776), and an exposition of the same doctrine by Realdus Columbus (Realdo Colombo) in his De re anatomica libri XV (Venice 1553), and an exposition of the same doctrine by Realdus Columbus (Realdo Colombo) in his De re anatomica libri XV (Venice 1559) forms a close parallel to this. Detailed philological analysis has made it probable that Servetus (and perhaps Columbus, too) had direct knowledge of the theory of Ibn al-Nafis, and it is likely that this knowledge was transmitted by Andrea Alpago, who spent more than 30 years in Syria, travelled widely in search of Arabic manuscripts, and is known to have translated from the Arabic numerous medical texts not all of which were printed posthumously (he died about 1524).

IBN AL-NAHHAS — IBN AL-NAJJĀH

According to some sources Ibn al-Naṭṭāḥ excelled in history. Among his authorities were the Wāgakdī, al-Madārīnī and Abu Ubayda Ma'mar b. al-Muthanna. Thanks to his (lost) work Kīlāb (or Aḥḥār) al-da'wla al-‘Abbāsiyya, later biographers consider him one of the pioneer writers of the dynastic history of the ‘Abbāsid. Whether this work was original or, as F. Rosenthal suggests, a revision of an earlier work by the Shīfi al-Ṭurrā, at least according to A. Dūrí that Ibn al-Naṭṭāḥ may have been the author of an important extant work on the ‘Abbāsid known as Aḥkār al-‘Abbās ... wa wa‘l-dā‘ih, preserved in manuscript in the library of the Institute of Higher Islamic Studies in Baghhdād. The first pages are missing (204 fols. survive); the name of the author is not given. The work is an annalist account in biographical form dealing with al-‘Abbās and his descendants, the ‘Abbāsids. The abrupt manner in which the manuscript ends shows that it is incomplete. A consistent attribution of the work to Ibn al-Naṭṭāḥ would appear, however, to be rash, in view of the paucity both of the available information on Ibn al-Naṭṭāḥ’s works and of the deductions which may be drawn from this manuscript.

As a traditionist Ibn al-Naṭṭāḥ was also known among the circle of the Muḥaddithūn, who thought highly of him and regarded him as trustworthy (thāba). This judgement enhances his importance as an early historian.

Bibliography: In view of the important place held by Ibn al-Naṭṭāḥ in Muslim historiography, the lack of information on him is surprising. Few references have been found to him, he is mentioned in Maṣūdī’s list of authors (Muḥājâd, ed.-tr. Pellat, § 8) and he figures also among the historians in Sakhawi’s list (mainly derived from Maṣūdī’s list, except for its alphabetical arrangement; see F. Rosenthal, History, 430 (Arabic tr., 686)) and also among the historians in Sakhawi’s list (mainly derived from Maṣūdī’s list, except for its alphabetical arrangement; see F. Rosenthal, History, 430 (Arabic tr., 686)).

Little is known about his life except that, as his nisba (his Baṣrī shows, he was born in Baṣra and lived there for the greater part of his life. He used to visit Baghhdād in order to hear and relate traditions.

IBN AL-NAZHAR, Abū Bakr Ahmad b. Sulaymān al-'Umānī, bāṣiqī scholar of 'Uman who lived in the 6th/12th century (he was killed by Khardala b. Samak). He was the author of the Kitāb al-dīwān, a collection of poems on ḥākīm of which two editions have been published (one of them in Cairo in 1351). Among his other works there should be mentioned an important Kitāb Sīlah al-dīzmān fī siyār aḥl 'Umanā.

IBN NUBATA, Abū ʿAYYĀ.§ Abī ʿRaqīm b. Muḥammad b. ʿIsāʾīl al-Ḥudhālī al-Farrākī, born at Mayyafarīkīn at a date not known, that of 335/946 given by his biographers being probably incorrect (cf. Amedroz, The Mawardi dynasty at Madīnāt al-Muḥājirīn, in J.R.A.S., 193, 125, n. 1; idem, Notes on two articles on Mayyafarīkīn, in J.R.A.S., 1900, 175), was preacher (ḥāfiq) at the court of Sayf al-Dawla at Mayyafarīkīn and Aleppo. He died in 374/984-5 in his native town. His sermons (khufāb) dīhādīyya, often composed sermons for political occasions. His most famous sermons, the ḥuṣlāb dhīhādīyya, were written to exhort the population to support Sayf al-Dawla in the war against the Byzantines, and they aroused great enthusiasm. They contain references to contemporary events, for example the taking of Aleppo by the Byzantines in 351/962, the measures that he was made superintendant of the Church of the Holy Sepulchre at Jerusalem. To fulfill this duty he went there every year and then returned to Damascus. After al-Afḍal's fall and death at Damascus, Ibn Nubata dedicated to him a threnody which he composed himself to a lie of mysticism and lost interest in all poets; this put an end to the happy period of Ibn Nubata's life. From then on he wandered from town to town in Syria, earning his livelihood by writing panegyrics. It was during this period that he was made superintendent of the Church of the Holy Sepulchre at Jerusalem. In 743/1342, Ibn Nubata was appointed secretary to the Chancellery (Dīwān al-īawah) at Damascus. His misfortunes at this time led him to write poems soliciting the support of the sultan ʿAbd ʿRaqīm, who ruled at Damascus from 710 to 723/1313-41, and whose famous poet he became. To him he addressed his most famous panegyrics, known as al-Muʾayyadīyyāt. Al-Malik al-Muʾayyad paid him an annual allowance, which he sent to him at Damascus. Ibn Nubata led at this period a happy life and wrote a number of literary treatises commissioned by al-Malik al-Muʾayyad. When the latter died in 732/1332, the poet wrote moving threnodies lamenting his death. Al-Afḍal, who succeeded his father and ruled Ḥamāt from 732 to 743/1332-41, continued for a time to patronize Ibn Nubata, but then he devoted himself to a life of mysticism and lost interest in all poets; this put an end to the happy period of Ibn Nubata's life. From then on he wandered from town to town in Syria, earning his livelihood by writing panegyrics. It was during this period that he was made superintendent of the Church of the Holy Sepulchre at Jerusalem. To fulfill this duty he went there every year and then returned to Damascus. After al-Afḍal's fall and death at Damascus, Ibn Nubata dedicated to him a threnody which was in fact a lament for the whole of the Ayyubid dynasty.

In 743/1342, Ibn Nubata was appointed secretary to the Chancellery (Dīwān al-īawah) at Damascus. His misfortunes at this time led him to write poems soliciting the support of the sultan ʿAbd ʿRaqīm, who ruled at Damascus from 710 to 723/1313-41, and whose famous poet he became. To him he addressed his most famous panegyrics, known as al-Muʾayyadīyyāt. Al-Malik al-Muʾayyad paid him an annual allowance, which he sent to him at Damascus. Ibn Nubata led at this period a happy life and wrote a number of literary treatises commissioned by al-Malik al-Muʾayyad. When the latter died in 732/1332, the poet wrote moving threnodies lamenting his death. Al-Afḍal, who succeeded his father and ruled Ḥamāt from 732 to 743/1332-41, continued for a time to patronize Ibn Nubata, but then he devoted himself to a life of mysticism and lost interest in all poets; this put an end to the happy period of Ibn Nubata's life. From then on he wandered from town to town in Syria, earning his livelihood by writing panegyrics. It was during this period that he was made superintendent of the Church of the Holy Sepulchre at Jerusalem. To fulfill this duty he went there every year and then returned to Damascus. After al-Afḍal's fall and death at Damascus, Ibn Nubata dedicated to him a threnody which was in fact a lament for the whole of the Ayyubid dynasty.
Ibn Nubata wrote many prose works mentioned in the ididza which he gave to his pupil Salah al-Din al-Ṣaḍāḥ, and listed also by Brockelmann. In accordance with the fashion of the period, Ibn Nubata’s prose is characterized by mannerisms of style. The most important of these works were written at the request of the ruler of Hamāt, al-Malik al-Muʿayyad, when the poet was in Syria; among them are: *Maṭla* al-fawā'id, a work of adab praised by some men of letters of the period; *Ṣaḥīḥ al-muṣawwār*, biographies of the scholars of the period; *Ṣurk al-ayyad*, a commentary on the *Sārghitmish*, and died in 970/1563, when he had not yet reached the limit of his intellectual development; (4) Ibn Nubbaym also wrote commentaries on several handbooks of law, except that he was born in Cairo in 926/1520, studied in Cairo and several times afterwards; it is one of the great handbooks of the Hanafi madhab.

Zayn al-Din’s younger brother ʿUmār, also called Ibn Nuqaym, studied under him and wrote another commentary on the Kān al-daḥāʾib, called al-Nahr al-fāʾīḥ; he died suddenly, presumably poisoned by a jealous wife of his, in 1005/1596 and was buried near his brother (al-Muhībī, Khiṣāṣ al-ʿulār, iii, 206).

**Bibliography:**

Nubata was particularly interested in the systematic structure of ʿikb, and this interest shows itself in his literary activity, which was very extensive.

(1) His Kītāb al-ʿagāb wa l-nasīʿah (printed in Calcutta 1240/1825 and repeatedly in Cairo) is based on the usual subjects of Islamic and Arabic learning, started to teach and to give fatūās at an early age while his teachers were still alive, performed the ḥadīṯ in 953/1547, taught at the madrasa of the amir Şarghtimish, and died in 970/1563, when he had not yet reached the limit of his intellectual development; he was buried near the sanctuary of Sayyida Sukayna. Ibn Nubata’s work on the ʿikb al-dāna, which he criticizes the Andalusians (text in Ibn al-Nakib (694-764/1294-1362), and Saʿd ʿAbd al-Wahhāb, al-Mustaḥaffad, Cairo 1344, vii, 249; Ahmad Amin and others, *Sarh al-ʿuyun* (Cairo 1964) contains further bibliographical references and a list of Ibn Nubata’s works.
IBN RA'IK, or MUHAMMAD B. RA'IK, first amir al-umārāʾ (q.v.) of the 'Abbāsid caliphate. The son of an officer of the caliph al-Mu'taṣid, and of Khazar origin, Ibn Ra'ik had been chief of police, and then chamberlain during the reign of al-Muktaḍir. On the accession of al-Kāḥir, at first in disgrace for having supported the former caliph and having fled from Baghdaḏ, he succeeded in being made governor of al-Ḍār al-Ṣafira. With the accession of Rabbān, he was made governor also of Wāṣṣi, because he was one of the most powerful governors, and had no scruples about withholding the payments which were due from him in order to make difficulties for the caliph and the vizier. He obtained, through his appointment as amir al-umārāʾ (q.v. "commander of the commanders"), the chief command of the army, together with responsibility for the financial administration and for maintaining order throughout the empire (342/953–954). During the two years of his ascension, Ibn Ra'ik concerned himself mainly with depriving the caliph of every means of defence, and ordered for this reason the massacre of the Ḥudariyya (q.v.) guards, who had proved intractable. He also entered into conflict with the governors of the Ahwāz, the Banu 'l-Bardāl, from whom he attempted to take their province, and treated in a particularly cruel manner the former vizier Ibn Mukla (q.v.), who was intriguing against him. In spite of all this, he was removed from office in 362/973 by his own subordinate, Badjkam, who appointed him as governor of the Diyar Muḍar. After Badjkam's death, he seized the power from the new amir Kurānīkī and succeeded in getting himself appointed again as amir al-umārāʾ in 372/982/September 941. But he was not long in office, as he was assassinated in Raḡāb (330/April 942) by the Hamdānīn al-Ḥasan b. Abū 'l-Allāh, who felt himself to be threatened by him.

of the Al-Tidjani (d. after 708/1308) and especially of Ibn al-Rakik (ca. 706/1306-7), al-Nuwayri (d. 732/1331-2), Ibn Khaldun (d. 808/1405-6) and al-Mafcrizi (d. 846/1442-3). Al-Sakhawi (I, 222; d. 908/1496-7), al-Shamakhî, and even al-Wazir al-Sarrâdh (Izial, p. 289 ff.), who was writing in 1137/1724-5, appear to quote directly from him. Today, however, the Ta'rîkh of Ibn al-Rakik, although it is constantly referred to as surviving in certain private libraries in Tunisia, cannot in fact be traced. An anonymous fragment (Ibn al-Katta, ed. M. al-Ka'bi, who attributes it to Ibn al-Rakik; but this attribution is in fact very dubious. It should be noted finally, if the passages borrowed from Ibn al-Rakik's work are to be correctly interpreted, that although compiled or written with scrupulous care it is coloured by the šī'ī sympathies of its author, a fact which seems to have been forgotten or overlooked by the historians who have identified long fragments from it.

Ibn al-Rakik, who in 388/998 was sent by the Zirid Bâdis on a diplomatic mission to al-Hâkim of Egypt, seems, to judge from a poem reproduced by Yâkuţ (Mu'âşim, i, 222-4), to have stayed for a long time in Cairo, of whose delights 'al-lafz' writes poignantly and nostalgically. Among his other works not yet traced, there are mentioned: Kitab al-Nisâ' (on women); al-Hâfiz wa 'l-irtiyaf (on pleasures); al-Aghâni (on songs); and Nasm al-suluk fi mus'amardt al-mulâk (a manual for the perfect courtier).

Bibliography: The sources are given by Brockelmann, i, 161, S I, 252; Amari, Storia, ed. Nallino, 1933, i, 39; Zirid, ed. i, 51-2; H. R. Idris, Zirides, i, XIV and ii, 81-2. The best biographical notice on Ibn al-Rakik is that by Yâkuţ, Mu'âşim al-udâbâ, Cairo ed. 1936, i, 216-26. (M Talbi)

IBN RAŞHÎD [see Rashid, al.]

IBN RAŞHÎ, Ābî 'Alî Ḥâsan b. Raşhî Raşik al-Kayrawâni, and also al-Āzîd, al-Masflî, one of the most illustrious men of letters of Ifrikiya, born 390/1000 at M'sila (Masla = Muhammadiyya) in the region of Constantine. His father, known by the single name Rashik, was probably a freed slave of the Azd. He followed the trade of goldsmith in Byzantine origin (rumî), who had become a client of the Azd. He followed the trade of goldsmith in M'sila, where the young Hasan, after his first studies, soon revealed his poetic talents, as well as a taste for energy: witty, jovial, high-spirited, and indeed a conscious artistic elegance, in which the poet's qualities, his charming character and his boundless

metre (al-mā'ām), rhyme (al-ḥāfiya), and the culture, intelligence and dexterity of the poet who must be able to handle all types with the same ease and to adapt his poetry according to the subject, the circumstances and the public. The work concludes with some particulars about the life of the Arabs, their language and the knowledge required in order to develop poetic talent. The quotations, which are varied and accompanied by comments, give this work on poetics a quality of adab which appreciably enhances it; the reasoned and well-founded judgements which accompany the exposition throughout all al-Umda in themselves allow Ibn Rashik to be ranked as one of the greatest Arab literary critics. Making use of the various currents of literary criticism which, from Ibn Sallām to al-ʿAskari, through Kudāma, al-ʿĀmidī and al-Dījrānī, reached its final but incomplete form in the East, Ibn Rashik, who devoted himself to the criticism of poetry, composed a work of synthesis that was at once rational, systematic and original, in which he did not confine himself to a theoretical exposé or to the study of one aspect of poetry or of a single poet, but dealt with poetry in its entirety and as a man of letters, since this criticism flows from the complete and copiously illustrated exposition of poetics, as well giving a place, along with the classical criteria, to taste and the "literary sense".

The favourite problem of the Arab literary critic, plagiarism (al-sarīka)—already considered at the end of al-Umda—became with him, in a remarkable work, Kurādat al-dhakhāb fi nādaq ʿabīr al-ʿArab (ed. Khāndjī, Cairo 1926; ed. Ch. Bouyahia, forthcoming), a study of poetic creation, and more precisely of the particular use made by each poet of poetic themes and the art of expressing them, and, to some extent, of the evolution of Arab poetry. Ibn Rashik's method of literary criticism finds its application in his admirable Ummdhad al-samān flī ḥārār al-Kayrawān (a lost work, the substance of which has, however, mostly been preserved in later biographical dictionaries, which often adopted it as a model, closely imitated but never equalled; Ibn al-ʿAbbār makes no secret of this fact for his Tuhāt al-bāḍīm, incomplete ed. under the title al-Muṣlihad min K. Tuhāt, Cairo 1948, ed. idem, Tuhfat al-kidam, Cairo 1326/1908, 220; al-Wazīr al-Sarrādī, al-Bulāl al-sundusiyā, Tunis 1287/1870-1, 99-102; Rādi lī Khālid, Istanbul ed., 185, 301, 973, 1029, 1160, 1907, 1918; Brockelmann, i, 307, S I, 539-40; H. (Ch. Bouyahia)

IBN RASHIK
Abū Muḥammad ʿAbd al-Razzām al-Kushayrī, ruler of Murcia, 1492/1493-1501/1502. He is first heard of as ʿdāmi of Ḫīn Balī, the modern Vilches, in 1474/1481. In this year Ibn ʿAmīr [q.v.] stayed with Ibn Rashik on his way from Seville to take Murcia from Ibn Ṣhrāf for his master al-Mūtamīd Ibn Ṣhabīb. Ibn ʿAmīr and Ibn Rashik formed an association, as a result of which, and by a process of which the accounts differ, Ibn Rashik became the independent ruler of Murcia. Ibn Rashik's position, like that of his neighbours at Valencia and Almeria, was precarious, being threatened both by internal strife and continual pressure from the Christians. Indeed the Christians possessed an outpost in the very heart of Ibn Rashik's territory at Aledo, 45 km south-west of Murcia.

The advent of the Almoravids and the great defeat suffered by the Christians at Zallaqa (479/1086) had but slight immediate effect on the Levante. Ibn Rashik was obliged to pay a token tribute to Muṭamīd and Aledo remained in Christian hands. Yūsuf b. Ṭashfin's second expedition put an end to this situation. Yūsuf made directly for Aledo

(Ch. Bouyahia)
and laid siege to it with the help of his Andalusian allies (481/1088). He had already made a pact with Mu'tamid that Murcia should be restored to him and, though it seems that Ibn Rashik contrived to postpone the evil hour for a time, he was finally deposed under suspicion of actually helping the Christians besieged at Aledo and was delivered as a prisoner to Mu'tamid. 'Abd Allāh the Zirī says that Mu'tamid had him put to death but according to Ibn al-Khaṭīb he was kept prisoner at Seville until released by the Almoravids when they took possession of the city in 484/1093. His subsequent fate is unrecorded.

**IBN RAWAHA** (see 'Abd Allāh b. RAWAWA).

**IBN AL-RAWANDI or AL-RAWANDI,** Abu 'l-Husayn Ahmad b. Yahya b. Ishāk, Mu'tazill and heretic, born at the beginning of the 3rd/9th century. The unsolved problem of the date of his death (the middle or the end of the 4th/ioth century) should probably be decided, in spite of certain indications to the contrary, in favour of the earlier date, given that his work on the supposed criticism of prophecy by the Brahmans (see **ABARİMA** but the article omit to mention this point) is already mentioned in an unannounced fragment by the Jewish mutakallim Dāwūd b. Marwān al-Raḥḥal, known as al-Muḳammi, whose literary activity was not later than the last third of the 3rd/9th century (cf. G. Vajda, in Oriens, xv [1962], 61: 2.).

Ibn al-Rawandi's intellectual development is difficult to trace. At first an adherent of Mu'tazilism, he then left his friends and attacked them mercilessly, emphasizing their real or apparent inconsistencies, deducing heretical conclusions from their speculations, and provoking from them, but probably after he had left them, refutations no less violent. His attachment, at least temporarily, to Shi'ism seems underlain by a 'Bābī'ian' streak, even in the essay that he turned after this to free thought (sandawa), perhaps under the influence of Abū Ṭās al-Warrāq (q.v.), as stormy a figure as himself. It is not clear whether he ended as a sceptic or whether there is some truth in the Mu'tazila's claim that he finally repented. Whatever the facts may have been, a discerning scholar like al-Tawḥīdī (q.v.) pays homage to his periplicity and his perfect mastery of language.

There are also several obscure points in the bibliography of Ibn al-Rawandi. The Fīrīst gives two lists of works which were attributed to him: one consists of eight titles, the other, incompletely transmitted, thirty-seven, the first seven of which are considered to date from his Mu'tazilī period; the second list contains none of the titles enumerated in the first except 'Azwān, Našr, al-Bika, Dāmīgī, Kādīb, Fardā (or Firdān?), Mūḏqān, Luluʻa; on the other hand it lists, under numbers 34, 35 and 36, some refutations supposedly composed by Ibn al-Rawandi himself (see J. Fück, Texts ... from Ibn al-Nadīm's Kitāb al-Fīrīst, in Professor Muhammad Shafī'ī's Presentation Volume, Lahore 1955, 72 f.). H.S. Nyberg has compiled (Arabic introduction to his ed. of the K. al-İnüşār, Cairo 1925, 32 f., in French in A. N. Nader, Kitāb al-İnüşār, Le Livre du Triomphe...). 

Beirut 1957, xxvii-xx) a list of nineteen works to which should be added a Kitāb al-Khāṣṣī and perhaps a Kitāb al-Ma'taṣīla, refuted by al-Djabbār (see A. Borisov, in S.O., iv [1947], 81 f.).

Fragments of three of his works are preserved in works written by those who refuted his ideas: (1) the Kitāb Faṣfaṣāl al-Mu'taṣīla is contained, divided up but the major part of it reproduced, in the Kitāb al-Inüşār of al-Khayyāt. Ibn al-Rawandi's attack was in its first part a reply to an apologia, or rather a panegyric, of the Mu'tazilī school (Faṣfaṣāl al-Mu'taṣīla, q.v.) by al-Khayyāt, who maintains of a defence of the Shi'ī. Nyberg's ed. has been reproduced, with a French translation (to be used with caution) by A. N. Nader, Beirut 1957. (2) Fragments of his Kitāb al-Dāmīgī, written against the Kurān, were reproduced by the kātib 'Abd al-Djabbār (q.v.) in the course of his refutation (also lost) of Abū 'Ali al-Djabbār (q.v.). These fragments are not the same as those reproduced later by Ibn al-Djawi in his Minhaj (see Ibn al-Mu'taṣīla, xvi, Cairo 1380/1960, 389-94, and also 156 and 416. The purely dialectical refutation of the Baharīma in vol. xv of al-Mugham, Cairo 1915, 109-6, does not mention Ibn al-Rawandi at all, but see pp. 73 and 127; see also by the same, Tāhīth dal'il al-nubuwalla, ed. 'Abd al-Karim 'Uṯmān, Beirut 1956, 51-63, 90 f., 128 f., 222, 224, 232, where the use of Ibn al-Rawandi's works by Shi'ī propagandists is stressed. (3) Some fragments of the Kitāb al-Zumurrud are preserved in the Madījah of the Ismaʿīlī al-Muʿayyadī fī 'l-Dīn (q.v.), ed. and tr. by P. Kraus in Beiträge (see bibl.).

The quotations, whose verbatim accuracy is not certain, which are found in the Kitāb al-Tawḥīd of al-Māturīdī (q.v.), MS Cambridge Add. 3581, 96 v., 101 v. (particularly against al-Warrāq) and in Naṣīr-i Khusrav (q.v.), Kitāb-i Di jamīʿ al-Ḫulma tāy, ed. Corbin-Molin, Tehran 1953, 232 f. (against the "Hašnīya", but it does not deal with those who are usually referred to by this name in the Sunni sources) have still to be investigated.

The plentiful extracts from the K. al-Zumurrud provide a fairly clear indication of the most heterodox doctrine of Ibn al-Rawandi, that for which posterity has been least willing to forgive him: a biting criticism of prophecy in general and of the prophecy of the First Three Khilafahs in particular that for which posterity has been least willing to forgive him: a biting criticism of prophecy in general and of the prophecy of the First Three Khilafahs in particular, which should be added a Kitāb al-Khāṣṣī and perhaps a Kitāb al-Ma'taṣīla, refuted by al-Djabbār (see A. Borisov, in S.O., iv [1947], 81 f.).

Borisov, in S.O., iv [1947], 81 f.).
the bibliography prior to its publication; there should be added (what follows is a selection only): for the works of Ibn al-Rawandi in Arabic literature, S. Poznański, in MGWJ, ii (1907), 731 ff.; other details of this (and in particular of the affinity between Ibn al-Rawandi and the slightly later Jewish heretic Hayyayawāy al-Balghī) in the work in Hebrew by M. Zucker, Rav Saadia Gaon's Translation of the Torah, New York 1959, 13-5, 29-33; see also G. Vajda, in REJ, xcix (1953), 88 f. A. Badawi has translated into Arabic a Cronograph of Ibn Khrais al-ţawgī al-îltamāsī fi 'l-ta'ābīr al-îltamāsī, Cairo 1945, 77-88. Passages from Persian sources, Táwḥīd: al-Imād wa l-mu'āwnās, Cairo 1937/1933, ii, 14 and al-Baṣīd wa l-dhāhīdār, same date and place, 183. The notice by Ibn Mūrtāda on Ibn al-Rawandi may be read in the ed. by S. Diwald-Wilzer, Die Klassen der Musulmānien, Wiesbaden 1961, 92, lines 1-5. The passage from Ibn al-Anbārī, Nawādat al-alībī, quoted by Kraus, Berti, 379, is found in the most recent ed. by I. Sāmarrātī, Bāhdād 1959, 150. See also the notices in Brockelmann, S I, 340 f., in F. Sezgin, GAS, i, 1967, 620 f. and in Zirikli, As'Lāmāh, i, 252 ff.; further, H. S. Nyberg, 'Amr Ibn Udbaid et Ibn al-Rawandi, deux reprouvés, in Classicisme et déclin culturel dans l'histoire de l'Islam, Paris 1957, 125-36. A preliminary sketch, so far only fragmentary, of a doctrinal study (premature in view of the state of the documentation but excellent so far as it goes) is J. van Ess, in Archiv für Geschichte der Philosophie, xlv (1953), 79-85 and Die Erkenntnislehre des ^Adudaddīn al-lci, Wiesbaden 1966, passages indicated in the analytical index, p. 492. (P. Kraus-[G. Vajda])

Ibn Ridwan, Abu 'l-Ḥasan 'Ali b. Ridwan b. 'Ali b. Da'far al-Miṣrī, a renowned physician and medical author and polemist of Egypt. He is well informed about his life and personal circumstances because he composed an autobiography, the essence of which has been preserved by Ibn Abī Ḫasyiba, when he was approaching sixty. It is pervaded by a strong feeling of complacency which is, perhaps, explained by his experiences and explains, in its turn, his addiction to polemics. He was born in 386/998, the son of a baker in Giza (Dūza) near Cairo. He was very poor, had a hard youth, and had to earn his living and the money for his instruction by astrological forecasting in the streets and by similar means. He never had a teacher in medicine, which became a matter of reproach to him later, and he studied exclusively from books. He says himself that he did not possess the means to pay the apprentice's fee demanded by medical practitioners. He also was unable to marry until he was thirty. But after his thirtieth year he began to acquire a good medical reputation, and when he was appointed Chief Physician of Egypt by the Fāṭimid Caliph of Cairo (it cannot have been al-Ḥākim who disappeared in 411/1021), when Ibn Ridwan was only twenty-three years old, but probably al-Muṣtaṣirīn, 427/1036-487/1094), he acquired prosperity and wealth. Abu 'l-ʿMuṣṭarkar al-Husayn b. Maḍīn, the ruler of Makran [q.v.], consulted him when he was stricken by hemiplegia. Ibn Ridwan never left Egypt and perhaps not even the immediate neighbourhood of Cairo, where he became "one of the foremost to give information about the branches of knowledge in which he claimed authority" (Ibn al-Kiftī). The site of his house remained known for a long time. According to Ibn Abī Ḫasyiba, he adopted an orphan girl in the period of famine and plague which started in 445/1053, and he educated her and she grew up in his house; but once when he left her alone, she took possession of his goods and she was never heard of again and fled, and nothing more was heard of her; thereafter, his mind became deranged. Ibn Ridwan was inclined to acrimonioum polemics against his predecessors and contemporaries, including Ḥunayn b. Isbāṭ, al-Rāzī, Ibn al-Dīazzār, Ibn al-Tayyib, Ibn Būṭlān [qq.v.], and others. Whereas he is unanimously praised as a medical practitioner, and Ibn Abī Ḫasyiba calls him "a better medical man (than Ibn Būṭlān) and better trained in the philosophical and associated sciences", he does not seem to be satisfied with his personal relationships. According to Ibn al-Kiftī, he was a man of narrow mind and not of sound judgment. He was, moreover, not of good looks and appearance. Nevertheless, many pupils followed his lectures and studied under him, and his fame spread abroad"; but "his pupils used to relate about him ridiculous things concerning his medical arguments, astrological sayings and logical assertions, if those who have related them are right." Among his disciples were the Fāṭimid prince, philosopher, and bibliophile al-Mubāshshīr b. 奋斗目标 [q.v.], who had an argument". This is amply borne out by the passage from Ibn al-Kiftī. Among his disciples were the Fatimid prince, philosopher, and bibliophile al-Mubāshshīr b. 奋斗目标 [q.v.], who had an argument". This is amply borne out by the passage from Ibn al-Kiftī, who called his works not "a call to deviate in the least from the thought of Galen, to such a degree that he did not allow an original thinker such as al-Rāzī to deviate in the least from the thought of Galen, and indeed most of his polemics have their starting-point in this contention of his. In addition, as Ibn Abī Ḫasyiba observes, Ibn Ridwan "was insolent in what he said, and he abused those with whom he had an argument". This is amply borne out by the contents of his treatises against Ibn Būṭlān (see below).

Among his more important and better known works are: (a) A Commentary on the Quadrupartium of Ptolemy (Sharḥ al-makāliṭa al-arba'ā li-Bāllāmīsāt); it was translated into Latin and into Turkish, and the Latin translation was printed, together with the Quadrupartium itself, among the incunabula of Venice (and later) several times: (2) a Commentary on Galen's Ars parsa (Sharḥ al-sīnadā al-sāqhirā li-Qāmilīnā); this too, was translated into Latin, and the translation was repeatedly printed, together with the text of Galen, before and after 1500 (Brockelmann, i, 657, no. 74, and S. I, 886, no. 24 are to be combined); it was also translated into Hebrew; (3) Kālid al-ʿUṣāl fi l-fībāb, a compendium (kabābīd),
another of Ibn Riḍwān’s books to have been translated into Hebrew; (4) al-Kitāb al-Nafis fi taḥīm ṣindūt al-jibb’, in Ibn Riḍwān, displaying a remarkable knowledge of Greek medical writers, tries to show that learning medicine from books is preferable to learning from teachers, turning the necessity of his own study into a virtue; the work contains important information on the transmission of Greek science to the Arabs; summary of the existing part in Schacht-Meyerhof, Controversy, 20–8; (5) Risāla fi ḍaf‘ maqaḍ ar-rādī bī‘ard Miṣr, a treatise dealing with the effects of disease in Egypt and Cairo, the plague and its causes, preventive measures and hygienic rules for the inhabitants of Egypt, including a medical topography of Cairo and its suburbs in the 5th/11th century; translation of this last section by M. Meyerhof in Sitzungsber. d. Physikalisch-medicinischen Gesellschaft, liv, Erlangen 1923, 219–24, and in Comptes rendus du Congrès international de médecine tropicale et d’hygiène, ii, Cairo 1929, 251–52; see also K. Voliers, ZDMG, xxvii (1890), 386 f.; (6) finally, his controversy with Ibn Bültan of which three treatises of his have been preserved (edited and translated in Schacht-Meyerhof, Controversy), whereas two and perhaps three more have been lost; the controversy started from a disputed point of physiology, and perhaps three more have been lost; the controversy started from a disputed point of physiology, and finished with Ibn Riḍwān calling upon the practitioners of Cairo to boycott Ibn Bültan.

IBN RŪḤ, ABU ‘L-KĀSIM HUSAYN b. Rūḥ b. Abī Bahr al-Nawbāṭī, third safīr or wakil (305/917–326/938) of the absent twelfth imām of the Twelver Shi‘a, during the lesser Ghayba [q.v.]. Of the Nawbāṭī family only on the mother’s side, he was from Kūm. He held the title bāb already under Ḥasan ‘Askarī [q.v.], and transmitted ḏadīths from earlier imāms. Appointed successor by the second safīr, Abī Dā‘far al-Umari, despite some opposition, he made himself the unquestioned centre of Twelver Shi‘ism at Baghdād under al-Muṣṭādir. During a time in hiding, he appointed al-Shalmaḏānī [q.v.], his deputy, but then denounced him as a heretic. Along with his adherents, the Banū Furāt, Ibn Rūḥ was accused of correspondence with the Karāmūṭa. For five years (312/924–317/929) he was imprisoned, allegedly on a fiscal complaint. Freed by Mu‘ānis, under al-Kādī he was favoured by the court. Ibn Rūḥ calmed disputes among Shi‘ī courtiers and suavely avoided giving offence to Sunnis. Before his death, he appointed Abu l-Ḥasan al-Samarrī his successor.

IBN AL-RŪMĪ, ABU ‘L-HĀSA IN AL-‘AABS B. DURAYDĪ (or Djurdjí or Djurjí), poet of the 3rd/9th century, was born at Baghdād on 2 Rajab 221/21 June 836 and died there in 283/896 (some sources give the date of his death as 276/889 or 284/ 897). His father, al-‘Abbās, a Byzantine freedman and a client of ‘Ubayy Allāh b. Ṯā‘ār b. Dī‘ār, was probably the first member of the family to embrace Islam. His mother Ḥāsana, the daughter of ‘Abbās Allāh al-Sīdī, was of Persian origin.

Little is known of his studies. It is known, however, that he went to a school attended by upper-class children and that he was the pupil of Mūsāmād b. Hābīb, the friend of his father and like him the son of a freedman and a client of the Banu l-‘Abbās. At various times he was in contact with Thālab, al-Mubarrad, al-Zaḥrīyādī, al-Asbakhī fī iṣābāh al-Banū al-Sarrādī and many other men of letters of the period, which provided him with a solid cultural background, the evidence of which is found in his work.

Al-Mas‘ūdī comments that “poetry was only the least of his talents”, and al-Ma‘arrī describes him as being primarily a philosopher. During his lifetime his fame as a “scholar” seems to have weighed heavily upon him; some spiteful critics considered that it accorded ill with the bouts of drinking from which he was unable to refrain.

His poetic talent showed itself at an early age. There exist poems which he is said to have composed while at school, and at the age of twenty he had already made his name as a poet. His poems were the subject of study and commentary, and he no longer paid any attention to malicious criticism. Convinced of his own worth and of the poet’s sacred right to receive due reward, he preferred a career as a composer of panegyric to an appointment at the chancery which had been offered to him and which later he was to seek in vain.

His violent Shi‘ism and his Muʿtazilism inevitably closed to him the doors of the court, to which he gained access only towards the end of his life. The branch of the Abāsids of which he was the client was unable to be of any help to him. Ṯā‘ār b. Dī‘ār, the father of his patron ‘Ubayy Allāh, was the brother of Zuhayr b. ʿAbd Allāh, the brother of al-Ma‘mūn who succeeded, in spite of the opposition of the Hāšimi majority, in having his nephew proclaimed heir presumptive and in the conflict which arose soon after between al-Amin and al-Ma‘mūn, he had opened taken the side of the former. Al-Ma‘mūn’s victory banished him and his descendants from the court, and no further mention of the latter is found.

In 250/864, Ibn al-Rūmī, who until then had
maintained a certain labiyya, openly gave his support to the Zaydi revolt begun at Kufa by the Tālibi Yabāy b. 'Umar. Each of the two lamentations which he dedicated to Yabāy was a Shi'i manifestation of a call to revolt and a violent and insulting threat directed at the ʿAbbāsids. This same hostility to the dynasty is found in other poems preserved in the Diwān.

But the poet seems to have regained the favour of his patrons under the regency of al-Muwaffak, the brother of al-Muʿtāmid, who adopted a conciliatory policy towards the ʿAlids. He is even said to have fallen in love with the sarrāja bint al-Muwaffak, the sister of al-Muwaffak, who continued the policy of his father and who, himself a poet, brought back the vanished tradition of the Bayāt al-Ḥikma by establishing in his palace various scholars and men of letters.

As the result of his long opposition to the party in power, Ibn al-Rūmī must have been obliged to seek for wealthy patrons outside the court. His Diwān gives numerous suggestions to this end. Both Tahir and especially with Ubayd Allah b. ʿAbd Allāh, Ahmād b. al-Ḥāṣib, ʿAbd Allāh b. Muḥammad b. Yazād, Ahmād b. ʿIsārāl, ʿIsārāl b. Bubbul, ʿṢādī b. Makhḍam and his son al-ʿAllā, the Banū Wahb and especially al-Ḵāṣim b. Ubayd Allāh, Ahmād b. Thawāba, ʿĪbrahim b. al-Mudabbir, the Banū ʿDjarraḥ, the Banū ʿFurāt, the Banū Nawbakhāṭ, and a great number of minor secretaries too many to enumerate. Many of them showed him favour and gave him presents. But he was extravagant, thriftless and difficult to please, and his praise almost always turned to invective against those who had not fulfilled all his wishes. It must also be recognized that the attitude he had adopted towards the authorities earlier in his life discouraged some high officials from compromising themselves by rewarding him. Others were unable to forget his Byzantine and Christian origin, in spite of his being a Muslim and in spite of the fanatical anti-Christian attitude which, as a new convert, he adopted. Yet others were offended by his arrogance and aggressiveness, and by the proud and threatening manner which he sometimes adopted when reminding them of a promise or trying to hasten a gift. His bitter and sometimes even scurrilous epigrams caused a fair share of the receipts to remain. It is, however, difficult to believe that these epigrams were the direct cause of his death, as is stated, though with many reservations, in some Shi'i and Muṭazzīlī sources. Al-Ḵāṣim, who is accused of having had him poisoned at his table (it is the caliph who is accused in MS Paris 3594), had at this time not yet become vizier; he was engaged in avoiding any scandal and in trying to gain the good opinion of all in order to ensure that he would be appointed to succeed his father. His hatred of the Shi'i şīr and his bloodthirsty disposition did not become apparent until later. But the poet's death aroused suspicion because of the way in which al-Ḵāṣim's followers had intentionally spread rumours in order to frighten the poet, who had become old, sick and nervous. Nevertheless, the various details given of his final illness seem to be the signs of diabetes.

Popular rumour is also probably responsible for the fictional statements of the poet's pathological superstition and tendency to hypochondria. There seems nothing in his general life to justify them. Any truth which may lie behind these allegations may perhaps be sought in the last years of his life, when he lost one after the other the four (at least) children of his late marriage, as well as his wife, and found himself banished and threatened by his chief patron al-Rūmī.

Ibn al-Rūmī did not have the leisure to collect his poems into a Diwan himself. The first to undertake this was a certain al-Musayyabi, probably ʿAli b. ʿAbd Allāh b. al-Musayyab, a friend of the poet and the author of a biography of him which has not survived. They were then collected by al-Ṣāli, who produced another recension of the Diwan in which the poems were arranged alphabetically. His work was continued and completed by Abu ʿIyyāb, who is said to have added a thousand verses collected from the various existing recensions. The manuscripts of these recensions which have survived total nearly seventeen thousand verses.

Only a small part of this enormous Diwan has been published. In 1947, Muḥammad Sharif Salim had the two first letters printed; five years later there appeared five other letters published by the same editor, who also has collected and published some extracts, among which may be mentioned the anthology made by al-Bārūdī (Cairo 1909), the selection by Kāmil Kīlānī (Cairo 1924) and that by al-Ṣādīq (Cairo, circa 1930). In the greater part of his work Ibn al-Rūmī shows himself to be a neo-classicist; but his production was so varied that it is difficult to classify him with one specific school of poets. Indeed, side by side with formal poems, which in their thought, their art and their studied elegance foreshadow Muṭannaḥī, are found a great number of poems whose spontaneity, sensitivity, naturalness and clarity prefigure the expressive poetry of the Rūmīṣūl of Abū Firdaws and the nature-poems of which al-Ṣawwārī was to be the master. In addition there exist, in his Diwan, hundreds of poems, mainly short, in which he shows himself to be, more than anyone else among his contemporaries, a society poet, able to make rhymes at command and seeking to dazzle with his learning, his affections, his fondness for antiquity and his search for things witty and unusual. He was above all an example of the Baghdādi tradition which was to distinguish court poetry in the following century.

IBN AL-RUMI — IBN RUSHD

To complete his education, Ibn al-Rumi went to the court of the Marinid ruler Uthman b. jiadiths two kadi al-mandkih. In 683/1284, he decided to travel to the east in order to perform the Pilgrimage to Mecca. At the invitation of Ibn al-Hakim al-Rundi, he went to the court of the Marinid ruler Uthman b. jiadiths two kadi al-mandkih.

FIHRI AL-SABTI, jurist and man of letters, a native, as indicated by his nisba, of Ceuta. He was a Maliki jurist, he was also an eloquent orator. Al-Makkari formed a friendship with him and travelled with him on the author's visits to Tunis, Damascus and Cairo, where he gave a commentary every day on the Koran in the great mosque of Khajib and offices of Mufti.

ABD ALLAH MUHAMMAD B. UMAR B. RUSHAYD AL-MARRAKUSHI, jurist and man of letters, a native, as indicated by his nisba, of Tunis, where he was born. He was born at Cordova in 520/1126 and died at Marrakush in 595/1198.

The sources are unanimous in praising the extent of Ibn Rushayd's learning, his competence in the science of hadith, his austerity and his modesty. A Malikî jurist, he was also an eloquent orator. Al-Makkari, who wrote about ten titles of works by Ibn Rushayd, they cover the science of hadith in all its aspects; mathematics; and Arabic language, literature and metrics.

Four works have survived in manuscript. The greatest part of his works, published Mîl al-mawrî bi-mi'jam al-qaysî bi-islâm al-rûshîdî, written in 689/1290 (MSS Escurial*, 1972/1 and 1785, a collection of biographies of Andalusian jurists, and the Kitâb al-Sanân al-abâyân wa l-mawrîd al-amân fi 'l-muhammâma bayâna 'l-îmâmâyîn fi 'l-îsmân al-muârikhîn (MS Escurial*, 1806), a biography of the traditionists of the Kharijites and Muslim. A short fragment (40 fols.) of the treatise on metrics by Ibn Rushayd, Dimasî mukhtasâr fi 'l-îsmâyûl, written in 689/1290 (MSS Escurial*, 1972/1 and 1785), a collection of biographies of Andalusian jurists, and the Kitâb al-Sanân al-abâyân wa l-mawrîd al-amân fi 'l-muhammâma bayâna 'l-îmâmâyîn fi 'l-îsmân al-muârikhîn (MS Escurial*, 1806), a biography of the traditionists of the Kharijites and Muslim. A short fragment (40 fols.) of the treatise on metrics by Ibn Rushayd, Dimasî mukhtasâr fi 'l-îsmâyûl, written in 689/1290 (MSS Escurial*, 1972/1 and 1785)

(R. ARIÉ)
Muhammad ibn Rizk and he became very competent in the science of kalām (controversies and contradictions in the legal sciences). He left his heart in the dialectic and the science of the traditions of the Prophet; but the same author says that the science of law and of the principles (usūl), ṣādiq, interested him more than the science of traditions, ṣawāda. He worked also on Ash'arī kalām which he was later to criticize. In medicine, he was the pupil of Abū Džafar ibn al-Abbar al-Marrakushi, who was in addition a teacher of hadith (cf. 'Uyūn). Ibn al-Abbar mentions another of his teachers, Abū Marwān ibn Džurrāyyūl (notice no. 1714), who (he says) was one of the foremost practitioners of his art. The biographers do not mention philosophical studies. Ibn Abī 'Uṣaybi'a limits himself to reporting, following al-Bāḏj, that Averroes studied "philosophical sciences" (al-ʿulām al-ḥikmāyya) with the physician Abū Džafar. Ibn al-Abbar mentions in passing that he "inclined towards the sciences of the Ancients (ʿulām al-aṣwāṣiʿ)" probably an allusion to his knowledge of Greek thought.

In 548/1153, Averroes was at Marrākūsh. Renan supposes that he was occupied there in carrying out the intentions of the Almohad Abū al-Munīn "in the building of colleges which he was founding at this time". It is known, through the Commentary of the De Caelo, that he was engaged there in astronomical observations. It is perhaps to this period of his life that he is referring in the Commentary of book Α of the Metaphysics, when he speaks of the researches which must be done on the movements of the planets in order to found an astronomy which would be physical and not only mathematical: "I hoped in my youth that it would be possible for me to carry out this research successfully; but now that I am old, I have lost this hope...". It is possible that he met at this time Ibn Tufayl, who was to play an important part in his career as a philosopher by presenting him to Abū Ya'qūb Yusuf, the successor of Abū al-Munīn. Al-Marrākūshī (Munṣīgib, ed. Dozy, 174-5) obtained the account of this interview from a pupil of Ibn Rushd, who reported the actual words of the teacher. The prince questioned Averroes on the possibility of this world having been created from nothing, and asked him whether it had a beginning. (It is known that, ever since Plato's Timaeus and the De Caelo and the Metaphysics of Aristotle down to Proclus, this had been a problem for Greek philosophers. It was only during the last years of his life that he was engrossed in the study of the nature of the universe (organum) and the First Cause (de creazione in the Muslim theology, New York 1903, 255). Indeed, not only was Averroes banished from Cordova, but several of his works were burned and forbidden, this study, which were considered dangerous to religion. Those who were jealous of Ibn Rushd or doctrinally opposed to him took advantage of the occasion to criticize him in vulgar epigrams, which have been published and translated by Munk (427-8 and 517).

But once he had returned to Marrākūsh, to a Berber milieu which was less sensitive on matters of doctrine, the caliph repealed all these edicts and summoned the philosopher again to his court. Ibn Rushd did not have long to enjoy this return to favour, since he died in Marrākūsh on 9 Safar 595/11 December 1198. He was buried there outside the gate of Taghzūt. Later his body was taken to Cordova, where the mystic Ibn al-'Arabī, still a young man, was present at his funeral (cf. H. Corbin, L'imagination créatrice dans le soufisme d'Ibn 'Arabī, 32-8).

II. Works. The chronology of the works of Averroes has been established by M. Alonso (La cronología en las obras de Averroes, in Miscelanea Camilliani, 1 (1943), 418-32) and later by A. H. M. Jones (Averroes: the caliph Yusuf, he had already written some paraphrases or short commentaries (ṯaṣfur) on the Organon, the Physics and the Metaphysics, as well as the first redaction of his great medical work, the Colliget (al-Kulliyāt, the Book of Generalities), requesting his friend Abū Marwān Ibn Žuhr to write a book on the "particularities" (al-ʿumār al-ḥisāyya, therapeutics), "so that their two works together should form a complete treatise on the art of medicine" (Ibn Abī 'Uṣaybi'a). He continued to write the short or middle commentaries (tallāḥīn) between 1169 and 1176. But from 1174 to 1180 was the period in which his original works were produced: "Treatises on the intellect", De substantia orbis, Faṣl al-makhāfi, Kāshī al-mandhīji, Tahāfut al-Tahāfut. The great commentaries (taṣfur) did not begin until later. M. Cruz Hernandez (La filosofía de Averroes, Madrid 1963, 253) has produced a clear outline of the various tendencies which have governed the study of Averroes' work. Whereas for the Latin schoolmen Averroes is essentially the Commentator: Averroes, che'li gran commento feo (Dante, Inferno, iv, 144). Renan points out the differences which can exist between the ideas contained in the commentaries and often presented as those of Aristotle, and the personal ideas of the philosopher.
Nevertheless, even where Ibn Rushd marks this distinction, Renan’s attitude is “this may have been only a precaution to allow him to express his philosophical ideas more freely under the cover of someone else” (Oeuvres complètes, iii, 67). A little later (67), on the subject of the Tahāfūt, he claims that “the doctrine set out in it is, on several points, in flagrant contradiction with that of Ibn Rushd”. It is true that he bases his judgement on the Latin version, in which he suspects there are interpolations. For him, as for the followers of Averroes in the Middle Ages, this is the one who, inspired by Aristotle, the rationalist method and doctrine, as much as he was opposed to religious dogmas. This being so, Renan, following his preconceptions, considers the theological writings as artifices intended to deceive or to provide a challenge to the inquisition of the Mālikī jufahārī. An examination of the biography and the work of Averroes shows that this assessment is entirely without foundation. Munk, on his side, has attempted to establish the validity of the “Tahāfūt” a number of analogous works of al-Fārābī on the philosopher and the prophet: “The double expression of one and the same truth, in terms which are abstract and clear on the one hand, in sensitive and symbolic terms on the other, philosophy and religion will thus exist side by side, without ever clashing, since, addressing themselves to two different categories of mind, their fields will remain entirely separate”. Cruz Hernandez concludes his investigation by showing the absurdity of making a priori a choice between the philosopher and the theologian. Since Averroes was never forced to dissociate his ideas, he considers that one must admit the sincerity of the whole work and the fundamental unity of the thought it expresses.

Only a small number of works in Arabic survive. The majority have been preserved only in Latin or Hebrew translations. Some manuscripts give the Arabic text in Hebrew characters. Brockelmann gives a list of the Arabic texts of Averroes, in his MFO, vi, a sur les philosophes arabes connus des latins, v, a list of the Arabic texts of Averroes, in MFO, viii/i (1922), may also be consulted. Among the works in Arabic which are known so far to have survived are: short or middle commentaries on the Physics (al-Sādūq al-fāḥshī); on the De Caelo et mundo (al-Sādūq wa ‘l-‘ulwiyya); on the De Generatione et corruptione (al-Kawn wa ‘l-fassād); on the Meteorologica (al-‘Abd wa ‘l-ma‘ṣīḥ); on the De Anima (al-Najjās); on metaphysical questions (Mā ba‘ḍ al-fāḥshī’ā); on the De Sensu et Sensibilitas (al-‘Abd wa ‘l-ma‘ṣīḥ), the great Commentary on the Metaphysics (Tafṣīr . . ., ed. M. Bouyges, Beirut 1936-48), the Fāṣīl al-makhālī and the Dimāgīa (ed. with Dr. L. Gauvrit, Tractī definitīvī, Algiers 1946, ed. G. F. Hourani, Leiden 1959), the Kāshf ‘an manāḥīdī al-adīlī (ed. with German tr., with the Fāṣīl, by M. J. Müller, Philosophie und Theologie von Averroes, Munich, text 1859, tr. 1875). There should also be mentioned the research and publications of ʿAbd al-ʿRahmān Badawi in Cairo.

III. The thought of Averroes. It seems certain that Ibn Rushd approached philosophy through the theoretical sciences. As a jurist, he was interested in the šarīʿi (on this question, see R. Brunschvig, Averroes juriste, in Études . . ., Paris 1962, 35-68). Ibn al-ʿAbdābāh mentions the importance of Kitāb Bidāyat al-muṣājāhāt wa-nīkhāyāt al-muḥtaṣābī fi ‘l-fikhr, and adds: “In it he gives the reasons for divergences, demonstrates their motivations and justifies them”. What interested him in law was a strictness of thought which, without going as far as that of philosophical syllogism, entailed a well-defined method of reasoning and a logic. On the other hand, it is known that he received his first education in philosophy from a physician. At the end of his book on the Generalities (Colliget), he stresses the method followed and writes: “We have assembled, in our propositions, the individual facts and the general questions. Whomever has grasped the generalities which we have written is capable of understanding what is correct and what is erroneous in the therapeutics of the writers of humādī” (‘Uyun). At the time when he was writing the Collabor, Averroes was studying the Organon and the Physics, which naturally led him to formulate the metaphysical problem. He thus saw in Aristotle mainly the logician who follows a strict method of demonstration, the scholar who starts from the concrete in order to explain it by linking it with general propositions. He was to grasp even better the theory of knowledge when writing a commentary on the Posterior Analytics (1170). This approach led him to discover the true Aristotle, and he thus learned to distinguish it from the image of him given by the Greek commentators such as Alexander of Aphrodisias and the Muslim faṣāṣīfī such as Ibn Sinā. This is why he criticized so vigorously the philosophy of Ibn Sinā, while respecting the medical work of his predecessor (he wrote a commentary on his medical poem al-‘Urūgūṣa fi ‘l-fīḥb). Among the other philosophers, he was interested in the ideas of al-Fārābī on logic and was inspired by his moral and political doctrines in the commentary which he wrote on Plato’s Republic. But he was chiefly in the tradition of Ibn Bāḍījī, and wrote a commentary on his Risāla on union with the Intellect and on his book on the “Regime of the solitary”. His relations with Ibn Ṭufayl are well known: Ibn Rushd wrote a commentary on Ḥāfiṣ b. Ḥāfṣ (q.v.). There are definite similarities between the two philosophers, but although Ibn Ṭufayl was interested in the independent attitudes inherent in philosophy and revealed faith, Ibn Ṭufayl the duality of the persons Ḥāfīz and Absāl who represent them (this is resolved, at the end of the myth, in a common life devoted to contemplation far from human society) leads to a mystic vision of knowledge, which is not at all to be found in Ibn Rushd, as Renan has clearly pointed out.

A. The theologico-philosophic treatises. It may be considered that they were written in the following order: Fāṣīl al-makālī and its appendix the Dimāgīa, Kāshf al-manāḥīdī (575/1179), which mentions the Fāṣīl, Tahāfūt al-Tahāfūt (which does not mention either of the two preceding works and which, according to Bouyges, was not written before 1180). (a) The Fāṣīl al-makālī wa taḥṣīlāt ma‘ṣīḥ lihāna min al-‘ittīḥād ("An authoritative treatise and exposition of the convergence which exists between the religious law and philosophy"). Ibn Rushd begins by giving a definition of philosophy entirely in accordance with the Kurʾānic recommendations. He himself quotes verses LIX, 2 and VII, 184, among others. It is a rational view of creation which leads to the knowledge of the Creator. These sacred texts are
interpreted as a recommendation to use either purely rational inferences (fiyds *akli), or to use them together with inferences based on the Law (fiyds *ahkmd), Thus the Law establishes the legitimacy of rational speculation (nasar), whose method reaches perfection with demonstrative syllogism (burhdn). Here Averroes was involved in a quarrel among the theologians about the definition of faith and what part it should play in intellectual knowledge. His reply is clear: "The Law imposes an obligation on the believer, since it must be obeyed when it commands rational research: thus the Law establishes the legitimacy of undertaking rational speculation, to proceed by degrees and to take account of what plays the same part in relation to speculation as instruments do in relation to action". This is less a fides quaerens intellectum than a perfect faith which embraces rational knowledge. It demands the knowledge of the kiyds *akli, which is indispensable to the true knowledge of God, as it demands also that of the kiyds *fikhi, thanks to which, in matters of law, it is possible to know exactly the Divine commandments. Nevertheless this obligation is bounded by the intellectual capacity of each person, since God never imposes more than one individual soul is able to carry out.

But Ibn Rushd states that a study of this magnitude cannot be made without taking previous research into account. Thus the pursuit of the above reasoning involves the obligation to examine the works of the ancients (cf. a similar idea developed by Fasqur al-Din al-Razi in his Majaddat al-ghayb, introduction). It is therefore contrary to the Law to forbid such an examination, provided that the person carrying it out possesses dhakat* al-fisra (a technical term, derived from a Kur'anic root, to indicate a gift which is given to man of remembering things and recognizing the truth, which may be translated by "a keen sense of the truth"), and al-`adda l-ghar*yya accompanied by ethical virtue, that is a religious and moral qualification defined by the Law. But not all men accept proof by demonstration: some give their assent (tasddik) only to dialectical discourses (al-ab`writ al-`qada`liyya), others only to rhetorical discourses (khik* biyya). God speaks to men through these three types of discourse in order to reach them all (cf. Kur'an, XVI, 126). If rational research ends in a truth which is not understood literally, the Law sets the philosopher on his way: thus, if it is the same as in law (this new comparison with the truth), and the Water existed before this world, and that the Kurgan itself distinguishes the passages which need no difficulty, or else it is in apparent disagreement, by scholars must be forbidden to the ordinary man, whereas the common man must adhere to the literal meaning. Here Ibn Rushd distinguishes the passages which need interpretation from those which are to be accepted as they stand: on the one hand, the ayat mutasaddhibumi, on the other, the ayat mubhaymati (Kur'an, III, 7), the verses which have several meanings and those which have a clear and precise meaning. The taw尉 of these ambiguous verses is known only to God Himself and to those who have a solid grounding in scholarship. Ibn Rushd reads this text as a justification of ta`wil for men of true scholarship (cf. L. Gauthier, La theorie, 59 f., on the two possible readings). To determine what should be interpreted and what should be understood literally, Averroes does not have recourse to a consensus (ijtima`[q]), but he criticizes this argument curiously, without convincing that of Ibn Hazm on the impossibility of establishing concrete proof of its existence (cf. R. Brunschvig, Averroes juriste, 47). On this subject Averroes deals briefly with a question disputed among the jurists: that of takfir, an accusation of infidelity; he considers that the excommunications launched against the philosophers should not be regarded as takfir bi`r* (or `al-d jawl *bi`r), i.e. a decisive condemnation against which there is no appeal. It is known that more tolerant persons previously had this takfir `al-d jawl *ta`lir as a severe measure. But in the case of the philosophers, they cannot be accused of infidelity on the strength of the consensus, since God restricts the use of ta`wil to scholars in particular. It cannot be a question of a consensus communis (ijtima` mutasadi) accessible to all. Here Ibn Rushd uses the technicality of the Law to support the cause of the philosophers whom he seeks to defend. Thus he attacks the takfir that al-Ghazzali launched against the falasifa. Then he reverses the positions and shows that it is often the mutakallimin, the theologians, who make undue use of ta`wil, for example over the verses (XI, 9) concerning the Creation: the Kur'an manifestly teaches that the Throne and the Water existed before this world, and that before the six days there existed a period which is the number of the sphere. It is not, of course, impossible that the philosopher may be wrong on such difficult questions (ji `il-`agh* al-`awsi`a). But he may be excused and he will nevertheless have his reward, like the judge who blunders when performing sitti*hid, since in this case his error is an involuntary one (khikd*) which may creep in even when a duty is being performed.

Thus there is a division in the Law texts which are to be taken in their sarih and to interpret which would be to lapse into unbelief (kufr) or heretical interpretation (bid`a); there are also texts which is obligatory for scholars to interpret, but concerning which, for those who are not scholars, on the other hand, ta`wil is a kufr or a bid`a (this is what happens to theologians who do not make use of rational demonstration); finally, there are texts concerning which there is doubt: thus the verses on the future life are to be understood literally so far as regards the affirmation of its existence but they admit of different opinions as regards the qualification (si`a) given to them by scholars, whereas the common man must adhere to the literal meaning. The scholars, for their part, must not "popularize" their learning in the form of dialectical, rhetorical or poetic writings; they must write only works of demonstration (khutub al-har*mm), so that they will be accessible only to those who are capable of following such demonstration. Al-Ghazzali did not follow this rule and was therefore in error, though his intentions were good. The books written by scholars must be forbidden to the ordinary man by the leaders of the community.

Faith involves an assent (tasddik) to a representation (tasawwur). This assent is in response, accord-
ing to temperament, to a demonstrative, dialectical or rhetorical argument. The representation leads to a grasp of either the thing itself or its image (mutakallim). Revelation, being addressed to a larger number, makes very little use of demonstration. It can happen that premises based on opinion may also be certain (yabīna). In this case, and if no term used in the conclusion is understood in a figurative sense (representing the image of the thing), the text must be understood literally. But if the conclusion is in figurative terms, then interpretation is necessary. If the premises consist only of opinion and the conclusion affects the things themselves, the premises may be interpreted, but not the conclusion. Finally, if the premises consist only of opinion and the conclusion is figurative, scholars have an obligation to interpret, but the ordinary man may not go beyond the literal meaning. Otherwise, in this case, it would be turning away from the letter a mind which had access to nothing else, and since the text contains only opinions and figurative meanings, it would no longer offer any support to a person unable to find other support elsewhere. Thus his faith would be destroyed.

There is therefore only one truth, and strictly speaking there cannot be two different expressions of one single truth as though it were spoken in two languages, that of reason and that of imagination, for that would only introduce different types of tasawwur. Ibn Rushd's original contribution is to stress the importance of adherence to the truth. Men understand it through the ways (furuh) which gain their assent; the majority consent to something because of what they themselves are, rather than because of what the thing itself is. Their truth is subjective. Incapable of adopting a rational objective attitude which would govern their personal reactions, they have to have their personal sensibility affected in order to accept what is proposed to them. Consequently it is necessary that the dialectical or rhetorical approaches which they follow should lead them to a representation of the truth, either actual or figurative, which they can accept and adopt, so that their subjective attitude does not lead them into erroneous representations. This is realized in the Kurān. But going beyond this, scholars, through ta'wil, find the way of reason which leads to the understanding of the truth. At the same time the agreement of Law and Reason, of religion and philosophy, while the common man profits from this agreement without knowing that it exists. But it is necessary to respect the situation of the ordinary man and not to reveal to him anything of the interpretations. To act in any other way is to give rise to sects, and this was the error in particular of the Mu'tazila and the Ash'arīs. The majority of people should be taught only the general methods which the Kurān has revealed and used for them. The special method which the Holy Book suggests for those who are capable of it should be reserved for scholars. To conclude, the agreement of the maṭhānū and the manhijī is not that of two formulations, of two expressions, of two equivalent types of representation. It is that of the different types of opinion on a single truth at the same time; it is the practical agreement of two methods in order to arrive at a single practical conclusion, one of them being no more than this, the other based also on a theoretical demonstration and a speculative knowledge. It is thus that, to take an example which is not in Ibn Rushd, the same problem may be solved and the same result arrived at by arithmetic or by algebra, although the arithmetical method, remaining at the level of real intuition, produces a better understanding of the concrete relations between facts than does the algebraic method, consisting of the manipulation of conventional signs.

The Faṣl al-mahbūl is therefore a treatise on methodology. The problematical element is that of all Muslim thinking: that of the jurisconsults, the grammarians and the Kurānic commentators, and indeed the theologians. Averroes employs the technical vocabulary in use among these scholars. But he very skilfully manipulates all these ideas within a logical framework borrowed from the Greeks, which can later be applied to the problems of theology: it is the framework of Aristotle's Organon, rational demonstration (Analytics), dialectical reasoning (Topics), rhetorical argument (Rhetoric) and to a lesser degree Poetics, with discernible at times in the background, allusions to sophistics.

(b) The Kidūb al-Kalīf “an manākhif al-adillā fi ʿabd al-mīla wa laʾirf ʿāna wa l-bīdār al-māzīlī (“Exposition of the methods of demonstration relative to the dogmas of religion, and definition of the equivocations and innovations which appear in them as methods of interpretation and which distort truth or lead into error”). This treatise foreshadows the Tahdhīb still more clearly than the preceding one, whose general conclusions it evokes in its introduction. Its aim is to show that the theories of the sects satisfy neither the demands of scholarship nor the needs of the common man. It consists of five chapters. The first is devoted to the existence of God; in it the author examines the opinions of the Khāghiyya, the Ash'arīs, the Sūfis and the Mu'tazila. For the first, faith is based entirely on the authority of the Book and owes nothing to reason: a question already dealt with in the Faṣl. The Ash'arīs allow the use of reason but their methods are open to criticism. They prove the existence of God by the contingency of the world, which has come into existence (muhdākh). But the agent which brings it into existence (muḥādīkh) must have an eternal existence. Consequently its action is eternal and the effects of it are also eternal. In order to escape this consequence, it is not possible to say with these theologians that the action of an eternal being has a beginning in time, since this would presuppose a cause which at first prevented this action and then allowed it; and a situation which precipitated it. This cause, in its turn, is either eternal or situated within time. And so the reasoning continues, reminiscent of a similar argument of Fakhr al-Din al-Rāzī on tark and the muraqadākh. There follows a criticism based more particularly on the atomism of this school. Averroes disagrees with a thesis which, in order to retain the absolute freedom of God, destroys His wisdom and the regular order of His providence. In addition, the Ash'arī argument supposes that the universe, in its entirety, is formed in exactly the same way as the sublunary world which surrounds us, which is not proved (Aristotle gives to heaven and the heavenly bodies a separate situation). Ibn Rushd also considers time—whether it is created or eternal. This recalls very clearly discussions which go back to Plato and the problem of the mobile to middle Platonism (Calvisius Taurus), Philo of Alexandria, Johannes Philoponus (Yahyā al-Nahlī; cf. Ernst Behler, Die Ewigkeit der Welt; J. Pouilloux and R. Arnaldes, Philon d'Alexandrie, De Aeternitate, Introduction, translation and notes). He examines critically the argument that the infinite cannot be crossed, which demands a point of first departure if one is to arrive at the present event. This is true for sequences in a straight line, but not for cyclic
sequences where an initial point of departure is not apparent. Thus, evaporation is not the first origin itself produced by clouds. These clouds therefore stem from other clouds; the very nature of clouds does not permit the idea of any definitely first clouds. In rectilinear causality on the other hand (man gives birth to man), a point of departure is necessary. Nevertheless, if, in such a line, each cause were merely the instrument of an eternal agent, the present effect would result from the action of an eternal agent, and it would exist even if this agent had made use of such instruments an infinity of times (cf. the double causality of Spinoza).

Ibn Rushd devotes a special criticism to al-Djuzwayni, accusing him of being unaware of the necessity of that which exists, which leads him to oppose Avicenna's doctrine of the necessary by itself and the possible by itself (which is necessary by another). That which is possible by itself can never become necessary by means of its agent. Another argument of al-Djuzwayni is that the world was created at a certain place within the infinite void; but any one part of the void is the same as another (cf. Leibnitz), therefore a free will is necessary to decide between one place and another. But, Averroes objects, it is essential to prove first that the void exists and that it is infinite and eternal, otherwise another void would be necessary to contain it.

Against the theory of the Sûfis Ibn Rushd admits that mystic training may help in the attainment of rational knowledge, but that it cannot replace it. Regarding the Mu'tazila, he states that he has found none of their books in Spain; he says nothing of them, and passes on to the Kur'anic proofs. This is argument by means of Providence and by means of the creation of substances (animals, vegetables, heaven). Averroes underlines the generation of the organic starting from the inorganic; there is therefore an agent which gives life (this was to be stated in the Tafsîr of book A of the Metaphysics, see below). As for the heavens, they are commanded; it is the Kur'anic idea of tashhir (sakhbhar Allah, in many verses). The idea of the divine amr expressing the act of the unmoved Mover which commands without coming into any contact with it to be taken up again in the Tâkahf. These two types of proof concern the ordinary man, but the scholars give them demonstrative value, and they have a deeper and wider knowledge of the realities on which they base their demonstrations.

In the second chapter he studies the unity of God. The Kur'an proves it by the unity of the government of the world, a proof which the scholars, and Averroes in particular, take up and go into deeply. The criticism of the Ash'aris reasoning is subtle and technical. It is enough merely to mention it.

The third chapter deals with the attributes of God: knowledge, life, power, will, hearing, sight, speech. Ibn Rushd distinguishes clearly between the Kur'anic doctrine and the theories of the theologians who raise problems on which the Kur'an is silent. Thus on knowledge he says, "It is indicated by the surfaces of bodies. Thus the envelope of the Being which exists in the direction marked by the exterior surface of this sphere will be incorporeal. That is the true demonstration."

The fifth chapter deals with divine actions: creation, the sending of prophets, predestination and divine decree, justice and injustice, the future life. On the creation, in addition to what he has already said about it, Averroes states against the Ash'aris that although the world contains contingency, it cannot be contingent as a whole. The liberty of God cannot be that of indifference. Finally the term bûdîth (coming into existence) is not Kur'anic and constitutes in itself a bûdîa. On the prophetic mission, Ibn Rushd makes a critical examination of the probative value of miracles and of the igâs al-Kur'am. He regards the problem of predestination as "one of the most difficult". The Kur'an contains on this for and against the Ash'aris. The argument cannot be found in bûdîth. Both series of texts must be retained: on the one hand human action obviously depends, both for its cause and its execution, on external and internal conditions created by God; but on the other hand, we are the authors of our own acts since "it is evident that God has created in us faculties by means of which we can acquire things which are opposed by nature", which proves that freedom of choice exists.
Here there is involved the question of secondary
causes. All causes other than God Himself have no
existence, neither they nor their effects, other than
through God. The word "agent" may not be used in-
discriminately of God and of other causes. But causes
operate, not only because God uses them as instru-
ments, but also because He created them as causes.
Furthermore, it can be said that substances and
esses have for their cause only God, whereas acci-
dents have other causes. On divine justice, Ibn Rushd
agrees with Agh'arism: it is necessary to believe at the
same time both that God is just, and that He is just
creator of good and evil, in order to avoid any dualism.
God created evil with good ends in view: it is by
accident that fire, which is good, does harm. On this
delicate problem, Averroes does not hesitate to
reproduce all the sophistries which creep into the
theodicy of all periods. It is true that this is a point on
which it is necessary to convince both the ordinary
man and the philosophers themselves. This does not
mean that God is above the just and the unjust: He is
just, but in Himself, and not as a judge is, in the
service of others. Finally the future life exists; that
is not contrary to reason. It is left to each person to
imagine the modalities of it for himself.

This treatise is directed against the doctrines that
theologians, going beyond all sound demonstra-
tion, construct upon the Book; against the problems
which they raise. The feeling behind it is not, basic-
ally, very different from that of al-Ash'ari and al-
Ghazâli at the beginning of their careers, they having
become theologians rather in spite of themselves,
in order to refute the errors which were threatening
Islam. But they were wrong; Ibn Rushd considers
that the only recourse is to demonstrative knowledge.
He condemns theology; the literal meaning of the
sacred text seems to him on the whole wiser, even
more acceptable to reason, than the theological
lubrications. One would expect that, in distinguishing
thus clearly between the common man and the schol-
ars, he would maintain that the arguments and the
representations which are in the Kur'ân form a bad
diet for the uneducated masses who are incapable of
teaching themselves (the doctrine of the double truth
of the western Averroists: that which is true for
religion on the one hand, and for philosophy on the other
hand, is not so: there exists a religious truth which is true for all men
whoever they are. The worst misfortune which could befall them would be to lose their faith. Now philo-
osophy, particularly when dealing with obscure ques-
tions, shakes the faith of many men and should be
reserved for scholars. But theology, with its uncertain or
sophistic arguments, while giving the appearance of
adhering to the texts, is still more dangerous, especial-
ly because its intention is to elaborate the authentic
doctrine in which everyone must believe. Philosophers,
in all cases where the system of rational demonstra-
tion is not followed, are in the same situation as the
ordinary man; they also must adhere to the literal
meaning of the Kur'ân and beware of the false exal-
tations of theology.

(c) The Tahâfut al-Tahâfut. In the Fâsi and the
Kashf, al-Ghazâli had been very severely handled. In
the Tahâfut, the battle against him grows, becomes
more definite and leads Ibn Rushd to embrace all the
great problems of philosophy. This work combines the
results of the paraphrases and of the middle
commentaries, as well as all his basic personal ideas
on religious questions, the development of which may
be traced in the preceding treatises. But in the attack
on the Tahâfut al-faldâsifâ al-Ghazâli is not the only
target. Many of the criticisms in his work directed
against Aviceenna are accepted by Averroes, if not
in the form of argument used by al-Ghazâli, at least
for the correctness of their conclusions. The Tahâfut
al-Tahâfut is thus a reconstruction of the false phil-
osophy, that of Aristotle himself, against the false,
that of the neo-Platonic falsâdifs, which distorted the
thinking of Aristotle, and against the theological
systems. In this sense, it can be said that Ibn Rushd's
original philosophical doctrine is to be found in this
book.

There is a very precise study of this work in the
introduction written by S. van den Bergh to his
English translation. The two Muslim thinkers are
separated on a fundamental point: in the tradition
of his master al-Djuywâynî, al-Ghazâli does not consider
that philosophical reasoning has the strictness of
mathematical reasoning, and in the Ma'âshid, he
points out that there exists there a source of error
which misleads the unthinking supporters of logic.
Aristotle, on the other hand, believes in the value
of demonstration, and shows, as he did for the theolo-
gians, that it is the neo-Platonic philosophers who
lack strictness, but that sound logic should not be
accused of this.

A large part of the work of al-Ghazâli, and thus
that of Ibn Rushd which follows it, is devoted to the
problem of the creation of the world. Averroes' solu-
tion is that of an eternal creation. There cannot have
existed an empty time which preceded the appera-
tance of the world at a certain moment in it. Time
is, according to Aristotle, the numbered number
(τὸ άριθμομένον) of movement (Physics, IV,
219 b 8). It measures movements only within the
limits that movement measures time itself since they
are mutual definitions of each other (οὖ μόνον δὲ
τὴν κίνησιν τὸ χρόνον μετρώμεν, ἄλλα καὶ
τὴν κίνησιν τὸν χρόνον δία τὸ άριθμοῖ τοῦ
άλλαττον, Physics, IV, 220 b 14-16). But although the
time of the movement of the sphere measures the
movements within the world, there is no movement
outside the sphere which enables time to measure the
movement of the sphere. The illusion is therefore one
of "aligning": the revolutions of the sphere in a sort of
empty, rectilinear time, which, if it is infinite, cannot
be crossed, so that an actual revolution cannot take
place. But reality, each revolution is independent of
the others. Each of them depends immediately on the
actions of the first agent: "Their sequence is accident-
al" (para. 20). In the sequences of causes it is neces-
sary that the present effect is the result of all these
causes. If they are all infinite, it cannot exist. But it
is not necessary for all the past revolutions of the
sphere to be added together in order for the present
revolution to take place. Thus it can be said that "The
Circular movements of the past and the future are non-
existent" (para. 23). This example shows that in the
Tahâfut the ideas already outlined in the earlier trea-
tises are analysed philosophically in a much deeper
fashion. He maintains that the creative will in God
should not be conceived in relation to our own; it is
found in the excellence of God, separate from the
world; the world does not emanate from Him in con-
tinuity with Him; God is not an agent in the way that
it is said, at least as an image, that a person "makes"
a shadow, his own shadow. The term "will" expresses
the method of this action of a perfectly transcendent-
al being. This is why Ibn Rushd sees no incongruity
in the fact that such a creator produces a multiplicity
of beings as the effect of his act; he thus rejects
the principle which is the basis of the emanatist
doctrines, that the One can give birth only to one.

In ontology, Averroes criticizes with al-Ghazâli
Avicenna’s conception of the Being necessary in itself (wādij bi-dhatih), but he goes further: being is that ‘which is predicated of the ten categories and analogically, and it is in this sense that we speak of the substance that it exists by itself and of the accident that it exists through its existing in the existent which subsists by itself. As to the existent which has the meaning of the ‘true’, all the categories participate in it in the same way, and the existent which has the meaning of the ‘true’ is something in the mind, namely that a thing is outside the soul in conformity with what it is inside the soul” (902.4).

A quiddity, in thought, is only the explanation (sharh) of the meaning of a name; and it is only when one knows that this meaning exists outside the soul that one knows that it is a quiddity. It is thus not possible really to separate essence and existence; the distinction is made only in thought. In this lies Avicenna’s error. If the being which is possible of itself is pure essence, it exists only in thought. Outside it, it is either an essence which exists, or it is nothing. If it exists, to “add” to it existence so that it shall be has no meaning. If it does not exist, it is obviously not possible to add something to nothing. Thus when Avicenna defines the possible as that which has a cause, it must first be specified what cause is referred to, since apart from the fiction of a cause which would give an existence added to a pure essence, if the idea of the cause enters that of the possible, then either the possible becomes necessary (darūr) (since the cause which makes it necessary forms part of its definition), or else one becomes involved in a tautology: that which has a cause is possible, that is, it has a cause (277), and this line can be followed to infinity. In short, Avicenna destroys the idea of the possible as such, since he makes of it either the necessary, or a simple verbal idea in thought. Avicenna admits the existence of the true possible (mumkin habīb) which leads to the necessary possible (mumkin darur), by which he implies a necessary reality based on a true possibility, that is on a potentiality. The cause is the agent which translates the potentiality into the actuality. There is no other action than this. God makes actual the potentialities which are in the world. The world in its God’s will does not resemble ours (see above). But being in action and not potential, it resembles more closely our knowledge of the particular than our knowledge of the universal. Similarly God’s will does not resemble ours (see above).

There remains the question of the last things. Demonstrative proof can establish spirituality and immortality only as regards the intellect, since it alone among the faculties of the soul is indivisible and operates without the need of physical organs.

Since the knowledge of the soul remains obscure, it is reasonable to have recourse to revelation. As for the resurrection of the body, this is not demonstrable. But the speculative virtues cannot do without the moral virtues. Although the soul is immortal, it will not survive by contemplation alone but will need those moral virtues which imply the presence of the body. However the resurrection is not conceived of as the return of life to the earthly body. It is, as the Qur’ān says, a second creation.

B. The Tafsir of the Metaphysics. Averroes’ work ended with the great commentaries. We therefore now examine the main ideas which, towards the end of his life, he drew from Aristotle’s
Metaphysics. Understanding well his thought and his method, he elucidates the Aristotelian doctrine while expressing his own point of view on it. Among the possible interpretations he chooses that which suits his own ideas. This commentary is a major work. The Arabic translations were bad. Often Ibn Rushd consulted two or three of them. He studied the writers of antiquity: Alexander of Aphrodisias, Theophrastus, Nicholas of Damascus, Johannes Philoponus. He discusses them and often, by his own inspiration, he improves, an accepted version. Where the incomprehensibility of a text causes him to stray from the original thought of Aristotle, Averroes never strays very far.

The object of metaphysics. This science is concerned with the study of certain words: “His aim in this book is to distinguish the meanings contained in words. In this science a speculative examination is made of them, and these meanings have in it the place which in any art is held by the object (mawdu*).

cause, there would have to exist an eternal and continually existing anniyya which would determine absolutely the form and substance of each being. Appealing to experience, Averroes disagrees with this entirely deterministic conception. No doubt the relation of the cause to the effect is always necessary; but a cause can interfere in a natural process which, as such, is a stranger to its causality. "As for a cause which results in an effect of chance, this is not at all the cause of a natural movement!" (ll. 735-6). The result is that the causation of the natural processes with regard to the effect produced in the natural process, is without cause. The natural causes are ordered towards a natural end. But the accidental cause, not being naturally directed towards this, is one which produces such an end without its being determined by any cause. Thus fire burns or heats; this is its natural effect. But if it burns a man, its causation intervenes in the natural process of life and destroys it, although the natural end of fire is not to alter the natural processes of life.

Contrary to this is the study of primary substance and of ontological necessity. In a long preamble to the commentary on book A, Ibn Rushd re-states the complete rational plan of the work and explains that this book is the actual end of it, the two following containing only the criticism of the philosophy of Ideas and Numbers.

Although he is conversant with the analogy of proportionality (III, 1552), Ibn Rushd considers in depth the analogy of attribution. He shows that anteriority of a substance is not like that of one number in relation to another, but that it is "the anteriority of a thing to that which is related to it". Substance is not a universal (this is contrary to Plato). It is divided into perceptible substance, either eternal (sarmadi), the heavens, or corruptible (fasiid), and unmoved and separate substance. Perceptible eternal substance comes into the field of physics (this is contrary to Avicenna): "The metaphysician seeks to discover what are the principles of substance considered as such, and he explains that separate substance is the principle of physical substance; but in order to solve this problem, it is necessary to resort on the one hand to what is explained in book I of the Physics either on generable and corruptible being (i.e. composed of matter and form), or on eternal substance; and on the other hand to that which is explained at the end of book VIII: that the mover of eternal substance is exempt from matter" (III, 1424). Unmoved substance therefore forms part of metaphysics, but in order to reach an understanding of it, it is necessary to study the changes in moved beings. All generation stems from a being in posse: matter. But the matter of the heavenly bodies, subjected merely to a change of place, is in actuality. Thus the heavenly bodies are neither divisible nor corruptible, contrary to the ideas of Avicenna, who considers that the matter of all the bodies is in posse.

All generation has three causes: the subject (maw-du'), matter in posse, and the two contraries (iddin) to which it is in posse: the one, on which the definition hangs, is form (qaran); the other is the lack of form ('adam al-sara). Such are the principles (mabada') of substance. Neither form nor matter can be generated; all that can be engendered is their union (madjam) under the action of a mover (muhrrik); what it moves is matter, that towards which it moves is form. Thus the only thing which is engendered is that which is composed (murakkab).

Ibn Rushd stresses, in criticizing Alexander and Themistius, the question of the "synonymous" or univocal agent (al-muwathi?): man is born of man. But how to explain the animals which are bred by putrefaction (al-muwafi*)? It is explained thus: there are the natural substances which are engendered naturally (this is what is meant by "univocal generation"), and the accidents which may be produced by nature, art, chance (bi 'ilisi?h) or spontaneity (min tilid? nafsik, ?rukto 'amurma). But all generation of natural substance is natural. Thus the animals which are born from putrefaction are natural productions of a synonymous agent and not the products of chance, "since that which is produced by chance is a generation without order (nisam) and is not an aim pursued by nature". The efficient natural cause has always a natural finality. Decay has the same power as semen among creatures which reproduce themselves in a line of issue (mutanasi'li: since semen it contains a power of forming each animal which is born of it.

Matter is common to all material beings. In this sense "it has the nature of something universal". But if this were really the case, it would have a form and would be made one by the form. How, being one in number, can it exist in a plurality? It is possible only because it is in posse. When the individual differences (al-fusul al-shakhsiyya) which give existence to numerical multiplicity are removed, it is said of matter that it is one, and thus that it is common to many things. But it is not called common because it has a common form, as is the case with the category (cf. III, p. 1473). Unity by form comes from the fact that several concrete beings, numerically distinct, form one same species or one same category. "The community (isfi'ik) which the intelligence recognizes in the common forms has an existence in posse outside the soul. That which the intelligence recognizes in matter is pure nothingness, since it is included only by the negation which withdraws from it individual form. But since matter has no existence outside the soul, in so far as it is conceived of as common to the totality of the generables and of the corruptibles . . ., that by means of which it is matter distinct from nothingness and existing outside the soul, is reduced to the fact that it is a subject (substratum) of the perceptible individual which may be seen but is not understood, the problem in question is: how does Zayd exist is not the fact that the intelligible form of the man is shared by common matter: this form and this matter are only thought, and from their encounter, which is that of a universal positive form and a universal negative (matter), it having existence only in the soul, there cannot result, outside the soul, this concrete and individual reality which is Zayd. Properly speaking, the creation of an individual takes place neither through matter nor through form. As has been clearly said by M. Cruz Hernandez: "la materia y la forma no poseen per se actividad motora, ni autoprincipio de transformacion alguna". What exists is the individual form in a particular subject, and that which engenders a particular is a particular. Ibn Rushd disagrees here with Themistius, who believed that, in generation, the form was created for him the generation of animals by putrefaction was a proof of this since, he asked, where did the form of these animals come from?) The substantial form would thus be separate and come from without; there would be a dator formarum (wakhi al-swar) which would be the agent intellect (al-tali al-fa'idal). This was also the doctrine of Avicenna, based on the following argument: "there are no active powers in matter except the four qualities, hot, cold, dry and wet. These qualities produce what is similar to
them. But the substantial forms do not act upon each other”. Ibn Rushd’s thesis is that “the agent produces as separate forms "(ibid.).

As for the agent, Averroes criticizes the theologians who admit only one single efficient cause and who deny secondary causes. This is because they think that all action is creation ex nihilo, and when they see a mover act on a mobile thing, they ask which mover it was that moved the thing; but this is not the question; the true agent is that which causes a subject to pass from potentiality to actuality, and it is in this sense only that it is said that it unites matter and form. The forms exist in posse in primary matter and in action in the prime mover, rather in the sense in which it is said that the object of art exists in actuality within the soul of the artist.

The moved movers are thus really agents which have their own natural action. This being so, it is necessary to find not only what moves them but what co-ordinates them. There exists a real and universal movement, that of the sphere, which gives continuity and permanence (al-ittisal wa ‘l-azaliyya) to all the movements of the world. As for the sphere and the heavenly bodies, they are moved by the desire inspired in them by the first unmoved mover, “because heavenly bodies, they are moved by the desire inspired into them by the first unmoved mover, “because they understand of themselves that their perfection and their substance are only in movement... and also that their movement is the cause of the passage into actuality of what is in posse in the separate forms, i.e., the material forms” (iii, p. 1595). In fact, although the forms are in action in the prime mover and in posse in matter, as has been seen above, it must be stated that the reverse is true in connexion with the concrete realization of material beings: "one has the impression (wujubabbaku) that they have two existences: the one in action, which is material existence, and the other in posse, which is their existence as separate forms "(ibid.). This was the theory of the supporters of the Platonic Ideas, but they fell short of the truth, since the separate forms in themselves are not movers: they are found in the Prime Mover which draws all beings to them and through them. The first end of the movement of the heavens is the immortality of the non-animalic existence of (täb—is) its search for this that in the second place it ensures this passage of material beings from potentiality to action. ‘Thus he who performs exercise to preserve his health by practising an art, has as his main aim the preservation of health, and as a secondary aim the practice of this art’ (1596).

On the Intellect, Ibn Rushd takes his stand against Alexander, who considered that the material intellect was generated and corruptible, which presents insoluble problems in the matter of intellectual knowledge. Ibn Rushd takes up a thesis which he attributes to Theophrastus, Theonistius and the majority of the Peripatetic philosophers: the material intellect exists and the separate agent intellect is as the form in the material intellect. But he states this more clearly by referring to what he has said in the De Anima. The material intellect is in itself general and corruptible (Bouyges, 1489: the Latin translations add a negative: non est generalis et corruptibilis.) The habitual intellect (bi ‘l-malakalhabituli£,ei), which holds at our disposition the knowledge of the intelligibles, has a generable and a corruptible part; the corruptible is its action; but in itself it is incorruptible. It comes to us from without (min kibrigi ljupadorev) and is not generated; this is why the intellect in posse is for it like a place (mahään) and not like a material thing. If this intellect, in so far as it must unite with the material intellect, had an action which was not general and corruptible, although it is essential and there would be nothing in it which constrained it to unite with the material intellect. But since it does unite with it, its action in so far as it unites is not its substance. The action which it produces is not for the benefit of itself, but of another. So it is possible for an eternal being to give to a generable and corruptible being the power to understand. When man exercises his faculty of reason, he is not in all potentiality, and of necessity its action, which is not it itself, is reduced to nothing. So, either we no longer understand at all through this intellect, or we understand through it, in the sense that its action is reduced, in this state, to its substance. Ibn Rushd shows that the second case is the true one (cf. iii, 1489-90). The question is a difficult one. It seems that Averroes considered the habitual intellect to be the way in which the agent intellect is present in us that is, in that part of our soul which is the material intellect. Its action in us has a beginning and an end; like acquired knowledge in the scholar, it is not continually in use. It is therefore, from this point of view, connected with the psychological reality of the feelings, of the imagination, of the memory, and of the will. But when used to perfection, it no longer needs the instruments of the soul: it turns back on itself and in itself in its own action, in which it is identical with the intelligible which it thinks. In this perfection of our intellect we understand through the agent intellect itself, that is through the action which substantially constitutes it. This is what has led to the statement that our individuality disappears. We have seen the modifications which Averroes introduces into this doctrine, which he considers as being that of Aristotle, without altering it in its demonstrative value: since although all that is demonstrated is true, that which is not demonstrable is not necessarily false.

A general study of the thought of Averroes would have to be based on the texts preserved in Latin or Hebrew. This article has been limited to the main works surviving in Arabic. A Latin Averroes, given the slight variations in emphasis which translations always give the action word, can be transposed into various languages of the Almohad empire, as mentioned in the commentary on the Republic which has survived in Hebrew (ed. with introd., tr., and notes by E. I. J. Rosenthal, Averroes’ Commentary on Plato’s Republic, Cambridge 1956). Ibn Rushd did not know the Politics of Aristotle; Plato takes its place. “The two works — Nichomachean Ethics and Republic—form two complementary parts of the same science of Politics, as Averroes stated himself”. Averroes’ social awareness appears here in his ideal of a perfect city, the image of the world; he makes frequent use of al-Fārābī; he transposes in a very interesting fashion the Greek institutions into Muslim realities, as, in the Poetics, he transposes the Greek literary genres; finally he makes many allusions or applications to Muslim public law and to the situation of the Almohad empire compared with the Almoravids.

Ibn Rushd had few disciples in Islam. His great fame among the Western schoolmen is well known. Renan, followed by many others, claimed that Ibn Rushd’s thinking contained nothing original. This is because he deliberately belittled the religious and
juristic works. In a general way, he committed an error of appreciation which was to remain a blind spot in Greek historiography. If one considers the whole corpus of Ibn Rusd's works and the unity of his wide thought, it becomes apparent that the "Commentator" was a true philosopher.

of Mecca

Ibn al-Abbar, no. 746; Ibn Khallikan-de Slane, ii, 501 n.; Ibn Farbān, al-Dibādī al-muḥākāhah, Cairo 1320, 287; Makkari, Analectes, 565 f. (taken from Ibn al-Abbar, no. 746), 607. (J. Robson)

IBN AL-SA’BĪ (the son of the clock-maker), Faqhr al-Dīn Ridwān (or Ridwān) b. Muḥammad b. ‘Alī b. Rustam al-Khurāsānī, born at Damascus, where his father, a native of Khurāsān, had settled. His father was a skilled clock-maker, whose most notable works were the clocks at the entrance to the Great Mosque at Damascus, commissioned by the Zangid al-Malik al-ʿĀdil Nūr al-Dīn al-Maḥmūd (died in Shawwal sâg/May 1174); he was also versed in astronomy. Ibn al-Sabčīn was a physician, but he was also well-versed in literature, logic and the other philosophic disciplines as well as in clock-making. He was first the vizier of al-Malik al-’Ādil b. al-Malik al-ʿĀṣirī al-Hilālī, and then vizier and personal physician of his brother al-Malik al-Muʿāṣir b. al-Malik al-ʿĀdil (died 624/1227). He died at Damascus in about 627/1220. There survives a work of his on clock-making, the Risāla fi ʿamal al-sabčīn wa-sirt’mālik (abridged translation E. Wiedemann and Fritz Hauser, Über die Uhren im Bereich der islamischen Kultur, in Nova acta academiae naturae curiosorum, c (1915), 176-267), in which he deals primarily with his father’s clock, which he repaired and improved.

His brother, Bahār al-Dīn Abu ʿl-ʿĀsān ʿAlī, also called Ibn al-Sabčīn ʿAlī, was a well-known poet whose diwān has been edited by A. E. Khūrī (Beirut 1938-9). He died, in Cairo, in about 604/1207; for details of his life see Ibn Khalīkān, no. 489.

The same name was also given to the Ḥanafī jurist-consult Muẓaffar al-Dīn al-Hāfīz b. ʿAlī al-Baghdādī, died 694/1295, author of a much used compendium of fiqh which is called Mašūmā al-bayrān wa-muṭalāka l-nayyirayn, because it is an adaptation of the Muḥtāṣar al-Kindūrī [q.v.] and of the Mašūmā of al-Nasafī; for details see Tabākāt al-Ḥanafīyya, ed. Flügel, 4.

Biography: Ibn ʿAbī Usaybāʾī, ii, 183; Suter, Abhandl. 2. Gesch. d. Mathem. Wissenschaft,

IBN SABČIN, ʿAlī b. ʿAbd al-Ḥaṣan b. ʿAbd al-Ḥaqq b. Ibrahim b. Muḥammad b. ʿAlī b. Rūḥ al-Dīn, ʿAlī, the last representative of the Arab ‘Peripatetic’ school.

In 520/1126 he returned to Murcia in 613 or 614/1217-8 and died in Mecca in 668 or 669/1271-2.

“A bitter and tormented spirit”, L. Massignon called him. His life, consisting entirely of controversies, quarrels and persecutions, seems to have been a long and painful trial, alleviated however by the love and loyalty bestowed on him by his disciples, the sabīnīyya, men humble of heart and living in poverty. In Spain, where he carried out his studies, his fortune at first favoured him. His wide learning and knowledge of medicine and alchemy were esteemed. On the other hand, his Sūfism was suspect; he was reproached for some of his doctrinal assertions, among others, that in which he defined God as being the sole reality of existing things; this was regarded as a profession of monist faith, which his own position as a bellenizing philosopher could only render more suspect in the eyes of the ‘ulamā’ and ṣafābāt. He was compelled to leave his native land, when about thirty years old, to escape from persecution by his enemies. Followed by a group of disciples, he settled in Ceuta. There he acquired such celebrity that Ibn Khālās, the governor of the city, deputed him to answer the philosophical questions which the emperor Frederick II of Hohenstaufen had put, through his ambassador to the Amir of Khurasan b. al-Wāḥīd al-Rāshīd (630-40/1232-42). But this high official, fearing that public order might be disturbed by the philosopher’s teaching, soon expelled a visitor whom he considered to be compromising. Once again, Ibn Sabčīn was compelled to go into exile. He turned towards the East. He travelled to Bādis, then to Bougie. It was in that town that he met al-Shuṣhārī (610-12/1213-9), who became the most faithful, as well as the most moving, of all his disciples. Continuing on his way eastwards, he came to Tunis. In a milieu of orthodox Islam, this Aristotelian Śūfī once again came up against the hostility of the ‘ulamā’. To escape from his chief enemy Abī Bakr al-Sakūnī, a theologian from Seville who had settled in Tunis, he hurriedly left the town. There is a record of his journey on to Cābeg, and thence to Cairo. But there he scarcely felt secure and the great Mamlūk sultan Baybars I was ill-disposed towards him. Only the kārām of Mecca remained as a place of refuge for him. But there too he was persecuted, by an Andalusian emīr named Kūtb al-Kastallānī (614-12/1217-8). For once, however, he escaped unharmed from the accusations that were brought against him.

M. A. F. Mehren regards Ibn Sabčīn as “one of the last representatives of the Arab ‘Peripatetic’ school”.

The same name was also given to the Hanafī jurist-consult Muzaffar al-Din al-Hafti b. Ali al-Baghdadi, died 694/1295, author of a much used compendium of fiqh which is called Madjima al-Tabrisy an-wasul be-nayyirun, because it is an adaptation of the Muhtasar al-Kuduri, and of the Mansuma of al-Nasafi; for details see Tabakat al-Hanafiyya, ed. Flügel, 4.

Biography: Ibn Abi Usaybi'a, ii, 183; Suter, Abhandl. 2. Gesch. d. Mathem. Wissensch.,
This opinion is shared by L. Massignon, who considers that through his very Hellenism the philosopher was condemned to remain without disciples in the history of Islam. Ibn Khaldūn places him among the adherents of wahda, that is to say among the Monists, whom he contrasts with the theorists of tāḍālī. His isolation in a world of ‘ulumāʾ, mujāhids, theologians and faḥāḥīf is not without its poignancy. He reacted by adopting a haughty attitude, pouring scorn on his adversaries. He possessed a restless temperament, racked by a nervous distemper which led open no to the conclusions he arrived at, according to his own judgment, to be false. The reports of some of his biographers. This aristocratic intellectual seems to have found his only consolation among the humble men who listened to him and allowed himself to be charmed by his words. His disciple al-Shuṣhtāri, who spoke of himself as his slave and dedicated three of his šajāls to him, called him "the magnet of souls" (magnífis al-nūsūs). That he took his own life in the manner of the Stoics, by opening the veins of his wrists, is in no way improbable [see intīmār. For this philosopher, possessed by Love, it was the ultimate way of uniting himself with the Beloved, of fleeing a world that rejected him.

The šīnaḏ of the tarīkh šabiʿiyiya given by al-Shuṣhtāri in one of his šajāds shows the overlapping of the two cultures, the Greek and the Muslim, as accepted by the followers of Ibn Sabʿīn. In it, among other links, we find Plato, Aristotle, Alexander the Great, al-Hallādī, al-Shādhī who, as a mystic was the teacher of that strange character al-Suhrawardi, and Abū Madyan. In this initiatory chain, Hellenistic philosophy and Muslim ṭasawwuf are linked together under the patronage of Hermēs, the spokesman of the gods and their messenger to men.

His biographers ascribe a certain number of works to him, the principal ones being Badd al-ʿarif, which he is said to have written at the age of fifteen (an ed. is being prepared in Paris), Durādī, Ḥādīs, al-Fath al-mushararat, a short book, al-Fāḥīriyya, several treatises and a few essays.

**Bibliography:** M.A.F. Mehren, Correspondance du philosophe soufi Ibn Saʿd b. Abd al-Raqq, with the emprorcer Frédéric II de Hohenstaufen, in J.A., 1890 (in this edition will be found information concerning his biography, the text of the replies that he is said to have given to the four philosophical questions put by the emperor Frederick II, and also some extracts from his two principal biographers, namely Kutubi, Fawād al-unṣafayī and Makākīrī, Naṣf al-šibb). See also Al-Ḥaṣāb al-Bādāsī, al-Maqṣād (Vies des saints du Rиф), annotated trans. by G. S. Colin, in AM, xxvi (1926), 157-9, 150-2, n. 141; L. **IBN SAʿD**

Abū ʿAbd Allāh Muḥammad b. Saʿd b. Maṇīr al-Baṣrī al-Ḥāḍirī, traditionist, b. Baṣra ca. 168/784, d. Baghdād on 4 Dīnāmād II 230/16 February 845. He was a client (mawla) of the Banū Ḥāshim, for his grandfather had been a freedman of Ḥusayn b. ʿAbd Allāh b. Ḫubayy b. ʿAbd Allāh (d. 140 or 141; see Ibn Saʿd’s apud Ibn Ḥadhrāj, Taḥḥāb al-Taḥḥābī, ii, 344). Ibn Saʿd’s travelled in search of traditions and studied under many authorities. Later he settled in Baghdād and attached himself to al-ʿWāṣiki (q.v.), became his secretary and transmitted his works. He also studied genealogy under Ḥighām b. al-Ka'bī. During the Caliphate of al-Maʾmūn, Ibn Saʿd and some other orthodox scholars were summoned by order of al-Maʾmūn and were made to declare their adherence to the Muʿtazilli dogma (Ṭabarī, iii, 1116 ff., sub anno 210).

Ibn Saʿd’s fame rests on his Book of the Classes (Kitāb al-Taḥbāb al-kāfirī, there existed also a small edition, probably an abridgement). It was intended to be an aid to the study of traditions by reviewing information as one or more periods (including about 600 women) who, from the beginning of Islam down to the author’s time, had played a rôle as narrators or transmitters of traditions about the Prophet’s sayings and doings. Ibn Saʿd compiled it from the works of his predecessors, especially al-ʿWāṣiki and Ibn al-Ka'bī; he usually gives the full isnād, but no title; he often quotes, however, the Kitāb Nasab al-anṣār of ʿAbd Allāh b. Muḥammad b. Ḫumārī, called Ibn al-Kaḍāḥ (see Taʾrīḵ Baghdādī, x, 62) which he had written down at the author’s dictation (Ibn Saʿd, ii/2, 70). Ibn Saʿd opens his work with a biography of the Prophet; then follow the classes, arranged geographically, and within each region chronologically, and sometimes also genealogically. The articles on the Companions of the Prophet are often extensive, whilst the articles on the other classes get shorter and shorter, until sometimes only the name is given. Later on some lacunae were filled in, and even an article on Ibn Saʿd himself (vi/2, 99) was added by his pupil, al-Ḥusayn b. Fāhām (d. 289/900), in his recension of the work. Another recension (used by Ṭabarī in his “Annals”) was made by al-Ḥāribī b. Ābū Usāma (d. 282/895), and a third one by Ibn Ḥabīl ‘l-Dunyā (q.v.), which was used by Ibn ʿAbd al-Barr (see Ibn Ḥayrāṣ, Fāhrāsā, 224). The edition published by E. Sachau and others (Leiden 1904-9, 9 volumes in 16 parts) gives the recension of Ibn Hayyayawī (d. 381/991), which was also used by Ibn Sayyid al-ʿNāṣī, Dhabāhī, Ibn Ḥadhrāj and others.

According to his biographers Ibn Saʿd wrote also books on āfīḥ and kariḥ. The Fīāṣir (MS Chester Beatty, p. 60) mentions besides the two editions of his Tabākīt the Kitab al-Hiyal of Ibn al-Husayn b. Muḥammad b. Ḫurāf al-Kurān under al-ʿWāṣiki and taught them to Ibn Abī Usāma, who transmitted them to Ibn Ḥanṣădī (see Ibn al-Dżāzari, Chāṭāt al-nihāya, i, 142). Among the critics of traditions Ibn Saʿd has—unlike his master al-ʿWāṣiki—the reputation of being a trustworthy authority.

Muḥammad b. Saʿd is not to be confused with his namesake, Muḥammad b. Saʿd al-ʿAwfi (d. 276/895; see Taʾrīḵ Baghdādī, v, 322 f.), to whom al-Fādārī is referring when he says hadāthāni Muḥammad b. Saʿd “an abīb . . . in an isnād which occurs no less than 1500 times in his Ĥāṣfīr (see H. Horst in ZDMG, iii (1953), 294) and occasionally in his “Annals” (i, 45, 75, 143, 314, 376, 420, 1394, 1451, 1530). All the transmitters mentioned in this isnād belong to the same family: Muḥammad b. Saʿd’s father Saʿd b. Muhammad b. Ḫasan b. ʿAṭiyāya (Taʾrīḵ Baghdādī, ix, 126; cf. Ibn Saʿd’s vi, 212, 20); the latter’s paternal uncle Ḥusayn b. Ḫasan b. ʿAṭiyāya al-Kāfī al-Ḥanāfī (d. 201 or 202; see Taʾrīḵ Baghdādī, viii, 29 ff.; Ibn Saʿd’s vi, 74); Ḥasan b. ʿAṭiyāya (d. 181; see Ibn Ḥadhrāj, Lisān al-Miṣān, ii, 294) and ʿAṭiyāya b. Saʿd (d. 122 in Kūfā; see Ibn Saʿd’s vi, 212; Ibn Ḥadhrāj, Taḥḥābī, vii, 224 f.), who transmits from ʿAbd Allāh b. Ḫubayy b. Allāh b. Ḫubayy b. ʿAbd Allāh b. Ḫubayy b. ʿAbd Allāh b. Ḫubayy, the abbās explanations of Kantūrī verses. None of them was considered by the critics
as an unimpeachable authority; and it was said of 'Atiya b. Sa'd that he had his tafsir from al-Kabîl but insinuated (by sadîq) that he had heard it from Abd Sa'd al-Khâlid (Manhal, no. 516) and called Karim al-Din Akram, (Manhal, no. 516) and called Karim al-Din al-Saghir to distinguish him from his uncle, served as Ndzir of the First Class. After the death of Ibn Ghurab, one of the most powerful Secretary Sa'd al-In Ghurab. Except for brief biographical sketches, little is known about him. Like Ibn Ghurab, he was of Coptic origin, and moved from one high position to another during the reign of the Mamlûk Sultan al-Nâṣîr Faradj (reigned 808-1405-6) in place of Ibn Ghurab, who was elevated to the office to be Controller of the Royal Stables (Kdtib al-sirr), at that time to Head of the Council and made Emir of Sultan al-Muzaffar Baybars II (708-q/1308-9), and after a temporary setback at the latter's fall, he rose under Baybars's successor, al-Nâṣîr Muhammad b. Kalâwûn (709-41/1309-40). During that ruler's third term Ibn al-Sadîd became, for a time, the most powerful figure in the governmental administration.

Most contemporary as well as later accounts, generally based on a biography by Khalîl b. Aybak al-Safadî, assert that he was the first to bear the title of Controller of Privy Funds (Nâṣîr al-dawâla, or khâwâsî). According to al-Mâkrizî, however (cf. Khâtaj, Bâlîk ed., ii, 227), the title was known from Fâtîmid times but was of minor importance until Sultan al-Nâṣîr Muhammad abolished the vicerate and appointed Ibn al-Safadî as Controller. In this office he was the supreme financial administrator in the realm and bore other titles as well, such as 'azîm al-dawâla and wakil of the Sultan. Among his other responsibilities was the control of the finances of the Manşûri hospital and madrasa and of the wakîf of the mosque of Ahmad b. Tûlûn.

Ibn al-Sâdîd seems to have had absolute control over the personal finances of the ruler to such an extent, as is related which some chroniclers liken to that of the Barâzîd. The exact reasons for his fall from favour are not clear, but in 723/1323 he was seized, confined, and forced to sign a statement, witnessed by the Chief Kâdi, to the effect that all the wealth in his possession actually belonged to the Sultan and that none of it was his (Khâtaj, Bâlîk, ii, 59). After this he was moved from one place of confinement to another, from the tomb that he had built at al-Karafa outside Cairo to Karak al-Shawbak, building the port facilities of Ladhikîyya to equal those of Alexandria, with the intention of using that harbour as his point of departure. On the other hand, Ibn Taghribîrdî (Cairo ed. ix, 77), following earlier authorities, praises him for the sincerity of his Islamic feeling, his generosity, reliability and executive ability.

His sister's son, also named Karim al-Din Alkâmăr, (Mankhul, no. 38) and called Karim al-Din al-Saghîr to distinguish him from his uncle, served as Nâṣîr
al-dawla and was also exiled to Aswan, where he died in 726/1326. Some nine years later, in 735/1334, the sons of both Karim al-Din ibn al-Sadhid and of his uncle, Ibn al-Salat, were arrested.

Although the downfall of Ibn al-Sadhid may be attributed to a change in the Sultan's personal attitude, deeper historical causes may be suggested. One is the possibility that it was connected with changes in fiscal policy as reflected in the monetary reforms introduced by the Sultan almost immediately after the death of Ibn al-Sadhid. Another is the evident suspicion that Ibn al-Sadhid was involved in events connected with the anti-Christian riots in Cairo and other parts of Egypt in 721/1321. It is recorded that he was stoned by the populace for interceding on behalf of Christians accused of starting fires and was condemned by pious Muslims for having persuaded the Sultan to order the demolition of a minbar erected on the site of a destroyed Christian church (cf. Khulās, 311, 314-6). A number of building projects are attributed to Ibn al-Sadhid, including a mosque and a khānskhā in Cairo, and the endowment of two mosques bearing his name in the outskirts of Damascus.

**Bibliography:** As mentioned above, most of the available biographies are based on the as yet unpublished work of al-Safadi and repeat the same material. This is true of Ibn Haḍjur, Durur, which has two biographies, one under Akram (i, 401-4) and one under ʿAbd al-Karim (i, 401-4); of al-Kutubi, Faḍūlī, ii, 8-15; of Ibn Taghribirdi (Cairo, i, exc. 75-7; and even of modern works such as al-Zirikli, al-ʿĀlam, iv, 180, and Dāʾirat al-maʿārif, iii, 164. Additional material occurs in Dawādārī, Kanz, i (ed. Roemer), 188, 203, 217, 247, 282, 296, 302, 305, 306, 310, 311, 314-15, 349, 354, 375, 388, 390, 394; and Kāfī (Bilbīlī), ii, 59, 66, 68, 131, 164, 186, 225, 227, 269, 392, 425, 426, 511, 514-6. Other references are Sauvare, in JA, 1896, 231-268; Wiet, Lampes, app. no. 21-2; Wiet, Manhal, no. 1463; ʿAli Pasha, ii, 28, 99-100. (W. M. BRINNER)

IBN SAĐDUN [see vAHYĀ B. SAĐDUN].

IBN AL-SAFFAR, Abu l-ʿKĀSIM Ahmad b. ʿAbd AllĀH b. ʿUMAR al-ḫāfiFr Kh[F]AN[AL-ANDALUSI], a Spanish Jewish astronomer and mathematician Maslama al-Maḍīrī [q.v.], lived in Cordova until shortly after the outbreak of civil strife, at which time he moved to Demi, where he died in 426/1035. ʿṢāfīd al-Andalusī (d. 462/1070) informs us that Ibn al-Saffar wrote a set of astronomical tables according to the Sindind method as well as a treatise on the astrolabe. The former seems to survive only partially in an Arabic manuscript written in Hebrew characters (MS Paris, hebr., 1102). The latter text has been edited by J. M. Millās Vallicrosa (see Bibliography). There are two Latin versions of this treatise on the astrolabe; one by Johannes Hispalensis is ascribed to al-Madjriti (Alcalicum de Mageri qui dicitur Almacheritus) and the other by Plato of Tivoli is ascribed to Ibn al-Saffar (Abucazin filio Asafer). Since they both represent the Arabic text of Ibn al-Saffar, Millās Vallicrosa argued (in his article of 1955) that al-Madjriti had been substituted in one version because of the confusion that both they had the same kunya (Abu l-ʿKāsim). A Hebrew version by Jacob ben Makhir, in two recensions, and a Spanish version are also extant. No other treatises by Ibn al-Saffar are known.

Muḥammad, a brother of Abu l-ʿKāsim Ibn al-Saffar, is described as an astrolabe-maker by ʿṢāfīd al-Andalusī; at least one surviving astrolabe (dated 420/1029) is ascribed to him (cf. L. A. Mayer, Islamic astrologists and their works, Geneva 1956, 75).

IBN AL-SHABIR, historian, author of a chronicle on the Rustamid ināms of Tāhert. His work forms the earliest document on the Ibadīs of North Africa which has survived up to the present, with the exception of extracts from the work of Ibn Saḥīm b. ʿUmar [q.v.]. The chronicle of Ibn al-Ṣaghrī was very highly esteemed by the Ibadī historians of the Maghrib, two of whom, al-Barrādī [q.v.] and al-Ṣamākī [q.v.] quoted large extracts from it. His opinions concerning the Ibadīs of Tāhert and particularly the Rustamids were certainly not hostile, in spite of an anti-Ibadī statement made in one passage of his work. He himself was more a Shīʿī, and his Ālīid tendencies appear in more than one passage of his chronicle. While still a young man he owned a shop in Tāhert, in the al-Rahādīna quarter, and attended the mosque in this quarter. He lived during part of the reign of the inām Abū l-ʿAṣāfīr and also during the inām Abū Ḥātim, when he wrote his chronicle, probably in about 290/903.

Ibn al-Ṣaghrī’s work is an anecdotal rather than a political history, and has been rightly described by A. de C. Motylinski as “la monographie de la Tâhert abadhite dans sa vie intime”. The author used as his basic sources stories narrated by various persons of Tâhert, mainly Ālīids, who were often relating their ancestors’ version of events. He only rarely gives the names of his informants, among whom there should be mentioned a certain Abūmad b. ʿBaṣhrī.

IBN SĀḤĪB AL-SALĀT, Abū Marwān ʿAbd al-Malik B. Muḥammad al-Bāqli, Andalusian author of an important historical of the Almohads entitled al-Mann bi l-iḥānā ala l-mustaṣaf bi-an ḍaʿalahum Allāh al-ʾaṭīma wa-d/g/aʿalahum al-muṣribihin (ed. A. de Āhdī al-Tāzi, Beirut 1964). Practically nothing is known of this Ibn Ṣibīl al-Salāt, nor of his connection with several other men of the same name. Ibn Sāhib al-Salat seems himself to have been an Almohad ḍāḥīs and clearly was closely
involved in the events which he describes. Brockelmann's statement, presumably taken from Amari, that he died in 578/1182 is incorrect; it may be deduced from the work itself that he was still living in 594/1198 (Tâlî's Introduction, pp. 24-6). The surviving fragment of al-Mann bi'mâna begins with the year 554/1159 and finishes with 568/1172 (not 580/1182) as is his connexion with the work mentioned by Brockelmann, S II, 935, No. 58.

( J. F. P. Hopkins)

IBN SAHI AL-ISRA'ILI AL-ISBILI, Abû 'Isâk IRÂBÂNI; one of the few genuine poets of Muslim Spain in the 7th/12th century. When compared with the great names of poetry during this period, such as Abû Bâshr Saîfân b. Idrisi (d. 619/1222), Abû 'l-Hasan 'Ali b. Harîk (d. 622/1225), Muhammad b. Idrisi 'Aliy Mardj al-Kuhl (d. 634/1236), Ibn Lubbâl (d. 683/1284), Shbî b. Sharîf al-Rundi (d. 684/1285) and Hzâmîn al-Kartâ'dînâni (d. 684/1285), Ibn Sahl impresses us by his truly poetic temperament and his artistic sensibility.

Born in Seville in about 609/1212-3 of a Jewish family, he spent nearly all his life in his native town, wholly absorbed in poetry, to which he devoted himself entirely, and it is only towards the end of his life that we find him attached to one of the governors as secretary. The Seville in which he lived was sad and under constant threat, but he succeeded in escaping into a world of imaginary love and romantic dreams. As early as 625/1227, when he was only sixteen years old, he impressed his contemporaries with his poetic talents when he suggested the insertion of a verse in a poem composed by al-Haythaml (d. 684/1285) and Hazîm al-Karti'dînâni (d. 684/1285), Ibn Sahl impresses us by his truly poetic temperament and his artistic sensibility.

In 594/1198 (Tazi's Introduction, pp. 24-6). The surviving fragment of al-Mann bi'mâna begins with the year 554/1159 and finishes with 568/1172 (not 580/1182) as is his connexion with the work mentioned by Brockelmann, S II, 935, No. 58.

(F. Rosenthal)

After spending his youth in Seville, where he divided his time between the traditional studies and pleasures, Ibn Sa'id left Spain in 639/1241 to perform the Pilgrimage, together with his father, who died on the journey, at Alexandria, in 648/1249. He was then given a warm welcome in Cairo, where there had preceded him a fame which was probably due to the *Kitāb al-Mughrib fi ḫulā 'l-Maghrib* which he had brought with him. This work has a curious history: begun in 530/1135 by Abu Mūsā ibn al-ʿAbbās al-Mashriqī, the work seemed to be a counterpart to the first; this work does not appear to have been completed, but several volumes of it manuscript exist in Cairo. He next performed a second Pilgrimage to Mecca and started on his return journey, writing on the way an account of his voyage, al-Nafha al-mishiyya fi ʾr-iḫtih al-Makhṣiya. On his arrival in Tunis (652/1254-5) he entered the service of the amir al-Mustansir (see R. Brunschvig, *Hafsides*, index), fell for a time into disgrace, but finally succeeded in regaining favour. In 666/1267, he made a second journey in the East which took him as far as Iran, but the last years of his life are surrounded by some obscurity; he seems to have returned in about 675/1276 to Tunis, where he died in 685/1286.

Ibn Sa'id's poetry, to judge from the few examples which have survived (for his *Diwan* is lost), reveals, among much that is hackneyed and stereotyped, some original ideas and personal accents when, in the East, he expresses his nostalgia for his native Andalus. But his fame rests mainly on the *Mughrib*, the anthologies deriving from it and his historical and geographical works, most of which have today disappeared. The following have been printed: *Rāyāt al-mubarrisīn wa-ḥāyāt al-mumayyizīn*, partial ed. with Spanish tr. by E. Garcia Gómez, Madrid 1942; Eng. tr. A. J. Arberry, Cambridge 1953.—*Umān al-murbiṣīn wa-ʾr-murbiṇāt*, ed. Cairo 1286; partial ed. and Fr. tr. by A. Mahdad, Algiers 1949.—*Al-ṣūfīn al-ṣabīlīn wa al-sabīlīn*; *Maqālāt*, ed. Ibrāhīm b. al-ʿAbbās b. 'Abd Allāh al-Hidārī at the suggestion of 'Abd al-Ibrāhīm al-ʿAbbās b. al-Mūsā b. Muhammad b. al-Ḥasan b. al-Sibā, under the title *al-Muṣarrāt wa-ʾr-Murājāt*, ed. Cairo 1286; partial ed. and Fr. tr. by A. Mahdad, Algiers 1949.—*Al-Mustansir*, ed. Ibn Katfī 674, also (or its *muṣarrāt*), *al-Muṣarrāt*, 343 f., and other brief notices. Cf. further, Brockelmann, S I, 590 f. (S II, 293 f.); *De genalogia des Banu Sa'id*, 462 f., 491; 'Abbās 'Azāwī, *al-Tā'īf bi-ʾl-му'arrikhin, i, Baghdad 1376/1957, 90-5; Mustafa Diawd, introd. to his ed. of *Nisā' al-khulūfa*.

**IBN AL-MAHDIS**—**IBN AL-SAIGH**, Abu 'L-HASAN 'ALI b. MŪSĀ b. MUQ. B. 'ABD AL-MA'LIK b. SA'I, Andalusian poet, anthologist, historian and geographer, born near Granada in 610/1213, in a family which was descended from the Companion of the Prophet 'Ammar b. Yasir [a.s.] and which had long previously emigrated to Spain, where, during the period of the Ta'ifah, it had carved out a principality for itself in the Kal'a of the Banu Yabuṣ (modern name Alcala la Real), but had afterwards been forced to enter the service of the Almohads (for this family, see G. Potiron, *Elements de biographie et de généalogie des Banu Sa'id*, i, Baghdad 1376/1957, 90-5; Mustafa Diawd, introd. to his ed. of *Nisā' al-khulūfa*).

**IBN AL-SAIGH**—**IBN AL-SĀ'I**, ABO 'L-ḤASAN B. AL-HASAN B. SIBĀ, al-Maghribī, historian and geographer, born near Granada in 610/1213, in a family which was descended from the Companion of the Prophet 'Ammar b. Yasir [a.s.] and which had long previously emigrated to Spain, where, during the period of the Ta'ifah, it had carved out a principality for itself in the Kal'a of the Banu Yabuṣ (modern name Alcala la Real), but had afterwards been forced to enter the service of the Almohads (for this family, see G. Potiron, *Elements de biographie et de généalogie des Banu Sa'id*, i, Baghdad 1376/1957, 90-5; Mustafa Diawd, introd. to his ed. of *Nisā' al-khulūfa*). His writings on the scholars of his time, his own family, his journey to Mecca, and on geography etc. have been used by later writers such as al-Maḳṣari or Abo 'L-Fidā', but the latter admits that Ibn Sa'id's geographical writings are full of errors.

mentary on Ibn Durayd's Maṣṣūra, an abridgment of the Şaḥā of al-Djumhari, an abridgment of the commentaries by Ibn Khārīf and by al-Sirāfī on the Kitāb of Sibawayh (manuscript in the Karawiyān, etc.), as well as of a Māmah ẓahibiyya and of a large Dīwān, containing especially a long ḥāfiyya, composed in Egypt, in which he expressed the nostalgia he felt on being far from his native town; this composition is numbered among the famous zahrīyyāt.

**IBN AL-SALĀH, TAṢI 'L-DIN ABŪ 'AMR UTHMĀN B. 'ABD AL-RAHMĀN AL-KURDI AL-SHAHRĀZĪRĪ, who belonged to the Şaḥīf madhhab, was born in 577/1181 at Sharakhān, a village in the Irīlī district near Shahrazūr, and died in Damascus in 643/1246. He was one of the most prominent of the three scholars of the period, among them the great names of Arabic literature, al-Asma'ī, i, Abu ‘l-Adīl B. al-Salar, and al-Adīl B. al-Salar, see Al-Adīl B. al-Salar. He was the author of several works in poetry and lexicography. He was in contact, at various times, with such figures as Abu 'l-Khattāb al-Ma'ārifī and Abu Ḥātim al-Malzārī, with the relations of the Ibaḍī of Tähert with their co-religionists in the East during the imāmāte of ‘Abd al-Wahhāb, and with several important Ibaḍīs of Kayrawān and central and eastern Tunisia. The date of composition of the work is not known, though it seems fairly probable that it was completed shortly after the year 693/1294, which is the last date mentioned in the extracts given by al-Shammākhī.

**Bibliography:** al-Shammākhī, Kitāb al-Siyar, Cairo 1301, 133-4, 135, 142, 143, 161, 162, 260-2; T Lewicki, Le culte du bélier dans la Tunisie musulmane, in REI, ix (1935), 196-7; idem, Une chronique ibāḍīte, in REI, vii (1934), 73; idem, Les historiens, biographes et traditionnistes ibāḍītes—wahhâbîtes de l'afrique du Nord du VIIe au XVIIe siècle, in Folia Orientalia, iii (1961-2), 106-7. **IBN AL-SALĀH (see AL-SALĀH B. AL-SALLĀH).**

**IBN SALLĀM AL-DJUMAḤI, ABŪ 'ABD ALLĀH MUḤ. B. SALLĀM, traditionist and philologist of the Baṣra school. He was a maṣūm of Kudāma b. Maṭīna Djuwānī (d. 777/1181) at Baṣra in 1397/1395. It was in his native town that he began the transmission of the book on the sciences of adab and all branches of ḥadīth and fiqh that he collected. He was one of the most prominent of the three scholars of the period, among them the great names of Arabic literature, al-Asma‘ī, i, Abu ‘l-Khattāb al-Ma‘ārifī and Abu ‘l-Adīl B. al-Salar, see Al-Adīl B. al-Salar. He was the author of several works in poetry and lexicography. He was in contact, at various times, with such figures as Abu ‘l-Khattāb al-Ma‘ārifī and Abu ‘l-Adīl B. al-Salar, see Al-Adīl B. al-Salar.

His biographers attribute to him several works: a šahrī al-Kur’ān (which, however, is not mentioned by Ibn al-Nadim), a K. al-Faddāl (؟) fi mulk (؟) al-ḥākhūr wa 'l-ṭāgbār, a K. Buṣūtī al-Arab, a K. al-Hallāb (al-Hallāb?) wa-yāḏūr wa-khadr al-khalīf? Ahlāf, perhaps also a K. al-ṣūrūṣ, but his fame rests mainly on his Kitāb Ṭabābāt al-ṣūrū’s, which nevertheless presents several problems; these are not easy to solve because of the disordered state in which the text has survived and the unsatisfactory way in which it has been transmitted; in fact, although it can be accepted that Ibn Sallām is indeed the originator of this work, its contents were transmitted orally and probably worked over by his nephew Abū Ḫallīf al-ṣāfī al-Hubāb al-Djuwāni, who was blind, and were not written down until some decades after the death of its real author; an indication that
this was so is to be found in the fact that al-Djahiz, when he cites Ibn Sallam, mentions his inad (this does not necessarily refer to the work which was to become the Tabakht fi'l-adwiya al-mufrada il-islamiyyin, which seem to form the two basic parts of the printed graphic facts and brief quotations of verses, but notices contain in general only rudimentary bio-

chapter 13 gives the longitudes of the apogees of the planets for 416/1025 (Libros del Saber, iii, 241-71). Ibn Khaldün (iii, 135) also ascribes to him an abridgement of Polenoy's *Almagest*.

Steinschneider (Heb. *Ueber*., 584) thinks that Kalonymos ben Kalonymos' Hebrew translation, finished in 1312, of a treatise on the cylinder and the cone ascribed to "Sammah" is to be referred to Ibn al-Samh, and suggests (Diet europa. *Ueber*., sect. 182) that the Latin *Antiquariatum* of Abnaşah is also his work; neither of these attributions has anything to support it beyond the vague similarities of the names. Moreover, the implication made by Millá's Vallicrosa (Asarqueil, 4, 247 and 278) that the Abû 'Abd Allâh Muḥammad Ibn al-Samh whose observation activity is mentioned by al-Zarkali is our author seems erroneous; he should rather be our author's father. Finally, Ibn al-Samh is named as the recipient of an epistle on alchemy alleged to have been written by his fellow-student of al-Maḏgiriti, Abû Bâkîr b. Bîshrun (see Ibn Khaldün, iii, 230), and F. Rosenthal (ibid., n. 696) notes that a biography of Maslama names Ibn Bîghrûn as the authority for a statement that there was an estrangement between al-Maḏgiriti and Ibn al-Samh. However, Rosenthal goes on to conclude that Ibn Bîghrûn's epistle is pseudepipigraphical, and therefore throws no additional light on the still nebulous Ibn al-Samh.

*Bibliography: Brief articles on Ibn al-Samh can be found in Steinschneider, Hebr. *Ueber*., 585; Suter, 85; Sánchez Pérez, *Biografías de matemáticos árabes*, Madrid 1921, 67; Brockelmann, i, 623 and S 1, 681; and E. S. Kennedy, *Islamic astronomical tables*, Philadelphia 1956, no. 26. References to him are also found in J. M. Millá Vallicrosa, *Estudios sobre Asarqueil*, Madrid-Granada 1943-50, and Los primeros tratados de astronómia en la España árabe, in Rev. Inst. Egipcio de Est. Isl. en Madrid, iii (1935), 35-49, an article which is republished in his *Nuevos estudios sobre historia de la ciencia española*, Barcelona 1960, 61-78. But there has been no study of his works or of his influence. (D. Pinckney)

*IBN SANÀ'-AL-MULK, ABU 'L-KÂSIM HIBAT ALLÂH B. ABI 'L-FA'ÂD DIA'VAR B. AL-MUTÂ'ÂMID,* known as al-Kâdî al-Sa'îd, Arabic poet of the Ayyubid period famous mainly for the treatise *Fusus al-fusul wa khardâ'at al-uqul* (published by Di. Rikâbî in Damascus in 1368/1049, and made it possible to see more clearly the structure of *muwâshshâhâb* just at a time when the originality of the *khardâja* was beginning to be perceived [see *muwâshshâh*]). The work consists of a selection of 34 *muwâshshâhâb* from al-Andalus and the Maghrib and 35 specimens composed by the author himself. The whole is preceded by a long introduction in which Ibn Sanà' al-Mulk sets out his theory about the structure and the prosody of the genre.

*IBN SARÂBÎYÛN, SUHRÂB,* author of the *Kîl'âb 'adâ'ib al-âkhâm al-sabâ'.* lived in the first half of the 4th/10th century. Hardly anything is known about the life of the author except for the little that can be ascertained from internal evidence in his extant work. In its introduction he calls himself Suhrâb (p. 5), and so was presumably of Persian origin. Again, from the detailed information that the author presents about the rivers of Baghdad and of *Irâq* (pp. 114-38) it seems that he lived in these regions for some time. The work was produced between 289-334/902-45, and although the title of the work suggests that it dealt with "marvels" ('adâ'îb) of the world, these are not described in the extant work. The author characterizes the work as a summary of information gathered from various works of earlier writers on the subject, it being his object to make this information on the positions of towns, seas, rivers, mountains, valleys, and on land- and sea-routes, available to those interested in constructing a map of the world. Hence, he describes in detail the technique of constructing a map on a cylindrical projection. Al-Khwârizmî's work, *Sûrat al-arâd,* which forms the basis of Suhrâb's work, must, in the opinion of H. von Mâzik, have originally contained similar introductions on map-making (the world-map described by Suhrâb and al-Khwârizmî has been reconstructed in detail by Râdîya Diâiri of the Aligardes and of Damascus, to whom he dedicated some pieces of poetry; he also wrote in praise of Salah al-Dîn (Salâdîn).

Ibn Sanà' al-Mulk wrote in the traditional genres without much originality; he is the author of a *Divân* (published in Haydarâbâd [Dairatu'l-Ma'ârif, n.s. no. xii] in 1958, by M. 'Abd al-Hâkîm, with detailed biography) and of an anthology of his own works in verse and prose, the *Fâysâl al-fâsîl wa 'shâbâl-al/******/(MS Paris 3233); he is said to have written also an abridgement of the *K. al-Hayâvân* of al-'Dzhîrîh under the title Râh al-hayâvân; but his importance is due less the fact that he was the first person, in the East, to compose *muwâshshâhâb* (sometimes with a *khardâja* containing Persian words) and that he had the idea of deducing from the Andalusian and Maghribi specimens available to him the rules of the genre, while realizing the difficulty of such an enterprise. His treatise, the *Dâr al-fâzir fi 'umal al-muwâshshâbât,* was published by Di. Rikâbî in Damascus in 1368/1049.
Equator which are given by al-Khuwarizmi; Suhrab also gives a few additional names of mountains, e.g., Tabaristan, Djan, Shir, Kirth, etc. (4) Suhrab calls the Sea of Baṣra (the Persian Gulf) the "Sea of Fārs" which suggests that he was under the influence of the Balkh School of Muslim geography; (5) the main difference between the two lies in the arrangement of the rivers: while al-Khuwarizmi describes all the rivers under the climes in which their sources lie, Suhrab describes most of the large and small rivers in a separate chapter and does not give their longitudes or latitudes as al-Khuwarizmi does, but describes their courses in terms of farsākhs or mils or in relation to places; (6) Suhrab makes use of diacritical marks to names and to portions added by him.

As pointed out by Krackovskiy, Suhrab's style is that of a naturalized Arab. The works of Suhrab and al-Khuwarizmi are complementary and should be studied together.

**IBN AL-DIRAYA** [see ṢAFI AL-DIN AL-HILIL].

**IBN AL-SARRAJ** [see IBN AL-ṢITT].

**IBN AL-SARRĀDI** [see IBN AL-RĀDI].

**IBN AL-SARRĀDI** [see IBN AL-RĀDI].

**IBN AL-SASSAR, and SARSARI**), the name of a scholarly family from the world, 450/1060 to 800/1398. The family of Damascus which can be traced for several centuries. Probably of Mesopotamian origin, as is attested by their nisbas al-Ṭaghlibi and al-Qaladī (referring to the town of Balad/Balat, now known as Eski Mosul), the family, like others of its class during the thalith laydīl, was led away from grammatical studies in favour of logic and music, but then returned to them respectfully. He taught in Baghdad, and some famous grammarians were included among his pupils: Abu ʿl-Ḳasīm al-Ẓaḍādiḏi, Abū Saʿd al-Ṣirāfi, ʿĀli b. ʿĪsā al-Rumdāni and Abū ʿĀli al-Fārisī. There is mention of his modesty and the soundness of his teaching, and one fact noted is that he had difficulty in pronouncing the rolled rā which, in his speech, became a ghwyn ( Ibn Khalīkān, Wafayāt, iii, 462).

A pupil of al-Mubarrad, he took part in the widespread movement which led the Arab grammarians to base their work on the Kitāb of Sibawayhi. He wrote a Sharḥ to the Kitāb as the outcome of his teachings. He repeated the doctrine of the Kitāb in various didactic works:— the K. al-ʿUṣūl al-ḥabīr which was esteemed very highly, then the Kitāb of Dhuqayl, and the K. al-Mawṣilat al-ṣaw (wa-huwa ʿl-ʿUṣūl al-taḥakhir, according to Yākūṭ, Mūḍjam, xviii, 200). The Fihrist (62) mentions also the K. al-Majāz, the K. al-Diḥawī, the K. al-Mawṣilat, the K. al-ʿAṣbaḏ, the K. al-ʿAṣbaḏ ḫārjī, the K. al-ʿAṣbaḏ ḫārjī and the K. al-ḥilāl, he which did not complete, according to Yākūṭ ( loc. cit.); the latter adds the K. al-Ḥaḍīth and the K. al-Ḥālidī? He touched on lexicography in the K. al-ʿArwafī wa ʿl-ḥawādīl wa ʿl-nār, and Kur'anic sciences in the K. Ṣādādi al-ḥarrāt and the K. al-Ṣāḥib wa ʿl-nār, mentioned in al-Ḥifūzī, infe, ii, 295.

As pointed out by Kradkovskiy, Suhrab's style is that of a naturalized Arab. The works of Suhrab and al-Khuwarizmi are complementary and should be studied together.
Hibat Allah, 'Ali, and Muhammad. Of these three, the family of Hibat Allah was most important.

(4) Hibat Allah b. Mahsud, Abu 'l-ghanam, d. 563/1168, served as a kadi at the age of twenty, heard and transmitted many traditions from teachers such as Hibat Allah b. Abmad b. Tâ'ús and studied jurisprudence with Abu 'l-Hasanc al-Sulami, cf. Sibt b. al-Djawzi, Mir'ât, 274; Ibn Taghibirdi, iii, 125.

(5) al-Hasan b. Hibat Allah, Abu 'l-Mawhîrî, 537-86/1142-90, probably the most important of the 6th/12th century members of the family, travelled extensively in the eastern Islamic world in pursuit of the study of traditions. In Iraq he studied with Ibn al-Butá (d. 564/1169), and in Iran with al-Hasan b. Abmad al-'Atâr (d. 560/1164) and Ibn Mâshâdâh (d. 572/1176). He was a companion of Ibn 'Asâkir, the historian of Damascus, and his name appears frequently in the samâ'dî of Ibn 'Asâkir's history as well as in the works of other authors. The titles of at least four of his own works are known. He was the first of his family to have been buried in a family turba on Mount Kâsîyûn, cf. al-Dhahabi, iii, 48; Ibn Taghibirdi (Cairo), vi, 112.

(6) al-'Usayn b. Hibat Allah, Abu 'l-Kâsim, 530-626/1135-1229, the elder brother of al-Hasan, also a scholar and traditionist, but not so well known and often confused with his brother by later historians and chroniclers. He was important as a teacher of tradition, which he studied first with his grandfather (on his maternal side 'Abd al-Wâhid b. Hâlîl, d. 565/1169-70) and with many other scholars listed in a 17-volume work no longer extant. See Abû Shâma, Tarâjidîm, 154; Ibn Taghibirdi (Cairo), vi, 272.

(7) Sâlim b. al-Hasan, Abu 'l-Ghânâtim, Amin al-Din, 577-637/1181-1240, accompanied his father on some of his journeys and thus had the opportunity of studying with important scholars in other lands. See Orientalia, ii, 286.

The children and grandchildren of Sâlim were the bearers of the family tradition of scholarship down to the beginning of the 9th/15th century, when the family name disappears. The sons of Sâlim, 'Abd al-Ra'âman (d. 664/1266), al-Hasan (d. 664/1266), and Muhammad (d. 670/1272), are all noted in their biographies for their learning and for performing public religious functions—usually as kâdis. In the next generation, that of the grandchildren of Sâlim, there is increasing involvement in the financial administration of the province of Damascus. Among the chief figures of that period are the following:

(9) Ibrâhîm b. 'Abd al-Ra'âman b. Sâlim, Damâl al-Din, Abu Ishâk, d. 693/1294, became Nâsit al-dâneuwîn, as his father before him, serving from 679/1279-80. In the latter year he was seized, together with the Vizier of Damascus, Ibn Kusayyîr, and they were mulcted of much wealth. In 682/1283, he was appointed muhsâbî and re-appointed to his previous post as well. He continued to serve until 687/1287, when he and a number of Damascene notables were summoned to Cairo and was forced to pay 60,000 dirhams to obtain his release. He was reinstated as kadi but died a few years later. See Orientalia, ii, 277; Wiet, Manhal, no. 1050.

(10) 'Abd al-Mumâmmad, Na'dîm al-Din Abu 'l-'Abbas, 655-723/1257-1322, brother of no. (8) and the most prominent of all the Banû Sha'râ. He studied tradition in Egypt as well as Syria, and also studied jurisprudence and grammar. He was appointed to teach at several madrasas, among them the Lesser 'Âdilîyya, the Aminîyya, the Ghazzâliyya, the Greater 'Âdilîyya, and the Aminîyya of the Arab, the Alî and the Aminîyya in Damascus, a post he held until his death 21 years later. He figured prominently in the religious and civil events in Damascus during that period, which included the cause célèbre of Ibn Taymiyya. Students flocked to his lectures and some of the prominent scholars of Damascus were taught by him. Many biographical notices and references are devoted to him, among them Ibn Kâthîr, xiv, 166; al-Kutubi, Fawâ'id, i, 62; Wiet, Manhal, no. 260; Ibn Hâdjar, Durar, i, 263; Ibn Taghibirdi (Cairo), ix, 258.

Two women of the family are noted for their scholarly attainments, a sister of the Chief Kâdi named Asmâ', 636-733/1240-1333, and her daughter Malika, d. 749/1348.

Finally there is a writer of local history known only through a unique Bodleian Library manuscript of one of his works, Muhammad b. Muhammad b. Muhammad b. Abmad—presumably a great-grandson of the Chief Kâdi. His work al-Durra al-mu'âdâ'a fi 'l-da'wa al-Zâhiriyah, a valuable study of Damascus during a part of the reign of Sultan al-Zâhir Bârîq, has been edited and translated by W. M. Brinner as A Chronicle of Damascus 1239-1379, Berkeley 1963, 2 vols.

Bibliography: A brief survey is found in Dâbrat al-ma'ârif, iii, 285. A full study of the family may be found in the article by W. M. Brinner, The Banû Sha'râ: A Study in the transmission of a scholarly tradition, in Arabic, vii/2 (1960), 167-95. Some important additions to this article appear in a brief notice by G. Vajda, A propos des Banû Sha'râ, in Glanes intéressants sur l'intérieur du VII'XIHI siècle dans le Mu'âm al-Suvûd al-Dâmîjîdî, in Arabc, viii/1 (1961), 98. (W. M. Brinner)

ISBN Sâ'ûd [see su'd, AL].

IBN AL-SAWDA' [see 'ABD ALLAH B. SABA'].

IBN SAYHÂN, 'Abd al-Ra'âman (b. Sayhân) b. Arâfat al-Mu'âribî, a minor poet of Medina who lived in the 1st/7th century, on intimate terms with the governors or members of the Umayyad aristocracy of the town—al-Walîd b. 'Uthmân b. 'Affân, al-Walîd b. 'Uthba b. Abî Sufyân, 'Abd al-Ra'âman b. al-Hakam and al-Walîd b. 'Uthba b. Abî Mu'sâyît; indeed he belonged to a clan which was a half of the Banû Harb b. Umayya, a fact which incidentally won him the friendship and protection of Mu'âwîya. Although we possess a number of his verses, which belong to 'A'âmîya and the Arabâyayî, as well as some in praise of the singer Djamâl [g.e.], this somewhat unproductive poet has escaped falling into total oblivion merely because some of his compositions were set to music; in these works panegyrics of his friends are usually combined with the glorification of wine, and he even uses sacrilegious terms in advocating its enjoyment. He thus takes his place in the line of Bacchic poets, while giving this poetry a distinctly anti-Muslim flavour. The potations in
which he indulged with his Umayyad friends brought him into conflict with Marwan b. al-Ḥakam (q.v.), who punished him with the slaughter of 80 strokes of the whip, but it is interesting to note that Mu'āwiyah compelled Marwan to make a public retraction. 

**Bibliography:** the only notice is that in the *Aḥārān* (Beirut ed., ii, 208-26) which contains interesting details regarding the consumption of wine in *Medina*; see also C. A. Nallino, *Letteratura*, French tr., 96; F. Bustānī, *Dār al-maʿārif*, ii, 331-32.

**IBN AL-ŠAYRAFĪ, TĀDĪ AL-RĀṢĪ AḤMAD AL-DĪN ABU 'L-KĀSIM 'ALI b. MUḤDĪB b. SULAYMĀN, Egyptian civil servant and a prolific writer in prose and verse, was born on 22 Šaḥbān 645/25 May 1071. His grandfather had been a kātib and his father was a money-changer. He learned the profession of kātib under Ibn Mu'arridī, wali of the Department of the *Arma* (*Dīwān al-Ŷayḫ)*, and finally rose to the Chancery (*Dīwān al-Ŷaḥūd*). On the death of its head Sana al-Muluk Muḥammad, Ibn al-Šayrafī succeeded him, and he was employed there for some fifty years, until his death on 20 Šafar 542/21 July 1147. The following is a tentative list of his works: (1) *Ṣiyāṣī al-asrā'ī* (referred to as *raṣā'ī*), which he composed in the course of his official duties; according to Yākūt, he wrote more than four volumes of official letters, while Ibn Sa'd (al-Murūji), 111) says that he saw a collection in twenty volumes. For those that survive, dispersed in various histories and literary works, see Dāmāl al-Dīn al-Šayrafī, *Maḏmaṣ'āt al-waṭaḥīf al-Ŷāfi‘īyya*. (2) *Kānim Dīwān al-Raṣā'ī*, a guide to chancery practice, ed. 'All Bāḥlarī, Cairo 1905, with extensive notes; Fr. tr. by H. Massi, *Code de la chancellerie*, in *BIFAO*, xi (1934), 55-120. The work is dedicated to al-Ŷaḍī kātib muwashṣaḥī. (3) *Iḥrār al-Ŷai al-waṣī‘a*, a history of the Fatimid viziers from Ibn Kilis to al-Bata; according to al-Muṣ'id b. al-Ṭāhir, Fatih 5410; a microfilm in the Institute of Arabic Manuscripts, Cairo 1950; F. Bustānī, *L'Antologia di Ibn as-Sairafi sui poeti arabo-siciliani*, in *Boll. del Centro di Studi filologici e linguisticici Siciliani*, iii (1954), 1-15; O. Kaak, *De la poésie arabo-sicilienne*, in *Arabo-sicilienne*, no. 1 (1960), 149-170; F. Bustānī, *Dār al-maʿārif*, iii, 292, (Ed.) *IBN SAYYID AL-NAS, FATIH AL-DIN MUHAMMAD b. YUSUF AL-ANSĀRĪ, Andalusian poet, historian and traditionist, born at Granada in 467/1074. He had a profound knowledge of Arabic language and literature, and was a prolific poet, particularly of muwaṣṣaḥī. He was kātib of the amīr Muḥammad Tāṣhīn at Granada; but his fame rests on a history of the Almoravid dynasty entitled *Ta'rīkh al-dawla al-lamtunīyya or Anawār al-di'ālayfi fī al-hābīr al-dawla al-murābitiyā;* at first ending at the year 530/1136 6, then continued by the author until shortly before his death, which took place at Orihuela probably in 537/1142 (the other date recorded, 570/1175-5, seems to be too late), this chronicle has not yet been discovered; there exist only some extracts, preserved in particular in the *Bayān* of Ibn Iḍhārī and the publication of which had been promised by E. Lévi-Provençal (see Lévi- Provençal and R. Menéndez Pidal, in *Andalucía* (1936), 57, 160, 161); this chronicle is also quoted in al-Ḥulal al-muwaṣṣaḥī, and some passages from it are reproduced by Ibn al-Khāṭib and other historians. 

**Bibliography:** In the course of his official duties; according to al-Muṣ'id b. al-Ṭāhir, Fatih 5410; a microfilm in the Institute of Arabic Manuscripts, Cairo 1950; F. Bustānī, *L'Antologia di Ibn as-Sairafi sui poeti arabo-siciliani*, in *Boll. del Centro di Studi filologici e linguistici Siciliani*, iii (1954), 1-15; O. Kaak, *De la poésie arabo-sicilienne*, in *Arabo-sicilienne*, no. 1 (1960), 149-170; F. Bustānī, *Dār al-maʿārif*, iii, 292, (Ed.) *IBN SAYYID AL-NAS, FATIH AL-DIN MUHAMMAD b. fast handwriting, both maghribi and eastern. He was popular with almost all high government officials, but there are hints that this was not the right company for a scholar and that he was not as devoted to scholarship as a root of his gifts should have been. He held a professorship in hadith in the Zahiriyya, and some other teaching and mosque positions. Instead of a government appointment offered him by al-Malik al-Manṣūr Lāḏiṇ, he accepted a pension for life, and he had additional sources of income. He died on 11 Shaban 734/17 April 1334.

It is a good deal of poetry which was highly esteemed. He is credited with two works on the ṣakība, and he wrote a commentary on al-Tirmidhi’s Ṣahih (cf. Segzin, i, 155). MS. Escorial 1160 (= 1515 Casiri) contains his answers to questions submitted to him in 731/1330-1 by Ahmad b. Aybak Ibn al-Dimayy, concerning various ḥadīths, some problems of the science of hadith, and, it seems, biographical items (requiring further study). Mainly, he wrote on the Prophet and his last years, and his reputation rests on his biography of the Prophet, entitled ‘Uyun al-ṭalār fi junūn al-maghdal wa ’l-ṣamā‘il wa ’l-ṭayar (ed. Cairo 1356). It is compiled on the basis of Ibn ʿIsḥāk (Ibn Hishām) and al-Waḳi’dī (q.q.v.), but it makes use also of a number of sources now lost or imperfectly known, such as Mūsā b. ʿUkba, Ibn ʿAqil, Abū ʿArūba, and Abū Bishr al-Dawla’ī (cf. ‘Uyun, ii, 342-7). The work was eminently successful in its time. Ibn Sayyid al-Nās himself wrote an abridgement of it, and it was commented upon several times and also versified. 

Biography: Bibliographies by contemporaries such as al-Ṣafādī, Wāfi, i, 289-311; al-Uḍfawi, al-Badr al-sāfīr (not available, quoted by Ibn al-ʿImād, Shahrārdī, vi, 108); al-Ḍahabī, al-Muʿjam al-maḥkūmat (not available); al-Kutubi, Fawā'id, Cairo 1951, ii, 344-9, etc., and many later notices, such as, for instance, al-Subkī, Tabākāt al-Ṣafārīyya, Cairo 1324, vi, 29-31; Ibn Ḥadijār, Durar, iv, 208-13. Cf. also Pons Boigués, 320 f.; R. Basset, in Le Musée, v (1886), 245-55 (with a discussion of the important inhabitants. He was welcomed by the Mamluk sultan Baybars and enjoyed his favour and that of his successors. He did not return to Syria until 669/1271, in the course of a journey made with this sultan.

It was in Egypt that he wrote his main works: the historical topography of Syria and the Ḍijarzra entitled al-ʿĀhâd al-halṭara fi dhīhur umrād ʿAl-Saḥam wa ’l-Ḍijarzra, in three substantial sections, written between 671/1272-3 and 680/1281-2, and the life of Baybars (Turkish tr. of the Edirne MS by Yaltkaya, 1941), sometimes wrongly attributed to Bahāʾ al-Din Ibn Shaddād (see next art.). There is also attributed to him a work on the Yemen, unpublished.

Biography: Brockelmann, ii, 634, S I, 883; Cl. Cahen, La Syrie du nord . . ., Paris 1940, index; parts of the historical topography have been published: of Aleppo, by D. Sourdelle, Beirut 1953; of Damascus, by S. Dahan, Damascus 1956; of Lebanon, Jordan and Palestine, by S. Dahan, Damascus 1963; on the section relating to the Ḍijarzra, see Cl. Cahen, La Djazira au milieu du XTT ies, Paris 1958, iii, Paris 1959, v, (not to be confused with ‘Uzūn al-Din, see above), biographer of Saladin, was born in Mosul in 439/1045 and died at Aleppo, at a great age, in 662/1265.

After completing his education in Mosul, he spent four years as assistant teacher (muṣṭaf) in the Nizāmīyya at Baghdad. Returning to Mosul, he taught at the madrasa founded by Kamāl al-Din al-Shahrāzūrī. He was sent by the Atabegs of Mosul on various embassies, to the caliph in Baghdad, to Saladin, and to the governors of neighbouring towns. In 583/1188 he performed the Pilgrimage; while he was at Damascus, on his way home, Saladin, then besieging the castle of Kawkab, sent for him and listened to a work on ḥadīth which he had composed. Ibn Shaddād visited Jerusalem (now back in Muslim hands), and then sought Saladin’s permission to return to Mosul. Saladin, much impressed by a work on ḥadīth which Ibn Shaddād had dedicated to him, retained him in his service (from Djumada I 584/July 1188); as kādir of the army and of Jerusalem he remained in constant attendance on Saladin until the latter’s
death (589/1193), of which he has left a moving description.

Ibn Shaddad then moved to Aleppo, where he acted as the conciliator and adviser of Saladin's sons. In 591/1195 al-Malik al-Zahir appointed him kādi of Aleppo, with supervision of the madrasas. It was in these years that he founded his magnificent madrasa, for the promotion of the Shāfiʿī madhhab, opposite the madrasa of Nūr al-Dīn, and a dār al-badhīd, erecting his own tomb between his two foundations. There are numerous records of missions he made to Cairo (in 593, 608 and 609) in attempts to compose Ayyubid family quarrels; and in 629/1232 he led the delegation which brought the daughter of al-Malik al-Kāmil from Cairo to marry al-Malik al-ʿAṣīl of Aleppo. In his latter years his house was frequented by such famous writers as Ibn Khallīkān, who has left an impressive description of the aged scholar; Abū Shāma, who gives Ibn Shaddad's biography, s.a. 632, in his Dhayl ʿala Ṽal-Rawdatayn; and Ibn ʿAbīl Wālī (q.v.), who visited Aleppo in 627 and 628, and traced Ibn Shaddad's sources.

Ibn Shaddad’s minor works are: (1) Dalāʾī al-ḥikām, still in manuscript (Paris, Bibl. Nat., MS ar. 736); (2) Maǧlaʿa al-ḥukkām ʿinda ilibbās al-ḥikām (MS in 2 vols. at the Egyptian National Library, Cairo); (3) Durūs al-badhīd, lectures delivered in Aleppo in 629/1232 (Bodleian Library, Cat. i, 1173); (4) Kiīlāʾ al-ʿaṣīl, on the encounter of Moses and Pharaoh (MS: Patna); (5) Fadāʾīl al-qāḥdī, the work presented to Saladin (Istanbul, MS Körprüli 764); (6) Asmāʾ al-rājīdāl al-laḍădīn fī Muḥadhdib al-Ḵīrārī (not in Brockelmann: Istanbul, MS Millet/ Velkyūtdīn Carullah 255).

His most important work is his biography of Saladin, entitled al-Naḥḍūd al-sulṭānīyya wa ʿl-maḥāsin al-Yūsifiyya ʿsa Sirat Salāḥ al-Dīn. First published by A. Schultens in 1732-3, it was edited, with French tr., by De Slane in RHC, ii, 170-5, iii, 104; Brockelmann, I, 316-7, S I, 549-50. (GAMALEL-DIN EL-SHAYYAL) His works have been used by nearly all later historians, and has been used by nearly all later historians, Muslim and European; it gives invaluable information not only on the battles of the opposed armies and the weapons employed, but also on the social and administrative systems on both the Muslim and the Christian sides, and contains important documents illustrating the relations between Saladin and the neighbouring Crusader States. As a “specimen of royal biography . . . a based on a study of character”, it is, in F. Gabrieli’s words, “without parallel in the historical literature of early Islam”.

Ibn AL-SHADJARl AL-BAGHDADl, ABU ʿl-SAʾDĀT HIṢAṬ ALLĀH b. ʿALI b. MUḤAMMAb b. ḤAMsA, a descendant of ʿAlī b. Abl Ṭāḥī (he is thus called al-Sharīf al-Ḥasan al-ʿAlawī), was a gram-maryan and poet of Baghdad, born in Ramadān 450/November 1058. After making the traditional studies under the direction of numerous teachers he began how, at the end of his youth, Ibn al-Anbārī (q.v.), who introduced him to the practice of folklore knowledge to ʿAll through an unbroken line of teachers, he taught grammar for 70 years. At the same time he was maḏāb of the nakīb (q.v. of the Tālibīs in al-Kāhkh, where he lived. He died in Ramadān 542/February 1148, and was buried in his own house.

His Amālī, dictated in 84 sessions, forms his principal work (ed. Haydarābād 1349), completed by his Intisār which was published by a commission with Ibn al-Khāṣḥāb (q.v.). He is also the author of a Hamāsā (ed. Krenkov, Haydarābād 1345; Cairo 1306, under the title Maḥḍīrāt shuʿārāʾ al-ʿArab). Of his other works, we may note a commentary on the Luma ʿa Ibn Dīnī (q.v.) and a treatise entitled Māʿ laʿfatā laṣfūn wa ʿl-khalaṣa maʿnī. His poems in qaṣīa form, his panegyrics, funeral orations and verses of parentic character do not reveal any great originality.

Bibliography: Ibn al-Anbārī, Nuzha (last biography); Yākūṭ, ʿUdabāb, xii, 282-4; Ibn Khallikān, index, s.v.; Suyūṭī, Būḥāyā, 407-8; Brockelmann, S 1, 493; F. Krenkov, in JRA S, 1929, 96-100; F. Bustamī, Dīвать al-mawāṣif, iii, 252.

IBN AL-SHAHID, ABD ḤAFṣ UMAR AL-TANGAL, Andalusian man of letters of the 5th/11th century. Almost nothing is known of his life except that he was one of the panegyrist of al-Muṣtaʿīm Ibn Ṣaʿūd, king of Almeria. Ibn Bassām devotes to him a notice of some length in his Dhakhlra (1/2, 380-200) and quotes a fair number of his poems. Ibn Saʿīd also mentions him in the Maghīra (ed. Sh. Dayf, ii, 209-10) but without giving any personal details of him.

As a poet, Ibn al-Shāhid was merely one of the many flourishing at that period, without any especial claim to fame. He has on the other hand some importance as a prose writer, although this may be judged only from a Risaʿīa and a Maḥāmā, both of them reproduced (the latter only fragmentarily) by Ibn Bassām. The Maḥāmā, written in an elegant rhymed prose without excessive use of ornament, follows its subject, in the manner of a short story, and differs slightly, in its theme and its structure, from the classical works in the same genre written in the East.

Bibliography: In addition to the references given in the text, see Humaydī, Diwān al-μulābābīs, Cairo 1952, 283-4; Dabbi, Būḥāyā,
IBN SHAHIN
[see NISIM BEN YA'COB IBN SHAHIN]

IBN SHAHIN AL-ZAHIRI, GHARS AL-DIN KHALIL, born in Cairo (or Jerusalem) in 1314/14, son of a man of distinction. Ibn al-Salih, author of the Diwan al-Shafi'i, was a pupil of one of the most important Shi'i scholars of his time and was recognized and highly thought of even by the Sunnis. His sermons having never before been published, and his treatise entitled Mutashabih al-Kur'an, is its chief source, is incorporated in it; a unique feature, however, is the chapter on the Shi'i poets, certainly written, according to Ibn Kabbal, between 573 and 582/1177-86; (2) Manáshíl Ābí Abí Tālib, 3 vols., ed. Na'dal, 1956, a theological-apologetic treatise on the imāms rather than a work of genealogy and hadith. Other works, the majority consisting of Shi'i apologetic: Mudhakkab al-Kind (printed in Tehran); Bayān al-tanzil', Abaum al-tara'ikfi 'l-hudud, (printed in Tehran); Bayān al-tanzil', Abaum al-tara'ikfi 'l-hudud, (printed in Tehran); Bayān al-tanzil', Abaum al-tara'ikfi 'l-hudud, (printed in Tehran); Bayān al-tanzil', Abaum al-tara'ikfi 'l-hudud, (printed in Tehran);
"reader" of the Kur'an and teacher of Kur'anic reading, died Safar 328/November-December 939, introduced in the public prayer (fi 'l-mihrd) readings of Ibn Mas'ud, Ubay and others which varied from 'Ughmân's pronunciation; for this purpose, or perhaps at the instigation of his influential colleague Ibn Mujâhid (whom he detested), he was brought to trial in 325/935 before a special court presided over by the vizier Ibn Mûkla and with Ibn Mujâhid also as a member; he at first in a confident and aggressive manner defended the variants which had provoked the charge. However, after he had been flopped on the vizier's orders he performe ceased resisting, made a complete recantation and signed a document (mahdar) stating that for the future he would adhere to 'Ughmân's text as being the only valid one. After being discharged from the vizier's house, Ibn Shanâbudh had at first to seek safety outside Baghdâd from the infuriated mob.

(R. Paret)

**IBN SHARAF AL-KÂRWAṈI,** Abû 'Abd Allâm Muhammad b. Sa'id al-Qayrawânî, is a prose writer and poet, born at Kayrawân about 390/1000. He received his initiation into poetry under the direction of Abu 'l-Hasan al-Kâbi and Abû 'Imrân al-Fâsî, into grammar under Muhammad b. Dja'âfar al-Kazzâz, and into belles-lettres under al-Husri [q.v.]; he probably studied also under Ibn Abî 'Rtidjîl [q.v.]. Although he was one-eyed, he succeeded in gaining admittance to the entourage of al-Mu'izz b. Bâ'dîs [q.v.] and thus was on terms of familiarity with the best minds of the age, though not without making enemies and falling in disgrace. In them he gives in rhymed prose the name of Ibn Rašîq [q.v.]; whose name is inseparable from that of Ibn Sharaf because the two men followed more or less parallel courses; their rivalry, spitefully maintained by al-Mu'izz, turned out in the end to be fruitful, for it stimulated not only an exchange of epigrams and epistles (which are today lost) but also the composition of several works which testify to the high degree of culture reached by the Kayrawânîs at the beginning of the 5th/11th century. Besides this, Ibn Sharaf devoted himself to the habitual activity of court poets, composing verses in praise of the amir, describing flowers and fruits, taking part in the literary gatherings which were held at the court, and replying on the spot to the slightest caprice of his master.

The Hilâl invasion [see HILAL] obliged al-Mu'izz to take refuge in al-Mahdiyya in 447/1055, and he took the two rival poets with him. After a short stay with Tamîl b. al-Mu'izz, Ibn Sharaf went to Sicily and established himself at Mazara, where he was shortly joined by Ibn Rašîq, with whom, it is said, he was reconciled. However, he did not stay long in Sicily but in 449/1057 embarked for Spain; after trying his luck at the courts of several of the

Bustînhî, Dhâ'irat al-ma'ârîf, iii, 259-60; Maymann's collection of verses may be supplemented from Nuwayrî, Nihatî, Ibn Dibyâ, Mu'tirîb, Ibn Bassâm, Dhâhîrâ, Ibn Lûyûn, Lâmbî, Ibn al-'Imad, *Kharîda,* Umârî, Ma'sâlîh al-abâr, etc. (a new collection is being prepared in Paris).

---

The son of the foregoing, Abu 'l-Faḍîl Dja'âfar b. Muhammad, was likewise a celebrated poet and prose writer. Born at Kayrawân in 444/1052-3, he emigrated with his father as a child to Spain, where he spent the rest of his life in Spain, where he attained the rank of waṣîr at Almeria during the reign of Muhammad al-Mu'tasim (443/1051-4/1091), at whose court he passed a number of years. He died in 534/1139. Abu 'l-Faḍîl was a man of wide culture and a facile talent in the customary genres: panegyric, description, gnomic poetry. He is the author of two collections of aphorisms and maxims in prose and verse, *Nûgîh*
IBN SHARAF AL-KAYRAWĀNĪ — IBN SHIBL

The available data would seem to indicate that the use of the figure of Ibn Sharya as an historical narrator does not antedate the early 3rd/9th century, after the figure of the sage had become securely established. The author of the "Book of kings" may not have been a South Arabian patriot, but rather some Baghdadī antiquarian who tried to profit from the fashionable interest in South Arabian antiquity. Whether the work contains many reflections of genuine South Arabian folklore, as Kremers maintained, or the whole thing is a piece of fiction, as a later, Fatimid-period addition, though great scepticism would seem to be indicated.

IBN SHAYKH HITṬĪN [see AL-DIMASHQĪ, SHAMS AL-DIN-].

IBN SHİBL [or AL-SHİBL], ʿABD AL-ḤUSAYN B. ʿABD AL-LĀH B. YÛSUF . . . AL-BAGHDĀDI, according to Ibn Abī ʿUṣaybiʿa (d. 655/1257), but MUḤAMMAD B. AL-HĀSĪN B. ʿABD AL-LĀH B. YÛSUF according to al-Kuttabī (and according to Kahhaba his genealogy is continued thus: B. AMR B. ʿAṢĪĪR B. ʿUṢAMI AL-STAMI) and, according to al-Ṣafādī, Ḳhvāṣna al-ḥādab, and, later, al-Zirktī, MUḤAMMAD B. AL-ḤUSAYN b. ʿABD AL-LĀH B. AMR B. ʿAṢĪĪR B. ʿUṢAMI SHIB, theoretician and practitioner in medicine, and poet; he lived during the reigns of al-Kādīr bi-ʿIlāh and of al-Kāʾīm bi-amr Allah (381/468-997/1057). The exact date of his birth is not known, though Kahhaba puts it at 401/1010-11; he was educated in Baghdādī to which his family belonged, and died there in 473/1080-1; according to al-Safādī, al-Ḳhvāṣna al-ḥādab, al-Zirktī and Kahhaba, or in 474/1082-3, according to Ibn Abī ʿUṣaybiʿa, and was buried at Bāḥ al-Ḥarb. The sources, notably the ʿUyān al-anbāʿ, contain little information on his medical career, merely mentioning that he continued in it until an advanced age; but they contain more details on the ṭuwaṭ which he wrote. Among the verses which they quote, in particular two famous ḥadīthāt reproduced in full by Ibn Abī ʿUṣaybiʿa, the attribution of some is uncertain (Ibn Sīnā and al-Mafārīq are mentioned as possible authors). They seem to display, together with a pessimistic view of life similar to that of Ibn Sīnā and ʿUmar Khayyām, a certain mechanistic and determinist conception of the universe seen as
independent of the divine will. This could explain some suspicions of atheism, or at least of doubtful orthodoxy, which were attached to this writer, whose philosophical-scientific scepticism was typical of his period.

Bibliography: Ibn Abû Ţayyibâ, 'Uryân al-anbâ’ fi tabâdî al-afîbîb', ed. A. Müller, i, Göttin- gen 1884, 248-52; al-Kutubi, Falâd al-wafâyât, ii, Cairo Rab刺激 1283/1866, 244-7; al-Safadi, Wāfî, iii, Damascus 1953, 11-16, n. 572; Hâdî Khallîfa, i, column 766; Kâbîlîa, ix, Damascus 1959, 196-7; Zirkî, 'A’dâm', ii, 332. An important part of Ibn Shuhayd's poetry is to be found in Kifti, al-Muhammadun min al-shu’arâ’, Paris MS. 3335, fols. 91a-101b (an ed. by M. Mammâr is to appear).

(Scârcia Amoretti)

IBN AL-SHIHNA, MuHBB al-DîN ABU ‘L-FâDAL MuHAMMAD, Hânâfî chief bâdî in Cairo between 866/1463 and 876/1471, died in 890/1485. He belonged to an important family of Aleppo, whose ancestor was a freedman called Mâbûdî al-Rîshûkhi or b. al-Khutûkî al-Hâdîdî, who was the father of the Ayyubîd ruler al-Malîk al-‘Azîz in about 616/1219. His father was bâdî of Aleppo at the beginning of the 9th/15th century, and is remembered for having founded a wakf for the benefit of the mosque of the citadel of Aleppo, commemorated by an inscription which still exists, dated 811/1408. He himself wrote several works, the most important of which is a description of Aleppo and northern Syria entitled al-Durr al-muntakhab li-ta’rikh lialab, Syria entitled al-Durr al-muntakhab li-ta’rikh lialab, (Isbâra, ii, 341; c. 596), c. 1235, whose author is presented as an ascetic); Ibn al-Inbî, al-Shaghdarî, i, 210; al-‘Abdî, al-kudât, see index, iv, 15. (J-C. VadeTr)

IBN SHUHAYD, ÂBÛ ‘AMîR AHMAD b. ÂBî MARWân ‘ABD AL-MALIK b. ÂBî ‘UMAR AHMAD b. ‘ABD AL-MALIK b. ‘UMAR b. MUHAMMAD b. ’ISâ b. SHUHAYD AL-ÂSHDÂ’î, Andalusan poet, man of letters and vizier, born at Cordova, in 382/992, of an Arab family whose ancestor Shuhayd had settled in Spain before 162/778 and whose members included the famous viziers in the Umayyads, the Abbasids, and the Sharifs. He probably belongs to the same family as Ibn Hazm, but this ministry lasted for only forty-seven years. His father, Abu Marwan, was an important official and al-Mansûr had even appointed him vizier. Abu ‘Amîr was therefore destined to hold similar offices, and on his father's death, in 393/1003, he was even to inherit the honorific title of wâsir and to incur heavy responsibilities while still very young, since he was the last representative of the family. However, he was prevented from occupying the offices which, by his descent, he might have expected through the unrest which very soon occurred in Cordova, the fall of the Âmirids, who were his protectors, and the overthrow of the Umayyads, and was thus led to devote himself wholeheartedly to literature.

He received in his youth the education usually given to young members of the aristocracy, learning a great deal about poetry and adab, some history and adab, perhaps also a little medicine and philosophy, and prepared himself to fill his position as powerful official and courtier. Certainl, when the Âmin broke out in 399/1008, he was attached to the court, but the title of sâkid al-shu’urâ’ which is attributed to him seems to have been a purely honorific one. A legitimist to a lesser degree than Ibn Hazm (q.v.), he refused to leave the capital during the years of unrest, but he certainly seems to have had no scruples about making approaches to the Ham- mâdîs (q.v.), who were established at Cordova, in 406/1016; probably his situation was not always very secure, and Ibn Khâkân even claims, as a result of an unjustifiable interpretation of an alleged dijāb-dariyya, that he was for a time in prison. The accession of al-Mustazhir in 414/1024, seems to have put an end to his troubles, and indeed the new caliph did appoint him as wâsir in company, notably, with Ibn Hazm, but this ministry lasted for only forty-seven days; while Ibn Hazm was imprisoned, Ibn Shuhayd succeeded in fleeing and took refuge with the Ham- mâdîs Yâbây b. Âl at Malaga. He probably returned to Cordova after the flight of al-Mustakfi, in 416/1025, and did not again leave his native town. After the final attempt to restore the Umayyads and the accession of al-Mutâ’add, in 418/1027, he had
an opportunity to play a political rôle under the new caliph; in particular he drew up, against the Cordovans who were discontented because of the exhortations of the minister Hákam b. Sa'íd, a violent manifesto which he himself read in front of the assembled notables. After the abdication of al-Mu'tadd (422/1031), Ibn Shuhayd was able to live at the court of the Djahwarids, and his funeral prayer was recited by Abu 'l-Hazm himself; he was afflicted by hemiplegia and died, after a period of suffering which inspired some of his finest poetry, on 21 Dhu al-Fīdād (426/11 April 1035), while still in the prime of life.

Ibn Shuhayd is generally thought of as a libertine who led a dissolute life. It is true that his conduct was not of the standard demanded by the puritans of his time, but he seems to have been slandered by the historians and biographers, who accuse him in particular of having sacrificed his salvation to futile pleasures and of having preferred āšl to ġidād, that is, to have written nothing on religion. Actually the dominant feature of his character was an inordinate pride, which is not, however, too much to be regretted since it gave rise to a small masterpiece, the Risālāt al-Tawdbi wa l-zawdbi (the spirits of inspiration and the saviours, pl. of sa'wba'a— the name of a genie—given in this form in order to make the rhyme with the preceding word). The author of this article believes that he has demonstrated the originality of the Risālā in the manner in which it has survived (all that exists in its present form is a late copy), supplemented by a suitable proportion of ghārāb and of grammar; (2) it is God alone who teaches bayān; (3) beauty is indefinable and inexplicable, for it derives precisely from this innate talent and is composed of subtle and intangible elements; (4) in short, bayān alone is the mark of poetry. In this connexion Ibn Shuhayd distinguishes three categories of men of letters, but more precisely of poets: those who have original ideas but not much inspiration; those who are able to improvise without difficulty long poems of great worth; those who succeed by using the resources of technique. From all the evidence he classes himself in the second category.

Ibn Shuhayd's rôle as a literary critic is therefore not a negligible one, particularly since he has a feeling for the evolution of Arabic literature in prose as well as verse; but the very perceptive observations of E. García Gárate in his book on the poetry of al-Mutanabbi, Madrid 1952, 60-5, and in the introduction to his translation of the Taqī al-hamāma, 6-9, classes Abū 'Amir and Ibn Hazm as the leaders of a poetic school with a tendency to create a specifically Andalusian poetry, seem in the last analysis to be an exaggeration, since Ibn Hazm was hardly ever an innovator and Ibn Shuhayd's only ambition was to surpass his models with the aid of inspiration and no longer of craftsmanship. Some of his verses are indeed of high quality (for example the theme of the dabīb) and he excels in description; a writer of great sensibility, he brings to the ghazal great finesse, while in his panegyrics he maintains the dignity and nobility suitable to his rank.

In short, although Abū 'Amir may be considered as the eminent representative of classical poetry (for he did not stoop to composing muwassakhābil and literary prose in Spain at the beginning of the 5th/11th century, his chief merit resides in the form which he had devised to present his youthful works, the Risālāt al-Tawdbi wa l-sawdbi'.

Bibliography: The notice in the Matn of Ibn Hayyān was extensively used by Ibn Bassam who, in his Dhakhira (ii, 161-289 and passim), provides the fullest biographical detail and reproduces the
major part of the prose or verse texts which have survived, in particular long extracts from the Risalat al-Tawdib wa 'l-tanzabi, which have been published separately, with a long introduction, by B. al-Bustānī, Beirut 1951; Ibn Khākān, in the Kālidī and the Majmah, gives extracts especially from the poems, with personal commentaries which should be read with caution; biographical details are found also in Dabbi, Bughya; Yākūt, Udbatī, iii, 220-3; Ibn Sā'id, Mughrib, 78-85; Ibn Khājiānī; Ibn Ṣafī Allāh al-ʿUmrānī, Masdīkāt, xv, MS Paris 1937, 209; Ibn Ṣafādī, Bughya, extracts from the works of Ibn Shuḥayd are scattered throughout the works mentioned above, as well as in Thālībī, Yatīma, ii, 35-50 (which proves that Ibn Shuḥayd had quickly become famous also throughout the East); ʿīmād al-Dīn al-ʿIṣfahānī, Kharīdī, MS Paris 3331, 2017-20184; Ibn al-Ḫaṭṭīb, ʿAṣrī; Maṣkārī, Analektes. Among the modern works should be mentioned: A. Dayt, Balīgat al-ʿArab fi ʿl-Andalus, Cairo 1944, 43-59; H. Pērēs, Poétique andalouse, passim; Z. Mūbārak, Al-Isfahānī, ii, 35-50 (which also mentions Ibn Sīdā); Ibn Ṣādī, Mīmām. The greatest Andalusian lexicographer, in Acts of the First Congresses, ed. Cheikho, Beirut 1913). Incidentally, in the recension of the old dārdrūh, he holds chronologically an intermediate position between the works of his contemporaries, he went to live for a time in Khuzistān, but apparently he was born in Baghdad in about 386/992. His father, nicknamed the Sīkkit (the Taciturn), is reputed to have been an expert in poetry and lexicography; it was he who started his son's education, which was later continued under the direction of Abū ʿAmr al-Shaybānī, al-Farrāʾ, Ibn al-ʿArāʾibī and other famous teachers; like many of his contemporaries, he went to live for a time among the Bedouin in order to perfect his knowledge of Arabic. After teaching at the Darb al-Ḵanṭara, in Bagh ḍād, he turned to instruction at a higher level and dictated the most important of his works to pupils. Entrusted by al-Mutawakkīl with the education of his sons al-Muʿtazz and al-Muʿayyad, he came to be on familiar terms with the caliph, but his attachment to the ʿAlīds, which was imprudent enough to display in the presence of al-Mutawakkīl, brought about his fall; trampled underfoot by the Turkish soldiers of the guard (it is often said that his tongue was torn out), he died at the age of 58, on 5 Ṣaʿīd 244/17 October 858 (but other dates, 243, 245 and 246, are also given).

In grammar, Ibn al-Sīkkit would belong to the Kūfī school, but he could not be regarded as an eminent grammarian, while the lexicographical works and commentaries that have won him fame would connect him rather with the ʿAlīf school, for he underwent the influence of the celebrated masters of that town, al-ʿAṣnāʾī, Abū ʿUbayda, Abū Yazīd al-Anṣārī; in reality, he represents the syncretist tendency characteristic of the Bagh ḍād school. A specialist in lexicography and Arabic poetry, Ibn al-Sīkkit left, firstly, about twenty works, the most important of which appear to be the Kitāb ʿIsālāh al-Manṭik (ed. Shākir and Hādūn, Cairo 1368/1954); cf. Fīrās, i (1950), 325 ff.) and the Kitāb al-ʿArabī wa al-Kalbī (ed. Cheikho, Beirut 1897 (comm. of al-Ḵaṭṭīb, al-Taṣrīḥ, Kans al-hūfūs, ed. Cheikho, Beirut 1895-8); in addition, Haffner published the Kitāb al-Kalb wa ʿl-ʿArabī (in Texte zur arabischen Lexicographie, Leipzig 1905, 3-65) and the Kitāb al-ʿAḍād (in Drei Quellenwerke über die ʿAḍād, Beirut 1921). Incidentally, in the recension of the old dārdrūh, he holds chronologically an intermediate position between
on the one hand al-Asmaci, Abu 'Ubayda and some others who initiated the first work of methodical arrangement, and on the other hand al-Sukkari who completed the process. It is for this reason that the Fihrist (i, 157-8) lists some thirty ancient poets whose dīwan was collected and commented on by Ibn al-Sikkīt, with a care which in general compels the respect of critics. Only a few of his works have survived; those on al-Khansāʾ (see Cheikho's ed. of the dīvan of this poetess, Beirut 1897) on Urwa b. al-Ward (see Nöldeke, Die Gedichte des Urwa ibn Alward, Göttingen 1887); on Kays b. al-Khashāʾ (ed. Th. Tschopp, 2 vols., 1879, 1890) and on Muhammad b. al-Hujayrā (ed. N. A. Tāhā and M. al-Halabi, Cairo 1958).

Bibliography: Fihrist, i, 72, 157-8 (Cairo ed. 107, 224-s); al-Anbārī, Nazha, ed. A. Amer, 109-11; Zubaydī, Ţabāqāt, in RSO, viii; Ibn Khayr al-Ishbili, Fahrasa, 382; Yāḏūt, Uḏābāʾ, xx, 50-2; Ibn Mālikkānī, Cairo 1310, i, 305; Suyūṭī, Bughya, 418; Flügel, Die grammatischen Schriften der Araber, Leipzig 1864, 159; M. Ben Cheneb, Etude sur la fahrasa... . . . 433, § 237; R. Blachère, HLA, i, 113; M. Makhzūmī, Madrasat al-Kūfā, Baghdad 1374/1955, 155; S. A. Ahmedali, Ibn as-Sikkīt, Lahore n.d.; idem, in ZDMG, xc (1936), 201-8; R. Sellheim, Die klassisch-arabischen Sprachwörtersammlungen, The Hague 1954, 112 and index; H. Pleisch, Traité de philologie arabe, i, Beirut 1961, index; Brockelmann, i, 122, S I, 180.

**IBN SINĀ, ABū 'ALI AL-HUSAYN B. 'ABD ALLĀH B. SINĀ, known in the West as AVICENNA.** He followed the encyclopaedic conception of the sciences that had been traditional since the time of the Greek Sages in uniting philosophy with the study of nature and in seeing the perfection of man as lying in both knowledge and action. He was also as illustrious a physician as he was a philosopher [see HIMA].

Life. His life is known to us from authoritative sources. An autobiography covers his first thirty years, and the rest are documented by his disciple al-Dzjadānī, who was also his secretary and his friend.

He was born in 370/980 in Afshana, his mother's home, near Bukhārā. His native language was Persian. His father, an official of the Samanid administration, had wished to remain loyal. He took flight and was obliged to hide on several occasions, earning his living by medical consultations. He was imprisoned, escaped, lived for fourteen years in relative peace at the court of Isfahān and died at Hamadān, during an expedition of the prince 'Aibā al-Dawā'ī in 418/1027.

He was buried there, and a monument was erected to him to celebrate the (ḥīdārī) millenary of his birth. If his works are to be understood, they should not be thought of as those of a philosopher who lived in his books. He was occupied all day by affairs of state, and he laboured by night on his great works, which were written with astonishing rapidity. He was never safe, and was frequently compelled to move; he would write on horseback, and sometimes in prison, his only resource for reference being his memory. It has been found surprising that he differs from Aristotle in his works: but he quoted him without re-reading him, and, above all, his independence of mind inclined him to present his own personally worked out thought, rather than to repeat the works of others. Besides, his personal training was different. He was a man who lived in touch with the concrete, constantly faced with difficulties, and a great physician who dealt with specific cases. Aristotle's Logic seemed to him insufficient, because it could not be applied in a way that was sufficiently close to life. Many recent controversies have been aroused since the study of his works has increased, especially at the time of his millenary, but the most plausible view of his personality is still the following: he is a scientific man, who attempts to bring the Greek theories to the level of that which needs to be expressed by the study of the concrete, when apprehended by a great mind.

The secret of his evolution, however, will remain concealed from us as long as we do not possess such important works as the Kitāb al-Inṣaf, the "Book of Impartial Judgement", which investigated 28,000 questions, and his "Eastern Philosophy", of which we have only fragments.

Works. The corpus of Ibn Sinā's works that has come down to us is considerable, but incomplete. To the many questions that were put to him he replied hastily, without always taking care to keep his texts. Al-Dzjadānī has preserved several of these; others have been transmitted with different titles, others lost. The manuscript of the Inṣaf disappeared at the sack of Isfahān, in his own lifetime. The fundamental bibliography is that which al-Dzjadānī included in his biography, but it is not exhaustive. G. C. Anawati lists a total of 276 works, including texts noted as doubtful and some apocryphal works, in his bibliography of 1950. Mahdavī, in 1954, lists 131 authentic, and 110 doubtful works. Ibn Sinā was known primarily as a philosopher and a physician, but he was always listened to; he became an object of envy, sometimes persecuted by his enemies and sometimes coveted by princes opposing those to whom he wished to remain loyal. He took flight and was obliged to hide on several occasions, earning his living by medical consultations. He was imprisoned, escaped, lived for fourteen years in relative peace at the court of Isfahān and died at Hamadān, during an expedition of the prince 'Aibā al-Dawā'ī in 418/1027.

of a true poet, clothing his philosophical doctrine in images, both in verse (as in his poem on the soul) and in prose, in symbolic narratives whose meaning has given rise to retrospection (see DAVY V. YASEK). Ibn Sina's writings are the substance of scientific and philosophical works, but natural history and mathematics are thought of as parts of philosophy. Thus, his principal treatise on these sciences is included in the great Kitāb al-Shifa', "Book of Healing of the Soul"), in the same way as that on Metaphysics, while the famous Kānūn ji 'l-ṭibb, "Canon of Medicine", is a separate work.

The Kānūn appears to have formed a more scientific basis for the medical practice of the doctors, because it constituted a monumental unity, which maintained its authority until modern times when experimental science began, and because it still remained more accessible than Hippocrates and Galen, it served as a basis for seven centuries of medical teaching and practice. Even today it is still possible to derive useful information from it, for Dr. 'Abd Allāh Ahmadieh, a clinician of Tehran, has studied the conditions of the heart as described by the great teacher with good results, particularly in treating rheumatism.

The Kānūn is the clear and ordered "Summa" of all the medical knowledge of Ibn Sīnā's time, augmented from his own observations. It is divided into five books. The first contains generalities concerning the human body, sickness, health and general treatment and therapies (French translation of the treatise on Anatomy by P. de Koning, 1905; adaptation giving an incomplete résumé of the first book, in English, by Cameron Grüner, 1930). The second contains the Materia Medica and the Pharmacology of herbs; the page on experimentation in medicine (115, of the Roma 1593 edition) quoted in the Introduction to the French translation of the Işhârât, 58, is to be found there. This passage sets out the three methods—agreement, disagreement and concomitant variations— that are usually regarded as characteristic of modern science. The third book deals with special pathology, studied by organs, or rather by systems (German translation of the treatise on diseases of the eyes, by Hirschberg and Lippert, 1902). The fourth book opens with the famous treatise on fevers; then follow the treatise on signs, symptoms, diagnostics and prognostics, minor surgery, tumours, wounds, fractures and bites, and that on poisons. The fifth book completes the superscription.

Several treatises take up in isolation a number of the data in the Kānūn and deal with particular points. Some are very well-known: their smaller size assured them of a wide circulation. Among the most widely diffused are treatises on the pulse, the medical pharmacopoeia, advice for the conservation of health and the study of diarrhoea; in addition, monographs on various remedies,ichory, oxymel, balsam, bleeding. The virtues of wine are not neglected.

Physicians were offered a mnemonic in the form of a poem which established the essentials of Avicenna's theory and practice: principles, observations, advice on therapeutics and dietetics, simple surgical techniques. This is the famous Urdūzī fi 'l-ṭibb, which was translated into Latin several times from the 13th to the 17th century, under the title Cantūca Avicennae (ed. with French trans. by H. Tjaher and A. Noureddine, Paris 1956, Poème de la Médecine, together with Cormengaud de Blaise's Latin translation).

Ibn Sīnā's philosophical works have come down to us in a mutilated condition. The important Kitāb al-Shifa' is complete (critical text in process of publication, Cairo 1952). Extracts chosen by the author himself as being the most characteristic make up the Kitāb al-Najāt, "The Book of Salvation" (from Erröl), which is not an independent redaction, as was thought until 1937 (table of concordances established by A.-M. Goichon La distinction de Vessence et de Vexistence d'après Ibn Sīnā, 499-503). The Kitāb al-Ishârât wa 'l-tanbikāt, "Book of directives and remarks", is complete (trans. into Persian and French), as is the Dânîshnâma-i 'Alâ'ī, "The Book of Knowledge for 'Alâ'ī", a résumé of his doctrine written at the request of the prince 'Alâ'ī-al-Dawla. We have only fragments of the Kitāb al-Inṣâf, "Book of Impartial Judgment". Some treatises, too concerned with the individual sciences, have been published by A. Badawi, and a small part of the Manṭik al-maṭāriṣiyin, "Logic of the Easterners", which is the logic of his "Eastern Philosophy", the rest of it being lost. A fairly large number of minor writings are preserved; they illustrate points of detail which are often important, but are far from completing the lacunae.

Ibn Sīnā's was too penetrating a mind, and one too concerned with the absolute, not to venture outside the individual sciences. He looked for the principle and the guarantee of these, and this led him to set above them, on the one hand, the science of being, Metaphysics, and, on the other, the universal tool of truth, Logic, or "the instrumental science", as the falāṣīf termed it.

As far as one can tell in the absence of several of his fundamental works, he seems to have been an innovator particularly in logic, correcting the excess of abstraction which does not permit Aristotle to take sufficient account of change, which is present everywhere and at all times in the terrestrial world; and, thus, of the difference between strict (mulâb) meaning, and concrete meaning, specified by the particular "conditions" in which a thing is actualized. As a physician, he enters into logic when he admits a sign as the middle term of a syllogism. He gives it the force of a proof, as the latter is recognized in a symptom in medical diagnosis (see Introduction to the French trans. of the Işhârât).

In Metaphysics the doctrine of Ibn Sīnā is most individual, and is also illuminated by his personal antecedents. On the other hand, his thought was fashioned by three teachers, of whom, however, he knew only two by name: Aristotle and al-Fârābî, who introduced the Aristotelianism of the Easterners, subsequently developed by Ibn Sīnā. The third was Plotinus, who came down to him under the name of Aristotle, in the so-called "Theology of Aristotle" (see ARISTÔTALIS), which was composed of extracts from Plotinus' Enneads, and presented as the culmination of Aristotle's Metaphysics. This error of attribution dogs the whole of Avicenna's work. As a born metaphysician he earned the title of "Philosopher of being", and as a realist he wished to understand essences in their actualized state, so that he is just as much the "Philosopher of essence". The whole of his metaphysics is ordered round the double problem of the origin of being and its transmission to essence, but to individually actualized essence (cf. Goichon, La distinction de l'essence et de l'existence d'après Ibn Sīnā, Paris 1937).

It is at this point that a free interpretation of Aristotle and Plotinus gives him his theory of the creation of forms by emanation. This is linked with a cosmogony taken from the apocryphal Theology, but is also inspired by hylemorphism and Aristotelian data on the soul. The extensive place occupied in his thought by the intelligence prompts him to this startling view: the gift of being is linked with the
light of the intelligence. Moreover, Ibn Sinà is a believer; in accordance with Islam he believes in God as the Creator. None of the philosophies handed down from paganism or antiquity take account of this. He attempts to integrate dogma with his philosophical formulation. In fact, he does not succeed very well, but he continually works in this direction.

The first certitude apprehended by the human mind, he says, is that of being, which is apprehended by means of sense-perceptions. The idea of being, however, is so powerful in Ibn Sinà (see in the Physics of the Dīnīgūnāmā the part that it played for him) that he bases himself here on a metaphysical apprehension of being; in addition, since the human soul, according to him, is a separate intelligence, which leads its own spiritual existence while being united with the body, it is capable of apprehending it by itself.

The second certitude is that the being thus apprehended in man, and in every existing thing, is not present there of necessity. The essence of "man", "horse" or "stone" does not imply the necessity of the existence of a particular man or horse. Existence is given to actualized, concrete beings by a Being that differs from all of them: it is not one of the essences that have no existence in themselves, but its essence is its very being. The Creator is the First Cause; as a consequence of this theory the proof of the existence of God is restricted to Metaphysics, and not to Physics, as happens when God is proved to be the prime mover.

A Western controversy enters here: did Avicenna really believe in the analogy of being? It is true that he does not place the uncreated Being in the genus Substance or in a genus Being; but if he proceeds from knowledge of created beings to that of the uncreated Being, is not this a proof that he considers their natures to be allied? He certainly apprehends an analogy between the being of substance and that of accident, as he states explicitly, but did he go further? (see M. Cruz Hernández, passim.)

Ibn Sinà did not formulate the distinction between the uncreated Being and created beings as clearly as did Thomas Aquinas, but the latter does base himself on Ibn Sinà's doctrine; only being is in God, God is in no genus and being is not a genus. He then sets out his thought precisely (cf. Vasteenkiste, Avicenna-Citaten bij S. Thomas, in Tijdschrift voor Philosophie, September 1953, citations nos. 12, 13, 14, 15, 20, 145, 330, pp. 460-1, 473 and 491).

With the principles established, two reasons for the omission of the conclusion are plausible, but neither involves the distinction not being made. Either, having set it out and admitted it, he withdrew it with difficulty because of the confusion between the data of Aristotle and Plotinus, or, as G. M. Wickens (Avicenna, scientist and philosopher, 52) suggests, he does not speak of it as a discovery because the celebrated distinction was then generally admitted—as Abû Hâyân al-Tawhîdî says. But Ibn Sinà maintains that God, as he conceives Him, is "the first with respect to the being of the Universe, anterior to that being, and also, consequently, outside it" (E. Gilson, L'esprit de la philosophie médiévale, 80-1).

However, this apparent impetus of Ibn Sinà is interrupted by the data of Plotinus, for they inspire the emanatist theory of creation. The Kūr in, like the Old and New Testaments, explains creation by a free act of will on the part of God. For Ibn Sinà, by way of Plotinus, the necessary Being is such in all its modes—and thus as creator—and being overflows from it. (Ibn Tijaddir himself asks the question: "Is it an analogous being? is it not rather the same being?") Moreover, this emanation does not occur freely, and creation involves intermediaries, which are also creators. From the One can come only one. The necessary Being thus produces a single Intelligence. This, having a cause, necessarily possesses a duality of being and knowledge. It introduces multiplicity into the world; from it can derive another Intelligence, a celestial Soul and a celestial body. Ptolemy's system becomes the framework of creative emanation; emanation descends from sphere to sphere as far as a tenth pure Intelligence, which governs, not a sphere, but our terrestrial world, which is made, unlike the others, of corruptible matter. This brings with it a multiplicity which surpasses human knowledge but is perfectly possessed and dominated by the active Intellect, the tenth Intelligence. Its role is demonstrated in a poetic and symbolic form in the "Tale of Háyy b. Yaštán", a name that refers to the active Intellect itself.

The philosophical origin of this active Intellect is the passage in the De Anima in which Aristotle refers by this name to the active part of the human soul. Ibn Sinà irredeemably mutilates the latter by taking away from it this active part, and with it its most noble action and its highest intellectual function: abstraction of intelligibles. This active Intellect, which, according to Aristotle, produces all intelligibles, is now a separate Intelligence. Thus the human soul receives them passively, and so cannot think except by leave of the Intellect; comprehension, knowledge and the sciences are now no longer its affair. It can elaborate only that which is given to it by the active Intellect. The latter produces not only these intelligibles but also all the substantial forms that are created in accordance with the models that it has conceived in conformity with the potentialities of matter. It is in this way, Ibn Sinà replies to Plato's anxious question (Parmenides, 131 a-b), that the concrete being can share in the Idea. The active Intellect has an ability which Plato sought for in vain: it apprehends the two series of relative perceptions, from both the forethought of the world: from it can derive the concrete beings with their mutual relationships; in addition, it apprehends their common repository, which is its own essence (cf. Goïchon, La théorie des formes chez Avicenne, in Atti XII congr. intern. de filosofia, ix, at 137-8). A reply is also given to the question of Aristotle as to the provenance of form and the contribution of the Ideas to sensible beings (Metaph., Z 8 and M 5).

The human soul by itself can attain only the first three degrees of abstraction: sensation, imagination and the action of estimation that extracts individual non-sensible ideas. It then apprehends the intelligible that is given to it from outside. Intuition is due to its joining with the active Intellect.

Being and intelligence overflow like a river from the necessary Being and descend to the extreme limits of the created. There is an equally full recreation, produced by creatures' love and desire for their creators, as far as the supreme Principle, which corresponds to the abundance of this gift. This beautiful concept, which could derive only from a soul inclined towards religion, has been thought of as mysterious. The Risāla fi 'l-İshārāt, "The Epistle on Love", however, is primarily a metaphysical explanation of the tendency of every being towards its
good, and a physical explanation of the motion of the stars; they imitate in their fashion, which is material, the unceasing action of the pure Act. The spheres, in fact, thus imitate the unceasing action of the pure Act.

Among the fierce controversies to which Avicenna’s thought has given rise is the discussion as to whether or not he should be considered a mystic. At first sight, the whole range of expressions that he uses to speak of love’s re-ascending as far as to the Creator leads one to an affirmative interpretation—not in an esoteric way [see Ḥaṭṭī b. Yaḥyā], but in the positive sense of the love of God. The more one studies his philosophical doctrine, the more one finds that it illuminates these expressions. The stages of the Sāfsīs, studied in the Ighār, leave rather the impression of experiences observed by a great, curious and respectful mind, which, however, does not participate. Ibn Sinā is a believer, and this fact should be maintained in opposition to those who have made of him a lover of pleasure who narrowly escapes being a hypocrite, although there is so much seriousness in his life and such efforts to reconcile his philosophy with his faith—even if he is not always successful. He is far above the gnostic impregnated with occultism and paganism to which some would reduce him. Is he a mystic in the exact sense that the word has in Catholic theology? It reserves the word for one whose whole life is a great love of God, in a kind of intimacy of heart and thought with God, which implies that God holds the first place in all things and everything is apprehended as related to Him. Had it been thus with Ibn Sinā, his writings would give a totally different impression. Nevertheless, at bottom he did perhaps apprehend God. It is in the simple expression of apprehension through the heart, in the secret of the heart (sirr), in flashes, however short and infrequent, that we are led to see in him a beginning of true mystic apprehension, in opposition to the gnosticism and its symbols, for at this depth of the heart there is no longer any need for words. One doubt, however, still enters in: his general doctrine of apprehension, and some of the terms that he uses, in fact, in texts on sirr, could be applied at least as well to a privileged comprehension with the active Intellect, and not with God Himself (cf. Goichon, Le sirr [l’intime du cœur] dans la doctrine avicennienne de la connaissance). Again, on this question, the absence of his last great work, the "Eastern Philosophy", precludes a definite answer. This irreparable lacuna in the transmission of his works does not allow us to understand in what respects he wished to complete, and even to correct, Aristotle, as he states in his prologue. As a hypothesis, suggested by his constant efforts to express the concrete and by his biography, we may suppose that he wished to make room for the oriental scientific tradition, which was more experimental than Greek science. The small alterations made to Aristotelian logic are of the same nature. In metaphysics, it is probable that he was shocked by the contradictions between Plotinus and Aristotle that were evident in the texts which the knowledge of the time attributed to one single author, and that he wished to resolve these anomalies by giving new explanations.

Influence of Ibn Sinā. The transmission of Greek science by the Arabs, and the translation of the works of the works of Aristotle into Latin, produced the first Renaissance in Southern Europe. The medical translations are less replaceable didactic corpus, for the Ḥayyāt and the Kānūn, made him an undisputed master in medicine, natural sciences and philosophy.

From the 12th to the 16th century the teaching and practice of medicine were based on him. The works of Abū Bakr Muhammad b. Zakariyyā' al-Rāzī were also known, and he was considered to be a better clinician; but the Kānūn provided an irreplaceable didactic corpus, for the Kitāb al-Kulliyāt fi 'l-ḥibb of Ibn Rushd corresponded only with the first part of the Kānūn. The latter was translated in its entirety between 1150 and 1187 by Gerard of Cremona, and, in all, eighty-seven translations of it were made, some of which were only partial. The majority were into Latin, but several Hebrew translations were also made, in Spain, Italy and the south of France. The medical translations are less good than those of the philosophical works; some words transcribed in Arabic from Greek were not understood or identified, and some Arabic technical terms were more or less transcribed in Latin, and remain incomprehensible. The Kānūn formed the basis of teaching at all the universities. It appears in the oldest known syllabus of teaching given to the School of Medicine at Montpellier, a bull of Clement V, dating from 1309, and in all subsequent ones until 1557. Ten years later Galen was preferred to Ibn Sinā, but the latter continued to be taught until the 17th century. The editing of the Arabic text, at Rome in 1593, demonstrates the esteem in which he was still held. (On the teaching of the works of Avicenna in the universities, see A. Germain, Influence of Ibn Sīnā. The transmission of the works of the works of Avicenna into Latin, see A. Germain, Influence de la pensée arabe sur la philosophie, 1880, 71; Stephen d’Israël, Histoire des universités françaises et étrangères des origines à nos jours, Paris 1933, 1, 119; C. Elgood, A medical history of Persia... until the year 1932, Cambridge 1951, 205-9). Chauvin reminds us in the Prologue to the Canterbury Tales that no doctor should be ignorant of him. Almost all, in fact, possessed either fragments of the Kānūn, especially the "Fevers" and the "Diseases of the eyes", or shorter writings, the treatise on the pulse or that on "Diseases of the heart". All Arab authors, from the 7th/8th to the 10th/16th century, are dependent on Ibn Sinā, even though they question him, like the father of Ibn Zuhr (Avenzoar), or augment and correct him, like Ibn al- Nadīf, who recorded his discovery of pulmonary circulation in his commentary on the Kānūn; he wrote a summary of the Kānūn which any physician could obtain more easily than he could the original text.

In the West several physicians learned Arabic for the sake of the works of Ibn Sinā. The first known influence appears in the works of a Dane, Henrik Harpstræng, a royal physician who died in 1244. Arnold of Villeneuve, born at Valence, translated the treatise on the diseases of the heart, as well as
some of the books of al-Kindi and other Arab authors. Some surgeons also quoted him as their authority: William of Saliceto in Italy, and his disciple Lanfranc, the founder of surgery in France; Guy of Chauliac, who died in 1368, and whose teaching employed Arabic terms and doctrines. At the University of Bologna, anatomy was still being taught in Arabic terms in the 14th century.

The Renaissance brought a violent reaction; Leonardo da Vinci rejected Ibn Sina’s anatomy, but, for want of another vocabulary, used the Arabic terms. Paracelsus burned the Kānsū at Basle. Harvey denounced the gloom which surrounded his discovery of the major circulation in 1628.

The natural sciences presented in the Shifāʾ were much used by the mediaeval encyclopedists, as were the treatises of al-Rāzī and apocryphal treatises. The ‘‘Treatise on Animals’’ was translated by Michael Scot; Albertus Magnus employed the mineralogy (on Ibn Sina’s scientific influence, see G. Sarton, Introduction to the history of science, ii, published 1931). Ibn Sina was an Aristotelian, and as such inferior to al-Rāzī, who had discovered the existence of the vacuum, which he himself denied. However, he opposed the theory of the transmutation of metals, and hence alchemy (for citations to this effect from several Arab authors, see the introduction by Holmyard and Mandeville to their translation of Avicennae De congelatione et conglutinatione lapidum, Paris 1927, 6-7).

Ibn Sina’s influence in philosophy was less absolute and more disputed, but more lasting, for the use made of him by St Thomas Aquinas embodied certain of his proofs in Catholic theology (cf. Goichon, La philosophie d’Avicenne et son influence en Europe médiévale, Paris 1944, ch. III).

The translation of the Shifāʾ came at a moment when Aristotle was scarcely known, and that only through the ‘‘Posterior Analytics’’, the ‘‘Topics’’ and the ‘‘Refutation of the Sophists’’. The corpus that presented a ‘‘Metaphysics’’, the ‘‘Treatise on the Soul’’ and that on the ‘‘Heavens’’, etc. seemed to hold another significance. It was, however, thought to be a simple commentary on Aristotle. For a century it received unreserved admiration; when Aristotle was better known, it was still thought that the Shifāʾ augmented his work on the subject of the origin of the world, the study of intelligence and angels. He was placed in the Neoplatonist and Augustinian traditions; his attempts to reconcile philosophy and faith corresponded with the ardent desires of the Schoolmen. He was forbidden by the decrees of 1210 and 1215, referring to ‘‘Aristoteles et sequaces ejus’’, which banned Ibn Sina from the Sorbonne. But his role remained undiminished in private discussions.

After acclaim for his similarities with Christian thought came criticism of his diversifications from it, violently initiated by William of Auvergne in 1230. Nevertheless, a pontifical decree of Gregory IX, in 1231, once more permitted the study of Ibn Sina’s philosophy. The lacunae, however, were now apparent. Nonetheless, the thought of all philosophers was nourished by his, to such a degree that it is impossible to tell what it would have been like without him. Latin scholasticism owes to his opponent, William of Auvergne, the fact that it received from him the distinction between essence and existence, which William considered that he had found in him.

Another current of thought, stemming from English centres of study, developed particularly in the Franciscan order. It saw Ibn Sina as more of a philosopher, augmenting Saint Augustine: the active Intellect was like the sun of minds and the internal Master. They believed that he opened up a whole mystic world. Roger Bacon and Duns Scotus were influenced by him. The latter, however, based his doctrine of the univocity of being on the same text that Thomas Aquinas had used to support the opposite doctrine.

Selection was gradually practised in the corpus of Ibn Sina. He took his definitive place, together with Saint Thomas Aquinas. The distinction between essence and existence became one of the fundamentals of Thomist philosophy. It gave an explanation for the immortality of angels; Saint Thomas’s De Ente et Essentia is imbued with Avicennism. The better the theologian masters his own thought, the less he cites Ibn Sina (see the quotations in Vansteenkiste, op. cit.), but he still respects him. Saint Thomas’s commentators, Cajetan and Jean de Saint-Thomas, writing respectively at the end of the 15th century and during the 17th, still allotted to Ibn Sina the place that he had taken in Thomism, the place that is definitely his.

III. Books and articles on Ibn Sīnā: innumerable, particularly since the millenary; see the bibliographies cited, Nullino up to 1930, Ėrgin, Anawati, Mahdavi, A.-M. Goichon, Distinction . . ., bibliogr. 504-20, up to 1957, and the collection A., scientist and philosopher, a millenary symposium, London 1955, bibliography after each chapter; some information in Islamologie, Pareja et al., bibliography and notes by A.-M. Goichon, Ibn Sīnā, A VIEW, and Eigemo, in Encyclopaedia philosofica, Venice-Rome 1957, i, 253-35, and 2nd ed., 1968, i, coll. 66-78 (German trans. Lexicon der Philosophie, Munich 1968, i); S. Naficy, Bibliographie des principaux travaux europèens sur A., Tehran 1953 (83 eds. of Latin translations from 1472 to 1939). For the scientific section, see the numerous articles and books in the Library of Congress, for 1880-1943, Index Catalogue, Washington; since 1879, running bibliography, Quarterly cumulative Index Medicus, Chicago; G. Sarton, Introduction to the History of Science, Baltimore 1927-50, especially vol. i.

medical influence see Index Catalogue, loc. cit.
(A-M. Goichon)

IBN SINR, ABU BAKR MUHAMMAD, the first
renowned Muslim interpreter of dreams, was
also, according to Ibn Sa'd (viii, 140), a traditionalist
"of great trustworthiness, who inspired confidence,
great and worthy, well-versed in jurisprudence. He was
an imam of great scholarship and piety"
Born two years before the end of the caliphate of 'Ummān,
i.e., in 34/654, he was the contemporary and friend of
al-Hasan al-Askari (q.v.) and died in the same year as
he, in 110/725. His father, a tinker from Djerdjarāyā,
had been taken prisoner in 'Irāk (at Mayyān or at
'Āyn al-Tamr) by Khālid b. al-Walid; he then
became a slave of Anas b. Mālik who was ordered by
the caliph 'Umar to set him free by contract of
enfranchisement (see Bukhārī, ed. Kreil, ii, 50, no. 1,
p. 127). His mother, Šafīyya, was a slave of the
caliph Abū Bakr; she was held in such esteem within
the community that when she died her laying-out
was performed by three of the Prophet's wives, and
eighteen Badrīs, led by Ubayy b. Ka'b, were present
at her burial.

Muhammad was a cloth merchant, but this does
not seem to have earned him enough to live on,
since he died in debt (on the origin of this debt, cf.
the various opinions reported by Ibn Sa'd, 144 f.).
He is reputed to have had thirty children by the
same Arab wife, only one of whom survived. He was
an elephantine man at one period the secretary of Anas b. Mālik, who
had requested that Sirin should be sent out to
lead his funeral prayer. In order to do this, he had to
be released from prison for one day.

So renowned was he for his piety and for the
reliability of the information which he handed on
that a century later al-'Aṣma'ī was to say of him:
"When the deaf man [Ibn Sirin was deaf] relates
traditions, clasp your hands" (probably as a sign
of the intense interest aroused by his statements).
Full details of his life are to be found in Ibn Khallîkān,
n. 576.

The pages which Ibn Sa'd (op. cit., 140-50) devotes
to Muhammad b. Sirin prove the seriousness with which
he acted as a muḥaddith. He said: "This
science is religion; take care from whom you learn it"
(144). In the chain of transmitters of ḥadīths in
which his name appears there are found in particular,
Especially noticeable among those who have
transmitted his ḥadīths are Kāṭāda and Khālid al-
Hādhāḥi. He was opposed to the written trans-
mision of traditions (ibid.), and regarded the cunning
questions which he was asked, particularly on the
subject of predestination, as having been prompted
by devils (143). He was capable of laughter and joking, but he had a quick temper, which led to a comparison between his irascibility and the mildness of his friend al-Isḥāq b. Salāḥ b. Ṣaʿd (142). The details of his behaviour of his way of dressing, of his scruples over anything unlawful and of his private devotions show him to have been very pious and also very eccentric.

Much less is known of Ibn Sirin's activity as an interpreter of dreams than of his interpretations as a dream interpreter. In fact Ibn Sa'dī (d. 350/945) although he does not fail to mention his ability to interpret dreams, not stresses this, whereas the works of Ibn Dāwūd do include a whole list of dreams interpreted by Sa’dī b. al-Musayyab (v, 91-2) who was the true ancestor of Arab dream interpretation (see T. Fādī, La divination arabe, 309-12). It was, however, in about the middle of the 3rd/9th century that his fame as an interpreter of dreams began to be attested: several of his interpretations are mentioned in the K. al-Bayāna‘ī of al-Dāhibī and his ability as an interpreter of dreams is also known to Ibn Khūṭayba (see ibid., 313 ff.).

From the 4th/10th century onwards he was credited with works on the interpretation of dreams (see Fīhirī, 316), the diversity of whose titles, and the contents and the late character of which show them to have been the work of forgers anxious to acquire for their writings the authority and prestige of a tābi‘ī of the second generation. The first of these writings is the Tābi‘ī al-najdī, published several times in Egypt; the second is the Munṭakhab al-kalām fi tābi‘ī al-ḥālim, a compilation made, at the beginning of the 9th/15th century, by Aḥmad b. al-Ḥusayn b. Ḥasan b. Ibrāhīm al-Khalīlī al-Dārī (see T. Fādī, op. cit., 335, no. 27) and printed in the Uoniromancie arabe d'après Ibn Sirīn.

Much less is known of Ibn Sirīn’s activity as a preacher. He wrote also Tufyfa ‘alā ‘l-Dīmātsa al-mansūb li-Khalīl (MS Rabat, no. 1414); (3) a commentary on the Lāmiyya of al-Zākki (MS Rabat, no. 316). The references to the editions and the manuscripts of all these works are to be found ibid., 345, no. 85. In this it is on the compilation that there is based the thēsis complémentaire by A. Abel Dālī on L’omironomance arabe d’après Ibn Sirīn. Other unpublished writings which bear his name are: Tābi‘ī al-ḥālim (or al-mamār or al-mamād); K. al-najdī fi tābi‘ī al-māni, K. al-tanwīrīr fi rūyīt al-ta‘bir; K. al-Da‘wūdī; etc. His name is also found as the author of treatises in Turkish, Persian, Greek and Latin. The references to the editions and the manuscripts of these works are to be found apud T. Fādī, op. cit., 355, no. 117.

IBN AL-SĪRĪ [see ibn al-bawwāb]

IBN SŪDA (Sawda), name of a number of Malikī scholars and bādis of Fez belonging to an Andalusian family which had emigrated to Tāwād (present name Fās al-Bālī), about 80 km. north-north-west of Fez, and was therefore known by the name of Tāwād.

2. MUHAMMAD B. MUḤAMMAD IBN SŪDA (d. 1066/1666) was bādi of Fez (see Lévi-Provençal, Chorfa, 402).

3. ABD AllāH MUḤAMMAD B. AL-TĀLĪB AL-TĀWFI, died at Fez on 20 Dhu ’l-Hijjah 1290/17 July 1795, is the most famous member of the Banū Sūda family; Lévi-Provençal (Chorfa, 332) even considers him as "one of the greatest scholars that Morocco has produced". After having been the pupil of the leading scholars of Fez, he was initiated into Šī‘ism, then taught in his native town tafsīr, ḥadīth, fiqh, taṣawwuf, kalām, logic and wa‘il; his learning earned him the honorific title of ḥaqqī al-dā‘imā. In 1310/1894-5, he went on the Pilgrimage to Mecca and spent quite a long time in the holy cities and in Cairo, where he gave lectures and met notably Ḥaqqī Murtaḍā al-Zābidī, author of Tādī al-Arās, which mentions him under S.W.D. At Fez, he was the teacher of the majority of the Moroccan scholars of his time and in particular of Ibn ‘Adībī (q.v.). He wrote a number of glosses and commentaries, among which may be mentioned: (1) Tālīf ‘al-‘ámān ‘alā sharī‘ al-Zarkhānī (q.v.); (2) a sharī‘ of the Tufa‘a of Ibn ‘Āṣīm (q.v.) (Cairo, in the margin of the commentary on the Tufa‘a by al-Tasālī); (3) a commentary on the Lāmiyya of al-Zākki (q.v.) (MS Rabat, no. 1486); this sharī‘ has been the subject of a gloss, MS Rabat, no. 1483; (4) Zād al-ma‘dīdī al-sā‘ī fi maqāṣīr al-Bukhdārī, a commentary on the Bukhdārī, published at Fez 1238-39, 4 vols.; (5-6) Dā‘u ‘alā l-dā‘imī ‘ayn ghurā‘ al-Dīmātsa of Khailli (q.v.) (MS Rabat, 40, 314) also a Tufyfa ‘alā ‘l-Dīmātsa al-mansūb li-Khalīl (MS Rabat, no. 1414); (7) Mandīsīh al-hadīdī; (8) Tufyfa al-takhdīw (MS Rabat, no. 1395); MS of the Real Acad. de Cordoba (see al-Mulh, iv (1964-5), 108]; (9) finally a Fahrarsa (q.v.) (MS Rabat, no. 414 bis).

4. ABU ‘L-ABBĀS AHMAD B. MUḤAMMAD (1753-1755/1780-20), son and pupil of the above, was bādi of Fez and took part in the preparation of a commentary on Ibn Dāwūd (MS Rabat, no. 55). See also al-Kattāni, Salwa, i, 115; Lévi-Provençal, Chorfa, i, 115.

5. ABU ‘L-FADĪL ‘AL-ABBĀS B. AHMAD B. MUḤAMMAD, died 26 Dhu‘ al-Mu‘āna 11 (1826-1903), is the most famous member of the Banū Sūda family; Lévi-Provençal, Chorfa, index.

6. ABD AllāH MUḤAMMAD AL-MIḤDĪ B. AL-TĀLĪB MUḤAMMAD B. MUḤAMMAD (1820-1840), was also a Malikī faqih and a philologist. In 1269/1853 he was the subject of a gloss, MS Rabat, no. 1483; (8) finally a Fahrarsa (q.v.) (MS Rabat, no. 414 bis).

7. ABD AllāH IBN ‘ABD AL-WAHĪD B. AHMAD was bādi of al-Kaṣr and a preacher at Fez; he died in Dhu ’l-Kaṣr 1259/1882. See al-Kattāni, Salwa, i, 121; Lévi-Provençal, Chorfa, 380.

8. ABU ‘L-ABBĀS AHMAD B. AL-TĀLĪB (1241-1321/1862-1909), a man of great learning in religion and philology, was bādi at Azemmour in 1280-1863-4; then at Tangier in 1292/1875, and finally, in 1294/1877, at Meknès, where he also held the office of
preacher. Among his more important works are a gloss on the Shāhīd of al-Bukhārī, a risāla on the Basm Allah and a Rau' al-lubs wa l-shubuhdt fī 'l-Abbās min biḥl al-ummākhād, Cairo 1231.

Biography: apart from the sources mentioned in this article, see Dā'īrat al-maṭāţīr, iii, 208-9; Sulaymān al-Hawwāt (1160-1231/1747-1816) wrote al-Ra'ıf wa al-maṣāda wa l-ḥulal al-mamāḍāa fī maḍā'īr Bani Sūdā, a biography of the family of the Banū Sūdā from its beginning to Muhammad al-Tawdī (3) who was the teacher of al-Hawwāt, to his son Abu l-ʿAbbās (4) and even to his grandsons Abu l-Faḍl (5), who was in his turn the pupil of the author; a microfilm of this work is said to exist in the Rabat library.

(Ed.)

IBN SULAYM AL-ASIWAṉĪ, ʿAṢĪB ALLĀH B. AHMAD, a Fātimid dāʿī, author of Kitāb Aḥḥār al-Nubā wa l-Muṣūra wa ʿAlla wa l-Buḍa wa l-Nī. He was sent on a special mission to Nubia by D`awhar al-Manṣūrī (q.v.), probably in 366/976. He persuaded King George of Nubia to resume the delivery of the ṣabāf (q.v.), which had lately been withheld, but failed in debate to convert the court which had lately been Bakj [q.v.], delivering the azhdhār, the latter text appearing on comparison to be Kitāb al-Askār, a biography of Ahmad b. Dawud, in the presence of the Subkī, ii, 93 f., Ibn ʿAbd al-Hayyāmī to his Kitāb al-Ziyādāt, and Al-Asnawi possessed his Kitāb al-Fihrist (cf. Islamica, ii, 1927, 505-37 on this type of literature) and his Kitāb al-Waddāʾi (on deposits). Other titles mentioned include a Kitāb Muḥhasār fī ʿl-fihrist, a Kitāb al-Ghunya fī ʿl-fihrist, a Kitāb al-ʿĀyn wa l-Dayn, and a Kitāb al-Fārūq fī ʿl-furāʾ, but with Dawud's son, Muhammad b. al-Ifasān (information to this effect is [Yusuf FADL HASAN]) Ibn Suraydi further wrote a number of polemical treatises against his opponents, both Hanafīs and Ṣāḥibīs, and the asīl al-kalām [see ʿilm al-kalām]; this is perhaps why the Fīrisīt calls him also a muṭahālim, although nothing is known of a particular interest of his in theology. So we hear of a Kitāb al-ṣālī Muhammad b. al-Ḥasan, a Kitāb al-ṣālī al-Dawūdī, a Kitāb al-ṣālī al-Kāṣhārī, a Kitāb al-ṣālī al-Dawūdī, and “another retarding him (i.e., Ibn Dāwūd) on questions on which he had been in opposition to al-Ṣāḥīfī”.

Ibn Suraydi has given its name to the hotly debated problem of the Masʿāla al-Suraydiyya, or “vicious circle of repudiation” (dawer al-falāk, al-masʿāla al-dawāwīra). If a man says to his wife: “If I repudiate you, consider yourself to have already been repudiated by me three times”, and then repudiates her once, two (or with a variant, three) answers are possible: either nothing but the repudiation not subject to the condition is effective (or, as an alternative, it is effective and two repudiations of the lot which was repudiated in the additional, conditional answer) or no repudiation is effective if three repudiations later than it have already taken place, because the repudiation not subject to the condition is effective, three repudiations earlier than it have already taken place, and if this is the case, there is no marriage in which that first repudiation could have effect, and if this is the case, the three repudiations made conditional on it can also have no effect, so no repudiation is effective if three repudiations later than it have already taken place. Ibn Suraydi was no doubt the first to formulate the dilemma (it is most improbable that al-Ṣāḥīfī himself should have done so and have laid down the second answer, as is sometimes asserted), and the kind of reasoning behind it corresponds to the reasoning apparent from Ibn Suraydi’s reported treatment of some other problems (al-Subkī, ii, 93 f.), and for which some veiled criticism was levelled at him (al-Nawwār, al-Dhahabī). Ibn Suraydi refers to his Kitāb al-ṣālī al-Dawūdī, and in this he gives his own answer to the hotly debated problem. If a man says to his wife: “If I repudiate you, consider yourself to have already been repudiated by me three times”, and then repudiates her once, two (or with a variant, three) answers are possible: either nothing but the repudiation not subject to the condition is effective (or, as an alternative, it is effective and two repudiations of the lot which was repudiated in the additional, conditional answer) or no repudiation is effective if three repudiations later than it have already taken place, because the repudiation not subject to the condition is effective, three repudiations earlier than it have already taken place, and if this is the case, there is no marriage in which that first repudiation could have effect, and if this is the case, the three repudiations made conditional on it can also have no effect, so no repudiation is effective if three repudiations later than it have already taken place. Ibn Suraydi was no doubt the first to formulate the dilemma (it is most improbable that al-Ṣāḥīfī himself should have done so and have laid down the second answer, as is sometimes asserted), and the kind of reasoning behind it corresponds to the reasoning apparent from Ibn Suraydi’s reported treatment of some other problems (al-Subkī, ii, 93 f.), and for which some veiled criticism was levelled at him (al-Nawwār, al-Dhahabī). Ibn Suraydi refers to his Kitāb al-ṣālī al-Dawūdī, and in this he gives his own answer to the hotly debated problem.
mended the second answer as a possible escape for people who had been forced to take an oath of secrecy, under penalty of automatic repudiation, by order of 'Abd al-Malik to Damascus. According to al-Walid b. Abd al-Malik, the traditionist al-Ta'awudh, Diwan, 1922, 34, 164-7; Brockemöller, S.I, 306, 167 (obiterate). On the Ma'sala al-Suraydiana: Goldscheider, "Streitschrift", 78 f.; Arabic text, 57 f.; (ed. 'Abd al-Rahman Badawi, Cairo 1964/1382, 168); L. Massignon, "al-Hallaj", ii, 1922, 34, 283 f.; Yusuf Ya'qub Maskûnî, Sihâ Ibn al-Ta'awudh, Dîwan, published in Cairo by Margoliouth in "al-Musulîf, 1321/1903, his manuscript, which is gene..."

The sources generally give the by-name of Ta'awudh to Muhammad's grandfather, who owed it to a defect in pronunciation, but the 'Umdat al-tâlib calls his father Ibrahim by this name and explains it by relating an anecdote according to which Isma'il, ordering a garment for his son, said farâ instead of farâb. This same text states however that the expression lawâmza 'ala ismail, common in the language, saysîd al-sâdî, that of Al as against both the father's and the mother's side, a meaning which this word still retains in Persian).

He lived mainly at Medina and his descendants disappeared as a series of migrations (to Ethiopia and to Kirman).

While his nephews, the grandsons of Ibrahim b. Isma'il, are often referred to as good poets, his own reputation is linked with the Zaydi revolt which took place in Kôfa under the effective command of Abu 'l-Saray'â [q.v.] in 198/815. Ibn Ta'awudh's political ambitions seem to have been awakened by Naṣr b. Shabab (Shabib in the Mafradat al-Tâlibîyan), who

IBN TABAJABA—IBN TAYMIYYA

sought him out at Medina during the frudji (probably of 198), preferring him as imam to the Hasani 'Abd Allah b. Mās'ūs b. 'Abd Allah and to the Husaynid 'Ali b. Ubayd Allah b. al-Hasan, who refused to become involved personally in an armed conflict, in accordance with the usual attitude of the Abī al-Bayt. Once in 'Irāq, Ibn Tabāţabā encountered the opposition of Nağr's collaborators, who seem to have abandoned him and offered him as compensation the sum of 5,000 dinārs, which he refused. Returning towards the Hijāz, Ibn Tabāţabā stopped at 'Anāt, where he succeeded in contacting Abu 'l-Sarayyā, who was engaged in organizing the Zaydī revolt. While the 'Alīid was with difficulty gathering together a few inadequately armed citizens at Kūfā, where he had immediately gone, Abu 'l-Sarayyā was arming a small group of Zaydis around the tomb of al-Ḥusayn, and arrived on the day appointed in the suburb of Kūfā chosen in advance. The two groups went together towards the town, where Abu 'l-Sarayyā pronounced a khutba which included all the Mu'tazili principles, the ideological basis of the Zaydī revolt; while the 'Alīid, was engaged in organizing the revolt. As the 'Alīid found himself with some difficulty, the investiture of his leader (in the Umda: amir al-mu'minin) on 10 Djumādā I 199/27 December 814, as had been predicted by a ḥadīth going back to Zayd b. 'Alī.

The revolt went through various phases; it began with some victories due in part to the negligence of the enemy commander, al-Ḥasan b. Sahl, who was occupied in studying the horoscope of the Kibdjak. Ibn Taymiyya was forced to leave his native town, and he obtained, with some difficulty, the investiture of his leader (in the Umda: amir al-mu'minin) on 10 Djumādā I 199/27 December 814, as had been predicted by a ḥadīth going back to Zayd b. 'Alī.

During the reign of al-Malik al-Mansūr Lāḏīn (695/1297-9) he was appointed by the sultan to exhort the faithful to the djihād at the time of the expedition undertaken by the sultan against the kingdom of Little Armenia. At almost the same time, in 698/1299, he wrote, at the request of these of Hamāt, one of his most famous professions of faith, al-Ḥamawiyya al-kubrā, very hostile to Aš'arism and to kalām (MRK, i, 414-69).

Accused by his enemies of anthropomorphism (taṣbīḥ), Ibn Taymiyya refused to appear before the Ḥanafī kādī Dījāl al-Dīn Al-Māzdār (d. 745/1344-5), on the grounds that this kādī had not received from the sultan powers of jurisdiction in matters of dogma. After a private meeting, held in the house of the Shāfi'ī kādī Imām al-Dīn Umar al-Kaẓwīnī (d. 699/1299-1300), at which the Ḥamawiyya was studied, Ibn Taymiyya, whose replies are said to have been judged satisfactory, was troubled no further.

During the Mongol invasion in 699/1300, led by the Ilkhan Ghazān with the support of the Mamlūk amir Kībdayk, Ibn Taymiyya was, at Damascus, one of the spokesmen of the resistance party. In addition, he took part, in Shawwāl 696/June 1300, in the expedition which the Mamlūk authorities undertook against the Šī'is of Kasrawān who were accused of helping the Franks and the Mongols.

In 700/1303, when a new Mongol threat arose, he was instructed to exhort people to the djihād and went to Cairo, in Djumādā I 700/January 1301, to ask the Mamlūk sultan Muhammad b. Kālāwūn to intervene in Syria. In 702/1303, at the time of the new Mongol invasion, he was present at the victory of Shākhab, on 4 Ramadan 702/22 April 1303, where he had been instructed to issue a fatwā to impose the dispensation from the duty of fasting for those who were fighting.

The years which followed were marked by intense polemical activity. In 704/1305, he attacked a certain Ibrāhīm al-Kattān, accused of using kahshā, and another sayyih, Muhammad al-Khabībāz, who was accused, among other things, of antinomianism. At about the same time he went with some stone-
masons to smash a sacred rock in the mosque of al-Narandj (Biddya, xiv, 34). He also took up arms against the Itti''hadyya, supporters of Ibn al-''Arabi (d. 638/1240-1), and sent to one of his most prominent members, the shaykh Naqr al-Din al-Manbiji, the spiritual director of Baybars al-Djashnikir, a letter which was courteous, but nevertheless firmly condemned the monism of Ibn al-''Arabi (MMR, i, 161-83). Towards the end of the year 704/July 1305, he took part in a new expedition against the Rawdfid of Kasrawan and, on his return, attacked in Damascus the Ahmadiyya Rifa''iyya, whose shaykh was accused of Mongol sympathies (MMR, i, 121-46).

His enemies then renewed their attacks on his credo and cast doubts on the correctness of his profession of faith al-Wasitijyya, written shortly before the arrival of the Mongols in Damascus. Two councils were held on 8 and 12 Rajab 705/24 and 28 January 1306, at the residence of the governor of Damascus, al-Afram. The second council, a member of which was Safi al-Din al-Hindi (d. 715/1315), a pupil of Fakhr al-Din al-Razi (d. 606/1209-10), found that the Wasitijyya "was in conformity with the Kur'an and the Sunna".

The affair seemed to be finished. However the Shafi'i kadi Ibn al-''Asrari (d. 723/1323), a pupil of MA''boud al-Islafni (d. 688/1289), set about reforming the traditionist al-Mizzi (d. 743/1342-3). A third council was held at the governor's residence on 7 Sha'ban 705/22 February 1306, on the sultan's orders. Again the Wasitijyya was not condemned, and Ibn al-''Asrari resigned. The two adversaries were finally sent to Cairo, where they arrived on 22 Ramadan 705/7 April 1306.

The very day after his arrival, Ibn Taymiyya appeared before a new council which was held in the Citadel and consisted of a number of high officials of the state and the four kadi 'l-khadat of Egypt. Ibn Taymiyya was accused of anthropomorphism and condemned to imprisonment. He remained in the Citadel of Cairo for nearly a year and a half, until 26 Rabii' I 707/25 September 1307. He was released on the intervention of the amir Salar, the rival of Baybars al-Djashnikir, and of the Bedouin amir Muhanna b. Tankiz (d. 740/1340), who had been appointed in Rabi' II 712/August 1312. It was under the governorate of Tankiz that Ibn Taymiyya spent his last fifteen years. Promoted to the rank of professor, and considered by his supporters as an independent mudallak, he had now as his chief pupil Ibn Kayyim al-Djawziyya (d. 751/1350 [cf.]), who did much to spread his ideas and indeed shared some of his persecution. Relations between Hanbalis and Ash'arists continued often to be strained, as is proved by the incident in Muharram 712/February 1313, which again saw the two schools in disagreement on the question of dogma (Biddya, xiv, 75-6).

Towards the end of 716/February 1317 and in the following months, Ibn Taymiyya was involved in the affair concerning Husma''da, the amir of Mecca who had formed an agreement with the Ikhlani Xudabanda (d. 716/1316) in order that there should prevail in Mecca a policy favourable to Shi''ism; it seems to have been at about this time that Ibn Taymiyya wrote the Minhaj al-sunnah al-nabawiyya (Cairo 1321/1904; reprinted), in which he attacked the Ikhlans and received him in audience in Cairo (Biddya, xiv, 53-4).

Ibn Taymiyya was back in Cairo on 8 Shawwal 709/21 March 1310 and remained there again for about three years. He was occasionally consulted by Muhammad b. Kalawun (al-Malik al-Nasir) on Syrian affairs and continued to teach privately and to give answers to the various enquiries which were addressed to him. It was at this time that he began, if not the final redaction, at least the development of his treatise on juridical policy, the Kutt al-sti''asa al-ghar''iyya, the date of which may be put at between 712/1312 and 714/1315 (cf the Fr. tr. by H. Laoust, Damascus (PIFD) 1948, and Eng. tr. by Omar A. Farrukh, Beirut 1966; latest ed. by Muhammad al-Mubarak, Beirut 1967). Several of the Fatawa misriyya (Cairo 1368/1949) also date from this period. A new Mongol threat, rapidly dispelled, caused Ibn Taymiyya to return to Damascus, where he arrived, after a brief stay in Jerusalem, on 1 Dhu 'l-Ka'da 712/28 February 1313. Al-Malik al-''Nasir, who had preceded him by one week, had left on the Pilgrimage; on his return to Damascus on 11 Muharram 713/8 May 1313, he took various measures of administrative and financial reorganization. In addition, a new governor of Damascus, the amir Tankiz (d. 740/1340), had been appointed in Rabii' II 712/August 1312.

Towards the end of 716/February 1317 and in the following months, Ibn Taymiyya was involved in the affair concerning Humaydah, the amir of Mecca who had formed an agreement with the Ikhlani Khudabanda (d. 716/1316) in order that there should prevail in Mecca a policy favourable to Shi''ism; it seems to have been at about this time that Ibn Taymiyya wrote the Minhaj al-sunnah al-nabawiyya (Cairo 1321/1904; reprinted), in which he attacked the Ikhlans and received him in audience in Cairo (Biddya, xiv, 75-6).

However the persecutions were soon to recommence. In 718/1318, a letter from the sultan forbad Ibn Taymiyya to issue any fatwas on repudiation (jaldh) contrary to the prevailing Hanball doctrine; he was criticized for denying the validity of uniting three repudiations into one single one and for considering the oath (half) of repudiation as a single oath if the person who uttered it did not intend to proceed to an actual repudiation. Two councils were held on the matter, presided over
by Tankiz, in 718/1318 and 719/1319. A third council, held on 10 Muḥarram 721/9 February 1321, by a decree from al-Malik al-Nāṣir. He is mentioned in the years that followed as taking part in various incidents in the religious or political life of Egypt and Syria.

On 16 Shawān 726/18 July 1326, Ibn Taymiyya was again arrested, without any further trial, and was deprived of the right to issue fatwas by a decree of the sultan which was read out in the Umayyad Mosque. He was criticized because of his risāla on visits to tombs (niyārat al-buḥūr) in which he condemned the cult of saints. A number of his disciples were arrested at the same time as he was but must have been released shortly afterwards except for Ibn Kayyim al-Djawiyya (the text of the Niyyarat al-buḥūr, written before this date, is given in MR, 103-22).

Ibn Taymiyya then encountered the opposition of the Mālikī bāṣī al-ḥudūl, Tāṣi al-Din al-Ighnāt (d. 730/1330). Another influential opponent was ʿAlī al-Din al-Kūnawī, a disciple of Ibn al-ʿArabī, who, after having been director of the Dār al-Ṣafīd al-ṣāliḥiyya in Cairo, had recently been appointed Shāfiʿī bāṣī al-ḥudūl at Damascus.

Ibn Taymiyya remained a prisoner in the Citadel for more than two years; he continued to write and to issue fatwas; there date from this period several works which have survived and which were written with the aim of justifying his doctrines, in particular the Kūdab al-muṣāfīr al-waṣīḥiyya, on the methodology of fiqh (MR, i, 180-217), the Rašī al-malām (MR, 55-83) and the Kūdab al-Radd ʿala ʿl-Ikhnāt (Cairo 1346/1928), in which he made a violent personal attack on his opponent and set out at length his ideas on the cult of saints (cf. Ṣasai, 353-4).

As a result of a complaint by al-Ighnātī to the sultan, the latter ordered, on 9 Dżumāda II 728/21 April 1328, that Ibn Taymiyya's paper, ink and pen should be taken in. This order was left unexecuted, and Ibn Taymiyya died in the Citadel, on 20 Dhu al-Ḥaḍār 728/26 September 1328. His burial, attended by a large number of the inhabitants of Damascus, was in the cemetery of the Ṣafīyya, where his tomb is still honoured.

Ibn Taymiyya's works are numerous; nearly all have now appeared in print. A list of his main works is given in the treatise by Ibn al-Kayyim entitled Asmāʿ muṣallafāt Ibn Taymiyya (Damascus 1372/1953); cf. Brockelmann, I, 125-7 and S II, 119-26. There should be mentioned several collections published in Cairo or in Arabia: Maṣūmat al-rasāʾīl (abbr. as MR in this article, Cairo 1322/1906); Maṣūmat al-rasāʾīl al-ḥusnīyya (abbr. MRK, Cairo 1326/1906, 2 vols.); Kūdab Maṣūmat al-rasāʾīl (Kuwait 1333/1915); Maṣūmat al-rasāʾīl ʿala ʿl-maṣāʾīl (abbr. MRM, Cairo (Minār press) 1349/1930-1931, 5 vols.); and finally Maṣūmat al-fuṭūḥa ḥayba al-Islām Aḥmad Ibn Taymiyya (Riyād 1381/1962, 40 vols.).

Ibn Taymiyya's education was primarily that of a Hanbali theologian and jurist. He possessed a very sound knowledge of all the great works of his school, from those of the imām Aḥmad (d. 240/854-5) or of al-Khallāl (d. 312/924) to those of Muwaffak al-Din b. Kudāma (d. 620/1223) or of his own paternal grandfather, Majdīd al-Din Abū ʿl-Barakāt (d. 652/1254), whose Muṣābarat and Muṣūlaḥā became part of the everyday reading of the Ḥanbalis of the Mamlūk period.

To this knowledge of early and classical Hanbalism, he added not only that of the other schools of jurisprudence (khulafāʿ), but also that of heresiographical literature (fīraḥ), in particular of ṣalāfat and of Ṣūfism. Indeed, he refers to knowing and having reflected on the works of many of the Ṣūfīyya: Kūdab al-Tābiʿīn al-ṣaḥābīyya (MR, i, 180-217), in which he declared the superiority of Aḥmad (d. 643/1245), Abū Ṭalīb al-Makki (d. 386/996), Abū Ṭālim al-Khāyārī (d. 562/1169), Abū al-Kādir al-Dījīlī (d. 561/1166) and Abū Ḥaṣṣ al-Suhrawardi (d. 652/1254). He mentions also having allowed himself to be deluded, in his youth, by the Futuḥat of Ibn al-ʿArabī (d. 638/1242-1), before discovering how subtly heretical they were. He never condemned Ṣūfism in itself, but only that which he considered to be, in the case of too many Ṣūfis, inadmissible deviations in doctrine, ritual or morals, such as monism (wuhdaṭ al-ʿawālīd), antinomianism (ibdāḥa) or esotericism (ḥuzūmuw).

His doctrine was intended to be primarily, while centred on and inspired by the spirit of Hanbalism, a doctrine of synthesis or of conciliation—"the happy mean" (masāʾal)—which would accord to each school its rightful place in a strongly hierarchical whole in conformity with the precepts of the Kurān and the Sunna. "The dogmatic theologians", he wrote, "based their system on reason (ʿaql), the traditionists based theirs on hadīth (nabīḥ), and the Ṣūfis theirs on free-will (irḍa)." Tradition, reason and free-will are precisely the three elements Ibn Taymiyya aimed to integrate and harmonize in a solidly constructed doctrine which might be defined as a conservative reformism, whether it was a case of the formulation of the credo, the rehabilitation of ʿiṣṭihād or the reconstruction of the state.

In the field of dogma, Ibn Taymiyya's main intention was to follow the Kurān and hadīth, "to describe God only as He has described Himself, in His Book and as the Prophet has described Him in the Sunna." Repudiating simultaneously the ʿaql, the hadīth and the Sunna, the theologians of his school, from the imām Aḥmad (d. 643/1245) to those of the respective caliphs (Rāṣūldūrī), order of succession, but distinguishes between the problem of the caliphate (khilāfa) and that of the respective merits (tafṣīl) of these four caliphs; although he declares the obvious superiority of Abū Bakr and "Umār, he acknowledges that there might be hesitation in pronouncing (lauwāḥṣaḥ) on the respective merits of ʿUṯmān and "All. His loyalty to the "men of old" (ṣaʿaḥa) led him to prefer the ideas upheld by the Companions.
IBN TAYMIYYA

(safa'aba) or their early successors to the doctrine taught by the founders of the madhdhib. Ibn Taymiyya did not, as is sometimes said, abandon the "re-opening" of idjihdd, and still less did he claim this privilege for himself; he did not consider that idjihdd required to be "closed", since its continuance is necessary for the interpretation of the Law (cf. the opposition between kulliyiyat and iqtisayiyat). But anxious to impose some discipline on this idjihdd, he attempted to define the rules which every mujtahid ought to follow. With this intent, he announced the absolute supremacy of the text (mas#,) (Kur'ân or hadith) and reduced correspondingly the importance of idjma, to which he opposed the agreement (itti'fakh) of the doctors of the Law, the validity of which derives from the text on which it is based.

He attaches much importance to reasoning by analogy (kiva), which consists first of all in seeking the cause ("illâ") of a judgement (hukm) resulting from the Kur'ân or from the Sunna and then in extending this judgement to all cases which share the same cause.

Ibn Taymiyya was often suspicious of maslama, which he criticized for approaching methods based on reason (ra'; ištihbar; shawa; kafa), but he finally approved a use of it which was both extensive and disciplined. The application of maslama, which may apply in all fields, including even that of the 'shadat, presupposes a previous long meditation on the Kur'ân, on kama and on the jurisprudence of the great doctors of the Law.

In fact Ibn Taymiyya considered religion and the State to be indissolubly linked. Without the coercive power (shawka) of the State, religion is in danger. Without the discipline of the revealed Law, the State becomes a tyrannical organization. The essential function of the State is to see that justice ("adl) prevails, to ordain good (amr) and to forbid evil, to bring about, in reality, the reign of unity (takhhil al-tawhîd), and to prepare for the coming of a society devoted to the service of God ("ibâda").

While recognizing the legitimacy of the Râghidun, Ibn Taymiyya never upheld the principle of the permanence of the single caliphate. He pointed out that the "re-opening" of faith (shakl) requires obedience only to God and to His Prophet: it does not limit the number of the imams to whom obedience is owed. He regards the Muslim community (umma) as a natural confederation of states.

Every imam is at once the proxy (waki') and partner (sharik) of those whom he administers, and therefore his mission is to construct and instil respect for the system of orders and prohibitions which, within the framework of the revealed Law according to the circumstances, is to govern the various areas of the life of the community.

Furthermore, each member of the community has the duty and the right to give advice (nasîba), within the limits of his competence, to his brothers in religion and hence to ordain good and forbid evil, striving to avoid anything which could endanger the solidarity of the Believers and divide the community.

Ibn Taymiyya's economic ethics also share this emphasis on solidarity or the importance of the community. He favours the idea of property, but states that the rich should be the friends and partners of the poor, and substitutes for the idea of competition that of co-operation and mutual help.

He disapproved of the authoritarian fixing of prices (tas'ir) and permitted this fixing only after negotiation and agreement. He reminded people that "The revealed Law continues to be deeply felt by everyone in his goal and wish to resemble Karun, just as it condemns those whose aim is political power and who wish to be like Pharaoh".

Ibn Taymiyya's influence, even in his own lifetime and under the BaÅrî Mamlûks, was great, in spite of the hostility which he encountered from the powerful family of the Subki, the two founders of which, Taki '1-Din (d. 756/1355) and his son Tadj al-Din (d. 771/1369-70), were among the most eminent representatives of Shâfi'iism and Syro-Egyptian Ash'arism. Among his chief disciples, in the world of the 'ulamâ', were, in addition to Ibn al-Kayyim mentioned above, men or women who sometimes belonged to other schools than his. AÅmd b. Ibrâhim al-Wâski (d. 711/1311-2), one of his first disciples, was the son of the head of the Rifa'iyya brotherhood of Wahf. Umn Taynab (d. 711/1311-2), a native of Baghhd, who led a campaign in Damascus against the Iftihadiyya, is an excellent example of the type of devout woman which existed at that time in Syria. Al-Mizl (d. 743/1342-3), who had come from Aleppo and was one of the greatest traditionists of the period, belonged to the Shâfi'î school.

His influence was also great in the world of the 'ulamâ', as illustrated by the fact that Hatib al-Mansuri (d. 721/1321), Ibn al-Kayyim mentioned above, men or women who sometimes belonged to other schools than his. AÅmd b. Ibrâhim al-Wâski (d. 711/1311-2), one of his first disciples, was the son of the head of the Rifa'iyya brotherhood of Wahf. Umn Taynab (d. 711/1311-2), a native of Baghhd, who led a campaign in Damascus against the Iftihadiyya, is an excellent example of the type of devout woman which existed at that time in Syria. Al-Mizl (d. 743/1342-3), who had come from Aleppo and was one of the greatest traditionists of the period, belonged to the Shâfi'î school.

Finaly, Ibn Taymiyya's influence was also great in the world of the 'ulamâ', as illustrated by the fact that Hatib al-Mansuri (d. 721/1321), Ibn al-Kayyim mentioned above, men or women who sometimes belonged to other schools than his. AÅmd b. Ibrâhim al-Wâski (d. 711/1311-2), one of his first disciples, was the son of the head of the Rifa'iyya brotherhood of Wahf. Umn Taynab (d. 711/1311-2), a native of Baghhd, who led a campaign in Damascus against the Iftihadiyya, is an excellent example of the type of devout woman which existed at that time in Syria. Al-Mizl (d. 743/1342-3), who had come from Aleppo and was one of the greatest traditionists of the period, belonged to the Shâfi'î school.

Under the Circassian Mamlûks (783-922/1382-1517), Ibn Taymiyya's influence was less apparent but nevertheless continued to be deeply felt in various 'ulamâ' circles. Al-Maqrizi (d. 845/1441-2), in his Kita'at (Cairo 1326/1909, iv, 185), contrasts to the supporters of al-Ash'ari—of whom he is one—those of Ibn Taymiyya, the defender of the faith of the "men of old" (salaf). "People", he writes, "are divided into two factions over the question of Ibn Taymiyya; for until the present, the latter has retained admirers and disciples in Syria and Egypt".

The Ottoman conquest of Syria and Egypt (922/1517), which led to the official supremacy of the Hanafi school, struck a severe blow to Hanbalism, which did not however disappear altogether. Supporters of Ibn Taymiyya remained: among them were al-'Ulaymi (d. ca. 928/1522), the historian of Jerusalem and Hebron, who wrote a history of Hanbalism which is a valuable source of information on this school after the death of Ibn al-Kayyim, and also especially al-Marî (d. 1033/1623), who wrote a laudatory biography of Ibn Taymiyya, al-Awâlîk al-durrîyya (Cairo 1320/1911). It was under the Ottomans also that Ibn Taymiyya's ideas, most of which were adopted by MuÅmmad b. 'Abd al-Wahhûb (d. 1206/1792), gave rise to Wahhâbism and to the state of the SuÅ'îd dynasty. Ibn Taymiyya
remains today, with al-Ghazali (d. 505/1111) and Ibn al-<Arabl (d. 638/1240), one of the writers who have had the greatest influence on contemporary Islam, particularly in Sunni circles.

**IBN AL-TAYYIB** [see TAMMAM B. GHALIH].

**IBN AL-TAYYIB,** ABU 'L-FARADJ 'ABBAD ALLAH AL-'IRAQI, Nestorian monk, physician, philosopher and theologian known in mediaeval Europe under the name of Abu 'l-Bayd. He was the brother of Abu 'l-Bayd. The best-known members of the family are:

Abu 'l-Husayn Dja (see TAMMAM B. GHALIH). His son and his grandson were also talented men.

(J. Verket)

**IBN THAWABA,** name of the members of an important family, of Christian origin, among whom were several high officials of the 'Abbāsid administration. An anecdote related by Ibn al-Nadim (* FHirth*, 130) and repeated by Yākūt (*Udāba*, iv, 144-5) suggests that the family's ancestor, Thawaba, lived in Baḥrayn where he was a barber. His son Muhammad entered the administration at an unknown date. The best-known members of the family are:

Abu 'l-'Abbās Ahmad B. Muḥammad, who was, under al-Muhtadi (ruled 255/869-256/870), one of the chief assistants of the vizier Sulaymān b. Wahb. Isma'il b. Bulbul himself, whom Aljmad disliked and disagreed with, forgave him for his hostile attitude towards him and entrusted him with the administration of several regions of Ṭirāk. He was to remain in charge of these districts until the arrival in office of the vizier 'Ubayd Allāh b. Sulaymān b. Wahb, who replaced him by Abu 'l-Hasan b. Ḍakhd; but Ibn Thawaba remained an official until his death, in 277/980 according to the majority of his biographers, in 273/886 according to al-Ṣūlī.

He was a poet of talent and a poet. He is said to have left two works, one of them a collection of letters, which have not survived. But he had acquired a reputation for clumsiness, and his contemporaries regarded as grotesque his affected language, his upstart affectation, and his excessive arrogance. It is not known whether he shared the pro-Shī'ī sentiments of his son Muḥammad, but Ibn Bulbul's conciliatory attitude towards him seems to indicate that he did not.

Ibn Thawaba presided over a circle in which a number of poets and men of letters met regularly. His generosity, sometimes ostentatious, led some poets of his time (such as al-Buṭṭur and al-Rūmī) to write of him very elegant panegyrics, which still survive. But the disagreements which he had with some of them, and notably with Ibn al-Rūmī, earned him a series of epigrams full of irony and sarcasm. Several of them, and notably al-Tawbī, retained the image of him which is given in these satires and present him in some of their anecdotcs as a grotesque, narrow and pretentious bore.

Very little is known of the career of his son Muḥammad. He was the secretary of the Türk Bāykābāk and he had to go into hiding for a period to escape from the anger of al-Muhtadi, who had been incited against him by certain courtiers who accused him of Shī'ism. His master finally exonerated him and obtained for him the caliph's pardon, which enabled him to return to his office in 250/864. He also was a man of letters and is said to have left a hand written manuscript of letters which has not survived.

Abu 'l-Husayn Dja 'Far' b. Muḥammad, the brother of Abu 'l-'Abbās Ahmad, occupied a high office in the administration; under the vizierate of 'Ubayd Allāh b. Sulaymān b. Wahb he was appointed as deputy to the vizier's son, al-Hasan, who had just been put in charge of several offices, among them the Chancellery and the Police (*Nisā'īr*, viii, 83-4; Yākūt, *Udāba*, vii, 187). On al-Hasan's death, Dja 'Far succeeded him in these offices and remained in them until he died in 284/897 (al-Ṣafadī, *Whāfi*, iii/2, 68). He was replaced by his son Muḥammad, who was a great favourite of al-Muhtadīr and who died in 312/924 (*Udāba*, xviii, 96). Muḥammad was succeeded by his son Abū 'Abd Allāh Ahmad, who was the last of the Banū Thawāba to hold an important office in the administration. On his death, the offices which had been hereditary among the Banū Thawāba since the death of al-Hasan b. 'Ubayd Allāh were entrusted to Abū Isḥāḳ al-Ṣābi (*Udāba*, vii, 188).

Dja 'Far was a cultivated man and a talented poet. It is known that he attempted to compare with Ibn al-Rūmī and that he was closely connected with Ibn al-Mu'tazz, who wrote a touching elegy on his death in which Dja 'Far's moral and literary virtues are sympathetically enumerated.

His son and his grandson were also talented men of letters. Abū 'Abd Allāh is said to have left a collection of letters (*Udāba*, iv, 146).

**Bibliography:** Fī Ḥirṣīyūt, 130, 168; Yākūt,
This Munya was probably a later edition of the historical section of the Faqārī. A Kūdī al-Tālibī is mentioned in Ibn al-Fuwaṭī, Taḥqīq Mādīna’ al-adād, ed. M. Dārṣā, 2: 309-10. 

IBN AL-TILMID, ABBU ‘AL-LÍ-ÁBÀ HIBAT ALLÁH, ABBI ‘AL-ÁLÁ SÁ’ID B. IRRÁHM, with the honorific names of Muwaufik al-Mulk and Amin al-Dawla (he was widely known under the latter name), Christian Persian translator of Baghdad, where he was born in the second half of the 5th/11th century, and son of a very eminent physician. He completed his education in various branches of learning by making fairly lengthy journeys in Asia Minor and Persia; he replaced the Pharmacopoeia of Sabur b. Sahl (Pharmacopoeia) and two abridged versions of it which had been used until then. These works and some others (a treatise on bleeding and a

...
practical manual of medical treatment) have sur-
vived in manuscript (see Brockelmann, I, 487, S 1, 891); nothing has so far been printed.

(M. MEYERHOF)

**IBN TUFAYL**

Ibn Tufayl, celebrated philosopher, whose full name was Abû Bakr Muḥammad b. Ṭabd al-Malik b. Muḥammad b. Ṭufayl al-Kaysî. He belonged to the prominent Arab tribe of Kays; he was also called al-Andalusî or al-Ighbîlî. Christian scholastics call him Abubacer, a corruption of Abû Bakr.

Ibn Tufayl was probably born in the first decade of the 12th/11th century in Wādî ʿĀghî, the modern Guadis, 40 miles N.E. of Granada. Nothing is known of his family background. The name Tufayl, a patrilineal name of Ibn Bâdjiya [q.v.], is frequently stated, is incorrect, for in the introduction to his philosophical romance he says expressly that he was not acquainted with this philosopher. He first of all practised as a physician in Granada, and then became secretary to the governor of the province. In 594/1154, he became secretary to the governor of Ceuta and Tangier, a son of ʿAbd al-Muẓîm, the founder of the Almohad dynasty. Finally he received the appointment of court physician to the Almohad sultan Abû Yaḥyâ b. Iṣâ, the Caliph himself attending his obsequies. According to his autobiography, called *Isâm al-arâdû, or what is more noted, in his own time as a teacher of philosophy, is perhaps more valued today for his historical writings dealing with the end of Mamlûk rule and the beginning of Ottoman domination of Syria. His autobiography, called *Al-Fulâl al-maghâbîn fi ahbâd Muḥammad b. Tâlûn* (pub. Damascus 1348/1929), while it gives little personal information, is an excellent source for a study both of the author's intellectual development and of traditional Islamic education at that time.

Ibn Tâlûn was born in al-Sâhilîyya, the suburb of Damascus on Mount Kâsîyûn, to a family with scholarly connexions. His paternal uncle, Ḍîmal al-Dîn Yûsûf b. Tâlûn, was a kâdhî and muqâtîl of the Palace of Justice (Dâr al-ʿâdî). He traced his paternal ancestry to a Mamlûk, Ḥūmûrâwîy b. Tâlûn, while his mother, ʿAṣdân, who died of plague during his infancy, was of Anatolian origin (rûmîyî). The latter term and the fact, mentioned in the autobiography, that she spoke liesân al-arâmî, has given rise to dispute as to whether this meant, in the usage of that time, that she was Anatolian Turkish or Greek. Reared by his father and the aforementioned uncle, Ibn Tâlûn showed precocious intellectual abilities, completing the reading of the Korân by the age of seven and in 891/1484, when he was eleven, receiving a stipend from the waqf of the Mârîdânîyya madrasa as a student of jurisprudence (fikh). During his lifetime he filled numerous teaching and administrative positions of a religious nature—the latter, however, never of very high rank—although in his last years he declined posts such as preacher (khâlid) in the Umayyad Mosque and Ḥanafî Muftî of Damascus, pleading advanced age as a reason. Most of his life was devoted to scholarship and writing and he seems to have avoided any political involvements under both régimes. He died over 70 years of age, a bachelor without issue.

In the breadth of his interests and variety of his writings Ibn Tâlûn resembles his Egyptian contemporary, al-Suyûṭî [q.v.] (d. 911/1505), from whom he received an iǧâsa. In his autobiography, which records all the scholars with whom he studied, he lists as well all the books he read, covering at least thirty fields of learning and representing all the traditional Islamic sciences as well as "secular" sciences such as medicine and astronomy. His wide-ranging interests are reflected in his numerous writings, the titles of 750 of which are listed, varying in length from brief pamphlets to weighty
volumes, many of which are no longer extant.

In the field of history the scholars who influenced him most strongly were Yûnûs b. Abd al-Hadî [q.v. (d. 927/1521)] and 'Abd al-Kâdir al-Nu'mânî [d. 927/1521], both of whom are known today for their studies of the mosques and madrasas of Damascus respectively. Several of Ibn Tûlûn's works, especially those devoted to suburbs of Damascus like al-
Šâlihibîyâ, his birthplace, and al-Mizzâ, reflect the methods of these scholars.

Among the numerous works by Ibn Tûlûn the following histories—mostly, but not exclusively, dealing with Damascus and its environs—have been published:

1. Mufâkahat al-khîlân fî hawâdih al-sâmân (2 vols., ed. M. Mostafa, Cairo 1962-4), a chronicle of Egypt and Syria covering the years 884-926/1479-1500. The published text omits the years 895/1492-93, 920/1514, and 925/1519, which were missing in the manuscript used—Tübingen MS No. MÀ VI, 7.

Extracts were published much earlier by R. Hartmann as Tübingen Fragment der Chronik des Ibn Tûlûn, in Schriften der Königsgesellschaft, 3. Jahr, Heft 2, 1926.

3. l'îâm al-uward bi-mân waliya nâ'id min al-ârâk bi-Dimashq al-ârâk al-kubr. The original has not been published as yet. A French translation by H. Laouist is included in the work Les gouverneurs de Damascus sous les Mamlouks et les premiers Ottomans... (Damascus 1952).

4. Five shorter works were published from autograph manuscripts in 1348/1929 in Damascus by Maktabat al-Kûsî wa 'l-Budây under the title Rasâ'il la'îrkhîyâ:

(a) al-Fûlkh al-madîkhôn, the autobiography, 54 pp.

(b) al-Šâma' al-mud'd拉 fî a'âbbâr al-khâl al-dîmarîyyîyya, a history of the Citadel of Damascus, 28 pp.

(c) al-Mûsîma fîlmâ bîli fî 'l-Mizzâ, about the suburb of Damascus al-Mizzâ, and an account of its mosques, tombs, great men, etc., 26 pp.

(d) al-Lamîda al-barriyya fî 'l-mukhtat al-ta'îrîyya, 44 stories, 72 pp.

(e) l'îâm al-sâ'sûn 'an hubûl sayyid al-mursulîn.

5. Sâbî b. al-Šâfi'î 'alâ 'dîrât al-mârîkh, about the first 30 years of the history of Damascus. Published by As'ad Talas in RAAD, xxiii/3-4, 149-61; 5-6, 236-47; 7-8, 338-51, and by Habîb al-Zayyât in al-Khâlida al-dârîyya, ii/39.

Some of his other historical studies, especially the biographical dictionaries, contain valuable contemporary material and are undoubtedly worthy of publication.

Publication: The best source for the life and work of Ibn Tûlûn is his autobiography al-Fûlkh al-madîkhôn, mentioned above. All other biographical sketches are based on it, for example: al-Ghazâlî, al-Kauwâthb al-nâmî, ii, 52-4; Ibn al-Mu'min, Sha'îrârî, viii, 298; al-Ziriklî, al-'Alâm, vii, 184-5; Dîrîr al-mu'ârif, iii, 318-20, by S. al-Munâdjidî, as well as the latter's introduction to Al-A'imma al-îtîdâ al-âshâr, mentioned above, and his study al-Mus'âribâhîn al-dîmâshqîyyûn, Cairo 1956, 79-81 (note some errors there, esp. attribution of publication of part of l'îâm al-uward to Littmann). See also the introduction to Al-Kalâ'id al-dawâriyya, i, by M. al-Mu'min, pp. [i-xxiv]; the introduction by M. Mostafa to vol. ii of Mufâkahat al-khîlân [q.v.], pp. [vii-xxi]; the excellent introduction by H. Laouist to the text of Damas, esp. pp. ix-xvii. The best information on extant manuscripts is in Brockelmann, II, 481, S II, 494. (W. M. Brinner)

IBN TûLûN [see Ahmad B. TûLûN and TûLûNî].

IBN TûMART, the Mahdi [q.v.] of the Almohads and founder of the Almohad movement [see Mawa'id al-Dîn]. The biographies of so celebrated a figure Influence on contemporary mountain men—legendary matter besides evident contradictions. He was born between 471/1078 and 474/1081 in the Anti-Atlas of Morocco. His father belonged to the Harga and his mother to the Masakalâ, both of which are divisions of the Masmûdा tribal group and there can be no doubt that he was a pure Berber despite the various shârîfîn genealogies attributed to him. Of his first 30 or so years we have no real knowledge. In 1115/1715 he left his native mountains and went first to Cordoba, where he spent a year. Only Ibn Kunfudh gives any information as to what he did there, saying merely that he studied with the hâdî'î Ibn Hamdîn. Ibn Tûmart next embarked at Almérîa for the East. At Alexandria he met Abû Bakr al-Tur'tu'î and then went via Mecca to Baghdad, where he met Abû Bakr al-Shâshî and Mubarak b. 'Abd al-Dîjabbâr. All the sources reckon, some with reserve, Ibn Tûmart's supposed meeting with al-Ghazâlî in Baghdad. The story (given most fully by Ibn al-Kat-tân, pp. 14-8) goes that al-Ghazâlî, learning that his new student was recently in Cordoba, enquired as to the doings of the fuhabâ from there. When told that at the instigation of Ibn Hamdîn, hâdî of Cordoba, the Ithâ'hî had been officially burnt throughout the Almoravid dominions he called upon God to destroy the Almoravids. Thereupon Ibn Tûmart exclaimed: "Imâm, pray to God to do that by my hand!" The Imâm ignored him at first but on a second occasion acceded. His prayer of course was granted. The story is, however, apocryphal: by the time Ibn Tûmart reached Baghdad al-Ghazâlî had already left the city for good and had been for over ten years in Kharusân, where it is never hinted that Ibn Tûmart ever saw him. The return towards the Maghrib began in 510/1115 or 511/1117. It was a turbulent journey. Ibn Tûmart caused public disturbances and put himself in danger of his life by his uncompromising insistence on the punctilious observance of religious obligations. At the same time his learning and piety made an impression, and during the many long halts in his journey he found ready audiences. En route, probably at Tunis, he was joined by Abû Bakr b. 'Ali al-Šâhâdâjî, surnamed al-Bayhâlkh, who became his devoted follower and whose Mémoires are a prime source of information for the remainder of Ibn Tûmart's career and that of his successor Abû al-Mu'mîn. At Mâllâla, near Bougie (Béjâya), the momentous meeting between Ibn Tûmart and Abû al-Mu'mîn took place. Love of the supernatural has embellished the circumstances of this meeting with a wealth of picturesque detail but subsequent events confirmed the power of this combination of Ibn Tûmart's personal magnetism and Abû al-Mu'mîn's administrative and military genius. This peculiar force of personality must be invoked to explain why Ibn Tûmart, despite the continual riots which he provoked, ran the gauntlet of lesser authorities unscathed and finally confronted the Al-
moravid sultan himself at Marrakush. This was in 514/1120. Ali b. Yusuf b. Tashfin arranged a debate between Ibn Tumart and a group of 'ashāḥa, who were as cloistered as his own. One party, represented by the vizier Mālik b. Wuhayb, saw in Ibn Tumart preaching a serious threat to the régime and so advocated his destruction. Others, among whom 'Umar is mentioned, could not stomach the punishment of one who could not be convicted of any crime against the Shari'a. While the pacific 'Ali vacillated, Yintan took Ibn Tumart under his protection. But Yintan succeeded in converting the lake people, and now perhaps over-confident, Ibn Tumart of his mortal danger, so he prudently withdrew to Aghmat. There the usual disturbances took place and a new stage in his career began.

Until now Ibn Tumart had apparently not viewed himself as the actual or potential leader of a movement or as a rebel against established authority; he was merely an individual fulfilling his religious obligations as he conceived them. But now the situation had changed. 'Ali b. Yusuf had finally overcome his scruples at the news of the latest troubles in Aghmat and despatched a messenger to order the return of the trouble-maker to Marrakush. Ibn Tumart refused to go and so was now in open rebellion. At the same time he had now won a powerful supporter in the person of Isma'il Ilg, chief of the Hazardja, who was soon after joined by 'Umar Fatii and Yusuf b. Wanudin of the Hintata.

He found himself apparently by accident the spiritual leader of substantial forces united, no doubt, more by tribal anti-Almoravid sentiments than by concern for the purity of the faith. The idea of proclaiming himself Mahdi began to grow in his mind and from the time he finally reached his birthplace at Igilliz in 515/1121 and installed himself in a cave (al-Qar al-mubaddas—not now identifiable with certainty) he devoted himself to spreading the belief that the appearance of the Mahdi in the Maghrib was imminent. At the end of one harangue in which he listed the attributes of the Mahdi he was finally acclaimed. "When the Imam al-Mahdi finished his speech", says ʿAbd al-Mu'min, "ten men, of whom I was one, rushed up to him and I said: 'These signs are found only in you! You are the Mahdi!'" And so we were fated to be among his Mahdisti.

The expedition was unsuccess ful, for though the Almohads besieged Marrakush for six weeks they were defeated, five of the Ten being killed, nearby at al-Bufcayra in mid-524/1130. This defeat was doubtless a severe psychological setback for the Almohads, but subsequent events show that it did not in fact much hinder the progress of the movement; and it was an empty victory for the Almoravids, who proved impotent to press home their advantage.

The Mahdi died a few months after the battle of al-Bufcayra, in Ramadān 524/August 1130. His close companion who saw his death and attended his body was called ʿAbd al-Mu'min by his followers. Ibn Tumart, judging it prudent to move to a more easily defended position, "emigrated" in 517/1123 to Tinnmalal (Dur. Tinnal) in the upper Nfis valley, about 75 kms. south-south-west of Marrakush. The manner in which he and his followers took possession of Tinnmalal and its territory is not entirely clear, but it led to a protest by one of the Ten which cost him his life. The Ahl Tinnmalal of the Almohad hierarchy are significantly a heterogeneous group. This fact and other evidence indicates that the original inhabitants of Tinnmalal were liquidated and replaced by a mixed group of the Mahdi's close followers.

The next few years were passed in the consolida tion and steady extension of Almohad power. This was made easier by the preoccupation of the Almoravids with troubles in Spain but also made more difficult by discord among the Almohads themselves. Though the Almohad movement was certainly helped by the antipathy for the Almoravids shared by all the mountain tribes, it was at the same time hindered by the fragmentation of the Masmuda into very small and jealousely independent groups who resisted incorporation into any larger federation. Perhaps impatience with the speed of the movement's development was the main motive behind the next important event in the Mahdi's career, the tamyiz.

The scanty texts on the tamyiz are difficult to interpret, but it is clear that he and the supervision of one Bāshir al-Wanghari there was a methodical and stringent elimination of real or suspected dissidents. This took place in 523 or 524/1128-9. Dating from this period, and obscurely connected with the tamyiz, is the peculiar organization of the Almohads into a hierarchy headed by the Ten. The origin and significance of this apparently quite artificial creation remain a mystery.

Whether the tamyiz so consolidated the movement's strength that Ibn Tumart felt strong enough to embark on the taking of Marrakush or whether it aroused such resentment that such a diversion of interest became necessary is an open question, but the campaign began at once. The leader was the same al-Bāshir. The expedition was unsuccessful, for though the Almohads besieged Marrakush for six weeks they were defeated, five of the Ten being killed, nearby at al-Bubayra in mid-524/1130. This defeat was doubtless a severe psychological setback for the Almohads, but subsequent events show that it did not in fact much hinder the progress of the movement; and it was an empty victory for the Almoravids, who proved impotent to press home their advantage.

The Mahdi died a few months after the battle of al-Bubayra, in Ramadān 524/August 1130. His close companion who saw his death and attended his body was called ʿAbd al-Mu'min by his followers. Ibn Tumart, judging it prudent to move to a more easily defended position, "emigrated" in 517/1123 to Tinnmalal (Dur. Tinnal) in the upper Nfis valley, about 75 kms. south-south-west of Marrakush. The manner in which he and his followers took possession of Tinnmalal and its territory is not entirely clear, but it led to a protest by one of the Ten which cost him his life. The Ahl Tinnmalal of the Almohad
or spiritualization of the concept of God, as opposed to Judaism, the literal acceptance of the anthropomorphic phrases of the Qur'an of which he so often accused the Almoravids. But there is nothing original in his religious ideas. He adopted those which suited him wherever he found them, including the Shi'ite notion of the impeccably (ma'sidin) Imām, who he claimed to be. His theology is not important. His career followed a pattern, familiar in the Maghrib, of a charismatic personality being able briefly to unite groups who live normally in anarchical fragments. He based his appeal partly on the romantic notion that the Berber race and that of the leader, and doctrine is of minor importance. The role of 'Abd al-Mu'min in founding the Almohad state was as important as that of the Mahdi, though probably neither would have achieved anything without the leadership of Al-Mu'tāz al-Ra'īsi or the Almohad state itself. Ibn Khaldūn (d. 620/1223) has observed that in the public mind the name of Al-Mu'tāz al-Ra'īsi is closely associated with that of Ibn al-'Utrūs the military leader, and Al-Mu'tāz al-Ra'īsi, who was of Berber origin, was closely identified with the Mahdī. His role was to bring about the victory of the Almohads over the Almoravids, the name of the latter being associated with that of the former. Ibn 'Abd al-Wahhāb al-Malki (d. 671/1269) has described Al-Mu'tāz al-Ra'īsi as the only personality to have exercised a unifying influence in the Maghrib during the time of the Almoravids.

Bibliography:

(3) F. P. Hopkins, Ibn Tumlūs, Andalusian physician and philosopher, whose full name was Yūsūf b. 'Abd al-Mu'min, and with the kunyah Abu 'l-Hājdīdājī and Abu Islāk. He was known in mediaeval Europe under the name of Albagiūn Thulmas, and Nallino (cf. RSO, xii, 170) considers that the name Tumlūs may be a corruption of Barthelomayus or Ptolemaeus. He was born at Alcira in about 560/1164, was a pupil of Ibn Rushd, and named after al-Ihāsan b. al-Ṭaghibi (d. 250/865). Its construction is attributed also to Ardashīr Bābakān. The ancient town was called in Aramaic Džazaṭa d'Kardu, a town which re-appears in Christian texts of the 6th and 17th centuries. It has been identified with the ancient Bāzābdā, where Alexander the Great crossed the Tigris; later this was one of the foremost points of the Roman advance mentioned by Ammianus Marcellinus (xx, xvii, i).

The town was called in Aramaic Džazarta d'Kardu, a name which re-appears in Christian texts of the 6th and 17th centuries. It has been identified with the ancient Bāzābdā, where Alexander the Great crossed the Tigris; later this was one of the foremost points of the Roman advance mentioned by Ammianus Marcellinus (xx, xvii, i).

Situated in the Džajār Rābī'ī's (g.v. [37° 15' N and 42° 5' E], at 400 metres altitude, 125 kilometres downstream from the confluence of the Bohtan Su, to the west of Mount Džatl (g.v.), Džazarta Ibn 'Umar is on the Tigris at the point where its distance from the Euphrates is greatest. Emerging from the gorges of the Taurus, the Tigris then enters the Upper Džazarta, a flat region where the river flows more slowly. The city was built in a bend in the river, the two ends of which were joined at the narrowest point by a canal which is said to have been dug by al-Ḥasan Ibn 'Umar. The site of the town thus became an island, whence its name of Džazārta; the force of the current turned the canal into the main bed of the Tigris, while the flow in the original river bed encircling the town dried up. The town also possessed a bridge, and was a river port in an island position; from this point the Tigris was navigable, and a
system of navigation existed to transport merchandise in the direction of Mosul. As a river port, Diazirat Ibn Umar was an important centre in a prosperous region of vineyards and orchards, made so by the supply of fresh water. In the neighbouring mountains, covered with oak forests and producing an abundance of walnuts, hazel-nuts and gall-nuts, bees produced honey and wax which were exported. The frontier between the Arab and the Kurdish regions is marked by a Roman road, darb 'atib, which joins Diazirat Ibn 'Umar to Nişân and then Mardin.

The town, whose monuments witness to its brilliant past, lost many of its inhabitants at the beginning of the 20th century; the population, which consists of Muslims, Kurds, and Christians of various denominations, fell from 9,580 in 1890 to 5,575 in 1940. In 1960 it was 6,473. In the 4th/10th century, the town possessed imposing walls built of mud bricks, which in the time of Ibn Baṭṭūṭa had three gates; they were rebuilt in basalt, and a section of the wall is still preserved and its piers are carved representations of the signs of the zodiac as on the bridge of Ijīs. The great bridge in the time of Ibn Baṭṭūṭa had three gates; it was built by the Kurds and succeeded in maintaining a relative independence north by the castle of the Kurdish amirs. In the 6th/12th century, the town possessed a hospital, fourteen hammāms, of which eight still remained at the end of the 19th century, with thirty sabilis and nineteen mosques. The intellectual and religious role which the town played in the 6th/12th century was illustrated by four Saḥifāt madrasas, while there existed for the Saḥifs two ābāsāt outside the walls. Beside the original Great Mosque, the amir Badr al-Din Lu'Lū built another in the following century. In the 19th century, there remained of this active commercial centre, according to Cuenot, five chišām, a vaulted bazaar, one hundred and six small shops and ten cafés. The presence of some early churches demonstrates the importance of the Christian element.

Slightly downstream from Diazirat Ibn 'Umar there exist today the ruins of a fine bridge of which a single arch of twenty-eight metres is still standing; on its piers are carved representations of the signs of the zodiac as on the bridge of Ḥīn Kayfā [q.v.], a work of the Artuk period. Upstream there exists on the Batman Su a bridge built by the amir Timurtaş of Mardin.

For a long time under the control of the Kurdish amirs, Diazirat Ibn 'Umar had a certain importance in the 6th/12th century, since in the town was a dependency of Mosul; in the 5th/11th century, after having had as governor in 495/1102 Shams al-Dawla Diakarmish, a former manīš of Malkāshāh, it was in the hands of the Marwānids; in the 6th/12th century, it belonged to the Zangids, who appointed 'Izz al-Dīn Abū Bakr al-Dubaysi as governor in 547/1156. The region occupied by the Baybarsi Kurds was taken by Kutb al-Dīn Mawdud b. Zangi in the 6th and 7th/12th century. In 495/1102, the place was occupied by the Bashnawi Kurds was taken by Lizz al-Dīn Abu Bakr al-Dubaysi [q.v.], in 553/1158, the region was occupied by the Bakrīzī Kurds. In 860/1456, a section of the castle of the Kurdish amirs was taken by al-Sifr al-kabir fi ṣīlah al-turfid biwādwiyya, an ancient temple at Busir al-Sidr [q.v.]. Among his numerous writings are several khāṣds, one of which, the Risālat al-şams ila 'l-hiliāl, was commented upon by himself under the title al-Ma' al-warābī ila 'l-arād al-nadżmīyya. This commentary and the poem became known in mediaeval Europe in a defective Latin version as Tabula chimica and Epistola solis ad lunam crescenti, the name of the author being rendered Senior Zadith Filius Humelius. Al-Ma' al-warābī begins with a description of two quasi-archaeological excursions to an ancient temple at Bāšür al-Sidr [q.v.] in order to find documents of alchemical wisdom there. This introduction follows a common pattern of fiction in Hermetic literature, but, as H. Stricker has shown, Ibn Umayl must actually have been in that temple, where he saw a statue of Imhotep, without however being able to read the name (cf. L’écriture de Murtadi, pp. 101-37). His special interest in the old temples and their wall-paintings is also indicated by another title: al-Sifr al-kabir fi ṣīlah al-aṣkāl al-bīrbdwiyya ila 'l-tasdwir. Among the many alchemical authorities quoted in al-Ma' al-warābī we find the names of Hermes [see HIRMIS], the legendary Egyptian king Markūnus (cf. G. Wiet, L’Égypte de Mursiûd, Paris 1953, 21), Democritus, Socrates, Plato, Zosimus, Mary the Jewess, Khalīd b. Ya'qūb [q.v.], Dhu 'l-Nūn [q.v.], and Dībjūr b. Hāyiyyān [q.v.]; he also depends on the Turba Philosopher. He is silent about al-Rāzī [q.v.], but he seems to include him when attacking those contemporary adepts who tried to obtain the elixir [see al-IKSIR] from base organic substances such as eggs and hairs.
IBN UMAYL — IBN WAFAID

IBN ‘UNAYN, Abu ‘l-Ma‘asin Sharaf al-Din Muhammad ibn Nasr, ‘Ali ibn Muhammad ibn Qahhaf al-An’asari, satirical poet born at Damascus on 9 Shawwaal 597/1200, he studied with the main teachers of Damascus and spent a period in Iraq, Ibn ‘Unayn began early to use his lively satire against many different kinds of people; he did not spare even Salaf al-Din al-Saladini, who had just made himself master of the town (570/1174), and for this he was soon banished. He then went on some journeys connected with commercial matters, which led him to Iraq, Asharaybihjan, Kharas, Transoxiana, and even to India; then he returned to the Yemen, where he spent some time in the entourage of Saladin’s brother, Tughtakin; and then he settled for a time in Egypt (before 593/1197). His nostalgia for his native town led him to write the Diwanz, “Collection of the sayings of ‘Unayn”, which was his most famous work, and translated into Latin by Gerard of Cremona and into Hebrew by Abraham ibn ‘Abi Dahan. It was finally published by R. Blachère, Paris 1935, 148 f.; Ibn Abi Uṣaybi‘a’s (ed. Müller), ii, 40; idem, El libro de agricultura de Ibn wasit, “Abridged text of the Diwanz of Ibn ‘Unayn” published by Khalil Mardam at Damascus in 1946. Bibliography: Ibn Khallikan, iv; Yāqūt, Udamā, xii, 81-92; Abu Shama, Rawdatayn; Ibn Kathīr, Bidaya, xxii; Sibt Ibn al-Djawzi, Mir’at al-samān, viii, 5 f.; Ibn al-‘Imād, Shadharāt, iv, v; Hādīlī Khalīfa, col. 267; J. Rikabi, La poésie profane sous les Ayyūbides, Paris 1949, index; Khalil Mardam, introduction to the Diwanz; idem, in DM, iii, 403-7. (G. Troupeau)

IBN ‘UYYANA [see sdyvān b. ‘uyyana].

IBN WAFAID, Abu ‘l-Mu‘arrif ‘Abd al-Rahmān Muhammad al-Qa‘im, Andalusian physician, pharmacologist, and agricultural theorist. Little is known of his life except that he was born in 597/1200, died in 670/1271; of his works, only four are translated into Latin by Gerard of Cremona and translated into Hebrew by Abraham ibn ‘Abi Dahan. It was finally published by R. Blachère, Paris 1935, 148 f.; Ibn Abi Uṣaybi‘a’s (ed. Müller), ii, 40; idem, El libro de agricultura de Ibn wasit, “Abridged text of the Diwanz of Ibn ‘Unayn” published by Khalil Mardam at Damascus in 1946. Bibliography: Ibn al-Abbar, ii, 551; Sād al-Andalusi, Cairo n.d., 110 = Fr. tr. R. Blachère, Paris 1935, 148 f.; Ibn Abi Uṣaybi‘a’s (ed. Müller), ii, 40; idem, El libro de agricultura de Ibn Wāfīd y su influencia en la agricultura del Renacimiento, in And., viii (1943), 281-332 = Estudios sobre historia de la ciencia española, Barcelona 1949, ch. 7; E. J. F. P. HOPKINS

IBN WAHH, 'Abd ALLAH b. WAHH b. MUSLIM AL-
FIHRI al-KURASHI, Mālikī traditionist of Egypt,
born in Cairo in 125/743 and died there in 197/813.

From a very early age he was taught by the imām
of Medina, until the latter's death, and then returned
to Cairo, where his own tomb is in the Karāfa
(see Ibn Khullikān, tr. de Slane, ii, 16, Ibn al-Zayyāt,
al-Kasbāb al-malikī, nayyār 44). The kāfī ḫiyād (Tartib
al-Dīdmi', ed. i, xi, and J. David-Weill, Manuscrits
malékides d'Ibn Wafid, in Melanges Maspero, Cairo
1940, ii, 177-81.

J. DAVID-WEILL

IBN WAHHON, Abū MUHAMMAD 'Abd al-
DIWTHI b. WAFIDH, Arab poet of Spain, whose
career was passed at the court of the master
of Seville, al-Mutamid ibn 'Abbād [q.v.]. Born at
Murcia, probably about 430-40/1039-49, into a
family of humble origin, he went to seek his fortune
at Seville, where he was the pupil of the philologist
al-Ahmād al-Shattamari [q.v.] and formed a friendship
with the vizier and poet Ibn 'Ammār [q.v.] before
being admitted to the court, in circumstances which
are variously reported. He then became one of the
official panegyrists of al-Mutanabbi, to whom
Ibn Wafidhiyya states that he dictated his trans-
lations "from the language of the Chaldees* into
Arabic". This Abū Ta'lib al-Zayyāt, who claims to
be a pupil and secretary of Ibn Wahshiyya, was,
according to L. Massignon (apud Festugiere, La
Réalisation d'Hermès Trismégiste, i, Paris 1944,
App. III, 396), "a Sābi, a member of a family of
viziers" (d. ca. 340/951?); he lived in the time of
Ibn al-Nadim (Fihrist, 312). If all parts of his name
are correct, he was the great-great-grandson of
the vizier Abū Diwthi Muhammad b. 'Abd al-Malik
(b. Abān, omitted in all sources when Abū Ta'lib
is referred to) al-Zayyāt [see ibn al-Zayyāt, Kald'id,
Khafcan, Kald'id, Mi'addi ibn Ditya, Ibn Baddii
al-badd'ih, Ibn Kharlda, Ibn Khuzaa, Ibn Mu'addīb,
Mu'addin, Nakhshab, Nakhshab, Poesie andalouse,
Wad al-badd'ih, index; Marra-

Bibliography: Ibn Basām collected the Diwan of Ibn Wafidh under the title al-Ikhāl al-
mughtamil 'alā ḫirī 'Abd al-Dīdmi, but this collec-
tion has not survived, and of this anthologist's
work on the poet there remains only a chapter of the
Dīdmi (2, still unpublished); al-Fath Ibn Maktāb, Kāʾlid, 15-3, 242-5; Ibn Dīyār, Muṣrub, index, s.v.; Ibn Faḍl Allāh al-'Umari, Ma-
ṣālik al-adab, 374; Ibn Khallikān, Šelash, MS
44). The name of a person to whom
the translations which are attributed to Ibn Wahshi-
yya are not those of a native user of Arabic. The
question is whether they were made directly from

certain indications which support the author's claim
to have translated from Syrian, the most import-
and, in addition to the style of the language,
the type of prayers which are included, in particular,
in the K. al-Fīlābnta nambaṣīyya and which bear a
striking resemblance to those of Syriac liturgy
(cf. in particular the prayer with which the book
begins see ZS vi, 1928-9, 35 f.) and which is a
sort of ṣaṣānīn = ṣīrāq in the style of the
Syriac brevialry). This type of prayer is found in
the manuals of magic and talismanic art (such as

(Ch. FELLAT)
Ibn WAHSIYYA

Ghadyat al-fyakim of the Ps.-Madiriti) and what has been preserved from the Harranians by Ibn... yadillu calayhi min afywdl al-mawludin, "translated from the Nabataean into Arabic by Abu Bakr b. A^mad b. Wahshiyya.

This indication alone however is of no significance, states that he "translated it from the language of scripts not all of which are complete. Ibn Wahshiyya of the period of Nabuchodonosor II (605-562 B.C.;... M. Plessner has given a list of its contents in ZS, vi (1928-9), 35-55. From 1835 to 1875, this work was the subject of vigorous debate among orientalists: E. M. Quatremere, in his Mémoire sur les Nabaldens, in JA, xv (1835), 5-55, 97-137, 209-71 (see also Journal des Savants, March 1857) considered it to be the translation of a Chaldean work of the period of Nabuchodonosor II (605-562 B.C.;... Die Uberreste der altbabylonischen Literatur im Germanique, x (1860), 136-66; v. Gutschmid, Inscriptions, in Mémoires des Savants Etrangers présentés à l'Académie Impériale des Sciences de St. Petersbourg, viii (1859), 329-54, dates it at the latest to the beginning of the 14th century B.C. This extreme view of Chwolson produced such a violent reaction from orientalists that it was about fifty years before this work was discussed again. Three important studies were written in reply to the Chwolson exposition of 1857: A. von Wiedemann, in „Kleine Schriften, ii, 568-716; cf. also War Ibn Waskhijjah ein nabatalischer Herodot?, in Berichte über d. Verhandl. d. kgl. Sachs. Gesellschaft d. Wiss. zu Leipzig, Phil.-hist. Kl., 1863, 67-99 = K. Tankalusha (Sphinx des Anubis. Rerum... Noldeke, in spite of the efforts of several scholars during the last fifty years to re-instate him (cf. E. Wiedemann, Zur Nabatäischen Landwirtschaft, in ZS, i (1922), 201-2; M. Plessner, Der Inhalt der Nabatäischen Landwirtschaft, in ZS, vi (1928-9), 27-56; E. Bergdolt, Beiträge zur Geschichte der Botanik. I — Ibn Wahšija: Die Kultur des Vielvölkens (viola odorata) und die Bedingungen des Blühen's in der Ruhezeit, in Berichte der Deutschen Botanischen Gesellschaft, i (1932), 321-56; II — Über einige Pfropfungen, ib., iii (1934), 87-94; III — Wasseranzeigende Pflansen, ib., liv (1936), 127-34; G. O. S. Darby, The mysterious Abolays, in Osiris, i (1936), 251-59; idem, Ibn Waskhja in mediæval Spanish literature, in Isis, xxxii (1941), 433-8). The very pessimistic prediction of Franz Boll, who says, referring to the K. Tankalusha (see below): "ist gleich seinen übrigen Schriften verdientermaassen noch immer unedirt geblieben und wird es wohl auch bleiben" (Sphäera, Leipzig 1903, 428), certainly seems to be justified.

It was concerning al-Fīlāḥa al-nabatīyya that the dispute over Ibn Waskhija arose; the other works attributed to him, although much less well-known, suffered repercussions from this.

(2) K. Šawk al-mulsahám fi ma‘rifsat rumūs al-‘āblām, an extraordinary collection of 93 cryptic alphabets attributed to the Manichean (Surya-Navaratna) and some Buddhist, Jain and Hindu peoples, and to famous persons, accompanied by alphabets appropriate to each planet and each sign of the zodiac (MS Paris 6805, 131 fols., nasḫī of 1165/1751-2, in which it is stated, fol. 129 r., that the work was written for 'Abd al-Malik b. Marwân in 241/855 (sic); the author lived in Damascus; J. Hammes, Ancient alphabets and hieroglyphic characters explained, with an account of the Egyptian priests, their classes, initiation and sacrifices in the Arabic language... London 1806; S. de Sacy, apud A. L. Millin, Magasin Encyclopédique, vi (1810), 145-75; v. Gutschmid, loc. cit., 16-21). This type of collection of scripts is used in works of magic and of talismanic art; specimens of it are found in many maqdi‘as of esoteric writings. It is not impossible that many of these alphabets which were used as ciphers; they have the attributes of this (symmetry, opposition, superposition, interlacing of downstrokes; differentiation by small downstrokes, decorative refinements).

(3) K. Tankalusha (= Teucros; cf. A. Borissov, in JA, cxxvi (1933), 300-5) al-Bāśli al-‘āblām, fi šwar darād al-falak wa-ma‘ yadillu ‘alāsya min ahdīl al-mau-sāli‘ān, "translated from the Nabatean into Arabic by Abū Bakr al-‘Ahdīl al-Wāshijjah, and...
and dictated to 'Abd (sic) b. 'Abd al-Zayyāt (MS Leiden 891/2, fols. 28-69, preceded by a treatise on astrology which dates to 1200/16th century, famous for one poem, well-known in the Arab world), the translator of which is said to have been 'Umar b. Farrākhān al-Tabarī, see Brockelmann, S I, 392), an astrological treatise describing the twelve signs of the zodiac and the thirty degrees of each of them and based on the Pahlavi versions of the Παραστάλοπος of Teucros of Babylon and the Ανδρολόγια of Vettius Valens (cf. Nallino, Trase di opere greche inuine agli Arabi per trasferire phelecona, in Αλφαλάμματα, presented to E. G. Browne, Cambridge, 342-8, and S. I. 434 ff.).

(4) K. al-Sumūm, translated from the "Nabataean" and dictated to 'Abū Tālib ... al-Zayyāt (MSS Istanbul, Şehid All Paşa 2073, nasḫī of 905/1509-1500, 21.5 × 15 cm.; Leiden 725, 142 fols., a copy made by the British Museum manuscript 1357; other manuscripts in Brockelmann, S I, 431). Ibn Wāṣḥyiyā gives his sources: it is a compilation from two treatises on toxicity, one by Yābūkā (Istanbul MS: Baryūfī) al-Nabāṭī al-Kardānī, the other by Shāhī Sāt (Istanbul MS: Shāhīt Bīṣīt) "of the inhabitants of 'Aqūṭākū" (so Istanbul). It is the manual of poisons of Čanaḵya, according to a new redaction, produced in the medical circles of Gondāghērā, from the Persian translation of this treatise (cf. B. Strauss, Das Gībūtash des Sīhāk, in Quellen u. Studien z. Gesch. der Naturwiss. u. der Medizin, vii (1954), 28 (116) ff; Massigmon, loc. cit., 393). The work covers (a) things which kill by a look, (b) voices which terrify, (c) things which kill by their smell, (d) those which are lethal if eaten or drunk and (e) those which are lethal if touched; from chapter 8 onwards it deals with snake-bites, bites by dogs, the stings of spiders, scorpions, etc. (cf. K. al-Sumūm wa-dā'ī madārīrkhā by the Ps. Dāhir: Brockelmann, S I, 428, n. 32; Kraus, Jabir, i, 156-9).

(5) K. al-Uṣūl al-ḥabīr, a treatise on alchemy (MSS Istanbul, Rāqqī Paşa 963/3, fol. 499 ff., nasḫī, 24 × 18 cm.; the same madāmītā, fols. 1-36v., attributes to him K. al-Shawādīrī fi 'l-ḥikma wa-ḥiward; Hāzi Biāṣa 849, fols. 227-30r, taʿlīk fūrisī, n. d., 35 × 26 cm., in a madāmītā of works on alchemy, the majority of these Persian, beginning with the K. Mutakabbir wa-dā'ī al-Fīlāṭa by [b.] Ḵayyām-Šāft, fols. 1-222. In another madāmītā in Konya (Yusuf Ağa, 4873/3, 55 fols., 16 × 11.5 cm., small taʿlīk of 707/1307-8; see also 546 in the same collection), there is attributed to him another treatise on alchemy entitled K. Kāhī al-ramūd. There are also attributed to him other Hermetic works such as Kans al-ḥikma, Malātī al-anwār fi 'l-ḥikma, used by the Ismāʿīlīs, K. al-Hayābīl wa-tamādghīl and K. Tabāhānī (cf. reference in Brockelmann, I, 281, S I, 431), about which much less is known. He himself states, in al-Fīlāṭa al-nabāṭīyya (Leiden MS, p. 2), that he translated also extracts from a vast and valuable work on astrology entitled K. Dīlḥawādīrī al-Bībīlī fi arsr al-falak wa-takhamīs wa-l-tamādīhīn min haratik al-nujūm, and K. al-Anāwī al-ḥabīr. The Fīsīrīt, 312, lists other titles, for the existence of which there is no other evidence.

From his works as a whole there emerges a striking resemblance between his opinions and those of the Neoplatonist school of Syria founded by Iamblichus (d. 330 A.D.). Like the latter, Ibn Wāṣḥyiyā believed that man can come into contact with God by means of esoteric rites and symbolic formulas. The perspicacious Ibn Khaldūn (Muḥammad, iii, 120/165 f.; tr. Rosenthal, iii, 151 f.) had realized this when he stressed the care which the ancient authors of Geoponica took to discover the secret correspondences between the spiritual properties (rāhīnīyyāt) of plants and those of the heavenly bodies, and when he stated that the K. al-Fīlāṭa al-nabāṭīyya had been translated from the Greek (currīmā min ḥawālīn al-Yundniyyin).

In conclusion, we believe (as had already been suggested by G. H. Ewald, in Göttinger Nachrichten, 1857, 141 and 1861 (15 May)) that the works attributed to Ibn Wāṣḥyiyā are really extracts from a vast and valuable work on Geoponica already used by All b. Saḥīb b. Rabbān al-Tabarī in Fīrdaus al-ḥikma, completed in 235/850: cf. reference in Brockelmann, S I, 363). The present writer plans further research on Ibn Wāṣḥyiyā's work along these lines.

nickname of his grandfather, and it is not known whether he was given it because of his peevish nature or because he played the μαν (cymbals) (see L.A. under the root w.n.ri.). His father was the grandson of the 'Ali b. Muhammad b. 'Abd Allāh (1170-1240/1757-90). Totally deaf, but with a lively intelligence, he left behind him the reputation of an amusing courtier, with an inexhaustible supply of witty anecdotes. The sultan, who prided himself on his literary culture, called him Abu 'l-Shama'makā, probably because he had a large mouth and a large nose, like the poet from Kūfa with the same name [q.v.], and was as skilful as he in panegyric and satire.

As Abu 'l-' Abbās Ahmad did not succeed, either during his father's lifetime or after his death, in gaining admittance to the court, which was barred to him by envy, and as he wished at all costs to recite to the sultan the urduza which he had written for this purpose, he resorted to a ruse: standing himself one day on a proconterlooking route of the royal procession, he declaimed at the top of his voice as the sultan was passing, in the radīzat metre, the following couplet:

"My lord, son of the Prophet (nabī),
Abu 'l-Shama'makā was my father (abī)."

The Sultan recognized him, received him, listened to his poem, with which he was delighted, gave him a generous reward and awarded him a place in his entourage where he remained until his death, which is said to have occurred in 1187/1773.

Of his works, which are reputed to have included epistles on various subjects and some poems, all that is known is the urduza called al-Shama'makābiyya, a bi'fiyya of 275 verses in the radīzat metre. The success of this work is due to its educational value. It is in fact a résumé of the traditional culture of the Arabs in a form which could be understood, learned and remembered by an educated Moroccan of that period: a vocabulary dealing with the desert, inherited from the early poets of the Diabiliyya—the names of its winds, its flora and fauna, its proverbs, legends, anecdotes, historical facts, famous characters (both men and women)—in short a syncretistic tapestry of adab, poetry and history. Thus the Shama'makābiyya was used as a textbook, a précis to be learned by heart in the same way as the al-Mas'īl al-Mudḥaba fi l-mas'īl (Cairo 1285); al-Thābit al-wadīyya fi muḥkālāt al-īrāb, an urduza of 125 verses (ed. R. Abicht, Breslau 1891); a commentary on the preceeding work (MS Berlin); al-Bahā'ī al-wadīyya, an urduza, a rendering in 5000 verses of the al-Fā'ālī al-saghir of al-Kawzin (a manual of Shā‘ī fikh) (lith. Cairo 1311); Tālimmat al-Muḥkāsar fi aḥkhār al-baṣḥar, an abridgement of the chronicle of Abu 'l-Fidā' with continuation from 729 to 740/1329-9 (Cairo 1285); al-Maṣ'īl al-muḥkhaba fi 'l-maṣ'ālīl al-muḥkhaba, an urduza of 71 verses on questions of succession (MS Berlin and Cairo); al-Shābī al-ūdāb wa 'l-ūdāb al-ūdāb, a work of mysticism (MS Aya Sofya); al-Allīyya al-wadīyya, an urduza on the interpretation of dreams (several eds. in Egypt after that of Bollée 1387); al-Muṣīr wa-manṣūr, an urduza entitled Ḥim al-īrāb; al-Durrā, a commentary on the Allīyya of Ibn Muṣīr; Taddhikār (Muḥakkār) al-gharb, Abāh al-akhūr.

Bibliography: Kutubī, Fawdī, ii, 116; Subkī, Taḥāf al-Allīyya, vi, 243; Suyūtī, Ruybah, 365; Ibn al-'Imām, Shadgarāt, i, 161; Ibn Ḥasan, Ḍurar, ii, s.v.; Ibn Iyās, Badī‘ al-nūh, i, 198; Wustenfeld, Geschichtsschreiber, no. 412; Sarkis, Muḥammād, October 1457. He is said to be the author of the Kharīda al-aqābil wa-fardāt al-gharbā, a sort of geography and natural history without any scientific value. In fact, one of the authorities mentioned in the introduction (al-Musā’di, al-Tūsī, Ibn al-Ṭahrīr, al-Marrākūshī), the Kharīda is merely a plagiarism of the Dī‘imī al-funūn wa-salawat al-muṣāfin of Ṣūfīn al-Dīn Āḥmad b. Ḥamān b. Shāhīb al-Hārnālī al-Ḥanbalī, who lived in Egypt circa 731/1332. The work has nevertheless had a certain vogue among orientalists, who have published or translated fragments from it: De Guignes, A. Hylander (Lund 1824), C. J. Torrens, in Les manuscrits arabes de Paris 1921, 28, no. 80; 115, no. 340; Brockelmann, Geschichte der Schriftsteller, no. 412; it has been printed in Cairo several times since 1276.

However, there remain two problems: the first is the name of this Ibn al-Warḍī, who, according to al-Zirīkī, was called Ibn al-Wurḍī; the second is the real authorship of the Kharīda, which is also attributed to Zakīn al-Dīn al-Warḍī [see next article] and to Ṣūfīn al-Dīn Āḥmad b. Ṣūfīn al-Walīd al-Sulṭānī in a Vatican manuscript.

Bibliography: Ibn Iyās, Badī‘ al-nāhīr, ii, 60; Brockelmann, II, 132-2, S II, 162-3; F. Bustānī, DM, iv, 137; Zirīkī, A‘lam, x. (ED.)

IBN AL-WARΔ, IBN AL-DIN ĀḤMAD HĀFS ‘UMAR B. MUṣAFFAR B. ‘UMAR B. ABī ‘L-FAWARĪS MUḤ. B. ‘ALĪ AL-WARDĪ AL-KURĀSHI AL-BAKRĪ AL-SHAFI‘I, Shā‘īfī al-ṣabīlī, philologist, man of letters, historian and poet, born at Maarrat al-Nu‘mān (he has also the nizāb al-Maarrat); 689 or 691/1290-1292, died of plague in Aleppo on 27 Dhū ‘l-Hijādī 749/18 March 1349.

He was educated in his native town, then at Hamāt, Damascus and Aleppo; he seems to have held for a time the office of deputy to the bāḍis of Mandīj and of Aleppo, but, as the result of a dream, he abandoned this career to devote himself to his literary work.

He is the author of the following works: a Dī‘imī including poems, maḥkāmāt, epistles, discourses, a risāla on the plague, etc. (published in Istanbul by Fāris al-Shidyāk, in the Madī‘mat al-Dī‘imī, in 1300); Lāmīyyat (or Nāshīrāt or Wasiyāt) al-īkhwān as-muḥkharāt wa-muṣāfin al-khillān, a moral poem of 77 verses in the rāmāl metre, long a classic (ed. Cairo 1302 with commentary by Mas‘īd b. Ḥasan al-Kunāwī; in C. J. David, Tansib al-adab, Mosul 1863; also al-Siyawwānī, Naḥīf al-Yaman; Fr. tr. in R1, 1900; with the text, he collected in 1896 [see next article]) an abridgement of the chronicle of Abu ‘l-Shamālī al-Dawwārī in 689 or 691/1290-2, died of plague in Aleppo on 27 Dhū ‘l-Hijādī 749/18 March 1349.

It is in fact a résumé of the traditional culture of the Arabs in a form which could be understood, learned and remembered by an educated Moroccan of that period: a vocabulary dealing with the desert, inherited from the early poets of the Diabiliyya—the names of its winds, its flora and fauna, its proverbs, legends, anecdotes, historical facts, famous characters (both men and women)—in short a syncretistic tapestry of adab, poetry and history. Thus the Shama’makābiyya was used as a textbook, a précis to be learned by heart in the same way as the Muwāllātāt, the dī‘imī and the maḥkāmāt, and it has formed the subject of several commentaries, the best known of which are: (1) Abu ‘l-’Abbās Ahmad b. Khālid ... al-Nāṣirī, Zahr al-adīfān min ḥadābat Ibn al-Warḍī, lith. Fez 1315; 1386; (2) Abī Hāmid al-Hādī al-Mubāhī, Muḥammad al-Makkī b. Muḥammad al-Bītāwlī al-Sharshālī al-Ḥasanī, Iḥṭīāf saḥrat al-adīfān min ḥadābat fiwāyīyat Ibn al-Warḍī, lith. Fez 1333/1393; (3) Abī Muḥammad al-‘Arabī b. Mattāshīrī, Sharḥ al-Shama’makābiyya (cf. Kattānī, Fīhirī, ii, 15); (4) Abī ‘Allāh Ḥannūn (Gunnūnī), Sharḥ al-Shama’makābiyya, Cairo 1964.

(Μ. ΗΑΔΗ-ΣΑΔΩΚ)
3. A noted family called Ibn Yacish, reputedly descended from Yakya ibn Yacish, a 6th/i2th century

4. In about 663/1264-5, Ibn Wâsîl returned to his native Hamât, where he was appointed chief hâdî but devoted little time to writing, composing there his Mukhâsir al-Akhbâr and his Bani Ayyub. His works include a detailed commentary in Arabic on Ibn Sinâ’s al-Kanân fi ‘l-jibb; an Arabic super-commentary on Abraham ibn ‘Ezra’s commentary on the Pentateuch; and a dictionary of difficult words occurring in Arabic poetry. He may also be identical with Solomon ben Abraham ibn Da’ud, who translated into Hebrew two Arabic medical works: Ibn Rushd’s Kulliyât fi’s-jibb (translation entitled Mikhâl), and Ibn Sinâ’s al-Urdius, with Ibn Rushd’s commentary.

5. In 659/August 1261, Baybars sent him an embassy to the King of Sicily, Manfred, whom he met in Barletta in southern Italy and to whom he dedicated a treatise on logic, Ta’rîkh al-Sulayhi (no. (i) below), and his successor al-Risdla al-Anbruriyya. He subsequently lived for various periods in Madrid, Florence and Paris. In 1585 he came to Salonia, where he openly returned to Judaism, and then settled in Istanbul. He hated Spain passionately, and this may have been the reason for his political activities and unsuccessful efforts to foster the development of an Anglo-Turkish entente against Spain: he had some influence at the courts of both Murâd III and Queen Elizabeth (whose physician Rodrigo Lopez was his brother-in-law). He also enjoyed considerable prestige in several other European courts, notably that of France. His diplomatic efforts played a part in nullifying Spanish attempts to secure Ottoman neutrality in the war between England and Spain, and in ensuring England’s benevolent neutrality during the successful Ottoman campaign in Hungary which culminated in the victory at Ilaç Ovası (Kerekesz) in 1503. As a reward the Sultan created him Duke of Mytilene. The grant of Tiberias, originally made to his kinsman Joseph Nasi ( João Miquez, d. 1579; see Nasi), was renewed to him, and his son Jacob (Francisco) settled there. Salomo ibn Ya’âsh died in Istanbul in 1603.

3. A noted family called Ibn Ya’âsh, reputedly descended from Ya’ây ibn Ya’âsh, a 6th/12th century

IBN YAClgH, MUWAFFAK AL-DfN ABU 'L-BAKA 3

YACISH B. CAL! B. YACISH AL-HALABI, also known as
IBN AL-SANIC, Arab grammarian, born at Aleppo
on 3 Ramadan 553/28 September 1158, died there 25
Djumada I 643/18 October 1245. He studied grammar (nahw) and tradition (liadiih) first in Aleppo,
then in 577/1181 in Mosul and finally under Abu
'1-Yumn al-Kindi in Damascus. Then he returned
to Aleppo, where he lectured on grammar and
literature until his death. Ibn Khallikan, who was
his pupil in 626-7/1229-30, gives a vivid picture
of him, and tells some anecdotes about his wit.
Other pupils of his were Yakut (i, 757, Irshdd, iii,
77 f.), Ibn Malik Djamal al-Din and al-Sharishi. Ibn
Yacish is best known for his extensive commentary
on Zamakhshari's al-Mufassal (published by G. Jahn,
Leipzig 1882-6, 2 vols.). He adheres strictly to the
doctrine of Sibawayh and the Basra school, but
discusses at length the differences between the
two schools. His style is verbose and sometimes
slovenly. For other works of his, see Brockelmann,
I, 397; S I, 521.

IBN YALLAS, MUHAMMAD AL-HADJDJ C!LAL
£
AL! B. MUHAMMAD YALLAS SHAWUSH, Sufi Shavkh
of the order of the Darkawa [q.v.]. Born in
1271/1855, he studied theology and law thoroughly
at Tlemcen, where he was initiated into tasawwuf by
Abmad b. Muhammad Dakkali. His other teachers
in Sufism were, successively, Muhammad al-Habri
(d. 1900) and Ibn al-Habib al-Buzidi (d. 1909 at
Mostaganem) with whom his fellow-pupil was Aljmad
al-cAlawi (or Ibn cAliwa [q.v.]), the founder of the
c
Alawiyya tarilia. In 1911, he emigrated to Damascus
with his disciple Muhammad al-Hashimi [q.v.], who
was to succeed him as spiritual leader of the Darkawae
Alawiyya in Syria after his death at Damascus on
n Djumada II 1346/6 December 1927. He was the
author of a Diwdn (printed at Damascus, n.d.) in
which he celebrated the beauty of Layla, the beloved
Divine Presence; his poems are still sung in Damascus
during the sessions of dhikr of the fukard*.
Bibliography: see the articles referred to
above.
(J--L MICHON)
IBN-I YAMlN, in full AMIR FAIOIR AL-DIN
MAHMUD B. AMIR YAMIN AL-DIN TUGHRA'I MusTAWF! FARYUMADI, the most important Persian poet
of fyifas (literally "fragments", i.e., epigrams or
occasional verses), born in 685/1287 in Faryumad
(in the district of Bayhak, the modern Sabzavar),
where his father was a small landowner and at
the same tune a director of finance (mustawfi), in
the service of the governor of Khurasan, Khwadia
c
Ala° al-Din Muhammad. Both occupations, it seems,
had been hereditary in the family from ancient

times (according to some, having immigrated from
Transoxania to Faryumad). Ibn-i Yamin received
the usual education (chiefly in medicine and literature) in his native town, whose culture at that time
stood at a very high level. Under the influence of
his father, who was himself a poet and who loved
his son dearly, he began at an early age to write
verses. The son even entered into a poetical contest
with his father. On his father's death (724/1323-4)
Ibn-i Yamin's peaceful life came to an end, since
he now became court poet, financial official, and
after a time mustawfl to cAla5 al-Din, and was later
granted the title of amir. He disliked the bustle of
court life, and disagreement arose between him and
his master, who moreover fell from favour and was
replaced by Tari Tagha'i (727-9/1327-29),^ tyrant,
under whom Ibn-i Yamin lost the greater part of
his estate, and was finally forced to give up also the
remainder. After spending the years 738-42/1337-41
at the court of the Ilkhan Tagha Timur in Gurgan,
he joined in 742/1341 the radical wing of the Sarbadars [q.v.]. The encounter with the Kurts at Zava
(743/*342) resulted in a severe defeat for the Sarbadars; the poet was taken prisoner and lost the diwdn
containing all that he had written until then. The
conquerors took him to Herat, where he was well
treated, so that he was able to write his poetry in
peace. In 747/1346, he returned to Sabzavar, from
whence however he was soon temporarily driven out,
by a crisis of the Sarbadars, to Adharbaydjan and
Baghdad. From 749/1348 he lived almost without
interruption in Faryumad in the "service" of the
Sarbadars, and even received a pension from them.
He occupied himself with farming and the writing of
epigrams. He died at the same place at an advanced
age in 769/1368.
Like all the inhabitants of Sabzavar, he was a
Shici, though not without hesitations. He was one of
the earliest poets to write of the imams and the
tragedy of Karbala5.
The question of the authenticity of the kulliyydt
and diwdns which appear under the name of Ibn-i
Yamin has not been satisfactorily solved. When the
diwdn written in his early years was irretrievably lost
in 743/1342, the poet made great efforts to reconstruct it. With the help of his own memory and
notes, and those of his friends, he succeeded in
producing a first redaction of the earlier collection
in 746/1346 and a second in 1356. Compared with
the edition of Sacid Nafisi with more than 5,000
couplets, the reliable MS 403 (Dorn) in the SaltlkovShc"edrin Library (Leningrad) consists of about
16,120 couplets according to Mulladianavi Shahristani (according to S. Imronov, however, only 13,387
couplets); the manuscript dates from the 9th/i5th
century and was copied from Ibn-i Yamin's texts.
There exist however several other manuscripts
which differ from this one and those related to it,
yet similarly bear the name of Ibn-i Yamin, but
which must belong to another poet, as has already
been recognized by CA. A. Dihkhuda. According to
the completely convincing arguments of S. Imronov,
this is the much later Shaykh al-shuyukh Ibn-i
Yamin Shiburghani (d. 1005/1596-7), a distinguished
Sufi of his day (cf. S. Nafisi, Tdrikh-i na?m wa nathr,
i, 587), whose diwdn is indeed entirely permeated by
mysticism.
Ibn-i Yamin's frasidas are certainly not of the
highest quality and are marred by mendicancy,
repetition and plagiarism. They are in praise of
65 rulers of minor importance, whose generosity
he praises in thinly-veiled appeals for money. On


the other hand, he is an unequalled master in *bī’ās*, "epigrams", to which after 757/1356 he applied himself almost exclusively (they are of course included with the earlier poems in the manuscripts which have now come to light). These epigrams are divided by A. R. Khekmat into autobiographical, social critical, didactic, philosophical, and other types. Particularly encouraging is his sympathy for the rural population, of whose joys and sorrows he had direct experience. His pen was guided by reason, though not without inconsistencies (such as a belief in free will and work). He sharply opposed flattery, untruthfulness, despoticism and foreign rule. He lived in an unsettled age, which is vividly reflected in his *kulliyāt*, which therefore represent a useful historical source. Ibn-i Yamn's literary heritage consists of collected poetical works, a *Kānāme* and short prose works (letters).

**IBN YŪNUS**, Abū Sa‘īd ‘Abd al-Raḥmān b. Ahmad al-Šādāfī (b. 281/894, d. Monday 26 Dū‘mād 11 547/4 September 955, which, however, was actually 24 October 955 (Tuesday), a grandson of the famous early Egyptian supporter of al-Shāfī‘ī, Yūnus b. ‘Abd al-‘Alī, and the father of the astronomer (below). He wrote on Egyptian scholars and, in a separate work, on the foreigners who came to visit or settle in Egypt. Both works were much used sources of information for later authors, but they seem not to have been preserved. Only part of a supplement by Abu ‘l-‘Aṣāṣī Mīrābī b. ‘Abī b. al-Tāhān has so far been traced in a manuscript in Damascus.

**IBN YŪNUS (or Yūnus)**, whose full name was Abū ʿl-Ḥasan Ṭābil b. Abī Sa‘īd ‘Abd al-Raḥmān b. Ahmad b. Yūnus al-Šādāfī, one of the most prominent Muslim astronomers, died in 399/1009.

Ibn Yūnus’s chief astronomical work, *al-Zīdī al-kabīr al-khābīmi* (not all of which seems to have survived), was begun ca. 380/990 and completed shortly before his death. Several long extracts have been published and translated, and it is one of the *sidīj* (sets of astronomical tables) that has been treated extensively by modern scholars. He quotes a large number of astronomical observations (eclipses and other phenomena), some made by his predecessors (many of which turn out to be erroneous), others made by himself in Cairo; they constitute the most extensive list of medieval astronomical observations presently known. Ibn Yūnus is especially careful in reporting the researches of his predecessors, and his criticisms of errors and discrepancies in their works are distinctly modern in tone.

The *sidīj* of Ibn Yūnus was analysed by Delambre on the basis of a Caussin’s publication of chapters 3-5 and an unpublished translation of most of the remaining chapters by Sédiot that has since disappeared. The observations reported by Ibn Yūnus were discussed by S. Newcomb, who was interested in their possible usefulness for determining the value of the secular acceleration of the moon. Ibn Yūnus’s original contributions to plane and spherical trigonometry have been treated by Delambre, von Braunmübl, and Schoy.

Bibliography: Some verses of Ibn (al-)Zâbîr are quoted in dictionaries and grammatical works; the most detailed notice is in the Aghâni, xiii, 33-49, = Beirut ed., iv, 211-46; see also Dîbâ, Bayân, i, 226; idem, Bukhâlā, ed. Hâdrî, 207, 380; Ibn Kutayba, ʿâshîr, index; idem, ʿUyân, ii, 186; iii, 67, 265; Ibn Sallâm, Tâdidâb, 146; Mubarrad, Kâmîl, 222, 165; Hûstâl, Zahr, 405, 474, 817; Tabârî, ii, 231, 269, 871; Masûdî, Murâdî, v, 300-7; Marzbânî, Mûḏjdîm, 244, 470; Baghdadî, Khânîma (Bûlak), i, 345; ii, 100; Ibn al-ʿÂshîr, ii, 317; iv, 30, 272, 307; Tilbrîzî, Sharh Dîwdn al-Ḥamâsa, passim; Caetani, Annali, ii, 231, 269, 871; Nallino, Letteratura, 133, 143 = Fr. tr. 205-6, 220. (ED.)

IBN ZâFîR, Aḥâb ʿAbd Âllâh (var. Abû Ḥâshîm, Abû Djaʿfar) Muḥ. b. Aḥâb Muḥ., an Arab scholar and polygonist to whom are usually ascribed the maḥâla al-Sîkîlî (often followed by the maḥâla al-Makki) and various honorific titles. According to Ibn Khallâkîn (M. Amari, Bibliotheca arabo-sicula [=B.A.S.], Leipzig 1857, 630), he was born in Sicily (in 497/1104, according to certain biographers) and brought up in Mecca; he travelled in various countries in the East and in the Magrib and, towards the end of his life, retired to Hamât where he died in 565/1170 (var. 567 and 598). But these biographical data, and in particular his origin, birth and journeys, vary considerably in the other authors mentioned in the B.A.S. In fact, according to Yâyûṭ (Ifrîkî, vii, 102), the place where he stayed during his journeys were Egypt, Ifrîkî (in al-Mahdiyya), Sicily, Egypt again, Aleppo and Hamâta. Of this author's vast output (Ibn Zafar, in the introduction of his Sulûwîn al-mutâlâ [see below], credits himself with 32 works), only four works have survived. As for the subjects treated in those of his writings which must be regarded as lost and which, according to Yâyûṭ (op. cit., 102), were destroyed in Aleppo during the struggles between Shâjis and Sunnîs, from the few that we possess it may be deduced that they were concerned with Qur'ānic exegesis, theology, fîkâ, moral philosophy, exhortation, grammar, Aristotelian logic and lexicography (several commentaries on the Maḥkâmât of al-Harîrî). The only writings to have survived are: Yanbâh al-baydî fi tašâkîr al-ḥâlîr al-bâlîm, a long unt published commentary on the Qur'ān and, in his own opinion, the best of his writings (for the MSS, see Brockelmann, i, 352, S i, 596); Khayr al-bîshir bi-khayr al-bashir (lih. Cairo 1280/1863) on the predictions received by mankind on the subject of Muhammad's prophetic mission; Arabî nudjâbâ al-ānbî (the undated Cairo ed. belongs to 1322/1904), biographies of illustrious individuals, starting with Muhammad, and various subjects of adab (see Brockelmann, i, 352, S i, 595, and also C. A. Nallino, I manoscritti arabi ... di Torino, in Mem. Acc. Scienze, 1900, 37-8); Sulûwîn al-mutâlî fi ʿulâm al-āthâr (lih. Cairo 1278/1862-3; printed Tunis 1297/1866-7, Beirut 1300/1882-3); this Fürstenspiegel, drawn up on the model of Kailla wa-Dimna, and of which Italian, English and Turkish translations were made, must be regarded as the author's most widely known work.

Bibliography: Brockelmann, i, 352, S i, 595; the preface to the Italian translation, by M. Amari, of the Sulûwîn, Florence 1851, 1882; on the Sulûwîn, see V. Chauvin, ii, 175-87 — M. Amari, Storia dei Musulmani di Sicilia, Catania 1933, iii, 735-57. Lastly, we must add that, in the Catalogue of MSS in the Mosque of al-Azhâr, a work (775, no. 2120 "Fišh Āmm") is attributed to Ibn Zafar, bearing the title Fisd al-ādîl al-muṣafârî (Muṣafârî?) fi l-muṣâbâdîn wa l-ʿâdâdîl, of which the author himself makes no mention in the list of his writings contained in the musâbdîma of the Sulûwîn.

(U. Rizzitano)
IBN ZAFIR— IBN ZAKUR 971

saldiu&yya may form a part (see Cl. Cahen, in Historians of the Middle East, 70), but of which the most important part is that which concerns the Fatimids: it was used by Ibn Khallikán and Wiistenfeld, but remains unpublished. The other titles mentioned are ABBâr al-shu'fâ', Aisâ d-siyâsa (or al-balâqga), Naftâs al-Dhakhîra (extracts from Ibn Bassâm?), Sâfî al-ghazlî fi dîshâm al-sâhir wa 'l-khâlî (abridged by al-Suyûtî), Man usiba mimman ismuh 'All, Makrûmât al-kutlûb.

Bibliography: Yâkût, Irjâd, v. 228 = U. von Wilamowitz, 30, 2; Ibn Shâhir, Fasâd, s.v.; Makkâri, Analectes, ii, 166, 176; Stèissheim, Protogeometra zu einer Ausgabe der Gedigitgeschichte, Leipzig 1911, 32 ff.; F. Bustânî, Dâ'drat al-mâ'ârif, iii, 322; Broekelmann, S. I, 533; Cl. Cahen, Quelques chroniques anciennes relatives aux derniers Fatimides, in BIFAO, xxvii (1937), 22 ff. (Ed.)

IBN AL-ZÂKKÂK, Abu 'l-Hasan 'Ali b. 'A'Îyvât Allah b. Mû'tarrîf b. Salâma, Andalusian poet, born at the very end of the 5th/11th century, probably at Valencia, whence his nisba of al-Balansi, although he is sometimes, probably wrongly, given that of al-Mursi (of Murcia). The little that is known of his personal life is in part contradictory; his genealogy varies according to the writer, but the most probable is that given above. It is known that his mother was the sister of the great poet Ibn Khafaja [q.v.]; the information concerning his father is confused: Ibn 'Abd al-Malîk describes him as related to the Banû 'Abdâd of Seville [see 'ABBâDID], but states that he denied this relationship when al-Mustâmid was deposed and exiled by the Almoravids (484/1091) and that he lived in Valencia, where he was the muezin of the Great Mosque. Al-Mâkârî (Analectes, ii, 196) states that he was a poor artisan and relates an anecdote in which the son plays a part and which seems to be a legend. Nor do the early writers agree about his ethnic name: some consider his nisba to be al-Lâkîmi, which implies a purely Arab origin, others refer to him as al-Bulûgîn, making him a Berber. Nor are they consistent on the name under which the poet is known, Ibn al-Zâkka or Ibn al-Dâkka.

He first studied with Ibn al-Sîd at-Balatsawîs [see al-BALATSAWES] and probably studied poetry with his uncle Ibn Khafaja. His life was short but very happy, to judge by his epitaph, which he wrote himself. He died in 528/1133 or 530/1135, before he was forty.

Ibn al-Zâkka, whose poems, collected in a diwân, “passed from hand to hand”, very soon acquired great fame, and the Arab authorities and critics, as well as modern orientalists, regard him as one of the great poets of Muslim Spain. His poetry, according to E. Garcia Gómez, imitates Ibn Khafaja, but not slavishly; it is more restrained, perhaps less brilliant, but more refined.

(F. DE LA GRANJA)
above (cf. Alami, al-Anis al-mutrib, 24; Lévi-Provençal, Chorfa, 274 and n. 2). He also studied poetry, verse, and adab, and joined the fraternity founded in Morocco by Abū `Abd Allāh Muhammad b. Naṣīr.

The method of tuition consisted often in listening to an elucidation of the same text carried out several times by the same tutor, and on occasion by several tutors. Thus, the Mukhṭasar of Khalīl was explained to him three times by Burdullu and once by Bārktu; similarly, Dīvān al-dīwānīm was explained to him by Māqāliyyah and by Bārktu. In his biographies of these poets, he knew by heart the Talkhīš al-Mīthāk, the Dīvān al-dīwānīm, the Kāfisyya and the Alīfyya of Ibn Mālik, the Mukhtar of Khalīl, the Makāmat of al-Hariri, etc., and had acquired the titles of adīb, of ḍawwāl (versed in the art of fine speaking) and of nāṣir (verifier).

According to these biographers, he was the author of sixteen works: (1) a rīhīa entitled Naṣīr asāhir al-bustān fī man adzhāzan bi l-Diwa`ara` fī Tahfīzah min fudūlah al-akhar bi l-`A`mā, Algiers 1319/1902; (2) a diwān entitled al-Rauḍ al-Sarīr fī badī al-tawaqqūth wa-munaltaka l-`Ibtid`a'; for the autograph MS, now at Rabat, see RJMA, v (1959), 189; about fifteen fragments, totalling 350 verses, are contained in his rīhīa and in `Alamī, al-Anis al-mutrib, passim; (3) al-Mu`īrī al-mubīn: annama tawfīqah al-Anis al-mutrib wa-Rawdi al-nisirin, MS. in Rabat (cf. Lévi-Provençal, Mrs. ar. de Rabat, w. 498 (2), 215) and in the library of Abu l-Diwa`ara that of al-Anis al-mutrib al-walā' al-sālih al-Maghrīb, cf. Alami, al-Anis al-mutrib, fol. 57v.; Kattāni, Salseal al-anfās, lit. Fez 1314/1906, ill. 179; RMM, xxiv, 206; R. Basset, Recherches bibliographiques sur les sources de la Salouat el-anfās, Algiers 1903, 13, no. 18; Muḥ. al-Sā`īb, al-Munḥashādi `al-`abkarrīyya, 58; E. Lévi-Provençal, Les histoires de chevaux, Paris 1924, p. 213, 2; Ibn al-Hāy al-Kattāni, Fihrist, 1314/1927, i, 130; Brockelmann, i, 26, 51, 54, 545, S 11, 684; `Abd al-Wahhāb b. Manṣūr, al-Diwa`ara` fī rīhīya Abī `Abd Allāh b. Zākūr, in al-Basa`ar, no. 348, of 6 January 1956, 2, no. 350 of 20 January 1956, 5, no. 351 of 27 January 1956, 2, no. 354 of 17 February 1956, 2; `Abd Allāh Kamūn (= Gennūn), al-Munḥashādi min shīr Ibn Zākur, Cairo 1942; idem, al-Munḥashādi fī tadabdar al-`arab, Beirut 1963, 17 (M. Ḥady-Sadok).

IBN ZAMRAK, ABŪ `ABD ALLĀH MUHAMMAD B. YŪSUF B. MUHAMMAD B. AHMAD B. MUHAMMAD B. YŪSUF AL-SURAYVI, known as Ibn Zamrak (or Zumruk), Andalusian poet and statesman, born at Granada in 733/1333. Although he was of humble origin, he devoted himself to study and received his education from famous masters, notably al-Shārfī al-Gharnāṭī and Ibn al-Khāṭīb. Thanks to the active patronage of the latter, the young poet obtained a post in the government administration of Granada. In 760/1359, when Muhammad V was deposed and welcomed at Fez by the Marinid sultan Abū Sālim, Ibn al-Khāṭīb and Ibn Zamrak followed him into exile. During this period, Ibn Zamrak pursued his studies, took part in the festivities at the court and, on occasion, wrote poetry. When, after various vicissitudes, Muhammad V returned to Granada (763/1362), he appointed him private secretary (kātib sirrīh) by a zāhir which was drawn up by Ibn Khāṭīb himself. During the following years, he often filled the rôle of court poet. In 773/1371-2, Ibn al-Khāṭīb, who until then had assisted the Naṣīrī ruler in carrying out the complicated policy of Caliph of the Almoravides in the three Andalusian cities of Cordoba, Seville, and Toledo, was dismissed. Thanks to the special favour of the landlord, the young poet was retained in Morocco (which was in a state of chaos following the assassination of Abū Sālim in 762/1361), defected and joined the Marinid sultan `Abd al-`Azīz at Tlemcen; it was then that Ibn Zamrak succeeded his teacher and patron in the post of chief minister. Ibn al-Khāṭīb, arrested in Fez, had to appear before a court of enquiry in Granada presided over by Ibn Zamrak, where he was accused of heresy, subjected to torture, and finally put to death in prison. At this stage there was no criticism of Ibn Zamrak, who continued to fulfil his duties as chief minister and court poet. But after the death of Muhammad V (793/1391), his son and successor, Yūsūf II, dismissed Ibn Zamrak and imprisoned him for nearly two years in the citadel of Almeria; restored again to office, the poet-minister was once again dismissed by the same ruler, who, as we have seen, was replaced by Muhammad b. `Aṣīm. He was re-appointed in 795/1393, but shortly afterwards, at a date not known, was assassinated on the sultan's orders.

The Dīvān of Ibn Zamrak has not been preserved, but a considerable number of poems, collected by Ibn al-Khāṭīb and reproduced by al-Maḳārī, have survived: they consist of elegies, panegyrics, and congratulations written on the occasion of religious
festivals or of important events at the court. In some of his poems there can be traced the undoubted plagiarism from him. In the panegyrics, the descriptive themes of the verses in which he celebrates the beauty of Granada and its gardens and palaces are of particular interest; some of these verses are still permanently preserved since they form a part of the decoration of the walls of the Alhambra.

The character of Ibn Zamrak provides the central theme in the novel by the Egyptian writer and teacher Subhayr al-Kalamawi entitled Tsamaa' gharabat al-ajsam (Cairo 1949).

Bibliography: The fundamental study of E. García Gómez, Ibn Zamrak, el poeta de la Alhambra, in Cinco poetas musulmanes, Madrid—Buenos Aires 1944, 169-271, has been used as a basis for this article. To the sources mentioned in it there should be added: Maakhir, Aš'ar al-r̄iyādi, Cairo 1359/1940, ii, 7-206; Ahmad Bābā, Nāyi al-lābīkādī in the margins of the Dīdān of Ibn Farbūn, Cairo 1351, 282-3; ibn al-Khatīb, al-K̄atiba al-kāmina, ed. Ibnsān 'Abbās, Beirut 1955, 282-8. The mawlidīyyāt of Ibn Zamrak have been studied by A. Salmi, in Hesprēs, iii (1956), 335-435, passim. (F. DE LA GRANJA)

IBN AL-ZARKALI [see AL-ZARKALI] and IBN AL-ZARRALA, 'Abd al-Rahmān b. Muḥammad b. 'Abd al-Raḥmān b. 'Alī b. 'Abd al-Malik b. Zaydān b. Ismā'īl (the last named was the famous 'Alawīd sultan who died in 1410/1727). Moroccan official and historian, born in Rabī' II 1290/ June 1873 in the imperial palace at Meknēs. He received a thorough education from the best teachers, first in his native town and then at Fez, in the mosque of al-Karawīyīn. In 1324/1906, he succeeded his father in the office of nakīb [q.v.], an ancestor the sultan Mawlay Isma'il. He died on 16 November 1946 and was buried at Meknēs in the burial chamber (tiyārīh) of the great ancestor of the sultan Mawlay Ismā'īl.

Ibn Zaydūn's works, though of great importance, are still not all published. They may be considered as the best source not only for the history of Meknēs, but also for that of the 'Alawīd dynasty. Ibn Zaydūn thoroughly appreciated the importance of sources and he succeeded in building up a large library (with a catalogue) containing a considerable number of manuscripts and archive documents. In particular, his official position enabled him to acquire and to publish some hundreds of sakīras [q.v.]. All his works are written in a clear language and set out in a very modern manner with plans, reproductions, portraits and, above all, with very complete indexes, which make them valuable and practical reference works. Among those published so far, or about to be published, may be mentioned: (1) Thāf al-ʾīlam al-nās bi-durr al-ṭarātayn, 4 vols., Rabat 1944-57; (2) qīṣās bi-Fāṣ al-ākhir, Rabat 1937; contains new facts and documents on the beginnings, at Fez, of the 'Alawīd dynasty. (3) al-ʾIzz wa l-ʾawla fi maʿālim nāṣm al-dawla, 2 vols., Rabat (Royal Press) 1961-2; through the documents here published and annotated, this constitutes an excellent source on the functioning and the life of the sultan's palace and on the mechanism of the Moroccan government. (4) al-Manāhīgī al-sawīyya fi maʿālīm mulūk al-dawla al-salāwīyya, 2 vols., to be published at the Royal Press, Rabat. Among the unpublished works is a dīwān of poems written in honour of the birth of the Prophet (mawlidīyyāt).

IBN ZAYDÔN—IBN AL-ZAYYÃT

al-Mustakfi. This poetess was not without talent but was incurably flirtatious and caused both happiness and unhappiness to Ibn Zaydûn, who wrote on the subject of her favours and her inconstancy the sincerest of all his poetic works. Her deception went even further, since it seems certain that Ibn Zaydûn’s enemy, Ibn ‘Abdûs, intrigued against him through jealousy; and then, when Ibn Zaydûn had gone away, Wallâda easily found consolation with his rival.

Ibn Zaydûn’s poetry fits admirably the description of “neo-classical”, so much so that he was given the name of “the western Buhtûrî”. Although his diwân contains a number of short occasional poems, it contains many of perfectly classical structure. The genre which he cultivates the most is probably panegyric, dedicated to one or other of his successive masters. The enmity with which he was surrounded inspired him in addition to write virulent satirical poems. Among the most moving poems are some elegies, notably those which lamented the death of the mother of Abu ‘l-Walîd Ibn Dîjahwar and the daughter of al-Mu’tâdîd.

But the most personal poems are of course those concerning his affair with Wallâda. Critics have not failed to point out the particularly languishing and plaintive character of his love poetry, as well as of the numerous poems in which he celebrated the enchanted scenes of his love. It is moreover in these poems that he appears most typically western. Some have thought to see in this languor an influence of the Christian milieu; it is more likely that they reflect the influence of the locality, and merely crystallize a general tendency of the poetry of his period.

There should be mentioned also the existence in this work of a strophic poetry of mušāyâbah type, as well as a whole series of poetical enigmas in which there appears a symbolism on the names of birds (mušâyârât). Although Ibn Zaydûn cannot be denied a certain talent in the expression of emotion, and notably of his passion for Wallâda and for his country, it must be admitted that this talent is not adequate to deal with solemn šâydâs, in which his writing remains stilted and conventional; his panegyrics remain heavy use of contrived styles. The short poems, on the other hand, give an impression of improvisation and real originality.

In addition to his diwân, Ibn Zaydûn wrote a number of epistles, the two most famous of which are the Risâla kašûfiyya, in which he puts into the mouth of Wallâda a satire on his rival Ibn ‘Abdûs (commentary by Ibn Nabûtâ—a. 768/1366—Šârî al-‘ayûn fi šarîK Risâlât Ibn Zaydûn), and the Risâla dîjdiyya, addressed from his prison to Abu ‘l-Wâlid Ibn Dîjahwar. The epistles of Ibn Zaydûn continue the tradition begun by al-Dîjahîz in his Tarîbî, and carried on among others by al-Khuwârizmî, al-Tawhîdî and al-Ḫâmâshînî.

It appears that these rasîs had more success in the East than his poems, whose originality was questioned there.

IBN ZAYLÂ, ABû MANŠûR AL-HUṢAYN B. MUḤAMMAD B. ‘UMAR B. ZAYLÂ (according to Brockelmann, I, 458, and B. Tâhîr B. Zaylât al-Iṣfâhânî in S I, 829), died, while still young, in 440/A.D. 848. A pupil of Ibn Sinâ and a member of his immediate circle, he wrote a commentary on the poetry of Ibn ‘Abî Yâsîn al-Râṣîdî (q.e., what he calls MS BM Or. 928(3)) and the greater part of which he translated to accompany his edition of this brief work (Traités mystiques, fasc. i, 1889). Mehrcen mentions also a Hebrew translation of this commentary published by D. Kaufmann, Berlin 1886. Ibn Zaylât is quoted also by H. Corbin in Avicenne et le Rêve visionnaire, ii, 148 and 150-4, and often quoted and discussed by A. M. Goichon in Le Rêve de l’Hâyâ Ibn Yâsîn commenté par des textes d’Avicenne (see index). Ibn Abî Uṣâybî (ji, 19) lists among the works of Ibn Sinâ a Kitâb Tu’tâlîth, A Book of glosses, or of notes which his pupil Abû Manşûr b. Zaylât had written down according to his instructions. It was to his questions and to those of Bahmanîr that Ibn Sinâ replied in his Mubâḥâtât (Brockelmann, S I, 827). A mathematician and an excellent musician, Ibn Zaylât wrote al-Kitât al-hâfî fi ‘l-muṣâbîth (“What should be known about music”), published in Cairo in 1964 by Sâkariyya. Yûsûf, with an introduction giving also (p. 2) references to the other authors who have mentioned Ibn Zaylât: al-Bayhâki, Ta’rîkh hukamât al-Islâm, no. 50, 99-100; Ḥâdîdî Khâlîfî, i, 862; al-Zirîkîl, ʾAlâm, ii, 278; U. al-Khâlîfî, Muṣâlîm al-mu’dâlîfîn, iv, 13; Ḥâdîdî Ṭûlân, Tu’rîkh al-ʾArâb al-ʾiṣfâhânî, 3rd. ed., 400; H. G. Farmer, A history of Arabian music, 220. In addition to his better known works, Ibn Zaylât wrote also an abridged version of the sections on the natural sciences in the Şîfâ of Ibn Sinâ, a book on the soul, and various letters.

Bibliography: In the article.

(A.-M. Goichon)

IBN AL-ZAYYÂT, MUḤAMMAD B. ‘ABD AL-MALîK, vizier of the ‘Abbâsid period. Belonging to a family of scribes and famous for his intellectual interests, Ibn al-Zayyât attracted attention for his qualities as a secretary and a man of letters, was appointed vizier by the caliph al-Mu’tasîm in about 221/833, and, with the chief hâdi Ibn Abî Du’âd, contributed to the direction of the general policy of the empire.

Remaining vizier during the caliphate of al-Wâlîk (227-32/842-7), he encouraged the caliph to impose heavy fines on several secretaries, in particular on the assistants of two Turkish leaders who were taking over important governorships in the provinces, and he acquired an unpleasant notoriety by inflicting on the culprit a particularly cruel torture, that of the tannur, an iron cylinder with spikes inside it. He quarrelled with the chief hâdi Ibn Abî Du’âd, apparently merely for reasons of personal rivalry, and it is not known what part he played in the prosecution of the miḥâba.

Although the caliph al-Mutawakkil retained him in his service when he came to power, this was only temporary: some weeks later, in Safâr 233/September-October 847, he dismissed him and inflicted on him the torture which he himself had invented. Ibn al-Zayyât died soon afterwards. During his vizierate he had tried in vain to restrain the influence of the Turkish leaders, and left behind mainly a reputation for harshness and cruelty.

(D. SOURDEL)

Ibn al-Zayyat, Abu Yacub 'Abd al-Rahman, Moroccan man of letters and jurist, known and esteemed as a hagiographer, who lived and died at Marrakush and in the region surrounding it. He was one of the companions of the famous Moroccan saint Abu l-Abbâs al-Sabti (524-601/1130-1204). He died in 628 or 629/1230-1 when he was bâdi of the Reşgâra. His body is said to have been transported to Marrâkûsh and buried in the kubba of Sidi Muhammad al-Farrân and Sidi Muhammad al-MadhûÎ (d. 560/1164), Fatrra the râjî of the town, near to the gate known as Bâb al-Qhamis.

Ibn al-Zayyat al-Tâdidî was himself as devout as the saintly personages whose fiorettî he collected in the famous hagiographical collection al-Tashawwuf ilâ rîdigîl al-tasawwuf (ed. A. Faure, Rabat 1958). Completed in 617/1221, this valuable compilation of lives of saints is, together with al-Minhâj al-wadih (c. 1130) of Ibn al-Madúsî and the Ums al-âfhârî of Ibn Kandhîd al-Kusântînî, the earliest source on the religious history of Morocco. The Tashawwuf is devoted to the saints (sâlihûn) who lived or stayed in Marrakûsh or in southern Morocco between the 5th/11th and the beginning of the 7th/13th centuries. Ibn al-Zayyat is thought to have written a second such collection covering all the holy men of the country, but of this no trace has been found. There do, however, exist copies of the very interesting notice he wrote on the victory of the Meccans at Ulûd in poems, two of which are given together with the rejoinders of Hassân b. Thâbit by Ibn Ishâk (Ibn Hishâm, 616 f. and 619 f., cf. also 636). Another poem (given by Ibn Hishâm, 703-5, together with the rejoinders of Hassân b. Thâbit and Ka'b b. Mâlik) refers to the campaign of the "trench" (al-khandaq). When the Prophet had signed at Hudaybiya the treaty with the Meccans, Uqra b. Abî Tâmî, the deputy, invited the "Ka'b, 'Abd al-Azîz, and Kâhilî b. al-Walid went to him and embraced Islam. Uthmân was, like 'Amr b. al-Azîz, a clansman of Ibn al-Zibâra, who blamed him in a poem (Ibn Hishâm, 718). To the period between Hudaybiya and the fall of Mecca belong some verses against the Meccan Mawâbîr b. Rabîh, who had attacked Sulayhî b. 'Amr in connexion with the case of Abû Basîr (see Ibn Hishâm, 751 f., and Wâlî al-Dîn al-Maârî, ed. A. Faure, Rabat 1957, 81-2). When the Prophet had conquered Mecca, ordered the execution of some persons who had harmed him by their poems and songs (Ibn Hishâm, 819, Ibn al-Zibâra fled with Hubayrî b. Abî Wahhîb to Nağrân, and returned only after Hassân b. Thâbit had assured him of the Prophet's clemency. The authenticity of the poem which he addressed to Muhammad on this occasion is (according to Ibn Hishâm, 828) uncertain. Other verses ascribed to him cannot be dated; e.g., the verses in which he praises Khuwaylî b. Wahhâb al-Dumâabi (44âhî, vii, 114), an ancestor of Abû Dhâbah (q.v.). Then we are told that he wrote on the hangings of the Ka'b some verses derogatory to the Kuraysh; the Banû Sahm were forced to hand him over to the Kuraysh, who punished him and set him free only after he had composed an oâf quoted poem in honour of Kusayy (Âyân, Zhawâidh, iv, 149; Ibn Hishâm, ii, 25, etc.); but some verses of this poem occur also in a poem of Muthrûd b. Ka'b (al-Sharîf al-Murtadâ, Amâlî, iv, 179; cf. also Ya'qûbî, i, 282). He criticized the Kuraysh on another occasion (Dumâabi, 57; 44âhî, iv, 140; Sulayhî, Rawî, i, 94) probably because they were unwilling to risk their profits by fighting against Muhammad. Sometimes verses of other poets are ascribed to him, e.g., the verses on the case of Abû Basîr (see Ibn Hishâm, 705 and 44âhî, xv, 29, 21); and Umayyâ b. Abî 'l-Sa'î (see Ibn Hishâm, 705 and 44âhî, xv, 29, 21); and Umayyâ b. Abî 'l-Salîm, noted poet ( Cf. Ibn Hishâm, 718, and Umayyâ b. Abî 'l-Salîm, noted poet). On the other hand, verses of Ibn al-Zibâra were ascribed to other poets, e.g., his poem in praise of the Banû Khâlid bint Arkâm (see al-Muhammad, Mâta'āba lafuw, ed. A. Mennor, Cairo 1350, 27, with the editor's footnote). Other verses (44âhî, i, 52; 64) show that he even satirized the patronage of Abû Bakr, the grandfather, and 'Abd Allâh, the father of the poet 'Umar b. 'Abd Allâh b. Abî Rabî'a. He also praised the Banû al-Mughrîs b. 'Abd Allâh b. 'Umar b. Mâjhâm, the strongest family within the powerful Banû Makjûm (al-Djâbis, Bayânî, i, 46, 20); for his connexion with this family, see also Ibn Hādjâr, Isbâkî, i, 149, s.v. Busr b. Sufyân). In the other poems which refer to the fights between the Meccans and the Muslims, our poet never hints at religious or ideological differences, but considers these fights only as the outcome of troubles between clans of the same tribe. He is proud of his own clan and extols its virtues. The new religion did not change his attitude; for the last information about him is that he and Dîrâr b. al-Khattâb al-Fihri visited in

Ibn al-Zibâra was sent along with 'Amr b. al-Azîz [q.v.], Hubayrî b. Abî Wahhîb and Abî 'Azâz, who also had satirized the Prophet, to the Banû 'Abd Manât and other confederates to ask them for assistance. Most of them (Wâlî al-Dîn al-Mardjûsî, i, 149) who blamed him in a poem (Ibn Hishâm, 718). To the period between Hudaybiya and the fall of Mecca belong some verses against the Meccan Mawâbîr b. Rabîh, who had attacked Sulayhî b. 'Amr in connexion with the case of Abû Basîr (see Ibn Hishâm, 751 f., and Wâlî al-Dîn al-Mardjûsî, ed. A. Faure, Rabat 1957, 81-2). When the Prophet had conquered Mecca, ordered the execution of some persons who had harmed him by their poems and songs (Ibn Hishâm, 819, Ibn al-Zibâra fled with Hubayrî b. Abî Wahhîb to Nağrân, and returned only after Hassân b. Thâbit had assured him of the Prophet's clemency. The authenticity of the poem which he addressed to Muhammad on this occasion is (according to Ibn Hishâm, 828) uncertain. Other verses ascribed to him cannot be dated; e.g., the verses in which he praises Khuwaylî b. Wahhâb al-Dumâabi (44âhî, vii, 114), an ancestor of Abû Dhâbah (q.v.). Then we are told that he wrote on the hangings of the Ka'b some verses derogatory to the Kuraysh; the Banû Sahm were forced to hand him over to the Kuraysh, who punished him and set him free only after he had composed an oath quoted poem in honour of Kusayy (Âyân, Zhawâidh, iv, 149; Ibn Hishâm, ii, 25, etc.); but some verses of this poem occur also in a poem of Muthrûd b. Ka'b (al-Sharîf al-Murtadâ, Amâlî, iv, 179; cf. also Ya'qûbî, i, 282). He criticized the Kuraysh on another occasion (Dumâabi, 57; 44âhî, iv, 140; Sulayhî, Rawî, i, 94) probably because they were unwilling to risk their profits by fighting against Muhammad. Sometimes verses of other poets are ascribed to him, e.g., the verses on the case of Abû Basîr (see Ibn Hishâm, 705 and 44âhî, xv, 29, 21); and Umayyâ b. Abî 'l-Sa'î (see Ibn Hishâm, 718, and Umayyâ b. Abî 'l-Salîm, noted poet). On the other hand, verses of Ibn al-Zibâra were ascribed to other poets, e.g., his poem in praise of the Banû Khâlid bint Arkâm (see al-Muhammad, Mâta'āba lafuw, ed. A. Mennor, Cairo 1350, 27, with the editor's footnote). Other verses (44âhî, i, 52; 64) show that he even satirized the patronage of Abû Bakr, the grandfather, and 'Abd Allâh, the father of the poet 'Umar b. 'Abd Allâh b. Abî Rabî'a. He also praised the Banû al-Mughrîs b. 'Abd Allâh b. 'Umar b. Mâjhâm, the strongest family within the powerful Banû Makjûm (al-Djâbis, Bayânî, i, 46, 20); for his connexion with this family, see also Ibn Hâdjâr, Isbâkî, i, 149, s.v. Busr b. Sufyân). In the other poems which refer to the fights between the Meccans and the Muslims, our poet never hints at religious or ideological differences, but considers these fights only as the outcome of troubles between clans of the same tribe. He is proud of his own clan and extols its virtues. The new religion did not change his attitude; for the last information about him is that he and Dîrâr b. al-Khattâb al-Fihri visited in
the reign of 'Umar their old rival 'Abdusa b. Thabit and irritated him by reciting the poems they had composed in old days against him, but had then to leave the latter's recital (Agha', iv, 140; Dhu-mahli, 60). It was just this clannishness which gave his verses an actuality even long after his death. His poems against the Banu Hashim were still popular with the Umayyads, and Yazid b. Mu'awiyah recited one of these poems when he was told that Medina had been taken by his troops (Qisaari [Guirgass], 277; Ibn 'Abd Rabbih, ii, 316, ii, 235, with additional verses in which the caliph addresses himself). Even in the story was mentioned in an edict amongst the sins of his days in Granada, respected by all the inhabitants, and visited by Abu Bakr ibn Mufawwaz and Said bin Abii Usaybi, who was reigning there at that instance he forbade hot baths (ya'fin al-adudim) they had a poisonous action. He left a number of works whose titles are mentioned by his biographers: "they are Andalusian biographies of the 6th and 3rd centuries, and in the article; consult also Bibliography: Brockelmann, i, 141, s. 215; Sezgin, i, 727; Yaqut, iii, 218-20; Dhibahli, Tabaddal al-huffaz, tabaha S, no. 124; there is a full exhibition to Shakhir's edition. (J. F. P. Hopkins)

IBN AL-ZUBAYR, ABU 'DJA'AFAR AHMAD b. IBRAHIM b. AL-ZUBAYR b. MUHAMMAD AL-'ASIMI, Andalusian traditionalist, reader of the Kuran, man of letters and historian, born at Jafar (Qayyam) in Ibn 'l-Ka'ada 629/September-October 1230, d. Granada on 8 Rabii' I 708/26 August 1308. He seems to have been particularly interested in Kuranic readings, but his biographers speak very highly of his knowledge of the Arabic language and describe him as "the muba'dadh of al-Andalus and of the Maghrib." His propensity for redressing wrongs got him into trouble in his native town, then at Malaga, whither he had had to flee; his action against a sorcerer called Ibrahim al-Fa'asari, who had a strong influence over the local authorities, obliged him to leave the town and go to Granada where he is said to have succeeded in having condemned to death the magician, who had been given a mission to carry out by the ruler of Malaga. He was at first received with honour by the amir of Granada, but later had some disagreements with him. Then his situation improved and he was probably able to devote himself freely to his teaching activities, while holding the offices of khalif and of imam at the Great Mosque, and of kadi in charge of marriages. He ended his days in Granada, respected by all the inhabitants. He left a number of works whose titles are mentioned by his biographers: Milad al-ta'wil fi 'il-muqaddib al-la'di fi l-Tanzil, al-Burhan fi i'tirab suwar al-Qur'an, al-l'Am bi-man khitam bi-h al-shuyal al-anadulasi min al-a'dum, K, al-Zaman wa l-malaham, Radd al-dhijah min vi'sah al-madjahahil, a Mu'jam, a tawil, on the Kudad of Sibawayh and finally, the only one which has in part survived, the Silat al-Sila, a continuation of the Tahmila of Ibn Ba'ghkwval [q.v.], the last part of which was published by E. Levi-Provenal, at Rabat in 1937; this work contains Andalusian biographies of the 6th and 7th/12th and 13th centuries. Bibliography: Introd. to the ed. by Levi-Provenal; Ibn al-Khatib, Itaha, i, 72; Ibn Farhun, Dhibal, Fez ed., 57; Ibn al-Kadi, Durrat al-Hijjajli, ed. Allouche, Rabat 1934-6, no. 8; Dhibahl, Huffaz, iv, 275; Ibn Ha'dar, Durar, l, 84-8, no. 232; Sayyuti, Bugaza, 126-7; Hadjiji Khalifa, i, 363, ii, 115, v, 646; Dowzi, De Abdaladis, ii, 166; Pons Boigues, Ensaya, no. 288; Brockelmann, s. II, 376-7; DM, ii, 132. (CH. PELLAT)

IBN AL-ZUBAYR, ABU 'ABD ALLAH AL-ZUBAYR b. BAKKAR... b. AL-ZUBAYR, B. AL-'ASIMI, Andalusian traditionalist, reader of the Kuran; he was appointed kadi of Mecca and died there in 256/870. Over 30 titles of works by him are quoted but of them only two are extant: al-Munafa'fihiyati, a collection of anecdotes compiled for Muwaffak, son of the Caliph Mutawakkil, and the celebrated [Diwan] Nazar's Kuraysh was written in 1306 and of its fame the second half only of Nasar Kuraysh has survived (ed. Ma'bud M. Shakir, Cairo 1381/1961). Bibliography: Brockelmann, i, 141, s. 215; Sezgin, i, 727; Yaqut, iii, 218-20; Dhibahl, Tabaddal al-huffaz, tabaha S, no. 124; there is a full exhibition to Shakhir's edition. (J. F. P. Hopkins)

IBN AL-ZUBAYR [see 'ABD ALLAH B. AL-ZUBAYR; MUS'AB B. AL-ZUBAYR].

IBN ZUHR, patronymic of a family of scholars who came originally from Arabia (Iyad) and settled, at the beginning of the 4th/10th century, at Daju Shattiba (Jattiba) in the east of Spain. Ibn Khalilikhan says of the members of this family that they were "all 'ilamad, ru'asid, bukhamad" and vintiers who reached high ranks in the entourages of princes. I. ZUHR AL-IVADI was the father of Marwan, who was the father of Abi Bakr Mu'ammad, who was famous as a juristconsult; he died at Talabira (Talaver) in 422/1030-1.

II. ABU MARWAN 'ABD AL-MALIK B. MUHAMMAD B. MARWAN B. ZUHR B. BAKKAR... B. AL-ZUBAYR. He was well versed in the Kuranic sciences and in fijah, following in this the example of his father. His own interests were in the study of the different types of sciences. He left for the East with the intention of performing the Pilgrimage, went to Kayrawan, and then to Cairo, where he spent a long time studying medicine. Ibn Khalilikanikhan relates a slightly different itinerary, stating that he went first as far as Baghdad and stopped on the way back in Egypt and at Kayrawan. Ibn al-Abbair says that he became a famous and excellent physician. Returning to his native country, he settled at Denuya (Denia), where he was welcomed by Muidjndi [q.v.], who was reigning there at that time. His fame spread to all the provinces in the peninsula. Ibn Abii Usaybija relates that he held unorthodox opinions (dar'a shahhdha) in medicine, for instance he forbade hot baths (hammaid) because they had a poisonous action (ya'fin al-adudim) and because they interfered with the composition of the humours. He died at Denia, according to Ibn al-Abbair and Ibn Khalilikanikhan, at Seville, according to Ibn Abii Usaybija, in about 470/1078 as Ibn al-Abbair surmises.

III. ABU 'L-'AZL 'ZUHR B. 'ABD AL-MALIK B. MUHAMMAD, son of the above; generally known by the mediaeval western scholars by his kunya only: Abouali, Abouli, Abulile, or followed by Zuhr: Aboelilezor, Abulelizor, Albuleizor. (1) Life. Born in Seville, he went to Cordova where he met Abii 'Ali al-Ghassani, who taught in the Great Mosque and who advised him to study the science of hadith with Abii Bakr ibn Muwaffaz and Abii Dja'far ibn 'Abd al-'Aziz. He "heard" (sama's) from Abii Mu'mammad 'Abd Allah b. Ayyub the reading of that category of hadiths which have been transmitted by the guarantors in a chain and with "a
touching of hands" (al-hadith al-musalsal fi 'l-akhd bi 'l-yad). This means that he received in the subject the most thorough education. Many scholars, before taking up one of the natural sciences or philosophy, began with a serious study of the religious sciences. Abu l-'Alā was also distinguished in belles lettres (adab). He was in correspondence with al-Ījārī, the author of the Mahāmāt. But he had a predilection for medicine. While still quite young, during the reign of al-Mu'taḍid, the 'Abbadid ruler of Seville (433/1042-68), he had studied this art which he learned from his father. He became famous in it and "eclipsed all who had preceded him with the breadth of his knowledge of it and with the wisdom he showed in making use of it, so much so that the people of the Magrib made him and his family, in this matter, a subject of boasting" (Ibn al-Abbār). Al-Mu'tamid Ibn 'Abbāb gave his patronage to Abu l-'Alā, who was always grateful to him for this, although he supported the Almoravid Yūsuf b. Tāshfin (who became master of the country in 484/1091). It is not clear whether he was Yūsuf's vizier. Wüstfeld says so (Geschichte, 89-90), but the biographers are silent on this precise point. They mention only that he took part in the administration of public affairs at an exceptionally high level. The manuscript of the Tadhkira gives him this title of sazir (so that the western writers called him Alguazir Albuleizor). Abu l-'Alā died at Cordova in 525/1130, from a nāggha, "a senile wart turned malignant" (G. Colin. Ibn Abī Usayyib, that tells us that the name given in Spain to a dūbya, which, according to Dozy, is "an ulcer, the pus of which is ichorous in whatever part of the body it appears"#, and which G. Colin, who distinguishes it from a nāggha, identifies with a gastric ulcer, while H. Jähner (in his translation of Ibn Abī Usayyib, Algiers 1958), translates it as "phlegmon gangrénieux" without questioning the assimilation of the two terms). Abu l-'Alā was buried in Seville.

(2) Works. Ibn Abī Usayyib mentions 9 works by him. Two are devoted to medical observations (mudājarrāb). The others are: "The book of the properties of drugs" (K. al-Kitābiyyāt); "The book of simple medicaments" (K. al-Adwiyya al-mufradāt); the "Explanation through witnesses of the libel" (K. al-Idāk bi-iḥṣasāt al-istīḥād) against Ibn Riddīn (cf. Ibn al-Abbar, no. 1717. The reason for this disgrace is not known, but Abu l-'Alā, having read it, found fault with it and put it aside to use the margins for writing out his prescriptions. G. Colin rightly points out that though he may not have agreed with Avicenna on every point yet he did not consider him entirely worthless, so that he took the trouble to refute his book on simple medicaments.

In the Tadhkira the practitioner's ideal is seen more clearly. Unlike the physicians of his time, whom he accuses of using medicine with insufficient precautions, he counsels prudence (ḥazm) in treatment. In the field of medicine based on the humours and on therapeutics based on the qualities of the remedies (cold, hot, dry and wet) and on their degrees, he shows the error of attempting to restore the equilibrium of the temperament by administering the remedy in too great a dose and thus setting off a reaction in the opposite direction. The corrective strength of the medication must be in proportion to the pathogenic tendency (bi-hādir ḥašah al-mayl). "How often have doctors helped on the causes of death!" he exclaims. From this arises his basic principle in treating a patient: it is necessary, so to speak, to try on the patient the simple or composite remedy, using it at first "at the beginning of the lowest degree" (fi sawā'il al-darraqj al-ūlā). Then, according to the results obtained, the physician will gradually increase its strength. It is wrong to hurry, even if one is certain of not making a mistake. As for the medicaments themselves, care should be taken to mix them with substances which are capable on the one hand of conveying them to the diseased organs, and on the other hand of correcting any harmful side-effects which they may have. These practical recommendations based the progress of the medical art on the precise observation of the effects of a treatment prudently administered, and thus experimental, which is in itself already a positive method.

IV. ABū MARWĀN 'ABD AL-MA'LĪK B. ABī L-'ALĀ ZUHR, son of the above, usually referred to under the name of Abū Marwān Ibn Zuhr (the Abhommor Avenzoar of the mediaeval West). He was born in Seville. His biographers do not give his date of birth but, from various indications, G. Colin places it in about 484-7/1092-5. He died at Seville in 557/1161.

(1) Life. He was taught medicine by his father and excelled in it an early age. He had received also a solid literary and juridical education. He does not seem to have travelled to the East, but he certainly went to North Africa. He was in the service of the Almoravid dynasty and received wealth and honours from these rulers. It was for one of these, Abū 'l-Abbar, that he wrote the Kitāb al-Iḥtiṣād (Ibn al-Abbār gives it as K. al-Iḥtiṣād), a title which G. Colin corrected), completed in 515/1121. In 535/1140, he was in prison at Marrākush, the town being in the power of Ibāhīm's brother, 'Ali b. Yūsuf b. Tāshfin (cf. Ibn al-Abbār, no. 1771). The reason for this disgrace is not known, but Abū Marwān, in his Taysīr, refers to this ruler as "the
wretched 'Ali', and in his "Book of foods" he mentions "the time of suffering which I was forced to endure by the order of kub al-Mansur [q.v.]". During the Almohad period, 'Abd al-Mu'min took him into his personal service and "had confidence in him in medical matters" (Ibn Abi Usaybi'a). He was appointed vizier. Ibn Rushd [q.v.] became his friend (but was not his pupil) and it seems that they studied some subjects together and collaborated to a certain extent. Abu Marwan died from the same disease as his father. An anecdote (given by Ibn Abi Usaybi'a) relates that when Abu Marwan predicted to a colleague named al-Far that he would die of convulsions (shandjī) because he ate too many figs, the other replied that he would die of a nagha because he did not eat enough of them. Both prognostications proved correct.

(2) Works. According to Ibn Abi Usaybi'a, Abu Marwan wrote six works: the Taysir fi 'l-muddawdāt wa 'l-ādārīr ("Practical manual of treatments and diets"), followed by a formulary, the Ḍārūmā; K. al-Aghdhiya ("Book of foods"); K. al-Zīna ("Book of embellishment"), written for his son Abū Bakr, on purgatives; Mahālia fi 'sīlah al-kutulā ("Treatise on diseases of the kidneys"); Risāla fi vīllatay al-barāz wa 'l-bahāk (letter to a doctor in Seville on white leprosy, or vitiligo, and pityriasis); Tadhkira, for his son Abū Bakr (G. Colin thinks that Ibn Abi Usaybi'a must have attributed this work to Abu Marwan in error, when it was really by Abu 'l-Āką). To this list should be added the K. al-Iktisād fi ḍārūm al-awrām wa 'l-ādārīr mentioned by Ibn al-Abbar. Of these six works there have survived the K. al-Iktisād, which dates from 515/1121; the Taysir, written between 1121 and 1162; and the "Book of foods" (between 1130 and 1162).

The first is an "abridged summary" (dīnna muḥkam-taṣara) which combines "the methods of therapeutics (ṭōb) and of prophylaxis (rubāa)". It was intended to be read in public before the ruler, and was therefore divided into equal sections of medium length (iḥtiṣād is the term for this type of division), in the same way as the Kurān is divided for the same purpose; since the Kurān has thirty of these sections, Abu Marwan's work was intended to consist of the same number, but only half of them (15) have survived. It begins with a general introduction, in which the author points out that between ḍārūm and iḥtiṣād, and between the medicine of the body and the medicine of the soul. There follows the enumeration of the three souls: the rational, in the brain; the animal, in the heart; the natural, in the liver. The two last are normally subordinated to the first. Then Avenzoar reviews the treatments of the different organs, beginning with the tongue, since it is thanks to it that man is able to praise God. The description of the diseases takes second place to the details of therapeutical measures.

The Taysir begins, after an introduction which includes some "recettes cabalistiques" (G. Colin), with a descriptive study of ailments and their treatment. It follows approximately an order which had become traditional, starting with the head and ending with the feet. But the plan is very flexible. Following his father, Abu Marwan stresses the value of exercise. His observations lead him to some original views: a description of mediastinal tumours (al-awrām alaṣṣī ṭakāḏuḥu fi 'l-ghishā waḥšīm al-saḍ al-ṣilām), book i, 16, ch. VI); of pericardial abscesses (awrām ghishā bi-ḥāl, book i, 12, ch. VII), which he was the first to describe. Also interesting are the chapters on intestinal oestions (talqī), paralysis of the pharynx, and inflammation of the middle ear. He was one of the first to recommend tracheotomy, and artificial feeding via the oesophagus for the rectum. He reports cases of ringworm caused by marsh vapours. His study of scabies should also be mentioned. He described the agent of this disease (sarcopotes scabiei), and he was among the first, though not actually the first, to do so: as has been pointed out by G. Sarton, he was preceded in this by Abmad al-Ṭabari (second half of the 10th/11th century); cf. the German translation of some passages from the K. al-Mu'dāfra al-bubšafīyya al-Ṭabari, written by Muhammad Rihār, in Archiv für Geschichte des Medizins, xix (1927), 134 and Isti, 5, 119.

The K. al-Aghdhiya deals with the various diets, with condiments, culinary preparations, and drinks. It also covers medicaments (and it is here that we find what G. Colin refers to as cabalistic medicine), as well as rules of hygiene (cf. Renaud, in Hespéris, xii).

(3) As a physician. Ibn Abi Usaybi'a relates several anecdotes intended to illustrate Abu Marwan's skill and perspicacity. He succeeded in administering a purgative to 'Abd al-Mu'min, who was averse to this treatment, by making him eat some grapes picked from a vine which the skillful doctor had watered with water mixed with purgative drugs. On another occasion, he cured a man who had an enormous belly and had intestinal trouble by pointing out that he drank water from a ewer of doubtful cleanliness: he broke the ewer and there was seen to emerge from it a frog which had slid in and grown fat there and was the cause of the illness. Ibn Rushd wrote in his Colloqet that for anyone wishing to study the treatises on therapeutics (kanānīgh), the best of all is the Taysir, which he had asked his friend to compile and which he had transcribed. While praising the Taysir only for its practical application, Ibn Rushd underlines, perhaps unwittingly but nevertheless very clearly, the type of medicine practised by Avenzoar, which was less a general science (on this point Avenzoar is not original and reproduces the system of Galen) than a very practical art of healing. Finally it should be mentioned that Abu Marwan, as an article of faith and perhaps also through conviction, seems to adhere to the Aḥāri doctrine that secondary causes are not necessary but only for the sake of God's will. He himself, stricken by the malady from which he was to die and urged by his son to try new remedies, declared: "If God wished to change this my bodily frame, He will not give me power to use remedies other than those which will carry out His decree and His will".

B. ZUHR AL-HAFDIR ("the grandson"), son of the above; born Seville in 504/1110-11 (or 507), d. 595/1198-9. He learned the Kurān by heart, and studied traditions and Arabic language and literature. He had read with 'Abd al-Malik al-Bāḏji the Mudawwana of Saḥnūn on the doctrine of Malik and the Musnad of Ibn Abi Şayba. He was outstanding in everything. He received his medical education from his father and in his turn distinguished himself in the practice of this art. He was also a poet, famous for his muwashshāhāt. He practised archery and played chess. Ibn Abi Usaybi'a describes him as a man of physical, moral and intellectual accomplishments. He enjoyed the confidence of the caliph Ya'kūb al-Mansūr who summoned him to Africa as his personal physician. When this ruler decided to have all books of logic and philosophy destroyed, he put Abū Bakr in charge of this operation, allowing him as an
exception to retain the works which were his own personal property. Abu Bakr carried this out faithfully. But Ibn Abi Usaybi'ā, who relates the matter, probably wishing to illustrate the spirit in which the great physician performed this, gives immediately afterwards an anecdote which may be summarized thus: Abū Bakr had discovered two of his students in the possession of a book of logic; he was angry and confiscated the book. But later, when he had completed the medical education of the two students, he directed them to study carefully the book which they had previously read, and it was only when he returned to them their book of logic, with the remark: "Now you are equipped to read this book and others like it!"

The vizier Abū Zayd ʿAbd al-Rahmān b. Yūqān, a jealous and spiteful man, had him poisoned. He was mourned by the caliph.

Abū Bakr had been above all a practising physician. He did however write a treatise on ophthalmology. Ibn Abi Usaybi'ā and Ibn Khallikān have preserved a number of his poems, for which he had been as famous as for his medical skill.

VI. ʿAbd al-Muḥammad ʿAbd Allāh b. al-Ḥāfīd, son of the above, born at Seville in 577/1181-2, and died of poison at Salé in 602/1205-6, at the age of twenty-five. His body was later taken to Seville and buried beside his ancestors at the Gate of Victory. He had learned medicine from his father and he too had been initiated into the secrets of medical practice. Also with his father, he had studied the Kitāb al-Nabāt of Abū Hanifa al-Dinawari. He was attached to the service of the caliph al-Nāṣir b. al-Mānsūr. On his death, he left two sons, who both lived at Seville. The younger, Abū IʿAlī Muḥammad, studied the works of Galen.

IBN ZULAK (or ZAWLAK), ʿAbd al-Muḥammad al-Ḥasan b. Ibrāhīm . . . al-Laythy, born 306/919, died 386/996, Egyptian historian, the author of a number of biographical, historical and topographical works on Egypt in the time of the Ikhshidids and early Fātimids. These works, though almost entirely lost, undoubtly a good deal of subsequent historiography relating to this period. He is said to have written continuations of the works of al-Kindī [q.v.] on the governors and judges of Egypt, a book on the Māḥāna [t.v.] family of officials, and others on the ruins of the Ikhshid, Kāfūr, al-Muʿizz and, according to some, al-Azīz. A biography of Dīwarrār, mentioned in an Ismāʿīlī bibliography, is probably, as Ivanov suggests, an extract from the book on al-Muʿizz. These works are quoted extensively by Makrizī, both in the Kitāb and the Iltāwī by Ibn Saʿd, by Ibn Ḥāǧīr in his Rajī al-ʿalār (1, Cairo 1957, 2), and by other later authors. A manuscript biography of the Egyptian grammian Muhammad b. Mūsā al-Kindī al-Ṣayrafi [see IBN-AL-SAYRAFI], preserved in the Egyptian library, is ascribed to him (Cairo catalogue, v, 1348/1930, 14).

IBN ZURĀ, ʿAbd al-Iṣāb b. ʿIsāk b. Zūrā, Jacobite Christian philosopher, apostolic and translator, born at Baghdad in ʿIlī b. Ḵuzayla 311/August 924, d. on 6 Shaʿbān 398/16 April 1008 (the respective dates of 376/987 and 448/1056 given by Ibn ʿAbdāl ʿAbdār b. ʿAbdī should not be accepted, since Ibn Zūrā is mentioned by Ibn al-Nadīm (circa 377/987), and Ibn ʿAbdāl ʿAbdī himself speaks of his relations with ʿYaḥyā b. ʿAdī, d. 364/975). He studied literature, physics, mathematics and then philosophy under the direction of ʿYaḥyā b. ʿAdī [q.v.]; he seems also to have studied medicine, since Ibn Abi Usaybi'ā includes him among the famous physicians. Nevertheless he was forced to earn his living by engaging in commercial activities and trading in particular with Byzantium, which, in the opinion of Abū Hāyyān al-Tawhīdī, hindered greatly his philosophical work. Furthermore, his competitors denounced him to the authorities, accusing him of secret intrigues with Byzantium, so that he was arrested and sentenced, and his possessions were confiscated. These disasters ruined his already poor health and hastened his death.

Ibn Zūrā translated or abridged, probably from the Syriac, several works of Aristotle and in particular the Historia Animalium; he is, because of this, esteemed as a translator. However, his fame is based on a number of treatises on philosophy, theology and of apologetics, which are mostly lost.

Of the list of his works given by Ibn al-Nadīm and in the Vatican (113, 123, 127, 135): Replies to twelve other questions by the above; to the five questions of Abu Hakim Yusuf al-Buhayri; a should not be accepted, since it appears that there has survived only one translation (the Sophistical Refutations of Aristotle, Sufisfikd, ms. Paris, ar. 2346; see A. Badawi, Manṭak Aristi, iii, 737-1016), and ten or so treatises. Four of these have been published by P. Sbath (Vingt traités philosophiques et apologétiques d'auteurs arabes chrétiens du IXe au XIVe siècle, Cairo 1929); a treatise on the intellect (68-75); a letter to a Muslim friend on the existence of God (6-19); a refutation of the Awdāl al-adilla fī ʿṣāl al-dīn of Abu ʿl-Kāsim ʿAbd Allāh b. Ahmad al-Balkhī (52-8); the Risāla ʿl-Yahudi Bishr b. Fīnūs (19-52). Six others exist in manuscript, especially in Paris (BN 132, 173, 174) and in the Vatican (113, 123, 127, 135). Replies to the five questions of Abu Hakim Yusuf al-Buhayri; Replies to twelve other questions by the above; Treatise on union; a defence of the Jacobite doctrine; Questions concerning the attitude of the body during prayer, concerning vows, fasting and almsgiving; a Treatise in which he defends those who devote themselves to logic and philosophy. It should be stated that the attribution of these works to Ibn Zurā is not absolutely certain; at least two other texts have been falsely attributed to him: the
The study shows that Ibn Zur'a follows in general his teacher, Yahyâ b. 'Adî, but departs from him on points of detail, makes great use of Aristotelian logic, of Platonic or Plotinian doctrine, of the Bible and of the Fathers of the Church, in order to present, in a fairly heavy style, a cool but scholarly and rational apologetic, which only rarely has recourse to argumentum ad hominem.

IBO [see Nigeria].

IBRÂHîM, the ABRAHAM of the Bible, plays in Islamic religious history an important role as the founder or reformer of the monotheistic Ka'bah cult. He is mentioned, in greater or less detail, in 25 sûras of the Qur'ân. Moses is the only Biblical character who is mentioned more frequently, though this does not mean that Abraham is considered second to him in importance.

In two sûras, which are to be dated from the first Meccan period, there is a reference to the "leaves, scrolls" (sujiuf) of Abraham and Moses, by which presumably texts of revelation are meant (LXXXVII, 18f.; LI, 71, 96f.). In the latter passage Abraham is indicated as "who paid his debt in full". In a whole series of sûras of the second and third Meccan period it is related how Abraham attacked the idol-worship of his father (named 'Azâr in sûra VI, 74) and his people and advocated belief in one single God (XCVII, 83-98; XCVI, 69-89; XIX, 41-50; XLIII, 26-8; XX, 51-73; XIX, 16-27; VI, 74-64). Moreover, in one passage, Abraham is expressively designated of Hebron, the alleged burial place of Abraham, as al-Khallâ (founded by Moses) and introduces the Hidjra that Muhammad, on the occasion of his controversy with the Jews, pronounced the Old Testament patriarch a hânîf [q.v.] and the first Muslim, and maintained that he, together with Ishmael, the ancestor of the Arabs, built the Ka'bah and introduced the ceremonies of the Pilgrimage. Abraham — always according to Snouck Hurgronje — became the religion of pure monotheism already propagated by Abraham, priority over both Judaism (founded by Moses) and Christianity (founded by Jesus).

This thesis of Snouck Hurgronje became more widely known through a supplement which A. J. Weensinck added to the article IBRâHîM in the Encyclopaedia Biblica and provoked contradiction and denial, especially from Muslims. In the Arabic translation of EII these criticisms were expressed in a detailed commentary on the article IBRÂHîM. Some non-Muslims as well expressed doubts about Snouck Hurgronje's reasoning and conclusions. They were criticized by Youakim Moubarac, a pupil of Louis Massignon, in a special work (1958), in an attempt to mediate between Islam and Christianity; his criticism however went too far. More moderate and scientifically better grounded is the opinion of Edmund Beck (in Le Muston, lv, 1952). Snouck Hurgronje's reasoning has indeed certain weaknesses. In three sûras which are attributed to the third Meccan period (XIV, XVI, VI) there is already anticipated the role of Abraham which is characteristic of the Medinan period: In XCV, 35-41; XIV, 35-41; VI, 74-84. In one place, Isaiah is mentioned alone (XCVII, 112f., see above); in five places he is mentioned together with Jacob, who in this connexion appears as another son of Abraham and not as his grandson (XIX, 49; XXI 72; XXIX, 27; VI, 84; XI, 71; cf. XCVIII, 45-7; XII, 6, 38). On the occasions when the name of Ishmael is mentioned too, it appears without any reference to the person and history of Abra-
regarding these passages as later, Medinan, interpolations. This is however a rather questionable method. But even if it is granted that he is right on this point (the individual rācās are admittedly often made up of passages from different periods), it must be admitted that already long before the Hījirah Muhammad had esteemed Abraham as the champion of a pure monotheistic faith, so that in the period following the Hījirah it was not an entirely new function which was attributed to him. E. Beck summarizes the results of his reflections on this as follows: "Abraham had been connected with Abraham already in the Meccan period, before associating Ishmael with this patriarch. (2) Also the conception implied by the term millūt Ibrāhīm did not arise exclusively from the polemic with Jews (and Christians) which took place there and there have not removed the divergences which exist between the opinions of Muslims and non-Muslims over the figure of Abraham as presented in the Kurān. The former consider that Abraham actually was in Mecca and, together with Ishmael, built the Kaʿba there and spread the pure monotheistic faith. Non-Muslims regard this merely as a religious legend. At the present stage of the dialogue there can be no reconciliation of the two points of view.

In the statements collected above on the history of Abraham as presented in the Kurān there have been indicated only the most important themes. There are many details which could be mentioned. Among these are the rescue of Abraham from the fire into which his heathen compatriots had thrown him (XXVII, 97; XXI, 68-70; XXIX, 24); his intercession on behalf of his pagan father (XXIX, 47; XXVI, 86; LX, 4-6; IX, 114); his quarrel with the autocratic king (Nimrod, II, 258); the killing of the four birds (II, 260; cf. Genesis, xv, 9 f.); much more material exists in the commentaries on the Kurān, the histories of the prophets (Kīsās al-anbiyāʾ) and works of universal history. It is in part borrowed from Jewish sources and may for the most part be termed scholarly or pseudo-scholarly edifying supplementation. Episodes which are described with excessively fantastic details are the arguments between the believer Abraham and the pagan king Nimrod, the story of the sacrifice of Abraham's son, which was averted at the last minute (on which there remains disagreement on whether the son was Isaac or Ishmael), and the sojourn in Mecca of Hagar and Ishmael. In some cases the Islamic legend of Abraham has even influenced the later Jewish tradition. There is no need to go further into these byways here, particularly since Grumach, Bousset, Snouck Hurgronje, and Schüttinger have already dealt with them exhaustively (see bibl.). It may be mentioned in passing that the Biblical name of Abraham's father (Ṭbrāh) is correctly transmitted in the above-mentioned secondary literature (Ṭbrāh), whereas in the Kurān (VI, 74) he is called Āzar. (On this name, see J. Horowitz, Koranische Untersuchungen, Berlin and Leipzig 1926, 85 f.)

Ibrāhīm I b. al-ʿAqlab b. ʿSaḥ al-Ṣaḥāb (184-96/800-12), founder of the Ifriqiyan dynasty of the Aghlabids, was a Tāmirī of the clan of the Saʿd b. Zayd Maḥāt. This clan, as a result of the Muslim conquests, had settled at a very early date in Khūrāsān, where they were especially enemies of the Muhallabids, whom Ibrāhīm was later to encounter again in Egypt and then in Ifriqiya. It was thus that al-ʿAqlab, the eponymous ancestor of the Aghlabids, was born. He embraced the cause of the ʿAbbasids, of whom he was one of the most fervent supporters with Abu Muslim al-Khurāsānī. It was in their service that he fought at the battle of the Zāb (144/761), that is, the region of the Aurès mountains in the south of the present-day Constantinois. In 148/765, Ibn al-ʿAqlab was driven out by his own troops, and al-ʿAqlab replaced him at Kayrawn, beneath the walls of which he was killed during one of the numerous insurrections which continually rent the country.

His family returned towards Egypt. Ibrāhīm at this time was ten years of age. He began his education with a thorough study of the Kūfī and was one of the most brilliant pupils of al-Ṭayyū b. Saʿd (d. 795). But being descended from one of the most illustrious officers of the ʿAbbasid army, he necessarily followed the tradition of his family. He thus joined the ḡurūd of Egypt and took a fatal part in the upheavals which were disturbing the country. He took part in 174/790 in the pillage of the public treasury, taking only his exact due without anything extra, according to al-Baladīḥūrī. This action caused him to be banished by the Muhallabid
government of Egypt and obliged to live under supervision in the Zab, which was governed by another Muhallabid, i.e. by a traditional enemy of the family. In the meantime, however, he was continually disturbing Ifrikiya, Ibrahim managed to consolidate his position in the Zab, where the memory of his father was still fresh. He learned above all not to exceed the bounds of the law. Mellowed by his trials, he held himself aloof from the insurrections and, as the result of a power vacuum in the Zab (a consequence of those insurrections), he came to possess real de facto authority there. In 179/795, Harun was killed, and wise and well-meaning, Ibrahim restored law and order in the country, transformed this de facto authority into a proper investiture. Probably two years later, Ibrahim was promoted by al-Rashid, who was apparently satisfied with his services, from the rank of deputy-governor to that of governor of the Zab responsible directly to himself.

Soon a new insurrection was given him the key of Kayrawân. In Ramadân 183/October 995, Tammân, the Tammâni governor of Tuns (belonging to the clan of the Malik b. Zayd Manât, who were hostile to the Sa’d b. Zayd Manât) had driven Ibn al-‘Akkî out of Kayrawân. From the Zab, Ibrahim rushed in to restore the legitimate governor to his rights. This restoration of the status quo did not in fact receive the support of the caliphate or that of the Ifrikiyans. Therefore, for various reasons of Baghdâdi and Ifrikiyan policy, Ibrahim was invited to take the place of Ibn al-‘Akkî, and al-Rashid, in return for a favourable financial arrangement, was persuaded to confer on him the title of hereditary amir. In this way Ifrikiya acquired, peacefully and painlessly, the status of an autonomous emirate.

This easy accession to power was not, however, without difficulties for Ibrahim. He had to contend with the hostility of the fukahd* and members of the djund. He had to suffer many affronts, and use much moderation, cunning and energy in order to consolidate his régime. On his accession he built, two miles south of Kayrawân, a fortified residence, al-‘Abbâsiyya (q.v.), which, garrisoned by a strong guard of black soldiers, was to save the dynasty on more than one occasion. The first rebellion broke out (188/803), then there was another at Tripoli (189/805). But the most serious uprising was that of the djund, which was put down only with the help of reinforcements opportuneely sent by the caliph. And when Ibrahim I died (21 Shawwâl 196/July 812), his son and successor ʻAbd Allah II, who had been recalled from Tunis, succeeded to the throne from Ziyadat Allah I, was seized with panic. In fact, he easily overcame his adversaries, who did not even attempt to unite their force. He next came into conflict with the Nafusa Berbers (283-4/896-7), whose ranks were completely routed.

The despotism of Ibrahim II did not fail to provoke violent reactions. The Berbers, more exposed to it than the others, were the first to revolt (286/901-3) throughout the kingdom and were severely punished. The bodies of the victims were borne away by cartloads and thrown into common graves. Twelve years later (280/893), it was the turn of the great “feudal lords” to take up the struggle. The cause of this insurrection was the amir’s policy of subjugating powerful figures, and the most important victims were the proud warriors of the citadel of Balazma, the key to the massif of Ibn al-Tifîn, from which there began the movement which was to overthrow the Aghlabid dynasty. Ibrahim II, who at first imagined this to be a repetition of the great rebellion of the djund which had very nearly taken the throne from Ziyâdat Allâh I, was seized with panic. In fact, he easily overcame his adversaries, who did not even attempt to unite their force.

Some years later (289/902), he abdicated in favour of his son ʻAbd Allâh II, who had been recalled from Sicily, and went, surrounded by ahi al-bâsîr “perspicacious people”, and wearing the patched habit of penitent ascetics, to seek and find martyrs under the walls of Cosenza (17 Dhu’l-Ka’dâ 289/23 October 902). The amir, whose arrival spread panic throughout southern Italy, planned, it is said, nothing less than to take Byzantium by way of Rome. His reign was one of power and folly.
the growth of the illness which was consuming him, he gradually deteriorated as a ruler, and by his errors prepared the way for the triumph of the Fattahs.

Ibrâhîm, eighteenth Ottoman Sultan, was born on 12 Shawâwîl 1024/4 November 1615, the youngest son of Ahmad I [q.v.]. He spent all his early life in close confinement, in constant fear of being put to death (as four of his older brothers were); so that when Murâd IV [q.v.] died and Ibrâhîm, the sole surviving prince of the dynasty, was called to ascend the throne, only the combined persuasions of his mother Rûsûm and the Grand Vizier Kâra Mü斯塔fâ Pâsha [q.v.] induced him to emerge (16 Shawâwîl 1049/February 1640).

The capable Kâra Mü斯塔fâ remained in power for the first four years of Ibrâhîm's reign. He promoted peaceful relations with Persia and, by the treaty of Szûn (13 March 1642), renewed the peace with Austria; while in 1051/1642 Azov (Azak [q.v.]) was recovered from the Cossacks. He carried through a reform of the coinage [see SIKKA] and a new land-survey [see Tarihi; Kandîya].

During at least the first years of his reign, Ibrâhîm was capable of concerning himself with the well-being of his empire. The Grand Vizier addressed to his authority of Istanbul over refractory provincial governors (repression of the revolt of Naşûb Pâsha-žade Hüseyn Pâsha, 1053/1643). During at least the first years of his reign, Ibrâhîm was capable of concerning himself with the well-being of his empire. The Grand Vizier addressed to his authority of Istanbul over refractory provincial governors (repression of the revolt of Naşûb Pâsha-žade Hüseyn Pâsha, 1053/1643).

It was at this juncture that the seizure by Maltese corsairs of a ship carrying pilgrims to Egypt provoked the Sultan, urged on by Yûsûf, to invade Crete (Djumâddâr 6/26 January 1646). The attempt of each to win over the wayward Sultan led to the deposition of Mustafa (Shawâwîl 1055/December 1645) and to the execution of Yûsûf (Dhu '1-Hidjdja loss/January 1646).

Ibrâhîm's addiction to the women of the harem now found its culmination in his taking one of his concubines (Telli Khasseki) in legal marriage (after what he is said to have ordered the Palace of Ibrâhîm Pâsha on the Hippodrome, which was made over to the lady, to be carpeted with furs). The imposition of heavy taxes, not for the prosecution of the war but for the satisfaction of such eccentric whims, aroused increasing discontent both in the provinces (revolt of Varvar 'Ali Pâsha at Silvas, put down by Işhîr Mü斯塔fâ Pâsha [q.v.]) and in Istanbul. Various Janissary officers persuaded some members of the 'ulama to join in a plot, at first directed against the Grand Vizier Ahmed Pasha, who on 18 Ragîlab 1058/August 1648 was strangled and torn to pieces (whence his later nickname "Hezar-pâre"); and on the same day Ibrâhîm was seized and put into close confinement in the Palace, while his seven year old son Mehmedm (IV) was placed on the throne. Ten days later, however, fearing that Ibrâhîm's partisans might procure his restoration, the new Grand Vizier, Şûf Mehmed Pâsha, accompanied by the Shaykh al-Islâm (who had given a fetu-sanctioning the execution), had him strangled (28 Ragîlab 1058/August 1648).

Ibrâhîm's addiction to the women of the harem now found its culmination in his taking one of his concubines (Telli Khasseki) in legal marriage (after what he is said to have ordered the Palace of Ibrâhîm Pâsha on the Hippodrome, which was made over to the lady, to be carpeted with furs). The imposition of heavy taxes, not for the prosecution of the war but for the satisfaction of such eccentric whims, aroused increasing discontent both in the provinces (revolt of Varvar 'Ali Pâsha at Silvas, put down by Işhîr Mü斯塔fâ Pâsha [q.v.]) and in Istanbul. Ten days later, however, fearing that Ibrâhîm's partisans might procure his restoration, the new Grand Vizier, Şûf Mehmed Pâsha, accompanied by the Shaykh al-Islâm (who had given a fetu-sanctioning the execution), had him strangled (28 Ragîlab 1058/August 1648).
was thus Ḥasanid through his father and Ḥusaynid through his mother, which earned him the by-name of al-Madīq (of pure blood). He was considered as the akhāyda of the Ḥashimites (‘Alids and ‘Abbāsid) as well as of the Ḥasanids, since he enjoyed great authority after his father al-Ḥasan died during the reign of the caliph al-Walid I. Ibrāhīm’s mother, Hind bint Aḥbi ʿUbayda, before marrying the ʿAlid ʿAbd Allāh, had been the wife of ʿAbd Allāh the son of the caliph ʿAbd al-Malik; she was renowned as a poet and the sources have preserved some of her verses.

The intrigues of the ʿAlids to raise one of the members of their family to the caliphate had begun very early, during the Umayyad period. At a gathering of the Ḥashimites held at al-ʿAbwāb2, after the murder of al-Walid II [g.v.], ‘Abbāsid Allāh had got all those present (except ʿAbd Allāh b. ʿṢaḥib [g.v.,] who was at that time the most influential of the Ḥusaynids) to agree that his son Muḥammad should be recognized as claimant to the caliphate; the bayʿa had thus been given to this young man, then thirty-two years of age. After this, the two brothers Muḥammad and Ibrāhīm carried out a vigorous campaign of propaganda, travelling throughout the lands of the empire, especially the farthest east, including Sind. When the ʿAbbāsid al-Saffāb ascended the throne, the frustrated ʿAlids were forced to accept the faṭīḥ accompli, but they did not give up their plans; the two brothers continued their proselytizing in secret, changing its objective and making the ʿAbbāsids the target of their accusations. Al-Saffāb scarcely heeded their activity, but his successor al-ʿUṣūr took offence at it; as Muḥammad and Ibrāhīm had not come to meet him during the Pilgrimage of 136/754 and had not rendered homage to him, he decided, in 140/758, to imprison in a dār in Medina the aged ʿAbbāsid Allāh, and shortly afterwards some other ʿAlids; they had thus all these prisoners to Kūfah, where they were thrown into a foul dungeon. He hoped thus to lure Muḥammad and Ibrāhīm from their hiding-place, but, on the advice of their father, they did not allow themselves to be inveigled into suspending their revolutionary activities.

Al-ʿUṣūr having intensified the search, Muḥammad and Ibrāhīm decided to take action against the ʿAbbāsids and began a revolt on ʿRaḍāj b. ʿAbd Allāh (23 September 762), at Medina. For details of this action, during which he was killed on 14 Ramadān 145/6 December 762, see the article MUḤAMMAD AL-NAFS AL-ZAKIYYA. Ibrāhīm had been for some time in Baṣrah, where the movement had many supporters; Muḥammad having told him in advance of his plans, he too began a revolt (5 Ramadān 145/23 November 762); his movement at Baṣrah was more extensive and lasted longer than that at Medina. Al-ʿUṣūr, alarmed by the insurrection, had gone from Baḥdād, which he was then engaged in building, to Kūfah, in order to keep control over the inhabitants. He brought in troops from al-Ẓiqla and from Syria, resorting to stratagems to make them appear more numerous than they really were, and instructed ʿAbd al-Malik b. Mūsā [g.v.] to intercept his activities in the Hijdāj, after his victory over Muḥammad, and to march immediately with his army against Ibrāhīm. The latter, master of Baṣrah thanks to the governor there, who was in sympathy with the rebels, had seized the treasury and had sent armed bands to occupy other towns and districts (al-ʿĀwāz, some towns of Fārs, Wāṣīt). When the news of Muḥammad’s death reached Baṣrah, the rebels paid homage to Ibrāhīm, who advanced towards Kūfah, where many of his supporters urged him to go, but he gave up this plan and withdrew; then, instead of awaiting at Baṣrah an attack from ʿAbd al-Malik b. Mūsā, he went to Baḥḵumrā (1 Dhū ʿl-Kaʿaḍa 145/21 January 763), where a battle took place between the ʿAbbāsid forces and the rebels. ʿIsā’s vanguard was at first routed, but this first failure soon turned to victory for the government troops. Ibrāhīm, left alone with a few faithful followers after the majority of his supporters had been scattered, was mortally wounded, and died on 25 Dhū ʿl-Kaʿaḍa 145/14 February 765. According to the source it was ʿAbd al-Malik himself who ordered his death. He was then 47 years of age. The revolt of the two brothers had thus occupied almost the whole of the second half of the year 145.

There were several causes for the failure of the revolt: Muḥammad’s hasty decision to open his campaign of insurrection at Medina, where he could find neither the means nor the forces necessary for his enterprise; the prompt reaction of al-ʿUṣūr and the challenge offered to him of first extinguishing the revolt begun in Medina and then of attacking Baṣrah with a larger number of troops; the lack of enthusiasm of the supporters of the ʿAlids. This last point is proved by the following facts: the Medinans, taken unawares, had at first sworn homage to Muḥammad, but they turned again to the caliph at the approach of ʿIsā; the supporters from other towns did not rally either to Medina or Baṣrah; the majority of the fuḥakā2 limited themselves to giving verbal approval or to providing a contribution in money, as ʿAbd Ḥanifa is said to have done; the Kūfāns were afraid and remained inactive; the Syrians drove out Mūsā, the brother of Muḥammad and Ibrāhīm, who had been sent to govern their territory; at Wāṣīt, the supporters preferred to await the result of the conflict; before and during the battle of Baḥḵumrā, there were defections, and finally an almost general dispersal. But it may be that the reason for the ʿAlid failure is to be sought not only in these last-minute occurrences but earlier, in the situation created by the accession of the ʿAbbāsids, which the ʿAlids had not properly assessed. Both sides had based their propaganda on the merits and the religion, but the ʿAbbāsids, now in power, were in fact keeping their promises. The ʿAlids therefore were hard put to it to find motives for opposition to these new rulers. While great social, political, and to a certain extent also religious, reforms were in progress, it was unlikely that the people, who had put their confidence in the ʿAbbāsids for the solution of their problems, would take part in a struggle waged against these rulers by members of their own family in the cause of a strict legitimism—all the more since it was only the Ḥasanid branch of the ʿAlids which proposed to challenge them, the other great branch, that of the Ḥusaynids, having no intention of doing so. Another reason for the lack of enthusiasm of the Muslims in general for the Ḥasanid cause was probably the fact that on the question of the divorce of Muslim women they had not yet made up their minds. But the Ḥasanid position was either not clear or open to criticism. The sources are by no means explicit on this, but there were quarrels between Ibrāhīm and his Zaydi supporters, evidently because the latter suspected, and in fact very soon realized, that their aims were not the same as those of the Ḥasanids. The Zaydis at this period formed what was in effect a political party with social objectives
Ibrahim b. 'Abd Allah — Ibrahim b. Adham

(see L. Veccia Vaglieri, op. cit. in bibliography); thus the groups describing themselves as Zaydis who joined Ibrahim in Basra demanded as a condition of their joining the campaign that, if Muhammad and Ibrahim should die, the command should go to 'Isa, the son of the martyr Zayd b. Husayn [g.v.] ; they soon fell into disagreement with Ibrahim, and wished to put a leader of their own at the head of the rebels, renouncing this project only when they feared that al-Manṣūr would take advantage of this quarrel; they nevertheless reserved the right to receive in the presence of the sultan the objections raised on a detail of ritual, on the tactics to adopt during the battle, and on the way in which provisions and money should be requisitioned. Nevertheless some Zaydis remained with the 'Alid until the end of the battle, and, when he was wounded, bravely defended his body.

Ibrahim appears to have been more intelligent than his brother Muhammad, or so it would seem from the fact that when the founders of Mu'atizzalism, Wāsīl b. 'Aṭas and 'Amr b. Ubayd, came to Medina with a group of followers of their movement to meet the 'Alid claimant to the caliphate, 'Abd Allāh (with the agreement of his advisers) preferred that they should meet Ibrahim rather than Muhammad, since, given the intelligence of the questioners, the interview promised to be an awkward one. The Makdīl (193 f.) confirms that Ibrahim made a very good impression on them. He was better educated than his brother, if not in the religious sciences at least in the field of literature, since it is reported that he spent in hiding he boldly faced great dangers...
ever, from al-Sulami onwards this legend is found firmly rooted in the accounts of Ibrahim's life. Thus the anecdote generally associates his conversion, or repentance, with his abdication; the accounts of this may be grouped under about ten different themes, e.g. that he repented after reflecting on the utter contentment of a beggar whom he saw sitting in the shade of the palace, or that he was warned by Khidr, in the guise of a fakir, of the transitory nature of this world. The best known of the themes is also the earliest, being found in al-Kalabidj (1078) and then passed into other languages: much of the factual material was lost, while the more legendary and fanciful themes were taken over and often greatly embellished. This process can be observed in Persian, Indian and Indonesian literature on Ibrahim, which has been discussed in detail by R. A. Nicholson (1960). The richest source in Persian is Farid al-Din Attar's Taghhirat al-awliya (ed. R. A. Nicholson, London and Leiden 1905, i, 55-106); translations of relevant portions of this have been supplied by A. Pavet de Courteille, J. Hallauer, Claud Field, Banky Behari and A. J. Arberry in different publications. For an example of works in Persian composed in India see Allâh Diyâh . . . Cîshî al-'Ukhmâni (d. after 1568 AD), Siyar al-âbâd, Lucknow 1877, 29-45.

On the Arabic abridgement of the Turkish biography see W. Ahlwardt, Die Handschriften . . . zu Berlin, viii, Berlin 1896, 47-9; on the Urdu poem see Garcin de Tassy, Histoire de la littérature hindouie et hindoustanie, i, Paris 1870, 101; on the Malay version see Studies in Islam, v/1, New Delhi 1968, 7-20.

Useful compilations of data on Ibn Adham can be found in two short works: in English by R. A. Nicholson in ZA, xxvi (1912), 215-20; in H. Ritter's Das Meer der Seele, Leiden 1955 (see index); and under IBRAHIM b. ADHAM in EI. For reference to pictorial representations of this saint see W. G. Archer, Indian painting in the Punjab Hills, London 1952, 79, 83, 84, 92.

(ROLLE JONES)

IBRAHIM b. 'ALI [see al-IBRAHIM]

IBRAHIM b. 'ALI b. HASAN AL-SARKKÃ', Egyptian teacher and preacher, whose father's family came from the village of Shâbrâkhâm (formerly the markaz of Zifta, now that of Kûwaynsa in Lower Egypt). He himself was born in 1212/1799 in Cairo, where he was to spend his whole life. After he had followed the course of studies at the kutdîb and then at al-Azhar (Shâfi'i rîte) until 1234/1819, his whole career was spent as a teacher at al-Azhar. His biographers give the titles of his works and only mention his zeal for work and for reading, but in fact little is known of his life, since the history of the members of the al-Azhar in the 19th century has still to be written, and the researches of Mme. Afâl Lufti Sayyd are now only beginning to provide information on this subject. He owed his fame to his gifts as an orator, being preacher at al-Azhar Mosque for over twenty years. He preached sermons on all the customary occasions and celebrations and gave

an oration in Arabic at the ceremony of the opening of the Suez Canal (Fort Said, 16 November 1869), according to 'Abd al-Rahmân Râfî', 'Aqr Isdmî, I, 102. 'Abd al-Malik b. Mutâhid al-Muhammadiyya (lit.) is a collection of sermons for all the Fridays and feast days of the year and for some extraordinary occasions (eclipses, etc.): it has a certain interest for the study of religious feeling in the 19th century. He performed the Pilgrimage in 1263/1847. On 15 Ramadân 1280/23 February 1864 he was granted a pension of 2,020 piastres (Abdin Palace archives, notice no. 37) and died on 14 Dümâd II 1295/14 May 1881, being given a semi-official funeral.

His grandson (through his daughter) Hasan b. Muhammad al-Sâkka, born in 1265/1846, was also an 'âlim and preacher at al-Azhar. He died on 24 Dümâd I 1326/24 June 1869 and was buried near his grandfather.

IBRÂHIM B. AL-ASHTAR, son of the famous Mâlik b. al-Hârith al-Nakhâi (see AL-ASHTAR and himself a soldier attached to the 'Alîad party. It is said that he had already fought at Siffin [q.v.] in the ranks of 'Alî, but his historical importance is based on his action in support of al-Mu'âhad b. 'Abd al-'Ubayd [q.v.]. In fact he seems to have hesitated before joining the 'Alî party. He then himself took the view that it was necessary for the latter to forgo a letter which purported to be written by Muhammad ibn al-Hasanîyya to Ibrahim before the latter agreed to recognize al-Mu'âhad as the agent of 'Alî's son. Ibn al-Ashtar, whose name is mentioned together with that of the famous Âqâbâbîyya [q.v.] and not Usayyâma as might be supposed from their appeal to exact vengeance for al-Husayn b. 'Ali, is famous for the defeat which he inflicted on the Umayyad troops and for the fact that he killed with his own hand 'Abd al-Malik b. Ziyâd [q.v.] and some other important adversaries, during the battle fought at al-Dâ'izir, near al-Mu'âhad, on 10 Muharram 67/ 6 August 686; the heads of the victims were sent to al-Mu'âhad, who in his turn sent them to 'Abd al-Malik b. al-Zubayr.

After the death of al-Mu'âhad (14 Ramadân 67/3 April 687) during an attempt at a sortie, during the siege of Kufa by the troops of Mu'âshab b. al-Zubayr and in the absence of Ibn al-Ashtar (who had been sent by his leader to al-Mawilî), the Zubayridy party received the support of this brave general; in spite of the efforts of 'Abd al-Malik b. Marwân to detach him from his enemies, he remained faithful to them, and it was while fighting in the ranks of Mu'âshab that he was killed at Maskin, in Dümâd I 72/October 691, on the eve of the battle of Dayr al-Dirâhidh [q.v.]; al-Mas'ûdi wrote a striking description of the last moments of Ibn al-Ashtar, whose body, sent over to the enemy, was later burned.

Ibrahim b. al-Ashtar is sometimes confused with Abî 'Imrân Ibrahim b. Yazid b. Kays al-Nâqâhî, a fâhî and traditionist of Kufa (50-96/670-715); see Ibn Hadij, Tahdhib, s.v.

Bibliography: Tabari, index; Ibn al-Ahkâm, sub annis 67, 72; Badîkhuri, Ansâb, index; Masûdî, Maqâmât, ii, 237 (Ibrahim was a minor in 70/689); Caskel, Djemhara, tab. 264 and Register, s.v.; Agâhâni, Beirut ed., xvii, 252; Dâ'irdâ'ir al-ma'ârisî, ii, 122-3. (Ed.)

IBRÂHIM B. DHAKÂN AN-AL-HARRÂNI, vizier of the 'Abbâsid caliph al-Hâdi. The caliph, on his accession, had appointed as vizier and chamberlain the powerful al-Rabi', but he soon replaced him by Ibrahim al-Harrani, who had been his adviser when he was governor of Djûdâd. Some historians however do not give Ibrahim the title of vizier, but refer to him only as director of finance.

Ziyâd [q.v.] and some other important adversaries, during the battle fought at al-Dâ'izir, near al-Mu'âhad, on 10 Muharram 67/ 6 August 686; the heads of the victims were sent to al-Mu'âhad, who in his turn sent them to 'Abd al-Malik b. al-Zubayr.

After the death of al-Mu'âhad (14 Ramadân 67/3 April 687) during an attempt at a sortie, during the siege of Kufa by the troops of Mu'âshab b. al-Zubayr and in the absence of Ibn al-Ashtar (who had been sent by his leader to al-Mawilî), the Zubayridy party received the support of this brave general; in spite of the efforts of 'Abd al-Malik b. Marwân to detach him from his enemies, he remained faithful to them, and it was while fighting in the ranks of Mu'âshab that he was killed at Maskin, in Dümâd I 72/October 691, on the eve of the battle of Dayr al-Dirâhidh [q.v.]; al-Mas'ûdi wrote a striking description of the last moments of Ibn al-Ashtar, whose body, sent over to the enemy, was later burned.

Ibrahim b. al-Ashtar is sometimes confused with Abî 'Imrân Ibrahim b. Yazid b. Kays al-Nâqâhî, a fâhî and traditionist of Kufa (50-96/670-715); see Ibn Hadij, Tahdhib, s.v.

IBRÂHIM B. DHAKÂN AN-AL-HARRÂNI, vizier of the 'Abbâsid caliph al-Hâdi. The caliph, on his accession, had appointed as vizier and chamberlain the powerful al-Rabi', but he soon replaced him by Ibrahim al-Harrani, who had been his adviser when he was governor of Djûdâd. Some historians however do not give Ibrahim the title of vizier, but refer to him only as director of finance.

IBRĀHĪM B. SAYABA, minor poet of the second half of the 2nd/8th century who died circa 193/809. Of obscure origin and a mawla of the `Abbāsids, he held, according to Ibn al-Mu`tazz, the office of secretary to al-Mahdi but, having once been suspected of sandaka, he was dismissed and obliged to beg for a living. Like so many of his contemporaries, he led a disorganized and even dissolute life, but he was not lacking in wit, to judge by the anecdotes of which he is the hero. Ibn al-Mu`taazz writes, in the account given by the author of the Aghdhī, that he went verses of little value which Ibnbrīhīm al-Mawsili and his son Isfrāk set to music out of friendship towards him, so that he acquired a certain degree of fame and succeeded in becoming acquainted with persons in high society; he was in fact known to al-Fadl b. al-Rabil after having been on fairly intimate terms with Yāhūb b. Khālid al-Barnakī, to whom he addressed notably (it is not clear in what circumstances) an epistle of which al-Dījahīd (Bayān, iii, 215) states that all the inhabitants of Baghād at that time knew it by heart.

Bibliography: Aghdhīh, Bayān, and Bashbāhā, indexes; Dījahshīyarī, 203 (incorrectly: Ibnbrīhīm b. Shabāba); Ibn Kūtaba, `Uyūn al-`abdāb, i, 217. Ibn al-Mu`tazz, T-`Abbābīh, 36-7; Aghdhī, xi, 5-8 (Beirut ed., xii, 80-4). (Ed.)

IBRĀHĪM B. SHAHRUKH (Abu ʿL-Fath Mirzā IBRĀHĪM SULTĀN BAḤIRUD, Timūrid prince, second son of Shahrūkh [q.v., born 28 Shawwāl 796/26 August 1394. In 812/1409-10, Ibnbrīhīm was appointed governor of Balkh and Ṭukharistān up to the borders of Kabul and Badakshān, and in 817/ 1414 he was appointed governor of Fārs, a position which he held for over twenty years up to his death on 4 Shawwal 883/May 1435. In 823/1420-1, and in 832/1429, he took part in Shahrūkh’s campaigns in Aḥbarbāyjān. In 842/1441 he annexed Khorasān to the Timurid empire.

Ibnbrīhīm had two sons: Isma`īl (died ca. 835/1432), and ʿAbd Allāh, born 27 Rajab 836/19 March 1433, who, though still an infant, succeeded his father as governor of Fārs, and was later appointed governor of Samarkand.

(M. R. SAVORY)

IBRĀHĪM B. SHIRKŪH, AL-MALIK AL-MAṢūDIR NĀṢIR AL-DĪN IBRĀHĪM B. AL-MALIK AL-MUQĀDṢĪ AD-DĪN SHIRKŪH II, cousin of Sulāḥ al-Dīn (Saladin), succeeded his father Shīrkūh [q.v.], prince of Aleppo and Damascus in Baghād 867/January-February 1240. When he became master of the province of Hims, to which at that time there belonged Tadmur, Rabba and Māsīn, the pressure of the Khuwārizmīns in northern Syria was very great. When Ibnbrīhīm learned of the defeat of the Aleppo army at Buza`ī in Rabīʿ II 638/October-November 1240, he set off northwards with reinforcements of troops from Damascus. In Baghād 638/January 1242 the Khuwārizmīns marched against Aleppo but did not attack the town and, after unsuccessful attempts to encircle it, withdrew towards the east. Ibnbrīhīm overtook them and defeated them in Shāwwal 638/ April 1241; he gained further victories over them in Ẓafar 640/ August 1242 and again at the end of 641 and beginning of 642/April-June 1244. The Khuwārizmīns seem to have been driven out of Syria.

Ibnbrīhīm b. Shīrkūh became involved in the family quarrels between Sulāḥ Ayyūb of Cairo and Sulāḥ Isma`īl of Damascus. In the spring of 642/1244 hos- tileilities broke out between Cairo and Damascus; and Nāṣir Dāwūd, the Ayyūbid prince of Karak, and Ibnbrīhīm allied themselves with Sulāḥ Isma`īl, who had the support of the Knights Templar. Ibnbrīhīm went in person to ʿAkkā to ratify the agreement with the Franks. The Franks in the Pharaoh’s Egypt, on his side, acquired the services of the Khuwārizmīns, who were ready to hire themselves to whoever offered most. On 14 Dījamād I 642/18 October 1244, there took place, to the north-east of Ghazza, the battle of Harbiyya, or Forbie, at which the Franco-Syrian allies were defeated. In the following year, Sulāḥ Ayyūb laid siege to Damascus in the ʿId-Ḥidāja 643/May 1245; six months later the town capitulated and Isma`īl received Ba`albakk in compensation. The Khuwārizmīns, dissatisfied with Sulāḥ Ayyūb, in 644/1246 offered their services to Isma`īl to re-take Damascus. Ibnbrīhīm b. Shīrkūh and Nāṣir Yusuf of Aleppo, in the pay of Sulāḥ Ayyūb, then set off southwards with a large army. The Khuwārizmīns raised the siege of Damascus and moved northwards; they were defeated near the lake of Hims on 8 Muharram 644/28 May 1246. Ibnbrīhīm reached Damascus and encamped near Nayrāb, to the west of the town, where he became ill and died on 11 Ẓafar 645/28 June 1246. He is buried at Hims beside his father. His son Abu ʿL-Fath Muṣāf, succeeded him, with the titles of al-Malik al-ʿAshraf Muṭarraf al-Dawlah, and was recognized the authority of Sulāḥ Ayyūb.

Ibrahim b. al-Walid

(Ch. Pellat)

Ibrahim b. al-Walid b. 'Abd al-Malik, Abu Iskak, son of the caliph al-Walid I [q.v.] and of a slave (Suwar in al-Yaqubl, Dayrâ in al-Masudi), was appointed as wa'îl al-'ahd by his brother Yazid [q.v.] three days after the latter succeeded to the caliphate (20 Djumada II 126/9 April 744). According to al-Tabari, this appointment was made on the insistence of the Kadiyari [q.v.], who wanted to ensure an heir to the throne who would be favourable to them. When Yazid succeeded in imposing his authority in Urdunn, Ibrahim was appointed governor (amir) of this district. After the death of Yazid (7 or 19 Dhu 'l-Hijja 126/20 September or 2 October 744), who, according to an allegation made only by al-Yaqubi, was thought to have been poisoned by Ibrahim, the caliphate of the latter was recognized only in the southern part of Syria; in the north, the inhabitants of Hiims opposed the entry of his cousin, 'Abd al-'Aziz b. al-Hadidjâdî [q.v.], whom he had appointed as amir, so that he was obliged to lay siege to the town.

Earlier, on the death of al-Walid II, Marwan b. Muhammad [q.v.], the governor of Armenia and of Adharbaydjan, had gone with an army into Djazira and had received there in secret the bay'a of the inhabitants. He planned, in order to avenge the murder of al-Walid, to march against Yazid, but instead concluded a peace with the new caliph. Following this agreement, the reward for which was the governorship of the Djazira in addition to Armenia and Adharbaydjan, Marwan was preparing to return to Armenia, when the death of Yazid and Ibrahim's accession to the throne led him to continue his march. He entered Syria at the head of the junds of Djazira and Armenia to depose the new caliph. At Halab (according to Ibn al-Athir in Kinnarîn), he defeated Ibrahim's two brothers, Bishr [q.v.] and Masrur, and took them prisoner; then he raised their bay'a of the caliphate (as sons of al-Walid II) and they swore allegiance to him. The sources differ in their reports of Ibrahim's behaviour on Marwan's entry: 'Abd al-Malik, in the battle which followed at 'Ayn al-Djârr, a place near Damascus, this army suffered a crushing defeat (7 Safar 127/18 November 744) and its leader fled to Damascus. The amirs of Damascus decided to kill the two sons of al-Walid II, al-Hakam and 'Uthman, who were prisoners, because Marwan, before the battle of 'Ayn al-Djârr, had proposed to recognize their right to the caliphate (as sons of al-Walid II) and they feared that if one of them became caliph he would take revenge on the murderers of his father. After the death of these claimants to the throne, the situation had changed, and Marwan was able from then on to advance his own candidature. When he approached Damascus, the inhabitants hastened to swear allegiance to him. The sources differ in their reports of Ibrahim's behaviour on Marwan's entry into Damascus: al-Yaqubi [q.v.] states that he hastened to recognize Marwan as the new caliph (15 Safar 127/26 November 744) in Damascus itself; according to the other historians he fled to Tadmur (Palmyra) with...
Ibrahim b. Al-Walid — Ibrahim Al-Ahdab

Sulaymān b. Hīshām and it was not until some time afterwards that he asked for and obtained amān from Marwān; this earned him the by-name of al-maḥṣūd. In any case, from the time that he gave his support to Marwān, he became a member of the caliph's suite and was treated with respect. He died on the day which marked the end of the Umayyad dynasty, i.e., in the battle of the Zāb [q.v.] (11 Dhu-mādād II 132/25 January 750); it is said that his body was found among those of the fugitives who were drowned in the river. There exist also other versions: according to al-Ṭabārī, he was Ibrahim in Syria by 'Abd Allāh b. 'All [q.v.]; according to al-Masūdī, Marwān, having seized Damascus, drove Ibrahim out and later, having taken him prisoner before the battle of the Zāb, killed him and crucified his body. Al-Dinawārī states simply that Marwān killed him on the day of his entry into Damascus.

Ishāq b. Husayn, al-Maṣūrī does not list Ibrahim's reign in the series of the Umayyad caliphs, evidently because his accession to the throne had not been unanimously recognized. Indeed it must be emphasized that Ibrahim did not play an important role in the period of anarchy which followed the death of al-Walid; the sources are completely silent on him before his accession to the caliphate and they do not attribute any importance to him during his brief reign.

**Bibliography:** Tabārī, ii, 539, 1270, 1334, 1869, 1875, 1877, 1890, 1892, 1893; iii, 41 and index; Ya'qūbī, ii, 349, 402, 403; Dinawārī, al-Abhār al-tawdīl, ed. **Ibrahim b. Ya'qūb Al-Iṣrā'īlī Al-Turkūsī**, Spanish Jewish traveller, born in Tortosa, to judge by his nisba, is known for having made, circa 546/965, a long journey in western, central and eastern Europe. It is not clear why he made this tour: it has been suggested that he was trading in horses or in slaves, and it is not impossible that he was on an official intelligence mission for the Umayyad caliphate. He was Ibrahim in Spain by the fragment mentioned of an old writer, whether he cites him or not, or cites him through al-Masūdī, al-Ṭabārī, al-Maṣīḥi, al-Masūrī does not list Ibrahim's reign in the series of the Umayyad caliphs, evidently because his accession to the throne had not been unanimously recognized. Indeed it must be emphasized that Ibrahim did not play an important role in the period of anarchy which followed the death of al-Walid; the sources are completely silent on him before his accession to the caliphate and they do not attribute any importance to him during his brief reign.

**Ibrahim b. 'Abd al-Ahdab, Manaf** (died 750/1350), a distinguished representative of Arabic culture in the 19th century. After addressing the traditional studies, he became a teacher (1264-8/1848-52), and finally became a magistrate for the Slav countries of Europe, chiefly Poland, Bohemia and the Slav Obodrites of Schwerin-Meklenburg. In addition to some details on Spain: an indication either that Ibrahim's work was more than a simple account of the European journey, or that he wrote other works besides this one. Al-Kazwini has preserved, for the Slav countries, the passages concerning Poland and the "Town of Women"; he is particularly indebted to Ibrahim, whether he cites him or not, or cites him through al-Uḍhri, for a collection of notes on the towns of western and southern Europe.

The date of the original work and the quality of the fragments which survive, notably those about the Slavs, show how greatly to be regretted is the loss of so much of it. To judge by these fragments, the account of the journey must have combined direct and oral information. Most famous among passages of the former type are the description of the abbey of Fulda, that of the salt-pans of Soest, the reflections on commerce at Augsburg or at Prague, the indications of the fact that there were found as far away as Germany Sāmānī dirhams struck at Samarkand in 301-9/1214-5. The oral information naturally includes more legend, but it is nevertheless often of considerable value, as is shown by the information collected on the Bulgars or the details concerning whale-fishing off the coast of Ireland. Finally, to reverse the point of view, the work provides an excellent illustration of how the developing Europe of that period could appear to a foreign visitor.

The fragments of Ibrahim b. Ya'qūb on the Slavs have been edited and translated (into Polish and Latin with very full documentation) by T. Kowalski (see Bbīl.). A French translation of the passages on western Europe has been made by A. Miquel (see Bbīl.). A French translation of the work of the whole of M. Canard is in preparation.

in Beirut in 1276/1859. A collaborator in the revue Thamardt al-funun and an important figure in a kind of literary circle, he engaged from this time onward in an immense literary activity which produced several collections of poems, works of adab and of grammar, rasā’il, maḥāmdāt, plays, newspapers articles, etc. Part of his work seems to be lost; other works are still in manuscript, but a dozen or so have been published, in particular the Farā’id al-lā’dī fi Madima’ al-amlāh, a poetic version of the collection of proverbs by al-Maydānī (Beirut 1312/1894, 2 vols.). The list given by Brockelmann (S III, 533) is incomplete and inaccurate (in particular the Tafsil al-ṣayḥūs ... is the work of Ibrahim’s son Sa’dīd, but that of Djabbur ‘Abd al-Nūr (Da’īrat al-Ma’ārif, vii, 170-4) seems to be nearly exhaustive. Though he was overshadowed by the great names of the Nahda (q.v.), Ibrahim al-Abdāb nevertheless played a significant role because of his sound Arabic culture, which enabled him to uphold tradition while he did not prevent his following, though still tentatively, the movement of renewal which was a feature of the 19th century.

**Bibliography:** Introduction to the Farā’id al-lā’dī by the author’s two sons, Sa’dīd and Husayn; ‘Abd al-Razzāq al-Baytār, Hiliyat al-bashār fi tawākh al-karn al-ṭālith ashār, i, Damascus 1901; the bibliographical work of Zurikī, Khaliḥa, and Dāghir; the most extensive study is that mentioned above by Zīj. ‘Abd al-Nūr, who is preparing (1967), a monograph entitled al-Shaykh Ibrahim al-Abdāb. (Ed.)

**IBRĀHĪM BEY AL-KABĪR AL-MUḤAMMADI (i.e., the māmlūk of Muḥammad Bey Abu l-Dhahab) was raised to the beylicacy in 1182/1768-9; and held the appointments of amīr al-had-[d] in 1187/1773-4 and daftardār in 1189/1773-4. When Abu l-Dhahab went on campaign against Shaykh Zahir al-Umar (Muḥarram 1189/March 1775), he left Ibrahim as his deputy in command of Cairo. On his death, the ascendancy in Egypt passed to his retainers (the Muḥammadiyya) headed by Ibrahim and Murad Bey, the former becoming shaykh al-balad. The characters of the two men were strongly contrasted, Murad being headstrong, bold and ruthless, while Ibrahim was of a conciliatory but less decisive nature. Murad’s plot to assassinate Bey, which had hitherto abstained from the competition for ascendancy in Egypt, had hitherto abstained from the competition for ascendancy in Egypt, and client of the late Ali Bey. Murad, being headstrong, bold and ruthless, while Isma’īl Bey, the former becoming shaykh al-balad. The exactions of the grandees and the latter resumed the position of Shaykh Ibrahim al-Abdāb. The political situation remained unstable, since the Muḥammadiyya owed their return to a conspiracy organized by Hasan Bey al-Djuddāwī, the head of the ‘Aliwiyya (i.e., the māmlūk of ‘Ali Bey). Murad again fomented factional hostility; the ‘Aliwiyya were expelled from Cairo and proscribed (Djumādā I 1191/July 1777). Isma’īl was, however, unable to maintain himself in power. Murad and Ibrahim re-entered Cairo, and the latter resumed the position of Shaykh al-balad (Muḥarram 1192/February 1778). The political situation remained unstable, since the Muḥammadiyya owed their return to a conspiracy organized by Hasan Bey al-Djuddāwī, the head of the ‘Aliwiyya (i.e., the māmlūk of ‘Ali Bey). Murad again fomented factional hostility; the ‘Aliwiyya were expelled from Cairo and proscribed (Djumādā I 1192/June 1778). The duumvirs, however, failed to dislodge them from Upper Egypt, where they were joined by Isma’īl Bey, and in 1195/1781 Murad ceded much of the south to them. Late in 1197/1783 factional struggles among the Muḥammadiyya in Cairo culminated in open hostilities between Murad and Ibrahim. In Shawwal 1198/September 1784 Ibrahim was evicted from Cairo, and Murad assumed sole power. They were reconciled, and Ibrahim was restored as shaykh al-balad in Rabī’ II 1199/February 1785. Meanwhile the state of security and condition of agriculture in Egypt had seriously declined. The Pilgrimage caravan was ill-provisioned, and in 1198/1783-4 and 1199/1784-5 failed to visit Medina. At this point the imperial Ottoman government intervened with the despatch of an expeditionary force to Egypt under Dješā’īrī Ḥāzīn Ḥasan Pasha (q.v.), bearing a demand for arrears of tribute and dues to the Holy Cities, and a formal censure because of the failure of the Pilgrimage caravan to reach Medina. The duumvirs, after vacillation, decided on resistance (in particular the Tafsil al-ṣayḥūs ... is the work of Ibrahim’s son Sa’dīd, but that of Djabbur ‘Abd al-Nūr (Da’īrat al-Ma’ārif, vii, 170-4) seems to be nearly exhaustive. Though he was overshadowed by the great names of the Nahda (q.v.), Ibrahim al-Abdāb nevertheless played a significant role because of his sound Arabic culture, which enabled him to uphold tradition while he did not prevent his following, though still tentatively, the movement of renewal which was a feature of the 19th century.

(Ed.)

**IBRĀHĪM DERWĪSH PASHA** (1812-96), Ottoman general, was the son of a certain Ibrāhīm Aqha, one of the a’yan (q.v.) of Loča (Lovets, in Bulgaria). Entering the army as a volunteer, he was soon commissioned; he was promoted to bībāsīl in 1232/1816-7 and to mūṣīr (“general”) on 28 April 1826. He was in command of operations in Montenegro [see karađağ], and in 1865, as commander
of the Fourth Army, accompanied Ahmad Djewith Paşa [q.v.] in the pacification of the Koan area of the Taurus. After failing to prevent the spread of the revolution in the Crimea, he was dismissed. His most illustrious service was performed during the Russo-Turkish war of 1877-8, when, as commander of the army defending Lázistn, he repeatedly beat off Russian attacks and successfully held Batumi [q.v.] until the armistice—the only Ottoman general undefeated in this war. He then occupied a succession of posts: governor of Diyarbakır and of Selânîk, minister of the Grand Vizier’s Staff, the special commissioner to Egypt. He died on 22 June 1896 and is buried by the turbe of Sultan Mahmûd on Divanyolu.

(M. ÇıhâreddinTekindâğ)

**İBRAHİM EDHEM PASHA,** Ottoman Grand Vizier under the sultan Abd al-Hamîd II; born probably in Chios in 1818 (?) of Greek parents, he was bought as a slave by Khusrev Paşa [q.v.] and sent to France in 1827 to receive technical training. After graduating in Paris as a mining engineer in 1839, he returned to Istanbul and was nominated to the Şehâr-ya ‘Asheri (High Military Council) with the rank of Colonel. After serving a few years in Anatolia as chief engineer of mines, he was called to Istanbul in 1263/1847 to be appointed to the Palace army staff. Promoted *Mirasîdî* (Brigadier-general) in 1264/1848 and *Ferîk* (Lieutenant-general) three years later, he was removed from his military post in 1271/1855 owing to a palace intrigue, although maintaining his position as a member of the *Medjdî-i TanÎmidî* (Council of Reforms), to which he had been nominated in Muharram 1271/October 1854. On 26 Rabî‘ I 1273/24 November 1856 he was appointed Minister of Foreign Affairs with the rank of vizier in the cabinet of Muşîruf Reşid Paşa [q.v.]. On his dismissal on 8 Rabi‘ II 1279/25 September 1857 he returned to the *Medjdî-i TanÎmidî*. On 29 Divânîdâ I 1276/ 24 December 1859 he became Minister of *Commerce* in the cabinet of Mehmed Rûşhûd Paşa. Dismissed on 9 Muharrâm 1278/17 July 1862, he was reappointed three times to the same office in the following fifteen years. Meanwhile he served as Minister of Public Works, of Public Instruction, and of Justice, as governor of Tûrâhâ and Van, as a member of the Şehâr-ya Dâlet (*High Council of State*) etc. Appointed ambassador to Berlin on 5 Rabî‘ I 1293/31 March 1876 he remained only a few months abroad, being nominated Ottoman deputy delegate to the Conference of Constantinople which was entrusted with the settlement of the Balkan Crisis. His firm attitude at the conference won him the confidence of the Miranda and Vanzo, as a member of the Şehâr-ya Dâlet (*High Council of State*) etc. Appointed ambassador to Berlin on 5 Rabî‘ I 1293/31 March 1876 he remained only a few months abroad, being nominated Ottoman deputy delegate to the Conference of Constantinople which was entrusted with the settlement of the Balkan Crisis. His firm attitude at the conference won him the confidence of the Milošević, and was promoted to the Secretary of the Ministry of Foreign Affairs. After the Young Turk Revolution, he was appointed ambassador to Italy. This was a period of great political instability in Istanbul, marked by the formation and fall of five ministries in the first eighteen months after the revolution.

**İBRAHİM HAKKI PASHA** (1863-1978), Ottoman statesman, diplomat, and Grand Vizier (1910-11), was born in Beşiktaş. He was the son of Remzi Efendi, who had been *mutasarrîf* of Saâd in 1879 on his return from a Turcu-Russian war of 1877. Nevertheless his contribution to the modernization of Turkey is worthy of mention. The foundation of a modern printing press (*Mabûsa-i Âmirî*) near the Topkâp Palace during his period as Minister of Public Instruction in 1853 and the introduction of the decimal system of measurement into Turkey during his presidency of the Council of Public Works in 1869 are important achievements in this respect. His articles on geology published in the *Mîrîdî-i hafla* (1862) greatly helped the diffusion of Western science among the Turkish intellectuals. His sons *Othmân Hamdî* [q.v.], İsmâ‘îl Gâlib [q.v.] and Khalîl Edhem Eldem [q.v.] contributed also to the development of arts and scholarship in Turkey. (E. KURAN)

**İBRAHİM DERWÎSH PASHA**—İBRAHİM HAKKI PASHA

993
When Husayn Hilmi Paşa [q.v.] resigned on 28 December 1909, there was speculation as to who would succeed him. Hakki Paşa was amongst the candidates under consideration. He was appointed on 12 January 1910 because of his political neutrality, which made him acceptable to the Unionists as well as to the conservatives. Not being a partisan of any political group, Hakki Paşa was able to bargain with all sides and demand absolute freedom of action in forming his cabinet. One of his first acts as Grand Vizier was to appoint Mâhmut Şawkat (Şevket) Paşa—the Generalissimo who administered martial law and dominated Turkish politics—Minister of War, thus bringing him under cabinet control.

Hakki Paşa's grand vizierate of twenty months was a period of external peace. Internally, however, the conflict between the Committee of Union and Progress [see ITTİHAD WETERAKKI DJEM HARBI], Abdul Hamid, she will overlook the little things as long as she remembers the big. The incidents of his office were correspondingly numerous. Now the incidents of his office were correspondingly numerous. When Ibrahim Hakki Pasha had collected, in addition to the hadiths he had, nothing on this matter (cf. Timurwali, i, 210 and a Hanbali Biddya, i, 26; contrary to the hadith, ii, 212; and cf. Ya'qubi, Uzma, ii, 112. On his connexion with Shâfi’îm: Subkî, ʻIbâdât, i, 26; contrary opinion in Ibn Kâhir and Ya'qubi, who made him a Hanbal (Mir'ât al-qâmîn, ii, 210 and Bidâyâ, ix, 70). The Ta'âlî’îl Bâğîdîl of al-Khatîb, vi, 27, has nothing on this matter (cf. Tadhkira, ii, 162).

IBRAHIM AL-IMAM — IBRAHIM LODI

IBRAHIM AL-IMAM [see IBRAHIM B. MUHAMMAD].

IBRAHIM KHAN, the ancestor of the Ibrahim-Khanzade family, was the son of Selim II's daughter Esma'lik Sultan (d. 993/1585) by his first marriage to the Grand Vizier Sokollu Mehmed Pasha [q.v.]. According to a late tradition (Hadith al-Dawamni), i, 38), perhaps based on the misconception that the sons of princesses were not allowed to live [see Dama'd], his birth was at first concealed. He first appears as Kaptali-begi, in Mubarram 1099/September 1594. By 1099/1610 he was beg-begi of Bosna—a promotion which convinced contemporaries of his elevation to Mememehmed II's enactment that sons of princesses should not rise beyond the degree of sandjak-begi (cf. Kanan-nam-i Ali 0uthman, TOEM supp. 1330, p. 29); his appointment to this and other high governorates was, it is said, a reward for his presenting to the Sultan the property on which his father's palace in the At-Meydan stood, a site needed for the building of the Mosque of Ahmed I (Barozzi-Berchet, Relazioni, i, 151). He died after 1091/1621-2.

His descendants, the Ibrahim-Khanzade, formed, like the Ewrenoszade and the Turkhaiizade, one of the historic families of the Empire, although they never filled important positions in the state. His grandson Ali Beg is mentioned frequently by the chroniclers (Rashid, ii, 301; Hammer-Purgstall, ix, 563, no. 2696; de La Motraye, Voyages, i, 320). Towards the end of the 18th/19th century the legend arose that if the Ottoman dynasty were to die out the Ibrahim-Khanzade family would succeed and that hence the Sultans were bound to respect the life of every member of it (de La Motraye, Voyages, i, 261 f.; G. von den Driesch, Historische Nachrichten..., Nürnberg 1723, 137; D. Cantemir, The History... of the Ottoman Empire, London 1734, 107; C. W. Lüedeke, Beschreibung des Türkischen Reiches..., Leipzig 1771-8, i, 202, ii, 63). They had their residence in the suburb of Eyyub on the Golden Horn, and until recently acted as mutesville of the wakfs of their ancestor Sokollu Mehmed Pasha [Djedwed, Ta'rîkh, vi, 198].

Bibliography: besides the works cited in the text: Si'dili-i 0uthmanî, i, 99; C. White, Three years in Constantinople, ii, 307; M. Tayyib Gökiligün, art. İbrahim Han, in JA, with further details on İbrahîm’s career and other members of the family, based on references in unpublished chronicles and in Ottoman archive sources.

IBRAHIM LODI was the last of the Lodi Sultans of Delhi, who was defeated and slain on the battlefield of Bābur [q.v.] in the historic first battle of Pānpat in 933/1526. His death opens the chapter in the annals of India as it marks the end of the Dihli Sultanate [q.v.] and the beginning of the Moghul rule which was to last for more than four centuries.

The eldest son of Sikandar Lodi (reg. 924/22 November 1517, one day after his father’s death. Since he was distrustful and ungenerous, the nobles did not like the idea of Ibrahim coming to the throne but were obliged to accept him as such. In token of their displeasure they contrived to divide the kingdom into two parts and to set up Ibrahim’s younger brother Djalal Khan as the ruler of the Sharki province of Djuawnpur [q.v.]. Sensing trouble in this move of the nobles, Ibrahim took immediate steps to end this disarray and deprive Djalal Khan of his newly acquired power. Apprised of Ibrahim’s designs, Djalal Khan raised the banner of revolt but could not withstand the might of the Sultan’s army and fled to Gawâ螺lor, where he took refuge with Bâkramaghît, son of the great Mân Singh who had bravely contested with Sikandar Lodi so long. This prompted Ibrahim to attack and besiege Gawâ螺lor. However, while the siege was still in progress Djalal Khan was captured and taken to Hânsl, where he was imprisoned along with other rebellious Afghan nobles. Djalal Khan subsequently died in prison.

Suspecting disaffection on the part of the grandees of the empire, Ibrahim indulged in acts of capricious tyranny, thus alienating the sympathies of most of the experienced and loyal servants of his father and “driving them into the arms of an invader”. Two leading nobles, Mîyân Bîhâs, a former chief minister of Sultan Sikandar, and A’âm Hamûyûn Sarwânî, the ruler of Kâîlî, were put to death in prison at the instigation of the Sultan. Their fate alarmed other nobles, who began to look to their own safety. Many of them rebelled, so that chaos and anarchy reigned in the land. While the Sultan was still busy suppressing the rebellions, the Pandjâb under Dawlat Khân Lodi, son of Tâtâr Khân Lodi, also revolted; this prompted the Sultan to summon the refractory governor to Delhi. Sensing trouble, Dawlat Khan instead sent his son Dilâwir Khân to the Court; but this merely roused the anger of the Sultan, who put Dilâwir in prison for some time. There he saw many other nobles suffering torture and indignity, and having seen the small reward accorded to loyalty he apprised his father, on his return to the Pandjâb, of Ibrahim’s true designs. Convinced of the dooms that might befall him if Ibrahim continued to occupy the throne, Dawlat Khân invited Bâbur to attack India, little realizing that his act would prove a turning point in the history of the sub-continent, sounding the death-knell of the Pathan empire and ushering in the establishment of a new alien dynasty.

On learning of Bâbur’s advance Ibrahim marched out with a huge army said to number more than a million to meet the invader. The two armies met at Pânpat; Bâbur’s artillery, and his superior tactics and strategy played havoc with the enemy. Ibrahim put up a heroic resistance but was no match for the skillful and experienced Turk. He died with his crown on his head and adorned with all the insignia of royalty. He had ruled for some nine years.

After the battle Bâbur ordered his men to search for Ibrahim’s body. It was found lying amidst the local villagers, who looked upon the last Lodi Sultan as a martyr and began to venerate him as a saint. We have it on Bâbur’s testimony (cf. Bâbur-nâmâ, Eng. trans., 541, 478) that the queen-mother did not take the death of her son with good grace. Although generously treated by Bâbur, she plotted to poison him; but her plans miscarried and Bâbur was saved. The conquest of the last Lodi Sultan brought no peace for the local villagers, who looked upon the last Lodi Sultan as a martyr and began to venerate him as a saint. We have it on Bâbur’s testimony (cf. Bâbur-nâmâ, Eng. trans., 541, 478) that the queen-mother did not take the death of her son with good grace. Although generously treated by Bâbur, she plotted to poison him; but her plans miscarried and Bâbur was saved. The conquest of the last Lodi Sultan brought no peace for the local villagers, who looked upon the last Lodi Sultan as a martyr and began to venerate him as a saint. We have it on Bâbur’s testimony (cf. Bâbur-nâmâ, Eng. trans., 541, 478) that the queen-mother did not take the death of her son with good grace. IBRAHIM LODI — IBRAHIM MÜTEFERRİKA

IBRAHIM AL-MAWSİLİ, Abû Isḥāq, one of the greatest musicians and composers of the early ʿAbbāsid period, b. 125/742 in Kūfā, d. 188/804 in Baghdad. His father Māhān (a name which Ibrahim changed into Maṣūr) and his mother Dōḡhār hailed from Arḍajān in Pars, and had come in Baghdad. His father, his mother took him to her brothers, in whose care he was brought up, but he ran away because his relatives would not permit him to study music.

He went first to Mosul—hence his nisba al-Makki and Siyat and profited from Abi 'l-Dāwra patron of music. Here he met the musicians Fulayh b. Abi Ṭalib, who both later went over to Ibrahim b. Dāwra and his brother Layth, a Magian at Ubulla. Soon Ibrahim attracted the attention either of Muhammad b. Sulaymān b. ʿAll or of his brother ʿAll; shortly afterwards he was called to the court of the caliph al-Mahdī, a great patron of music. Here he met the musicians Fūlayh b. Abi Ṭalib and ʿAllāya b. ʿAllāya b. ʿAmr b. Bāna, who were both later forced to leave to Ibrahim. Ibrahim conquered himself by setting to music a poem which Abu ʿl-ʿAtībiya had composed not long before under similar circumstances. Yet Ibrahim remained all his life addicted to wine. When al-Mahdī became caliph in 165/785 he summoned Ibrahim and it was very generous to him. It is said that he received, besides his monthly remuneration of 10,000 dirhams, (Aghdnī, v, 154-58); Taʾrikh Baghādī, vi, 175-8; Fīrisṭī, 140: Ibn Khallīkān, no. 9; H. G. Farmer, History of Arab music, index; E. Neubauer, Musiker am Hofe der frühen Abbassiden, Frankfurt am Main, 1965, 182 f. (J. W. FOCK)

IBRAHIM MÜTEFERRİKA, Ottoman statesman, diplomat, founder of the first Turkish printing press, and a pioneer of reform policy, was born in Kolozsvar (Cluj) in Erdel (Transylvania) of Christian parents. His family name and his Christian name are not known. He was probably born between 1670 and 1674. So far no Ottoman source has been found which provides information on the Christian phase of his life; but on the basis of a statement made by the Catholic Hungarian nobleman Czézarnak de Saussure, who met Ibrahim in Turkey in 1732, when he was there in the company of Ferenc Rakóczı, Ibrahim is believed to have been educated at the college of Kolozsvar to become a Calvinist minister. In the light of this assumption Ibrahim has traditionally been represented as a Calvinist convert to Islam; but on the basis of the short auto-biographical account given by Ibrahim in his unpublished Risāle-i Islāmîyye (MS: Esad Ef. 1187), N. Berkes has concluded that Ibrahim was not a Calvinist but a Unitarian. Unitarianism was very strong in Transylvania at the time when Ibrahim was born. This is clearly shown by the fact that the Unitarian controlled Hüquqiy and were also supporting Transylvanian independence from the Habsburgs. With the termination of the Ottoman protection of Transylvania and of Unitarianism and the ascendency won by the Catholic church when the Habsburgs occupied Kolozsvar, the Transylvanian Unitarians were no longer allowed to study the works of Servetus and David. The belief that Ibrahim had been a Calvinist is probably due to the fact that during the years when he was a theological student the college where he studied belonged no more to the persecuted and clandestine Unitarians but had been given over to the Calvinists. Ibrahim relates in his treatise how he secretly studied anti-trinitarian texts (and possibly Servetus' Biblia Sacra) and realized that the coming of the Prophet Muhammad had been predicted in those parts of the Bible which had been purged or falsified by the upholders of the doctrine of the Trinity. He relates also how he attained hidāya, thus implying that he had been converted to Islam before he actually "turned Turk".

Cezârınak de Saussure again seems to be responsible for the origin of the traditional account of his conversion to Islam. According to this account, neither convincing in itself nor supported by any evidence coming from Ibrahim or from any other
original source, he was captured by Turkish troops during an encounter between Austrian and Turkish forces and later was sold as a slave; having fallen into the hands of a cruel master, and unable to expect that his poor relatives would ransom him, he performed turn Muslim. More probably, İbrahim fled from Habsburg rule in Transylvania and in 1691 joined the forces of Toköly Imre, who, in alliance with the Ottoman army, was fighting against the Habsburgs to procure his restoration in Transylvania. Toköly probably saw İbrahim as a liaison officer with the Turks. In fact, this remained his chief function in his subsequent career in the Turkish service.

How İbrahim acquired Ottoman and Muslim culture and whether or not he studied at the Enderûn [q.v.] is not known. But he seems to have been taken into Ottoman service and to have become a member of the bureaucracy, later receiving promotion. His Risâle-i İslâmîyye, written about ten years after his embracing Islam, is not a treatise written to defend Islam, as Karacson and others following him have claimed, but seems to have been written to prove the link between his early Unitarianism and his passage to Islam. It does not yet contain any idea of the need for reform in the Ottoman institutions, a theme to which he seems to have turned only later. On the contrary, the treatise is a passionate condemnation of Catholicism and of the temporal power of the Papacy. It also reiterates his firm belief in the eventual victory of Islam over the Catholic world, since Muhammad’s monotheistic Islam was destined to be a superior religion, whose coming was predicted by Jesus himself. The argument must have been appealing to the Ottomans, who had entered into the second phase of their struggle against the Catholic world.

İbrahim’s career in Ottoman service and his diplomatic work seem to have begun after the composition of this treatise. He was elevated to the position of permanent müfteferrika [q.v.], and became a special counsellor and envoy of the Ottoman Sultan. İbrahim seems to have abandoned his interest in religion and theology by the time he entered this service. He took part particularly in diplomatic negotiations with Prince Eugène. In 1128/1716 he served as the Ottoman commissioner with the Hungarians who were assembled in Belgrade to promote their struggle, supported by the Ottomans, for independence. In 1132/1720 he was appointed liaison officer to Prince Ferenc Rákóczi, who had come to Turkey in 1717 from France, and with French support, to wage a joint struggle against Austria. İbrahim seems to have occupied his position until Rákóczi’s death in 1735, although his function probably became merely honorary when Rákóczi’s activities came to an end following the failure of his attempts to arouse the support of the Hungarians under Habsburg rule. İbrahim continued to be sent with further diplomatic missions. In 1140/1727, when he was dispatched to the Palatinus of Kiev for negotiations in connexion with the Polish treaty; he was one of the promoters of a Turkish-French alliance against Austria and Russia during the years 1150-2/1737-9; in 1151/1738 he conducted negotiations on behalf of the Ottoman government and the anti-Austrian Hungarians for the surrender of the fortress of Orsova to the Ottoman forces. He also took an active part, together with the Comte de Bonneval [see ÅHMAD PASHA BONNEVAY] in promoting Turkish-Swedish cooperation against Russia. In 1156/1743 he was sent also to Dagestan on a diplomatic mission.

İbrahim’s fame in recent years relies less on his state service and diplomatic activities than on his major contributions to the Turkish intellectual and cultural awakening. He took a leading and active part in the attempts at reform initiated in the early part of the 12th/18th century. Following the Treaty of Passarowicz (1131/1719) the idea of introducing European military practices was born. İbrahim was probably one of those who not only promoted the idea but also supplied information which he had obtained from his observations. Very likely it was he who inspired the first memorandum given to Ahmed III arguing the necessity of military innovation and the employment of European officers to train the Ottoman army.

But the enterprise which has made his name memorable is his establishment of a Turkish printing press. The idea seems to have been in the air in 1719; and when Mehmed, known as Yirmisekiz Çelebi, was sent to France on a diplomatic mission, he is shown by French sources to have been already convinced of the necessity and the permissibility of the innovation. The Grand Vizier İbrahim Paşağa, Mehmed Çelebi, and the latter’s son Sa’dî Eldendi (later Pasha and also an envoy to France), and the Shaykh al-İslâm encouraged and supported İbrahim in opening the press and 1140/1727. In an essay entitled İlahi al-İjâba İbrahim made a plea for the enterprise with a brilliant exposition of the losses incurred by Islamic learning from the absence of the art of printing among the Muslims and of the great benefits its establishment would bring to the Muslims and to the future of the Ottoman state. He was not interested in printing theologically controversial writings and of the temporal powers of the “religious institution”. The alleged opposition to the opening of the printing press does not seem to have been motivated by religion but rather by the economic interests of copyists and calligraphers. İbrahim’s major interest in printing was still in line with his political and diplomatic career as well as with his interest in Islamic reform. The works he printed in his press were all related to secular matters, such as language, history, geography, and the natural and physical sciences [for details see MATBA A]. In addition to his pioneer work as a printer he was also an editor, a compiler, a translator, and a writer. He also prepared a number of maps, printed the majority of them, and prided himself on being a geographer and cartographer.

In 1144/1731 İbrahim wrote his Usâl al-İhâm fi nizâm al-ulum in order to show the causes of the decline of the Ottoman power in Europe before the Christian states, to describe the modern forms of government, their military methods and organization, and finally to propose ways to remove the existing aberrations of the Ottoman system and to reform them (printed Istanbul 1145/1732; Fr. tr. by Baron Reviczki, Traité de la tactique, Vienne 1769). He placed prime importance upon the use of modern sciences, particularly upon the knowledge derived from new geographical explorations and upon the importance of the use of intelligence information to be obtained about the conditions of the European nations and their military forces. If he was not the first to draw attention to the consequences of the geographical discoveries and of the encirclement of the Ottoman empire by sea power, he was certainly the first to warn the Ottoman authorities of the future consequences of the modernizing trend in
Russia under the leadership of Peter the Great. Ibrahim died in 1158/1745 and was buried in Ghiyasa.

**Bibliography:** a bibliography of the books printed at Ibrahim's press will be found under matba'a. On Ibrahim Muteferrika: Çeçen Arif, "Ibrahim Muteferrika's Printed Books," in "Libraries of the Ottoman Empire: A Selection of their Collections," ed. Ahmet Aydin (Istanbul, 1999). Muteferrika also established the first Ottoman press in 1744/1259, and his influence was instrumental in the development of modern Turkish printing. His works include a great many books, including the famous "Ibrahim's "Husn Al-Ishq," a love poem that is still popular today. Muteferrika's contributions to the arts and sciences were significant, and his legacy continues to inspire new generations of Turkish scholars and artists.

IBRAHIM PASHA, the eldest son of Muhammad ʿAll [q.v.], general, and viceroy of Egypt. He is often described as Muhammad ʿAll's "adopted" son. Amina, a relative of his foster-father, the governor (تورک) of Kavalla in Macedonia, was certainly a divorced woman when Muhammad ʿAll married her in 1787, and it cannot be denied that Muhammad ʿAll had a certain preference for his son Ṭūsūn, who died on 28 September 1816; there was certainly also a rivalry between Ibrahim and Ṭūsūn. The year of his birth is decisive, however, and this is usually given as 1789 (but occasionally also as 1786). In the older authorities like Ḫaṭārī we find no hint that he was not Muhammad ʿAll's real son. When his position in Egypt had been somewhat secured, Muhammad ʿAll in 1805 sent for his two sons Ibrahim and Ṭūsūn, and in 1809 for his wife and the younger children, Ismāʾīl and two daughters. In 1806 Ibrahim was sent with the Kapudān Paşa to Istanbul as a hostage for the tribute promised by his father; after the departure of the English fleet from Alexandria in 1807 the Porte sent him back. In 1807 Ibrahim became deßferdâr. After the great massacre of the Mamluks in 1808, Ismaʿīl was sent by his father to Upper Egypt. He drove the remnants of the Mamluks into Nubia, subdued the Bedouins, and in the following years, Ibrahim Pasha took part in training the new troops (نیزد کاک) and in preparing the expedition. Ibrahim Paşa was sent to Sinnâr as commander-in-chief, and expedited the procurement of slaves and their transmission to Egypt. Falling ill with dysentery, he returned to Cairo early in 1822 (R. Hill, ʿIyāḥ i ʿl-ṣūdān 1820-1821, London 1959, 11-12).

In the following years, Ibrahim Paşa took part in training the new troops (سپاهی شهاد) and organizing the European army trained on the European model and ample supplies of war material, at the end of July 1824. The capture of Navarino and his entry into Tripolitsa practically brought the Peninsula under his control. February to April 1826 were devoted to the siege and capture of Missolonghi. After the intervention of the Great Powers had been rejected by the Porte and Muḥammad ʿAll, the naval battle of Navarino [q.v.] took place, in which, in October 1827, the greater part of the Egyptian-Turkish fleet was destroyed by the allied fleets of Great Britain, France and Russia, and finally Muḥammad ʿAll was forced by the British Admiral Codrington, who appeared before Alexandria, to recall his son and the Egyptian troops. Ibrahim arrived in Alexandria on 10 October 1828.

In 1831 Ibrahim Paşa was entrusted by his father with the conduct of the Syrian campaign. On 1 November he arrived with his troops in Palestine. After a six months' siege he obtained the surrender of ʿAkkâ, on 27 May 1832, after previously gaining victories over the Paşa of Tripoli and Aleppo on the plain of Zar'a south of Hims. Ibrahim's subsequent march march through Syria and Asia Minor was made possible by his victories over the advance guard of the Turkish army and his capture of Aleppo at Hims on 8-9 July, over the main Turkish army under Ḥusayn Paşa in the pass of Baylān at Alexandretta (29 July), and over the Turkish army under Raṣḥīd Paşa at ʿAyn Ṭaʿār (21 December). These victories showed the superiority of the Egyptian army, Ibrahim's skill as a leader, and the cleverness of his policy of uniting the various groups in Syria under one banner by the cry of "liberation from the Turkish yoke" and of winning to his side the influential Amir Baṣḥīr ʿĪṣā ibn Ṣāḥib of Lebanon. Ibrahim Paşa advanced as far as Kūtāh-āya. There in May 1833, not without pressure from the European powers, a treaty was signed between the Porte and Muḥammad ʿAll, by which Syria and Adana were ceded to the latter. Ibrahim received from the Sultan the title of muḥaṣṣal of Adana, and his father appointed him to administer the new territory. The application of a centralized administrative and bureaucratic control, which was Muḥammad ʿAll's instrument of government in Egypt, aroused the resentment of the diverse populations of Palestine, Lebanon and Syria (cf. W. R. Polk, The opening of south Lebanon, 1793-1840, Cambridge, Mass., 1963, 106-40). Sporadic but increasingly serious armed revolts broke out, provoked particularly by Ibrahim's measures of conscription and
of impounding arms. The enhanced status of the Christians alarmed the Muslims. The intervention of the powers, whose negotiations led to the Treaty of London (7 May 1840, the Quadruple Alliance), altered the situation. Hoping for support from the French, Muhammad 'Ali rejected the demand that he should evacuate Syria as far as 'Akka and confine himself to the hereditary pashalic of Egypt. No support was given to him, and the coast of Syria and Egypt were blockaded by the allied fleets. Ibrahim was in a difficult position between the forces which they landed and the hostile people of the Lebanon, who stirred up against him. After the capture of 'Akka by the British Admiral Napier and the latter's negotiations with Muhammad 'Ali in Alexandria, the latter was forced to agree to the evacuation of Syria on 22 November 1840. On 29 December, Ibrahim left Damascus with his troops and returned to Egypt via Qehazza, sending a portion of the army home via 'Akba under Sulayman Pasha.

In the years that followed, Ibrahim Pasha was mainly concerned with the administration of Egypt. His interest in and knowledge of agriculture is praised. He was several times in Europe, sometimes visiting watering-places to improve his health. Owing to his father's senility, Ibrahim formally assumed the governorship of Egypt on 2 September 1848, having received the sultan's firman some weeks earlier. He predeceased his father, however, on 10 November 1848, and was succeeded by his nephew, 'Abbâs Hilmi I [q.v.]. Through his son Ismâ'îl (reg. 1863-79) he was the progenitor of the former khedivial and royal family of Egypt.

**Bibliography:** No full-length study of Ibrahim Pasha has yet been made, and the primary sources for his career have not been systematically investigated. These include: (A) 'Abd al-Rahmân al-Djabarti, ʿAǧīzīb al-ʿalām (1920); (B) Archival materials, especially in Cairo and Istanbul (see P. M. Holt (ed.), Political and social change in modern Egypt, London 1968, 28-51). Selections of documents have been published: (i) on the Syrian phase by Asad H. Rustum in [anon.], Hurâb 'Ibrâhîm Bâghâ al-Mâni fi Sûrây wa ʿr-ʿAmdâlî, Cairo [1927], and A corpus of Arabic documents relating to the history of Syria under Mehmed Ali Pasha, Beirut 1929-34; (ii) from the archives of the European states on various phases of Muhammad 'All's rule in a series of volumes published under the auspices of King Fuâd I (see Précis de l'histoire d'Égypte par divers historiens et archéologues, iii, Cairo 1933, 375-6); (C) the writings of expatriates and travellers, many of whom were French (see Jean-Marie Carré, Voyageurs et écrivains français en Égypte, Cairo 1956, 169-323). Information on Ibrahim Pasha may be found scattered in numerous modern works concerned primarily with Muhammad 'Ali Pasha, of which the following are a selection: H. Dodwell, The founder of modern Egypt, Cambridge 1931; 'Abd al-Rahmân al-Râfî, ʿAbd Muhammad 'Ali, Cairo 1951; Helen Anne B. Revill, The agricultural policy of Muhammad 'Ali in Egypt, Cambridge, Mass., 1961.

Ottoman archive material is used by Şinasi Altundag, Kâtâl al-Mehmût Ali Pasha isyanı: Musî melesi 1832-1843, Ankara 1945.

For Ibrahim Pasha in Syria, see Asad J. Rustum, The royal archives of Egypt and the origins of the Egyptian expedition to Syria 1832-1842, Beirut 1936, and The royal archives of Egypt and the disturbances in Palestine, 1934, Beirut 1938.

**Ibrahim Pasha, Candarlı** [see Candarlı].

**Ibrahim Pasha, Damât, (?1010/1601), Ottoman Grand Vizier. Ibrahim Pasha, according to Peçevi (ii, 284), was of Bosnian origin. The Venetian sources refer to him as "di nazione schiavone" (Alberi, iii, 241-2, 367-8) or "di Chersego" (Alberi, iii, 432; cf. also Soranzo, 10: "nativo della Provincia di Herzezovina"). Perhaps the most exact indication is that of Minadoi, who describes Ibrahim Pasha (Historia, 266) as "di natione schiavone, del luogo detto Chiâncii, una breve giornata discosto da Ragusa". Minadoi obtained his information from "Crestoforo de Boni", who was interpreter to the Venetian consul in Syria, Giovanni Michele, and, like Ibrahim Pasha, a man of Slavonic descent from the region near Ragusa. De Boni had become acquainted with Ibrahim Pasha when the latter was operating against the Druzes of the Lebanon in 993/1585 (Minadoi, Historia, 277). As to the birth date of Ibrahim Pasha, no precise evidence would seem to be available. Minadoi (Historia, 266), writing not long before 1588 (the date of the first edition of his work), sets the age of Ibrahim Pasha at about thirty-two years. The statements made in the relazioni of the Venetian baili at Istanbul (Alberi, ii, 357 and iii, 290, 367-8, 432) suggest that Ibrahim Pasha was born circa 1550 A.D.

Ibrahim Pasha entered the imperial palace as a child of the devshirme [q.v.]. He rose to the office of râhîddâr and, on the accession to the throne of Murâd III in 982/1574, became silâhâdar and thereafter, in 988/1580, Agha of the Janissaries. He was made Beglerbeg of Rûmûl in 990/1582 and, while holding this appointment, had a large share in the organization of the festivities which Murâd III, in the summer of the same year, gave in order to celebrate the circumcision of his son, the future Mehemmed III. The year 990/1582 saw also the betrothal of Ibrahim Pasha to ʿÂyishâ, a daughter of Murâd III, and his advancement to the rank of vizier. Ibrahim Pasha was sent out in 991/1583 to become Beglerbeg of Mîşr (Egypt). On his return from Egypt through Syria in 993/1585 he undertook a campaign against the Druze chieftains of the Lebanon. Soon after his arrival in Istanbul—an event that he marked by a lavish presentation of gifts ("şâhîkeشت-ı aşım") to the Sultan—he received in marriage the princess ʿÂyishâ. The exact progression of Ibrahim Pasha in rank and in office during the next few years is not wholly clear. There is mention of him as fifth vizier (Venetian relazioni of 1583; Alberi, iii, 241), as fourth vizier in 994/1587 (Alberi, iii, 290), as fourth vizier (Venetian relazioni of 1585; Alberi, iii, 290) and as third vizier (Şolâkzâde, 609 —narrating events of 993/1585). The Venetian relazioni of 1585 also note that Ibrahim Pasha had been second vizier (cf. novani Moro (1590) in Alberi, iii, 367 and B. Anzoni I. senzo (1592) in Alberi, ii, 357).

Ibrahim, du. ng these years, s ved for a short while as Kapudâ, i.e., Hâg, an admiral of the Ottoman fleet (Mâdidâ Khâlîfâ, Tûfâb. -îhâr, 140; Danîs-
IBRAHIM PASHA, DÂMAD — IBRAHIM PASHA, KARA

The accession of Sultan Mehmed III in 1003/1956 brought İbrahim Pasha once more to the rank of second vizier (Hâdiji Khalîfa, Fedâiâlçe, i, 10). At this time the Ottoman empire was involved in the great war (1001-1015/1603-1606) with Austria. The departure of the Grand Vizier Ferhâd Pasha (q.v.) on a campaign against Wallachia in Şahbân 1003/April 1505 saw İbrahim Pasha, as second vizier, appointed to be Kâtîm-makâm of the Grand Vizier at Istanbul.

Oh the death of the Grand Vizier Kâğıtâ Sinân Pasha in Şahbân 1004/April 1506 İbrahim Pasha was raised to the Grand Vizierate. He was to hold the office for a little less than seven months. During this brief period of time the Ottomans captured from the Christians the important fortress of Eğri (q.v.), i.e., Eger (Erzûl) in Hungary (Muharram-Safar 1006/September-October 1506) and defeated the forces of the Emperor Rudolf II at the battle of Háç Ovasî (Mezö-Keresztes) fought in Rabî' I 1009/October 1506. After the battle Cîlçîlazâde Sinân Pasha (q.v.) was made Grand Vizier, but the office was bestowed once again on İbrahim Pasha a few weeks later in Rabî' II 1009/December 1506. He was dismissed, for the second time, from the Grand Vizierate in Rabî' I 1010/ November 1509 and re-appointed to it, for the third time, in Dümâdâ II 1007/January 1509, holding the office now until his death two and a half years later.

İbrahim Paşa, as Grand Vizier and as serdar, i.e., general-in-chief, took command of the Ottoman armies engaged in the Hungarian war. The campaign of 1008/1599 had amongst its main objectives the repair and strengthening of the frontier fortresses and to this end İbrahim Pasha not only conquered the local Hungarian population, which had suffered much in the course of the long war, to a more favourable attitude towards the Ottomans. İbrahim Paşa, having wintered at Belgrade, led his forces in 1009/1600 against the Christian fortress of Kanizsa (q.v.) and, after a short siege, accepted its surrender in Rabî' I 1009/ October 1600. This notable success marked, however, virtually the end of his career. He died at Zemun, near Belgrade, on 9 Muharram 1010/10 July 1601.

İbrahim Paşa is described in the sources as a man of handsome appearance (Alberî, iii, 242-2; Minados, 266: "bello di sembiani"), generous (Alberî, iii, 432), subtle of intellect, but deceitful (Alberî, iii, 290 — cf. also Pecêwî, ii, 229-231) and even "leggero di cervello e vario" (Alberî, ii, 357), not a sagacious figure nor apt for high command (Zeri, iii, 432: "non e riputato prudente, ne atto a supremo commando" —relazione of Matteo Zane, dated 1594) — though his undeniable success in the Hungarian campaigns of 1596, 1599 and 1600 would seem to call into doubt this last judgement of Matteo Zane.

V. J. PARRY

IBRAHIM PASHA, KARA, Ottoman Grand Vizier under Mehmed IV, was born in 1030/1620, in a village near Bayburt, of a Muslim family. He first appears as a levend (q.v.) serving under Abaza Hasan Pasha (q.v.); when Abaza Hasan's rebellion was crushed (1069/1658) he took service under a succession of prominent figures, firstly Firari Mus- tfâ Pasha and finally Kara Mustafa Pasha, whose kethâydâ he became. Helped by the Paşa's influence and enjoying the confidence of the Sultan he now began to rise rapidly in the service of the state. He was appointed firstly külük and then büyük mir- akbîr, in Rabî' I 1082/August 1671 (Râşîhî, i, 255); then when his patron Kara Mustafa became Grand Vizier (1087/1676) he himself was made third vizier (1088/1677), later second vizier (1089/1678), and then when the Sultan became Grand Vizier (1091/1684-5) in order to remove him from the court; but İbrahim immediately procured himself the further post of kâ'înmakâm to the Grand Vizier, thus ensuring his continued presence at the capital. The Grand Vizier succeeded in having him dismissed from both posts and demoted to fifth vizier (10 Shaw- wâl 1089/25 November 1678: the date given in Safine- tû 'l-vuzera, ed. Parmaksizoglu, Istanbul 1952, 39, is erroneous), but İbrahim’s influence over the Sultan was not weakened; he became successively fourth and third vizier, and, on the outbreak of the war with Austria, Kara Mustafa found it prudent to reinstate İbrahim's growing intimacy with the Sultan, had him appointed Kapûdan Paşa (17 Rabî'â 1088/13 November 1677) in order to remove him from the court; but İbrahim immediately procured himself the further post of kâ'înmakâm to the Grand Vizier, thus ensuring his continued presence at the capital. The Grand Vizier succeeded in having him dismissed from both posts and demoted to fifth vizier (10 Shawâl 1088/25 November 1678).
IOO2 IBRAHIM PASHA, KARA — IBRAHIM PASHA, NEVSHEHIRLI, favourite of Grand Vizier Ahmad III [q.v.], was born at Mısırhara (now Nevşehirli), the son of a certain Ali Ağa; since he is said to have been about 70 years old when he died in 1717, his birth may be dated to about 1647. In 1685 (so Rashid, ii, 6) he was dismissed. He asked permission to go on the Pilgrimage, but his enemies warned the Sultan that this was merely a cover for him to stir up trouble in Anatolia, by returning to the "Djelali" activities that had occupied his early years; his property was confiscated, he was exiled to Rhodes (Rabi‘ II 1097/March 1686), and he was soon after executed (Sha‘bān 1098/June 1687).

Bibliography: The two principal works for Kara İbrahim Paşa's career are Rashid (i, 290-293), and for his further career Abdi, Ankara (TTK) 1943. General histories: Hammer-Purgstall, vii, passim-, Zinkeisen, GOR, 129, 189, 50, pp. 906-8, where further references are given.

IBRAHİM PEÇEWI [see PEÇEWI].

IBRİHİM ŞEH İŞIK, the third of the salṭūm al-ġarbār, the name given to the rulers of the state of Dijawnpur [q.v., regnant 804-44/1402-40]. He and his elder brother Muḥārak Şehār ‘Karanfūl’, whom he succeeded on the Dijawnpur throne, were the adopted sons of the eunuch Malār Malik Sarwar, the first sultan, and they are generally supposed to have been Habāshī [q.v.]. Ibrahimī succeeded to a kingdom of considerable extent, from Koyī (later ‘Aļgarf) and Hāwā [q.v.] in the west to Bihār and Tirhut [q.v.] in the east, an area of about the size of Austria. It was Ibrahimī who did most to make Dijawnpur the important state it became, both by force of arms and in the cultural sphere. He set his sights high, aiming at the capture of Dīhil itself, marching on it in 809/1407 and annexing Kannawād and Sambhal [q.v.] on the way, and was deterred from making a final assault on Dīhil only by the receipt of the news that Mūsā id-Dīhilī had marched to the aid of the Dīhil sultan. He was unsuccessful in his attacks on other possessions of the Dīhil sultanate, including Bayānā, south-west of Ağa, and Kalp [q.v.], which it is said that he misfortune to attack in 834/ 1431 just as al-Ḥakam Shaḥrī [q.v.] of Mālāwā had the same idea. From this time he intervened on several occasions in the affairs of the Bengal sultanate [q.v. in Supplement], according to one account of the Hindū usurper Rādājī Gānsēh to bring up his son in the Islamic faith with the support of the Pāndās ḡayḥā Ḋur Kūṭb al-ʿAlām [q.v.]; and on his invasion of Bengal in 836/1432 the Bengal sultan sought help from Timūr’s son Shaḥ Rūkh. He en-

forced order throughout his own dominions, and in spite of his failure to bring the Dijawnpur sultanate any fresh territories he was recognized as one of the wielder of the greatest power in northern India. His reign is especially distinguished for his great patronage of art and letters, which earned for Diawnpur the title of ‘Shīrāz of the east’; the liberal condi-

tions of his court attracted scholars and litterateurs from all over the Islamic world, and important liter-

ary works, as well as works in kalām and fikh, were produced in Dijawnpur. He grazed his capital with many fine buildings, of which the Afālā madrasā is the principal survivor (see Dijawnpur).

Bibliography: See Dijawnpur and Shahrkāids. (J. BURTON-PAGE)

IBRİHİM ŞEH İŞIK [see ŞEH İŞIK].

IBRİHİM AL-YAZIDĪ [see AL-YAZIDĪ].

(AL-) IBRİHİM, Muḥammad al-Beṣīr, Algerian reformist scholar and writer, born 13 Shaw-

wāl 1306/12 June 1889 at Bougie. He showed at an early age signs of great intelligence and his childhood and youth were spent in concentrated study. Already at the age of fourteen he had studied, at the school run by his uncle, Muḥammad al-Makki İbrahimī, the Kur'ān and the main classical literary and philo-

sophical works. In 1912, on his way to the Hijāz, he stayed for three months in Cairo, where he followed courses at al-ʿAzār and at the Dār al-Waʿīl-īrshād which Raṣūlī had just opened on the island of Rawdā. At Medina, Beṣīr İbrahimī pursued more advanced work in taṣfīr and in ḥadīth, began to study genealogies, and carried out research in public and private libraries. And it was at Medina that he be-

came the friend of Ibn Bādis [q.v.]. For three months the two young scholars devoted their attention to considering projects for religious reform and for the renewal of Arabic studies in Algeria.

After spending two years (1917-18) at Damascus as a professor at the Madrasa Sulṭāniyya, İbrahimī returned to Algeria, where he immediately set to work, with Ibn Bādis, to propagate reform and lay the foundations of an Arabic national culture. Their efforts led to the foundation of the Association of Algerian Muslim ‘Ulamā’ in 1931, to the organization of a system of free Arabic education, and to the formation of a reformist Arabic press (the principal organs of which were al-Shāhāb and al-Baṣīrī).

On the death of Ibn Bādis in April 1940, İbrahimī became the leader of the Algerian reformist move-

ment, to which he imparted (at least after the end of the Second World War) the character of a move-

ment pursuing nationalist aims. The claims he made for his people, over a period of about ten years, may be summarized under three headings: the separ-

ation of the Muslim religion from the state, the independence of the Muslim judicial system, and the official recognition of the Arabic language. He also worked ceaselessly for the spread of free education in Arabic, under the auspices of the Association of ‘Ulamā’.

In order to meet its constantly increasing educa-

tional obligations and to enable its best pupils to proceed to a higher education in Arabic, the Associa-

tion of ‘Ulamā’ sought financial and academic help from the other Arab countries, which led them to send the ḡayḥā İbrahimī on a mission to the East in order to carry out on the spot the necessary enquiries and negotiations (1952). He did not return to his own country until 1962.

During his stay in the East, İbrahimī acted as spokesman for Algeria conceived as an Arab and Muslim nation. He was also able to take part in the religious and intellectual life of the countries in which he stayed (Egypt, Syria, Irak, the Hijāz, Kuwait, Pakistan) and was finally recognized everywhere as one of the outstanding figures of contemporary Islam. In 1961 he was elected as an active member of the Cairo Academy of the Arabic Language.

On his return to Algeria, ḡayḥā İbrahimī lost the support of the first leaders of independent Algeria because of his political views, which were based on the Islamic principle of the żārīj [q.v.], and his advocacy of "a city of justice and liberty". He died in Algiers on 19 Muharram 1378/5/20 October 1959.

Beṣīr İbrahimī was, with Ibn Bādis and Taqīyīb
IBRAHIM, one of the chief architects of Muslim reformism in Algeria. A distinguished orator and writer, and a scholar in the traditional Islamic disciplines, he may be considered as one of the last great representatives of classical Arabic culture.

Ibrahim's works are quite substantial, but, apart from his editorials from al-Baṣira, collected under the title of 'Uyun al-Baṣira ( Cairo 1963, 693 pp.), they are still unpublished. They include (1) ten or so short works on linguistic questions (al-Tasmiya br-‘r-masdar; al-‘Silāf a‘lāf ‘alā faw‘al; al-Nukhbat wa-l-nufdydt; or terms of the form ‘al-wu‘ala; al-‘Irād al-wūl-huqūd; Babāyīa fi al-arba‘iyin; ‘l-lahājja al-‘aammiyya al-dājāriyya; Rīsīla fi maḥbāri al-burīs wa-l-faṣḥā bi ḥayw al-arba‘iyin wa-l-‘aammiyya; a supplement to treatises on verbs, amthul; etc.); (2) some religious studies (Hikmat maḥrūhiyya al-saḥābi li-s-Līlām; Shu‘ab al-‘Imām); (3) a play: Kitāb. (a) Kāhinān asrar (al-Lakāhen); (4) an immensely long urdūsā (36,000 verses). This "epic" (makhnāmeh), as it is described by the author, covers the history of Islam and of Algeria, as well as the various aspects of the social and religious life of the Muslim community of Algeria.

IBRAIL, from the Rumanian Brâila, town of Wallachia (Tarā Rūmānāsāc) on the left bank of the Danube, about 20 km. south of the point where it is joined by the Siret; an important trading town situated at the junction of several trade routes. In the 8th/14th and 9th/15th centuries, Brâila had connections with Brăilea in Transylvania and Lemberg in Poland. Its port was visited not only by boats from the commercial towns on the Danube but also by ships from the Black Sea and the Mediterranean. Even in the 10th/16th century, when the Bosphorus and the Black Sea were controlled by the Porte, an average of 70 or 80 ships anchored regularly there. During Mehemmed II's campaign against Vlad Tepeş, prince of Wallachia, an Ottoman fleet disembarked troops at Brâila (866/1462), but the town was not taken until Radu I (945/1538), following the campaign of Suleyman the Magnificent against Moldavia. Radu Paisie, prince of Wallachia, was obliged to surrender it to the Sultan (945/1538), who appropriated also a fairly extensive territory surrounding the town. Once Brâila had become part of the Ottoman Empire, its new masters concerned themselves with its organization. There exists a 18th/19th century collection of regulations covering various aspects of economic and social life, taxes, land laws, etc. Under the Ottomans Brâila became a centre of supplies from which products from Wallachia were sent to Istanbul. For three centuries its history merges with that of other Danube commercial ports annexed by the Ottomans: it became the main object of the Rumanian princes in their struggles against the Porte. In 582/1574, the Moldavian prince Ioan cel Cumplit burned the town but was unable to take the fortress. In Radu I (1003/March 1595), Mihai Viteazul of Wallachia, at war with the Porte, forced the garrison to capitulate, but his assassination caused Brâila to be returned to the Sultan. Prince Miheșuna, taking arms against the Sultan, occupied it for a brief period in 1069/1659. During the Russo-Turkish wars Brâila was taken and then returned again to the sultan. During a further war it was taken by the Russians on 6 June 1828 and finally ceded to Wallachia by the Treaty of Adrianople in 1830. It later became the centre of the activities of Bulgarian emigrants which paved the way for the independence of Bulgaria.

IBRI [see YAHUD].

IBRI, a town in Oman (‘Umān [q.v.]) in eastern Arabia. Ibrī is the capital of al-‘Zahir, the highland district stretching from the inland slopes of the mountain range of al-Hadjar westwards to the sands of al-Rub‘ al-Khali. The town lies in the great wadi coursing down from the mountains to the sands near the point where its name changes from Wādī al-Kabīr to Wādī al-'Ayn. Higher up in the wadi are the towns of al-Sharkīyyah and Djabal al-Kawr, beyond which one comes to Nazwa, until recently the capital of the Imamate of Oman. South of Brī are members of the tribe of Banu Hud; however, now have their headquarters in al-Hamra near Nazwa and al-Sharkīyyah, who trace their origin from the tribe of the Abar. The Qaisirīn, however, now have their headquarters in al-Hamra near Nazwa and al-Sharkīyyah, while the residents of Brī are the Banū ‘Amran, who constitute the strongest tribe. The nomads sell the famous camels of Oman and buy the products of local handicrafts and imports from abroad. Agriculture flourishes, with the date and fruit groves being...
perhaps the largest in Oman on the inland side of the mountains. Among the fruits are mangoes, peaches, apricots, quinces, bananas, oranges, pomegranates, plums, and grapes.

As the former district capital under the İbshi inmāte, İbri is said to have the biggest İbadi mosque in Oman. The town has also been occupied at times by Wahhābīs. In 1251/1836, when the British naval officers Wellsted and Whitelock approached İbri as the first Europeans to visit this region, the place was full of Wahhābīs and the travellers were forced to turn back. In 1375/1955 the British journalist J. Morris, who came to İbri in the train of Sa'ūd b. Taymūr, Sultan of Muscat, encountered none of the old xenophobia.

**Bibliography:** Muhammad b. 'Abd Allāh al-Sālimi, Nahdat al-a'yan bi-surriyyal 'Ummān, Cairo 1380; J. Wellsted, Travels in Arabia, London 1838; Admiralty, A handbook of Arabia, London 1918; J. Morris, Sultan in Oman, London 1957.

**İBRİSHI** (see İBARI).

**İBRİUH,** Sp. Ebro. Most writers in Arabic on the topography of Spain mention the river Ebro, but they are generally limited to the conventional information that it rises in the mountains of Nabarra or the Rūm, passes through Tudela (Tuṭšā) and Zaragoza (Sarākṣaṣa), and reaches the Mediterranean a little below Tortosa (Ṭurṭūṣa). The Muslims never controlled the headwaters of the Ebro and were consequently vague about them. The same is true of the Duero, to the extent that Zuhri states that the Ebro and Duero share a common source. Sometimes other riverin towns, as Calahorra (Kalāhurra), Mequinenza (Miknāsā), and Flix (Illiṣ), and affluents, as the Gállego (Duḷḷiṣ), Diliṣ, Diliḷ, Segre (Ṣiṣkār), and Cinca (Nahr al-Zaytūn), are mentioned. Both 'Abd al-Mun'īm al-Himyari and İbn Sa'ūd know the river for Ebro without giving its name. Babri is aware of the etymological connexion between İbria (İbāriya) and Ebro. Zuhri states that gold is found in it (without saying where) and adds the enigmatic information that for 100 miles, from Tudela to Mequinenza, and again from Flix to Tortosa, they employ lanterns (yata'anggan I-sar PNG) on the river bank.

As a former district capital, İbri is said to have the biggest İbadi mosque in Oman. The town has also been occupied at times by Wahhābīs. In 1251/1836, when the British naval officers Wellsted and Whitelock approached İbri as the first Europeans to visit this region, the place was full of Wahhābīs and the travellers were forced to turn back. In 1375/1955 the British journalist J. Morris, who came to İbri in the train of Sa'ūd b. Taymūr, Sultan of Muscat, encountered none of the old xenophobia.

**Bibliography:** Standard geographical writers s.v.; Zuhri, K. al-Diqāḥiyah, Algiers Bib. Nat. MS. no. 1532, ff. 43a, 51b, 68b (ed. M. Hadd-Sadok, in Bī'ir. Or., xxi (1968), index).

**İBİSHLI,** Bahā al-Dīn Abū 'l-Fāţīr Muḥam-mad b. Āḥmad b. Maḥṣur, Egyptian writer (790-after 850/1358-after 1446), a author of famous antho-logy. He was born in a village in the Fayyūm, Abshiyah (whence the reading al-İbshīhī for his nisba, which is also pronounced al-İbshaybīhī), but he lived most of his life at Mahāla al-kubrā or in the neigh-bouring small town of Naharrij. He went quite often to Cairo, where he was able to receive lessons from Djiläuft al-Dīn al-Bulbinkī, the son of the Shafi'i doctor of the same name (Brockelman, S II, 139). He is said to have had as a student al-İbīkBī' (ibid., 177), the opponent of İbn al-Fārij, and İbn Fahīd (ibid., 225). His reputation is based on the Mustafrafi fi kūl fann mustasraf, one of the most famous antho-logs of the 9th/15th century (more than ten eds., at Būlāk and Cairo; Fr. tr. G. Fl. Rat, Paris-Toulon 1902) but, according to al-Sakhlwī, Daw, vii, 109, he wrote also a work of edification entitled Awaḥkh al-İbshīhī links the various categories of Arabic literature to the oral and popular culture gives to his rather clumsy work the value of direct testimony. A Turkish translation (Istanbul 1261-3/1845-7) made by Ekmeklīzde Āḥmad, under the auspices of Mehmed Es'ad (İnâmzade), demonstrates the popularity which was enjoyed under modern times by a work which succeeded in assembling "in a brilliant style, Kur'ānic quotations, prophetic sentences, philological difficulties, comic anecdotes" (Turkish preface); a short treatise (1-29) by the translator refers to the fundamental values of Islam (the divine unity, the five pillars of worship, respect for the poor and for the saint).

The nisba al-Ibshihi belonged also to other persons: (2) an Egyptian Malīki jurist and man of
letters, Ahmad b. Muhammad b. Mūsā (834-987/1430-92). He owed his literary education to the Mālikī scholar Abū al-Yazīd al-Mu'ayyad, and his juridical education to the classical Mālikī writers: Abū Zayd, Sīdī Khalil, the Kādī 'Iyāḍ. He was an expert in Kūfī antigraphy, and may have been the pupil of Tāhir b. 'Arabshāh (Brockelmann, S II, 21). (2) A ʿAbd al-Mu'min ʿAbd al-Dīn Al-Bahādīrī, also known as Abū al-Yazīd al-Qā'im al-Wālī, who received his education to the classical Malīkī writers: Abu Zayd, Ali (d. 892/1487), who gained a certain fame for his scholarship and the many journeys he made. He was known also by the names of Ibn Harfūsh and Ibn Saḥābī. He had dealings with al-Sākhawī, who accused him of plagiarsim and of producing an unauthorized version of his work of hadīth, al-Makhdūd al-Bāṣanah (Brockelmann, S II, 31; Saḥābī, Dauv, i, 157).

**Iṣḥār Mustafā Pasha** [see Iṣḥār Mustafā Pasha].

**Ibtīdā**[^1], introduction, prologue, a term in rhetoric. In Kazwini’s Talḥīḥ al-misfakh (published under the title Maut al-talḥīḥ, Cairo n.d., 125 and 127), its extended version, the Īḍāh (ed. Muḥ. ʿAbd al-Mu'min Ḵᵛāḏqālī, vi, 145-50, 154), and the various works based on the Talḥīḥ, the ibtīdā is defined, along with the tahlīlīts, “transition” [q.v.], and the nasīḥa, “conclusion” [q.v.], as one of the three sections of the poem or composition which should receive particular attention and should conform to certain criteria of style and content. In the opening line of a poem complicated syntax should be avoided and the two hemistichs should be closely related in sense; in the case of a panegyric, it should not contain anything that could be interpreted as an evil omen or an improper allusion to the ruler or dignitary to whom the poem is addressed, etc. In poetry as well as in prose the author may earn distinction by observing the bardat al-īstihlāl, “the skilful opening”, by which is understood an introduction that contains an allusion to the main theme of the work.

This theory, in particular the reference to the bardat al-īstihlāl, reflects a tendency on the part of Kazwīnī and his followers to emphasize the importance of thematic unity and restrict the use of the conceptions of the ḥakīmat al-Ārbaʿ, the nadīma, etc. Of special interest are the chapters in Ibn Al-Ṭabīṣī’s al-Maṣḥal al-sāʿir (ed. Muḥ. Muḥyī l-Dīn ʿAbd al-Hamīd, ii, 235-58) and Ibn Ḥidjdī’s al-Kāsīma (Cairo 1304, 3-20), which give much attention to the ibtīdā in prose. In dealing with the Kūrān, some authors regard the letters found at the beginning of some surās as models of ibtīdā. For the ibtīdā in oratory see ḫutba. **Bibliography:** Ibn al-Muqaddas, K. al-Badīʿ, ed. **Içil**[^3], mountainous province in southern Turkey, situated on the western spurs of the Taurus on the Mediterranean opposite Cyprus. The chief town is today the port of Mersin; its administrative districts are Mersin, Anamur, Gümüş, Mut, Silifke and Tarsus. The province is bordered to the north by the province of Konya, in the north-east by that of Niğde, in the east by Adana and in the west by Antalya. The main river is the Göksu [q.v.] (Kailyakdno/Sailep), which rises in the Bolkar Dağ and flows below Silifke into the Mediterranean.

In antiquity the borders of “Stony Cilicia” (as this territory, also called Isauria, was called to distinguish it from the neighbouring “Flat Cilicia”, i.e. the plain of Adana) were considered to be in the west the promontory of Korakesion (Alanya) in the east the valley of the Lamus (Lamas suyu). In the Byzantine period the territory formed, from the 9th century, a part of the military frontier against the Arabs under the name of Seleukeia. In the time of the Crusades the kingdom of Little Armenia fortified the towns there, among them Anamur, Sechín and Kelenderis on the coast and Ermenek [q.v.] and Lauzad inland. The Seljukus, under ʿAlāʾ al-Dīn Kaykāwûs I and especially under ʿAlī al-Dīn Kaykobād I, occupied by about 625/1228 the majority of these castles (many of them today are either without names or not yet identified) as far as Silifke, whose citadel Camardesium was occupied by the Knights of St. John. The newly-conquered “Seljuk-Armenia” was given the name of “Wilayat-i Arman”, the province was also called the “Wilayat of Kamar al-Dīn”, after its first Seljuk governor. The immigration of numerous Oğuz tribes soon made the “Province of Armanak” into a pronouncedly Turkish territory which, after the division of the Seljuk state belonging to the western half of Rûm, soon became the main territory of the Turkish princes of Karaman, who gradually succeeded in capturing all the fortresses (especially Ermenek and finally also the town of Silifke) from the Seljuks and the remaining Armenians and Crusaders. From this province as a centre, which, as the “inner part” of their principality, was called il-il (i), the Karamanids built up their dominion. There are references from the 8th/14th century to the Vasark-Türkmenens as being their neighbours and allies, among whom, in 853/1449-50, the militant Şafawid Şaykh Djuwān [q.v.] disseminated his propaganda (emirs: Ḥamza b. Kara ʿIsā, 837/1477; Uyuz Beg, circa 875/1470-80; ʿUyūsuf Beg Vasārak, governor of Kemākhs for Şah Ismāʿīl, fell in the battle of Câldırân [q.v.] in 920/1514). In Zeyne, a kasāba of Iç il, there died in 862/1457-8 the founder of the Samşândângi order, ʿAlāʾ al-Dīn All. Il-iç also provided the Karamanids with a refuge when they came into conflict with the Ottomans from the end of the

ICIL — ID AL-ADHA

8th/14th century. From 799/1397, and especially from the middle of the 9th/15th century, they retired often used as synonyms. It is not yet clear whether tash iil means originally "outside land" or "stone land"). Its last strongholds, the fortresses of Silifke, Ermenak and some others, recovered with the aid of the Crusaders under Mocenigo, did not fall to the Ottomans until after Mehemmed II's victory over Uzun Hasan, in the autumn of 878/1473. The Cypriots had lost in 852/1448 their last town on the mainland, and the Mamluks, to whom Alaya [see ALANYA] had belonged for some time from 830/1427, retreated from the coast of Icil in 888/1483, the district was allotted as a sandjak to the newly created Ottoman vilayet of Karaman, its administrative centre being Silifke. After the conquest of Cyprus in 979/1571, the Ottomans placed Icil under their new eyalet of Kibris, in which they resettled yursik [q.v.] from there. The district still contains remarks on the summer pastures of the Turkmen of Icil [Tohar, Küçük Cimen, Seki yaylaları]. The tribesfolk, among whom, as Faruk Sümer has shown, well-known Oguz tribal groups were to be identified, were still predominantly nomadic. During the efforts to sedentarize them, refractory yursik were again settled in Cyprus in 1124 and 1126/1712 and 1714. In the 18th century, the sandjak appears repeatedly as an arsalik [q.v.] of dismissed Grand Viziers. From 1831, Icil belonged to the eyalet of Adana. Evliya's itinerary, which still awaits detailed investigation, contains remarks on the summer pastures of the Türkmen of Icil [Tohar, Küçük Cimen, Seki yaylaları]. The tribesfolk, among whom, as Faruk Sümer has shown, well-known Oguz tribal groups were to be identified, were still predominantly nomadic. During the efforts to sedentarize them, refractory yursik were again settled in Cyprus in 1124 and 1126/1712 and 1714. In the 18th century, the sandjak appears repeatedly as an arsalik [q.v.] of dismissed Grand Viziers. From 1831, Icil belonged to the eyalet of Adana. Under the Republic Karamanogullari and Silifke (Şahbeddin Tekindag), with references to the geographical literature and to the Arabic, Persian and Turkish sources. (B. Flemming)

ICONOGRAPHY [see §6a].

ID, festival. The word is derived by the Arab lexicon from the root *soldi* and explained as "the (periodically) returning". But it is in fact one of those Aramaic loanwords which are particularly numerous in the domain of religion; cf. for example the Syriac *iddi* "festival, holiday".

The Muslim year has two canonical festivals, the *`id al-adha* [q.v.] or "sacrificial festival" on 10 Dhu 'l-Hijja and the *`id al-fitr* [q.v.] "festival of breaking the fast" on 1 Shawwal. The special legal regulations for these are dealt with in the following articles. Common to both festivals is the *salāt al-`idayn*, the festival of public prayer of the whole community, which is considered *sunna*. In many ways it has preserved older forms of the *salāt* than the whole community, or even the Friday *salāt* (although in other points it has come to resemble the latter) and in its general style much resembles the *salāt* for drought and eclipses. It consists only of two rak`as [q.v.] and contains several more *tāhkir* [q.v.] than the ordinary *salāt*. After it a *khawba* [q.v.] in two parts is delivered. It has no *adhan* [q.v.] and no *iḥāma* [q.v.]; as in the oldest times, the only summons to it is the words *al-salāt jiḏma* [q.v.]. It should be celebrated in the open air on the *musalla* [q.v.], which is still often done, though now mosques are frequently preferred. The time for its perfor-

mance is between sunset and the moment when the sun has reached its zenith.

At both festivals, which in practice last three or four days, *`id* clothes are on new or at least his best clothes; people visit, congratulate, and bestow presents on one another. The cemeteries are visited, and people stay in them for hours, sometimes spending the whole night in tents. These more popular practices are more usual at the *`id al-fitr* than at the *`id al-adha*; the festival of breaking the fast is much more joyfully celebrated because the hardships of Ramadan are over, so that at the present day the "minor festival" has in practice become of much greater importance than the "major festival".

*`ID AL-ADHA* (also called *`id al-kurban* or *`id al-nabir*) "sacrificial feast" or *`ID-AL-KABIR* "the major festival", in India barring *`id (bakra `id), in Turkey *bıyık bayram* or *kurban bayram*. It is celebrated on 10 Dhu 'l-Hijja, the day on which the pilgrims sacrifice in the valley of Minā [see *AL-NDHA*], also for all Muslims as a *sunna*. It becomes a necessary duty (*wajib* only by reason of a vow (*nadh*).

On the public prayer and the usages at the festival on this holiday see 'ID. Bibliography: In addition to the works mentioned for the article 'IDn, the books of fikhi in the chapter on nushiya, (E. MITTWOCH) 'ID AL-FİTR, "festival of the breaking of the fast" or al-'id al-saghir "the minor festival", Turkish kılık bayram or şeker bayram, is the festival celebrated on ŞShawwal and the following days. If the Muslim has not paid the zakat al-fitr before the period of fasting, he is legally bound to do this on ŞShawwal at the latest and is recommended to do it before the public prayer (salât) which is celebrated on this day (see 'ID). As this festival marks the end of the hardships of the period of fasting, it is, although called the "minor", celebrated with much more festivity and rejoicing than the "major festival"; cf. 'IDn. Bibliography: The books of fikhi in the section al-kâtâ fi'l-fihib and the bibliography to the article 'IDn (E. MITTWOCH) 'AL-'IDAFA [see AL-ASTUR-LAB]. 'IDAFA, infinitive of the verb adâfa (iîâ) "to unite (with)", has become a term in Arabic grammar. In the Kitâb of Sibawayhi it has at first a very wide meaning: it is inserted into the theory of the di'arr (genitive) [the Kûfans say khafa] set out in Chapter 100. There we find: "al-Di'arr is found only in nouns that are muddâf ilâyhi, that is, "that have received an adjunction", the mu'dfâ being that which is "added". It is the idâfa, the fact of having united one term with another, that requires the di'arr (Mufassâl, § 110), but the "operator" of this putting into the di'arr, the 'âmi, is the harf al-di'arr (preposition), mu'rât (intended) (Ibn Ya'âshî, 304, lines 11-12; Şharî al-Kâfi'îa i, 256, line 3 a f), expressed or understood (mu'a'ddar). Thus the idâfa always implies a harf al-di'arr; as far as Sibawayhi is concerned, see his distinctions in Ch. 100. The theory of the di'arr sets idâfa within very wide boundaries: as soon as there is a noun in the genitive (ma'djârî), there is idâfa: marârî bi-sâydlîn, "I passed by Zayd"; the verb marârî (1st term: mu'dâfî) is linked, united with "Zayd" (and term: mu'dâf ilâyhi), and the instrument of this idâfa is the harf al-di'arr; the preposition bi- (see Sibawayhi, i, 178, lines 1-10). Note that Sibawayhi extended the idâfa even to the nisba: ii, Ch. 318; equally Ibn al-Sarrâjî, 126. The determination of one noun by another noun in the di'arr also comes into this framework: ghuulâmîn saydlîn, "Zayd's young slave": ghuulâmî (1st term: mu'dâfî) is linked, united with "Zayd" (and term: mu'dâf ilâyhi), and the instrument of this idâfa is a harf al-di'arr, mu'addâr, unexpressed, but leaving its trace: the di'arr of the mu'dâf ilâyhi. In fact, ghuulâmîn saydlîn is thought of as implying the harf al-di'arr: li-, which is present in: al-ghulâmîn 'l-ladîhîn bi-sâydlîn, "the young slave belonging to Zayd" (cf. Ibn Ya'âshî, 303, line 23). According to the context, the Arab grammarians assume the presence of: li, min or even fi. The latter case continued to be employed for the theory of the di'arr, e.g.: Mufassâl, § 110 and Ibn Ya'âshî, 303.4. In common usage the word was limited to expressing the relationship of the determining of one term by another term, the determinative complement (the Hebrew "construct state"). European grammars thus translate idâfa as: "annexation", as did S. de Sacy (Gr. Ar. *, Paris 1831, ii, § 235); the term was also listed by J. Marouzeau in the Lexique de la terminologie linguistique, 21. Arab grammarians called the determination by the determinative complement: idâfa ma'dhâ, "pure" (Ibn al-Sarrâjî, 60), idâfa ma'nâsiyya, "semantic" (Mufassâl, § 111; Ibn al-Hâjîjî, Şharî al-Kâfi'îa i, 252), idâfa ma'dhâ wa-ma'nâsiyya (Al'ifsiyya, verse 390), idâfa tâ'âbîyya, "true" (Ibn Ya'âshî, 305, line 12). It expresses different relationships: possession, material, etc. (see de Sacy, ibid., § 98-9, or W. Wright, Ar. Gr. 3, ii, § 76). The two terms, closely joined, cannot be separated one from another: the first term of the di'arr does not denote the determination: in the dual and the sound plural the terminations -ni, -na are omitted: the second term (al-μu'dâf ilâyhi) is in the di'arr, e.g.: Ibn 'un 'l-mâlîkî, "the son of the king", in the dual: ibnâ 'l-mâlîkî, "the sons of the king", and in the plural: banâ 'l-mâlîkî, "the sons of the king". Both are definite or indefinite together: ibn 'un 'l-mâlîkî, "the son of the king"; ibnâ 'l-mâlîkî, "a king's son". Semantically there is a difference: ta'sîfî in the first case, that is, the indication of a definite being; takhsîs in the second: the indication of the category of a given being (see, among others, Al-Durjîânî, Ta'sîfî, 18). This takhsîs can be (for us) the equivalent of an adjective, e.g.: himârî 'uqâdîn, "a wild ass", but this does not alter the character of the Arabic construction. Another idâfa also exists. One can say, with an adjective, al-radžûl 'l-hasan u 'l-hasan 'l-mâlîkî, "the man (or: a man) with a beautiful face"; one says more frequently (using the di'arr), in the same sense: al-radžûl 'l-hasan u 'l-wadîhlî, or radžûlîn 'l-mâlîkî, "a king's son". One can use an active participle (followed by the di'arr in place of the verbal construction with the na'b), e.g.: ba'shîkh 'wa-tî'î muštîmî 'l-ma'dâfî (Kur'ân, XXII, 56-33), "announce the good news... and to those that accomplished the prayers"; ... 'addîn bâlûqî 'l-kha'âshî (ibid., V, 96/95), ... a sacrificial beast that arrives at the Ka'bah". The second type requires the use of the di'arr; the Arab grammarians consequently included it in the idâfa, but they declared it ghâyr ma'dhâ, "impure" (Ibn al-Sarrâjî, 60), lafṣiyâ, "verbal, formal" (Mufassâl, § 111; Ibn al-Hâjîjî, Şharî al-Kâfi'îa i, 252; Al'ifsiyya, verse 390); it is a simple way of expressing the same sense metaphorically: la tâ'âfîl ilâm takhsîf 'l-lafṣî, as Ibn al-Hâjîjî says (Şharî al-Kâfi'îa, i, 256), and presupposes no harf al-di'arr; but what is its 'âmiî (see Şharî al-Kâfi'îa, i, 251, line 13 f). In Arabic this idâfa lafṣiyâ must be carefully distinguished from the true one: the construction contains an important difference: the first term, as we have seen, can take the article; in addition, the function is different: determination in the true idâfa, qualification in the lafṣiyâ, and, one must add, a limited qualification: radžûlîn 'l-mâlîkî, first a man is qualified by "beautiful", by the complement in the di'arr, then this beauty is limited, here, to the "face" (cf. Ibn Ya'âshî, 306, lines 20-2). The construction is important: with an adjective it is a normal method of description in Arabic. It is used in ancient Semitic. But, where Arabic distinguishes the two idâfas in grammatical construction, ancient Semitic uses the same method for both: the construct state, the genitival relationship (see C. Brockelmann, Grundriss der vergleichenden Grammatik der semitischen Sprachen, ii, Berlin 1913, § 171 f; for Hebrew, see, especially, P. JOIÔON, Grammaire de l'Hebrew biblique, Rome 1923, § 129 l).

The term ʿidafa (ʿidāfa) is used loosely in New Persian for the exclamatory particle -i (strictly hasra-ya ʿidāfa) which serves to connect a nominal form with a following determinative, be it descriptive, appositive, anaphoric or reflexive, 'the long (NP) thing of which the second component is made, or to thing of which the second component is compared: (i) TURKISH LANGUAGES.

The Turkish ʿidāfa construction (ʿidāfa terkihi) is made up of two components: (1) the governed noun (muṣaf sf.yeh) or complement element (muṣimmm, talaṣṣalim/talaṣṣalatun unsur); (2) the governing noun (muṣaf) or complemented element (talaṣṣalim unsur). In Turkish ʿidāfet, in contrast to the Arabic or Persian ʿidāfa, the governed noun regularly precedes the governing noun.

The Turkish ʿidāfa is based: (1) on the possessive relationship, and (2) on the qualifying relationship between two nouns.

The possessive ʿidāfa, which in modern Turkish grammars is referred to as iṣṭiklal grupjukhası (possessive group/annexation), iṣim talaṣṣalimlamamsı (noun annexation/complement), may be divided into two categories: (1) definite ʿidāfa (iṣiyinis ʿidāfa, beṣīris iṣim talaṣṣalimlamamsı); (2) indefinite ʿidāfa (iṣiyinis ʿidāfa, beṣīris iṣim talaṣṣalimlamamsı). The differences between the two categories are: (1) in the definite ʿidāfa the governed noun is placed into the genitive: bâhešmin ṣapsı 'the gate of the garden', in the indefinite ʿidāfa it stands in the indefinite (suffixless) case: bâheš ṣapsı 'garden-gate'; (2) as seen from the foregoing example, the definite ʿidāfa establishes a loose, temporary relationship between the components; in the indefinite ʿidāfa this relationship is close, permanent, similar to that of the components of a compound noun; (3) in the definite ʿidāfa both components keep their stress, while in the indefinite ʿidāfa only the first component is stressed. In both categories the governing noun takes the possessive suffix of the third person, except that if the first component is singular in number, the noun of the first or second person, the second component takes the possessive suffix of the first or second person: ben-im ev-im 'my house', sis-im ev-imis 'your house' (colloquially also benism ev, etc.).

In the qualifying ʿidāfa two nouns are juxtaposed without change. The first component indicates the thing of which the second component is made, or to the one of which it is compared: spîk gümîch 'slip shirt', çelik irade 'iron will'. In recent Turkish grammars this type of ʿidāfa is dealt with in the chapter on sfuat taksims (adjective annexation) or sfuat talaṣṣalamsı (adjective complement).

Syntactically the ʿidāfa construction is treated as a unity, declensional endings being added to the second component: miṣāridin sapta-sı 'the hat of the teacher', gül-2 (acc.) of the dative sg. miṣāridin 'in his hat, hat', taş köprü-den 'from the stone bridge'. The plural suffix can be added to the first component only in the possessive ʿidāfa: oğretmenler-in vazyeti 'the duty of the teachers' and oğretmenler klub-i 'teachers' club'. If meaning requires a further possessive suffix to be attached to the indefinite ʿidāfa, the first possessive suffix is dropped: para şanta-sı 'purse', para şanta-m 'my purse', para.

An *idda can be a component of another *idda contract: "without the university's permission, a newly married woman's husband may not give her a new *idda; she must be given the right to her former *idda before the present one is concluded."

Already in the Old Turkish inscriptions of the 8th century A.D. the whole system of *idda is developed, except that the genitive suffix is less frequently used today, and the possessive suffix in the indefinite is also often omitted: *sadda, *ba‘gina, *kahna, *shukri, *ważira, etc.

IDAM [see HAMD, WAĐI AL-].

IDAM [see kātī].

IDAR, name of a fortified town in northern Gudjrāt, 100 km. north-east of Ahmedābād, and of its surrounding territory, largely mountainous. The former ṛaḍās of Idrar were in the 8th/14th century a constant thorn in the flesh of the first governors in Gudjrāt of the Dhilli sultanate, and military action was almost always required to collect the tribute the governors exacted. After Gudjrāt became an independent sultanate Ahmad Shāh I was similarly troubled, and the strength of Idrar, so near his newly founded capital of Ahmedābād, was a cause for concern. He consequently built another new garrison town, Ahmdnagar (now called Hitnagar), some 20 km. below Idrar as a base of operations against it, and waged continuous warfare on the ṛaḍās from 829/1425 to 831/1428, when the ṛaḍās at last sought peace and promised tribute. The agreement was generally broken, however, and it was not until 831/1428, when the Idrar garrison was completely withdrawn, that Ahmad's son Muhammad I renewed the attack in 850/1446, on which occasion the ruler bought peace by giving Muhammad his daughter in marriage. In the reign of Muzaffar II the powerful Maharāna Sāngrām of Cītāwar had established a usurper on the throne of Idrar. Such interference in the affairs of a feudatory state could not be tolerated even by the mild Muzaffar, and the rightful heir was restored by a Gudjrāt army. Sāngrām was, however, incurred at insults offered to his name by the Gudjrātīs fawqīddār [q.v.] at Idrar, and raided the border towns, including Idrar, in 925/1519, before being defeated by a large Gudjrāt army and compelled to pay reparations.

In Mughal times there were often similar clashes at first between the Idrar rulers and the Mughal army commanders, who expelled the Hindu rulers from time to time; and in 984/1576 the ṛaḍās did not submit to the Mughal armies until defeated in pitched battle. After this, affairs quietened down, although in 1018-9/1609-10 we hear of the ṛaḍās of Idrar being called upon, under the usual agreement with tributary rulers, to furnish a contingent of 2000 horse for the defence of Gudjrāt against the depredations of the

Nizām Shāhī armies under Malik ‘Abnar. In later times, when the Mughal empire was breaking up and the province of Gudjrāt was under the sāhādār of the Mahārānās of Gudjrāt, the latter gave Idrar in debt to his brothers, establishing a new Rādırūt dynasty of rulers there. The later history of Idrar is not relevant to the affairs of Islam in India.

Bibliography: See GUDJRAT. For the history of Idrar state under the Marāthās, see Imperialis Gazetteer of India, xxii (1908), 352-5.

IDARA, the common name in modern Arabic, Persian, Turkish, etc. for administrative term appears to have acquired its technical signification during the period of European influence. Islamic administration is discussed in the articles on administrative departments and services (bāb-i-šāh, bāYT A-MĀL, BĀRT, DĪWĀN, DĪWĀN-I HUMĀYŪN, istifā’, kālam, SāNūN, RAWK, τΑΥΡΙΡ etc.); on officers and functionaries (‘AMĪL, ‘AMĪD, DAFTĀR, ṛAḌĀR, KĀNĪ, SĀĪNĀ, MUṢHIB, . . . MUṢI‘IF, MUSTAWF, RĀṬ, NĀRĪ, RĀṬ’s ADITT, wAKĪL, WĀṢĪTA, WĀZĪR, etc.); on scribes (kāTĪB) and civil servants (mā‘mūN); on administrative documents, records, and accounts (DAFTĀR, DIPLOMATIC, inŠĀM, MUḤĀSABA, RASĀ‘I, SĪDĪJ). Provincial administration is discussed in articles on officers (‘AMĪR, BEGLEGĪRI, kĀ’TIM-MĀRĀM, MUṢIR, MUṬAṢARRĪF, SĀNĐI–BEY, WĀLĪ, etc.) and on territorial sub-divisions (bA‘LET, kĀṢĪF, kūRĀ, NĀḤĪYA, niYĀBA, MAMĀLAKA, RUSTĀR, SĀNdI–D, TASSŪD, UṬRÀN, VILĀYET, etc.). On police matters see ‘ASAS, DARĪQA, SHIHNA, SHURTA; on the introduction of the modern apparatus of government, see HUKUMA, TANZĪMĀT. (ED.)

‘IDDA, from the verb ‘adda, "to count, enumerate" (days or menstruations), Arabic term for the duration of widowhood or, rather, the period of abstention from sexual relations imposed on a widow or a divorced woman, or a woman whose marriage has been annulled, before she may re-marry. In pre-Islamic Arabia the institution is thought to have been unknown with regard to a divorced woman. The Kur'ānic provisions on which it was based were not always respected during the early years of Islam (J. Schacht, Origins, 181) although at a very early date the jurists added conditions to the Islamic provisions on which it was based. In many sub-divisions of the ‘idda there should be added a third: childbirth. In fact the ‘idda of a woman who is pregnant at the time that the marriage is dissolved ends with her accouchement. We shall deal first with this case, which is the simplest.

(1) For a woman who is pregnant, whatever the reason for the ending of her marriage (the death of her husband, divorce, annulment), the ‘idda lasts until her accouchement and ends with it, even if it
IDDA

follows very closely after the end of the marriage. Scarcely any except the "Twelver" Shi'is and the Zaydis prolong the 'idda in the case of a widow only, beyond the accouchement until the expiry of the period of 4 months and 10 days stipulated by the Kur'an for all widows indiscriminately. They maintain that this period of delay is established not merely to avoid a confusion in establishing birth, but also out of respect for the memory of the deceased; they do not consider it fitting that a widow should be able to re-marry too soon after her husband's death merely because in the meantime she has given birth to a child.

(2) For widows who are not pregnant and for divorced women who are either too young to menstruate or who have reached the menopause, the 'idda is counted in months and days.

(a) A widow must observe a retreat of 4 months and 10 days after her husband's death. This figure, the reasons for the adoption of which are not very clear, is that which appears in the Kur'an (II, 234); widows are obliged to observe this retreat whether or not the marriage has been consummated and whether or not they have reached the age of puberty, the only condition being that the marriage has been validly concluded. Here again the idea of avoiding uncertainty of birth gives place to that of social and family propriety.

(b) Divorced women who are either too young or too old to menstruate are obliged to observe a retreat of three lunar months (Kur'an, LXV, 4).

(c) Divorced women and those whose marriage has been annulled and who are of menstruating age "shall wait by themselves for three kura'" (Kur'an, II, 226).

The word kura' (pl. of kura) in the Kur'anic text has given rise, from the beginning of Islam, to a controversy among the commentators. Some understand it to mean the inter-menstrual periods, or, according to their terminology, the periods of "purity" which come between those of menstruation. This was the opinion which prevailed in the Sha'abi and Maliki schools and among the Djaa'ari Shi'is. But the Hanafis, the Hanbalis and the Zaydis consider the word kura' to be synonymous with menstrual iddah or iddah (mara' al-wud'), that is, to the "waiting time". This is why the Hanafis have specified in the calculation of the duration of the 'idda, according to whether the word kura' is given the first or the second meaning.

Although widows are forced to abstain from sexual relations whatever the circumstances, i.e. even when their marriage has not been consummated, the law is different for divorced women and for those whose marriage has been annulled. Muslim law insists that they observe an 'idda only when the marriage has been consummated, and even, in Sha'abi law, truly consummated, this school rejecting the theory of khulwa in which consummation is presumed to have occurred if a husband and wife have been alone together in a place where it would have been possible for them to have had sexual intercourse. Since all the other schools admit the presumption of consummation, the question arose as to whether this presumption is an absolute one. According to the majority of Hanafi, Maliki and Hanbali writers, khulwa does not cause consummation to be presumed, and so does not involve an obligation to observe 'idda, except when there exists no insurmountable obstacle to the consummation, such as the emasculation of the husband or a vaginal occlusion in the wife.

The writers are always careful to mention the various hypotheses which lead successively from one method of calculation to the other. There is, for example, the case of the wife under the age of puberty who reaches puberty during the period of the 'idda, calculated in months; there is also that of the divorced woman whose divorce can still be revoked who becomes a widow during the 'idda, the marriage not having yet been finally dissolved; she is subject from the date of her husband's death to the retreat prescribed for widows.

It would be too long to list all the eventualities provided for. It should merely be mentioned that the woman who has been definitively divorced (bd'in) must always observe a period of retreat counted by menstruations, even if her husband happens to die during her retreat, since her widowhood then occurs after the dissolution of her marriage. It is only in a case where the divorce is pronounced in articulo mortis (mara' al-maudi) that the wife, whose right to the inheritance is then not lost, must observe the longer of the two periods of retreat.

(3) Date of commencement of the 'idda. When a marriage has been legally concluded, the 'idda begins from the moment the marriage ends, that is from the husband's death or from the pronouncing of the divorce, even if the wife does not know of it. Formerly (before the modern laws on the publicity which must be given to divorces) it sometimes happened that a wife did not know that she had been divorced. In such a case she might observe the whole of her 'ida without being aware of it. The annulment of a marriage on the other hand, or a husband's decision to separate himself from his wife for a particular reason, must be reported to the wife. In such a case it is from the moment that she hears of it that the 'idda begins.

(4) The 'idda calculated by menstrual or inter-menstrual periods gives rise to many practical difficulties which the jurists have not always been able to solve satisfactorily. These difficulties arise from the fact that, in the last resort, reliance has to be placed on the statements of the interested party herself. She might be tempted to lie, either in order to prolong the waiting period, claiming to have had no menstruation, or at least no third one, or, on the other hand, in order to shorten it by maintaining that her menstrual periods were very brief and came very close together. The first type of behaviour was particularly frequent among Hanafi populations. In fact, Hanafi law allows the irrevocably divorced woman (bd'in) to retain the whole of her nafaka (maintenance) throughout the period of her 'idda. This explains why those who had no prospect of re-marrying delayed in announcing the occurrence of the third menstrual period which, by concluding the 'idda, thus deprived them of all nafaka. It is only in modern legislation that this device is prevented by fixing a maximum period of one year, after which the wife, although still considered to be in retreat if she has not announced her third menstrual period, has nevertheless no longer the right to maintenance (Egypt, Sudan). Certain countries (Ottoman and Jordanian law, Syrian code) fix a definite maximum of nine months or a year to the retreat itself. Deception of this nature is much less frequent among the Sha'abis and the Maliks, who allow the bd'in divorced woman only the right to remain in the husband's house during the period of retreat, without any right to food or clothing—a fairly miserly concession which does not encourage them to prolong the period of their retreat.

Deception practised for the opposite reason, how-
ever, was foreseen by the classical writers. This is when a divorced woman, having already received another marriage, wishes to be married to a man, and her prospective husband will be discouraged by having to wait too long, pretends that the menstrual and inter-menstrual periods are shorter than they actually are. In Ḥanafi law (the opinion of Abū Ḥanīfa has prevailed on this matter) the 'idda may never be for a period of less than 60 days. The minima fixed by the other schools vary from 30 to 39 days. It should be noted in this connexion that in Mālikī law the woman's word alone is not sufficient, even though she adheres to the minimum of 30 days fixed by this school for the total of the three menstrual periods. In these circumstances she must be examined by two women.

(5) The 'idda for a female slave is governed by special rules, of which a brief indication is sufficient. A female slave who is merely a concubine must observe a period of retreat equal to one menstruation or of one month, according to whether she is or is not of menstruating age, commencing from the time when she becomes the property of a new master if he intends to have sexual relations with her, or if there occurs a change in her legal status. This is known as istiblā' [q.v.]. But a slave may well be married, in which case she must observe, in the same circumstances in which the 'idda is imposed on a free woman, a 'idda, the duration of which, by application of the "rule of the half-rate", should be half as long as that of a free woman. In other words, the 'idda of a slave who is a widow would last for two months and five days, and that of a divorced woman not of menstruating age for one and a half months. As it is not possible to halve the period of three menstruations which is insisted on for the divorced free woman, it was decided that the 'idda of a divorced slave who is of menstruating age should consist of two inter-menstrual periods (Ṣḥāfi'ī and Mālikī law) or of two menstruations (Ḥanafī and Ḥanbalī law), the only exception being an umm wulad, who as such is treated as a free woman.

(6) The rights and the obligations of a woman who is observing a 'idda vary according to whether she is a widow or a divorcée. A widow with no children has the right to full maintenance (nafaka), even if she is pregnant. On this point all the schools agree. There exists a case without children and a new marriage contract (nafaka) is necessary and the payment of a new dowry is necessary and the payment of a new dowry. This is the solution recognized by the majority of the schools; only the Mālikis and the Shāfi'is base their rule on a decision attributed to the caliph Ṣa'īd (but which he is said to have reversed), state that after a marriage has become null and void and being entered into during a not yet completed 'idda, the wife "is to be eternally forbidden" to the second husband.

(8) Modern legal codes, from the Ottoman Family Law of 1917 to the Iraqi Code of Personal Status of 1959, have devoted much attention to the institution of the 'idda, but without departing significantly from the principles of classical Muslim law. All of them have preserved the two Kur'ānic waiting periods: 4 months and ten days for a widow and 3 menstrual or inter-menstrual periods for a divorced woman of menstruating age, except that in the Tunisian Code of Personal Status (art. 35) the three menstruations have been replaced by a fixed period of three months. The few modifications made to the classical law (particularly by the Ḥanafī countries) are concerned with the calculating of the duration of the 'idda by menstruations. They tend to fix a maximum and a

1012 "IDDa"
minimum period within which the three menstruations of the wife must occur. It is thus that it is laid down by the Ottoman law of 1917 (art. 140) and the Jordanian law of 1937 (art. 102) that the ‘idda may not be prolonged beyond nine months. In Egypt, the Sudan, and finally in Syria, they have preferred not to fix a maximum limit to the ‘idda of the divorced woman who is of menstruating age, while stipulating nevertheless that she may not claim maintenance for longer than twelve months (Egyptian Law no. 20 of 1929, art. 17; Sudanese Judicial Circular no. 28 of 1927, art. 64, and the Code Statut civil of 1928, art. 84), for longer than nine months, after the ending of the marriage. The effect of these measures has been to put an end in practice to the abuse of the law by certain divorced women claiming to have had no menstruation for many years in order to continue to receive maintenance. In some countries the minimum duration of the ‘idda, calculated in menstruations, has been fixed at three months.

**Bibliography:** The subject is always given a separate chapter in the great treatises of fikih. There may be consulted, for ‘Hafani law, Zayla'i, Tabyin al-hab'a, Cairo 1911, ii, 26-38; for Shafi'i law, Shiraz, Al-Muhammadi (ed. Halabi), ii, 142-55; for Maliki law, Dardir Dashtii, Al-Sharh al-kabir (ed. Halabi), ii, 468-502; and the exhaustive study in comparative law by Ibn Kudama, Al-Muf., iii, 468-88. For Shafi'i law, see Syed Ameri Ali, Al-Muhammedan Law, Calcutta 1928, 340, 353-4. A good summary of the subject is presented in Kuduri, Muhkasar, tr. Bercher and Bousquet, Le Statut personnel en droit musulman, 156 ff. For the law previous to the formation of the juridical schools, see J. Schacht, The origins of Muhammadan jurisprudence, 185, 197-9, 215-6; Y. Linant de Bellefonds, Traité de droit musulman comparé, Paris-The Hague 1965, ii, nos. 712 to 721 and 880 to 885. See also talak. (Y. Linant de Bellefonds)

**IDFÜ** [see **ADFÜ**]

**IDGHÁM** (idghâm), infinitive of the verb adghâm "to make (a thing) enter (another)"; in Arabic grammar: al-idghâm izza'h harf 'a harf, "idghâm is making a harf enter a harf" (L.A., xvii, 298), and: in the Shafi'i school: *idghâm* = 'l-harf and *idghâmuth*, according to the pattern *sawālah* (ibid.). whence the use of idghâm and *idghâm* in the same sense; the first is a term of the Kufans, the second of the Basrans (Ibn Yaqi'n, 1456, 156 ff; see also Talâk).

The Arab grammarians distinguish: *idghâm al-mithlâyin*, *idghâm al-mutakhârbiyyân*. The contraction of two consonants into one is a preliminary to the law of *idghâm*, as preliminary to it:

in a dislike of repeating the same consonant consecutively when the separator is a short vowel. Sibawayh speaks clearly on this subject (ii, Ch. 408, § 735); texts cited and translated in Etudes de Phonétique arabe, in MUSJ, xxvii (1949-50), 258, and *Traité de philologie arabe, i, § 503*; in this ginate (harf muta'ddadda), the Arab grammarians recognize a duality of harfs and not single one harf (that we should call long; see *Traité, § 4*); for the doctrine of Radî al-Dîn al-Astarabâdî, see *Sh.Sh., iii, 233*, lines 12-3 and 16. In vocalization of texts the harf muta'ddadda receives the sign *shaddâ* or *shâdâ* (W. Wright, *Ar. Gr.*, i, 140).

The Arab grammarians see the cause of *idghâm* in the duality of repeating the same consonant consecutively when the separator is a short vowel. Sibawayh speaks clearly on this subject (ii, Ch. 408, § 735); texts cited and translated in Etudes de Phonétique arabe, in MUSJ, xxvii (1949-50), 258, and *Traité de philologie arabe, i, § 503*; in this ginate (harf muta'ddadda), the Arab grammarians recognize a duality of harfs and not single one harf (that we should call long; see *Traité, § 4*); for the doctrine of Radî al-Dîn al-Astarabâdî, see *Sh.Sh., iii, 233*, lines 12-3 and 16. In vocalization of texts the harf muta'ddadda receives the sign *shaddâ* or *shâdâ* (W. Wright, *Ar. Gr.*, i, 140).

The Arab grammarians see the cause of *idghâm*...
word and in *infis'il* and *iddighâm al-mutakdribayn* in the case of *infis'il*, the *i* of the form *iftâala* broadcast as *iddighâm* (*Muṣn.*, § 733; see Ibn Ya'qîb, 1458, lines 4-6).

2). *iddígâm, iddíghâm*; the Arabic word, without vocalization, can be read in either way; the verbs *adghâma* and *iddaghama* can also be read in either way in all their "tenses", when unvocalized. How can one distinguish, in editions, the first, original vocalization from that which is due to the initiative of the editor? The edition of the *Kûbâb* (Paris) vocates *Lâb* for *iddghâm* (ll. 452); was this Siba'wîhî's pronunciation?

**Bibliography:** in the text; works cited in abbreviation: Sibawayh, *Kûbâb*, ed. Paris 1884-5; *Muṣn.*, Zamakhshârî, *Mu'fassal*, ed. J. P. Broch (Christiania 1879) and *Sharh* of Ibn Ya'qîb, ed. G. Jahn (Leipzig 1882); *Sha-Sh.*, Radî al-Dîn al-Asrârâbghî, *Sharh al-Shâfi'ya* (Cairo 1358/1939). The easiest account to consult is that of the *Muṣn.*: § 732 for the conditions of *iddighâm* and § 735 f. (with the corresponding commentary of Ibn Ya'qîb). Strâîrî, at the end of the *Sharh* of the *Kûbâb*, adds two chapters, one on the *iddighâm* of the Kûfâns (he gives phonetic terms peculiar to al-Farrâbî), and the other on the *iddighâm* of the *Kûrâ*: *H.* (H. Fleisch) *IDHâ'A*, modern Arabic term for "broadcasting" (*broadcastâr = muḥdhâr*, microphone = *miṣhtâr*).

Broadcasting in the Islamic world was inaugurated in Turkey in 1925, three years after the establishment of regular transmissions from London. In most Islamic lands however its growth was delayed by their dependent political and under-developed economic status. In Egypt, for example, broadcasting began in 1934 and at the time of the 1932 revolution its output was only 15 hours daily, with a total transmitting power of 73 KW. With the subsequent upsurge of national sentiment and economic development it rose by 1966 to 130 hours daily with a transmitting power of nearly 6,000 KW (statement by Deputy Premier for Guidance and Culture in *al-Idhâ'a wa'l-Talâfisîyôn*, 28 March 1966). In 1964 Turkey was again an innovator in the Islamic world when she set up an independent Broadcasting Corporation subject to direct government control. This Corporation was financed by licences and advertising, but deficits were underwritten by the government. Elsewhere in the Islamic world broadcasting output was under direct government control, many hours being dedicated to the exposition of government policy, official statements, and verbatim reports of speeches by the Leader. Long recordings were broadcast of the trial of the leaders of the Muslim Brotherhood in Egypt in 1954-5 and of that of former ministers in Iraq in 1958-9; the session of sentencing in November 1958 was relayed "live", as were the opening and closing sessions of Subandrio's trial in Indonesia in 1966. Though advertising on the air is permitted in many countries, underdevelopment makes it a less valuable source of revenue than in Europe or America. The main broadcasting categories are the same as elsewhere. The *Kûrâ* plays a great role in religious broadcasting, and in the UAR continuous recitation from 4-9 hrs. and from 12-21 hrs. was introduced in April 1964. Friday services are also broadcast, and religious talks and recitations, particularly in Ramadân. In Saudi Arabia broadcasting was long limited almost entirely to news and instructive and religious talks. States with large Christian minorities broadcast occasional Christian services. The

UAR, Turkey, and some other countries have cultural programmes adapted to differing intellectual levels. Standards of news broadcasts are related to those of the local press and news agencies; those of light entertainment to the existence of a cinema industry.

Many Muslim lands consist of vast territories in which the population is concentrated in limited areas, widely separated by tracts of desert or, in the case of Indonesia, by sea. Illiteracy is in general high, and in many cases independent nationhood is a recent acquisition. Broadcasting is thus exceptionally valuable on account of its diffusing information and ideas, creating a common national spirit, and spreading an educated form of speech. But the geographical characteristics at the same time necessitate an exceptionally heavy capital expenditure to ensure the clear reception which is essential for effective broadcasting. In Indonesia a network of regional stations, carrying their own programmes, has been set up, but in general the organization is highly centralized. The density of listening sets was enormously increased in the decade from 1955 to 1965 by the introduction of transistor sets. In the Middle East, which is predominantly Muslim, sets were estimated by the BBC (*Handbook*, 1967) to have risen in that period from two to twelve million—roughly one to every ten of the population. In the South Asian Muslim world the figure was far lower.

Most Muslim states cater for their national minorities in the minority language concerned; as Iraq for Kurds; Iran for Turcomans, Assyrians, Armenians, Kurds, Azerbajhanis and Arabs in Ahwaz; Morocco and Algeria for Berbers. Mali broadcasts in French, Bambara, Sonraie, Peul, Sarakole, Wolof, Tamachech (Tuareg Berber), and Hassani Arabic. Most cater also for resident foreign minorities, as the UAR for English, French, Germans, Italians, and Greeks. Some also direct broadcasts in the home language to their nationals abroad; as Lebanon to South America and West Africa, Jordan to South America, and the Turks to their emigrant workers in Germany.

Where a language is being modernized or given a more national flavour, as with Turkish and Urdu, broadcasting has a special importance; and in the Arab world for spreading a universally used form of Arabic.

Most Muslim states direct broadcasts, in the language of the people addressed, to one or more great powers directly concerned with the area and to neighbouring states. To be successful, such broadcasting involves heavy expense for the engagement of suitable, probably foreign, staff, and for powerful transmitters and if possible medium relay stations. Standards of language and content must rival those of the receiving country and, to be politically effective, the ideas expressed must appeal to at least a significant section of the population. Where these conditions are fulfilled, and only then, broadcast campaigns have effectively stimulated latent popular feeling. Radio warfare has been waged between Indonesia and Malaysia, and between the UAR and Iran. It has occurred frequently within the Arab world, where it is facilitated by the common language. It took place between Morocco and Algeria during the fighting in autumn 1963, but the most frequent protagonist has been the UAR, with its powerful transmitters, its developed news services, its relatively developed culture and, in the political field, the appeal of its pan-Arab and socialist policies to an important section in every Arab state. The UAR
in fact comes sixth in the list of external broadcasters with 589 hours weekly in some 30 languages, including African. This compares with 1,381 hours from the USSR; 909 from the Voice of America; and 663, in about 40 languages, from the BBC. Iran, apart from local languages, broadcasts in Russian, French, English, Urdu, Turkish and Arabic. Pakistan and Turkey each broadcast in twelve or more languages. Of lesser powers, Somalia after acquiring two 50 KW transmitters from the USSR in 1960, three years after independence, set out "to make its voice heard in the world" with six hours of daily transmission in Somali; 1 hour in English; and 1 hour each in Italian, Amharic and Swahili; 10 minutes in Galla, and occasional broadcasts in Dinka.

The example of broadcasting from abroad to Islamic lands was set by the great powers, just before and during the second world war. The Italian Fascist régime introduced broadcasting in Arabic in 1933. Great Britain did the same in 1938 and Nazi Germany in mid-1938; the latter specialized in scurrilous and violent propaganda. Later the USA and, in 1943, the USSR added their voices. Broadcasts in Arabic from Paris began before 1939; they include dialect transmissions for Algerians in France. Those for overseas reached their maximum during the Algerian fighting, after France ceased to control local broadcasting in other Arabic-speaking countries of North Africa. Later they were much reduced. By 1966, 45 states, Muslim and non-Muslim, were directing broadcasts in Arabic to Arab countries; 20 in Persian to Iran; 17 in Indonesian to Indonesia. The BBC alone broadcast for 12 hours daily in Arabic (ten from April 1967) and received some 80,000 letters from Arab listeners in the course of that year. The first Arab state seriously to organize external broadcasting was Syria, under the Shishakli régime (1930-4). Syria and the UAR introduced Hebrew broadcasts to Israel, which in turn broadcast in Arabic to the Arab countries and to its Arab minority and to its neighbours.

Professedly indigenous clandestine stations come and go, particularly during crises. A few have been genuine, but in general they have been directed from abroad by communist, Western or outside Muslim states. The cost of installing and producing television has limited its introduction in the Muslim world, though in Asia, and in Africa north of the Sahara, most Muslim states had by 1966 at least some service, and many encouraged the purchase of sets by customs remissions or other means. Except in the UAR the service was virtually restricted to the capital or a few large cities. In Iran private companies supported by advertising revenue provided services in Teheran and many large cities. In Iran private companies supported by advertising revenue provided services in Teheran and many large cities.

When the Arabs invaded al-Ahwaz in 1763, they penetrated via Ramhurmuz to Idhadj and made peace with the local lord, Tirawayh, leaving him in possession of power. But the town had to be conquered again in 21/642 after the battle of Nihâwand, and in 26/647-8 a rising of the people of Idhadj and the local Khurrazadh and other. By the end of the second millenium B.C. (see the detailed description of pre-Islamic antiquities by M. Streck in E.P., s.v. Mål-AMr). In Sâsâni times, the district was included in the territories of the Islamic world, the Arabic-speaking countries of the urban south. Conquered by the caliph al-Muwaffak in 298/910, and by the governor of Idhadj, Ahmad b. Dinar, to reinforce al-Muwaffak's army for the final assault on the Byzantine capital of Constantia. The town was destroyed in 312/925, though partly rebuilt in the 12th century, and though reckoned by the geographers to be in the warm or hot zone, the nearby mountains gave it a pleasant and healthy climate; the winter snow from these mountains was gathered and exported from Idhadj to the torrid, low-lying parts of al-Ahwâz (cf. Mukâaddasî, 414; Yâkût, Buldân, i, 416; Mustawfî, Nushai al-hâlíû, tr. Le Strange, 74). The district was also frequently subject to earthquakes.

Idhadj (the vocalisation Aydhadj is also found) was a populous and prosperous place in pre-Islamic times. There are many Elamite remains in the vicinity, mostly dating from the end of the second millennium B.C. (see the detailed description of pre-Islamic antiquities by M. Streck in E.P., s.v. Mål-AMr). In Sâsâni times, the district was included in the territories of the Islamic world, the Arabic-speaking countries of the urban south. Conquered by the caliph al-Muwaffak in 298/910, and by the governor of Idhadj, Ahmad b. Dinar, to reinforce al-Muwaffak's army for the final assault on the Byzantine capital of Constantia. The town was destroyed in 312/925, though partly rebuilt in the 12th century, and though reckoned by the geographers to be in the warm or hot zone, the nearby mountains gave it a pleasant and healthy climate; the winter snow from these mountains was gathered and exported from Idhadj to the torrid, low-lying parts of al-Ahwâz (cf. Mukâaddasî, 414; Yâkût, Buldân, i, 416; Mustawfî, Nushai al-hâlíû, tr. Le Strange, 74). The district was also frequently subject to earthquakes.

Idhadj (the vocalisation Aydhadj is also found) was a populous and prosperous place in pre-Islamic times. There are many Elamite remains in the vicinity, mostly dating from the end of the second millennium B.C. (see the detailed description of pre-Islamic antiquities by M. Streck in E.P., s.v. Mål-AMr). In Sâsâni times, the district was included in the territories of the Islamic world, the Arabic-speaking countries of the urban south. Conquered by the caliph al-Muwaffak in 298/910, and by the governor of Idhadj, Ahmad b. Dinar, to reinforce al-Muwaffak's army for the final assault on the Byzantine capital of Constantia. The town was destroyed in 312/925, though partly rebuilt in the 12th century, and though reckoned by the geographers to be in the warm or hot zone, the nearby mountains gave it a pleasant and healthy climate; the winter snow from these mountains was gathered and exported from Idhadj to the torrid, low-lying parts of al-Ahwâz (cf. Mukâaddasî, 414; Yâkût, Buldân, i, 416; Mustawfî, Nushai al-hâlíû, tr. Le Strange, 74). The district was also frequently subject to earthquakes.

Idhadj (the vocalisation Aydhadj is also found) was a populous and prosperous place in pre-Islamic times. Dulaf; the same in Kazwini, *Ālār al-bilād*, ii, 201). *Idhadj* seems to have flourished in Buyid times, and the near by the town of Sūsan were the winter residences of the Hazaraspids, their *yāyālāk* or summer-quarters being further to the north on the upper Zanda Rūd and the Kārūn headwaters. It is at this time that the name for *Iḍhadj* of Māl-Amīr or Māl-i Amīr “the Amir’s property” comes into use, and gradually replaces the older designation. The newer term may be connected with the residence there of the Hazaraspids, as is probably the name of the *Iḍhadj*-Iṣfahān road, *Ḍadda-yi Atābeg* “the Atābeg’s road”, in use till modern times. Ibn Baṭṭūṭa passed through the town twice in the course of his travels, once in 727/1327, during the reign of the Atābeg Ṣūrāṭ al-Dīn Āḥmad, and again in 748/1347, during the reign of Muzaffar al-Dīn Ahrāsīyāb II b. Āḥmad. He praises Āḥmad’s piety and asceticism, and says that he built 400 hospitals for travellers in his territories, of which 44 were in the capital *Iḍhadj* or Māl-al-Amīr (he uses both these names); Ahrāsīyāb, on the other hand, was a drunkard (*Travels*, ii, 30-42, tr. Gibb, ii, 287-94).

The Timūrid ʿAbūr b. ʿAbd al-Rūkh *q.v.* ended the line of Atābegs in 827/1423, and the region of Māl-al-Amīr fell into the hands of Baḥātīyārī chieftains. The town itself now became deserted and drops out of history, but its site is marked by a large mound and several lesser ones (see Jéquier, *Description du site de Mālamir*, in *Mémoires de la Délégation en Perse*, Paris 1901, iii, 1, 133-43).

The district of *Iḍhadj* was agriculturally prosperous during mediaeval Islamic times, since there was a fair rainfall and dry-farming was possible. Its specialities included grapes, citrus fruits, melons, pistachios and the variety of cardamom whose juice was used as a remedy for gout. The existence of many mines is mentioned by Kazwini, but of the granites of Khurasan, and even, it is said, the famous *Iznik* *al-maḥd* for them, for example, the acceptance of a gift free of encumbrances. They have not the power, even if authorized (by the minor’s guardian), to conclude transactions which involve a definite loss (*al-tasarrufūf al-ḍarrā al-maḥd*). The most typical example of these completely forbidden transactions is that of making gifts. There remain the legal transactions which are as likely to bring a loss as a gain. This category includes the majority of contracts dealing with their patrimony: selling, renting, loan, etc. In these cases the *wāli* in the case of a minor, or the judge in that of a spendthrift, must intervene.

Their intervention is envisaged by the Ḥanafī *fākhabā*, and also by the Mālikīs, as occurring after the transaction, according to the principle *al-idḍa* *fi ′l-iṭtaḥda* ka *fi ′l-iḥtibād* (Sarakḥī, *Mabūsī*, xxiv, 182), “ratification afterwards is equal to authorization beforehand”. But there is nothing, theoretically, which forbids the guardian or the judge to grant his authorization in advance, or at the same time as the transaction is concluded by the incapable person. When the usual procedure of ratification afterwards is followed, the transaction, before the approval of the guardian or the judge has been given, is considered to be *maḥkūf*, “in suspense”, neither invalid nor truly valid; it can only be made fully effective by ratification. The Shāfīʿīs do not permit semi-incapable persons to complete such transactions (sales, renting, etc.), which are the exclusive province of the *wāli*. They consider that these transactions can be neither authorized nor ratified; they must be concluded by the guardian himself on behalf of the minor. The Ḥanbalīs reject the process of ratification afterwards and insist on prior authorization if a *wāli* allows a minor to carry out a transaction which he is capable of carrying out himself.

(b) A minor who is no longer a child (except in Shāfīʿī law), and also a slave, may be authorized to take part in a commercial transaction; he then becomes *maʿṭāsh*: *al-bgir al-maʿṭāsh* or *al-adʿ al-maʿṭāsh*. In this case the authorization is necessary, given beforehand. It is very rarely given express but usually tacitly, when the *wāli* or the master allows the minor or the slave to trade without raising any objection. The early *fākhabā* questioned the regularity of such acts, and considered that this authorization was not valid, in that in such cases the slave was merely a virtual, except in the case of a judge, who must always give his express approval. The Shāfīʿī school, with its rigid principles, could not admit that a minor could be authorized to trade; their attitude to a slave was of course different. This school has remained in general faithful to its first doctrine; however, the exigencies of modern life led certain Shāfīʿīs of Khurṣān, and even, it is said, the famous Imām al-Haramayn, to attempt to modify it, tending to consider valid an authorization to trade granted to a minor.

The question of the extent of the authorization given to a minor or to a slave and whether a *wāli* or a master can impose a limit on it is decided differently by the different schools. The Ḥanafīs and Mālikīs consider that this authorization is the equivalent of a complete withdrawal of prohibition, which is not subject to qualification. The Shāfīʿīs and the Ḥanbalīs (so far as concerns a slave at least) regard it as a type of procurement and consider it to be the duty of the granter of the procurement to fix the limits of it, as in the general law regarding procurations.

**Bibliography:** The *idān* or *idāza* granted in respect of one single transaction to a minor who was reached years of discretion is studied in
the works of fiqh in the chapter on incapacity (hadir). Examples are Kasānī, Badd al-sanā', Cairo 1327, vii, 171 ff., and Ḥaṭṭāk and Mawrāq, commentaries on Khall, Cairo 1329, v, 63 ff. Among modern writers, see Şubbi Mahmasāni, Naṣāriyyat al-Šāmta li-`l-mawdūdāt wa-`l-`uwdād, Beirut 1948, ii, 106-7. The "authorized" minor and slave generally form the subject of a special chapter in the works of fiqh; e.g. Marghinānī, Ḥidāya, iv, 3 (ed. Ḥalabī). On the "authorized" slave, see also Jutic, Jutic, 1321, Musulmanu, ii, 352-6. See also Kudūrī, Mukhhāṣar, tr. Bouquet and Bercher, 224-30; and Y. Linant de Bellefonds, Traité de droit musulman comparé, Paris-The Hague 1965, i, no. 108-9 and 309-11. (Y. Linant de Bellefonds)

**IDJAR** (a), literally "making definite, binding, due (adādīb)\textsuperscript{1} is in Islamic law the technical term for the offer which, together with the acceptance (habāl [see bān?]), is one of the two essential formal elements which for the juridical analysis constitute a contract, which is construed as a bilateral transaction. Offer and acceptance can be expressed verbally (also in the form of compliance with an order, e.g. by the words "sell me" and "I sell you herewith"), or by the conclusive acts of the parties, e.g. the silent exchange of goods if that is the local custom, at least if the objects exchanged are of small value. The bilateral contract between the etymological meaning of the term and the function of what it designs, because the offer can always be withdrawn before it has been accepted (and, according to a Meccan doctrine which was later taken up by al-Şāfī, the so-called khāydr al-madājīs, even after it has been accepted, as long as the two parties have not separated). This leads to the conclusion that the bilateral contract of consent, which is quite isolated among the laws of antiquity, was preceded by a unilateral one, which is well known from other systems of law. If this is so, the change from the unilateral to the bilateral construction must have been made at some early date in the formative period of Islamic law.

(E. TYAN)

**IDJAR**, the granting of protection (diwār [q.v.]]) to a stranger according to ancient Arab practice. This form of protection was especially important for those who travelled about, because it was also used in other cases. The diwār (pl. diwarān) is mostly the person protected, but may also be the protector (as in Sūra VIII, 48/50; Muṣafādaṣṣīyat, 760, 18). To ask for protection is istidjara (Sūra IX, 6). The granting of protection was announced publicly (cf. Zaynab's **IDJAR** of her former pagan husband in Ibn Ḥāmāḥ, 469); and thus, when `Uṯmān b. Māḍūn wanted to renounce the **IDJAR** of al-Walīd b. al-Muğhrīa for that of God, al-Walīd made him declare his renunciation publicly to show that he was not alleging inadequate protection on the part of al-Walīd (ibid, 243). It was a point of honour to protect the diwar as effectively as one protected one's own kin (cf. Abū Tammān, Hamāsā, 422; Nöddke, Delectus, 40), and shortcomings in this could be made up in a turn-taking. Normally a request for diwar had to be accepted (Sūra IX, 6; Ibn Ḥanbal, Musnad, ii, 99), and the granting of diwar by one member of a group would be accepted by other members; in connexion with Zaynab's **IDJAR** Muhammad said that protection granted by the least of the Muslims (adnh-hum) was binding on all. Two men refused diwar to Muhammad on his return from al-Ṭā'īn the grounds that their position in the tribe of Kuyyayn was such that they were entitled to do this, since one was a hālīf and the
other belonged to a clan outside the central group (al-Tabari, i, 1203). The Kur'an (XXIII, 88/90; cf. LXXII, 22) applies this conception to God, and says: “He gives precedence (yu'dafir) but none grants protection against Him (lā yu'dafir ‘aṣāri‘, ‘aṣāri‘). Among contemporary nomads such as the Ruwala? there is a similar term ḥasār, but this indicates a mutual relationship between members of different tribes by which each grants protection against his fellow-tribesmen (A. Musil, Manners and customs of the Rovala Bedouins, New York 1928, 267-9; H. R. P. Dickson, The Arab of the Desert, London 1949, 126-32). Contact for protection would seem to have been dependent on actual physical contiguity.

This may be the touching of a tent-pole, or even coming within some yards of the tent, or the touching of a child of the family; but even lesser contacts may make protection obligatory, for example, when the camel-saddles of two men touch, or when a man uses a vessel belonging to another (cf. S. Fraenkel, Das Schutzrecht der Araber, in Orientalische Studien T. Nöldeke grundzüge, Giessen 1906, 293-301). There does not seem to be a hard and fast line between the ḏiṣr and the ḏakhir, the suppliant who “enters to seek protection. The latter is more prominent in Musil’s description of the Ruwala? (op. cit., 441-8; but cf. mention of neighbour, 460) and also in H. R. P. Dickson’s (op. cit., 133-9). The rights of the ḏakhir vary from tribe to tribe (cf. Dickson, 139), but are usually only for a limited period.

The eating of someone’s food constitutes a claim for protection, so long as some of the food remains in one’s body, and this period is considered to be three days. This applies particularly to the person who has the status of ḏafṣ, “guest”. Hospitality is highly regarded by the desert Arabs, and a stranger travelling in the desert (unless obviously an enemy) is offered lodging and the best food available. If he chooses to do so, he may remain for three days, and for a further three days (while the food remains in him) he is under his host’s protection (Musil, op. cit., 455-70; Dickson, op. cit., 118-22, 190-1).

Proximity to a sacred place gives protection. In the ḥaram or sacred area round a sanctuary animals and plants were protected as well as human beings (Wellhausen, Reste, 78). Kusayy and Ḥāṣim respectively speak of the remoteness of the ḫūrān. Another Ibn Ḥighām (83, 87) and it is also said that, when men become Muslims, they become God’s ḏiṣr ‘under His ḏhīmma, “protection”. A person who takes refuge at the grave of a great man or saint is known as ḏiṣr al-ḥabr, and often is effectively protected since otherwise the dead person would be dishonoured (cf. Goldziher, Muh. St., i, 237-8, Eng. tr. i, 215-7, with further references).

‘IḌJĀZ, literally “the rendering incapable, powerless”, since the second half of the 3rd/9th century technical term for the inimitability or uniqueness of the Kur‘ān in content and form. The numerous descriptive definitions do not, after the 4th/10th century, show significant divergencies. Ṭahānawi, Kashshaf ʿiscīlāt al-fumūn, Calcutta 1854-62 (written ca. 1158/1254), somewhat surprisingly, does not include the term; but the opening passage of his article on muṣṣīla, pp. 975-7, implies the character of ‘iḍās as action or failure to act not to be accounted for by habitual natural process coupled with a “challenge”, tabāḥdī, which is not taken up and at any rate does not result in anything “matching” the object of the challenge, ‘ādam al-muṣṭaṣrāḍ (see below). The Muslim theologian who most recently devoted an extensive treatise to this topic, Muṣṭafā ʾṢāliḥ al-Rafīʿī (d. 1937), ‘iḍās al-Kur‘ān wa l-badā‘a al-nabawīyya (Cairo 1345/1926), explains (7th ed., Cairo 1382/1961, 156): the ‘iḍās is two things combined, viz. the insufficiency of human strength to attempt a “confirmatory miracle”, muṣʿīla, and the persistence of this inadequacy through the ages. Theological formulae tend to represent a summation of analytical labours and to embody the results of disputes extending in many cases over centuries; in that of the ‘iḍās, the decisive discussions took place between ca. 750 and 1000 A.D.

Two factors combined to make the uniqueness of the Kur‘ān crucial within the never fully systematized dogmatics of Islam: the necessity to prove the mission of the Prophet and the necessity to secure such an incontrovertible authority for Muslim doctrine, law and more. These interlocking needs could, in the atmosphere of the period, be met only by establishing the transcendent or miraculous character of the document of revelation and the singularity or miraculousness of the historical Muḥammad b. ʿAbd Allāh revealing it. The concept of the miracle as testimony, muṣʿīla (q.v.), designed to confirm the veracity of a prophet and carefully defined per se as well as over against the ḥaramat (q.v.), the consensus which God allows to happen through His lesser “friends”, was developed to identify the Kur‘ān as the muṣʿīla of Muḥammad. It implied the supernatural nature of the Revelation which had, from the beginning, been the primary postulate and justification of Muḥammad’s preaching.

To view the Kur‘ān in toto as a miraculous intrusion (or a series of intrusions) of the divine and, hence, the unrepeatable into human experience spurred rather than blocked the question regarding the precise nature of the properties which set it apart from all other literature—this word being taken in the widest possible sense and including the books embodying earlier revelations. Supported by the complementary doctrine of Muḥammad’s ummīyya or illiteracy, the prophecies of future events, mundane and eschatological, paralleled by information about the precise nature of the properties which set it apart from all other literature—this word being taken in the widest possible sense and including the books embodying earlier revelations. Supported by the complementary doctrine of Muḥammad’s ummīyya or illiteracy, the prophecies of future events, mundane and eschatological, paralleled by information about the precise nature of the properties which set it apart from all other literature—this word being taken in the widest possible sense and including the books embodying earlier revelations. Supported by the complementary doctrine of Muḥammad’s ummīyya or illiteracy, the prophecies of future events, mundane and eschatological, paralleled by information about
of the Book; that an element of opinion was being injected into the valuation of the revealed text and thereby, to the more critical or the less pious, a direct challenge presented to denigrate or even match it — had however become apparent even sooner. Those weaknesses had already been countered (although a measure of refinement and elaboration of the argumentation was to follow in the 14th/15th century) by the concept of the tabaddi, or challenge. Based essentially on Ḫurān XVII, 90 and X, 90, where it is stated that ḫṣāṣṣa, or how they try to combine their efforts, are incapable of producing anything equaling as much as a single sūra of the Book, the ẓidjāz was substantiated by the pagan Arabs' failure to take up the challenge, a failure explicable solely by the realization on the part of those greatest masters of the word which the world had ever seen, motivated as they were by hatred of the new faith, by loyalty to the old and by artistic pride, that such an undertaking would be beyond them. (So already Ḏāibī, Ḥujjādī al-mubawwān, in Rasāʾīl al-Ḏābiḥīs ed. H. al-Sanābī, Cairo 1352/1933, 143 ff.; tr. C. Pellat, Arabicche Geisteswelt, Zürich and Stuttgart 1967, 78-80, who deals with the subject in a routine manner, suggesting that he is treating a familiar line of reasoning).

But once again, historical fact — for attempts to match the Kur'ānic style were indeed undertaken — and have turned successful with the vulnerability of a proof based on historical incident and subjective judgement would modify the argument. Reliance on tabaddi was supplanted by the doctrine of the sarfa, the "turning away". (Cf. as an intellectual precedent to the concept of sarfa, Lactantius (ca. 240-324 A.D.). Div. Inst., IV, 5: aevos esse arbitrator divina providentia, ne scire possent veritatem, "God made Himself the arbiter of history, so that they might not know the right way of finding the truth"). With the abandonment of the claim to literary inimitability as such and the recognition of the ability in potentia of the Arab rhetoricians of Muhammad's day victorious-ly to rise to the tabaddi, the miracle was perceived as consisting in God's preventing the competent from taking up the challenge altogether. So already al-Naṣṣāmī; cf. Bouman, Conf. lit., 22. Although the sarfa insists on the intrinsic excellence of the Ḫurān and particularly on the outstanding quality of its ḥṣāḥa; it is this level of stylistic perfection which prevented a muḍrador in spite of the indubitable occurrence of the tabaddi (cf. e.g., Muḥṣīni, ed. Amin al-Ḵhūlī, Cairo 1380/1960, XVI, 247; esp. also the long discussion, 264 ff.; no special act of God by way of a sarfa was required to inhibit the pagan Arabs from attempting to match Revealing (this is implied throughout and set forth explicitly at 322 ff.).

Muslim tradition identifies a comparatively small number of outspoken critics of the Book. Ǧīdāb b. Dīrahm (executed in 335/947) is generally named as its first detractor. Deprecation was, on occasion, accompanied by the attempt to match the revealed text by something artistically equivalent or better. The more popular perception of the artistry of the Kur'ānic text rather than the Ḫurān promulgated by the counter-prophet Musaylima (Musaylima) set an uncomfortable precedent. It is possible that the celebrated Iranian convert, the great stylist Ibn al-Mukaffa' (q.v.) (d. 320/737 or 324/741), actually did try his hand at such a muṣārada, but it found impossible to complete his task — a fate shared by some other writers to whom tradition attributes the same ambition. (Cf. M. Guidi, La Lotta tra l'Islam e il Manicheismo, Rome 1927, XVI, 64-5, 72; I. Goldzihver, Muḥammadanische Studien, ii, 403-4; Tahali, Chinese, tr. from the Persian version of a book by H. Zotenberg (repr. Paris 1958), iv, 450-2.) Bashshār b. Kurdī (d. 166/783) is quoted as freely comparing to its disadvantage Kur'ānic with contemporary verse and as having boasted of having personally surpassed sūra LIX; a similar statement is attributed to Abu 'l-Ṭā'ātiyya (d. 321/933), with reference to sūra LXXVII. Among the Muťażalla, Abū Mūsā Ǧābīb b. Sāhilb, better known as al-Mudārī (not al-Mudārī as Rāgī consistently writes, op. cit., e.g., p. 161), a contemporary of Būqīr b. al-Muṭāmīl (d. between 310/923 and 223/840), whose student he was, and of Abu 'l-Ḥushayl al-Ṭalīfī (d. ca. 223/840), is singled out as a sceptic in regard to the uniqueness of the Holy Book. The bitterest scoffers at the Kur'ān would seem to have been Ibn al-Rawandī (d. 295/897 or 297/912), parts of whose attacks on the new faith, by loyalty to the old and by artistic superiority, are coupled with the postulate that grammar was to be judged by the Ḫurān text rather than the Ḫurānic text by the tradition of classical grammar;
The major works marking the development of the *idjaz* concept and the researches supporting it have been brought together by Abdul Aleem, "Ijazat u-Shar'iyya," in IC, vii (1934), 64-82, 215-83, and G. E. von Grunebaum, A tenth-century document of Arab literary theory and criticism. The sections on poetry of al-Bābilīnī's Ijāz al- Qur̲ān, Chicago 1950 (with bibliography). The first systematic treatments carrying the word *idjaz* in their title which have been preserved—the oldest, by Muhammad b. Yazid (or Zaid) al-Wāsītī (d. 306/918-9), is lost—were concerned above all with the literary uniqueness of Revelation, the leading interest of both al-Tāhirī, al-Rummānī (d. 384/994) and Muhammad al-Khāṭābī (d. 386/996 or more probably 388/998). Outside the circle of "specialists", too, the tracing of poetic imagery in the Kurʿān, besides, the apology for the "low" style of the Bible is merely part of an educational problem—what to do with secular erudition within Christianity; whereas in Islam, the central position of the Kurʿān, as the focal point and justification of grammatical and literary studies, was, theoretically at least, never contested from within the believing community.

In another respect, however, Islam has come very close to Christian teaching (or, at any rate, Christian sentiment). In identifying the Kurʿān, i.e. the *fact* of revelation, as the *muqāṣa* of the Prophet it approaches very nearly the insight into the nature of the revelation which made Jesus refuse "to grant Him, which would have taken its place outside Revelation: this proof, moreover, would have been ineffective, and would not have provoked genuine faith, but at the most a gross superstition" (R. Mehl, *La condition du philosophe chrétien*, Paris-Neuchâtel 1947, 119; Eng. tr. by E. Kushner, *The condition of the Christian philosopher*, Philadelphia 1963, 127), which it must be admitted is precisely what happened whenever in Christianity or in Islam this insight of the central figure of the faith has been disregarded.

Tritton, *Muslim theology*, London 1947; J. Bouman, *Le conflit autour du Coran et la solution d'al-Bdqilldni*, Amsterdam 1959, with bibliography; H. Stieglecker, *Die Glaubenslehre des Islam*, Paderborn, Munich and Vienna 1962, esp. pp. 371-408; W. Madelung, *Der Imam al-Qāsim Ibn Ibrahim und die Glaubenslehre der Zaiditen*, Berlin 1965, 124 ff. (G. E. von Grunebaum *Idjāza* (A.) authorization, licence. When used in its technical meaning, this word means, in the strict sense, the third of the eight methods of receiving the transmission of a hadīth [g.v.] the various ways are set out precisely in W. Marçais, *Taqrīb*, 115-26). It means in short the fact that an authorized guarantor of a text or of a whole book (his own work or a work received through a chain of transmitters going back to the first transmitter or to the author) gives a person the authorization to transmit it in his turn so that the person authorized to transmit it in his turn so that the person authorized can avail himself of this transmission. But beyond this narrow definition there is in fact involved the principle, fundamental in Islam, of the pre-eminent value attached to oral testimony, a principle which has been maintained through all the fictions to which *idjāsa* and the other methods of transmission have given rise from a very early date and which still today continue to influence Muslim traditional thinking. It is this that gives its ideological and historical importance to the very full documentation contained...
in the isndds ("chaines de témoignages fondamentales"); L. Massinon, in the samd* ("certificates of dates and places and details of the names of the persons who formed links in the transmission—which precede, frame or follow not only the texts of hadith, of fiqh or of tafsir, but also theological, mystical, historical and philological works, and even literary collections, of both prose and poetry. Separate from the texts there appear the systematic lists of authorities (mu'adjam, ma'qyubah, hijab, fahraas q.v.), which form in themselves a well developed branch, still flourishing and so far insufficiently exploited, of the work of the traditional Muslim scholars. In spite of the very serious reservations which had been made from the beginning, notably by the imam al-Shafi'i (d. 204/820), with regard to transmissions not guaranteed by the direct study of the text transmitted and the effective meeting between a transmitter and a receiver capable of understanding the text, yet practices, supported when necessary by appropriate state-meats of casuistic reasoning, has always tended towards the acceptance of facts and increasing indulgence: a general idjazah without the hearing of the texts, an idjazah conferred on young children who have not yet reached the age of reason, even to those still unborn, an idjazah obtained as the result of a short interview during journeys whose aim was not exclusively study, or the Pilgrimage, an idjazah requested and granted by letter without any personal contact between the authority and the candidate. Among the fictional idjazah, those which were moreover of social and political significance, were those conferred at their request on rulers or on high state dignitaries. Examples of idjazah in verse exist from the second half of the 3rd/9th century (al-Khaṭl al-Baghdadi, Kifāya, 250), and these very soon became couched in turgid rhetoric (see below).

Among the "Twelver" Shi'i the idjazah obtains its authority from the infallible imams whose hadiths are scrupulously transmitted by their faithful supporters (see H. Laoust, Les schismes dans l'Islam, Paris 1905, 303).

In Persian and in Ottoman Turkish (in the latter as a composite word, idjazet-nâmé, iscàsetnâmè) the term has come into common use to mean "certificate of fitness" (to teach).

Youssef Eche (al-Shafi'i, Damascus 1949; an unpublished treatise by al-Silafi (d. 576/1180), K. al-Ważīfa fī dhihr al-mujadda wa 'l-mu'djida (MS Chester Beatty Arabic 8574, fols. 1-20), analysed by G. Vajda in Bull. de l'Inst. de Rech. et d'Hist. des Textes, no. 14, 1956; Mirzā 'All Ta'kī, al-Ijazāt, containing Licenses to learned men, Lucknow 1861/1869. On the subject of the superior value as proof of the spoken over the written word: L. Massinon, Études sur les "Isnads" ou chaines de témoignages fondamentaux dans la tradition musulmane haghiqienne, in MLanges Félix Grat, i, Paris 1946, 385-420 (= Opera Minora, ii, Beirut 1963, 61-92); R. Brunsvichg, Le système de la preuve en droit musulman, in Recueils de la Société Jean Bodin, xviii, La Preuve, Brussels 1964, 169-86. On the idjazah and the related documents in general: I. Goldziherr, Muh. St., ii, 188-93 (this study is the basis of his article in ET); reservations made by F. Seegm, GAS, i, 1967, 53-84, must be taken into account);
That the poetic form was popular for the *ijaza* as well as for the request for an *idjaz* (istid'd*) is shown by the poems composed in *Ma'ālid al-Adaab* (i, 638, 715, 743 ff.). *Ijaza* also occurs in *Sa'f* al-Din al-Hillī's *Dīwān* (Damascus 1297/1879, 481-3, for his own poems) and a late example is found in *Shīrānī's* *Hadībat al-afhrāb* (Būlāk 1282/1866, 76).

*Ijaza* as a technical term in prosody occurs as a synonym of various terms for faults in the rhyme [see art. ǦRIF]. As a term in rhetoric it is used when a poet builds some lines or even a whole poem on a single line or hemistich suggested by somebody else, often a ruler (but cf. Dozy, *Suppl. s.v. *ajzā*). It is also used when two poets compose alternately a hemistich or one or more lines of the same poem, often in the form of a contest, in which case we also find the term *tamāli* (or *manāla*, *ilmāli*, *TA*, v, 227 below). Other terms occur either as synonyms or to indicate different forms of *tamāli*. The interpretation of these terms given by Ibn Ṣafir in his *Baddī* al-Baddī*uh* (Būlāk 1278/1862 and on the margin of 'Abdāši, *Ma'dāsh al-tanāji*, Cairo 1316/1898) does not seem to have been generally accepted.

The connexion of parts of ‘Idj with Persian culture is noteworthy, and may partly explain the type of heresy to which they were prone. At Kfā al-‘Abd al-Mughīrah b. al-‘Idjīlī was executed as a heretic in 119/737 and Abū Manṣūr al-‘Idjīlī (see ‘Idjīlīyya) in 122/739. The well-known Abū Muslim (q.v.) is thought to have been a slave attached to ‘Idjīlī.

(W. Montgomery Watt) ‘Idjīlī, Abū Dūlah (see above b. 953).

‘Idjīmā’, the third, and in practice the most important, of the bases of Islamic religious law, according to the classical theory (see usul), its. In it is the unanalytical agreement of the Umma on a regulation (ḥukm) imposed by God. Technically it is "the unanalytical doctrine and opinion of the recognized religious authorities at any given time". Statement of the problem: the idea of idjīmā as a source of law, as proving in an intangible and definitive way the validity of a ḥukm (W. M. Watt, Islam and the integration of society, London 1961, 203), was a result of the need to perpetuate a truth given by the Kur’ān and corroborated by the Sunna of the Prophet. Arguments arose among the faithful after the death of the Prophet who, during his lifetime, was the "proof" (ḥudūd), and point of reference in legislative matters. The need began to be felt for a binding principle which would ratify a custom, as yet vague and undefined, which was being called upon to systematize itself at the same time as it was expanding and coming under attack from both Shi’is and Khāridjīs. The idea became defined and was given its theoretical formulation with the elaboration of the wa‘l al-fikhr, i.e. in the 2nd/8th century. The definition of idjīmā as a source of law then raises the question of the probative validity (ḥudūd al-ṣiyya) of this concept.

Denied by the Khāridjī (al-Baghdādī, Usul, 19) and by al-Naẓām (ibid., 19-20), this validity became the object of long discussions in the classical treatises on wa‘l al-fikhr. Whether it is the Hanāfi idjīmā extending the consensus of the Umma to all the Believers or the idjīmā of Ibn Hazm limiting it only to the Companions of the Prophet, the procedure is always the same: it consists of basing the proof deduced from the classic tradition of the idjīmā on a passage from "Kur‘ān or Tradition giving a reason in plain language" (Hourani, 19). This procedure clearly illustrates the exigencies of Islamic jurisprudence.

The rationalism of the Mu‘tazilīs, with its tendency to ethics rather than logic, amounts, where idjīmā is concerned, to no more than a deontology addressed to the personal convictions of the believer.

The primacy of reason (al-‘abī ḥabī al-sam‘), repeatedly expressed by ‘Abd al-Djabbār (Muḥānī, xii, 378 and passim; ‘Abd al-Wahhab (Muḥānī, xvii, 17 ff.; ‘Abd al-Husayn, Mu‘tama’d, ii, 460) is enshrined in the principle of ‘that which is best’ (al-aslāh), which can limit even the divine will. In the field of idjīmā, rationalism was obliged to make way for the strictest fideism, since reason is no more capable of deciding the inerrancy (‘ijmā) of a group of people than of guaranteeing that an individual is always exempt from error in his words and his deeds. ‘Abd al-Djabbār thus takes over the objection of al-Naẓām, who, thoughfrequently named elsewhere (Muḥānī, xvii, 22, xv, 361, 392 and passim), is not mentioned in connexion with idjīmā (compare Muḥānī, xvii, 138 and Mu‘tama’d, 458). Thus the bayāt affirms unequivocally: "As for demonstrating the legal validity of idjīmā by a process of reason, that is impossible" (‘a-performance, ‘a-performance, ‘a-performance, ‘a-performance, ‘a-performance).

In modern times, parallel with a classical and conservative trend represented by ‘Abd al-Wahāb Khalīl, there is developing a modernist trend inherited from the reformism of Muḥammad ‘Abdūh (Hourānī, 39-43) by the Pakistanī, Kamāl Fārūqī. In his recent work (Islamic jurisprudence, Karachi 1962), F. Khāridjī does not re-examine the theoretical problem of the proofs on which the validity of
idjmāʿ is based. Like Muḥammad ʿAbduh, he thinks that the scriptural proofs establish, though in a limited sense, the legal authority for the consensus of the Umma (Hourani, 43). But beyond this, he attempts to assure that idjmāʿ is a specific result of a critical analysis of the concept of iṣma. In showing that the ʿisma [q.v.] (infallibility) of the Umma is circumscribed and defined by divine infallibility, K. Fārābī illustrates the relative nature of the former and tries to adapt the concept of the legal validity of idjmāʿ to the necessities of the modern world and the exigencies of the socio-political system of which the Believer is a part.

Development: As the concept of idjmāʿ developed, the dispersion of the faithful from Medina became greater and the Muslim world expanded, the solutions to the problem became more diverse. The concept of "favourable acceptance" became more worked out and the idea of a certain de facto agreement led to a theoretical definition of idjmāʿ differing according to the schools.

The point of departure for this development is given by the Kitāb Ikhtilāf Mālik wa ʿl-Ṣāḥīfī (Kitāb al-Umm, vii, 177-83). Al-Ṣāḥīfī called into question the idea of the consensus of Medina by showing the obscure and imprecise nature of the concept of "the usage of Medina". He substituted the assertion of a basic truth, upon which, as far as law was concerned, the infallibility of the unananimous pronouncements of the Umma rested, for the Mālikī idjmāʿ, which merely affirmed an existing fact. The principle was stated in legal terms, although not based on law.

The Riḍāliya of al-Ṣāḥīfī, this scholar's only work on the subject, should be regarded as the resumed of a system of thought developed through oral discussions. This is the characteristic of the primitive religious law which was "a doctrine of essentially oral transmission" (H. Loust, in EI, s.v. ʿĪṣām ʿAbd al-Ḥamīd b. Ḥanbal, 274a). We must make a jump of three centuries to reach the degree of systematization which is achieved by the Mustasfaʿ al-Ṣāḥīfī.

With the ʿIlāmī fi ʿusūl al-ʿākhlām of Ibn Hazn, we find ourselves faced with a work on ʿusūl al-ḥukm in which idjmāʿ is treated as a juridical source needing a foundation and raising technical problems to be solved. For Ibn Ḥazn, idjmāʿ is limited to that of the Companions of the Prophet. A system which makes the use of oral pronouncements and ignores the exclusive use of proof texts can only allow idjmāʿ which is derived from a revealed text about the revelation is interrupted, then the divine promise should persevere in the truth would become void. It is, therefore, necessary to assert that the idjmāʿ of the Umma is certainly a source of truth (sawīb) by virtue of divine generosity, and that its object is to preserve the religion of Allāh". For these theologians idjmāʿ draws its validity from itself; it is held to be an autonomous juridical source (al-Sarakhsi, ʿUṣūl, i, 295).

The definition of the Imām al-Ḥaramayn, the teacher of al-Ghazālī, is narrower. According to him, the faṣih alone is competent in the matter (Kitāb al-Waraṣāḥī). His disciple, al-Ghazālī, explains it in detail: idjmāʿ is the agreement of the community of Muḥammad, in particular on all religious questions (Mustasfaʿ, i, 110). This community of Muḥammad forms a whole within which two categories must be distinguished; those who are definitely concerned in idjmāʿ (al-āṣirr, i, 115), i.e., every mutadhid whose juridical opinion is held to be valid (ḥal al-ḥall waʾl-ʾakāl), and those of whom note is certainly not taken (al-wādhik fiʾl-nafy), i.e., children who have not yet reached intellectual maturity (tamyīz), foetuses and lunatics. Between these two well-defined categories there is an intermediate zone of uncertainty, on the subject of which various problems arise: the questions of the rôle of the ordinary believer (al-shāmī al-mukallaf), the "innovator", who takes a position contrary to idjmāʿ, the "Followers" (ībārīn [q.v.]), younger contemporaries of the Companions and those opposed to them, the minority who oppose the majority who make up idjmāʿ.

From all the solutions put forward, it is possible to extract a constant of Sunni thought; idjmāʿ is the agreement of all the believers in general, and in particular that of those qualified, to whom was entrusted the task of taking the decisions in juridical matters.

Method: Once the question of the constitutors of idjmāʿ has been settled, the question of the method by which they reach agreement may be asked. This agreement can be made by word or deed, it can be explicitly stated or silent. The Ḥanafis, who distinguish between the conscious (ral-ʿākhlām) and the unconscious (rukūʿ in and the strict rule (ʿazima [q.v.]), consider tacit idjmāʿ to be valid only with regard to a concession, while for establishing a strict rule idjmāʿ definitely stated or expressed by an act is necessary. The Ḥanafis, indeed, are the only ones to allow tacit idjmāʿ (see the Kashf al-ʿāṣirr, a commentary on the ʿUṣūl of al-Bazdawi, iii, 946: "... the concession is based on necessity and it is necessity, which makes idjmāʿ out of tacit agreement"), while the Zāhiris, in their literalism, refuse it categorically. The Ṣāḥīfīs, like al-Djuywānī, al-Ghazālī and al-ʿĀmilī, allow it as idjmāʿ but with certain reservations. "It is idjmāʿ", al-Ghazālī tells us, "provided that this tacit agreement is accompanied by indications of approval on the part of those who are silent" (Mustasfaʿ, i, 121). It is difficult indeed to give the same probative value to silence as to a definite statement (ibid, 121).

But what is the value of an agreement which, without being formulated, is expressed by an act? Can it be held as valid inasmuch as this act, carried out by the majority of Believers, takes for granted at least the idjmāʿ of the élite, just as an act of the Prophet indicates his approval of that act? Put in another way, does the infallibility of the Umma

idjmāʿ is understood only those who have not adopted pernicious doctrines (ahwāʿ) and innovations (bidaʿ); and, if the Umma should find itself subject to error when the revelation is interrupted, then the divine promise would become void. It is, therefore, necessary to assert that the idjmāʿ of the Umma is certainly a source of truth (sawīb) by virtue of divine generosity, and that its object is to preserve the religion of Allāh". For these theologians idjmāʿ draws its validity from itself; it is held to be an autonomous juridical source (al-Sarakhsi, ʿUṣūl, i, 295).

The definition of the Imām al-Ḥaramayn, the teacher of al-Ghazālī, is narrower. According to him, the faṣih alone is competent in the matter (Kitāb al-Waraṣāḥī). His disciple, al-Ghazālī, explains it in detail: idjmāʿ is the agreement of the community of Muḥammad, in particular on all religious questions (Mustasfaʿ, i, 110). This community of Muḥammad forms a whole within which two categories must be distinguished; those who are definitely concerned in idjmāʿ (al-āṣirr, i, 115), i.e., every mutadhid whose juridical opinion is held to be valid (ḥal al-ḥall waʾl-ʾakāl), and those of whom note is certainly not taken (al-wādhik fiʾl-nafy), i.e., children who have not yet reached intellectual maturity (tamyīz), foetuses and lunatics. Between these two well-defined categories there is an intermediate zone of uncertainty, on the subject of which various problems arise: the questions of the rôle of the ordinary believer (al-shāmī al-mukallaf), the "innovator", who takes a position contrary to idjmāʿ, the "Followers" (ībārīn [q.v.]), younger contemporaries of the Companions and those opposed to them, the minority who oppose the majority who make up idjmāʿ.

From all the solutions put forward, it is possible to extract a constant of Sunni thought; idjmāʿ is the agreement of all the believers in general, and in particular that of those qualified, to whom was entrusted the task of taking the decisions in juridical matters.

Method: Once the question of the constitutors of idjmāʿ has been settled, the question of the method by which they reach agreement may be asked. This agreement can be made by word or deed, it can be explicitly stated or silent. The Ḥanafis, who distinguish between the conscious (ral-ʿākhlām) and the unconscious (rukūʿ in and the strict rule (ʿazima [q.v.]), consider tacit idjmāʿ to be valid only with regard to a concession, while for establishing a strict rule idjmāʿ definitely stated or expressed by an act is necessary. The Ḥanafis, indeed, are the only ones to allow tacit idjmāʿ (see the Kashf al-ʿāṣirr, a commentary on the ʿUṣūl of al-Bazdawi, iii, 946: "... the concession is based on necessity and it is necessity, which makes idjmāʿ out of tacit agreement"), while the Zāhiris, in their literalism, refuse it categorically. The Ṣāḥīfīs, like al-Djuywānī, al-Ghazālī and al-ʿĀmilī, allow it as idjmāʿ but with certain reservations. "It is idjmāʿ", al-Ghazālī tells us, "provided that this tacit agreement is accompanied by indications of approval on the part of those who are silent" (Mustasfaʿ, i, 121). It is difficult indeed to give the same probative value to silence as to a definite statement (ibid, 121).

But what is the value of an agreement which, without being formulated, is expressed by an act? Can it be held as valid inasmuch as this act, carried out by the majority of Believers, takes for granted at least the idjmāʿ of the élite, just as an act of the Prophet indicates his approval of that act? Put in another way, does the infallibility of the Umma
guarantee its conduct as well as its statements? The Shafi’is refuse to adopt this position for, they say, it is impossible to verify whether or not the totality of a people carries out an act unanimously. This assumes a complete record of the Believers and of their conduct. Although silence may sometimes be considered an indication of approval of a statement, and consequently regarded as tacit agreement, idjma is based on an act cannot be considered valid because of the difficulty of verification. Silence, indeed, may be ascertained directly through the absence of any opposing statement, whilst the act of silence obtained except by a continuous control, which would obviously be impossible to effect. Here again the Hanafis differ from the rest of the Sunnis and allow the validity of agreement about an action when the action concerns the whole body of the Believers, as for example agreement about the prohibition of adultery or usurious sale.

The opinion of the community, whether silent, signalled by an act (or by an abstention), or stated in words, is in time. Since idjma is the juridical source which mitigates the interruption of revelation with the death of the Prophet and allows the formulation of solutions to new problems which might arise, it is conditioned by the passing of the various periods during which the consensus is formed. This conditioning process raises an important question: does the formation of the consensus require the disappearance of the generation or not? For the Malikis and the Zahiris this is no problem, but what about the Shafi’is, Hanafis and Hanbalis? According to al-Âmidî, his master al-Shafi’i, Abû Hanîfa, the Ash’aris and the Mu’tazilis did not consider the extinction of the generation a necessary condition for the formation of idjma. For Ibn Hanbâl, this formation is subject to the total disappearance of the generation (cf. al-Âmidî, İhkal, i, 307 ff.).

It follows from this that the first group idjma is valid even if it is not unanimous and simply expresses the opinion of the majority (idjma al-akhtâr). As with the question whether the statements of the “Followers” should be taken into consideration, so the group which does not consider necessary the disappearance of the generation does take into consideration the statement of the Follower, if he had been a muqtahid and had opposed the Companions before they had become mu’dalâ &. It is otherwise for the Mu’tazilis; for al-Dhuwayni (idjma, i, 123) refuses to place any importance on the disappearance of the generation. Given that the generations overlap and that it is impossible to distinguish the end of one from the beginning of the next, the statements of one generation cannot be rounded off without, in so doing, “finally closing the gate of idjma”. Al-Ghazâlî (Mu’tasîfî, i, 121) to all intents and purposes had resolved the question by stating: “For idjma to be formed, it is enough that agreement should have taken place, even if only for an instant”.

Rôlê: The opinions of the jurists concerning the role played by idjma are varied. For some of them it could decide all religious questions. This is the opinion of al-Ghazâlî. There are, however, religious questions which are not subject to a legal ruling and on which idjma cannot provide a decision, because they depend directly upon the revelation which provides the basis for idjma. Arguments based on idjma can only be used to demonstrate religious truths which do not themselves prove the legal validity of idjma, e.g., the statement that the vision of God in the next world is not spatial, or the denial of the existence of a second God.

For al-Dhuwayni idjma is agreement on a bukm sharî’i. In general, the opinion of the jurists is guided by this bukm attributed to the Prophet: “You are better judges than I in temporal affairs. I am a better judge than you in what concerns your religion”.

Besides, it is agreed that an error in a temporal matter cannot incur the charge of impiety (kufr), but is simply considered as due to ignorance (gibâl). To sum up, the role of idjma is to decide in juridical questions of theory or practice concerning, in one way or another, the behaviour of the Believer, in so far as he is subject to the rules of conduct laid down by God and His Prophet. Thus it is said that idjma has a part to play as dâllî sharî’i in the field of mu’samâât (q.v.) but has no probabilistic value in those of ‘ibâdât or ‘ibtadâ. These latter, indeed, provide the basis for idjma and biyâs, that biyâs which, together with idjma, is, for the Hanafi a means to arrive at idjma, provided the muqtahid possesses the moral guarantees demanded by idjma: integrity and honesty. For these, his mind must not be inquisitive (dâllî) or blinded by the passion (kauz) which inspires pernicious doctrines (al-Bazdawi, op. cit., iii, 957). However, idjma and ra’y are only required in special cases. In these cases, it falls to the muqtahid to settle the affair, whilst when it is a question of usûl al-din, the ordinary Believer should be heard along with the muqtahid (al-Bazdawi, op. cit., iii, 959).

The Shafi’is are more guarded for, al-Ghazâlî says (op. cit., i, 123), any solution given by means of idjma or biyâs is only a probable opinion and liable to error and divergence, which destroys the infallibility of the Umma and its unmitigability. Besides, agreement cannot be reached through biyâs since, in their deliberations, the muqtahids may adopt different principles. It is otherwise for the Mu’tazilis; according to Abu’l-Husayn, for example, idjma is the rational striving of the muqtahid as an intelligent person (sâlih), not the preserve of the recognized muqtahid as such (Mu’samâd, ii, 489, 490-1; Muşenî, xvii, 224-8). This seems to have been the opinion of their master Wâsîl (al-Âmidî, İhkal, i, 326) opposed by al-Âmidî (wa-fihî biyâs).

From all this, then, it appears that the main principle is that of unanimity; biyâs and idjma are for the Sunnis— with the exception of the Zahirîs who also allow only necessary agreements— to be considered not only that their conclusions are unanimous. Idjma is a source of truth only when it appears as the agreement of the statements of the whole community. The infallibility of the Umma resides in its unanimity.

With K. Fârîkî and his followers contemporary Islam is in the process of seeking a theoretical justification for the calling into question of classical idjma (Hourani, 59-60); not innovation, but renewal of an obsolete idea which, to be effective, must be freed from the straitjacket of formal concepts in which it had been imprisoned by the discussions of the muqtahidÎs of the classical period.

Of the 3rd/9th century the idea began to gain ground that only the great scholars of the past, and not the epigones, had the right to idāth. By the beginning of the fourth century (about A.D. 900), the point had been reached that the initial generation of all schools felt that all essential questions had been thoroughly discussed and finally settled, and a consensus gradually established itself to the effect that from that time onwards no one might be deemed to have the necessary qualifications for independent reasoning in law, and that all future activity would have to be confined to the explanation, application, and, at the most, interpretation of the doctrine as it had been laid down once and for all. This "closing of the door of idāth", as it was called, amounted to the demand for takūlḏ (q.v.), the unquestioning acceptance of the doctrines of established schools and authorities. A person bound to practise takūlḏ is called muḥallid. See further Section II.

II. According to the classical doctrine of Islamic legal theory, idāth means exerting oneself to form an opinion (pām) in a case (baṣiyya) or as a rule (ḥukm) of law (Lišān, iv, 109, lines 19 ff.). This is done by applying analogy (kiyds) to the Kurān and the sunna. The muḥallid is one who by his own exertions forms his own opinion, being thus exactly opposed to the muḥallid, "imitator", who, as Subki in his Dām al-dawāndī* says, "takes the saying of another without knowledge of its basis (dallīl)". For thus applying himself he would, according to a tradition from the Prophet, receive a reward even though his decision were wrong; while, if it was right, he received a double reward (see ḥatta'). The duty and right of idāth thus did not involve inerrancy. Its result was always pām, fallible opinion (cf. R. Brunschvig, in Studi orientalisi- ti in onore di Giorgio Levi Della Vida, i, Rome 1956, 61-82). Only the combined idāth of the whole Muslim people led to idāmā, agreement, and was inerrant. On the controversy as to the possibility of error in muḥallidān see Taftāzānī on the Ābd al-Wāsīn of Nasafi, ed. Cairo 1321, 143 ff. But this broad idāth soon passed into the special idāth of those who had a peculiar right to form judgments on disputed points which must be followed by others. At this point, and from the nature of the case, a difference arose between theology (kalām) and law (fiḥ). Even to the present day many theologians assert that takūlḏ does not furnish a saving faith; see for example, the Kīfyaṭ al-arawānī of Fadālī, passim, and the translation in D. B. Mac- Donald's Development of Muslim theology, 315-51. But all canon lawyers for centuries have admittedly been muḥallidān of one degree or another. When later Islam looked back to the founding of the four legal schools (madhdhib), it assigned to the founders and to some of their contemporaries an idāth of the first rank. These had possessed a right to work out all questions from the very foundation (cf. ṭafāl), using Kurān, sunna, kiyds, istiḥsān, istiṣḥāb, etc., and were muḥallidān absolutely (muḥaṣf). Later those who played the same part within the school (ifi-l-madhāb), determining the fūri as the masters had settled the broad principles (wāṣil) of fiḥ and had laid down fundamental texts (muṣāf). If the view so stated was found implicitly in a nass of the founder of the madhdhib, it was called a wadāj. Still later and inferior were those who had a right only by their knowledge of previous decisions to
answer specific questions submitted to them; these were called muṣṭafihūn bi 'l-fatwā, "for giving legal opinions". All muṣṭafihūn had been in a sense muṣṭafis, givers of fatwās; but they were thus officially, such was the formal and generally accepted position. But from time to time individuals appeared who, moved either by ambition or by objection to recognized doctrines, returned to the earliest meaning of iǧtihād and asserted the right to form their own opinion from first principles. One of these was Ibn Taymiyya (d. 728/1328; cf. H. Laoust, *Contribution à une étude de la méthodologie canonique de...* B. Taymiyya, Cairo 1306, 19 ff.). Another, but a very heretical one, was the Emperor Akbar (q.v.); Goldziher, *Verlesungen*, 311. In Shī'ite Islam there are still absolute muṣṭafihūn. This is because they are regarded as the spokesmen of the Hidden Imām (cf. C. Frank, in *Islamica*, ii (1926), 171-92). Their position is thus quite different from that of the *uṣūlā* among Sunnis. They freely criticize and even control the actions of the Shāh, who is merely a *locum tenens* and preserver of order during the absence of the Hidden Imām, the ruler of *iʿāra ilā dīnī* (cf. E. Eliaš and N. K. Keddie, both in *Studia Islamica*, xxix (1969)). But the Sunni *uṣūlā* are regarded universally as the subservient creatures of the government (Goldziher, *Verlesungen*, 215-8, 233, 285).

III. The question of iǧtihād and taklīf continued in the subcontinent of India. Inspired less by this discussion than, to a certain degree, by the doctrine of Ibn Taymiyya and of his disciples, there arose, from the 12th/18th century onwards, individuals and schools of thought who advocated a return to the pristine purity of Islam, such as the Salafīyya (q.v.), who may be called Reformers, and others, from the last decades of the 19th century onwards, who laid the emphasis on renovating Islam in the light of modern conditions, and who may be called Modernists (see ʿulāmāʾ al-ṭarīqīn). Both tendencies reject traditional taklīf and some Modernists, in particular, combine this with extravagant claims to a new, free iǧtihād which goes far beyond any that was practised in the formative period of Islamic law. But the recent reshaping of institutions of the ʿilāmīya by secular legislation in several Islamic countries takes its inspiration from modern constitutional and social ideas rather than from the essentially problematic character of the legitimacy of iǧtihād and taklīf. Whereas this problem has largely lost its relevance

in the field of "civil" law, it has retained its full importance as far as the religious duties of Islam in the narrow meaning of the term, such as fasting, are concerned.

IDMĀR

IDMĀR is the infinitive of the verb ʿaḏmar/yaḏmir, "to conceal". The Arab grammarians use it when speaking about an unexpressed grammatical element, supposedly existent and active; it can thus be translated as "imply". The opposite is iḍār, from the verb ʿaḏhara "to reveal". A good example of the two is supplied by Ch. 50 of Sibawayhi. One can say (1, 107): al-ḥabīb al-ḥabīb, "the small boy, the small boy". With iḍār of a verb in the dānār requiring the naṣb of the substantive, or, with iḍār of this verb: la ṭawāṣṣaš al-ḥabīb, "do not tread on the small boy". This verb ʿaḏmar is used thus in all the "tenses": perfective, imperfective, etc. (so too with ʿaḏhara). The infinitive iḍār is particularly to be noted; it appears in the title of 14 chapters of the *Kādhī*. Since Sibawayhi, this verb has formed part of the grammatical vocabulary, e.g.: al-Ẓāmakhshāri, *Mufassal* (ed. Broch.), *yanāṭis bi-an muḍmar* (§ 411), "is put into the naṣb by means of an understood". In this sense of "imply" iḍār joins takdīr; but takdīr, as the instrument of a method—the system of ḥiyās—has a wider use; it extends as far as the admission of a supposition (see H. Fleisch, *Tradit.*, i, 7).

The verb ʿaḏmar, in the *Kādhī*, has a particular use, derived from the sense of "to conceal", signifying: "express by a personal pronoun", e.g.: 1, 344, line 13, for ʿaḏmar; 1, 190, lines 10-11, for muḍmar, tuḍmir. This use is continued, e.g.: al-ʿaḏmar bāb iḍār al-ḥākīr (al-Ḍūrjānī, *Ṭārīfī*, 18). In the *Kādhī*, iḍār refers to the personal pronouns: huwa, hiya, etc. (1, 188, lines 1-2); by means of them "you conceal (tuḍmir) a noun", known beforehand to the listener (al-ḥākīr, lines 5-6). Sibawayhi uses for this purpose: ʿalāmāt al-ʿaḍmar, "the sign of expression by means of personal pronouns"; e.g.: the titles of chapts. 205, 210, 213. For the separate pronouns, the ʿalāmāt al-ʿaḍmar is said to be ṣāḥira, "expressed"; for the affixed pronouns, al-ʿaḍmar has no ʿalāmāt ṣāḥira (1, 188, lines 4-8). He calls the demonstrative pronouns (1, 218, lines 22-3) al-ʿaṣma al-μuḍμaḥa. Ibn al-Ṣarrādī, (al-Mudhjar fi li-nākhab, Beirut 1935/1965) refers to the personal pronouns as al-muṣnā (al-muṣnāyda) (74); they are divided into: muṭṭasīl (affixed) and muṭṭafīl (separate). He does not omit ʿaḏmar (32) or muḍmar (55, 65), and he includes (76) in the muṣnāyda, the maṣūliyya (declarative pronouns) and the maṣūliyya (relative pronouns); iḏār is very frequently found as a synonym for al-μuḍμaḥa (personal pronoun) (see ʿaḏmar in *EI*). This is the usage of Ibn Mālik in the *Alfitiya*.
The philosophical usage of the word often derives from any one of the etymological meanings of the root \( \text{idmdr} \): from '(aldfca) re-joining, meeting, catching, grasping. And then, more generally, comprehension (syno-

one opposite to another (for example, a cold body becomes warm), whereas the information which makes the soul aware of the perceptible form is not the result of a movement of this sort but is a perfecting of the soul (sittahd), that is making the actual potential of the soul which does not cause it to pass, in its essence, from one opposite to another. Thus the soul grasps directly the perceptible forms, without these forms having to engender themselves in it from their opposites. "The result of this is that the soul feels itself and not the idea ... when we mean the most immediate act of perception, in which there is no intermediary" (Fa-hiya) (idrdk al-nil fi finashih). Consequently, even at the level of perception, idrdk has, according to this doctrine, a character of immediacy which confirms its intuitive value.

Al-Kindi, in his "Treatise on Definitions" (Rasat'il al-Kin'di al-falsafyya, ed. Abä Kida, Cairo 1950, i, 165, 167), had already defined the intellect ('abh), the imagination (tawahhum, fanafdyyl, takhayyul) and perception as the faculties which "grasp" (mudrika) forms: "Perception is the existence (inniyya = Dasein) of the grasp (idrdk) by the soul of forms endowed with matter, in their matter (suwar dhawdt) in an affection of the soul and gives it a perfection (cf. the lexicographical meaning of "reaching its maturity"). It is the perceptible form in the soul which is intentional, the close form being turned towards the distant form; it is not idrdk itself. An intentional idrdk would express rather this other meaning of the root: "to rejoin, meet, overtake".

Al-Ghazâlî, on the other hand, attributes to idrdk a dynamism which extends its scope to the things themselves. The heart (hulb) has, he says, three sorts of "expeditionary troops" (dunyd): the will, the motive power of the limbs of the body, and the thought, which is that which is only the inclination itself of them, as spies do (al-mudrik al-mutafarrif li'l-asghy 'al'djawdista). These are the five senses. "These troops are spread (mabthûtah) throughout specific organs, and this is expressed by the terms learning ('ilm) and idrdk" (Ihyâ', Cairo, iii, 5). In fact al-Ghazâlî conceives the feelings as linked to two fundamental vital functions: the acquisition of what is useful and the avoiding of what is harmful. Hence his military metaphors. The subjective side (the "close form" of Ibn Sînà) in perception is thus completely directed towards an encounter with the things on the frontier of the body, and idrdk is no longer the grasp of something affecting the soul which reflects its external cause; it is the direct grasp of the nature of this cause in the form in which it manifests itself in the place where it acts and whether it acts on the body. The form of an edible fruit is grasped neither in the soul nor in the eye, but on the tree so that one is able to go and pick it there. If the form is felt in the soul, one no longer has a cognitive sensation but the grasp of an affective state, pleasure (ihsan) or pain (alam). From this point of view, idrdk is divided, at the sensory level, into what may be called on the one hand external, localized and cognitive perceptions, and on the other hand perceptions which are internal, non-localized or badly localized and affective.

This difference in the conception of idrdk arises from the fact that the falsâdiya presents it in relation to the degree of abstraction from what it grasps, in a hierarchy of knowledges which culminates in intuition of the intellect. On the other hand, al-Ghazâlî, having a theologian's approach, considers primarily the concrete situation of conscious man in this world below (dunyd), a situation directed towards the religious values of ātin, according to a perspective in which true knowledge is more a means than an end.

Al-Tahtânawi (Beirut ed., ii, 484) summarizes the question of idrdk in these terms: "For the philosophers (hukamâ), this word is synonymous with knowing, in the sense of a form which, deriving from a thing, presents itself to the intellect, without specifying whether this thing is abstract or material, particular or universal, present or absent, whether it is realized in the mudîr himself, or in an instrument. In this meaning, idrdk embraces four divisions: the act of perception (ikds), of imagining (lakhayyul), of supposing (tawahhum) and of understanding (fa-abdkl). Some limit the word idrdk to the particular meaning of ikds, and it is then more particular than the word 'knowing' . . . ."

Finally, al-Tahtânawi mentions that in the terminology of the Sîfs idrdk is of two sorts: the idrdk basî (simple), which is the grasp of the existence of God together with the forgetting both of this grasp and of the fact that it is the existence of God which is grasped (this is therefore idrdk in a state of ecstasy involving a total loss of consciousness of self); idrdk murakkab (composite) accompanied by the awareness of this grasp and of the fact that it is the existence of God which is grasped. It should be mentioned that the mystics do not speak, any more than the philosophers do, of a grasp of God's essence, which is impossible, but of a grasp of His existence. To the extent to which perception produces an awareness of the existence of a thing, this idrdk murakkab of the mysteries would be analogous to a sensory knowledge. This recalls the question of the vision of God after death. Probably the eyes do not grasp it: id rdrik al-absâr, but there could occur a grasp with the whole of man which would therefore be reduced to a grasp of the existence [of God]. And indeed, some have claimed that although the colour black is visible, this is not because it is black in colour, but because it exists. Thus, although the existence is already the specific object of sensory vision, it is possible a fortiori to conceive of a non-sensory idrdk which would be a "vision" of the existence of God (on this question, cf. Fathalla Kholeif, A study on Fakhr al-Din al-Razi and his controversies in Transoxiana, Beirut 1966, 118 f. and p. 16 of the Arabic text).

idris, person mentioned twice in the kur’an (second meccan period): xix, 5756-58/57, “and mention in the book idris; he was a true man (siddik), a prophet. we raised him up to a high place”, and xxi, 85-86, “and (make mention of) isma’il, idris, brahim (moses), nuh, and we admitted them into our mercy; they were of the righteous” (tr. a. j. arberry). among the explanations suggested for this name, obviously foreign and adapted, like the name iblis [q.v.], to the pattern if’i, may be mentioned that of casanova (in ja, cciv, 358, followed by torrey, the jewish foundation of islam, new york 1933, 72) which connect it with “eva” (under the greek form eva, a corruption of andreas and referring either to the apostle andrew (t. nøldeke, in za, xvii, 84 ff.) or to a person with the same name, the cook of alexander the great who achieved immortality by accident, according to the romance of alexander (r. hartmann, ibid., xxiv, 314 ff.) in any case, the brief references in the kūr’ān have been sufficient for later muslim legend, often filled out with material from apocryphal biblical and rabbinical sources, to identify him with characters in the bible and the apocrypha who ascended into heaven: most frequently with hānōkî (enoch, arabic spelling akhnûkhî), more rarely with eliyyā (ilyās) or al-khîrî (ka’bîrî). on the other hand, as a result of the syncretism practised by the hermetists, the astrologers and the alchemists, whose speculations are not easy to distinguish from one another and whose ideas tend to become identical, especially among the “sabeans”, idris has been introduced into the genealogy of the “hermes” (hirmis [q.v.], pl. harāmisc), this thread can be traced from abū ma’asghar (k. al-uluf), whose sources have not yet been identified, to ibn abī usaybi’a, not to mention still later compilations. similarly idris has been credited with a number of wise sayings, and muslim mystic ibn al-ʿarabî describes him as “the prophet of the philosophers”; a number of works were attributed to him (ibn sabîn [q.v.] wrote a commentary on one, cf. ḥādīṣī ḥalīfa, ed. flügel, iii, 599, no. 7170); he is credited also with various inventions, arts of divination like geomancy and saʿārdagā [q.v.], and with useful arts, particularly that of writing (which again connects him with hermes and with the babylonian god nābû) and that of making garments (an attribute granted by balʿam unto the iranian myth of gayomār); this reputation assured him a place among the patron saints of the craftsmen’s guilds and the representative figures of the futuwma [q.v.]. sunni legend generally places idris between adam and noah; it makes him the recipient of a number of revelations in the form of holy books (suḥuf); it relates how he entered into paradise while still alive, never to leave it again (this is an idea which, in the jewish aggada, is attached to the 3rd century palestinian rabbi, yehoḥu’a ben levi); the prophet is said to have met him during his ascension to heaven. the shi’i legend concerning him (ibn

...
concubine named Kanza, of the Berber tribe of the Nefza, who was seven months pregnant and gave birth to Walila in Rabi 803 (August 791) to a son, also named Idris. To distinguish them, the first was called Al-Akbar and his son Al-Ashgar, or, as a hypocorism, Al-Azhar. Rāshid (see preceding article) had persuaded the Berbers to wait for the birth of the child and, if it was a son, to proclaim him as imām. When this happened, Rāshid acted as regent and served the young prince as tutor and mentor. In 805/806, Ibrahim b. Al-Aghlab instigated the revolt of Rāshid b. 'Abd Allah and had the Matghara Zawagha, in a place called al-Makarmada, and found-ranch of the High Atlas and seized Neffis, then Fas, which was inhabited by some Zanata, the Banū Izghaten, settled on the right bank of the wadi Fas, which he once again had allegiance sworn to him; he was now a strong prince, at the age of ten, at the time of his death, he settled on the right bank of the wadi Fas, which was inhabited by some Zanata, the Banū Izghaten, and where his father had founded the fortified military camp of Garwawa, the beginnings of Madin'at Tlemcen. He remained for some time in this town, and he restored the mosque of the Chorfa, where his tomb still remains, until the 9th/i5th century, in Radjab 841/1437-8, he was buried at Walila, beside his father. It was not until the age of 38, after an effective reign of 22 years. He died as the result of an accident, at Fas or Walila, in Djumada II 213/September 828, at the age of 38, after an effective reign of 22 years. He was buried at Wallàla, beside his father. It was not until the 9th/15th century, in Radjab 841/1437-8, that for reasons connected with the defence of Islam against the Christian invaders and the prestige of the holy town of Fas, founded by Idris, his body was removed and opportunely rediscovered there in the mosque of the Chorfa, where his tomb still remains the object of veneration by the Moroccans.

IDRIS, historian of Yemen [see al-SHARIF ABU MUHAMMAD IDRISI B. 'ALLI].

IDRIS B. AL-HASAN, Ismaili historian [see Supplement to al-ABU IDRISI, Abu 'Abd Allah Muhammad b. Abd Allah Muhammad b. Abd Allah Idrisi b. Al-Ali bin Al-Abban, called also al-SHARIF AL-IDRISI because of his exalted lineage, owes his fame to a work of descriptive geography entitled Kitâb Nawzat al-mushâfi fi khirār al-jahâf, which was produced on the orders of Roger II, the Norman king of Sicily, as a key to a large silver planisphere which the author himself had made. For this reason the work was also called Kitâb Rudjîr (the Book of Roger) or Al-Kitâb Al-Rudjîri. According to information found at the end of the six complete manuscripts which have survived, the book was completed in 548/1154, and this is the only certain date known in the life of Idrisi. Biographical notices on him are rather rare, and according to F. Pons Boigues this is to be explained by the fact that the Arab biographers considered Al-Idrisi to be a renegade, since he had lived at the court of a Christian king and written in praise of him in his work. Some western writers state that he was born at Ceuta in 493/1100 and that he studied at Cordova (hence the by-name of Al-Kurtubi). He states in his book that he travelled a great deal in Spain and in North Africa. The circumstances with led him to settle in Sicily at the court of Roger II are not known, nor are the details of the last days of his life and of his death, which some state to have occurred in 560/1165.

The Sicilian Arab poet, Ibn Bashrûn (or Bishrûn), his contemporary, states that al-Idrisi had written for William I another geographical work entitled Raud al-unis wa nuzhat al-nafs, of which up to now no certain trace has been found. According to Reinau and Rommel this information is indirectly confirmed by the fact that the content of the citations from al-Idrisi given by Abu 'l-Fidâ in his Takhwim does not tally with the corresponding passages of the Book of Roger. It is worthy of note that Abu 'l-Fidâ refers to a work which he calls in his introduction Kitâb Al-Sharif Al-Idrisi fi 'lamâdik wha Al-Masâlik. At the beginning of this century, J. Horovitz discovered in Istanbul the manuscript of a work by
al-Idrisi entitled *Uns al-muḥāḍi wa raʾūs al-ṣūqāḍi* or, according to another reference found at the end of the manuscript, *Raʾūs al-ṣūqāḍi wa Ṽu Ṽu al-muḥāḍi*. C. F. Seybold, in his article on al-Idrisi in *EI*, states that this is a summary of al-Idrisi's second geographical work written for William I, whereas J. H. Kramers thought that it was an extract from the "great Idrisi" written in 588/1192 and rewritten a century later, since it contains the addition of a brief description of an eighth climatic zone south of the Equator and a reference to the author Ibn Saʿīd, who was alive circa 670/1270. This abridgement is known usually as the "little Idrisi", the name given to it by K. Miller, and later adopted generally.

In addition to the complete text of the Book of Roger there exists an abbreviated text in which here and there sections have been cut, apparently without any precise motive. The fact that this text has been thus abbreviated has made it difficult to evaluate: to give only a few examples, it has been called in turn "estratto spoglio" (Schiaparelli), "résumé superficiel" (Seybold), "incomplete abridgment" (Kramers) and "extraits maigres" (Leleuel). This abridgement, which was included among the first secular Arabic works printed by the Medici press in Rome [see *Mathäx*] in 1592, has the title *Kitāb Nuḥuṭ al-muṣṭakāb fī Ṽab Ṽar al-⊃a⌈a][...]m al-⊃a⌈a][...]m wa Ṽb al-Salān al-⊃a⌈a][...]m wa Ṽb al-Madāya wa Ṽb al-⊃a⌈a][...]m*. This Medici edition was translated into Italian in 1592, has the title *Kitāb al-ʿĀdwa al-mufradāt* and was edited by the Italian polygraph B. Baldi, this unpublished translation being now in the University of Montpellier, and into Latin in 1619 by the Maronites Gabriel Sionita and Joannes Hesronita. This Latin translation was published in Paris with the title *Geographia Nubiensis*, id est accuratissima totius orbis in septem climata divis descrip[...]onis continens praesertim exactam universae Asiae et Africae, rerumque in his cactenus incognitarum explicationem. The manuscripts of this abridgment do not mention the author, which is why a copyist's error in transcribing *ardunā* ("our country") instead of *arduhā* in a passage on Nubia led to the work's being attributed simply to a "Nubian". Many studies have been published based on various parts of the Medici text.

Of the Book of Roger there exist two abridgements. The first, entitled *Diwān al-aḥāḍr min al-raʾaw al-miṣfār*, discovered in Cairo in 1893 by Vollers, was abridged by a certain Ḥāfīz Shīhāb al-Dīn Abmad al-Maṭrī. The fact that he had the same name as the historian al-Maṭrī caused this manuscript to be erroneously attributed to the historian; it was for a long time thought to be an abbreviation of a geographical encyclopaedia entitled *Raʾaw al-miṣfār fī khobar al-aḥāḍr* compiled by Ibn ʿAbd al-Munʿim al-Ḥimyārî [q.v.]. The second abridgement of the Book of Roger, whose author, an Arabic-speaking Armeni-an, named it simply *Kitāb al-dīgrāfiya (sic) al-kulliyya ay fārat al-ard*, was discovered at the beginning of this century by E. Griffini in a private collection in Tunis.

The maps (some of them in colour) which illustrate the text and which are found in a certain number of manuscripts as well as in the Istanbul manuscript of the "little Idrisi" are of especial interest. There is, in general, one for each section of the seven climatic zones, plus a planisphere in the introductory chapter. The majority have been published by K. Miller in his *Mappae arabicae*.

In his introduction of the Book of Roger, which has been hoped for since the end of the 18th century, is now finally being undertaken by an international group of scholars, each dealing with the part on which he is a specialist, under the auspices of the Istituto Italiano per il Medio e l'Estremo Oriente at Rome and under the direction of a committee consisting of G. Tucci, E. Cerulli, G. Levi Della Vida, F. Gabrieli, L. Vegacia Vagliari, A. Bombaci and L. Petech. An editorial committee is based at the Istituto Universitario Orientale of Naples.

There should also be mentioned a second original work which is attributed to al-Idrisi: a treatise on simples entitled *Kitāb al-Dīğmāʾ li-ḥaḍāṭ al-nahāḥi or Kitāb al-Muṣāfra al-Awāya al-mufarrada*, the manuscript of which was discovered in 1928 by H. Ritter in the Fatih library in Istanbul. Although the manuscript is incomplete and has many lacunae, the importance of this work, which is often mentioned by Ibn al-Baytār and which was thought to be lost, has been demonstrated by M. Meyerhof, who states that al-Idrisi succeeds in giving synonyms for each drug in a great number of languages, sometimes as many as twelve.

İDRİSİDS (Adārīṣa), Moroccan dynasty of descendants of 'All b. Abī Tālib, founded in 172/792 by İdrīṣ I (q.v.), who was succeeded by his son, İdrīṣ II (q.v.). The decadence of the dynasty was to commence with the latter's death. He left twelve sons: Muḥammad, Abnād, 'Ubayd Allah, İṣā, İdrīs, Dja*far, Hamza, Yaḥyā, 'Abd Allāh, al-Kāsim, Dāwūd, 'Umar. His eldest son, Muḥammad (no. 3 in the table), succeeded him and, on the advice of his grandmother Kanza, divided the kingdom among the eldest of his brothers, he himself retaining the capital of Fās. Al-Kāsim received Ṭanḍāj and its dependencies, including the town of al-Bagā; 'Umar received the countries of the Šīnḫādja and of the Għumāra of the Rīf; Dāwūd the country of the Haw- wāra, to the east of Ṭāzā; Yaḥyā, Dāy and its dependencies; İṣā, Wazekār and the northern Tāmesnā, with Šālā (Shalla); Hamza, al-Awliyya, the territory of Walī; 'Ubayd Allah, the south with the country of the Lāmta and its dependencies. The other princes who were too young to rule remained under the tutelage of their eldest brother and of their grandmother. At the same time, Tlmenč (Agādir) remained the fief of Muḥammad b. Sulaymān, the cousin of İdrīs II.

This division immediately produced rivalries. İṣā, ruler of Wazekār, revolted against Muḥammad, who appealed to his brother al-Kāsim, ruler of Ṭanḍāj, to go and punish the rebel. Meeting with a refusal, he entrusted the task to 'Umar, ruler of the Rīf, who attacked Wazekār and drove out İṣā, who was forced to take refuge in Šalā. 'Umar then marched on Ṭanḍāj to punish the insubordination of al-Kāsim; the latter, defeated, had to flee towards Azayla (Arzila), near which he settled. As a reward, 'Umar was given the governorship of Ṭanḍāj and ruled over his own domain and that of his brother until his death, at Fadjīdī al-Farās in the country of the Šīnḫādja, in Shawwāl July-October 835. His body was transported to Fās for burial. On Muḥammad's orders, his apanage passed to his son 'All b. 'Umar.

Muḥammad survived his brother by only seven months and, after a reign of over eight years, died, in Rabī'I 221/March-April 836, at Fās and was buried there. He had appointed to succeed him his son 'All (no. 4), aged nine years. The Awraba and the Berber tribes were aware of the intention of the father, and the chiefs of the tribes acted as regents until he came of age. He was endowed with great qualities and succeeded in organizing the country, pacifying it and ensuring the stability of the state. He reigned at Fās for thirteen years and died in Rajad 234/January 849.

He was succeeded by his brother Yaḥyā (no. 5), during whose peaceful reign there came to settle in Fās many immigrants from al-Andalus and Ifri kiya. The town, which soon became too small for its population, was to have many new buildings added, in particular the two great mosques of Fās, that of the Karawīyyīn and that of al-Andalus, both founded in 243/859. Yaḥyā died in 249/863 and was succeeded by his son, Yaḥyā II (no. 6), who showed no aptitude for rule and proceeded to share out his domain yet again: the family of al-Kāsim received Tandja and its dependencies, including the town of al-Bagā; the family of al-Kasim received the west side of Fās together with the government of the territories of the Lūwa-ta and Kutāma tribes; ʻUsayn, Yaḥyā's maternal uncle, received the territory to the south of Fās,
up to the Atlas mountains. Yahyā led a dissolute life and was forced, as the result of a scandal, to flee from his palace and take refuge in the district of the Andalusians, where he died in 252/866, the circumstances of his death being unknown. He had married a daughter of his cousin 'Ali b. 'Umar (no. 7), ruler of the Ghumara, and when 'Abd al-Rahmān b. Abī Sahl al-Dhahami, a powerful citizen of Fās, took advantage of the general discontent to seize the power for himself, Yahyā's widow appealed for help to her father, who seized the quarter of the Karawiyīn and restored order. Thus the power passed from the family of Muhammad to that of 'Umar. During 'Ali b. 'Umar's reign a Sufri Kharidjī, 'Abd al-Razzāk, revolted in the mountain district of Madyūna to the south of Fās. After several battles, 'Ali was defeated and forced to leave the town to take refuge with the Awraba. 'Abd al-Razzāk occupied the Andalusian quarter, but the quarter of the Karawiyīn refused to submit to him and summoned as ruler Yahyā (III) b. al-Kāsim (no. 8), named al-Mīkdām.

With this prince the power changed again to another family. He succeeded in taking the Andalusian quarter, from which the usurper fled; he reigned years later, in 315/927, through the treachery of the governor of Fās, he fell into the hands of Mūsā and was killed.

Having become the sole ruler of the western Magrib, Mūsā pursued the Idrīsid as far as their fortress at Ḥadījat al-Nasr in 317/929, and then threw off the authority of the Fātimid caliph at the instigation of the Umayyad ruler of Spain who, after seizing Mālīka in 314/927, had just taken Ṣabta (Ceuta) in 319/931. The Fātimid caliph then sent his general Ḥumayd b. Yaṣāl, and Mūsā was defeated. The Idrīsid family took advantage of this to raise the siege of their fortress and to destroy the Zanāta troops. Once the Fātimid forces had left, however, Mūsā once again recognized the suzerainty of the Umayyad caliph and, this time, the Fātimid general Maysūr, who was sent to punish him, put him to flight and the Idrīsids pursued him until he was killed. The Idrīsids then established themselves in the Rif in the north-west of the country, where they ruled, sometimes acknowledging as suzerain the Umayyad caliph, and sometimes the Fātimid. Al-Kāsim Gannūn (no. 11) ruled in the name of the latter until 337/948-9. His son, Abu l-ʿĀysh b. Ahmad (no. 12), ruled in the name of the Umayyad 'Abd al-

ed for a long period over the whole kingdom and fought against the Sufris. He was killed in 292/905, during a battle, by Rabīʿ b. Sulaymān, a general of Yahyā b. Idrīs b. ʿUmar (no. 9).

The civil war then became complicated by threats from outside: the kingdom was attacked by the Fātimids of Ifrīkiya. Yahyā b. 'Abd Allāh (no. 1), 'Abd Allāh b. ʿUmar (no. 2), Idrīs II b. Idrīs I (no. 3), Muḥammad b. Idrīs II (no. 4), ʿAli b. Muḥammad (no. 5), Yahyā I b. Muḥammad (no. 6), Yahyā b. Yahyā (no. 7), ʿAli II b. ʿUmar (no. 8), Yahyā III b. al-Kāsim (no. 9), Yahyā IV b. Idrīs b. ʿUmar (no. 10), Muḥammad b. Idrīs II (no. 11), al-Kāsim Gannūn b. Muḥ. b. al-Kāsim (no. 12), Abu l-ʿĀysh b. Ahmad b. al-Kāsim Gannūn (no. 13), al-Hasan b. al-Kāsim Gannūn (no. 14), and the governor of Fās, he fell into the hands of Mūsā and was killed.

Having become the sole ruler of the western Magrib, Mūsā pursued the Idrīsids as far as their fortress at Ḥadījat al-Nasr in 317/929, and then threw off the authority of the Fātimid caliph at the instigation of the Umayyad ruler of Spain who, after seizing Mālīka in 314/927, had just taken Ṣabta (Ceuta) in 319/931. The Fātimid caliph then sent his general Ḥumayd b. Yaṣāl, and Mūsā was defeated. The Idrīsid family took advantage of this to raise the siege of their fortress and to destroy the Zanāta troops. Once the Fātimid forces had left, however, Mūsā once again recognized the suzerainty of the Umayyad caliph and, this time, the Fātimid general Maysūr, who was sent to punish him, put him to flight and the Idrīsids pursued him until he was killed. The Idrīsids then established themselves in the Rif in the north-west of the country, where they ruled, sometimes acknowledging as suzerain the Umayyad caliph, and sometimes the Fātimid. Al-Kāsim Gannūn (no. 11) ruled in the name of the latter until 337/948-9. His son, Abu l-ʿĀysh b. Ahmad (no. 12), ruled in the name of the Umayyad 'Abd al-

The Idrīsid dynasty

1. Idrīs I b. ʿAbd Allāh [Rāshid, regent]
2. Idrīs II b. Idrīs I
3. Muḥammad b. Idrīs II
4. ʿAli b. Muḥammad
5. Yahyā I b. Muḥammad
6. Yahyā b. Yahyā
7. ʿAli II b. ʿUmar
8. Yahyā III b. al-Kāsim
9. Yahyā IV b. Idrīs b. ʿUmar [Fātimid governor, Mūsā b. ʿAbī l-ʿĀfīya]
11. al-Kāsim Gannūn b. Muḥ. b. al-Kāsim
12. Abu l-ʿĀysh b. Ahmad b. al-Kāsim Gannūn
13. al-Hasan b. al-Kāsim Gannūn

The civil war then became complicated by threats from outside: the kingdom was attacked by the Fātimids of Ifrīkiya. Yahyā b. ʿAbd Allāh (no. 1), ʿAbd Allāh b. ʿUmar (no. 2), Idrīs II b. Idrīs I (no. 3), Muḥammad b. Idrīs II (no. 4), ʿAli b. Muḥammad (no. 5), Yahyā I b. Muḥammad (no. 6), Yahyā b. Yahyā (no. 7), ʿAli II b. ʿUmar (no. 8), Yahyā III b. al-Kāsim (no. 9), Yahyā IV b. Idrīs b. ʿUmar (no. 10), Muḥammad b. Idrīs II (no. 11), al-Kāsim Gannūn b. Muḥ. b. al-Kāsim (no. 12), Abu l-ʿĀysh b. Ahmad b. al-Kāsim Gannūn (no. 13), and the governor of Fās, he fell into the hands of Mūsā and was killed.

Having become the sole ruler of the western Magrib, Mūsā pursued the Idrīsids as far as their fortress at Ḥadījat al-Nasr in 317/929, and then threw off the authority of the Fātimid caliph at the instigation of the Umayyad ruler of Spain who, after seizing Mālīka in 314/927, had just taken Ṣabta (Ceuta) in 319/931. The Fātimid caliph then sent his general Ḥumayd b. Yaṣāl, and Mūsā was defeated. The Idrīsid family took advantage of this to raise the siege of their fortress and to destroy the Zanāta troops. Once the Fātimid forces had left, however, Mūsā once again recognized the suzerainty of the Umayyad caliph and, this time, the Fātimid general Maysūr, who was sent to punish him, put him to flight and the Idrīsids pursued him until he was killed. The Idrīsids then established themselves in the Rif in the north-west of the country, where they ruled, sometimes acknowledging as suzerain the Umayyad caliph, and sometimes the Fātimid. Al-Kāsim Gannūn (no. 11) ruled in the name of the latter until 337/948-9. His son, Abu l-ʿĀysh b. Ahmad (no. 12), ruled in the name of the Umayyad 'Abd al-
port, in order to seize power once again. He was defeated and taken prisoner by the Umayyad general sent by al-Manṣūr, then assassinated on the road to Cordoba (1055). This caused the fall of the Idrisid dynasty. For more than two centuries, the Idrisid dynasty died out. Later, a branch descended from the Banu ʿUmar succeeded in establishing at Malaga a kingdom which lasted for slightly more than twenty years [see RAMMŪDĪDS].

In Morocco today there exists a large number of sharifs descended from the Idrisids [see SGURĀFA]. In 1280-81, the Banu ʿUmar dynasty died out. Later, a branch descended from the Banu ʿUmayyad general ʿAbd al-Ḥamid, Alexandria 1958, 194-6 (tr. Fagnan, 149-55); Ibn ʿUqīr, i, 82-4, 210-4, 235 f. (tr. Fagnan, i, 96-9, 303-10, 344 f.); Ibn Abī Zarʿ, Rāwū al-ḥurūs, lith. F. n.d., 4-63 (tr. Beaumier, 9-130); Yahyā Ibn Khaldūn, Bughyat al-nawwād, ed. and tr. Bel, 7-9, 103-10; Dākhān, Zahrat al-ās, ed. and tr. Bel, 7-27, 34 f., 84 f.; 115-17; al-Qārī, ed. Marçais, La Berbérie musulmane, 116-26; H. Terrasse, Hist. du Maroc, i, 107-28. (D. EUSTACHE)

IDRISĪYYA [see TĀRĪKA].

IDṬIRĀR, “compulsion, coercion”, as opposed to ikhtiyār, “freedom of choice”. Although the term itself, in its masdar form, does not belong to the language of the Qurʾān, the verbal use of the VHIth form is of relatively frequent occurrence there. The idea is that of an absolute necessity (ifṣīḍr); if he acts of “free choice”.

In one of his best analyses of human action, al-Ghazālī defines “free” actions man by means of acquisition (kasb).

In conclusion: in later ʿAshrārītī kalām the term ifṣīḍr is reserved rather for an action that, of itself, cannot not take place; it comes about bi-l-idfīḍr. But all three are alike, he says (ibid., 219), with respect to the actual nature (baḥša) of the compulsion (ṣīdrīr) or the coercion or obligation (ṣīb) that determines them. Al-Ghazālī’s conclusion, in fact, conformity with the ʿAshrārītī system but following a more highly developed psychological analysis, is that, in any case, of “chosen” action, the decision of the will necessarily follows the judgment of the intellect, and that, accordingly, man is “compelled to free choice”, maḍghār “ala l-ṣīdrīr (ibid., 220). A “natural” action occurring through ητήτηρ is purely determined; divine action is itself purely free; human actions are in an “intermediate position”, compelled to free choice. This is why the “people of the truth” (aḥī al-ḥaṣk) defined “free” actions of man by means of acquisition (kasb).

In the classic theme of the “channels (or “sources”) of knowledge” (ṣīb) in their different kinds of knowledge. In this way, ʿAshrārī already distinguished between necessary (ṣīdīrīr or ητήτηρ) knowledge, which asserts directly and compulsorily on the mind, and acquired (ṭiṣṭīb) knowledge (see W. Montgomery Watt, op. cit., 41-2, 132 and ref.). We find the same distinction in the ʿAshrārītī school, e.g., al-Bākīlānī, Ṭamḥid, 7-8. Necessary (ṣīdīrīr) knowledge is that which every man is compelled to admit, such, says al-Bākīlānī, is the sense of ητήτηρ. In the classic theme of the “channels (or “sources”) of knowledge” (ṣīb) the idea of “necessary knowledge” is regularly rendered by ṣīdīrīr.
The nisba is Ḩārāt. The tribesmen, who are nomads, range through the sayḥ or steppe east of the south-eastern corner of al-Rubī‘ al-Khalī. One of the landmarks in this district is Kārāt al-Khīrīt (al-Sulāḥī Hill). West of the hill is Wādī al-Ummayr, one of a number of valleys which run down to the quicksands of Umm al-Samīm [q.v.]. North of al-Ḥārāt is the tribe of al-Durūf [q.v.], while to the east are sections of al-Dījānāba [q.v.] and the tribes of Āl Wāhiha [q.v.] and al-Hikmān. Other sections of al-Dījānāba and the tribe of al-Ḥarāṣīs [q.v.] border on al-Ḥārāt to the south.

The tradition of al-Ḥārāt holds that the tribal ancestry was Ḥārāfī (a name still used in Arabia for a dust-coloured she-camel), a sister of ʿAmīr and Kaṭḥīr. Ḥārāfī, who had no husband, was got with child by an ʿAlīfīr (a sand devil, with no doubt an echo of ʿIrīlī). ʿAmīr was bent on killing his wayward sister, but Kaṭḥīr intervened to save her, and she gave birth to a son who was named ʿAlī. This tradition points to a blood relationship between al-Ḥārāt and the tribe of al-Ḥarāṣīs [q.v.] for ʿAlīfīr is Kaṭṭīs, the latter of which is the dominant tribe in the hinterland of the region of Zufār [q.v.] to the southwest of the range of al-Ḥārāt. The people of al-Ḥārāt believe that their forebears came from Ḥabarūt in western Zufār.

The three main sections of al-Ḥārāt are Bayt Ḥāmūda, al-Mazānīwā (pronounced mazānīwa, with the singular Muṣaynīwī), and al-Maḥākīkā (pronounced maḥākkī, with the singular Muḥāyykīkī). The members of the tribe belong to the Hūnāwī (Southern Arab) faction in Oman, but they enjoy the special privilege of being allowed to travel unmolested, along with anyone accompanying them, in ʿIrīlī (Northern Arab) territory. The tribesmen of al-Ḥārāt, like their neighbours of al-Dījānāba and al-Ḥarāṣīs, call themselves Sunnis. Other powerful neighbours, such as Āl Wāhiha and al-Durūf, are ʿĪbādis or mainly so.

**Bibliography:** Interviews with members of al-Ḥārāt, supplemented by brief references in Admiralty, A handbook of Arabia, London 1916-7; G. Rentz, etc., Oman and the southern shore of the Persian Gulf, Cairo 1952; W. Theisger, Arabian sands, London 1959. (G. Rentz)

**IFLĀR** (see EFLĀR).

**IFLĪLĪ** (see IRIFLĪLĪ).

**IPNI**, formerly called Santa Cruz de Mar Pequeño, a former Spanish enclave, about 600 square miles in area, on the coast of southern Morocco, situated between 28° 54' 3" and 29° 38' 10" N. Spanish rights in the area, where Spain held a trading post from about 1476-1524, were based upon the treaty of Tetzān (1860). They were recognised by France in 1912, but actual occupation was not affected until 1934. Its capital, Sidi Ifni, was formerly the seat of a single centralized administration for Africa Occi-

dental Española, but in January 1958, following the repulse, in the previous November, of an invasion by Moroccan irregulars, it became a separate pro-

vince from Spanish Sahara, each having its own military governor. Ifni is semi-desert in the south and its undeveloped resources are insufficient to maintain its population of about 40,000. With no significant exports, it was an economic liability to Spain and entirely dependent upon Morocco, where nearly half the male population found work as migrant labour. There has been no effective Hispanization. Claims to the territory advanced in 1538 by Morocco appear to have been supported by the leaders of the indigenous population, the seven tribes of the predominantly sedentary, Berber-speaking, Ait Ba-Amran. In December 1965, a resolution of the United Nations General Assembly called upon Spain to accelerate the decolonization of Ifni. Further pressure followed. Agreement between the Spanish and Moroccan governments for the transfer of sovereignty to Morocco was reached in January 1969.

**IFRAGHA**, a confederation of Touareg tribes consisting of about 17,000 persons who live in the southern Sahara between latitudes 17° and 21° N. at the north-east extremity of the republic of Mali. They inhabit the fairly low mountains of the Adrar [q.v.] and especially its valleys and its surrounding depressions. The Adrar is a dense massif, of crystalline and granitic rocks, less than 1,000 metres high, bordered to the west and is bounded to the west and the south by small sandstone plateaus. The wādis flow almost every summer during the rainy season (136 mm. at Kidāl) and sometimes join the Tilemsi to the west. The valleys and depressions are fairly rich in vegetation (acacias, tamarisks and tropical types of plant); the water there is fairly shallow and the pasturage relatively rich.

The region was probably at first inhabited by Songhai negroes, to whom are attributed the ruins of some villages. It is then thought to have been for a long time disputed between the Touareg, the Moors and the Songhāl. The Touareg Ifoghas became and remained masters of the country, which was an important crossroad of caravans routes to the Niger (Gao), Agadès, the Ahaggar and the oases of the north, particularly Touat.

The Ifoghas, like the other Touareg, are fair-skinned, speaking Tamakht (a Berber dialect) and are nomadic shepherds and caravaneers. They are however less poor than the Touareg of the north (Ahaggar and Azdjer); their line of descent is not through the women and their social structure is somewhat different: they have neither “warriors” nor slave tribes. They travel in small groups with their goatskin tents and their sheep and goats over fairly short distances, entrusting most of their ca-

mels, which travel farther afield, to keepers. In spite of the advent of lorries, they still trade by caravan with the oases of Touat and Tidakelt, from which they obtain dates, and increasingly with the Sahel area, whence they obtain millet and rice. Their only fixed points are the very small palm-grove of Tessalit, in the north-west, and the administrative centre of Kidāl in the south; Kidāl is the only market, its stall-holders being Mzabis and “Arabs” from the north.

**IFRÄGHA** (or AFRAGHA), the Arabic form of Fraga, name of a small town (pop. ca. 9000) in NE Spain 30 kms WSW of Lérida. The old part of the town is situated on the steep left bank of the R. Cinca some 18 kms above its confluence with the Ebro. Practically no traces of Muslim rule survive.

Fraga fell into Arab hands presumably when Mūsā
b. Nuṣayr took Saragossa in 96/714. Thereafter it may be assumed to have shared the fortunes of Saragossa, being rarely mentioned by name in the histories. At the beginning of the 6th/11th century it may be assumed to have been under the governance of Yāḥyā b. Ghaṣṣiḥya [see Ghaṣṣiḥya, Banū]. In 528/1134 Abū I-Humayr mentions Yāḥyā b. Ghaṣṣiḥya, who had already taken Saragossa in 512/1121. He tried to take Fraga but was soundly beaten by Yāḥyā. In 543/1149 the town was seized by Ramūn Berenguer IV, Count of Barcelona, and Muslim rule there came to an end.

Idrisi places Fraga with Jaca, Lérida, and Mequinenza in the province of Zaytūn, a name which he applies also, as does al-IIimyāri, to the Cinca. Al-Illimyāri also gives a few details on the battle in 528/1134. Yāḥyā gives correctly the date of the fall of Fraga to the Catalans but his short entry is otherwise a singular concentration of errors. Kāzwrīnī describes the warren of tunnels in which the inhabitants took refuge in time of trouble.

Banū İFRAN (or İFRAN, İFRAN, İFRAN, UFRAN, IFRAN etc.), the most important branch of the large Berber tribes of the Zanātā (Zanātā). According to the writings, now lost, of three Berber genealogists used by Ibn Khaldūn, namely Sābīk b. Sulaymān al-Maṭmātī, Hānī b. Masdūr al-Kūmī and Kāhlān b. Abī Luwā, the Banū İfran are descended from Ištīlān (also Yaqūt), son of Misrā, son of Zākiyya, son of Wardīr (or of Warṣīk), son of Adīdāt. According to the same tradition, Zākiyya was the brother of Dammār (Demmer), the eponymous ancestor of the Berber tribe of that name, while the sister-tribes of the Banū İfran, descended from Ištīlān, were the Maghrāwā, the Banū İrniyyān and the Banū Wasiṃ. Along with this tradition, which seems to have been generally adopted in Berber circles during the Middle Ages, Ibn Khaldūn also transmitted another, which appears to be far more authentic, since it derives from an İfrānid informant. It was taken by Ibn Khaldūn from the Djamhara of Ibn Ḥāzm (q.v.), who reproduced it from the account given by the Spanish historian Yūsuf al-Warrāq (or Muḥammad b. Yūsuf Ibn al-Warrāq), d. 361/973. This last-named scholar took his account from Ayyūb, son of Abū Yazīd Maḥşīl, b. Kānddā (q.v.), whom he had met in Cordova, where Ayyūb had been sent by his father on a mission to the Umayyad caliph 'Abd al-Raḥmān III. Now this second tradition regarding the origin of the Banū İfran, which may be called the "tribal" tradition, does not differ greatly from the first as known from the writings of al-Maṭmātī, al-Kūmī and Kāhlān b. Abī Luwā. According to Ayyūb, the Banū İfran were descendants of İrfi, son of İštīlān, son of Misrā, son of Zākiyya, son of Warṣīk (or Warṣīh), son of Adīdāt, son of Addāt, son of Dīnā, the eponym of all the Zanātā tribes. We may add that the İfrānid tradition transmitted by Ayyūb also regards the Banū Maghrāw (Maghrāwā), the Banū İrniyyān and the Banū Wasiṃ as sister-tribes of the Banū İfran, and Dammar as the brother of Zākiyya. Lastly, according to the İbbālī Tradition Abī Zaka-riyyā b. al-Wardānī (after 504/1110-1), the Banū İfran and the Banū Wasiṃ were kinsmen, and together formed the tribe (or rather confederation) known as the Banū Turks. According to Ibn Khaldūn, the name İrfi, the eponym of the Banū İfran, derives from the Berber word irt meaning "cavern" (in modern Berber dialects irtʃ/3frə/3frə, and the corresponding diminutives irtʃi etc., mean "grotto", "cavern", "hiding-place").

The earliest mention of the Banū İfran (who were unknown to the Greek and Latin writers of antiquity and even to Byzantine authors of the 6th century, writing in Greek or Latin) occurs in the period of the Muslim conquest of North Africa, that is to say the second half of the 1st/7th century. At that period, they were the largest and most powerful tribe of the great Zanātā family. According to Ibn Khaldūn, there were branches of them in İfrījīya, the Aures and the central Maghrib. Later, towards the end of the 1st/7th century, the Banū İfran appear as one of the most important tribes of eastern Barbary. With the Maghrāwā and several other Berber tribes of the Zanātā branch and that of the Butr, they then joined the great Berber confederation headed by the tribe of the Djarāwā commanded by the Kāhīna (q.v.), at once queen and prophetesses. At this period the Djarāwā apparently inhabited the Aures, and the main body of the Banū İfran occupied the regions adjacent to what is now Tunisia. The Banū İfran were so closely attached to the person of the Kāhīna that a Berber tradition quoted by Ibn Ḥābarī makes İfran, the ancestor of this tribe, the father of the Kāhīna. It is moreover very probable that the Banū İfran originally were merely a confederation of sections of various east-Berber tribes, apparently formed in the second half of the 6th or the first half of the 7th century A. D. In fact, the name Banū İfran is as yet not mentioned among those of most of the east- Berber tribes dealt with in the Johannes of Coripus (6th century), a well-known low-Latin source which gives an almost complete list of the peoples inhabiting the eastern part of Barbary at the time of the country's reconquest by the Byzantine Empire.

The Banū İfran properly speaking, the nucleus of the future confederation of that name, were originally, it seems, no more than a somewhat insignificant tribe who had succeeded in placing themselves at the head of a number of frations of Berber tribes at the time of the Byzantine domination or during the disturbed period of the first Arab invasions of Tripolitania and İfrījīya proper. The region originally inhabited by this people was in western Tripolitania, the hypothetical homeland of all the Zanātā tribes (ard Zanātā, "land of the Zanātā") according to the accounts of Arab traditionists of the 2nd/8th and 3rd/9th centuries, by Ibn 'Abd al-Hakam in his description of the conquest of the Maghrib). The Zanātā tribe then occupied not only the interior of western Tripolitania but also the country surrounding the town of Sabra (the ancient Sabratha), on the coast, where they are mentioned in 125/741. The territory occupied by the Zanātā was bordered on the East by the ard Hawwārā "land of the Hawwārā", which included all the central part of Tripolitania. Now it was on the borders between these two lands, in the modern district of Yefren, that the Berber tribe of the Banū İfran (or Yafān) dwelt, being thought by some to form part of the Zanātā and by others to belong to the Hawwārā. Nothing is known of the earliest history of these Banū İfran, who first appear in Arabic sources at about the middle of the 3rd/9th century as the eastern neighbours and rivals of the Nafsa. It is quite probable however that these Banū İfran of western Tripolitania were merely the remnants of the large Zanātā confederation of the same name who had continued to live in the Yefren after the emigration of the main body of that confederation further to the West, towards what is...
now Tunisia, probably at the time of the conquest of Tripolitania by the Arabs. As has been said, Ibn Khalidūn connects the name of Ifri, the ancestor and eponym of the Banū Ifran, with the Berber word ifrī “cavern”. If this etymology is correct it may be supposed that the confederation of the Banū Ifran (or rather its nucleus) owed its name to the fact that the Zanāta elements which it included originally lived in cave dwellings. Now it is known that the mountainous districts situated in the interior of western Tripolitania and south-eastern Tunisia, like Maghila, Dālā, Butnah, and the buttoned steppe of agyrān, abounded in cave dwellings both old and new (cf. J. Despois, Djebel Nefousa, 202-6), and there is nothing against the hypothesis that it was in this part of the ārd Zanāta that the Banū Ifran had its origin. A thorough analysis of Berber and particularly Ifranid traditions seems to confirm this identification of the tribe’s original home. Thus it seems possible to connect the Iṣlītan (Yaṣlītan, sister-tribe of the Banū Ifran) with the town of Zillīt, situated on the coast of Tripolitania, east of the ruins of Leptis Magna, in the country that belonged in the Middle Ages to the Hawwārā. The name of Misrā, the grandfather of Iṣrī in the same traditions, must be connected with that of the Misrātī tribe, held by mediaeval Berber genealogists to belong to a branch of the Hawwārā and occupying the most easterly part of the coastal zone of the ārd Hawwārā, in central Tripolitania. The principal centre of this tribe, in the Middle Ages, was the town of Suwāyqāt Ibn Māṭḥūd, today called Misratah. It is not far from these two places in Tripolitania that the district of Yefren, the home of the Ifran/Yafra in the 3rd/5th century, is situated. The name of the great-grandfather of the Banū Ifran, that is to say Zākīyā, seems to indicate that among the Berber tribes which formed the confederation of the Banū Ifran there were some fractions of the Luwāṭā [g.v.], a tribe which, at the time of the conquest of North Africa by the Arabs, occupied the ancient Marmarica and Cyrenaica. It seems indeed that the name Zākīyā is repeated in the name Arzākīyā, which was according to al-Bakrī the principal locality in the oasis of Awjīlā/Djalo, situated in the heart of the Luwāṭā country. It is very probable that this name is composed of two elements, -zākīyā which is a common Berber noun, perhaps meaning ‘sheep’, and -ār-. The Berber genealogists, and Ar-... This second element recurs in the name of the ancient Libyan tribe of Arzugītani (Ar-zug-itani), identical with the Zuweges of Herodotus and the Zawīgā of the Arab historians. It is probably related to War-, the element preceding several Berber tribal and personal names (cf., e.g., Warraydān, from the Arabic proper name Zayydān), the significance of which has not yet been fully explained (see T. Lewicki, Études ibadites nord-africaines, 45-6).

Tripolitania.—The Banū Ifran of western Tripolitania, a large tribe of the confederation of that name, which remained in the same place after the emigration of the main body of that people to what are now Tunisia and the Aurès, in the 3rd/5th century were a tribe of sufficient strength to fight the Nafusi on the one hand, and to maintain in Tripolitania, the Ifranīs. We know that they were Ibādīs, without however being supporters of the Rustamid imāms of Tāhert. They supported the cause of the Ibādī leader of Tripolitania, Khālaf b. al-Sambū, who had revolted against the Banū Rustam. Later, in the 5th/11th century, the Khālafī sectarians still formed part of the population of Yefren, along with the Nukkāris (it will be seen later that, in the first half of the 4th/10th century, Nukkāris became the national religion of the eastern branch of the Ifranī tribes). In the 6th/12th century, the Yefren sectarians were converted to the form of moderately orthodox doctrines of the Ibādī-Wahlīs, former supporters of the Rustamid imāms. Nominally subject to the various dynasties which in turn ruled eastern Barbary, the people of watani Yafriyan, “land of Yafrem”, endeavoured to preserve their independence under chiefs who bore the title muḥammad and belonged to the family of ‘Abn b. Ḥarīz, for a considerable period of time (cf. J. Despois, Etudes ibadites, II, 204-7). Indeed, these leaders still played a considerable part in the confederation of the Banū Ifran, but later they broke away to form a separate tribe. It was from these Maghila, united with the Banū Ifran, that ‘Abū Kurra al-Ifrānī (in some sources called al-Maghib) originated, the leader of the Banū Ifran in Ifrikiya and the central Maghrib, and also the supreme leader of the North African Sufris at the beginning and towards the middle of the 2nd/8th century. He was in command of the Ifranī tribes apparently from the year 131/748-9. In 124/741-2, when the Sufrī leader ʿAbd al-Wāḥid marched on Kayrawān, ‘Abū Kurra al-Maghib, according to ‘Abd al-Hakkām, was in command of the vanguard of his army. At this time the main body of the Banū Ifran was probably still in Ifrikiya, near the Aurès, which formed the centre of the Kāhīna’s state. It may be supposed that this tribe took part in the Sufrī rising of the Warafīdjūmā, who occupied the town of Kayrawān in 133/757. When, in 131/748-9, the Ibādī imām of Tripolitania, ‘Abū l-Khaṭṭāb ‘Abd al-Aṣlā b. al-Samb al-Maṣāfīrī, expelled the Warafīdjūmā from Kayrawān and made Ifrikiya a province of his state, the Sufrī Berber tribes of that country, like the Banū Ifran of the Ifrikiya and the central Maghrib, began to move towards the central Maghrib. This movement must have assumed the nature of a mass migration after 144/762-3, that is to say after the reconquest of eastern Barbary by the Arab general Ibn al-Ashāth, who thus became the common foe of all Berber sects—Khāridīs, Ibādīs and Sufrīs—in North Africa. It was apparently at this period, between 140/757-8 and 144/761-2, that the main body of Ifranī tribes, commanded by ‘Abū Kurra al-Ifrānī al-Maghib, emigrated to the central Maghrib.

Little is known of the history of the branches of the Banū Ifran who continued to inhabit Ifrikiya after the emigration of the tribes led by ‘Abū Kurra. Ibn Khālidūn claims that there were two Ifranī tribes in this province, the Marandjīs and the Banū Warkī (Warkò). These tribes inhabited the country lying between Kayrawān and Tinā, in the Bilād al-Diarī, and the Aurès massif. It seems that these tribes were soon converted to Ibādīsm, having adopted the doctrines of the Nukkāri sect. It was from the Banū Warkī (the name of this tribe is perhaps the same as Arkū, in al-Idrīsī the name of a locality on the route leading from Lorbeus to al-Masalla) that ‘Abū Yazīd Makhīd b. Kaydād traced his origin, the leader of the Nukkārī revolt which almost destroyed
FIAM

Fatimid domination in North Africa. A branch of the Warku inhabited Sadāda (now Sdada) in the Bilad al-Dirādī, in immediate proximity to the Banū Wāsīn (also called Banū Wargla). It seems however that, save for this fact, conditions in the central Maghrib were little changed. The Zanata was smaller than that of the Banū Ifran; it co-operated with the latter in their war against Ibn al-Ashā'īt [q.v.]. This army was placed under the command of al-Aghlab al-Tamimi who, after setting up his headquarters at Tūbna in the Zāb, tried to attack first Tlemcen, then Tangier, but was compelled by the Berbers to withdraw. Soon the Ifranī and Ibadī Berber tribes formed a coalition in which the Banū Ifran, still under the command of Abū Kurra, played a considerable part. In 150/767 Abū Kurra's army appeared before the walls of Kayrawān, and in 151/768 he himself came with 40,000 Idrānī horsemen to lay siege to the town of Tūbna.

Not a great deal is known of the Idrānī state of Tlemcen after the siege of Tūbna. It is however very probable that friendly relations were maintained with the Idrānī kingdom of Banū Rustam [q.v.] in Tāhert, which bordered on Tlemcen. The first ruler of Tāhert, Abū al-Rahmān b. Rustam, who governed the town from 160/776-7 or 162/778-9, even allied himself with the Banū Ifran by marriage, since he probably married a daughter of the ruling family of Tlemcen. From this union was born Abū al-Wahhāb, the second Idrānī imām of Tāhert. This marriage must have taken place in about 148/765-6 at the latest, since in 167/784-5, at the time of the death of Abū al-Rahmān b. Rustam, Abū al-Wahhāb was already an adult and a member of the council of six empowered to choose the future imām from its own members. Curiously enough, another member of the same council was Abū Kudāmā Yāzīd b. Bandi al-Ifrānī, a cousin and supporter of Abū al-Wahhāb, who later became one of the founders of the Nukkārī heresy. He conducted a long war with Abū al-Wahhāb, probably relying mainly on the Banū Ifran; in the end he died in battle, killed by Alflab, son of Abū al-Wahhāb, in about 188/803-4 or shortly afterwards. At that time, the Idrānī state of Abū Kurra had already ceased to exist for some years. It seems moreover that control of Tlemcen, which was then inhabited by the Banū Ifran and the Maghrawa, had passed after the death of Abū Kurra into the hands of Maghrawa leaders belonging to the dynasty of the Banū Khazar, this dynasty being destined to play a considerable part in the history of the Maghrib. In 173/789-90 (or according to certain historians, in 174/790-1), at the time of the conquest of that country by Idrīs I [q.v.], the founder of the dynasty of the Idrīsids, Muhammad b. Idrīs, the ruler of a small town of Tlemcen, came before the conqueror and, thanks to his prompt submission, obtained security for himself and for all the Zānās tribes of the central Maghrib. It was Sulaymān, brother of Idrīs I and later hereditary ruler of that town, who became the Idrīsī governor of Tlemcen; it seems however that, save for this fact, conditions in the central Maghrib were little changed. The Zanāta
tribes in the country continued to recognize the supremacy of the Maghrawa, which had long replaced the supremacy of the Banū Ifran. Thus the Maghrawa, who in the days of the confederation of Berber tribes ruled over the central Maghrib, remained once more one of these tribes after the Djarawa, now recovered their importance. But the rivalry between the Idranid and the Maghrawa leaders was long to continue in the central Maghrib as well as in the Maghrib al-Aṣğā, and it was only with the conquest of the whole of the Maghrib by the Almoravid army that this discord was finally brought to an end, with the disappearance of the states created by the Banū Ifran and the Maghrawa. The Idranid tribes of the central Maghrib, for their part, certainly succeeded in retaining much of their independence after 173/789-90, though of course under the control of Sulaymān and the Maghrawa leaders. At the time of the Idrisid domination of the Maghrib, the Banū Ifran were already Sunnī, having abandoned their earlier Sunnī beliefs at some point of time now difficult to determine. In any case the Ibāḍi Berber genealogist al-Birzālī, who supplied Ibn Ḥażm (5th/11th century) with information regarding the Zanata tribes in the Maghrib, believed that the Banū Ifran had always been Sunnī and appeared to know nothing of their Sufri past.

The Idranid kingdom of the central Maghrib makes its appearance in the historical sources after the expulsion of the Idrīsid rulers from Tiemcen by the Fātimids, which took place in 316/928. The Sunnī Idranid tribes of the country took no part in the Nukkārī revolt of Abū Yazīd Makhlād b. Kaydād al-Idranī, although it is not impossible that their leaders may have helped him to get in touch with the Umayyad government in Cordova and that it was from their territory that Abū Yazīd's son Ayūb set out for Spain, when entrusted by his father with a political mission to ʿĀbd al-Rahmān III. In any case, during the war between Abū Yazīd and the Fātimids, the numbers and strength of the Banū Ifran in the central Maghrib remained unchanged. At that time their leader was Muḥammad b. ʿAṭāb al-Idranī, whose power was restricted solely to the Idranid tribes in the neighbourhood of Tiemcen, while the town itself had, since the fall of the local Idrīsid rulers, once again become the capital of the Maghrawa and was the stronghold of the Banū Ifran. At this period the Banū Ifran's domination of this part of North Africa was for a time destroyed. The command of the Zanāta tribes of the central Maghrib, so relentlessly harried by the Fātimids, once again reverted to the Maghrawa, that is to say to Muḥammad b. ʿAlṣāy al-Idranī, who was governing Fez in the name of the Umayyad caliphs of Spain. This leader even succeeded in reconquering the town of Tiemcen from the Fātimid state, between 360/970-1 and 370/980-1. It seems however that the dynasty of Yaṣlā b. Muḥammad eventually recovered from the defeat of 347/958-9 and continued to reign over the Idranid tribes of the central Maghrib. Rulers drawn from this family were still in control there, with Tiemcen as their capital, in the first half of the 5th/11th century. At the time of the invasion of the Banū Hilāl, the master of Tiemcen was prince Bālḥīt, whom Ibn Khādān describes, in one passage in his book, as an Idranid and, in another, as a descendant of Muḥammad Ibn Khazār, that is to say as a Maghrawa. Be that as it may, he had as his vizier an Idranid general, who died in a battle against the Banū Hilāl in 450/1058. At that period the Banū Ifran shared their rule over the Zanāta in the central Maghrib with the Maghrawa and two other large Berber tribes, the Wāmnāni and the Banū Hilān. Bālḥīt was succeeded by his son al-Qabbās, who was reigning in Tiemcen at the time of the conquest of the central Maghrib by the Almoravid army.
tial of the Zanata leaders. In 369/979-80, the family of Ya'la b. Muhammad, still loyal to the Umayyads of Cordova, had to flee before the army of Bulukkîn b. Ziri, the Fatimid governor of Ifrikiya, who not only seized the central Maghrib but also penetrated as far as Fez and even Sidjûlnâs. But Yaddu b. Ya'la, who was among the fugitives, returned to the central Maghrib only after Bulukkûn had left for Ifrikiya, as did some other rulers of the dynasty of Ya'la who succeeded in restoring the state of Tlemcen. He settled in al-Magrib al-Aljâa and in 379/990-1 was appointed governor of the province for the Umayyad dynasty, with his base at Fez, formerly the territory of the Maqrwâ (from the time of the rule of Mu'âammad b. al-Kâshây). It was probably at this time that a certain number of families of the Banû Ifran settled in Fez, whose descendants were still living there, with other sections of the Zanata tribes, in 462/1069-70, when the army of the Almoravid Yusuf b. Tâgjûn seized the capital of al-Magrib al-Aljâa. However, the Umayyad government, fearing that Yaddu b. Ya'la's power might become too great, decided to offer support simultaneously to Ziri b. 'Atiyya, one of the amirs of the Maqrwâ. As a result, the old rivalry between the Banû Ifran and the Maqrwâ, previously allayed by the alliance concluded between Ya'la b. Mu'âammad and al-Kâshây b. Mu'âammad Ibn Khazar and his son Mu'âammad, was revived after 40 years of harmony. In 379/990-9 or 381/992-3, Yaddu b. Ya'la openly revolted against the Umayyad government, which had appointed Ziri b. 'Atiyya to govern Fez. The result of this conflict was the war waged by Yaddu against the combined forces of the Umayyads and the Maqrwâ. The latter finally prevailed, and Yaddu was obliged to seek refuge in the Sahara, where he died in 383/993-4. His successor as ruler of the tribe was Habbu's, son of his brother Ziri b. Ya'la. Habbu's was murdered by his cousin, the Ifranid amir Abû Yaddas b. Dûnâs, who was however compelled to flee soon afterwards. Hammâma, brother of Habbu's, then assumed the leadership of the Banû Ifran. He led the tribe against the town of Shâla (Salé) in the province of Tadla, capturing the town from Ziri b. 'Atiyya, together with part of Tadla that depended on it, and setting up a new Ifranid state of Ya'la named al-Hamâmâ. This kingdom lasted until the conquest of Morocco by the Almoravids. Hammâmâ died after 406/1015-6 and was succeeded by his brother Abu 'l-Kâmîl Tamîn, who, having to fight against the anti-Muslim kingdom of the Barajawât, was obliged to make peace with the Maqrwâ of Fez. However, war broke out once again in 424/1033, and Abu 'l-Kâmîl even succeeded in capturing Fez; it was only in 429/1037-8 that he was driven out by the Maqrwâ. Forced by the Maqrwâ, Abu 'l-Kâmîl had to withdraw to his kingdom of Tadla, he lived there until his death in 446/1054-5. It was apparently in the reign of Abu 'l-Kâmîl that the Ifranid dynasty of Salé also took possession of the large commercial town of Aghmat, previously held by the Maqrwâ origin. But soon the conquest of this part of the Maqrwâ by the Almoravid army, which captured Aghmat in 449/1057-8 and invaded the country of Tadla in the following year, ended the existence of the kingdom of Salé. The Ifranid rulers of the country perished and their state was annexed to the kingdom of the Almoravids.

The Banû Ifran of Tadla were not the only Ifranid branch to be established in the western part of what is now Morocco. Certain Ifranid families seem to have begun to penetrate into this region long before the state of Salé was founded. Thanks to the account left by Zam'mir, who in 352/966 was ambassador for the king of the Barghâwâta (in the province of Tamessna) to the Umayyad caliph al-Hakam al-Mustansir, we know that, among the Muslim-Berber petty tribes under the authority of the kings of the Barghâwâta, there was also an Ifranid tribe. This seems to be a reference to a fraction of the Banû Ifran who emigrated from the central Maghrib after the collapse of the Ifranid State of Ya'la b. Muhammad in 376/987-8. Spain.—The first wave of Ifranid emigrants came to Spain in 347/958-9, after the death of Ya'la b. Mu'âammad and the fall of his kingdom. This group, led by Ibn Khûrâ, son of Ya'la b. Mu'âammad's uncle, was given a very cordial welcome in Cordova. Another branch of the Banû Ifran settled in Spain towards the end of the 11th/12th century. This consisted of a fraction led by the Ifranid ruler Abû Yaddas b. Dûnâs who, after killing his cousin Yaddu b. Ya'la and attempting unsuccessfully to seize command of all the Ifranid tribes of al-Magrib al-Aljâa, fled to Spain with his three brothers and a numerous body of supporters. According to Ibn Khûlûn, this emigration occurred in 383/993-4 or 382/992-3. Abû Yaddas is said to have acted in concert with the Umayyad government of Cordova, which was anxious to remove the family of Yaddu b. Ya'la from supreme command over all the Ifranid tribes of Al-Magrib al-Aljâa and to replace it by another ruling family, more closely linked with the interests of the Umayyad dynasty. The Umayyad government welcomed the emigrants. All the fighting men of Abû Yaddas were enrolled in the Berber forces in Spain, and their leader was granted a considerable sum of money and several fiefs (1442). Later, in 400/1009-10, Abû Yaddas, together with all the Berber forces, is found supporting the cause of the caliph al-Mustâ'in in the war he fought with his predecessor al-Mahdi. He died in a battle on the banks of the Guadari; descendants of his held high rank in the Zanata forces in Spain. At the period of the mulk al-fawâqîh, Yâhâb b. Abû al-Raamsân, the son of Abû Yaddas' brother-al-Âtîfâ, entered the service of the Hammûdiid dynasty and was given the post of governor of Cordova. Another branch of the Ifranid dynasty was played a considerable part in Muslim Spain in the first half of the 5th/11th century. In 405/1014-5 he succeeded in driving from the town of Ronda the governor, Abû Kurra, another brother of Abû Yaddas, who played a considerable part in Muslim Spain and, in the name of the Umayyad dynasty, and established himself there as an independent prince. In addition to Ronda, his principality included the town of Taciruna (Tacoarona). If Ibn al-Khâthib is to be believed, Abû Nûr obtained this territory from Sulaymân b. al-Hakam b. Sulaymân b. al-Nâsir, who divided certain provinces of al-Andalus between the leaders of six Berber tribes which had settled in Spain. In 443/1051-2, with various other Berber leaders, Abû Nûr was forced to recognize the supremacy of the 'Abbâdîds of Seville. He died soon afterwards, in 457/1065, and was succeeded by his son Abû Nasr, who reigned until 457/1065, when he was murdered by a traitor acting with the connivance of the 'Abbâdî government.

It is quite probable that a section of the Banû Ifran settled in the neighbourhood of Mazarrón, in the province of Murcia. There is there a "diputación" called Ifre, a name which C. E. Dubler has connected with that of the Banû Ifran (or Ifrin, the vocalization adopted by this scholar). It seems however that the
modern Ibre owes its name not to Ibran but to Ifri — the eponym of this tribe, according to the traditions of the mediaeval Berber genealogists. Moreover, it is not impossible that the modern Spanish place-name derives, not from the name of the tribe of the Banū Ibran or its eponym, but directly from the Berber word i'frîn —caverne".

Sicily. —It is possible that some families of Irandj origin may have lived in Sicily, which was closely linked with Ifrikiya from the 9th/10th century, and that certain warriors belonging to the Banū Ibran and deriving from branches of the Ibranjya and the Banū Wārkhā may have made their way there with Aghlabid and Fāṭimid troops. Among the inhabitants of the town of Corleone mentioned in a mediaeval source, there is in fact a reference to a man bearing the name Ibn Abī Yafran and probably of Ibranj stock.

This is based on the report of a returned prisoner of war called Ḥārūn b. Yaḥyā (q.v.) who, to his description of Rome, append a brief note on Ibranjya and Britain. The latter "is ruled by seven kings"—obviously a belated allusion to the already defunct Anglo-Saxon heptarchy. Rather fuller information was available to Mas'udī, who refers to the Franks both in the Murādī (iii, 66-7, 69-72; ed. and tr. Ch. Pellat, §§ 910-1, 914-6) and in the Tanbih (B. G. A., viii, 22 ff.; 176 ff., etc.). The Franks are, he says, descended from Japheth; they are numerous, courageous, well-organized and well-disciplined people, with a vast and unified realm. They have some 150 cities, with Bawira (? Bariza) as capital. Alone among Muslim authors of his time, Mas'udī gives a list of the Frankish kings from Clovis to Louis IV, based, he tells us, on a book prepared by a Christian bishop for the Andalusian heir-apparent (later Caliph) al-Ḥakam in the year 328/939. He came across a copy of this book in Egypt in 336/947.

Diplomatic contacts between the Franks and the Caliphate were few, and have left little trace. The famous exchange of embassies between Charlemagne and Ḥārūn al-Rašīd is known only from a Frankish source; if it happened at all, it was of insufficient importance to attract the attention of the Arabic chroniclers, and no mention of it. Barthold has indeed rejected the whole story as inauthentic (Sōkeninmāy, vi, Moscow 1966, 342-4, = Khrisantsky Vostok, i (1912), 69-94; for an opposing view see F. W. Buckler, Haruna 'r-Rashid and Charles the Great, Cambridge 1931; cf. F. F. Schmidt in Isl., i (1912), 409-11; Barthold, Soč, vi, 432-6 = Khris. Vostok, iii (1913), 263-296; W. Ebermann, in Islamica, iii (1927), 233-5; S. Runciman, Charlemagne and Palestine, in English Historical Review, i (1925), 606-9; Madjī Khāḍdūl, al-Silāt al-dīlahumādīthayyay bayna Ḥārūn al-Rašīd wa-Sharīlamān, Baghdad 1939; G. Musca, Carlo Magno ed Harun al-Rashid, Bari 1963). The first definite report of a Frankish embassy to Baghdad dates from the year 293/906 when, according to al-Ḍahābī's wa'l-tubāf, by al-Awhabī, an embassy arrived at the court of the Mu'tafif from Bertha, daughter of king Lothair II of Lorraine and wife of Adalbert the Rich, March 293/906, in Enstitusu Dergisi, ii (1956-7), 115-45; G. Levi Della Vida, La corrispondenza di Berta di Toscana col Califfo Maulud, in Rivista Storica Italiana, lxvi (1954), 21-38; idem, Aneddoti e svaghi arabi e non arabi, Milan-Naples 1959, 26-44. The envoy, a
eunuch from North Africa, brought a variety of gifts, and a letter in the Frankish script, 'resembling the Greek writing,' but strangely for some search, a Frank was found working in the clothing store, who read the letter and translated it into Greek, which was then translated by Isbâk b. Hunayn from Greek into Arabic. Some eighty years later Ibn al-Nadîm drew on this passage for his note on the Frankish script, included in his discussion of writing, and adds that he had often seen this script on Frankish swords (Führer, ed. G. Flügel, Leipzig 1871, 20; on the 13th/19th reputation of European swords among the Muslims see A. Zeki Valdii [Togan], Die Schweuer der Germanen nach arabischen Berichten des 9-11. Jahrhunderts, in ZDMG, xc (1936), 15-37).

By far the most important known visitor from the Muslim lands to Europe in this period was Ibrâhîm b. Ya'qûb [q.v.], a Spanish Jew from Tortosa who travelled extensively in Frankish Europe ca. 354/965, probably on some sort of official mission for the Umayyad Caliph of Cordova. Ibn Ya'qûb's own account is lost, but is known from quotations by later geographers, especially Bakrî and Kâzëwînî. This is the only personal description of Western Europe for the Muslims, a matter of practical necessity, and not just of intellectual curiosity. It is therefore the more remarkable that they should have continued to show so little interest. In the East, the Muslim chroniclers have much to say about the Crusaders, whom they paraded, in their splendid attire, across the lands of Islam as far as Herat (cf. the verses cited by Z. V. Togan in Türk Dili ve Edebiyatî Dergisi, iii (1939), 535). By the 14th century however this attitude was dangerously out of date. Even the rapid growth of commercial and diplomatic relations after the Crusades evoked only a limited practical interest. In about 741/1340, Şihâb al-Dîn al-'Umari included two Western kings, of Spain and France, in his list of the sovereigns with whom the Sultan of Egypt corresponded, with a few details and the correct style and form of address for each. A later revision, the Ta'ârikh adds a few more names, and Kalkâshandî provides a much fuller list of European states and rulers, with some information about each ('Umari, al-Ta'ârikh bi 'l-mustafâl al-gharîb, Cairo 1312, 60-5; Kalkâshandî, Şubh al-a'âsh, viii, 33-53).

The Ottomans had dealings with Franks of various kinds from an early date—as merchants, as enemies, as neighbours, as diplomatic visitors. In Greece they conquered Frankish principalities; at Varna in 1444 they captured Frankish knights whom they paraded, in their splendid attire, across the lands of Islam as far as Herat (cf. the verses cited by Z. V. Togan in Türk Dili ve Edebiyatî Dergisi, iii (1939), 535). By the 16th century they were involved in extensive and complex dealings with European states. Ottoman interest in Christian Europe, though far from overwhelming, is noticeably greater than among earlier religions. The Muslims no longer had good reason for withholding from the Franks the scholarly interest which they had shown in the Greeks, Persians, and Indians. By the 8th/14th century however this attitude was dangerously out of date. Even the rapid growth of commercial and diplomatic relations after the Crusades evoked only a limited practical interest. In about 741/1340, Şihâb al-Dîn al-'Umari included two Western kings, of Spain and France, in his list of the sovereigns with whom the Sultan of Egypt corresponded, with a few details and the correct style and form of address for each. A later revision, the Ta'ârikh adds a few more names, and Kalkâshandî provides a much fuller list of European states and rulers, with some information about each ('Umari, al-Ta'ârikh bi 'l-mustafâl al-gharîb, Cairo 1312, 60-5; Kalkâshandî, Şubh al-a'âsh, viii, 33-53).

the additional meaning of "land of the Ifrandi")

In the writings of the Arabs of Spain and the Maghrib the term Ifrandj (also often Ifrani) with the additional meaning of "land of the Ifrandi") denotes any of the Christian peoples with whom the writers are acquainted. The more usual term is Rûm, or for Peninsula Christians Djallika (see djallika) or Baghawt (q. v.). There appears to be no distinction between Ifrandj and Rûm, and though particular writers may be suspected of using them in specific ways it is impossible to be certain; writers certainly vary among themselves and it would be unsafe in any particular case, without corroborative evidence, to draw any definite conclusions solely on the basis of the use of the term Ifrandj. Thus Ibn al-Abhár says that in 624/1227 the Ifrandi took Alácer do Sal (Hulla, ii, 290). The account in the Raúd al-múlût (s.v. Kašr Abî Dánis) has Rûm. The author of the Raúd al-birjáda simply has al-sudawdaw (which is a common usage). The Christians concerned were here Portuguese assisted by German crusaders. The natural supposition that Ifrandi in principle means "the Franks" is not supported by the actual usage of historical writers. For instance Ibn al-Khāṭīb (67/11, ii, 23) refers to a Christian king in north-western Spain as one of the kings of Ifrandi, but also to a raid on būlâl al-Rûm which is clearly the Narbonne region (s.v. ifrandj, ii, 22). The earlier use of the word Ifrandj by a Spanish writer seems to be that of Ibn al-Kûtiyya (d. 367/977) who applies it to the inhabitants of the Saragossa region (p. 133).

This vagueness of terminology reflects a vagueness of knowledge, itself perhaps the result of a lack of curiosity, shared even by those who profess to give specifically geographical information. The rather scanty and confused corpus of material furnished by this class of writers does however show clear signs of a notion that Ifrandi = Franks. One strand of the web of tradition, distinguished by the use of the term al-ard al-kabîra for the continent north of the Pyrenees, has its earliest representation in the Tabâbât al-umum of Sâ'id al-Andalus (Cairo n.d., 83). Sâ'id equates Ifrandi al-ulumâ with al-ard al-kabîra but distinguishes it from Ifransa. Sâ'id's contemporary Bakri (fl. 460/1069) and others after him such as 6'Abd al-Mun'im al-Hajjâdi (1266-1345) and others use similar phrasing but omit the reference to Ifransa (Bakri, Djiughrîfiyat al-Andalus wa-Uribîa, ed. 6'Abd al-Râhman al-Hâdîjî, Beirut 1968, 66-7; al-Raúd al-múlût, s.v. Ifrandi). This is seemingly a native tradition owing nothing to the Orient, but another major strand is that found in its earliest form in Masâu'dî (Murdûsî, iii, 67; ed.-tr. Pellat, § 911). Notable features of Masâu'dî's account are that the Ifrandi are distinct from the Djiillîkiya—i.e., they are not inhabitants of the Peninsula—and their capital is Paris. Both Bakri (471 f.) and 6'Abd al-Mun'im (s.v. Ifrandi) use Masâu'dî's material with some additions of unknown provenance but neither writer handles his material in such a fashion as to convince the reader that it has been brought up to date or collated with the other information. Thus although the article Ifrandi in al-Ruad al-mul'îd (s.v. Ifrandi) contains a probably coherent account of France, the article Burdûl (Bordeaux), otherwise accurate, places that city in Djiillîkiya; and Barcelona is stated (s.v. Bar-şalâna) to be the residence of the king of Ifrandi. None of the extant travellers' accounts—Ghazal, Turufi, Rabî b. Zayd alias Recemundo—provides any information on the Ifrandi/Franks.

The picture of Western Europe which emerges is that of a vast, cold, but fertile land extending northwards to the limits of habitation and hemmed in on the east by mountains and forests in or beyond which dwell the 6'arash. The Christian Ifrandi, though unhygienic in their habits, are hardy and good fighters. For long they owed allegiance to one king, whose capital is, or was, Paris or Lyons. So vague and fragmentary is this picture that one may with justification express the thought that the term "Ifrandi" does not represent fully the information on western Europe available to the Muslims of Spain.

Bibliography: In the text.

AL-IFRANDJ (Ifrandi, Ufrani, etc.) 6'Abd Allâh Muhammâd b. al-Hâdîjî Muhammâd b. 6'Abd Allâh, called al-Saghir, Moroccan historian and biographer, born at Marrûkhç ca. 1080/1669-70. 
His father belonged to the Berber tribe of the Ifran or Ufran, which was settled in southern Morocco, or in the vicinity of Abu 'l-Dja (Boujead). Towards the end of his life he was an imām and preacher (khātib) in the Yusuфи mosque (or Madrasat Ibn Yusuf) at Marrakesh; he died in either 1516/1743 or 1517/1745 (G. Deverdun, Un registre d'inventaire et de prêt... daté de 1712/1745... in M. A. Boularès and M. Allouche and M. Regragui, Catalogue des manuscrits arabes de Rabat, 2e série, i, 192-1953), Rabat 1958, index. (G. DEVERDUN)

IFRĀTI, IFRĀṬ FĪ'L-$IFA [see MUBALAGHA].

IFRİKIYA, the eastern part of the Maghrib, whence the name adopted by some modern historians for Eastern Barbary.

The term Ifrīkiya is undoubtedly—whatever the Arab writers say—borrowed from the Latin Africa, so the origin of the Arabic word must be sought in the etymology of the Latin term, a question which, from the most ancient times to today, has continued to defeat scholars. What is certain is that the term Africa, and the other forms derived from the same radical Afr (pl. Afrī), are attested in the Latin sources well before the fall of Carthage; it is known in particular that the elder Scipio (235-183 B.C.) received after his victory over Hannibal at Zama (202 B.C.) the by-name of “Africanus”; the adjective africus is also attested many times in a period before the fall of Carthage (146 B.C.), whose territory, annexed by Rome, was called Provincia Africa, “or, through omission of the substantive, simply Africa” (Gsell, Hist. ancienne, vi, 2). This Provincia Africa was the country of the Afri, a term which, after having been applied to the natives of the territory occupied by Carthage and even sometimes used to distinguish them from the Poeni or the Carthaginians, had ended by embracing also the latter—as may indeed be inferred from the by-name of the conqueror of Hannibal. These are the only definite facts on the matter.

After this there are few precise indications on the origin of the term Africa, and there is no unanimity of opinion on the matter. Fournel, in 1875, declared unequivocally: “I have no hesitation in saying that it is absolutely unknown” (Bersers, i, 23); Gsell, some decades later, stated: “It is better to admit our ignorance on the origin of this name” (Hist. ancienne, vii, 5); and we are no further forward today. Nevertheless, from ancient times to today, there have been advanced a number of theories, in varying degrees ingenious or convincing, which may be classified into two main groups.

1. The mythical etymologies. From remotest antiquity, a certain number of explanations, all based on the genealogical myth of divine or heroic origin entertained in the ancient world, have been put forward. For example Africa was considered to be the country of the children of Afr, the son of a “princess Libya, either a native, or a daughter of Jupiter, or of Neptune, or of Epaphus” (d’Avezac, Afrique, iv); or else the son of the Libyan Hercules; or of Cronos and Philyra; or of Abraham and Keturah; or the grandson of Abraham and the leader of an expedition to Libya, etc. (for the sources, see Gsell, Hist. ancienne, vii, 4).

The Arabs, certainly not completely ignorant of these legends, which were probably fairly widespread in the country they had just conquered, themselves showed no less imagination. They adopted mainly a system of etymology which consisted—under the influence of one hand by the ancient myths and based in addition on the model which had allowed them to propound the existence of an Arab race, that is by supposing the existence of an eponymous ancestor named generally Ifrīkīs (= Africs), or sometimes Ibrīgīs, who gave his name to the Ifrīkians and to their country. This explanation, later taken up with variants by most of the Arab chroniclers and geographers, represents in fact one single tradition which had been collected and disseminated by Highäm b. Muhammad al-Kalbi (d. between 204 and 605/819-21) [see al-KALBI].

It should however be noted that Ibn ‘Abd al-Hakam (187-257/803-71), who belonged to a family of serious faḥifs and mubaddaḥīs and who was the author of the earliest written source on the history of the conquest of the Ifrīkīs, does not mention this explanation in his work, probably advisedly. Ibn al-Kalbi is considered by serious traditionists as not to be trusted (Yāḥyāt, xiii, 287-8). Ibn Khaldūn, with his well-known critical approach, mentions it in his Muqaddima (16) only as an example of the “false tales” (al-ābāhṭ or al-ābāhṭa) with which his predecessors had padded out their works. And when he reproduces it later (Tibar, ii, 95, 108, 170), he does
so without taking any responsibility for it, or clearly indicating his reservations about it (ii, 170).

Ifrîkiya or Ifrikiya is of course always presented by the chroniclers relating, as a purely Arab hero. His history is always in some degree linked with the origin, still obscure, of the Berbers [q.v.], whom the Arabs generally described as Ca-naanite or Himyarite orientals. Ifriki, whose genealogy is given with a number of variants, is presented as a powerful king of the Yemen, contemporary with Solomon; he is said to have conquered the Maghrib, to which he gave his name, and established permanency there certain south Arabian tribes. Al-Bakri, Al-Dhahiri (d. circa 279/892), following Ibn al-Kalbi, refers to him as Ifriki b. Kayb b. Sa'yi al-Himyari, and the same descent is given in Ibn Khaldûn. But he is also sometimes given, among others, the name of Ifriki b. Abrah b. al-Râfiqh (al-Mas'dlik, c. 21); Yakût, i, 228).

The Arab chroniclers put forward also another explanation, equally mythical, in which however the hero who gave his name to Ifrikiya became a Biblical character. According to this explanation, which echoes the Greco-Jewish legend related by Josephus (Tissot, Exploration, i, 389, note 5), this hero was Ifriq (= Epher), son of Abraham and his second wife Faṭfûrâ (= Keturah) (al-Bakri, Mas'dlik, 21); or else Fârik b. Baysar b. Nub (Noah) (Yakût, i, 228). Other genealogies, equally Biblical, are suggested by Ibn Abi Dinar (Mu'nis, 19).

2. The philological etymologies. Other explanations, based on the Arabic root FRK (= to separate) which is detected in “Ifrikiya”, have also been advanced by al-Birûnî (d. after 442/1050, cited by Yakût, i, 228), al-Zabidi (TA, vi, 46), and Ibn Abi Dinar (Mu'nis, 19); they explain that Ifrikiya was so called “because it separates Egypt from the Maghrib” (farâkât ba'na Misr wa 'l-Maghrib), according to Leo Africanus (tr. Epaullard, 3), because it is separated from Europe, and partly from Asia, by the Mediterranean.

A number of other etymologies, all by philological derivation, some ancient and others suggested by modern scholars, have been worked out from Latin, Greek or Semitic roots. The name “Africa” is made to derive: from the Latin Africa ( Ausonia, = the Hot), an etymology suggested by Isidorus (“Africam quidam inde nominatam existimant, quasi apricam, quod sit apera caelo vel soli et sine horrore frigoris”) and Servius (see Tissot, Exploration, i, 289, note 2; Gsell, Afrique, vii, 3, note 8), and mentioned also by Ibn Abi Dinar who, linking the Latin word to an Arabic root, writes: “Ibn al-Shabbât, citing various sources, assures us that Ifrikiya was called Ibrifya (= Africa), a word derived from barîk [brightness], because its sky is cloudless” (Mu'nis, 19); or from the Greek word a-phrîko (a-deprived of cold) (see d'Avezac, Afrique, 4); or from the semitic root FRK.

M. d'Avezac (Afrique, 4-5), after mentioning that the word Africa had been regarded as representing “a territory rich in spices, the country of palm-trees and the divided country, the land of Barqah”, adds: “But how artificial these various conjectures appear beside the very simple statement of Suidas, that Africa was the ancient name of Carthage itself... and the basic etymology of this early name of Carthage is simply and naturally supplied by the language of Carthage itself, referring to Abyrqaq as a "separated" settlement, a colony of Tyre; and the Arabs came, by a regular derivation, to refer to the region dependent upon this ancient Afryqah as Afryqah”.

This explanation, which was adopted by de Slane and rejected by Carette, Tissot, and Gsell, involves two main difficulties: (a) Firstly, it is not absolutely certain that Carthage had the name of “Afryqah” in ancient times. The isolated attestation of Suidas (Carthago, quae Africa et Byrsa dixta fuit) is that of a late author (9th-10th centuries A.D.) whom many consider unsound. It is therefore not conclusive (Fournel, Berbers, i, 24, n. 2; Gsell, Afrique, vii, 3, n. 2). (b) Furthermore, to the difficulties of derivation is added the fact that the word Afir or its derivatives, which are probably not Latin words, have not been found in any Punic inscription, either in the time of Gsell (Afrique, vii, 4) or today.

It was therefore natural to consider other etymologies taken from Berber words: from ifri (cave); or from the Itrun [q.v.]; or from the name of the tribe of the Awrigha.

The last etymology was first suggested by Carette, prompted by the derivation of the word Libya, used by the Greeks, and which originally referred to the country of the Lebou or Luwata. Reasoning along the same lines, he wrote on the origin of the term Afrika: “It was probably for the Phoenician colonists of Carthage what the name of Libya had been for the Greek colonists of Cyrene... a name borrowed from the people with whom they first came in contact, and already traditionally in use in the country; a name earlier even than that of Libya, since the settlement of the Carthaginians was earlier than that of the Cyreneans” (Recherches, 309-10).

After adding that “this origin of the name of Africa is not based on any documents”, but that it nevertheless seemed to him “probable”, he attempts, with the help of some rather tenuous proofs, to establish that the Awrigha must, in the remotest antiquity, have inhabited the territory occupied by Carthage. Under the domination of the latter, “this tribe of the Aourîra [= Awrigha] may have been destroyed or dispersed, except for one single group, the Haouara...” (Recherches, 311).

This explanation was adopted by Vivien de Saint-Martin and by Tissot, who identified the Awrigha with the “Afrika” of the Arab geographers, and with the “Afrika” of Corippus. Carette knew today that this identification is hazardous. Furthermore, Carette's explanations are based only on the most fragile of hypotheses. In the absence of definite facts, and if one is not (with the prudence of Fournel or Gsell) to admit that one knows nothing, it seems that the least hazardous hypothesis remains that which makes the term Africa (= Ifrikiya) derive from the Semitic root FRK. Indeed, since the Romans could neither have found the word in their own language nor have borrowed it from the Greeks (who called Ifrikiya “Libya”), they can have received it only from their predecessors, the Carthaginians, whose heirs they had become through the fortunes of war. The “Land of Africa” or the Provincia Africa—the Ifrikiya of the Arabs—referred first of all in fact to the territory which had been conquered by Carthage and fallen under the authority of Rome. This is the only fact which is indisputably established.

Since the Arabic script does not indicate all the vowels, there exists some uncertainty about the spelling of the word Ifrikiya. The compilers of some dictionaries reproduce the word without vocalization, and give no indication of how it is to be read (Kâmâs, iii, 275; Sîdîkî, iv, 1543). In Ibn Durayd (d. 321/933),
the word is vocalized thus: Ifrifciyya (ṣamhara, i, 126), without any indication whether this vocalization is that of the Arabic or the Dámtara. Ibn Mas‘úr (la, x) states that it should be read Ifrifciyya (mukhafṣafat al-yā‘); and al-Zabádíl (TA, vii, 46) adopts the same spelling. He stipulates that it should be read (bi-l-hár ... wa-hiya mukhafṣaf). These two writers also add that the plural of Ifrikiyya is Afarīk, and quote two verses of al-Abwās (which are not an absolutely conclusive proof). Ibn Abi Díná(r, the word is sometimes spelt Ifrīkiyya (ṣamhara, i, 267). One page before this, however, the same al-Baladhref makes ‘Amr b. al-‘Áṣ write, in a letter addressed to ‘Umar: ‘We have reached Tripoli, a town separated from Ifrikiyya by nine days’ march’. Al-Warraq (4th/10th century), the source of al-Bakri (Masálik, 21), considered that ‘the boundaries of Ifrikiyya extend, in length, from Barka in the east to Tangiers the Green, called also Mauritania, in the west. In width, its boundaries extend from the sands which mark the beginning of the country of the Black People (al-Sudan)” (see also Yakut, i, 228; al-Himyari, Rawd, fol. 75; Ibn Abi Dínár, Mu‘nis, 20). Thus all these writers regarded Ifrikiyya as comprising the whole of the Maghrib. This idea, as a result of political vicissitudes, became progressively modified in other authors.

T. S. (307) states: ‘Ibn Khurradabghih (d. circa 272/885), who divides the inhabited world into four parts, adopts the Greek terminology to describe the African continent; he calls it Libya (= Libya) and includes in it Egypt, Abyssinia, the country of the Berbers, etc. (Masálik, 24-5). He reserves the term Ifrikiyya for the Aghlabid kingdom, of which he lists the main towns (Masálik, 6-7). This tendency to limit Ifrikiyya proper, at the most to the kingdom which was that of the Aghlabids, re-appears in most of the other geographers (Ibn al-Fákhi (d. circa 290/905), Buldán, 30-1; al-Iṣṭakhrí (d. circa 350/961), Masálik, 33; Yákút (d. 626/1229), i, 228; Márarkshí (d. circa 647/1249), Mu‘gabir, 273, 433-42). This kingdom extended from the west of Bougie to a few parangans from Barka (al-Ya‘kibú, Buldán, 215).

Sahdún (d. 240/850), however, considered that ‘the Ifrikiyya extend from Tripoli to Tobna’ (apud al-Dáwwádí, Amudá, in Mél. Lévi-Provençal, ii, 409). For al-Mu’kaddási (d. circa 375/985) ‘the first district (frura) on coming from Egypt is that of Barka; next come Ifrikiyya, the districts of Táhárt, of Siyádmá and of Fás, then Sús al-Aská’ (Ahsan al-takásim, 4-5), and he mentions, among the towns of Ifrikiyya, Djazarat Bání Zagháriyya (Algeria), Mattáqis (Mittála) and Ashir, that is to say, regions over which the Aghlabids never had any authority. It should finally be noted that Yákút fixes its western limits, according to some, at Bougie or al-Milána, whereas Ibn Abi Dínár states that in his time (end of the 11th/17th century) the word Ifrikiyya was hardly used any more, except of the plain of the Medjeda as far as Béja (Mu‘nis, 20). This last usage has still not entirely disappeared from the Bedouin language of Tunisia.

In short, Ifrikiyya was sometimes confused with the whole of the Maghrib and sometimes considered as a geographically separate region. It may be said that the geographical Ifrikiyya consisted essentially of the ancient (Númidia) Proconsularis and Byzacena, which formed the nucleus of it, to which were later added Tripolitania, the Númidia of the Aures, and even a part of Sittifán Númidia. Upon this geographical concept was superimposed an administrative concept. Because of this Ifrikiyya tended to be confused, in the writings of the chroniclers, with the territory which in the Middle Ages was ruled in turn from Kayrawán, from Mahdiyya or from Tunis, a territory which expanded or contracted according to the vicissitudes of history. This explains the often ambiguous use of the term, the implication of which becomes clear only in relation to the context and the period.

IFRÎKIYA — IFRÎT

Siecle, in SI, xxvii (1967), 88-94; see also ALGERIA, BERBERS, LIBYA, MOROCCO, TUNISIA.

(M. TALBI)

*IFRÎT*, sometimes connected with *ijfrît*, wick-ed, is an epithet expressing power, cunning and in-subordination. In spite of its aberrant form, the word seems to be of Arabic origin. The lexicographers consider it to derive from the verb *'afara*, "to roll someone in the dust" and, by extension, "to bring low".

The word is used rarely in Arabic poetry of the time of the *Hîdja* and is found only once in the Kur'ân. To Solomon's request that he should be brought the throne of the queen of Sheba, "an *ijfrît* of the *djinns* said, 'I shall bring it to you before you can rise from your place'" (XXVII, 39). From all the evidence, and as is also confirmed by the beginning of verse 40 of the same sâra, the epithet is not there used of a special category of *djinns* but in the sense of "rebellious". A *hâdîth* attributed to Muhammad and reported by Abû Hurayya uses the same expression: "*ijfrît min al-*djînns*" (Muslim, *Sabîl*, Cairo 1334, ii, 72; cf. al-Damiri, *Haya'usân*, Cairo 1319, i, 173).

After its use in the Kur'ân, the word became more widely used: in its substantive form, it came to mean a class of particularly powerful chthonian forces, formidable and cunning. It would, however, be difficult to state exactly its implication because of the ambiguity of the term *djinns*, which is applied to everything hidden and veiled from sight, and includes demons as well as *mârid*. The latter word, which is also found only once in the Kur'ân (XXXVII, 7), is used there also as an adjective and means strictly "rebel" (cf. Kur'ân, IV, 127, XXII, 3). But in its turn it ended by being used of one particular class of fantastic beings from the nether regions, which are difficult to distinguish from the *'afârît*. The Islamic theologians must soon have felt the necessity of providing a clearer definition of these rather obscure and shifting notions. The majority of the commentators considered both the one and the other to be rebellious and wicked demons. Al-Djâhîz provides more precise definitions. According to him, the *shayâbân* is a renegade *djînns* who sows discord and does evil; one who is strong enough to perform difficult tasks, carry heavy burdens and overhear what passes in the upper regions (cf. Kur'ân, XXXVII, 6-10, LXXII, 8-9) is a *mârid*; one who is more powerful still is an *ijfrît* (*Hayawan*, Cairo 1356, i, 291). In fact, the difference between these infernal beings is not a qualitative one at all; it is solely a matter of their varying abilities to perform marvels.

From this general point of view, the popular tales are in agreement with al-Djâhîz. But they often represent the *mârid* as superior to the *ijfrît*; he is even forty times stronger than him (Sayyîb b. *Dhî Yazan*, Cairo n.d., iii, 155). He has at his command a thousand auxiliaries, *awm*; each auxiliary has under his orders a thousand *shayâbân*, each of whom is in command of a thousand *djînns* ("”Thousand and one nights", no. 995). Nevertheless this superiority is not always asserted. It can happen that the *ijfrît* dominates its rivals from afar (Sayyîb, ii, 133, 286 ff.). The storytellers even add a subtle remark which is certainly surprising: the *djînns and the *ijfrît* are endowed with the same strength; but the *djînns surpasses the *ijfrît* in its power to assume different forms, which the latter is incapable of doing (Sayyîb, iii, 155). However, in the "Thousand and one nights" the *ijfrît* appears to humans in the most varied forms (nights nos. 14 and 22). The same is true of the *mârid*, which transforms itself into a bird, a snake, a woman, etc. It would be difficult to establish a real distinction between the two main types of the Arab chthonian genera. Moreover it is not unusual for editors to use indiscriminately the terms *ijfrît* and *mârid* (nights nos. 3, 4, 672, 674, 675; Sayyîb, i, 45, 49, 97, 127), which leads to the conclusion that they are synonymous. In fact they certainly come from the same mould, so that it is possible for the same description to serve for both.

In the popular tales, the *'afârît* takes the form of a woman (Sayyîb, ii, 102). It is formed basically of smoke (night no. 3; Sayyîb, ii, 2), which allows it to contract and to insert itself into a jar (night no. 3). When it is wounded, smoke emerges from its wounds (Sayyîb, i, 50, 97), although, in the Kur'ân, the *djînns* are created of "clear fire" (LV, 15). It has wings which it unfolds when it takes flight (night no. 179; Sayyîb, i, 50). It haunts ruins (night no. 399) and lives under the ground (nights nos. 6 and 184; Sayyîb, i, 47), which is its true habitat. In spite of its great power, it is possible for man to enslave it, with the help of God and by means of magic. The sharpest weapons have no effect on it (Sayyîb, ii, 287); in order to wound or kill it, it must be bewitched (Sayyîb, i, 43, 162).

On the moral plane, the *'afârît* are not fundamentally evil. One of them takes pity on an unfortunate husband terrorized by his wife (night no. 901), another allies himself with an *ijfrît*, to give help to a young girl who is being forced to marry a hideous hunchback (nights nos. 21 and 22). However, it is wickedness that predominates among this species of renegades. They carry away men's daughters (Sayyîb, i, 96) and will stop at no misdeed. It is from among them that the magicians choose their acolytes. But there are also believing *'afârît*, who do good and carry out God's purposes.

Like all the *djînns*, the *'afârît* are divided into males and females, but the *'ijfrît* (nights nos. 2 and 22) sometimes seems to be more powerful than the male (Sayyîb, i, 94). They marry among themselves, and it is possible for them to marry humans (nights nos. 2 and 659). Their social organization is an imitation of that of the Arabs. They are divided into tribes and clans and ruled by kings who sometimes go to war (nights nos. 652-9): Their conception of honour is inspired by that of the Bedouin; they are obliged especially to carry out blood vengeance (Sayyîb, ii, 160, 167).

The term *ijfrît* may be used of humans, and even of animals. It then expresses cunning, ingenuity and strength (*al-Kâmûs al-mubîh* and LA, art. *'afâra*). In contemporary Islam it always has the meaning of "powerful and formidable demon". In Egypt, together with this general meaning (Lane, *Manners and customs of the modern Egyptians*, London 1895, 232), which gives supremacy to the *mârid* (A. Amlîn, *Kâmûs al-mûrîd* fi ahkâm al-*djinns*, Cairo 1953, 355), it means also the ghost or spirit of a person deceased (Lane, *ibid.*, 236). In the Arabic dialect of Syria, it means both a chthonian genie and a man who is intelligent and resourceful.

Bibliography: In addition to the works mentioned in the article, the main works on *djinna* may be consulted: *Shihbîl*, *Ahâm al-murûd* fi akhâm al-*djinns*; Kazwînî, *'Afârît* al-＊makhkabât*; N. T. Nîma, al-*Djinns* fi 'l-adab al-*arabî*, Beirut 1961; J. Henninger, *Geisterglaube bei den vorislamischen Arabern*, in *Studia Instituti Anthropos*, xviii (1963). It should be mentioned in passing that Wensinck
rejects the Latin etymology of the word dìn and considers, with Wellhausen, that it is of Arabic origin (The etymology of the Arabic dìn, 506, in Mededelingen der Koninklijke Akademie van Wetenschappen, 2 reeks, Deel IV, Amsterdam 1920). See the discussion in J. Chelhom, Les structures des sacrés des Arabes, Paris 1965, 70.

IFRÈKLUS [see hureklus].
ICHÀR, verbal noun of the fourth form of the root w.d.h.r. (?), meaning here an exemption or a privilege with respect to taxes. The classical 'Abbasid administration used this term both for the privilege, and for the land which was covered by this privilege, of having to pay only one single tax payment, directly to the Treasury and not through tax-collectors. The districts of Mārdj and Karajj in western Iran are regularly referred to as al-İgharayn even after they had lost the official status which earned them this name. In the following centuries the term ıkähr disappeared, becoming absorbed in that of ıkähr [g.] which gradually broadened in connotation.

Bibliography: References to Kudama, Miskawayh, Șābī, the Ta'rīkh Kumm, etc. in F. Lekkogard, Islamic taxation, Copenhagen 1950, index; A. K. S. Lambton, Landlord and peasant, index; C. Cahen, L'évolution de l'Iqta', in Annales ESC, 1953, 23-30. (C. Cahen)

IGHARGHAR [see ıkährghar] in Tunisia, is a Saharan add to the north of the massif of Hoggar (Abaggar). Its most important tributary is, on the west, the Taghmet n-Akh. The basin of the Igharghar runs from the volcanic massif of Atakor, in the south, to the plateaus of primary sandstone of the "Tassilian enceinte" (Emmidin and Tassili of the Azdjer), surrounded by the granitic and metamorphic mountains of Tefedest and Turha. The Igharghar and its tributaries flow, usually intermittently, at the most once a year and their waters do not usually reach as far as Amguid. To the north of Amguid a secondary flow seems however to take place along the gorges which cross the hamada of Tinghert. Then the bed of the Igharghar disappears in the dunes of the great eastern Erg. It may perhaps have had a longer course during the wet spells of the Quaternary Age via the Gassi Touil and the Oued Righ to as far as it dhikr, "as for the production of 'l-*adam al-asli); XX, 113, Fakhr al-Dm al-Razi considers why the term al-ihdth al-ghayr zamdth, the act of bringing into existence a thing that does not exist at an earlier time (la* haddha min ghayr taghayyur la-hadatha min İd-shay*). He defines takawwn (establishment in being) as a production that follows a change (huddth lābī* l-taghayar-yur). Immediate and absolute huddth or ihdth is inconceivable to him.

For the senses in which Ibn Sinâ uses ihdth, in comparison with ıkähr, sunn and takawwn, A. M. Goichon, Lexique de la langue philosophique d'Ibn Sinâ, should be consulted, as should also La distinction de l'essence et de l'existence d'après Ibn Sinâ (see the index under h.d.t.) and the Livre des Directives et Remarques (trans. of the Ta'hrār, notes to pages 373, 377, 380), both by the same author. Apart from the general sense of "produce", Ibn Sinâ gives many precise philosophical senses. He distinguishes between al-ihdth al-samâni, the act of bringing into existence a thing which did not exist at an earlier time (fi zamân sâbîb), and al-ihdth al-qarâr samâni, the bringing into existence of a thing that does not contain that existence in its essence, not at one time to the exclusion of another, but at any time. Since time is not generated through generation in time, but through immediate creative production (ıkähr), the Creator (muhdth) is anterior not in time, but by essence. Then again, every effect (ma*wâl) is muhdth, for it draws its existence from something else. In this sense, ihdth consists in bringing into existence an essence which, in itself, is merely possible, and the muhdth is thus the contingent, not in the
sense that it could equally exist or not exist, but in the sense that, when it exists, it does not exist, but in the sense that, when it exists, it does not exist, but in the sense that, when it exists, it does not exist, but in the sense that, when it exists, it does not exist, but in the sense that, when it exists, it does not exist. Then, showing that it is impossible to take this verse literally, he interprets it by a ta‘wil and says that it indicates "the speed with which divine power enters upon the bringing into being of things: God creates (yuḥkilh) them, but not with reflexion, taking precautions or experimentation." Kun, then, relates to Avicenna's sense of ibdā‘, conformably with the first word of the verse, "be," in fact, however, there is no need to distinguish between two kinds of action, in the case of the creation of the world by God; it may be said that iḥdāth, with reference to the Creator, is an ibdā‘, inasmuch as it denotes the immediate action of the first Cause. When the first cause, however, produces, through an intermediary, secondary causes, iḥdāth is the term that applies, and it must then be distinguished from ibdā‘.

When we leave fa‘la, the inheritor of the metaphysics of matter and form, and move to Ashā’irite theology, which is founded on the idea of the discontinuity of time and that of the reality of bodies, creation ex nihilo is more easily justified as the only logical solution of the contingency of creatures. Al-Bākiliṭānī distinguishes the knowledge of the kādim, the object of which is God, from the knowledge of the muḥdath, the object of which is the world (fi‘lām). The beings of the world are divided into bodies which are compound, substances each of which is an atom (jauhār munfarid), and accidents (a‘rād), which exist in bodies and in substances. Everything that is not God is muḥdath. Bodies, being compound (mu‘alaf), are necessarily produced in being: the same, however, is true of substances and accidents. The demonstration of this, in which Al-Bākiliṭānī makes use of the notion of substance (in his reasoning he no longer mentions substances, and replaces them by bodies, doubtless because the argument, which can be more easily grasped at the level of the compound, is for him equally valid for the simple), is as follows: accidents are realities which come into existence (haydāthā‘): when one is produced, motion, for example, another, rest, is destroyed. Bodies cannot, however, exist before their accidents exist, for, in their composition, the parts that compose them have certain accidental relationships of proximity of distance. Thus, if bodies do not precede accidents, which are muḥdathā‘, they are themselves necessarily created. It is apparent that atoms, also, cannot exist without being in a place, in rest or in motion and in some relationship with one another, all of which determinations are accidents, since they are variable. Thus the singular substances do not precede accidents, and they are created. Al-Bākiliṭānī defines muḥdath as a being that derives from not-being (al-ma‘madījā‘ an al-adām). Now, as an accident cannot subsist by itself in two successive moments of time, iḥdāth is, broadly speaking, a continuous creation, just as much for a‘rād as for jauhār. Substance is not a being that, once it exists, subsists by the laws of its nature alone. God makes it exist (iḥdā‘) and subsists (iḥbā‘), as al-Rāzī shows in many passages of his Mafīth al-ghayb, especially in the commentary on the sura of the Tawbah. Thus we may say that, in the minds of the theologians, iḥdāth is, relative to creation, both iḥdā‘ and iḥbā‘. ‘Abd al-Kāhir al-Baghdādī presents the same idea as al-Bākiliṭānī in his K. Usul al-Din. The radical opposition of kādim and muḥdath is of Mu’tazilī origin. This school understands iḥdā‘ in the strict sense of the creation of existence, to the exclusion of essence. The Mu’tazilī wish thus not to banish from creation all exemplarism. The way that this problem of theirs is dealt with, however, is outside the terms of reference of a study of iḥdā‘. It should be noticed that the idea of iḥdā‘ can be distinguished from that of ḥkāl, in that it refers rather to the newness of the thing created, whereas ḥkāl denotes the actual act of the creator. In absolute terms, a muḥdath whose muḥdāth does not exist can be conceived of. But, as Ibn Hazm points out, if the Creator is all-sufficient (mūjīd), "God constantly causes every existing thing to exist throughout its existence," Ibn Hazm agrees with al-Naẓārī in stating, in opposition to Ashā’irite atomism, that continuous creation is not a succession of iḥdā‘, in which, at every moment, a creature's existence is renewed after having been destroyed, but an action that continues uninterruptedly as long as the creature is to survive: "wa-līmad la‘miyyāt mā yūjīd fi bālī ṣabil abāda‘ wa-in lam yuṣhī biḥl al-‘īzāt" (Fiṣāl, v, 55).

(R. Arnald)
who are already in Mecca assume the *ihram* for the *hadîdî* in Mecca itself, but they are obliged to leave the holy ground (fraram) of Mecca if they propose to assume it for the *umra*. In this case they will go for preference to al-Dîjîrînâ or to Tanîmî (the present-day masâqîdì *Ahsâja*).

Pilgrims travelling by boat put on the holy garments while on board, when their boat draws level with the appropriate *mihâj*. Those travelling by air do so at the place from which they board the plane for Djûddâ.

The garment for men consists of two pieces of white seamless cloth. One (*isâr*) is worn round the loins and falls to the knees like a wide loin-cloth. The other (*ridât*) is draped round the upper half of the wearer's chest. This type of garment, which must formerly have been in common use, is still worn today by the Afars (or Danâkîl) in the deserts at the foot of the mountains of Ethiopia towards the Red Sea as well as by some Somali tribes of the coast. The costume is completed by sandals (or, if need be, shoes which leave the ankles uncovered). Men's heads must be bare. In addition a sunshade may be used and papers or items of value may be carried in a leather shoulder-bag. There is no special garment for women, but propriety demands that they wear long sleeves, fairly long skirts and, nowadays, a kind of kerchief and head-veil.

The minutiae, and the differences between the juridical schools, are such that it is impossible to enumerate all the details here. Before entering that state of *ihram* the pilgrim usually performs a major ablation (*ghusl*) and has his hair and his nails cut and his armpits shaved. It is permitted at this stage to use a perfume which leaves no trace, as did the Prophet when he made his Farewell Pilgrimage. Two traditional *rakâs* are performed (*sunna*). After this the pilgrim recites many times the *taâbiyya* (*g.v.*).

The jurists lay down the following points: it is forbidden to the *muhâram* to wear any sewn garments; he must refrain from arguments, from hunting, from perfumes, and from cutting his hair and his nails. It is permitted to wash himself and to scrape his skin in moderation, but without causing any superiority arising from worldly attributes.

In an entirely different context, the expression *taâbiyya* refers to the *tabîr* with which the ritual prayer begins, and which puts the worshipper into a temporary state of special relationship with God.

owner do in order to be considered to have put to use a piece of land hitherto considered as vacant ... ottoman, Cairo 1906; see also D. Santillana, Istituzioni di diritto
musulmano, i, no. 69.

(Y. LINANT DE BELLEFONDS)

A person who has been authorized to put to use a piece of land (in Hanafi or Imami law) or who, on his own account (in the other systems), chooses a piece of waste land, with the intention of putting it to use, must begin by defining the limits of the land which he is undertaking to exploit. This is tadždîr, so called because the first procedure is to set stones along the length of each boundary in order to fix the extremities of the area to be brought into use. Any other method of delimitation—such as putting up barriers, or digging a well to water them; but the digging of a well in order to irrigate the land would be an act of išyâ‘—is not in itself “putting to use” and hence does not confer ownership; on this point the ğuqâdah of all the schools agree completely; but this delimitation nevertheless forms the first step towards a real putting to use of the waste land. It should be stressed here that the importance of this first stage varies greatly according to whether Hanafi doctrine or that of the other schools is involved.

A. In Hanafi law, because for the actual išyâ‘ the authority of the ēmām is always insisted upon, the simple formality of delimitation, even although carried out without authorization, confers on the person performing it a sort of de facto monopoly, since he could be supplanted only by an actual exploiter provided with the (very unlikely) authorization of the ēmām. This “monopoly” lasts for at least three years. This was in fact the period which, in accordance with the sayings of Ḥanûr, was granted to the exploiter in order that he might complete the bringing into use of the land whose boundaries he had already marked out. Once this period had expired, unless the ēmām granted him a further extension of it, the land was taken from him to be given to a more diligent exploiter. But if the putting to use was completed within the three years, the occupant of the land became the absolute owner of it. Apart from this, Hanafi law is not very exacting over the conditions of this putting to use. The ħanâfi writers (only the later writers it is true) consider that these conditions will depend on the exploiter’s final intentions for the waste land. If the land is desert and he intends to exploit it merely by irrigating it, for example by digging a well; if he plans to live there, it will be enough for him to build the four walls of a house (Hanafi law does not insist that this house should have a roof). As the logical conclusion of the reasoning which makes the conditions of the putting to use depend on the use which is finally to be made of the land, it could be admitted that the mere erecting of a fence constitutes a real putting to use, when the possessor has decided to use the land considered as waste land simply for grazing sheep.

B. In the doctrine of the other schools, tadždîr has much less weight than in Hanafi law, because of the fact that the išyâ‘ itself is not subject to an authorization. If it is assumed that the person who has performed it only a priority of claim, and this only of a moral kind, in the sense that it has no legal sanction and that nobody is forced to respect it except as a matter of conscience (diyâna). The result is that if a person other than he who has marked the boundaries were to manage to put to the land to use before him, this other person would be considered as the real owner of the land, and the right of priority of the person who had done no more than define the boundaries would lapse. All the same, this moral right was, at certain periods, strong enough for the ħanâfî Ibn Ḫûdâma (Mughrī, v. 519) to have no hesitation in including it among the possessive rights invested on the death of someone who has already marked the boundaries of, but not yet acquired ownership of, a piece of land. To make up for the uncertainty of tadždîr as conceived by the non-Hanafi writers, the latter are more exacting than the ħanâfîs on the conditions of the putting to use. They recognize, it is true, that there exist no absolute rules concerning it and that what is understood by putting to use (išyâ‘) is merely the use of the waste and uncultivated part of each country, taking into account the geographical situation and the nature and quality of the land to be put to use. Nevertheless, one rule is common to them all, that which, based on the literal meaning of the word išyâ‘, classes as putting to use only those actions which “bring new life” to the dead land, the mere fact of having exploited it not being, properly speaking, a putting to use; thus Ḭāḥil (Mughrî, v. 519) spoke on išyâ‘ al-mawdû‘ as putting to use only those actions which consist of fencing in the land, grazing animals, or digging a well to water them; but the digging of a well in order to irrigate the land would be an act of išyâ‘. On this point, the Mâlikî rule is based, with a few very slight differences, on the same principles as that of the Ḫâfî, Hanâfî and even Imami schools.

With the passage of time, the idea of išyâ‘ or acquiring property by putting to use became of decreasing importance, in proportion as there disappeared masâ‘îl lands, which almost everywhere were losing their character of res nullius to become state lands. This phenomenon was particularly evident in the Ottoman Empire. The Ottoman code of land laws of 1858 devoted only two articles to the restoration of waste land (articles 103 and 104), whereas a whole section of it was reserved for miriyâ‘ or state-owned land. It is true that later, in 1877, the Maggêla (q.v.) was to lay down detailed rules on the matter (articles 1270 f.) on the basis of the rules of Hanafi law. Thus for išyâ‘ proper, a previous authorization was still necessary (as in articles 103 and 104 of the Code of land laws), but for tadždîr authorization was not expressly demanded by the Maggêla; from this it was deduced in general that (in conformity with the old and less developed systems) the authorization was not indispensable, and that thus, in practice, it was possible to circumvent quite easily the principle that the putting to use must be preceded by an authorization from the ēmām.

Bibliography: All the works of fiḥh include a chapter on išyâ‘ al-mawdû‘; in the great work by Ibn Ḫûdâma, al-Mughrî, Cairo 1367, the question is dealt with on pages 513-5, and then on pages 538-44 of vol. v. Besides the general treatises of fiḥh, there may be consulted the following works, all very early: Abû Yusûf Yaḥyâ (d. 182/798), Kitâb al-Kharâjî, Bûlâk ed., 1302 (Fr. tr. by Fagin, Le Livre de l’Impôt foncier, Paris 1921); Yaḥyâ b. Ādâm (d. 202/817-8), Kitâb al-Kharâjî, Cairo 1347, 84 ff. (Eng. tr. by A. Ben Shemesh, Taxation in Islam, i, Leiden 1958); Ibn Sâlim (d. 224/839), Kitâb al-Amâwi, Cairo 1353; Mâwardî, al-ʿAkhâm al-sulûmîyya, Cairo 1909 (Fr. tr. by Fagin, Les Statuts gouvernementaux, Algiers 1916). For Ottoman law, N. Chiha, Traité de la propriété immobilière en droit ottoman, Cairo 1906; see also D. Santillana, Istituzioni di diritto musulmano, i, no. 69. (Y. LINANT DE BELLEFONDS)
Al-‘Iqāb was the historical sequel to the Almohade victory over Castile in the battle of Alarcos (al-Arak) 18 years earlier (9 Shabān 591/18 July 1194). After that great victory, Ya‘qūb al-Mansūr, the third Almohade Caliph, strengthened the stronghold of Calatrava, the seat of the intrepid knights of the Order of Calatrava. In the following years Almohade forces ravaged the region of Toledo, so that Castile felt that it could not ultimately resist the Muslim pressure if it remained alone: to survive, it had to gain the support of the other Christian kingdoms of the Peninsula.

This was the aim that Alfonso VIII of Castile endeavoured to attain after Alarcos. He managed to arrange matters with his rivals Sancho VIII (the Strong), king of Navarre, and Pedro II of Aragon, but had no success with Alfonso IX of Leon. However, he was able to secure for Castile the support of the most prominent knights of the Peninsula, such as Alvaro Núñez de Lara, Diego López de Haro and his cousin Lope Díaz, together with their powerful following. At the same time he sent a delegation to Pope Innocent III, asking him to summon a Crusade against the Muslims of Spain. The Pope agreed, and promulgated bulls asking the bishops of Italy and Western Europe to preach the crusade and urge people to enlist against the Muslims, with a promise of complete forgiveness of their sins in return.

In the meantime things had considerably deteriorated on the Muslim side since the death of Ya‘qūb al-Mansūr (22 January 1199). He was succeeded by his 13-year-old son Muhammad, surnamed al-Naṣir. The real authority in the empire passed into the hands of his uncles, none of whom was capable of sustaining the responsibilities they had assumed. The only capable man near the throne was Abū Muḥammad ʿAbd al-Waḥīd b. Abū Ḥafs Inti (al-Hintātī), one of the founders of the Almohade movement. When al-Naṣir grew older, he endeavoured to concentrate power in his own hands with the help of a group of selfish and intriguing viziers such as Abū Zayd ʿAbd al-Rahmān ibn Yuwaggān, Abū Saʿīd ibn Dājīmī and Abū Muḥammad b. Muḥammād. Moreover, al-Naṣir was a conceited young man, who endeavoured all the time to conceal his personal loyalty. When al-Naṣir had him executed on the spot. This rash action cost the Muslims dear, because the Andalusian contingents, dismayed by this injustice towards their most prominent general, decided to abstain from fighting when the battle came. The Muslims then advanced to Baeza and from there they laid siege to the fortress of Salvatierra, which was used as a base for operations by the Order of Calatrava. Encouraged by this initial success, they advanced westwards. They left the site of the present Santa Elena behind and pitched their camp some 4.5 km. to the west. They occupied the mountain canyons that pierce the craggy eastern wing of the Sierra Morena and especially the strategic pass of Losa. Making good use of the hilly plain (that looks like a sea with waves), the Muslims arranged themselves in good order: the hosts of the Caliph marched the main central force, while the contingents of the Andalusians formed the right flank, supported by the Order of Calatrava which was used as a base for operations by the Order of Calatrava. The Muslim forces cannot have surpassed 200,000, half of whom were muṭāfa’wāt. Right in the middle of the regular
troops stood the tent of 'the Caliph on a mound surrounded by huge chains fastened to iron poles. Outside these chains stood the force of the 'abid, the special guard of the caliph bearing their long javelins.

The Christian forces were by no means fewer in number than the Muslims, and they had more cavalry and were far better equipped and trained. They tried to make their camp on the heights of Moradal that dominate the mountain pass (Puerto) of the same name. From there they could overlook the whole Muslim camp, but the position was too arid to support long occupations for a long time. Descending to the plain near Úbeda and climbing again, they marched westwards to occupy the oval tableland called La Mesa del Rey, which also dominated the plain where the Muslims were and had the advantage of easy descents to the plain from both its east and west.

They began the attack early in the morning of Monday 15 Şa‘ar 609/16 July 1212. Their left wing advanced on the muftawwi‘a of the Christians, but were driven back with losses. They then managed to attack from the east, and a picked force of their cavalry charged the Andalusian contingents. To their surprise, these began to flee. Their unexpected flight was followed by that of the a‘rāb and the aghzd. Very soon the Almohade regular troops were left without cover, and all the weight of the Christian forces fell upon them. They steadfastly held their position, but were outnumbered and soon their ranks were penetrated. At the same time the Christians charged the muftawwi‘a again and routed them, taking advantage of the panic that assailed the Muslims. Soon Count Álvaro Núñez de Lara and his knights opened a wide gap in the Muslim ranks and reached the circles of the 'abid, followed by the kings of Navarre and Aragon. Al-Nasir had barely time to flee with a few of his men, to Baeza and then to Jaén and Seville. The rest of the Muslim forces were cut to pieces, and the number of the slain was enormous. To complete the catastrophe, Alfonso VIII soon occupied Baeza and Úbeda and slaughtered there in cold blood some 60,000 Muslims.

This was the last great battle fought by the Muslims in Spain. Its repercussions on the future of Muslim Spain were worse than the defeat itself. It definitively broke the last of these Muslims and dissipated the myth of the power of the North African troops. From that day onwards, Islam in Spain was always on the defensive, merely trying to delay the relentless Christian advance. The blow was beyond repair for the Almohade empire. The huge number of the fallen of the Almohade troops as well as the manifest incapacity of al-Nasir and his men sealed the fate of the Almohades. Al-Nasir could not survive his ignominious defeat for long. A short time after his return to Marrakush he shut himself up in his palace, to die gloriously on 22 December 1213, some 17 months after al-ıkāb.

**IKĀLA,** an agreement which cancels, wholly or in part, a previous agreement between the same parties. The transaction is treated by the fikrâ of the chapter on sale; the authors devote to it long expositions, because of the favour with which fikrâ regards all methods of mitigating the obligatory nature of a contract. As is said in a ḥadîth: “For him who annuls (abdal) a sale which the other party regrets [having concluded], God will annul his sins on the day of the Resurrection”. When Muslim jurists consider the subject of sale, they ask themselves first what is the juridical nature of this contract. Is it the islâla a rescission by fakhr, or a re-sale by the buyer to the first seller of the object which he had already acquired? The question is not without practical importance. If it is a question of a rescission by fakhr, this can come into effect at any moment, either before or after the buyer's taking possession of the object; there does not exist in this case the possibility of a third person's pre-empting it, since the operation does not involve a new transfer of ownership; and, in principle, when the islâla refers to the whole of the previous agreement, the seller must return the same sum as he had received. But if the islâla is regarded as a re-sale by the buyer to the first seller, it must then lead to consequences diametrically opposite to those above, although the Mâlikî, who maintain this view, give a separate place to the islâla which is concerned with foodstuffs.

The Shâfi‘î, Hanbali and Imâmi schools consider the islâla to be, indisputably, a fakhr, a retroactive rescission of the sale; the Mâlikî school considers it to be, in general, a re-sale; the Hanafis, following the teaching of Abû Ḥanîfâ, make a distinction: so far as concerns the relations between the two parties, it is a rescission; but as far as third parties are concerned, it is a re-sale, which will not however be vitiated by the introduction of a forbidden stipulation. This solution, obviously prompted by the desire to protect third parties, has been criticized on the grounds of principle. Ibn Ḫūdâmâ, in his treatise on Muslim comparative law (Mughni, iv, 121), expresses surprise that the nature of a juridical operation may change according to the point of view from which it is considered.

The schools agree in allowing the above rules to be transferred from the contract of sale to other contracts, not only to contracts which are “brothers” of sale: change, barter, amicable settlements, etc. but also to all contracts, where these are not by their nature phyar lâîm, that is revocable unilaterally, in which case islâla is obviously unnecessary. It is impossible when the contract to which it puts an end, is of its very nature, not susceptible to cancellation, such as marriage or repudiation by agreement.

An islâla based on mutual agreement requires for its completion the same conditions of validity as any other agreement, that is an offer and a matching acceptance, both to be made at the same contractual meeting (madjîs).

but then concentrating upon his legal practice. The 
teach the Muslims that

from Europe, whose possibilities—but also weaknesses 
they have fallen into disgrace because of their own 
laZiness and lack of faith. These ideas were expressed 
more distinctly in the Asdr-i ibdli (Secrets of the Self) 1915, which he wrote in Persian in order to reach a wider readership. His stress upon the development of the ego instead of mystical annihilation 
as well as Nietzschean trends shocked his 
audience. A second mul*anaw in Persian, com- 
plementing the first one, Rum*is ibdli i (Mysteries of Selflessness) 1918, determined the duties of the individual in the ideal Muslim community. Icbil 
then turned to lyric poetry in Persian, and published in 
1923 the Pay*im i ma*brih, an answer to Goethe's 
West-Ostlicher Divan. The following year, his Urdu 
poems were published as B*b-i ddr (The Sound of 
the caravan-bell), and in 1927 a second collection of 
Persian lyrics, Zab*t-i d*gam (Persian Psalms) with 
an appendix modelled upon Shabistari's 
Ghul*an-i r*v, 
was published. In 1928, Icbil delivered at several 
Indian universities his Six lectures on the recon- 
struction of religious thought in Islam, an attempt at 
reconciling Muslim theology with European philo-

sophy and science in a very personal way. At that time, 
the poet had started cooperating with the Muslim 
League; he presented his famous statement on the 
necessity of forming a separate Muslim state in 
Northwest India at their annual session in Allahabad 
1930. In the following years, he took part in two 
Round Table Conferences in London, visited France 
(where he met Henri Bergson and Louis Massignon, 
Spain, Italy (meeting Mussolini), and attended a 
Muslim conference in Jerusalem. In the autumn 
of 1933 he was invited to Afghanistan to discuss the 
problems of their Muslim congregations, but also 
which resulted in the Persian poems Musdrf (The 
Traveller); at the same time the Persian collection 
Pas ti b*yd krd (What is to be done?—the title 
alluding to Tolstoy's famous book!) was written. 
However Icbil's magnum opus in Persian is the 
D*iwdm, 1932, dedicated to his son D*blivid, a 
poetical account of a spiritual journey in the company of 
Djilal al-Din Rumi through the spheres, where 
he discusses philosophical and political problems 
with Muslim and non-Muslim leaders. In 1935, the 
most important collection of Icbil's Urdu poetry 
came out, Bbl-i D*blivid (Gabriel's Wing), which 
contains the famous hymn on the Mosque of 
Cordova. One year later followed the Urdu dwmp Darb-i Kaliim 
(The Stroke of Moses) with its bitter critique of the 
political and social situation. After a long illness, 
also, however, did not prevent him from 
conceiving a new evaluation of Islamic law, 
Icbil (upon whom the British Crown had conferred 
a knighthood as early as 1922) died on 21 April 1938. 
A collection of Persian quatrains and a few Urdu 
poems, A*r*ma*b^n-i H*j^dz (Gift of the H*j^dz), 
was published shortly after his death.

The very titles of Icbil's poems indicate his main intention: he felt like the caravan-bell which leads

Icbil lived in Lahore, for a while teaching philosophy, but then concentrating upon his legal practice. The mental crisis which he experienced after his return from Europe, where he arrived in 1924, was later— he had recognized and analysed fairly well, resulted in a stronger interest in the revival of the Muslim peoples, which was kindled, as in many of his Indian contemporaries, by the unhappy fate of the Turks during the Balkan War. His notebook of 1920 (Stray reflections, ed. Javid Icbil, Lahore 1961) contains already many of the ideas which he elabor- 
ated later, and the poems Iqdam-i bikhudi (Complaint) and 
Mathnawi, ed. Shabistari, 1915, 314-20) and J. Weiss, in E. Sachau, Islamstudien, i, 488-9), on the other hand, the

A collection of Persian quatrains and a few Urdu 
poems, A*r*ma*b^n-i H*j^dz (Gift of the H*j^dz), 
was published shortly after his death.

The very titles of Icbil's poems indicate his main intention: he felt like the caravan-bell which leads
those who are going astray in the wilderness towards the right goal, embodied in the Kacba, or guides who are written in the shari'a, and all his maq'awis are written in the metre of Rumi's Majdnaw-yi ma'navi. His imagery likewise is traditional, and he applies the inherited patterns of similes and metaphors to modern subjects (Farhad as the representative of exploited workers, Khursaw as the imperialist and capitalist). Many of his concepts can be traced back to classical Indo-Muslim poetry; but he needed these forms to gain an audience for his ideas. For poetry was, for him, not a means in itself but had to be, as he frequently asserted, "the heritage of prophecy", and its criterion is not its aesthetic beauty but its "life-yielding capacity". That is why he liked certain metres which could be easily memorized, and did not do away with the formal limits of Persian poetry with which his public was familiar. His poetry primarily concentrates upon one goal: to teach the Muslims how to regain strength by developing their personalities, be it as individuals or as nations. He has been accused of transplanting the Nietzschean superman into an Islamic environment; Ikbâl's ideal man, however, can only be understood in his relation to God.

God is, for Ikbâl, the greatest Ego, as witnessed by His personal name Allâh. He is "perfect personality which is compatible only with the conception of an Infinite Being" (F. von Hügel), which comprises everything and yet is distinct from everything. Each created being, too, has a small ego which it is called upon to develop. "Throughout the whole universe runs the gradually rising note of egohood"; and every ego is constantly striving towards a fuller realization of itself. Thus reality is eternal becoming; even death does not mean a break in this development, but opens new doors of self-realization. Immortality, then, is not ours by right, but is only an aspiration: only those who have perfected their ego during their lifetime as much as possible can partake in it. This perfection does not lead, as in the Nietzschean superman, to a detachment from God but can rather be attained by constant love and prayer. Love, 'ishq, is the man's means and the man's goal. "One who has defeated him, thus making up for his refusal to prostrate before Allâh (Sura II, 32, etc.). This is at least one of the differences between the thought of Ikbâl's Satanology. —As to time, Ikbâl was influenced in his view of the two levels of time, created and uncreated time, partly by Śāfīism, partly by Bergson; he often compared serial created time to a surûr, a magician's girdle which should be torn in order to reach the Divine nunc aeternum, if the faithful can speak, according to the example of the Prophet: "I have a time with God to which even Gabriel has no access". Ikbâl studied European philosophy intensely; he was impressed first by Hegel, but soon came to prefer the vitalists. His interpretation of Nietzsche, whom he compares to an Eastern maq'awî, is very thought-provoking; he felt that the German philosopher stopped at the lâ ilâh of the confession of faith without reaching the affirmation ilâh ilâhâ—a symbol which he also uses for Bolshevist Russia, which scattered the "ideals" of imperialism and capitalism but failed to affirm positively the power of the one God. What Ikbâl liked most in Nietzsche are the anti-Christian and anti-Platonic trends; his hostile words against Plato in the Asrar-i Ikbâl resound, though somewhat more mildly, through his whole work. Platonic mysticism was, for him, one of the main reasons of the decline of Islam. Ikbâl was a sincere admirer of Goethe, whose Faust seemed to him "nothing short of Divine workmanship", and who inspired his Payâm-i Maqût, parts of his Satanology, the two Preludes in the Dīwāndâne, etc. He compared him once with Rûmî, who was his oriental spiritual leader throughout his life. He discovered, probably under the influence of Šâhâb's sawânh-i Ma Rudân Rûm, the dynamic character of many of Rûmî's verses upon which he frequently relies. Very strong is likewise the influence of al-Hallâdî, whose thoughts he learned to understand thanks to Massignon's books, and whom he made, in the Dīwāndâne, a kind of forerunner of himself, blowing the trumpet of resurrection for the spiritually dead Muslims.

Ikbâl's main source of inspiration was the Kur'ân, whose beauty he praised again and again, and which unfolds every day new worlds, new possibilities before the faithful. His interpretation of single verses, however, is sometimes very unusual and personal, because he tries to affirm their relation with the findings of modern science. The Kur'ân and the gharî'a were thought of as capable of infinite development but at the same time as the unchangeable expression of the Divine will; hence a certain traditionism, for
example in his attitude towards women, which seems to contradict his outspoken belief in the dynamic nature of Islam. This latter belief is expressed in his numerous attacks on the theologians who cling only to the externals of religion and sink into the dust under the burden of commentaries, but never look at the original meaning of the Holy Writ. Though Ikbâl often advocates igîthâd, he sometimes prefers takfîd, traditional behaviour, as a kind of safeguard amid changing social life, until the Muslim community has attained a new consciousness and is freed from the idols of the modern "-isms" which threaten to destroy Muslims to new life. His work has been criticized, in the twenties, in European religious philosophy, he did not become a systematic philosopher; one would rather call him a "prophetical philosopher", or a "philosopher-poet", since poetry, which he wrote in masterly fashion in two languages, was not a means in itself, but a vehicle to propagate his mission, to restore the divine Decree. Such a poet, whose "spiritual father" he is called, more than that witness of unity.

The Kur'ân often uses the participle mukhâs, "he who devotes himself to God", who gives Him the worship that is His due (II, 139; IV, 146; XXXIX, 2-3; XL, 14, 65; XCVIII, 5, etc.). The worship due to God consists principally in proclaiming Him to be One and Unique, the absolute Lord, with Whom no other creature can be associated. This is why the Divine unity should be reflected in the unity of believers (notwithstanding geographical borders) who are bound by one Divine law, guided by one prophet, in whom prophethood has reached its culmination and end, and praying towards one centre, the Ka'ba. Islam is a spiritual force, opposed to blood kinship and earthrootedness; it is the witness of unity.

IKBĀL — IKHLĀS

Bibliography: Translations of Ikbâl's work mentioned in the article into European languages:

The IVth form adds to the double idea of the root—purity and salvation—that of "dedicating, devoting, consecrating oneself to God for the sake of God and God alone". Ikhâl is pre-eminently an interior virtue of the faithful Muslim, which implies both the unadulterated purity (and thus sincerity) of religious actions, pure (exclusive) worship given to God and pure (absolute) devotion to God and the Community of Believers. The perfection of one's adherence, and witness, to faith is gauged by igîthâd and ihsân (uprightness in good).

IKFĀ' [see KFIYA].

IKHLĀŞ. The IVth form adds to the double idea of the root—purity and salvation—that of "dedicating, devoting, consecrating oneself to God for the sake of God and God alone". Ikhâl is pre-eminently an interior virtue of the faithful Muslim, which implies both the unadulterated purity (and thus sincerity) of religious actions, pure (exclusive) worship given to God and pure (absolute) devotion to God and the Community of Believers. The perfection of one's adherence, and witness, to faith is gauged by igîthâd and ihsân (uprightness in good).

The Kur'ân often uses the participle mukhâs, "who devotes himself to God", who gives Him the worship that is His due (II, 139; IV, 146; XXXIX, 2-3; XL, 14, 65; XCVIII, 5, etc.). The worship due to God consists principally in proclaiming Him to be One and Unique, the absolute Lord, with Whom no other creature can be associated. This is why the divine Decree. The opposites of this interior attitude of the faithful Believer are hypocrisy (mi'âk) and the grave sin of shirk, "associating others with God". Hypocrisy is, in any case, a shirk of the heart, and any trace of shirk, however faint, is an obstacle to purity of action. Ikhâl cannot, then, be translated simply as "sincerity", as is often done. Ikhâl presupposes sincerity (ridâ), a unison of the heart and the lips", but, in a way, goes beyond this in a unity and purity of interior gaze which is directed at God and God alone.

The importance given to igîthâd in any attempt to interiorize religious values is characteristic of Muslim aspirations. We shall give three examples, which follow three quite different lines of thought.

1.—The moderate Ismânî-ism of the Ikhâlûn al-Šâfî makes igîthâd one of the conditions of faith (gâhârû al-imân), and one of the virtues of the Believer, together with complete reliance (tawakkul), endurance of trials (sabr), and one of the virtues of the Be-thinker (shârîf al-imân), "Who does not beget and is not begotten", is most usually called šurât al-ikhâl. The opposites of this interior attitude of the faithful Believer are hypocrisy (mi'âk) and the grave sin of shirk, "associating others with God". Hypocrisy is, in any case, a shirk of the heart, and any trace of shirk, however faint, is an obstacle to purity of action. Ikhâl cannot, then, be translated simply as "sincerity", as is often done. Ikhâl presupposes sincerity (ridâ), a unison of the heart and the lips", but, in a way, goes beyond this in a unity and purity of interior gaze which is directed at God and God alone.

IKHLAS — IKHSHIDIDS

L. Massignon, Passion*, 595-6). It is the secret imparted by Muhammad to JJudhayfa, who questioned
him about the "inner knowledge" film bdjiri). The
Prophet received the reply from God through the
angel Gabriel: "It is a secret (sirr) of My secret
(sirri)', I set it in the heart of My servant and none
of My creatures can comprehend it". Al-Mufrasibi
sees in ikhlds "the very principle of the spiritual
continuity of the true Sunna" (ibid., 596), and alyalladi wrote a Kitdb al-Sidfy wa-'l-ikhlds, in which
he both separated and united "sincerity" (sidfr) and
the perfect worship of predestined hearts" (ibid.}.
The great Sufi manuals frequently refer to it and
avail themselves of it to reorganize the "sayings of
the Ancients". Three examples: (a) al-Kalabadhi
makes ikhlds a "stage" (makdma) of the soul and devotes to it a short chapter of his Kitdb al-Tacarruf
(ed. A. J. Arberry, Cairo 1353/1933, 70; Eng. trans,
by the same, Cambridge 1935, 90-1). He reproduces
a phrase of Djunayd, who defines ikhlds as "that
through which God is desired, in whatever act it
may be", and he stresses the stipulation formulated
by Ruwaym, that no consideration should be given
to the act performed, but only to God. (b) Similar
themes, with references to the "Ancients", in the
Kut al-kulub of Abu Talib al-Makki (ed. Cairo 1351;
1932, iv, 33-5), in which the stress is laid upon uprightness of intention (niyya) "for the Face of God"
(li-wadih Allah), (c) Al-Kushayri, in his Risdlafi Him
al-tasawwuf (Cairo n.d., 95-6), quoting many Sufi
traditions, distinguishes between the ikhlds of the
mass of mankind (al-^awdmm) in which the soul, in
the spiritual state that it attains, should not seek
its own happiness, and that of the privileged (alkhawdss), in which the worship given to God should
be so pure that no consideration can be paid even to
the ikhlds.
Almost every author might be mentioned. AlAnsari, the great Hanbali mystic, in his Mandzil alsd^irin (ed. with Fr. trans. S. Laugier de Beaurecueil,
Cairo 1962, 31/72), numbers ikhlds among the ten
"types of behaviour" (mu'dmaldt) demanded of the
Sufi. He defines it as the effort to "purify action
of all admixture", that is to say, as Mahmud alFirkawi comments (ed. Beaurecueil, Cairo 1953, 34),
to purify it of infatuation, hypocrisy, the appetite
of the soul and other similar things. Al-Ansari
distinguishes three degrees: (a) detaching oneself
from correctly accomplished acts and not seeking
satisfaction in them; (b) endeavouring to act well,
but being ashamed of one's action and seeing it
only in the light of divine Generosity; (c) "purifying
action by freeing oneself from action".
The text, however, that had the most profound
influence was undoubtedly al-Ghazali's development
in his Ihyd* (Cairo ed., 1352/1933, iv, 321-8): four
chapters devoted to the virtue and merit of ikhlds,
its nature (hafcika), what the Shaykhs have said about
it and what obstructs it. This constitutes a small
treatise on spiritual psychology, which readily adopts
and develops, as often in the Ihyd*, Abu Talib alMakki's account. Having underlined the unity of intention that makes up ikhlds, al-Ghazali, too, stresses
the complete disinterestedness that it implies.
3.—The influence of Abu Talib al-Makki and alGhazali on Ibn Taymiyya needs no demonstration
(cf. H. Laoust, Essai sur les doctrines sociales et
politiques de Takl-d-Din Ahmad b. Taymiya, Cairo
1939, 84 and 90, n. i); similarly with the influence
of certain Shici views that he opposed in other connexions. If the direct heritage of al-Ansari is added
to this, it is hardly surprising to find in the interiorist

Hanbalism of Ibn Taymiyya frequent references
to the virtue of ikhlds, such as we have defined it.
He proclaims its value against a completely exterior
juridicism: first of all in the very act of obedience
to the religious Law (ibid., 472 and n. 2 with ref.).
He emphasizes the idea of devotion, pure and
absolute devotion to God, the Prophet, the Community. When he wishes to increase "effort (djihdd)
on the path of God" in order to extend on earth "the
rights of God and man", he makes djihdd the highest
form of ikhlds towards God (ibid., 360, n. 3). Pure
worship and absolute devotion are thus seen as the
most profound attitude demanded of the Believer.
Ibn Taymiyya's disciples readily adopted the
theme of ikhlds, above all his direct disciple Ibn
Kayyim al-Djawziyya, who saw in absolute devotion
to God (ikhlds li-'lldh) one of the fundamental virtues.
Muhammad b. cAbd al-Wahhab later echoed this
(ibid., 531). Following these, several contemporary
reformist trends (the salafiyya) emphasized it.
Ikhlds was for the Sufis an indispensable stage of the
soul in its quest for union with God. Through Ibn
Taymiyya's influence, and owing to his acceptance
of Sufi ideas, it became for the Muslim who wished to
interiorize his faith an attitude existentially required
by the very values of Islam.

IKHMlM [see AFOIMIM].
IKHSHID, the title given to local Iranian rulers of Soghdia and Farghana in the pre-Islamic and
early Islamic period. Although Justi (Iranisches
Namenbuch, i4ia), Unvala (The translation of an
extract from Mafdtih al^UMm of al-Khwdrazmi, in
/. of the K.R. Cama Inst., xi (1928), 18-19) and
Spuler (Iran, 30-1, 356) derive it from O. Pers.
khshaeta- 'shining, brilliant', an etymology from
O. Pers. khshdyathiya- 'king, ruler* (M. Pers. and
N. Pers. shah) is more probable (Christensen, and
Bos worth and Clauson, see below). This O. Pers. term
khshdyathiya- penetrated beyond Transoxania as far
as Mongolia, where we find the Orkhon Turkish title
of shadh, a rank given to senior members of the
princely family below the Kaghan.
At the time of the Arab conquest of Transoxania,
the rulers of Soghdia were called Ikhshids, and
Mukaddasi, 279, says that the Ikhshid, king of
Samarkand, had his castle and residence at Maymurgh in the Samarkand oasis. The Ikhshids continued in Soghdia well into the early cAbbasid period,
having transferred their seat to Ishtikhan after the
Arab conquest of Samarkand; the submission of the
then Ikhshid to the Caliph al-Mahdi is recorded by
Yackubi (cf. Barthold, Turkestan, 95, 202). The local
ruler of Farghana also had this title (Ibn Khurradadhbih, 40), and according to Ibn al-Athir, v, 344,
it was he who called in against the Arabs the Chinese
army of Kao-hsien-chih, defeated by Ziyad b. Salit
at Talas in 133/751. The title evidently carried great
prestige in Central Asia, for it was adopted in the
4th/ioth century by the Turkish commander
Muhammad b. Tughdj [q.v.], claiming descent from
the ancient princes of Farghana.

IKHSHIDIDS [see KAFUR and MUHAMMAD B.
TUGHDJ].


IKHTILADJ — IKHTILAF

IKHTILADJ. spontaneous pulsations, tremblings or convulsions which occur in all parts of the body, in particular in the limbs, the eyelids and the eyebrows, and which provide omens the interpretation of which as a divinatory sign is known as the "šim al-ikhtilddi" or "palmoscopy".

Palmoscopy forms part of physiognomy and, like it, formed part of medical diagnosis by the physicians of classical antiquity, among them Galen, who established a distinction between "palpitation" and "trembling, shudder, convulsion".

As a divinatory practice, Islamic palmoscopy seems to have been the first Islamic treatise, the written elements of which reached the Arabs through Persia. Ibn al-Nadim, who was conversant with an Arabic translation of the short works attributed to Melampos (op. cit., 391 f.), mentions, under the same heading (Fihrist, 314), two titles whose Iranian origin is beyond doubt: the first is Kitāb al-Ikhtilāf al-šarīf wa-la'dī fi-l-fird wa-'l-zadjr wa-'l-firdsa alayh al-haydīt, "The book of pulsations, with three interpretations, for Persians", which has not survived, but the contents of which might be similar to a paragraph of the Ps.-Diähiz, Bāb al-šarīf wa-l-ṣa'dir wa-l-firdaṣa al-šarīf madhab al-Furs (ed. K. Inostranzeff, in Matériaux de sources arabes, pour l'histoire de la culture dans la Perse sassanide, extr. from the Zapiski of the Oriental Section of the Archaeological Society, xviii, St. Petersburg 1907, 21-2); the second is Kitāb al-Ikhtilāf al-ṣa'dir wa-la'dī wa-l-ṣa'dir wa-l-ṣa'dir in-naṣṣ ar-rājū wa-l-iṣ'ābih wa-dīn wa-dīn wa-ma'ṣūfāt al-ša'dīq wa-l-ṣa'dir al-nisā' bi-ma'ṣūfāt mā yu'dīlu Ǧalayh al-haydīyt, "The book of pulsations, omens and of what man sees from his clothing and his body; description of naezi and of the treatment of women; the knowledge of the signs provided by snakes". The content of this collection of omens recalls that of an Assyro-Babylonian series entitled Shumma Ǧulina ma'sīl šahīk (cf. transliteration and tr. apud Fr. Nötzcher, in Orientalia, O. S. xxxi (1928), xxxix-xliv (1937), for the detailed references, cf. divination arabe, 399, notes 5 to 9).

The earliest manuscript examples of the treatises of ikhtilāf bear the name of Diyahar al-Sādik, the reputed teacher of esoteric sciences in early Islam. This attribution is due to the fact that he had gathered round him a circle of Iranian and Byzantine magi who were engaged in translating into Arabic specimens of the literatures of their native countries (cf. T. Fahd, La divination arabe. Etudes religieuses, sociologiques et folkloriques sur le milieu natif de l'Islam, Leiden 1966, 397-402; for survivals in Islam of palmoscopic practices, see E. Doutré, Magie et religion dans l'Afrique du Nord, Algiers 1909, 366. (T. Fahd))

IKHTILAF (a.), difference, also inconsistency; as a technical term, the differences of opinion amongst the authorities of religious law, both between the several schools and within each of them; opp. idjamʿ (q.v.), ittiḥād. The ancient schools of law, on the one hand, accepted geographical differences of doctrines as natural; on the other hand, they voiced strong objections to disagreement within each school, an opinion which was mitigated by their acceptance as legitimate of different opinions if based on idjamʿ (q.v.). The rising tide of disagreements on questions of principle arose only from the time of Shafiʿi (q.v.) and his systematic innovation. But the several schools arrived at a compromise, and the consensus (idjamʿ), which acted as the integrating principle of Islam, succeeded in making innocuous those differences of opinion which it could not eliminate. The four schools, then, are equally covered by idjamʿ, their alternative interpretations of Kurʾān and sunna are equally legitimate, they are all equally orthodox. This view has found expression in a saying which occurs first in the Fikh al-akhbar of Abū Hanifa (q.v.) and was later attributed to the Prophet, to the effect that "differences of opinion in the community of Muslims is a concession (raḥma) on the part of Allāh". The work of Shafʿārān (see below) expresses the attitude underlying this tradition with monotonous regularity.

The recording of these differences of opinion has produced a considerable literature since the begin-
nings of the study of fikh. The earlier works reflect the discussions between the several schools, the later ones are simply handbooks. To the earliest existing works belong the Kitāb ikhtilāf Abū Bakr (q.v.), which is in turn derived from the ūla, the Ashāris and Maturidis, and, as many of them have been lost, is only a valuable source for the comparative study of early ṣūfīs, Ibn Kutayba (q.v.); d. 276/889) in the early days of the 3rd century; the Ḥanbalis, certain Hanbalis, such as Alī, the Ashāris and Maturidis, and, as many of them have been lost, is only a valuable source for the comparative study of early ṣūfīs, Ibn Kutayba (q.v.), the Ḥanafis and the Ḥanbalis, certain Hanbalis, such as Alī, the Ashāris and Maturidis, and, as many of them have been lost, is only a valuable source for the comparative study of early ṣūfīs, Ibn Kutayba (q.v.)...
IKHTIYAR — IKHTIYARÁT 1063

Cairo 1382/1962, i, 340-65, with reference to Ibn Hazm). In treatises on the imdām, it is customary to contrast the akl al-ikhtiyār with the akl al-nāṣs, the supporters of free election with the supporters of textual determination.

It is, however, in the schools of ʿīm al-kalām that the question of the existence and the nature of free will in man is faced. It is one of the most discussed problems in the "Treatise on Actions".

The Muṭṭāzilīs of Baṣra, such as Muḥammad b. ʿĪsā Burqūdhūḥ, a disciple of al-Naḍīdīr, contrasted ikhtiyār, that which is performed voluntarily, with ḥudūr, that which is performed in obligatory acts and submission. In the school of Baḥdādhād, the first term is more frequently used as a correlative (mukhabal) of ṣiddār [q.e.] "constraint". According to the Muḥāḥaddīṣ al-Islāmīyīn of al-Ashʿārī (ed. Cairo 1309/1950, i, 110), Ḫāfa b. Ḥarb set out as follows the thesis of the Ṣāḥībī Ḥaṣūm b. al-Ḥaḍām: human action depends on a double perspective: it is free human action, but rather ʿāliyya, to the extent that it is "acquired" by the subject who performs it, which is constrained (ṣiddār) inasmuch as it cannot occur without the appearance of the cause that provokes it (cf. W. Montgomery Watt, Free will and predestination in early Islam, London 1948, 110). This distinction established within the same action is denied by the various Muṭṭāzilī branches. Briefly, it may be said that in their eyes man is the "inventor" (mukhtār) or "creator" (ḥulūl) of his actions inasmuch as he is mukhtār (in the sense of "one who chooses") and endowed with ikhtiyār.

But Ḫaṣūm b. al-Ḥaḍām had, on this very point, as it were, anticipated the Ḫāfa b. Ḥarb reaction. It should first of all be noted that the very word ikhtiyār is relatively little employed, or rather, it is used primarily to characterize divine action which operates bi-ʿl-ḥudra wa-ʿl-ikhtiyār (e.g., al-ʿAshʿārī, Istiḥṣāān al-khawād fi ʿīm al-kalām, ed. with Eng. trans. R. McCarthy, The theology of al-ʿAshʿārī, Beirut 1953, 93/127; al-Bakīllānī, Kitāb al-Tamḥīd, ed. McCarthy, Beirut 1957, 36). God alone is truly a "free Agent", al-fāʾil al-mukhtār.

Quite quickly, however, ikhtiyār takes on the common sense of an act that can be performed or not performed by the subject. Al-Bakīllānī stresses the fact that when a Ṣūfī likes to choose, he likes to choose (ṣūfī ʿāliyya al-ṭārikh al-ikhtiyārī) of the hand and the "movement" (tank al-ikhtiyār) which is the trembling of the hemispheric (Tamḥīd, 308, see also 286). This is a psychological statement that has to be placed within the vaster problem of the "creation" and "acquisition" of actions. In fact, generally speaking in the ʿAshʿārī and Ḥanafī-Māṭurīḍī schools, it is not al-ikhtiyār that is the title of discussions on free human action, but rather the "capacity" to act (mukhabal) of the subject. The opposite correlative is not longer ʿīm al-ikhtiyār-ṣiddār, but as formerly with Dirar, the leader of the Muṭṭāzilīs of Baṣra, ʿīm al-ikhtiyār-ṣiddār, the "contingent" ("commenced") power (of action)". The opposite correlative is no longer ʿīm al-ikhtiyār-ṣiddār, but as formerly with Dirar, the leader of the Muṭṭāzilīs of Baṣra, ʿīm al-ikhtiyār-ṣiddār. With the ʿAshʿārīs, the "acquisition of action", ʿīm al-ikhtiyār-ṣiddār, is understood as an "attribute" carried out directly by God, and with the Māṭurīḍīs as a simple "qualification" (ṣīya) of the subject. The term dealt with is that of ʿīm al-ikhtiyār, the "capacity" to act created by God in the human subject. Ikhtiyār does not belong to the list of technical words established by al-Djurādīnī in his Taʾrīfāt.

The existential determinism of the falsafīya does not hesitate, either, to speak of ʿīm al-ikhtiyār and of ʿīm al-ikhtiyār, but without in any way committing itself to the ontological reality of human free will.

Ikhtiyār must then most often be translated as "power of choice" (cf. A.-M. Goichon, Lexique de la langue philosophique d' Ibn Sīnā, Paris 1938, s.v.), and ikhtiyār as "deliberate". Ibn Sīnā says that the concupiscient and irascible faculties, simple opinion and the judgment of the intellect are all capable of ikhtiyār (Shīṭātāt, Iḥtiyyātāt, Cairo 1960, ii, 387-8). "Choice" presupposes an elective action, and it thus depends on a knowledge, which can, however, be instinctive as well as intellectual, animal as well as human and superhuman as well as human. Every animate being and every intelligent being, from animals to the celestial beings, is endowed with ikhtiyār. Al-Kindī speaks of the ikhtiyār of the celestial spheres, and of their ikhtiyār obedience to God (Rasāʾil al-Kindī, ed. Abū Rida, Cairo 1360/1950, i, 246-7). The adjective ikhtiyārī is the opposite of "natural" (tabīʾ) and is applied to the freedom of spontaneity of the estimalive faculty in animals in the same way as it is to the intellectual faculty in man (Māṭurīḍī, al-Falsāfah, ed. Cairo 1357/1938, 215), but it is not will that defines it. That which effects greater or less perfection of choice is not the degree of a freedom in which are joined intelligence and rational will, but the degree and quality of knowledge. The choice that depends on intelligence is the only one that can tend towards the "pure and true" good; it is no less caught up in the universal causal sequence.

It was probably the double line of influence, on the one hand of the tradition of kalām (especially al-Bākīllānī) and on the other of Ibn Sīnā, that inspired the analysis of the act of choice sketched by al-Ḥaṣāṣī at the beginning of the Taḥāfūt al-falsāfīya (with regard to the man put before two identical cups or two similar dates), and particularly in the Iḥyāʾ, Cairo 1352/1933, iv, 219-20 [see Ṣiddār]. Two points of view should be mentioned: (1) in human īm al-ihdā, voluntary decision is subordinated to the judgment of the intellect, that is to say, it is "constrained" by it; (2) in consequence, an absolute free choice is exercised in God alone, for God does not act "for a motive" or "to attain an end" (gharād, ḥuṣn), the existential determinism of the falsafīya that sees the freedom the "motive of preference" (mudājdūdīth), chosen by the intellect, into a decisive argument against "man as creator of his actions". Human choice, which is always motivated, is not a truly free choice; it is "an intermediary" between natural constraint and the pure divine freedom, both Ṣiddārī and ikhtiyārī, as Ḫaṣūm b. al-Ḥaḍām says. Al-Ḥaṣāṣī's analysis remains one of the peaks of the ʿAshʿārī thought. Similar themes are found, with more or less precision, in all subsequent treatises and manuals. In modern times, the ʿīm al-tawḥīd of Muhammad ʿAbduh (Cairo 1533, 60) limits itself to the double affirmation of two contrasting truths: the divine omnipotence, "which is proved" and the "evidence" of man "who is free (mukhtār) in his actions". It should finally be noted that nowadays, when Muṭṭāzilī theses are undeniably coming back into favour, the current philosophical vocabulary uses hurrīya more commonly than ʿīm al-ikhtiyār for the problem of the ontological foundation of human freedom.

Bibliography: in the article. (L. GardeT)

IKHTIVAR — IKHTIVARAT or hemerologies and mone-
logies (Gr. xartuyṣa, Lat. electiones) means an
astrological procedure whose aim is to ascertain the auspicious (sa*d) or inauspicious (nahs) character of the future. It deals with years, months, days and hours. This task, which was the duty of the official astrologer of the court as early as the Umayyad period, became increasingly important under the ‘Abbásids as a result of the adoption of Iranian customs and Sásanid calendars which established precisely how the prince's time should be spent during all the days of the week (cf. for example the Ps. ‘Dhaháb, Báb al-wrāja wa ‘l-sa’diyya wa ‘l-fajrā wa ‘l-hardā maddah al-Faww, ed. K. Inostranzeff, in Mahtāra, de sources abissées sur le Sasanide, extr. from the Zapiski of the Oriental Section of the Archeol. Soc., xviii, St. Petersburg 1907, 59; F. Gabrieli, Eitichetta di corte e costumi sasanidi nel Ktib Aqal al-Mulak al-di al-Gahis, in RSO, xi (1928), 292-305).

Divinatory hemerology was known to the early Arabs, as to all the peoples of antiquity (see La divination arab, 483, notes 4-5); the best known example is that found in the legend of the Ghariyān of al-Mundhir b. Mā' al-Samā', who once a year stood for two days beside these two sacred stones which were sprinkled with blood: one of these days was auspicious (ya'am na'min); on this day he was generous to those who came to see him; the other was inauspicious (ya'am bu'si); on this day his unfortunate visitors were sacrificed to his idols (on this legend and the Ghariyān, see T. Fahd, Le panthéon de l'Arabie centrale à la veille de l'hégire, Paris 1968, 91-4). For the Islamic period, particularly under the ‘Abbásids, there exist a large number of accounts which attest how frequently recourse was made to hemerology (cf. C. A. Nallino, Raccolta, v, 38 ff.; T. Fahd, La divination arabe, 484 f.).

The theoretical basis of hemerology underwent its greatest development during the ‘Abbásid period. There exist many short works of ikhtiyārāt, bearing the names of such famous astronomers as al-Kindī (Brockelmann, S I, 392), Sahl b. Biṣṣir, whose treatise survives in a Latin version (ibid., 396), al-Kasrānī (ibid., 392), Abū Mā'shar al-Falāki (ibid., 1, 222), Abū Sa'ād al-Sigzār (ibid., S I, 389), Muḥammad b. Ya’qūb b. Nawkhašt (ibid., 869), Fakhr al-Dīn al-Rāzī (ibid., 1, 507, S I, 924) and several others. For later implication, brief calendars, worked out according to various procedures, indicate the good or the bad actions which are to be advised or discouraged for a certain day of the week and a certain month of the lunar year (see examples in La divination arabe, 487).

In Iranian and Turkish milieus, more special attention is paid to the first day of the Islamic year, the Nawrūz (q.v.); the actions performed on this day presage what the whole year will be like (cf. H. Masse, Croisances et coutumes persanes, ii, 145 ff.; La divination arabe, 486, 489, note 1).

IKHTIYĀRĀT, in the sense of "anthologies" (see MUKHTARĀT).

IKHWĀN (see TARIQA).

AL-IKHWĀN ("the Brothers"), Arab tribesmen joining a religious and military movement which had its heyday in Arabia from 1330 to 1348/1292-30 under the rule of ʿAbd al-ʿAzīz b. ʿAbd al-Rahmān Āl Suʿūd, popularly known as Ibn Suʿūd (see Suʿūd, Āl). The movement, inspired by a resurgence of the Wahhābiyya (q.v.), bore a strong resemblance to the original work of the Ikhwan in the Arabian Peninsula in the 13th/14th century. In both cases the strength of tribal ties, the amazingly rapid spread of religious fervour in an attempt to form a cohesive community rising above tribal divisiveness, the zealous desire to propagate Islam by the dijāh, and the eagerness of the mujāhids to die as martyrs were strikingly similar. So likewise was the settlement of nomadic tribesmen in military cantonments, one of the distinctive features of the Ikhwan movement. Thanks in good measure to the prowess of the Ikhwan, most of the Arabian Peninsula was brought under the sway of a single Iṣṭān, Ibn Suʿūd. When the triumphant devotees of tawḥīd started to break out of the Peninsula to the north, however, the parallel with fājd al-İslam faded. The Ikhwan came up against British military aircraft and armoured cars based in the mandates of Transjordan and ‘Irāq and British warships stationed in the eastern Gulf for the protection of Britain's allies. The fanatical bravery of the Ikhwan beat in vain against the machines of the 20th century. And in challenging this century and its profound changes, the Ikhwan at last revolted against their sovereign, Ibn Suʿūd, who with superior force stopped and confined them. The Ikhwan movement may thus be regarded as the last gasp of pristine Islamic militancy, reproducing in many ways the beliefs and tactics of 1,300 years ago.

The progress and decline of the Ikhwan movement form an important chapter in the history of the Kingdom of Saudi Arabia. During the close association between Ibn Suʿūd and the Ikhwan the state expanded to the west and north, occupying the regions of ‘Aṣīr, Djabal Shammar, and al-Ḥijāz. Ibn Suʿūd as the new Protector of the Holy Cities acquired a position of prominence and dignity in the Islamic world. When the Ikhwan revolted, the response of the King and his government to the issues they raised determined the future course of the kingdom, which from then on emerged rapidly from its xenophobic isolation. The excesses of the Ikhwan harmed the reputation of Arabia in the Islamic world, yet their direct actionless storming up of Islam among the tribes of early Islam made a deep impression on many Muslims.

In the 12th and 13th/18th and 19th centuries Āl Suʿūd in their wars relied primarily on the sturdy town-dwellers of ‘Aqīd, who stood firmer in battle than the mercenarism Bedouin auxiliaries. In 1319/1902 Ibn Suʿūd recovered al- Riyād, the capital of his forefathers, from ‘Abd Rashīd b. Ḥayīl in Djabal Shammar, and began the reconstruction of the dominion of his house. Although a townsman by birth and largely by upbringing, he had lived among the Bedouins and knew them well. As he became embroiled in the tribal feuds which for ages had rent Arabia, he searched for a way of turning the talents of the Bedouins to better use. The answer he hit upon was to mobilize them in settlements, where they could more easily be taught the doctrines of Islam, be made responsible citizens, and be moulded into a formidable martial force. This revolutionary approach called for the Bedouins to depart from their old way of life, which came to be referred to as al- Dījāhilīyya, and to embrace a new way, illumined by God's grace, so that the name hūdra (variant hūdara) was given to the settlements and the name Ikhwan to the settlers. The Bedouin moving into a hūdara gave up his
house of hair for a mud hut. Often he sold his camels and ghānam, for he was now more of a farmer than a herder. He might even become a trader after a fashion by selling the products of his tillage.

The government supported the establishment of the ḥidiras through the selection of sites; the grant of land; the building of mosques, schools, and dwellings; the provision of seeds and tools and the giving of instruction in planting; the supply of arms and ammunition; and, above all, the sending of religious teachers (muwslims, islām); to indoctrinate the Ikhwan in the ideology of Islam as it was in the time of the Prophet and al-salaf al-ṣāliḥ. This was Islam as taught by Ibn ʿAbd al-Wahhāb (q.v.), but the Ikhwan often went to extremes. They were vehement in denouncing bid’as of all sorts. Electricity, which brought light without oil or wax, was iniquitous. The Ikhwan broke mirrors because they reflected images. In their personal appearance men must follow what was believed to be the Prophet’s example. Moustaches must be trimmed almost out of sight and beards grown long. The traditional headcloth and headdresses of the Bedouin must be replaced by a white turban.

Missionary work in the ḥidiras was carried on under the direction of Sayykh ʿAbd Allāh b. Muḥammad b. ʿAbd al-Ḥaḍir, a descendant of Ibn ʿAbd al-Wahhāb, who composed Ḥanbalī tracts for distribution among the Ikhwan. In Dhu-al-Ḥaḍir 1323/September 1914 he joined other ʿulamāʾ in addressing a circular to “ḥāfat al-Ikhwan min ahl al-hidirāṭ” in which moderation was urged upon them. No difference, the scholars said, could be found in the Sharīʿa between the wearing of headdresses and the wearing of a turban. At the same time Ibn Suʿūd wrote another circular to the Ikhwan in which he pointed out that there were no basic contradictions in the four madhhabs of Sunni Islam, even though he and his government adhered to Hanbaliism. He remarked that the Ikhwan had in their colonies the books of the different madhhabs, as well as the writings of Ibn Taymiyya and Ibn Kayyim al-Djawziyya (q.v.), the spiritual predecessors of Wahhābism. As the Ikhwan movement developed, however, such pleas for moderation and tolerance were often ignored by its followers. Nevertheless, the religious teaching in the Ikhwan had developed to the point where they began replacing the townsfolk of Nadjīd as the elite of Ibn Suʿūd’s army, marching with his bodyguard under his banner. In that year Ibn Suʿūd advanced with the Ikhwan to the walls of Ḥayl, and Ibn Rashid’s capital, but failed to take the city for want of artillery. In 1337/1919 the Ikhwan on their own won the first great victory in a contest destined to end with the downfall of the Ḥāghimīd regime of King al-Husayn ibn al-Jawdān in al-Hijaz. The Ikhwan took advantage of the enmity between Ibn Suʿūd and al-Husayn to send troops to the borderland between Nadjīd and al-Hijaz and the allegiance of the tribes living there. The key oases were al-Khurma and Taraba (q.v.), and the most important tribe was ʿUtayba. Ibn Suʿūd already had a strong segment of ʿUtayba with him under Ibn Humayd in al-Ghathāṣi. The Anīl of al-Khurma was the Sharīʿī Khālid b. Mansūr Ibn Luʿayy b. Dawlā of Ḥādī ʿAbd Allāh (see HāGHIMĪDS). Ibn Luʿayy, after falling out with his kinsman ʿAbd Allāh, son of King al-Husayn, during the siege of the Ottoman forces in Medina, returned to al-Khurma, where he enrolled as a member of Ibn Suʿūd’s Ikhwan and energetically spread their doctrines among the tribes. From 1336/1917 onwards, al-Husayn sent three expeditions against Ibn Luʿayy, but the latter reached the fort of Umm al-Qura and was annihilated. After the surrender of Medina, al-Husayn mounted an even larger expedition and gave the command to his son ʿAbd Allāh. The people of al-Khurma called on Ibn Suʿūd for help, and he commissioned Ibn Humayd to lead forward a contingent of the Ikhwan. Together Ibn Luʿayy and Ibn Humayd made a surprise attack on ʿAbd Allāh’s fortified camp at Taraba and thoroughly routed the Ḥāghimīd forces, both regulars and irregulars. The road to Mecca lay
open, but for diplomatic reasons Ibn Su'ud held the Ikhwan back.

In 1338/1920 soldiers of the Ikhwan, with the backing of Mubarak Al-Sabah, the ruler of Kuwait, over the borderland dispute with Asir. In 1338/1920 Ibn Su'ud felt that Salim was pressing his claims too far south, and Salim protested at the building of a kādīrā by the Ikhwan of Mutayr at Karya al-ʻUlyā (pronounced garyat al-ʻulayn). Salim dispatched troops into the disputed area, and at Hamd near Karya, they were overwhelmed by Faysal al-Dawish and the Ikhwan. Fearing invasion, the people of Kuwait in two months built a long wall with four gates to protect their town. In Muharram 1338/November 1920 al-Dawish moved, not against Kuwait town itself, but against the neighbouring oasis of al-Dajahra, which Salim defended with desperation and success. Losses on both sides were heavy. Britain, pledged to protect Kuwait, sent two warships to the port and two military planes to protect their town. After a siege of nearly two months in which al-Dawish and the Ikhwan played a prominent role, Hāyil capitulated in Safar 1339/December 1920. The Ikhwan leaders criticized the generous terms which Ibn Su'ud accorded to Al-Raghi.

The occupation of Al-Raghi's lands eliminated the buffer between Ibn Su'ud's state and the new states of Transjordan and Irāq. A number of followers of Al-Raghi, particularly from the tribe of Šhammar, took refuge in Irāq and made it a base for raids against the subjects of Ibn Su'ud. The Ikhwan, restrained from hurling themselves against the Hashimids in al-Hijāz, found substitute targets in their new neighbours, where al-Husayn's sons 'Abd Allah and Faysal had assumed the thrones of Transjordan and Kuwait. The Ikhwan did not move in time for the pilgrimage of 1342/1924, as their campaign against al-Hijāz began in Muḥarram 1339/August 1924. The main thrust westwards was accompanied by diversionsary expeditions against the Hashimids on two other fronts. A flying column of Ikhwan raided villages of Banū Ṣaḥḥir just south of Amman, and Amman itself on 3 May 1342/April 1924 with severe losses by British planes and armoured cars, while other Ikhwan made a series of irruptions into Irāq, where again the British opposed them with modern equipment.

A conflict arose between Ibn Su'ud and Sālim b. Muhammad Al-Sabah, the ruler of Kuwait, over the borderland dispute with Asir. In 1338/1920 Ibn Su'ud felt that Salim was pressing his claims too far south, and Salim protested at the building of a kādīrā by the Ikhwan of Mutayr at Karya al-ʻUlyā (pronounced garyat al-ʻulayn). Salim dispatched troops into the disputed area, and at Hamd near Karya, they were overwhelmed by Faysal al-Dawish and the Ikhwan. Fearing invasion, the people of Kuwait in two months built a long wall with four gates to protect their town. In Muharram 1338/November 1920 al-Dawish moved, not against Kuwait town itself, but against the neighbouring oasis of al-Dajahra, which Salim defended with desperation and success. Losses on both sides were heavy. Britain, pledged to protect Kuwait, sent two warships to the port and two military planes to protect their town. After a siege of nearly two months in which al-Dawish and the Ikhwan played a prominent role, Hāyil capitulated in Safar 1339/December 1920. The Ikhwan leaders criticized the generous terms which Ibn Su'ud accorded to Al-Raghi.

The occupation of Al-Raghi's lands eliminated the buffer between Ibn Su'ud's state and the new states of Transjordan and Irāq. A number of followers of Al-Raghi, particularly from the tribe of Šhammar, took refuge in Irāq and made it a base for raids against the subjects of Ibn Su'ud. The Ikhwan, restrained from hurling themselves against the Hashimids in al-Hijāz, found substitute targets in their new neighbours, where al-Husayn's sons 'Abd Allah and Faysal had assumed the thrones of Transjordan and Kuwait. The Ikhwan did not move in time for the pilgrimage of 1342/1924, as their campaign against al-Hijāz began in Muḥarram 1339/August 1924. The main thrust westwards was accompanied by diversionsary expeditions against the Hashimids on two other fronts. A flying column of Ikhwan raided villages of Banū Ṣaḥḥir just south of Amman, and Amman itself on 3 May 1342/April 1924 with severe losses by British planes and armoured cars, while other Ikhwan made a series of irruptions into Irāq, where again the British opposed them with modern equipment.

In the west the Ikhwan advanced under the command of Ibn Lu'ayy and Ibn Humayd. Early in Safar 1343/September 1924 their vanguard, with no responsible officer in charge, surged into the town

The British government, which held the mandates for Transjordan and Irāq and had a treaty with Ibn Su'ud, to whom it paid a modest subsidy, sought ways of preventing the raids and encouraging trade. The British felt that to determine the allegiance of tribes and to define boundary lines were essential steps. Representatives of Irāq and Najd were brought together to sign a treaty at al-Muhammad on 7 Ramādān 1340/5 May 1922, which Ibn Su'ud refused to ratify on the grounds that his representative had exceeded his instructions. Ibn Su'ud, however, in a meeting with British and Irāqī officials at al-'Ukayr accepted on 12 Rabi' II 1341/5 December 1922 a protocol to the treaty drawing a boundary between Najd and Irāq. At the same time a convention drawing a boundary between Najd and Kuwait was concluded with the British Political Agent from Kuwait. These instruments also established a neutral zone between Najd and Irāq and another between Najd and Kuwait, in each of which both governments concerned would have equal rights. The idea of the neutral zone was to provide a common territory without permanent inhabitants to which nomads with their livestock from both sides could resort for watering and grazing. For countless centuries the Bedouins of Arabia had moved back and forth without artificial boundaries to stop them. It would take time for them to adjust to the new arrangements, especially since the lines sketched on maps were not marked on the ground. Furthermore, the definition of the new boundaries was imprecise in a number of points, leaving room for argument over the location of the lines. For the better part of a decade raiding across boundaries was to remain a common practice.

Aiming to ease the tension between Ibn Su'ud and his three Hashimid neighbours, the British invited the four to send representatives to a conference at Kuwait. King al-Husayn of al-Hijāz refused to do so, but delegates from the other three met intermittently from Dīmāţ 1 to Ramādān 1342/December 1923-April 1924 without solving any of their problems, including control of the tribes on all sides. The situation between al-Husayn and Ibn Su'ud grew worse when al-Husayn was proclaimed Caliph in Rajab 1342/March 1924, an act regarded by the Ikhwan as further proof of Hashimid heresy. Islamic circles in Egypt and India voiced vigorous criticism of al-Husayn's administration of the affairs of the Holy Land and the Pilgrimage. In Dhu 'l-Ka'da 1342/June 1924 a congress of Ibn Su'ud's notables met in al-Riyād. The leaders of the Ikhwan accused al-Husayn of barring them from the pilgrimage, and the 'islamā' affirmed that the Muslims of Najd had the right to fulfil this fundamental duty "by consent or by force". The congress closed with the cry: "Tawakkala ʿala ilāh—ila 'l-Hijāz!"

The Ikhwan did not move in time for the pilgrimage of 1342/1924, as their campaign against al-Hijāz began in Muḥarram 1343/August 1924. The main thrust westwards was accompanied by diversionsary expeditions against the Hashimids on two other fronts. A flying column of Ikhwan raided villages of Banū Ṣaḥḥir just south of Amman, and Amman itself on 3 May 1342/April 1924 with severe losses by British planes and armoured cars, while other Ikhwan made a series of irruptions into Irāq, where again the British opposed them with modern equipment.

In the west the Ikhwan advanced under the command of Ibn Lu'ayy and Ibn Humayd. Early in Safar 1343/September 1924 their vanguard, with no responsible officer in charge, surged into the town
of al-Tā'if and put to flight the defending forces under al-Husayn's son cAli. A brawl with the citizens under al-Husayn's son cAli. It was enough to strike terror into the hearts of al-Husayn's subjects. Many, including the Amir cAli, abandoned Mecca, leaving it defenceless. In Rabī' I 1343/October 1924 the Ikhwan under Ibn Lu'ayy and Ibn Humayd thronged into the Holy City, wearing the robes of the Muslim jizya. Ibn Humayd rode into the town on a white charger, with his son on a white mule. The occupation took place nearly two months before the arrival of Ibn Su'ud from al-Riyād. When the Ikhwan chose Ibn Lu'ayy as Amir of Mecca, it became one of the ironies of history that the last Sharif of the nearly thousand-year-old Ḥaḍīmī dynasty to govern the city should be an adherent of the Ikhwan of Najd.

Carrying out the tenets of Wahhabism, the Ikhwan destroyed the image of the shrines in Mecca, thus provoking an unfavourable response in the Islamic world. Once again the Ikhwan showed resentment at Ibn Su'ud's leniency when he treated the people of al-Ḥijāz gently, and an ominous speech by Faysal al-Dawīsh in Mecca on 'Id al-Fitr indicated an inclination towards open revolt.

The leading citizens of al-Ḥijāz had prevailed upon al-Husayn to abdicate and had recognized his son cAli as the constitutional monarch. The Ikhwan joined in the sieges of 'Ali's main footholds, Diudda and Medina, but it was Ibn Su'ud who accepted the surrender of Diudda in Diūmādā II 1344/December 1925 and his son Muḥammad, rather than Faysal al-Dawīsh, who a little earlier accepted the surrender of Medina (Diūmādā I/December).

While the siege of Diudda was going on, Ibn Su'ud concluded with Britain in Rabī' II 1344/November 1925 the agreements of Bahra' and Haddā (places on the way from Diudda to Mecca), with Britain acting on behalf of 'Irāk and Transjordan. Both agreements were designed to enforce more effective control over raiding, and the Haddā agreement drew a boundary line between Najd and Transjordan (with the exception of the district of Ma'ān and al-'Aqaba, which Ibn Su'ud claimed as part of al-Ḥijāz).

In the wake of the triumphant entry of al-Ḥijāz, Ibn Su'ud sent most of the Ikhwan back to Najd or off on expeditions to rivet his control over districts in the south near the borders of the Yaman and in the north towards al-'Aqaba. In Mecca the Ikhwan influenced events again during the pilgrimage of 1344/1925, when they stoned the Egyptian caravan on the grounds that the Mahmal and its military band were hīḍās. The Egyptians fired on the pilgrims from Najd and killed a number of them. This incident was partly responsible for Egyptian coolness towards the new regime in al-Ḥijāz during the next 10 years.

The restlessness of the Ikhwan under the rule of Ibn Su'ud came to the surface in a congress of their chiefs at al-Arta'īwīya in 1345/1926. Ibn Su'ud, now King of al-Ḥijāz, was condemned for a number of his acts, such as sending his son Su'ud on a visit to Egypt, the land of shirk, and his use of automobiles, telephones, and the telegraph. Ibn Su'ud thereupon summoned his notables to a congress in al-Ḥijāz in Rājiḥā 1345/January 1927. Some but not all of the Ikhwan chiefs came. The 'ulama' issued a fatwa in Shābān/February, which in general deferred to the authority of Ibn Su'ud as ʿālim but at the same time made concessions to the Ikhwan. The entry of the Mahmal into Mecca was, if possible, to be prohibited. Strong measures were to be taken to bring the Shift of al-Ḥasā' and al-Ḳatif into the fold of true Islam. On the use of the telegraph however, the 'ulama' declined to give an opinion, holding it to be a modern invention about which nothing could be found in the works of the religious authorities. Two months later another congress in al-Ḥijāz brought together 3,000 of the Ikhwan leaders, only Ibn Humayd being absent, and Ibn Su'ud received further support. Ibn Su'ud strengthened his position by signing the treaty of Djudda with Britain on 18 Dhu 'l-Ka'da 1345/20 May 1927, even though dealings with Christian powers were anathema to men such as Ibn Humayd and al-Dawīsh, who continued recalcitrant.

In Diūmādā I 1346/November 1927 an incident in 'Irāk north of the neutral zone between it and Najd set in train the revolt of the Ikhwan against their sovereign. Protocol No. 1 of al-Ūkāy had forbidden the building of military bases in the vicinity of the boundary. When 'Irāk began to construct a police post at the wells of Buṣayya, Ibn Su'ud's government called this a violation of the protocol. Faysal al-Dawīsh's Ikhwan of Muṭayr took the matter into their own hands, descending on the post at night and virtually wiping out the 'Irāk forces. Other incidents followed in quick succession, with Muṭayr repeatedly defying Ibn Su'ud's orders. The British struck back by bombing Najd territory. In Ramaḍān 1346/March 1928 Ibn Humayd began to outdo al-Dawīsh in aggressiveness, calling for an all-out assault by the Ikhwan on the infidels of 'Irāk. In Shawwāl/April Ibn Su'ud, who was preparing to negotiate again with Britain, prevailed on the Ikhwan to suspend operations for a time, but the negotiations, which took place in Diudda in Dhu 'l-Ka'da/May, failed to settle the problems of 'Irāk military posts and Ikhwan raids, nor was the deadlock resolved in a second round of negotiations in Diudda in Saḍar 1347/August 1928.

To cope with the internal crisis Ibn Su'ud held a congress in al-Ḥijāz in Diūmādā I 1347/October 1928, which Ibn Humayd, al-Dawīsh, and ʿAbdūn b. Fahhād Ibn Highâyyn of al-Ūgāmīn refused to attend, though al-Dawīsh did send his son ʿAbd al-'Azīz and his ulama' Usayyizin. Ibn Su'ud brought together 3,000 of the Ikhwan. He went so far as to offer to his son ʿAbd al-'Azīz the town of Deera. When the Ikhwan called on the rebels to surrender and undergo trial Ibn Su'ud deferred to the authority of Ibn Su'ud, leaving it defenceless. In Rabi' II 1347/1929, when they stoned the Egyptian caravan on the way from Djudda to Mecca), with Britain acting on behalf of 'Irāk and Transjordan. Both agreements drew a boundary line between Najd and Transjordan. The British struck back by bombing Najd territory. In Ramaḍān 1346/March 1928 Ibn Humayd began to outdo al-Dawīsh in aggressiveness, calling for an all-out assault by the Ikhwan on the infidels of 'Irāk. In Shawwāl/April Ibn Su'ud, who was preparing to negotiate again with Britain, prevailed on the Ikhwan to suspend operations for a time, but the negotiations, which took place in Diudda in Dhu 'l-Ka'da/May, failed to settle the problems of 'Irāk military posts and Ikhwan raids, nor was the deadlock resolved in a second round of negotiations in Diudda in Saḍar 1347/August 1928.

The situation stayed relatively quiet until Ramaḍān 1347/February 1929, when Ibn Humayd in a raid northwards massacred a number of Najd merchants escorting camels to sell in Egypt. This bloody deed solidified opinion in the towns of Najd behind Ibn Su'ud, and tribes which had suffered at the hands of the Ikhwan supported the townsman. Ibn Su'ud called on the rebels to surrender and undergo trial in the Sharī'a courts, but they refused. Finally Ibn Su'ud overtook the rebels on the plain of al-Sabala (often written Sibīla in English) not far from al-Arta'īwīya, the fountainhead of the Ikhwan movement. Here in Shawwāl 1347/March 1929 Ibn Su'ud broke the back of the revolt. Ibn Humayd fled, only to be captured and imprisoned in al-Ḥijāz, while his ʿālim al-Ghatībah was razed by Ibn Su'ud's
brother 'Abd Allâh. Faysal al-Dawish, gravely wounded, was carried to ... in Syria, and gained him in Egypt an ever-increasing prestige. During the second world war, in 1941, he was im-

joined Nayif in the east in Muharram 1348/June 1929. c

Abd Allah b. Djalwi, and rebels won successes, cutting the road from the coast Among the stoutest opponents of the rebels was the

Didan's place was taken by his cousin Nayif Aba in revenge the Ikhwan of al-

IJithlayn was killed by order of Fahd, son of Ibn Su'ûd's. In Rabi 1348/August 1929 al-Dawish's son 'Uza'yyiz led a raid into the country of Shammer and 'Anaza, but he died from thirst in the desert after being defeated in a battle with Ibn Su'ûd's governor of Hâylî, 'Abd al-'Azîz b. Mustâ'd Âl Djâlî. Hundreds of the Ikhwan of Mu'âyrr fell in this battle. Fahd's horse was killed by one of Fahd's son of Ibn Su'ûd's. Thus peace was restored by 1348/1930 to the

world, and at the end of Sha'ba'n/January 1930 Faysal al-Dawish, Nayîf Ibn Hîljham, and other chiefs surrendered to the British in Kuwait territory. The British negotiated terms for all his Ikhwan and grazing for his many thousands of camels, and the rebel cause was doomed when an important section of 'Utayba under 'Umair Ibn Rubayî'ân chose Ibn Su'ûd's side. Relentlessly Ibn Su'ûd's forces closed in on the rebels, and in Sha'ba'n 1348/January 1930 Faysal al-Dawish, Nayîf Ibn Hîljham, and other chiefs surrendered to the British in Kuwait territory. The British negotiated terms of surrender with Ibn Su'ûd, and at the end of Sha'ba'n/January the captive chiefs were handed over. Their lives were spared, but they went to gaol in al-Riyâd.

Thus peace was restored by 1348/1930 to the realm of Ibn Su'ûd, and the age of tribal raiding came to an end. The suppression of the revolt did not mean the total eclipse of the Ikhwan movement; it meant rather that it would be consigned to a sub-

ordinate role in the state. Some of the hîdîrâs were abandoned, but others continued to flourish. Ikhwan chiefs who had remained loyal to Ibn Su'ûd received regular stipends, and the Ikhwan in the hîdîrâs got an annual grant (sha'ba) of rice. Among the loyal chiefs was the Shari Khâlid Ibn Lu'âyî, who com-

manded expeditions against the Yanamis in Nadîrân in 1350/1932 and the Idrisîs in Thâmât 'Asîr in 1350-51/1932-33. After 'Uqayl was killed in 1351/1933, during the second of which he fell ill and died. Other loyal chiefs held places of honour in the King's court. The religious zeal of the Ikhwan re-

mained alive among large sections of the population of the kingdom, and it is still displayed by the mawâwu's and the members of Hay'ât al-a'mûr bi 'l-mâ'rûf wa 'l-nâhiy 'an al-munkar. As the military establishment of the kingdom developed, the Ikhwan detachments became the National Guard, popularly known as al-Mugâhidûn. Now they move about in motor vehicles, which their predecessors once looked upon as works of sihr.

(AL-REMTZ)

AL-IKHWÂN AL-MUSLİMÎN, "the Muslim Brethren", Muslim movement, both religious and political, founded in Egypt by Hasan al-Banna'[q.v.].

History. Many facets of the history of the Muslim Brethren are still unknown, which is to be expected since the movement engaged in many secret activities, on several occasions threatening the es-

tablished régimes and being persecuted by them, many notorious militant members of it being now (1969) either in exile or living under police supervision in their own countries. The history of the movement may be divided into various periods:

(1) A formative period (1928-36) dominated by religious and social activities. After the foundation of the movement in 1928 the "Association of the Muslim Brethren", in 1928 at Ismâ'îliyya [q.v.] in Egypt, sections were formed in the various localities of the Suez Canal zone, then gradually throughout Egypt, particularly after 1933, the year in which al-Banna', who had remained a teacher, was moved to Cairo, where he transferred the headquarters of the brotherhood. Missionaries (idâ'în, pl. du'â'în) specially commissioned by the founder and "Supreme Guide" (al-murîghid al-sâ'mî) preached in the mosques and other public places; the Brethren founded schools of various grades, organized courses of religious instruction, taught the illiterate, set up hospitals and dispensaries, undertook various enterprises to raise the standard of living in the villages, built mosques and even launched industrial and commercial enterprises.

(a) A period of political activity and of expansion, then of troubles (1936-51). After the signing of the Anglo-Egyptian treaty of 1936, Hasan al-Banna' undertook the support of the cause of the Palestine Arabs, which enabled him to spread the movement throughout the Middle East and especially in Syria, and gained him in Egypt an ever-increasing prestige. During the second world war, in 1941, he was im-

(2) A period of political activity and of expansion, then of troubles (1936-51). After the signing of the Anglo-Egyptian treaty of 1936, Hasan al-Banna' undertook the support of the cause of the Palestine Arabs, which enabled him to spread the movement throughout the Middle East and especially in Syria, and gained him in Egypt an ever-increasing prestige. (2) A period of political activity and of expansion, then of troubles (1936-51). After the signing of the Anglo-Egyptian treaty of 1936, Hasan al-Banna' undertook the support of the cause of the Palestine Arabs, which enabled him to spread the movement throughout the Middle East and especially in Syria, and gained him in Egypt an ever-increasing prestige. During the second world war, in 1941, he was im-
prisoned for a time because of his violent anti-British propaganda. It seems that at this period the "Free Officers", who were to seize power on 23 July 1952, had a friendly relationship with the Brethren, but the two movements always remained independent of each other. It is probable that al-Banna had already organized, in addition to sporting and paramilitary groups, a secret army, and his plans certainly did not exclude the seizing of power by force. While awaiting a suitable opportunity, the Muslim Brethren continued their educational and social activities and became an increasing influence in Egyptian political life, but in the country itself and not in the parliament. After 1943 they had to reckon with competition from the communists, allied to the left wing of the Wafd, who like them were attempting to arouse the political awareness of the students and the populace. The Egyptian Left accused the Brethren of devoting in fact more energy to opposing than to opposing the British, and of resorting to violent methods and even actual terrorism to do so. The Muslim Brethren provided volunteers who fought with the Arab armies in the Palestine War in 1948. After the Arab defeat, they appeared as an organized armed force which was capable of challenging the Egyptian government; the government of al-Nukrashi ordered the dissolution of their organization, the confiscation of all its possessions and the arrest of a large number of Brethren. Al-Nukrashi was assassinated on 28 December 1948 by a Brother; shortly afterwards, on 12 February 1949, al-Banna was himself assassinated; no investigation of this murder was ever completed. The Brotherhood continued to function in secret. A new supreme guide was elected, Hasan Isma'il al-Hudaybi, a magistrate, but his authority was often challenged. In 1951, as a result of the law concerning organizations (23 April), the Brethren were able to resume their activities openly; in theory they were forbidden to do anything in secret or to make any military preparations, but they very soon managed to evade this prohibition. They took part in the harrying actions against the British bases in the Suez Canal zone. The part they played in the burning of Cairo on 26 January 1952 is still not clear.

(3) The Muslim Brethren under the Revolutionary régime (1952-1953). The beginning of the movement of the "Free Officers" which seized power on 23 July 1952 had a programme which resembled in many respects that of the Brethren, particularly on social matters; in addition, many officers who took part in the movement were in fact members of, or sympathizers with, the society of the Muslim Brethren. This may perhaps explain why the new régime at the beginning sought the support and even the collaboration of the Brethren; when all the political parties were dissolved (16 January 1953), the régime agreed to consider the Muslim Brethren as a non-political association. But it appears that al-Hudaybi demanded the right of control and veto over all the government's decisions, wishing to set himself up as the "moral tutor" of the revolution, a position which was unacceptable to the new régime. On 26 October 1952, al-Banna was summoned to the joint house of representatives and the Senate, and was granted again the right to exist as a non-political organization. The Anglo-Egyptian treaty signed on 29 October 1954 was the cause of a fresh disagreement: the Brethren regarded it as too favourable to Great Britain and rejected even the principle of negotiation with the British, maintaining that an armed struggle against them was the only method possible. On 26 October 1954, Colonel Djamaal al-Nasir and 'Abd al-Nasir were condemned to death and executed; the Supreme Guide, al-Hudaybi, was condemned to death, but his sentence was commuted to life imprisonment. One would have expected that after this the Brotherhood would be crushed; indeed many of the members who did not approve of terrorist methods, had given their support to the new régime. In fact the Brotherhood continued to exist clandestinely. During the summer of 1965, a conspiracy hatched by the Muslim Brethren, the aim of which was to overthrow the régime of Colonel 'Abd al-Nasir, was discovered; several hundred arrests were made; the enquiries and the trials lasted for a year; in August 1966 there took place three executions, including that of Sayyid Kiit, a well-known writer among the Brethren, not to mention many sentences of hard labour and prison. It appears however that the Brotherhood continues to exist clandestinely and constitutes a certain threat to the Egyptian government (1969).

The Muslim Brethren outside Egypt. Similar movements appeared at the same time in other Arab countries, inspired by the example of the Egyptian Brotherhood, but it is difficult to tell whether they were organically attached to it, and if so in what degree, or whether they were independent. In Syria, in 1937, there was founded an association of Muslim Brethren which was to be less extensive and less active than the Egyptian association, but some of its members occupied official political offices in Syria, and in particular the Muslim Brethren of Syria exercised a not inconsiderable moral and intellectual influence, under the leadership of ghayb Mustafa al-Siba'i (d. 1965). Less important, and in some cases more temporary, associations existed also in Palestine, Jordan, Lebanon and 'Irak. It should be added that the Muslim Brethren in Egypt commanded, and, it seemed, still command, wide sympathy in many Arab countries and also in non-Arab Muslim countries.

Doctrines. The essential message of the Muslim Brethren may be summarized thus: they consider Islam to be an "order" (nizam) without equal, because it is revealed by God, which has a vocation to organize all aspects of human life: "Islam is its dogma and onegi, its morality, its religion and state, spirituality and action, al- 'Amin and sword" (H. al-Banna); furthermore, this order is valid for all men of all time and all countries. The originality of the Muslim Brethren lies not in their doctrine, many elements of which may be found in the preaching of Djamaal al-Din al-Asfahani ('q.), but in the fact that their founder, by simplifying it and making it more strict, made it the ideological basis of a powerful popular movement. The professions...
of faith of the Brethren, and especially those of H. al-Banna3, who was educated in the Hanball madhab, are strongly inspired by the idea of a return to the faith of the "devout ancestors" (ta'dabbur) of the Community, although they are for the most part formulated on a plane and in terms very different from those of tradition and invoked on occasion the authority of non-Muslim scholars and philosophers in the cause of the struggle against atheism; the believer can know God only through the description which He has given of Himself in the Qur'an and through the words of His Prophet; but the faith of the Muslim is an active faith which, already in its first steps, throws itself into his mind and his heart by the total commitment of his life to the service of Islam. In the same spirit, the Brethren were obliged to perform pious exercises based on the recital of the Qur'an with meditation (tadabbur) and to make an assiduous study of hadiths and of the model provided by the history of the beginnings of the Muslim Community. Whatever the differences between them, all the professions of faith of the Brethren show the greatest mistrust of the traditional formulations of halâm, which they consider to be too much impregnated with the Greek spirit, which is foreign to primitive Islam, and whose speculations they accuse of having provoked in the past, and of encouraging at the present time, divisions and a sectarian spirit, which form an obstacle to the necessary unity of all Muslims which is indispensable in their struggle against the foreign imperialsists.

The Brethren's dedication to the service of Islam has as its main objective the struggle against western invasion in all its forms. Abroad first, it is necessary to fight until all the Muslim countries are freed from any foreign domination. Next, within Egypt, the Muslim Brethren planned to re-Islamize Egyptian life in the very many fields which had been impregnated by western influence, now considered to be waning; these extended from social habits, such as dress, greetings, the use of foreign languages, hours of work and of rest, the calendar, recreation, etc., to the educational, legal and political institutions, not to mention the field of ideas and sentiments. Matters relating to the family and to the position of women were not neglected; in addition there existed a "devout ancestors" (islâl) "Mother of the Community". One of the main points of this programme was the abolition of the Egyptian legal codes, based on European codes, and the creation of a legislation based on the sharî'ah; they considered the question of the evolution of fîsh to be no longer relevant, since a society which is renewed and really living, has as its main objective the struggle against atheism; the believer can know God only through the description which He has given of Himself in the Qur'an and through the words of His Prophet; but the faith of the Muslim is an active faith which, already in its first steps, throws itself into his mind and his heart by the total commitment of his life to the service of Islam. The ideas of the Muslim Brethren were, and still are, widely spread, even after the association disappeared officially, and they have today a great influence on Muslim literature in apologetics and in popular religion, particularly that written in Arabic. **Bibliography:** To the works and reviews mentioned by J. M. B. Jones in the article al-Banna3 should be added the following: Christina Ph. Harris, Nationalism and Revolution in Egypt, the role of the Muslim Brotherhood, London 1964; Anwar Abdel Malek, Egypte société militaire, Paris 1962 (see index); F. Bertier, L'ïdologie politique des Frères Musulmans, in Orient, no. 8 (4ème trim. 1958), 43-57; H. Laoust, Les schismes dans l'Islam, Paris 1965, 375-9.—There exists so far no complete list of the writings of Hasan al-Banna3 (which, apart from his autobiography, Mudâjkhirât al-da'wâ wa'l-da'âya, Cairo, n.d., consists of short brochures [his rasâ'il]), newspaper articles and lectures), nor of the periodicals produced by the Brotherhood, nor of the very numerous works of his propagandists; it would be possible however to compile an adequate list of documents using I. M. Husaini, The Moslem Brethren [see al-Banna3] and C. P. Harris, op. cit., supplemented by D. Harris, The Children of al-'arabiyâ, Beirut 1956, 209-12; a recent re-issue: Madîma'at rasâ'il al-imâm al-qâhidî Hasân al-Banna3, Dâr al-Andalus, Beirut 1956 (500 pp.); various writings of al-Banna3 are re-issued sporadically in different Arab countries. **Translations:** some works of al-Banna3 have been translated into French in Orient: Nahu al-nâr, Vers la lumière, tr. J. Marel, no. 4, 37-62; of an art., La...
nouvelle renaissance du monde arabe et son orientation, by A. Miquel, ... be in actual communication with chosen intimates (the authors of the Epistles) and to have disseminated the Epistles conceal their identity; these in the spiritual City, by the purity of their souls (all also call, more simply, ikhwa und the authors of the famous flows from this, loyalty to one another, in fact to other important problems in this respect: that of it seems indisputable that (New information), Stern was suspect to orthodox Muslims, the Epistles cir- tazili; authorship . . . . ., 142), today, 157 ff.). Al-Tawfeidi's teacher, Abu Al-Hurr, was connected not only as the authors of the Epistles, but also, he also names the dā`i `Abd Allâh b. Maymûn al-Kaddâdh and three other dā`a`i as collaborators in their composition. The Musta`i ril tradition of the Yemen has attributed them generally, since at least the 7th/11th century, to the ismā`īlî Abî Ahmad. In 1876, however, Dieterici (Philosophie . . . , 142), without recognizing the ismā`īlî character of the Epistles, mentions the Al-Tawâhidî (on which Hâdhâdhi Khâlîfà relied, iii, 46, gives 29 references to their supposed authors. Stern recently revived the question in the two articles mentioned above. It is clear that the four persons mentioned by the Al-Tawâhidî (Abû Sulaymân Muhammad b. Ma`shâr al-Bustî, called al-Maqdisî, the kâ`dî Abu `l-`Hasan `Abî `Ali b. Hâ- rîn al-Zanjânî, Abî Ahmad al-Nahradjuri and al-`Âwî, all friends of a Chancellery secretary, Zayd b. Rifa`a) are the authors (or among the authors) of the Epistles; for al-Tawfeidi was connected not only with Zayd b. Rifa`a, but also with the kâ`dî al-Zanjânî, and the latter told him a story which is found word for word in the text of the Ikhwân. He knew, then, what he was talking about. He calls the kâ`dî al-Zanjânî “the author of the doctrine” (Kitâb al-mu`awwana, ed. Ahmad Amin, Cairo 1942, 41 ff., 157 ff.). Al-Tawfeidi's teacher, Abû Sulaymân al-Mañîfî, for his part, gives al-Makdisi as the author of the work. Stern, however, discovered two most instructive passages in an unpublished Tâbîthi dâlî`i nuwra`uwa Suyâyûsînî Mu`ammad, the work of the Mu`tazzî chief kâ`dî of Rayy, `Abd al-Djabbar al-Hamadânî (325-415/936-1025) (now published as Tâbîthi dâlî`i al-nuwra`uwa, ed. `Abd al-Karîm `Uthmân, Beirut n.d.—preface dated 1966; see p. 610 ff.). One gives almost the same persons as the authors of the Epistles, and the other generalizes the ismā`îlî conviction. He believes that they were adopted by the Al-Tawâhidî only a century or two after their publication. According to him, the authors mentioned by Al-Taw- feidi and the kâ`dî `Abd Allâh al-Djabbar, although connected with Ismā`îlism, represented a particular trend in it, which believed that Muhammad b. Ismā`îl lived concealed and would come again as the expected mahdi; he was supposed to be in actual communication with chosen intimates (the authors of the Epistles) and to have disseminated the Epistles Shî`is claim them, although they contain some clear criticisms of their doctrine of the hidden ismā`îlî. The Ismā`îlîs rightly consider them to be one of their fundamental works (see Ivanov, in ET', suppl., s.v. ISMA`ILIA). Casanova, well before the Ismā`îlîs had allowed the publication of works of Fātimid literature, was the first orientalist (1898) to assert that they were of Ismâ`îlî origin; this was confirmed by this literature when it came to be partially known. The authorship of the Epistles has sometimes been ascribed to `Ali, and to Dja`far al-Sâdîk. Towards the end of the 5th/11th century, a Syrian Nizârid attributed them to the hidden ismā`m Muhammad b. Ismā`îl, and `Ali, but not; he also names the dā`i `Abd Allâh b. Maymûn al-Kaddâdh and three other dā`a`i as collaborators in their composition. The Musta`i ril tradition of the Yemen has attributed them generally, since at least the 7th/11th century, to the ismā`îlî Abî Ahmad.
through them. Stern thinks that the secret organization described by the Epistles was illusory, utopian and idealized, merely that of a group of authors who wished it to be. He believes that these authors had no official function in the organization of the Isma'ili da'wa and had no influence on contemporary Isma'iliism.

If this were the case, the kādī ʿAbd al-Diabār would not have considered them dangerous Isma'ili. What is more, the Ikhwan reject the idea of an expected imām. On the other hand, the secret organization described by them is too precise and corresponds too well to what the Isma'ili organization may at first have been to be a product of their imagination. It does not seem to be idealized, but quite in conformity with the spiritual condition of a revolutionary movement in full expansion, which sets the purity of its convictions above everything—this is what gives such a movement its efficacy; the mystique of the spiritual City which unites them and contrasts them with the terrestrial city is typical: on one side, the good, on the other, the evil. Why should so much information that could apply to Isma'iliism be found concerning a non-existent sect, and nothing concerning Isma'iliism itself, which was so active at that time? Moreover, the Epistles lead one to believe that the propaganda was addressed particularly to those whose culture made them most apt to receive it: philosophers and mystics, or those who could be of most use to the movement, Chancellery secretaries or governors. Now, this was probably historically the case with the Isma'ili propaganda. In spite of the slight doubt caused by the small difference between the information given by al-Tawhidi and that given by the kādī ʿAbd al-Diabār, it may well be thought that the persons mentioned by them, or some of them, certainly collaborated in the composition of the Epistles, and that they were initiates of the highest rank who played an important part, even if others, of equal importance, were more disposed to action. Perhaps they were among the four abdāl, or even the “forty” (cf. Révélation et vision véri- dicque, 33-6). But perhaps they were not the sole authors, and assertions of Isma'ili origins contain only a part of the truth.

If the authors sometimes mention their work in connection (iv, 362), the 50th Epistle (on different modes of government), on the other hand, considered particularly important because of its central chapter on the hidden meaning of festivals and sacrifices, and the 48th (on proselytizing) are put directly into the mouth of an imām. It is thus conceivable that the imām should have inspired the whole or part of the contents of certain Epistles, that he should have taken part in their composition or that he should have given something similar to his “imprimatur”; in any case, the imām of this world and those of the other world inspire all the members of the spiritual City. It is, however, also probable that the authors mentioned by al-Tawhidi and the kādī ʿAbd al-Diabār gave the Epistles only their more or less definitive form. They seem to have been begun much earlier, perhaps actually by the dāʾī ʿAbd Allāh b. Maymūn al-Kaddāb and his contemporaries, and then continued by their successors, under the aegis of several successive imāms, including Muḥammad b. Ismāʿīl, his son ʿAbd Allāh and his grandson Abmad. This would be no way surprising, if we suppose that the Epistles constitute an attempt to arrange and fix the official doctrine of Isma'iliism. This point of view appears confirmed by the attempts at dating that have been, or can be, made.

Dating.—Dietertki (Die Philosophie der Araber, Leipzig 1876, i, 124 ff.), in view of the facts that their supposed authors are mentioned by Ḥadżārī the Khaḍīfa (in his Muḥtārih, i, 232), and that verses of al-Mutanabbi (303-5/915-65) are too frequently quoted in them to have been incorporated subsequently, and in view, similarly, of the fact that al-Madżriti who introduced them into Spain died in 395/1005, fixes the date of the composition of the Epistles approximately between 350 and 375/961 and 986.

Other information that can be drawn from the Epistles seems to support these conclusions. They several times name Abū Ma'shār al-Falaki (d. 272/ 886 aged more than one hundred) and quote a passage of one of his works. They mention Bābak and the Khurramiyya, who began to attract attention in 92d/858, and the Sāmānids (ii, 280).

Although the Muṭṭalils are not named, many criticisms are evidently directed at them. Finally, one passage (iii, 161) mentions the Ashʿarītes, who, too are often criticized. Al-ʿAṣḥārī, born in 300/913, became orthodox in 300/913 and died in 323/935; there could have been no question of Ashʿarītes' existing until several years after his conversion, if not after his death; for the passage leads us to believe that ʿAṣḥārīsm had already begun to be talked about, but was not yet equated with orthodoxy. All this is confirmed by the fact that (as we have seen) al-Tawhidi personally knew al-Zandjānī, one of the supposed authors, and that he mentions these authors in a conversation with the vizier Ibn Saḍān in 370/981; this presupposes that at that date the Epistles had already been completed for some time. This is not incompatible, either, with the fact that the kādī ʿAbd al-Diabār al-Hamadānī speaks of the activity of al-Zandjānī, for he was 45 years old in 370. The Epistles, then, may have been finished between 350/961 and 370/980, that is to say before the conquest of Egypt by the Fāṭimid (358/969), or shortly after. Several passages, however, (notably iv, 146, 190, 252-3, 269) presage an important event, the manifestation of the cause by the Ikhwan, and the approach of government by good men. Two of these passages lead us to believe that this event is foretold by all the methods of divination and astrology (iv, 139) and in particular by the Judgement furnishing by the Ikhwan concerning the imminent conjunction that was to lead to the event is interpreted by Casanova (Une date astronomique), who bases himself on a passage of Ibn Khaldūn (ed. Quatremère, 186) and on the tables drawn up by an astronomer for De Goeje (Les Carmathes du Bahrain et les Fati- mides, Leiden 1886); according to him, the Ikhwan had in mind a conjunction that they expected on 18 Djamād I 449/19 November 1047, and the expected event occurred eleven years and 42 days later, on 13 Dhu 'l-Ka'da 450/1 January 1059: the khutba was then given in Baghdād, for a short period, in the name of the Fāṭimid al-Mustansir. The conjunction itself occurred in the caliphat of al-Zāhir, and Casanova sees an allusion to the latter in the term zāhir used in the text of the Ikhwan. Information furnished by the Djumās (247) suggests that this question should be reopened; it is possible that the tables used by Casanova did not correspond with those that the Ikhwan had at their disposal. Even if the dates that he suggests, however, are the right ones, his interpretation, for reasons that it would take too long to discuss in detail here, is certainly erroneous. It suffices to say that the Ikhwan allude here not to the final victory, but to a preliminary success.
Two dates, then, seem acceptable for the foretold event: 358/969 (the conquest of Egypt) or Rabic 1 297/December 900. It must be noted that Ibn Ubayd Allah al-Mahdi by the dā'ī Abū ʿAbd Allāh in Ifrikiya. Several of the passages cited give us to understand that not only many adepts and propagandists but the imām himself are in concealment, and that the return to manifestation is near at hand; this prompts the choice of 297/909. One of these passages (iv, 187) even states that “government of good men will begin through the agency of virtuous good men who will join together in a land”; to this end, is not Ifrikiya? If this is so, it must be concluded that the composition of the Epistles took a good many years, and this time can be approximately fixed as between 287/900 (perhaps even well before) and 354/965. The only fact that appears strange, in this case, is that no allusion is made to the victory of 297/909. On the other hand, it may be considered normal that the passages that predict it should have been kept intact, as a proof (to be commented on orally) of the truth of their doctrine.

It also follows from this that the Epistles, unlike most subsequent Ismāʿili writings, circulated in the orthodox world at a moment when an expanding Ismāʿilism anticipated a total victory, by degrees, but relatively rapidly.

Does the composition of the Epistles support this point of view?

The composition of the Epistles.—Only a close analysis would perhaps produce a reasonable certainty in this regard. Certain facts, however, demand attention at first sight.

The Epistles, as we have them, are 52 in number. In the text itself, however, it is ten times asserted that there are 51 Epistles. The 52nd itself (on magic) mentions the “fifty preceding Epistles” and designates itself the 51st. The extra Epistle, clearly added subsequently, is the 51st in our editions (“The Hierarchy [of the parts] of the whole world”), the normal position of which, besides, as its title indicates, would be in the second section (physical sciences). In fact, five pages of the nine that make up the Epistle are identical with pages of the 21st (the vegetable kingdom), and the remaining four pages add nothing new to the problem of the whole (which itself mentions, at the end, a total of 51 Epistles, without adding it is the last) perhaps represents the first state of an Epistle left to be rewritten, then rediscovered and subsequently included in the penultimate position, since the Epistle on magic had to be the last.

Moreover, the work has traces of a certain vagueness, both in the order of chapters, and in the number of Epistles in each section. Thus the 8th Epistle in the 1st section (mathematical sciences), which deals with manual arts, was earlier placed at the beginning of the 3rd section (psychical and intellectual sciences) (i, 276 and 285); the 9th (1st section) seems, according to its introduction, to have been placed, at one time, after the 25th (2nd section); this might justify its contents. It seems also (iii, 29) that the second section consisted at first of 8 Epistles, instead of the 17 that it contains in its definitive version; that the 10th in this section was then the second; that the sixth (quiddity of Nature) was added later. Similarly, it seems that the first section, which contains 14 Epistles, consisted only of 5; that the 4th Epistle (geography) was added later; that the 5th (music) at first formed part of the 6th (numerical and geometrical relationships) and was subsequently detached; that there was at first one single Epistle on logic, afterwards split into five short Epistles. In short, it appears that, at the time of the composition of the Epistle, there were only five Epistles from the 1st section and seven from the and were already written; that certain of these were afterwards amplified and then split up; that these two sections were afterwards enlarged by the addition of new Epistles. The same was probably true of the other two sections. A trace of this, at least, is to be found: a piece of information in the last Epistle (iv, 285), applicable, according to the writer, to the 50th, in fact applies to the 49th; this suggests either that the 50th had not yet been written, or that the order of Epistles has been altered. It is probable that the first writers had not accurately foreseen their number, and that towards the end the authors made arrangements to round off this number to 51, so that it might be satisfactory from an arithmetical point of view.

All this confirms the view that a very long time must have elapsed between the beginning of the composition and its being put into a definitive form. As far as the form is concerned, its unity is remarkable. This need not surprise us, if we imagine that the different authors worked more or less together, and, moved by the same spirit, influenced one another. Moreover, their style is singularly affected by that of certain translations of Greek works. Certain differences, however, can be detected, which are probably not to be attributed solely to a difference of subject-matter. While most of the Epistles are characterized by clarity of thought and rigorous exposition, except when the discussion concerns points of doctrine that the Ikhwan wish to treat only in an esoteric manner, the 31st (causes of differences of languages), in spite of the interest of the content, is distinguished by a pedantic, obscure and over-subtle style, which is hardly to be found elsewhere except in the 41st (definitions and diagrams).

Another peculiarity of the 31st Epistle is that the author speaks in the first person singular; this occurs in no other Epistle, except by accident and for a reason that can be explained.

The same remarkable unity is to be found in the fundamentals. Most of the contradictions are merely superficial, and arise from the fact that the same general doctrine is expressed by different authors, each of whom deals with his own special point of view.

Content of the Epistles.—When, following an astral conjunction, a community assumes power and enjoys hegemony, it takes over, according to the Ikhwan, all the sciences of the communities that have dominated previously. This is particularly the case at the beginning of a new millennium, when one religious law comes to supplant that which preceded it. The Ikhwan, then, believe it legitimate to adopt all “the sciences and wisdoms” produced by the efforts (supported by divine inspiration) of the good philosophers (certain philosophers were also prophets, prophets being the best of the philosophers) and those that have been revealed by God in the course of the previous millennia. They claim, then, to present a compendium of all the sciences known in their time, taken, in the first place, from these ancient books, next from the “caliphs of the prophets” and their companions (iii, 38a). This is what has led Orientalists to regard the Epistles as an Encyclopaedia. These sciences express the profound “realities” (ḥādīṯ) of the universe, which support revelation
and religious laws, and, consequently, explain them in a rational way; for this reason they form part of the Ismā'īlī dogmas: they constitute the "hidden meaning" of the holy scriptures; and the Law, which are their "visible" aspect. It is, clearly, a doctrine of emanation inspired by Neoplatonism—but one in which the ṣaddām plays in this world the essential part in the re-ascent of fallen souls—combined with Plotin's theory of the celestial spheres, and astrological laws are, consequently, of prime importance in it as the instrument for the realization of the divine will (for a more precise idea of the doctrines see the few remarks which will suffocate here.

The theory of great cycles of 7000 years—a cycle of manifestation alternating with a cycle of concealment (cf. Corbin, *Hist. phil. Isl.*, 129)—is not discussed. Two fairly clear allusions to it, however, are founded (ii, 228, iv, 229; cf. *Imānāt*, 73-5); three allusions to our present cycle (ii, 344, iii, 319, 512); one allusion as well to the fall of the celestial Adam and the "Revelation and the Law" which are considered the "first terrestrial Adam" (iv, 512). The respective roles of the legislator and of the successive ṣaddāms are not clearly defined; there, however, an allusion to the great prophets who ushered in the millennia of our cycle (Adam, Noah, Abraham, Moses, Jesus, Muḥammad and the haʾūm who is none other than Muḥammad restored to life) in the account of the myth of the cave (iii, 315-8). Once the five Legislators (Noah, Abraham, Jesus, Moses, Muḥammad, iv, 18-9) are named, and elsewhere the "five prophets endowed with energy . . . whose legislation is different" (ii, 470-1, iii, 486). It should also be noted that the role of the initiator of the prophet is clearly seen (iii, 509 [al-Khīdr and Moses], iv, 90-8); the instruction of the initiator, however, is a human instruction, not divine like that of the ṣaddām; it is the ṣaddām and his principal lieutenants that bear the name of khudā, and not the initiator. Moreover, the legislators are superior to the other ṣaddāms, and Muḥammad is superior to all the other legislators. It is Muḥammad (the City of Knowledge) who initiates ʾAlī ("the Gate of the City").

Again, Salmān does not receive any particular precedence; he is mentioned once only, among the Companions of the Prophet, as being the seventh of these. In the Ikhwaʾn, then, we find not the order some ṣaddāms, even if it should be noted, finally, that everything relating to the ṣaddāms is dealt with most discreetly, and thus in a completely esoteric manner (manifestation and concealment, true revelation, etc.); the ṣaddāms succeeding al-Husayn are never mentioned by name.

The semi-esoteric character of the Epistles can be understood if one considers the object of their authors had in view.

The object of the Epistles.—In fact, they aim secondarily at securing man's happiness in this world (the perfection of the body favours the perfection of the soul), but have the essential object of securing the happiness of his soul in the next world, and first of all of allowing it to re-ascent there after death. The soul must, then, gradually disengage itself from the defilements of matter which weigh it down, that is to say which obscure it and prevent its having a true and universal vision of the realities of creation, and, consequently, its approaching its Creator. When it has, at last, regained the original purity of its essence, thus taking on "an angelic form", it loses interest in the body and its appetites; it is ready to rise through the celestial spheres when it is at last released from the body, and later to merge itself in the universal Soul, and then, with the latter, in the Intellect. The Epistles must, then, gradually inculcate this purifying knowledge. Since, however, the legitimate ṣaddām has the office of guiding the ascent of souls, it is to him that these must cling; drawing near to God involves drawing near to the ṣaddām in this world; "true" knowledge helps him to be recognized, and he is rightly the repository of this "true" knowledge.

The Epistles, then, incite not only to knowledge, but also to action; they include, in fact, a deep commitment to their practical implementation; they have as their object, apart from the satisfaction of the spirit, that they draw many towards this and rally men round the ṣaddām. Idealism of convictions is accompanied by realism in application.

All this greatly conditions the form of the Epistles. The form of the Epistles.—This rigid conception of the purification and opening out of the soul, which is concurrent with its evangelistic character, involves a well defined pedagogical conception, which lead the soul progressively "to the goal of the sciences and wisdoms" and to its first purity.

This is why the 51 Epistles (actually 52) that make up the latter part of the realities are supposed to follow a gradual progression; they should, in theory, go from the concrete to the abstract, and fall into four sections. According to the classification given in the 7th Epistle, the four sections should be as follows: mathematics (the root of all the other sciences), logic, physics, metaphysics. In fact, they appear somewhat differently in our Epistles, but this is probably in order that the work may have an harmonious equilibrium, with the four sections all of the same size. These are in fact the following: (1) mathematical section, which comprises essentially, in order of progression: arithmetic, geometry, astronomy, music, to which is added logic (which, according to the classification given in the 7th Epistle, should form a separate section); (2) physical section ("bodily and natural sciences"); (3) section on the psychical and intellectual sciences (which, according to the classification given in the 7th Epistle, should belong under metaphysics); it deals in particular with the universal Intellect and Soul, with resurrection, and with many other things as well; (4) section on the metaphysical (the word used is ‛īlāhiyya "divine") and legal sciences. In fact, they deal particularly with the behaviour of initiates and propagandists, but also,
cryptically, with the method of finding the *imam*—this, no doubt, is what justifies the name “metaphysical” for these Epistles; as for the name “legal” (al-*ṣafār*), it is probably due to the fact that they deal with moral beliefs. Which, unhappily for prophecy, itself, unworthy to figure among the *ḥabash* (ii, 251): they form the “hidden” meaning of “visible” law. They conclude with the Epistle on astrological magic, the worth of which, in practical terms, lies in its helping in the recognition of the legitimate *imam*.

This supposed progression remains theoretical, for many of the Epistles are arranged in one section when, they are already entirely different (i.e., ii, 45); this, however, is not always possible, for only certain rare privileged ones can have all the Epistles at their disposal (iv, 205, 250). They are, naturally, a remedy for those who are worthy of them, and they should not be deprived of them; for others, however, they constitute a danger, if they are unable to understand them or are unworthy and are likely to put them to evil use. It is foreseen that the Epistles may fall into the hands of such people, and this is why certain points are discussed esoterically and by means of allusions (i, 45, iv, 462). It seems that the Epistles were studied at “sessions” (*madī*); it is, however, foreseen that adepts who are already advanced may study them themselves, if they cannot attend “sessions”, and may afterwards question qualified men about points that seem obscure to them; in addition, they will assist adepts less advanced than themselves by their reading. In general, the method consists of reading the Epistles to the less advanced, then commenting on them in the form of discussion, in order to teach them the ideas, the morality and the object of the Epistles (iv, 185, 186, 188, 250-1, 331, 339).

**The nature of the Epistles.**—An attempt has been made, in *Sabdans et Ikhwan al-ṣafā*, to show that the origins of the doctrine should probably be sought in direct contacts between the first Ismaʿili and the Sabaeans of Harrān. The latter, following the Hellenistic tendency to syncretism, mingled, in a new synthesis, their religion, Babylonian in origin, with Mithraism and Greek religion and philosophy, a synthesis catalyzed by Hermetic influence. The Ikhwān, in their turn, considering that the sciences of the past, “philosophical” or “revealed”, belonged, under the aegis of their *imān*, to Islam, achieved a new syncretism by establishing in Islam the elements of this Harrānian synthesis and by giving, without perhaps being aware of the fact, a far more important place to Neoplatonism.

In the Epistles, then, many diverse elements are to be found. There are probably some traces of early Babylonian astrology, supplemented by Indian and Iranian astrological elements, the whole based on the tenets of Greek astrology. There are stories of Indian and Persian origin and quotations and stories taken from the Hebrew Bible, as well as from Rabbinic texts; there are also borrowings from the New Testament (Christian influence is, in any case, very strong). The influence of Greek writings, however, as might be expected, is the dominant one. Influences of Hermes Trismegistus are particularly evident (not only from the writings called “Hermetic”, magical, astrological or alchemical—certain of which are perhaps Harrānian—but also from the Hermetic philosophical writings, the influence of which pervades the whole work), as are those of the Pythagoreans (on arithmetic, music, arithmology, but also on the general spirit of the work), of Aristotle (especially in logic and “physics”), of Plato, and of the Neoplatonists (especially in metaphysics). No Neoplatonist author, however, is named by the Ikhwān, except Porphyry, of whose work only the *Isagoge* appears to have been known to them. Of all the Neoplatonists, probably Plotinus—although they differ from him on certain points—without their realizing it, and without their knowing him, exer-
cised the strongest influence on them; they, however, believed that they were following Aristotle; in fact, they quote a passage of the supposed "Theology of Aristotle", which is, actually, known to be a résumé of several of the Enneads of Plotinus (ed. H. Fr. Dieterici, Beirut 1955). Even the dialectical form seems to have influenced that of the Ikhwan, as it perhaps influenced, in a totally different direction, that of the Mutahallimin.

They appear, however, to have known other Neo-Platonist works which they do not quote. This influence is supplemented, in astronomy and astrology, by that of Ptolemy (but the Ikhwan knew what Pythagoras and Plato had spiritualized, the celestial spheres). Finally, Euclid and Nicomachus were used in geometry.

The Ikhwan also had recourse, when necessary, to many other authors of whom they quote only a few, such as Galen (physics, alchemy and astrological magic) and Vettius Valens (in astrology). What seems most remarkable, however, is the synthesis that they achieved, in an original manner, for their metaphysics, adapting them to the dogmas of Islam, and modifying, where necessary, the information of their predecessors.

The Epistles of the Ikhwan occupy a place in the first rank of Arabic literature, for if pure Aristotelianism progressively ousted emanatism in the philosophers, their influence endures, not only in Shi'ism, but also in the mystic movements.

( Y. MAQURK )
in general, such as al-Biruni. But it is found also, as a view of the world in general, in the introduction to the Kitāb al-Mukaddasi reject the tradition, as will be seen, but yet mention it, even if only briefly: this is the case at least with al-Iṣṭakhrī and Ibn Hawkal, whereas al-Muqaddasi, going much further, reserves a special chapter for the seven climates. More specialized, but also descriptive, the geography of the world, such as al-Balkhi (al-Istakhri, al-Mukaddasi); the view of the world in general, in the introduction to the Sifat Diwārat al-ʿArab: he knows the traditional division (pp. 24-6), but elsewhere (p. 10 f.) increases the number of the geographical unities thus defined and multiplies them by raising to 26 the total number of parallels which mark their limits.

On the whole, the central climates, those where there are large concentrations of Islamic peoples, are obviously better known than the others: it is noticeable that the precision of the latitudes decreases in proportion as the north is approached. From this point of view it may be considered that Islam (as was natural) was interested, among all the regions, chiefly in those with which it was essentially concerned. But although the precision with which maps are made is merely a consequence of the historical phenomenon of the expansion of Islam in these climates, it may also have been facilitated by the merchants, particularly for the knowledge of the eastern extremities of these same climates, which were vital for the important commerce of the time. Finally, it should not be forgotten either that the location of the towns as precisely as possible is a result of the necessity to fix in each of them the direction for the prayer: it is not by accident that al-Muqaddasi gives their chapter on these questions the title Dhikr akallm al-ʿilm wa-marks al-kibla.

This knowledge derives, with much else, from the type of geography which consists of the description of the terrestrial sphere, which is called sīrat al-ard. A general knowledge of this "configuration of the earth", together with its climates and the degree of uncertainty or precision of its respective parts, very soon became an obligatory part of the knowledge of the educated man. One of the most prominent themes is that of the central climate, the fourth, which represents "moderation in all things". Here the old Babylonian tradition combines with preoccupation with the political and cultural pre-eminence of ʿIrāq to produce the statement that in Mesopotamia are combined the most beneficial effects of a place's position on the map, of the astral influences and of the general configuration of the contours, the whole ensuring to its inhabitants the most solid qualities of character, perfect balance and the liveliest intelligence. Concerning this, the picture given by the ʿIkhwan al-Safā' (I, 170-9) is most revealing: in it ʿIrāq holds both a middle position so far as regards the natural features represented by the rivers and the mountains, and a high position regarding the cultural benefits represented by the towns.

The passage in adab writings concerning the general theme of the seven climates, and the special theme of the fourth is a widely attested phenomenon. Their importance is illustrated by the fact that, as we have said, they are not even completely absent from works of the school of al-Balkhi who, as we shall see later, have no use for them in the method which they follow. The integration of these themes in the general culture of the time led also to the appearance of new climate maps in the Kitāb al-Buldan of Ibn al-Fakhr (pp. 24-6) or in a more specialized book like that of the Spanish geographer al-Rāzī: the statement (p. 51) that Spain is situated in the fourth climate, that of Bagdad, is the result of a local enthusiasm which, attributing to Spain its own advantages, celebrities and marvels, allows it to stand comparison with ʿIrāq.

Against this collection of texts, stemming from the Greek tradition, the work of Ibn al-Fakhr must be set other works from the beginning of the age of geography, which obviously rejected this tradition. The administrator-geographers, even when they make allowances for it like Kurdāma (p. 230), tend to present their facts to conform with the exigencies of administration or politics: al-Yaḥṣūbī, who describes the world starting from Bagdad as centre, is uninterested in any division which is not by provinces, in other words which does not correspond to those concrete realities which are the history and geography of well-defined areas which may be administered as such. Ibn Khurdāṣihbī, the earliest of the Muslim geographers in the strict sense, is still more interesting: although he makes ʿilm, according to a rather confused terminology, the equivalent or a subdivision of a kūra, it is certainly to a real entity, forming an administrative whole, to which he refers by these two words: it is a "country" grouped round a capital town, and combining with others to form a larger entity. Thus Šamāt, Šīyazār, Maʿarrat an-Nuʿmān and the Lebanon are each considered as an ʿilm, whereas Antiṣārūs, Bulūnās or al-Lāḏīkiyya are given the name of kūra, these divisions together forming, with many others, a wider area known as abālīm Ḥimṣ (pp. 75-6).

There exists another meaning of the word ʿilm, this time pertaining to Iran. The word khorār refers, in Persian tradition, to the seven great kingdoms of the world, of which six (India, China, the Turks, Rum, Africa and Arabia) are distributed around the central kingdom, that of Iran. An obvious borrowing of this idea, but using the word ʿilm, appears in al-Masʿūdī (ed. Pellat, i, § 189).

Finally, the school of al-Balkhi was to give the word a new meaning, fully adapted to the realities of practical geography. Although it borrowed the word itself from the Greek tradition, it took from the Iranian tradition the idea of a figurative representation of ʿilm in the form of a bird or a familiar object, and the idea of a distribution of human groups around one centre, with the difference that this time the pivot of the world shifted from Media to Arabia. But a more important fact is that the school of al-Balkhi, in the spirit this time of administrative geography, is careful to define areas, land or maritime, regarded as wholes which in geography are clearly isolated. Thus al-Iṣṭakhrī and Ibn Hawkal, describing (in order to repudiate it) the old division of the seven climates, produce twenty new abālīm, exclusively Muslim: Arabia, the sea of Fārs, the Maghrib, Egypt, Šīm, the sea of Rum, Ḫuzār...
IKLIM — IKRAR

The geographical division of the iklim: he considered, first of all, that geography is concerned with men, thus with the cultivable earth, and he refused to use the term iklim for seas and deserts. He therefore reduced the number of the abalim: he no longer listed sixteen earthly abalim as his predecessors had done, but fourteen: six Arab (Arabia, 'Irak, Khazars, the desert of Persia, Sidjistan, Khurasan). It will be seen that, first the group Armenia-al-Ran-Adharbaydjan is listed under the single name of al-Rihab (the "[high] plains") and that, secondly, Sidjistan, Khurasan and Transoxiana are grouped in the iklim of the Mashrik, which means (ed. de Goede, 7) the Sāmānīd sphere of influence. The whole operation is to designate the iklim of the Mashrik, as a geographical and historical entity which was to have been at a certain time in the past, sufficiently independent of others to be the seat of a de jure or a de facto autonomous authority.

The final meaning of the word, that of "region", "country" in general, is attested by Abu l-Fidā', who, in his tables, places side by side the scientific definition of iklim (al-iklīm al-hakīki) and its current definition (al-iklīm al-urfī).

IKRAR, in fīhā, means an acknowledgement, whether judicial or extra-judicial. The Muslim jurists define ikrār as irādār, "confession" (Ibn Kudāma, Mughnī, v, 137). The institution, as it has been built up by the jurists of Islam, is however much more flexible, more comprehensive and more independent of the exact anterior reality which it is considered to reveal, than the corresponding institution of the western systems, in the sense that it is used not only to rectify a mistake to contain an error, but also often in practice to produce a new juridical situation. As J. Schacht has pointed out, ikrār, at least in matters concerning patrimony, "creates an abstract debt"; the efficient cause, sabab, of the obligation admitted is never demanded of the declarant, except in Šafiʿi and Ḥanbali law in matters concerning a slave "authorized to trade". The slave is required to state the origin of the obligation which he considers himself to owe in order for it to be admitted: whether it comes within the provisions of the authorization which he has received.

All these reasons make it seem preferable to substitute, as far as possible, when translating ikrār, "recognition of rights" for the much narrower term "acknowledgement".

Whether it is judicial or extra-judicial, ikrār is subject to the same juridical rules; this is why the jubahā', in their writings, have not divided the study of it into two separate chapters, and although they return to the question in the chapter dealing with judgment (bādā'), this is solely in order to point out the place of judicial acknowledgement among all the methods of proof admitted in law. A judicial acknowledgement is one which intervenes during an action. It consists of the recognition by the person against whom the petitioner alleges a fact, or a right, of the soundness of the request. At this juncture, the procedure goes no further. The judge cannot neglect this recognition and demand a further proof. But if the defendant denies the claim of the plaintiff, it is then a matter of an inkrār [q.v.] or denial, which may lead to the procedure of an oath, which then has to be sworn by the defendant.

On the other hand, a distinction which must be made concerning ikrār is that based on the object of the recognition. If this object is a right to a patrimony, it is then a matter of an ikrār bi-l-jubāhā'; but if it is a non-patrimonial right (marriage, paternity, reputation, etc.), it is described as ikrār bi-l-nasā', bi-l-inkāhā', etc. This is not merely a question of terminology, since the two categories of recognition do not function quite according to the same rules.

1. Conditions of validity. These concern the declarant (al-maḥārīr), the beneficiary (al-mukāhār) and the object of the recognition (al-muḥārār bihā).

The author of the recognition must have reached the age of puberty and be of sound mind. A minor, an idiot or a person of low intelligence (maʿṭāh) may recognize neither a patrimonial nor a non-patrimonial right. A spendthrift (ṣafīh) may recognize only a non-patrimonial right.

With slaves, it is important to distinguish between one who has been authorized by his master to trade, and one who has not. For the latter, as a general rule, there can be no question of the recognition of debts, since he has no patrimony proper, and the acknowledgement of a previous debt would be manifestly untrue. Has he then the right to admit to an offence which is dealt with by a corporal punishment? According to almost all the writers of all the schools, his admission, under the circumstances, is valid, and he should recognize the continuance of the slave's liability for this offence in spite of the loss (e.g., the slave's life, or the mutilation of one of his limbs) which this could involve for the master; the Hanbalīs' adopt more or less the same point of view but do however consider the admission of a murder to be un-accepalbe.
The situation of a slave "authorized to trade" is quite different. According to the non-Hanafi doctors, his recognition of a debt is valid if this debt is in connexion with the trade in which he has been authorized to engage; it is a charge on his own profits, and not on any goods which may have been entrusted to him by his master. Hence the non-Hanafi insistence on the necessity that the cause (sabab) of the debt should be defined. According to the Hanafis, the debt recognized by the "authorized" slave is to be a charge on the whole of the goods in his possession. All the Hanafi doctors agree that an ikhr obtained by force is null whether the object of the recognition be patrimonial or non-patrimonial. Indeed this leads, in Hanafi law, to a rather paradoxical situation, concerning in particular repudiation or enfranchisement. This school regards these two actions as still valid even if they have been obtained directly through violence, but the ikhr, if its object is an earlier repudiation or an enfranchisement, and if it has been obtained by force, is nevertheless deemed to be invalid (al-Zayla'i, Tabyin, v. 2). For a person in a state of intoxication, the general principles of the law demand that any recognitions of rights towards a third party which he may be persuaded to utter while in such an unconscious or semi-conscious state are to be regarded as not having occurred, and the majority of the schools accept this solution. The Hanafis, on the other hand, rather inappropriately introduce a new consideration: that, in the strict juridical field, distinction between drunkenness which is excusable and drunkenness which is voluntary or culpable. In the first case (if for example the declarant has become intoxicated inadvertently through taking too large a dose of a medicine containing alcohol), the drunkenness, in this case considered excusable, makes inoperable all the admissions of the person who is in this state. But if the admissions are pronounced while in a state of culpable or voluntary intoxication, all his admissions are considered in Hanafi law to be valid.

The recognition of rights, whatever its object, is a unilateral act which is an obligation on its author for as long as the beneficiary (who is of course never forced to accept it) has not in some way expressed his refusal (radd), also referred to as denial (istithnd*). If this happens, it becomes invalid, the declarant being made the beneficiary implying its dishonest character. This is what the writers mean by saying that ikhr is irrevocable. There cannot therefore be any inhr after an ikhr, but the reverse is possible: al-ikhr ha'ad al-inhr sakht (al-Sara'kh, Mabsu', xvii. 157).

The rule of irrevocability admits at least two exceptions: (a) the first concerns the "rights of God" (habb Allah). A person who confesses to an offence punishable, i.e., revocable, such as the use of alcoholic liquor, etc., has always the right to retract, even after judgement has been passed, and right up to the moment when the punishment is inflicted. This does not apply to an offence punishable by retaliation, since retaliation is a "right of man", and the admission in this field is always irrevocable. (b) It is also permissible for the author of a recognition of "infect relationship" (see below) to retract his statement; indeed this recognition is in fact equal to a testament in which the right of acceptance, since an ikhr may always be refused. It is agreed that the acquiescence of corporate bodies does not have to be formal; those below the age of puberty who have reached the age of discretion may acquiesce in person. When the beneficiary of an ikhr has not reached the age of reason, he may not consent to it in person; the question is important particularly with regard to the recognition of paternity. If the person recognized by another as his son has not reached the age of reason (or if he is mentally defective), he may not acquiesce in this recognition, which will therefore be valid only in respect of the unilateral wish of the author of the recognition, and this definitively, that is without its being possible for the recognition to be questioned when the child reaches the age of reason, or when an insane person who has lucid intervals recovers his reason (al-Kasani, op. cit., vii, 232).

Concerning the object of the ikhr, al-mukarr bihi, it may be stated without hesitation that all rights of whatever sort, "the rights of man" (habb al-'ibad) or "rights of God" (habb Allah), patrimonial or non-patrimonial rights, may form the object of a recognition subject to the conditions mentioned above. There does not exist in fiqh a single exception to this rule, on condition, of course, that the right which is the object of the recognition appears feasible and is permitted by Muslim law.

But the problems raised by ikhr are not exactly the same, according to whether its object is a patrimonial or a non-patrimonial right.

II. The recognition of patrimonial rights (al-ikhr bi-l-hukuk).

The authors deal mainly with the recognition of a monetary debt and list the formulas suitable for expressing such a recognition, the simplest being: "I owe you a thousand dirhams".

The formula naturally varies according to whether the right recognized is a right to property, a deposit, a share in a limited partnership, etc. The Muslim jurist is faced with two great problems in connexion with this type of ikhr. The first is that of the indivisibility of the acknowledgement, the second that of the valuation of the mixed debt made during the final illness (marad al-mawt) of the declarant.

A. The problem of the indivisibility of the acknowledgement is common to all the legislative systems. It is stated thus: upon the hypothesis that the author of the acknowledgement, after having recognized a principal fact or a right, produces a new fact which modifies the juridical effects of his first affirmation, it is necessary to know who has the right acknowledge that the right which is the object of the recognition appears feasible and is permitted by Muslim law.

The Muslim jurists, adhering to their method of proceeding by concrete cases, put the question slightly differently. Is the isstithna? I.e., the exception, the restriction, which is introduced into an acknowledgement by the jurist, is "except", qualified, or is it considered non-existent, the acknowledgement remaining valid because it is irrevocable?

All the schools allow istithna? when the object of the restriction is of the same genre (djinna) as that of the main obligation; this is easy to understand, since the acknowledgement then forms an indivisible
whole. Apart from this case, on which all the jurists agree, the Hanafis authorize *istihdam* (thus rendering the acknowledgement indiscriminable) when the objects of the declaration are things which may be weighed, measured or counted". If this is not so, if, to take a classic example, the author of the recognition of a sum of money excludes from the object of his acknowledgement a slave or a garment, the restriction is null, considered not to have been formulated, the first part of the acknowledgement remaining perfectly valid. The Shafiis and Malikis go much further in the direction of the principle of the indivisibility of the object of the declaration. According to their doctrine, any *istihdam* is valid and is binding on the beneficiary of the recognition, who must either accept it as a whole or reject it entirely. The Hanbalis reject any *istihdam* except one whose object is of the same genre as the main obligation. Ibn Kudama (Muzni, v, 142) explains their position thus:

"To admit every sort of *istihdam* is to allow the author of the recognition to attach to the debt which he recognizes a claim against the best security which has no connexion with the object of the recognition. This would absorb him (if the thing were permitted) from proving, by witnesses or other means, the sound foundation of his claim"

The preceding rules do not apply in matters concerning the term *(aqd)*, which the author of the recognition includes in his acknowledgement. If the beneficiary contests the term, he is, say the Hanafis and the Malikis, to be believed, but must take the oath; the Shafiis and the Hanbalis on the other hand give precedence to the statement of the declarant; and it is incumbent upon the latter to state on oath that the debt was indeed due.

It is important not to confuse *istihdam* with what the jurists refer to as *istidrak*, which is a rectification. It is supposed that the author of the acknowledgement corrects himself in order to recognize a higher sum than the one he has just mentioned. It is easy however to avoid confusion, since *istidrak* is introduced into the phrase by the expression *lah bal*, which means: "not this, but rather". Thus the author of the acknowledgement may say "I owe so and so a thousand *dirhams*, nay rather two thousand".

According to the Hanafis, because of the rules of *kifah* (q.v.), the second declaration should be added by the author of the recognition, which finally owes 3000 *dirhams*, since all recognitions of debt are irrevocable as soon as uttered; but in *istihdah*, in equity, it is admitted that he owes only the total given in the *istidrak*, i.e. 2000 *dirhams* (al-Kasani, op. cit., vii, 212).

B. *Ikrar al-marad*. The recognition of debts made by a sick person in *articolo mortis*, or by anyone in danger of death (a person drowning or under sentence of death) is especially suspect, in a legislative system which, like *fikah*, sets very narrow limits to any acts of liberality inspired by approaching death. It could be too easy for a sick person to arrange things to the advantage of an heir by means of an *ikrar* or to dispose of more than a third of his fortune to a stranger, both of these being acts of generosity which he is not permitted to perform, directly, by testament.

Nevertheless, it is only the Hanafi and Hanbal school which lay down definite rules for the *ikrar* in favour of an heir. According to these two schools, *ikrar* uttered during the "death sickness" of the declarant in favour of an heir may be annulled, just as a testament in his favour would be (unless it had the unanimous agreement of the co-heirs).

The Malikis turn in each individual case to discovering the intention of the declarant. If this intention, because of the circumstances, is suspect (*mutiama*), then the *ikrar* is not valid, as such, but if it is considered that the declarant really did owe the object of the *ikrar* to his heir, they then consider the recognition to be perfectly in order. The Shafiis consider that, of the two diametrically opposite opinions professed by the Imam al-Shafi, the *raddjif* (preferable) opinion is that which regards as valid (*sahih*) any *ikrar* made during a final illness, even one in favour of an heir (al-Rami, Nihayat al-muhaddi, iv, 51).

If the beneficiary of the *ikrar* is not an heir of the dying person, all four schools allow him the *entire* benefit of the sum that is recognized as being due to him, even if this absorbs all the inheritance.

The beneficiary will then be in competition, and for a share proportional to his claim, with those to whom the declarant had been in debt before his illness. Only Hanafi law gives to those who were creditors before the illness priority over those who are beneficiaries of the *ikrar* made during a final illness, by virtue of the saying *dusyan al-shahih mukaddama* al-dusyan al-marad "debts [contracted] in a state of health are to be preferred to those made during the last illness".

III. Recognition of extra-patrimonial rights. It is always slightly surprising to see how readily *fikah* admits the recognition of a non-patrimonial right by one person in favour of another, even when this right cannot have come into existence directly except under relatively stringent conditions, from which its simple acknowledgement is exempt. Marriage, paternity, direct or indirect relationship, repudiation, enfranchisement, etc., may be the object of an *ikrar* which will take the name of the right thus recognized. We shall deal here only with the recognition of marriage, or, in other words, of the status of spouse (*ikrar bi-'l-nikdh*) and with the recognition of relationship (*ikrar bi-'l-nasab*). These are in fact the family rights which in the past most often formed the object of an *ikrar*.

A man may recognize a woman as being his wife, and *vice versa*, on the sole condition that there exists between them none of the impediments to marriage laid down by Muslim law. This possibility allows proof by witnesses or by documents to be replaced by other methods when such proof is impossible of too difficult, but it will also allow in certain circumstances the circumvention of the detailed regulations which govern the contracting of marriage in Muslim law. Naturally the recognition is valid only if it is approved by the beneficiary. Here there becomes apparent a difference between the recognition made by a man and that made by a woman. When it is the man who takes the initiative in the recognition, the woman may acquiesce, even after the death of the person who claimed to be her husband, whereas if it is the woman who is the first to "admit" her marriage with a certain man, the man may approve it only while the woman is still living.

The above dispositions are those of the Hanafi school; all the other Sunni schools and the Shi'ite schools hold more or less the same principles, except for the Malikis, who admit the *ikrar* bi-'l-nikdh only between persons who come from a distant country and who because of this may have some difficulty otherwise in providing proof in any other way of a marriage between them which took place in that country.

The *ikrar bi-'l-nasab*, the recognition of relationship, covers in reality two different institutions,
according to whether the relationship recognized is direct or indirect.

The relationship is direct when it does not imply, in order to be possible, the existence of a third person between the author of the recognition and the beneficiary. This can arise only in the case of the recognition of a child, a father or a mother. In all other cases (recognition of a brother, an uncle, a grandson) the relationship is indirect, since the author of the recognition could obtain the result he seeks only by attributing to a third person (his father, his grandfather, his son respectively in the examples given) the paternity of the person whom he recognizes.

This is why, while the recognition of direct relationship "establishes" (hābbāla) sonship or paternity, as the fukāhā say, the recognition of indirect relationship has only very narrow effects, limited to the author of the recognition only, and resulting occasionally in a right to inheritance of the beneficiary.

a) Recognition of direct relationship. In all the schools, three conditions are necessary for its validity: the child who is recognized (or who recognizes) must not be the son of someone else; there must be a sufficient difference in age between the author and the beneficiary to make the recognition likely; finally the person recognized must agree to it, unless it is a question of a very young child or of an insane person. To these three conditions the Mālikis add a fourth: they require that the circumstances of the birth were such as to make such a relationship plausible, in other words they consider that a child born in Morocco may not be "recognized" by a father who is definitely known never to have left Syria; but the other schools do not demand this condition nor (agreeing in this with the Mālikis) do they demand that proof be shown of the marriage of which the child is the issue.

The recognition of direct relationship puts the beneficiary in exactly the same juridical situation as if the relationship resulted from the rule al-walad li-‘fīrādī, "the child belongs to the marriage-bed", or from the proof by bayyina, by witnesses; this applying in all the branches of law, whether concerning succession, impediments to marriage, inheritance, his grandmaster witness, or else in penal law.

b) The recognition of indirect relationship. This, unlike the above, does not form a situation valid erga omnes. The author of the recognition binds only himself, but it is excessive to write, as does al-Zayla‘i (Tabyīn, v, 28), that "the recognition of a brother or of an uncle is the equivalent of a bequest!". In Hanafi law, a person who has recognized someone as being his brother (the most usual example) obviously cannot attribute to the beneficiary the status of being the son of his own father without the latter’s approval. Without such approval (the father being already deceased or having refused his consent), the beneficiary has no rights except as regards the author of the recognition; for this reason he will share with the latter the possessions which he inherits from his father; he may eventually claim from him maintenance, and will receive the whole of his inheritance, if the author of the recognition dies without leaving any heirs. This recognition, unlike the preceding one, may always be revoked, as may a testament.

The contemporary legal codes, since the Syrian Code of Personal Status of 1953 (art. 134 & 135), devote a fair number of clauses to the recognition of direct relationship. This modern legislation appears to be very reasonable. The institution still retains today a large part of its practical interest, since it enables the gaps in the records of the registry office to be made good, the latter in any case not being held in very high regard in certain Muslim countries; furthermore, it makes possible the recognition of a natural child (it is enough to fail to mention the irregular conditions of its birth) and also the adoption (referred to as recognition) of a foundingling.

It is surprising on the other hand to find, in these contemporary texts, clauses concerning the recognition of indirect relationship. This is hardly ever used today and it is doubtful whether it was really useful to include even brief rules about it in the laws and the codes the aim of which was adaptation to the conditions of modern life. Thus the Egyptian law of 6 August 1943 on inheritance devotes to it article 42; the Syrian, Tunisian and Moroccan codes of Personal Status refer to it, giving it moreover the same outline which the institution had in Hanafi law. It is only Trak which, in correcting the legislative whims of Kāsim, has not, in its Code of Personal Status, revoked the right to inheritance of a beneficiary of a recognition of indirect relationship (art. 88, modified by the law of 18 March 1963).

(Y. LINANT DE BELLEFONDS)
Azza [q.v.], and the prayer for the dead was spoken on both of them together. It is related that on account of his Kharidji opinions he was searched for by some governors, but the vagueness of this information shows it to be spurious. According to the oldest sources, he transmitted traditions from Ibn 'Abbās, Ḥāsha, and a very few others; later, the numbers of his authorities and of the transmitters from him increased almost indefinitely. Already in Ibn Sa'd, admiration of his knowledge is mixed with critical comments on his traditions; Bukhārī still endorses him, but the other Traditionists accepted him notwithstanding the objections which were being raised to him (four of the authors of the classical collections of traditions, Bukhārī, Muslim, Abā Dāwūd, and Naṣāʾī, included his traditions in their works), and only some later critics declared him unreliable or to have been untruthful in relating from his master, no doubt on account of his Kharidji, and therefore heretical, opinions; but the final appreciation of his Kharidji works), and only some later critics declared him unreliable or to have been untruthful in relating from his master, no doubt on account of his Kharidji, and therefore heretical, opinions; but the final appreciation of his Kharidji, and therefore heretical, opinions; but the final appreciation of his Kharidji, and therefore heretical, opinions; but the final appreciation of his Kharidji, and therefore heretical, opinions; but the final appreciation of his Kharidji, and therefore heretical, opinions; but the final appreciation of his Kharidji, and therefore heretical, opinions; but the final appreciation of his Kharidji, and therefore heretical, opinions; but the final appreciation of his Kharidji, and therefore heretical, opinions; but the final appreciation of his Kharidji, and therefore heretical, opinions; but the final appreciation of his Kharidji, and therefore heretical, opinions; but the final appreciation of his Kharidji, and therefore heretical, opinions; but the final appreciation of his Kharidji, and therefore heretical, opinions; but the final appreciation of his Kharidji, and therefore heretical, opinions. The Fihrist (p. 38, l. 2) mentions a book of his, derived from Ibn 'Abbās, on the revelation of the Kurān; it is no doubt as little authentic as the other collections of interpreting notes on the Kurān attributed to Ibn 'Abbās (Goldziher, 77).

IKRĪTIS, Arabic name of Crete, with the variants Akritēs (Yākūt), Iršādīsi (Ibn Rusta), Irktēs (Ibn al-Hawkal) (Akrita [Yākūt, ii, 865] refers to a locality in Asia Minor and has only a fortuitous resemblance with the name of the island of Crete).

Geography. The Arabic geographers describe it as one of the largest islands in the Mediterranean (Bahr al-Rūm [q.v.]), whose situation they sometimes confuse with that of Cyprus. They give widely varying figures for its area; a circumference of 300 miles (Ibn Rusta) or taking 15 days on foot (Ibn Khurraḍa al-Dhath; al-Himyari), 100 farsakh (al-Mukaddas; see Sh. Miquel in his Indices by M. Shafi, 1, 98 f. (no. 87)) that it came under Muslim domination. Its conquerors were not Arabs from the East, but came from Andalusia.

After the revolt, in 202/818, of the inhabitants of Cordova against the Umayyad amir al-Hakam 1, which was ruthlessly suppressed, the whole population of the Suburb of Cordova (al-Rabad) was exiled. A party of them (al-Rabadīyiūn) reached Morocco; others, more than 10,000 in number (15,000 according to Ibn al-Abbâr; see al-Bakrī, tr. de Slane, 285, note) joined probably by sailors from the coast of Andalusia, became pirates in the central and eastern Mediterranean. These pirates landed on occasion in Alexandria and became, owing to the political troubles there, masters of the city, forming with the help of a part of the population a small republic
which lasted for about twelve years, from 200 to 212/816-27. According to al-Ya'qūbī there were about 3,000 of them, arriving in 4,000 ships—an unlikely number—under the command of Ḥaṣṣ b. Ṣuḥayy b. ʿIsā (and not Ṣuḥayy b. ʿUmar as is given in one single tradition in Ṣaḥīḥ al-Baḥrī) al-Baḥrī, a native of Faḥṣ al-Baḥrī [q.v.], who was called al-Ghalz (the fat, the corpulent; Ṣaḥīḥ), also later al-ʾIrṭīṣīḥī. It was not until 212/827 that a new governor of Egypt sent by al-ʾArābī, Ibn Ṭāhir, put an end to their domination. He laid siege to Alexandria in Saḥār/May and forced it to capitulate, after a few days, in Rābi‘ I/June. According to Michael the Syrian (in Brooks, Storia, 2, 404, n. 2), the Spaniards mentioned in Ibn Ṭūlūn’s At-dhambāt (the emigration) and in selling the slaves and the booty which they had been expected, either because of the absence of Greek troops or because of the indifference of a population dissatisfied with Byzantine rule.

Byzantine tradition (Theophanes continuatus, 74-5) claims that, after this, Abū Ḥaṣṣ had his ships burned in order to deprive his companions, who wished to see their wives and children again, of any hope of getting away from the island, praising to them the wealth of this country where milk and honey flowed abundantly and telling them that they would find wives there. This tradition is not confirmed in the Arabic sources and seems unlikely, since the Andalusians certainly had their families with them. It is very probably a legend. Nevertheless Amari supposes that Abū Ḥaṣṣ might have burned some ships which were in a bad condition, and this may have given rise to the tradition.

Once settled in the island, whose Christian population they reduced to subjection, the Andalusians organized themselves into an independent emirate, recognizing more or less the authority of the ʿAbbāsid caliph and led by Abū Ḥaṣṣ ʿUmar and, after him, his descendants. They engaged mainly in piracy and in selling the slaves and the booty which they acquired from this. They may have contributed to the conquest of Sicily if, as Amari supposes (Storia, i, 304, n. 2), the Spaniards mentioned in Ibn Ṭūlūn’s (Baṣīr, i, 95) as having helped Ṣaḥād b. al-ʾUmar to come from Crete.

In 828, they ravaged the island of Aegina; in the same year the Byzantines attempted to reconquer Crete. Soon after 828 an expedition under the Greek Photios, which was joined by reinforcements under Damianos, failed completely: Damianos was captured and Photios fled with great difficulty. Another expedition led by Photios landed on the island, but after an initial success the troops were surprised in the night and massacred. Crateros, who succeeded in escaping, was captured on the island of Cos and hanged.

At the end of the reign of Michael II (820-9) or at the beginning of that of Theophilius, his son (October 829-842), the islands of the Aegean were re-captured from the Cretans, and this liberation is generally attributed to a certain Ooryphas, who had been put in command of a large fleet. In 829-30, Theophilius entered into relations with the Umayyad ruler of Cordova, ʿAbd al-Rahmān II, and attempted to gain his support against the Andalusians of Crete, on the pretext that they were rebels against the Umayyad authority who had given their allegiance to the ʿAbbāsid caliphate. The Umayyad merely gave the emperor complete freedom to expel the Andalusians from Crete (see E. Lévi-Provençal, Un échange d’ambassades entre Cordoue et Byzance au IXe s., in Byzantion, xii (1937), 1-24, following an anonymous Arab chronicle).

During the reign of Theophilius there occurred several encounters between Byzantines and Cretans. In Shabān 214/October 829, the Arabs destroyed a Byzantine fleet off the island of Thasos and laid waste Mount Athos, which remained for some time deserted. The Byzantines ravaged the coasts of the theme of Thrace (the west of Asia Minor) and massacred the monks of Mount Latros; but after this they were annihilated by the strategos of the theme, Constantine Contomites. The date of this event is not known, though Brooks puts it as late as 841.

During the reign of Michael III (842-67), Byzantium, after destroying in 843 a powerful Arab fleet which was sailing towards Constantinople (but which came from Syria and not from Crete), decided to attack Crete. The expedition, which took place in the same year, 843, was led by the logothete Theoctistes. It resulted in a temporary occupation of Crete (see Ahrweiler, 112 and 441), but Theoctistes returned to Constantinople because of rumours spread by the Arabs of political intrigues in the capital and, according to the continuator of Theophanes, the troops left in Crete were massacred by the Arabs.

The Byzantines continued to plan an expedition against Crete, which constituted a continual danger to the Greek coast and islands. As Crete obtained its arms from Egypt, a Byzantine fleet attacked Damietta in 853 and seized there a large supply of arms destined for Crete, while other squadrons were in action around Crete itself. The increase in the Byzantine maritime power at this time did not prevent the Cretans, in the last years of the reign of Michael III, from landing in Athens on two occasions in 862. In 866, Byzantium decided to undertake a new expedition against Crete, but the assassination of Bardas, the maternal uncle of the emperor, with the latter’s connivance, interrupted these operations (Vasiliev, i, 258; cf. Ahrweiler, 112).

During the first period of the Macedonian dynasty, the Arabs of Crete remained active. In 872, their raids reached as far as the Dalmatian coast of the Adriatic, and in the following year they laid waste the islands of the Aegean with a fleet under the command of a renegade called Photios, probably accompanied by other renegades. Some ships even reached the island of Proconnesos in the Hellespont. But the Byzantine admiral ʿOoryphas (a different person from the ʿOoryphas mentioned above), inflicted a severe defeat on the Cretan fleet, of which several ships were burned. Nevertheless, Photios re-appeared on the coast of the Peloponnese. The same Nicetas ʿOoryphas gave battle to him and, according to the Byzantine sources, took his revenge on the prisoners, inflicting horrible tortures on the renegades in particular. As a result of these Byzantine
victories, it appears that for about a decade the Cretans were forced to pay tribute to Byzantium. The amir of Crete, according to the Byzantine sources, was, in Salphis or Saet, a corruption of Ish'qiyb. At the beginning of the 10th century, the raids by the Arabs of Crete who were in communication with those living on the coast of Syria continually caused great havoc, in particular in the Peloponnese, where they massacred the inhabitants or carried them off to sell them as slaves. They were in control of Patmos, one of the Sporades, and Naxos paid tribute to them (see John Cameniates, Εἰς εἰκόνα Θεσσαλονίκης, ch. 68, 360-3, ch. 70, 573; Vasiliev, ii/1, 148-150, Russian ed., 134; cf. Ahrweiler, 104). The Muslim Syrian squadron of Leo of Tripoli, which captured Thessalonika in 291/904, anchored on the island of Patmos, one of the Sporades, and Naxos paid tribute to them (see John Cameniates, Εἰς εἰκόνα Θεσσαλονίκης, ch. 68, 360-3, ch. 70, 573; Vasiliev, ii/1, 148-150, Russian ed., 134; cf. Ahrweiler, 104).

The Muslim Syrian squadron of Leo of Tripoli, which captured Thessalonika in 291/904, anchored on its return journey at Crete, where some of the prisoners were sold (John Cameniates, ch. 73; Vasiliev, ii/1, 177, Russian ed. 150), which demonstrates the agreement which existed between Crete and Syria.

At the time of the expedition of the admiral Himerios in 297/909-10, a Byzantine emissary, who was the author of the Life of Saint Theoctistus of Lesbos, was sent to Crete to find out the intentions of the amir and to try to ascertain whether he would be giving his support to the Arabs of Syria (see Vasiliev, ii/1, 209, Russian ed. 177-8). It is not clear whether the same Himerios led an expedition against Crete in 911. This has been questioned (Ahrweiler, 113, n. 4). In any case, in the spring of 912, whether after the expedition against Crete or that against Syria, Himerios's fleet was pursued by that of the Arabs of Syria, probably helped by the Cretans, and destroyed to the north of Chios (Vasiliev, ii/1, 214; Russian ed., 182-3).

During the reign of Constantine Porphyrogogenitus, between 930 and 940, the Cretans attacked the Peloponnese and central Greece and also Athos (where fortifications had to be built) and the coasts of Asia Minor (see Vasiliev, ii/1, 320 ff., Russian ed., 270 ff.). It is possible that they penetrated Attica and as far as Athens (see the works quoted by G. C. Miles in Hesperia, 1956 and the note in Vasiliev, 320). The emperor therefore decided to prepare an expedition against Crete in 914 in order to put an end to the activity of the pirates: the preparations for it are described in detail in the De ceremoniis, ii, 45. But again the expedition was a failure; after the army had had to turn back, they were taken by surprise and defeated; and, large a number of ships were lost (see Vasiliev, ii/1, 333 ff.). It was during the reign of Romanus II, the son of Constantine Porphyrogogenitus, that Crete was reconquered by Nicephorus Phocas with a large fleet and army. The expedition left Constantinople in June or July 960. After landing, the army marched on the powerful fortress of Chandax and laid siege to it, while detachments spread across the island. The siege lasted throughout the winter of 960-1 and the fortress was captured by assault on 6 March 961.

The Cretans had not been able to obtain help. The amir of Aleppo had no fleet and does not appear to have been approached. An embassy had been sent from Crete to the Ikhshid amir of Egypt, but he, realizing his weakness, advised them to seek help from the Fatimid caliph of North Africa, al-Mu'tazz. The latter not only sent word to the emperor declaring that the truce concluded with Byzantium in 345/956-7 was at an end and demanding that he raise the siege of Crete; he further promised to send a fleet to aid Crete, and proposed to the amir of Egypt that they should act together, the African and Egyptian fleets to meet at Cyrenaica on the first day of Rabī' II 350/20 May 961. Documents relating to this are to be found in al-Majdūlīs wa' l-musayyārāt of the khitāb of Abu Hanifa al-Nūmān, the friend of the caliph al-Mu'tazz, published in the work by Hassan Ibrahim Hasan and Tāhā Abūmānṣar, al-Mu'tazz il-Dīn Allāh, Cairo 1948, 303-4, 321-2, analysed by Fahrat Dachraoui, La Crette dans le conflit entre Byzance et al-Mu'tazz, in Cahiers de Tunisie, no. 26-7 (1959) and tr. by M. Canard, Les sources arabes de l'histoire byzantine, in Revue des Études Byzantines, xix (1961), 283-8.

Although G. Al'Atir and other historians state that the Fatimid caliph, as he had promised the Cretans' ambassador, sent troops, who gained a victory over the Byzantines and took them prisoner, this is very doubtful: at the date indicated Chandax had already been taken by Nicephorus Phocas and this help would have arrived too late. According to the Byzantine sources, the amir of Crete having sent an appeal for help to the Arabs of Spain and Africa, a number of ships and a large force under the command of al-Mu'tazz, possibly supported by the Cretans, who had already been taken by Nicephorus Phocas and this help would have arrived too late. According to the Byzantine sources, the amir of Crete having sent an appeal for help to the Arabs of Spain and Africa, a number of ships and a large force under the command of al-Mu'tazz, probably helped by the Cretans, and destroyed to the north of Chios (Vasiliev, ii/1, 214; Russian ed., 182-3).

A treaty was concluded on this basis. Then the emperor proposed to the amir to send to Crete a herd of brood-mares, whose progeny was to be shared between them, the males for the emperor and the females for the amir. This was a ruse, which allowed the Byzantines to introduce into the island 500 horses with their grooms. Thereupon there arrived secretly the troops of Nicephorus Phocas, who landed at the place where the horses were, bringing with them saddles and bridles. They had only to mount the horses to be ready for battle and to take the defenders of the island by surprise. But, according to Yāḥūt, the army of Nicephorus Phocas consisted of 70,000 men, 5,000 of them being horsemen, and according to Ibn Khaldūn, he arrived with 700 ships.

The work of C. Schlumberger, Un empereur byzantin au Xe siècle, Nicephore Phocas, gives a detailed and vivid account of the siege of the town of Chandax. After the failure of a detachment sent into the interior, which was taken by surprise and massacred, Nicephorus began a complete blockade of the town by means of an entrenched, which stretched from one end of the island to the other. Bombarded and cut off from the rest of the island, the town fell, though not without putting up a vigorous defence, after a siege which lasted throughout the winter of 960-1. The town was pillaged and the inhabitants who had not been killed were taken captive, among them being the last amir, Kouroupas, his son Anemas and their family. The walls were demolished, and a fortress was built on a neighbouring height and provided with a garrison. The mosques were destroyed and all copies of the Qurʿān were burned (cf. Kūdāb al-'Uyūn, s. v. Mu'tazz). The Muslims who remained in the island were gradually converted to Christianity.

The capture of Crete resulted in unrest in Cairo, of which the victims were the Christians there (Yahyā b. Sa'id).

According to al-Nuwayri, the conversion of the Muslims was achieved by cunning and by force.
Some important inhabitants, invited to pay their respects to the emperor at Christmas, received lavish gifts and returned to the island very pleased. Following this a great many people travelled to Constantinople but then were arrested and forced to become Christian. In this way the island became entirely Christian.

Constantinople but then were arrested and forced to become Christian. In this way the island became entirely Christian.

Following this a great many people travelled to Constantinople but then were arrested and forced to become Christian. In this way the island became entirely Christian.

After this a great many people travelled to Constantinople but then were arrested and forced to become Christian. In this way the island became entirely Christian.

Abu Hašf ʿUmar b. ʿAbd al-ʿAzīz, d. 361/972.

Also in the Byzantine and the ʿAlamiyya are mentioned Cretan scholars, probably of Andalusian origin, with the nisba al-ʿIrājīth. One of them taught in Damasc, another in Egypt. Al-ʿIrājīth mentions an ʿUmar b. ʿĪsā b. Muḥammad b. ʿYūsūf, a descendant of Abu Hašf, who wrote, while a prisoner in Constantinople, a book on the meanings and the miracles of the Kurʾān. Al-Ṭabar (iii, 1880) speaks of a Byzantine ʿAlamiyya whom he refers as Naṣr al-ʿIrājīth, and who was killed in battle in 259/872-3. The commander of the Cretan fleet, Nisīr (Nisīris), see Vasiliev, i/l, 209 n., does not seem to have belonged to the family of Abu Hašf.

Crete remained Byzantine until the capture of Constantinople by the Franks in 1204. It then fell to Count Boniface of Monferrat, who sold it to the Venetians (see Bar Hebraeus, Chronography, Oxford 1932, 356; cf. K. M. Setton (ed.), A history of the Crusades, ii, 190-1, and Heyd, i, 276 ff.). It was in dispute between Genoa and Venice, the latter reconquering it in 1207. A key-point of the Venetian possessions (Heyd, i, 470), it remained Venetian until it was conquered by the Ottomans in 1669.

OTTOMAN PERIOD

From the time of the occupation of Crete by the Venetians until it was conquered by the Ottomans, there were very few attacks against it by the Turks: an expedition by the bey of Aydin, Umur, circa 741/1341; an Ottoman attack in 873/1469; another, more serious, led by Khayr al-Din Barbarossa in 943/1538; and finally an assault on the fortress of Suda in 974/1567 while a fleet from Algiers was ravaging the region of Retimo.

All the same the existence of this Venetian bastion in the eastern Mediterranean constituted a permanent menace for Ottoman navigation. There had been peace with Venice since 1573, but some incidents in the Adriatic had led to a brief period of hostilities in 1596 during the reign of Murad IV, and attention had then been drawn to the danger which Crete represented to the Turkish sea-routes, in particular to North Africa. It was during the reign of İbrahim I that the decision was taken to seize the island; a large fleet was assembled at Istanbul during the winter of 1644-5, and when it set sail in Safar 1055/April 1645, under the command of the Kapudan-i deryâ Yusuf Paşa, rumours were spread that its objective was Malta. In June, Turkish troops disembarked near Kana: the town was taken, after a siege of 54 days, on 26 Dümâda II 1055/19 August 1645; this occupation was followed by those of Kissamo in Muharram 1056/March 1646, Aprikorno in July, Milopotamo in September and Retimo in November of the same year. But the Ottoman offensive slowed down, in spite of reinforcements sent from Istanbul and also from Tripoli, Tunis and Algiers; the siege of Candia was several times resumed and then abandoned, while on their side the Venetians set up a blockade of the Dardanelles in 1648-9 and during 1650; an Ottoman naval victory in May 1654 near the entrance to the Dardanelles was answered by a Venetian victory in June 1656 in the same waters, with an occupation of the islands of Tenedos, Lemnos and Samothrace, which were re-captured by the Turks in the following year.

In 1676/1666, the grand vizier Köprülüzâde Fâdil Ahmad Paşa decided to bring matters to a conclusion: in fact, more than two years were needed from the resumption of the siege of Candia in May 1667; the Venetians, having obtained very little support from western Europe, finally accepted the Ottoman peace proposals; on 9 Rabi' II 1060/5 September 1669, peace was concluded: the Venetians abanoned all claims on Crete except Suda and Spinalonga, which were occupied by the Ottomans in 1715. This long war in Crete, although it ended in a Turkish victory and their control of all the eastern Mediterranean, was in the end not a very glorious one; it underlined the growing weakness of the Ottoman empire and confirmed the decline of Venice.

Once under Ottoman domination, Crete became a province (veyâdet) with Candia as its capital and divided into three sandjaks: Candia, Canea and Retimo. The Turkish authorities retained most of the local laws and interfered very little with the possessions and property of the Cretans; however some Anatolian Turks were transferred to the island, which finally came to contain an important Turkish minority; the internal affairs of the Greek community were left in its own hands and the use of the Greek language was continued. The population was made subject to the personal taxes usual in the Ottoman empire; land was subject to a tax of 1/5 of the production from it, and gardens and orchards of 140 aspers per džarîb; these taxes were reduced in 1675 to 1/7 and 80 aspers respectively.

In 1821, the Greek revolt reached Crete: the governor of Egypt, Muhammad 'Ali, summoned by the sultan, restored order and placed the island under his own authority; he instituted mixed assemblies of Muslims and Christians in Candia, in Canea and Retimo, which were to deal with local affairs; later, another assembly was instituted at Sphakia (Issakiya). In 1830 a new revolt broke out, and the Ottoman government proposed to Muhammad 'Ali that he should keep the island; but Muhammad 'Ali refused, and the Treaty of London in 1840 forbade him to make any claims on Crete.

Later, and especially after 1866, intermittent troubles broke out in the island: the Cretans demanded union with Greece, an idea which had the support of the Great Powers, especially France and Russia, whose aim was to make the question of Crete an international one, one of the elements of the "Eastern Question". In January 1869, the intervention of the Great Powers led to an alteration of the administrative system, by which the local responsibilities were more equally shared between Christians and Muslims; the governor (whose headquarters had been in Canea since 1850) was to be assisted by a council composed of 5 Muslims and 5 Christians; the official posts were divided among the two communities. A new revolt broke out however in 1878 and, finally, a-
 IKRILISH — AL-IKSIR 1087

vention signed on 23 October 1878 stipulated that the governor of the island should be a Christian, appointed with the agreement of the Great Powers, and that an assembly of 50 members (40 Christians and 10 Muslims) should take all the decisions concerning the internal affairs of Crete, but that these decisions should be submitted for the approval of the sultan. This convention was not fully implemented. In 1896, the Cretans revolted again and this time received the support of the king of Greece; war broke out between Greece and Turkey; finally the latter, in December 1897, accepted the principle of autonomy for the future government of Crete. On 27 November 1908, Turkish troops left Crete and, on 29 November, Prince George of Greece was appointed as commissary extraordinary: Ottoman suzerainty was theoretically retained, but in fact Crete was already lost to the Ottomans. In 1900, Prince George tried (unsuccessfully) to proclaim the union of Crete with Greece. This union was proclaimed by his successor, Zaïmis, on 6 October 1908, but was not recognized by the Young Turk government. The years 1909 and 1910 passed in an atmosphere of extreme tension. On 9 May 1910, the Cretan assembly swore allegiance on the transfers of populations between Greece and Turkey. Before these treaties, a certain number of the Cretans revolted again and this time received the support of the king of Greece; war broke out on 6 October 1908, but was not recognized by the Ottomans. In 1900, Prince George tried (unsuccessfully) to proclaim the union of Crete with Greece. This union was proclaimed by his successor, Zaïmis, on 6 October 1908, but was not recognized by the Young Turk government. The years 1909 and 1910 passed in an atmosphere of extreme tension. On 9 May 1910, the Cretan assembly swore allegiance.

This convention was not fully implemented. In 1896, the Cretans revolted again and this time received the support of the king of Greece; war broke out between Greece and Turkey; finally the latter, in December 1897, accepted the principle of autonomy for the future government of Crete. On 27 November 1908, Turkish troops left Crete and, on 29 November, Prince George of Greece was appointed as commissary extraordinary: Ottoman suzerainty was theoretically retained, but in fact Crete was already lost to the Ottomans. In 1900, Prince George tried (unsuccessfully) to proclaim the union of Crete with Greece. This union was proclaimed by his successor, Zaïmis, on 6 October 1908, but was not recognized by the Young Turk government. The years 1909 and 1910 passed in an atmosphere of extreme tension. On 9 May 1910, the Cretan assembly swore allegiance.

By an early date the name al-iksir was transferred to the substance with which the alchemists believed it possible to effect the transformation of base metals into precious ones. Iksir al-nimsiyâ (Dhâli, Tarbi, ed. Ch. Pellat, 39, 7), iksir al-samâ (Mâsâîî, Iksir al-samân, Cairo 1537/1538, 115, 115), or iksir al-faldisâ (Dhâli, Tarbi, ed. G. Sobby, Cairo 1928, 46, 141-3) is a sprinkling-powder for the treatment of wounds is indicated.

form 100, 1,000, or even 40,000 dirhams of base metal into gold. Al-Akfani (Kitab Irshad al-biyad, ed. A. S. Longwell, Collected by hs, 76 ff.) gives an interesting systematization of the elixirs into the esoteric (djawwānī) and the exoteric (barānī). Eventually the elixir served the mystics as a symbol of the divine truth which changed an unbeliever into a believer (Kleinere Schriften des Ibn al-'Arabi, ed. H. S. Nyberg, Leiden 1919, 219, 3 ff.).

With the translation of the Arabic alchemistic writings into Latin, the theories of the elixir spread to the West, and Albert the Great, d. 1280, specialized in cuadu em elixyr, aklymicus quo metalla convertuntur (Liber de animalibus, ed. H. Stadler, Munster 1921, ii, 1562). The notion of the elixir then returned from the field of alchemy to that of medicine: the elixir developed into the panacea, into the life prolonging agent, and eventually became more and more integrated into the pharmacopoeia (see P. Diepgen, Das Elsir, die kostlichste der Arzneien, Ingelheim 1951).

ÎKTĀ, term for a form of administrative grant, often (wrongly) translated by the European word "fief" (German Lehman). The nature of the Îktā' varied according to time and place, and a translation borrowed from other systems of institutions and conceptions has served only too often to mislead Western historians, and following them, even those of the East.

In the article DAVÂ it was seen how the Muslim state, in its early centuries, had distributed to its notables portions of its territory called khatîf (pl. of khatîf). These portions were made over, in fact, in semi-ownership, subject to the tithe, as were all properties of Muslim origin (as distinct from properties of indigenous origin, which were subject to the more onerous khāradj). It was shown too in the early stages, the income thus made over to the treasury, and paying to the state, out of the normal payment of the inhabitants, only a fixed contracted sum. This institution operated sometimes to the advantage of notables of various sorts, but above all, in the case of tribal groups—of Kurds, Bedouins, etc. and later Turcomans.

The Saltjûks and their vizier Nizâm al-Mulk have often been credited with the conception and organization of a new system of Îktā', nearer to the European fief and constituting a specific contribution of the new Turkish rulers. This view, based on late and misinterpreted texts of 'Îmâd al-Dîn al-Ish flora and al-Maârî, although contradicted by the evidence of contemporary, chief among whom is Nizâm al-Mulk himself. Certainly the Saltjûks made a wider use of khatîf in their empire than had been made previously, and probably introduced it in provinces (particularly eastern Iran) where it had scarcely ever been used; but it remained in conception a continuation of that of the Buûlds—an equivalent of pay granted for a short time—and what has been taken for an original creation of the Saltjûk government is merely a later result of their decline. In the course of the internal struggles which marked the last years of the dynasty, the Îktā' was granted must have increased continually in size and number, while the period of tenure became longer, tending even to hereditary succession. Such Îktā's now differed only in extent from provincial governorates, which themselves were changing at the same time from being revocable delegations of authority to becoming in effect hereditary principalities. The similarity was so great that the term Îktā' was extended finally without distinction to both. Then, we are told, the muklìm's began to take some interest in developing their Îktā'. Some successors of the Saltjûks, particularly the Zangids, explicitly proclaimed the right of in-
heritance to i'jadi's in order to secure the loyalty of their troops in the struggle against the Crusaders. This development has been ascribed to the influence of the Latin Orient, where something like the western idea of the hereditary fief had been introduced. While no definite denial of any such influence can be made, it does seem that the same result might have been reached through a natural autonomous development, even without the presence of the Latin Orient. Then again, the permanence of the i'jadi and the relative strength of the mubaka allowed the latter, by means of "protections" [see "himaya"], more or less forced purchases, or simple usuries, to acquire very large parts of the territory granted him, and, in the case of an incumbent who was at the same time governor of the province in which his i'jadi and these mukhs were situated, to exercise all public and private power at the same time. Under such conditions, it can be seen that the i'jadi evolved through a confusion of various notions and practices to a status approaching that of a "lordship". The inhabitants, indeed, were reduced to servitude by reason of the predisposition against them leaving the land when the taxes had not been paid, and of their extreme difficulty, which the mubaka could increase at will, in paying him off completely and on time. Besides, the intervention of the Turco-

mansk apparently necessitated the multiplication of lands of the mukalla'a type, which were gradually confused with the i'jadi's.

It has often been said that the Saljūk introduced in Asia Minor, newly won by the Turks for the Islamic World, the Turco-Muslim system of i'jadi with which their cousins had experimented in the traditional Muslim lands. But ethnic or dynastic kinship was not enough to obliterate the originality of the conditions of the conquest or the difference of the pre-existing indigenous usages. It is certain that when the State of "Rūm" was organized, it was with a particularly extensive state domain; but it is wrong to say that there necessarily resulted a considerable distribution of i'jadi. On the contrary, a careful study of the documentation available gives the impression that i'jadi in Rūm before the Mongol invasion was less defined, less widely distributed and less elaborated than in the neighbouring Muslim countries. The disintegration of the regime, which followed the Mongol conquest, certainly increased the importance of properties on this type. At the same time the State lands, but it also increased the importance of lands held in full ownership at the expense of the old i'jadi. The subsequent Ottoman régime was to give great importance to a related institution, that of the imdār [q.v.], but in the present state of our knowledge we do not know how the transition from the old i'jadi to the new imdār was made. The name imdār, etymologically Persian, but used here with a meaning corresponding to the Greek institution of the pronoia, suggests different antecedents.

In Iran itself, the periodic repetition of conquests and invasions uprooted the developing military aristocracies while they were still in process of formation; the Mongol conquest did still more, in that it partially overturned the institutional system of the conquered country. Nevertheless, once the new régime was established, the Il-khans, facing an economic situation broadly comparable with that of their predecessors and confronted in addition by agricultural decay, were forced in about the year 700/1300 to develop, little by little, analogous institutions. Originally their army had supported itself, in addition to treasures inherited from the states destroyed, on public estates, war booty, the pasture lands which they took for themselves in the conquered lands, and on forced levies. This could not continue when the frontiers and institutions became fixed. In the time of Ghiyath al-Din Khwājāi, it became impossible that non-institutionalized payments from the Treasury and pastureland should suffice. Even the direct assignment of wages from the local treasuries proved insufficient. The Il-khān and his vizier, the famous Rashīd al-Din, then decided to grant the actual districts to the soldiers who would have to manage them and fulfill their military obligations. Thus they approached the system of the Saljūk régime. However, whereas the Saljūk tended to differentiate. In Mongolia, the institution is called suyurgal when it is hereditary, tawuli when it is temporary or tenable for life only. But the vassal principalities and the indigenous populations had retained the term i'jadi, which is also found in use in the administrative texts. Perhaps originally the Mongol words were used more exactly in the case of large grants for the benefit of the Mongol notables, and the i'jadi as smaller grants made over indiscriminately to the military, sometimes to civilians of all kinds. But with the disorganization of the Il-khanid régime, the terms became less and less distinct, the more so since the grants were made for the most part from the important state lands inherited at the time of conquest and added to by the disappearance of numerous indigenous owners. It was further increased because the new military aristocracy, accentuating the work of its predecessors, stripped of all meaning the "rights" of ownership of the existing small proprietors. There came to be no distinction made between what had been i'jadi and what had been mukalla'a, and the two words, thanks to the common root, were often used indiscriminately.

Egypt also posed special problems, and there has been all too often a tendency to regard what was done there as corresponding with the situation elsewhere. This was not so even when, for example, Syria was incorporated into the same state. In Egypt, the traditional, far-reaching control of the state over all aspects of rural life cancelled out, in practice, the significance of the distinction between 'ushr lands and bākārān lands, and, in consequence, the significance of the distinction to be made between the older-style kāfīr and the new i'jadi, as even the contemporaries (Ibn Hawkal, al-Mukaddasi, Ibn Muyassar, etc.) clearly noted. In practice there, what was to be called i'jadi consisted of agricultural lands leased in return for a contractual payment, called here apparently kābālā [q.v.], but corresponding quite closely to the system more generally called mukalla'a (see above) in the Muslim world as a whole. Redistributions took place from time to time, to take account of the fluctuations of yields and expenses. These redistributions implied a certain stability of areas leased and leaseholders, and the vizier al-Afdal, at the beginning of the 6th/12th century, made a specially important one. The arrival of the Turco-Kurdish army of Salah al-Din, accustomed to the institutions inherited from the Saljūk régime, brought about a change in the Egyptian i'jadi system, but not so great a change as has been thought: the i'jadi's of the previous army were transferred to the new one, but henceforth free of all dues. They did not, however, completely escape the control of the administration, and, although certain i'jadi's might be granted on a long-term or even hereditary basis, cases of withdrawal and redistribuc
bution seem to have been just as frequent, not to speak of such systematic revisions as the famous rawk... the East; that it is doubtful a priori whether one may apply to one society concepts drawn from another, and that such

In the Muslim West, the development of the ḥāra was probably in a sense starker than in the East, but ḥāras and institutions were perhaps less clearly differentiated. In Umayyad Spain, apparently, the classic stage of ḥāra has not been passed and in the pre-Almorah Maghrib it was probably the same, save for a certain indistinctness concerning the status of certain lands and the terms designating them. In Ifrikiya the trend towards the fiscal ḥāra certainly appears more clearly, though with these reservations, under the Almohads and particularly the later Hafsids. We must await new studies before we can consider the situation in Marinid Morocco or the Kingdom of Granada, for example.

The remarks often made about oriental "feudalism", on the basis of the institution of ḥāra, justify our concluding with some more general remarks. The verbal and conceptual confusion in which the development of the ḥāra culminates, gives the impression of a sort of hierarchy of rights comparable to that known in European feudal society: at the top the Sultan, below him the great muḥāfaẓa, the provincial governor, then the small military muḥāfaẓa, and finally, with or without the intermediary of local proprietors (who are such only in name), the peasants. In addition, the fact that the senior officers and their men, even those who reached the highest ranks, often had the legal status of slaves or otherwise were clients of various types as having taken some kind of oath of personal obedience, produced alongside the hierarchy of rights over things, a hierarchy of personal obedience, which at its highest level was expressed by the introduction of the name of the Sultan on coins and in the public Friday prayer. But it must be repeated that the full development of this system was relatively rare, and, for example, in Turkey as in Egypt, the connexion between the collection of the ṣakīl and the muḥāfaẓa was direct. Besides, no state ever alienated (far from it) all of its land (in Egypt about a half). With the solid intellectual and administrative traditions of the East, the distinction between public and private rights was never obscured as it was in the West. Whilst in Europe the rebuilding of the social system was attempted on the basis of personal relations, in the East, the notion that all personal power was a delegation of public power remained clear. Even though personal subordination was known in the East, the feudal contract of fealty was never even imagined. Economically, a muḥāfaẓa differed from the Western lord in that he lived in the town and did not have to organize his rural lands with the reser... manner which could have been necessary had he lived there. He conquered the soil, and that is all. The fact that he was often a foreigner might, of course, be very important from various points of view, but this did not modify the structure of the ḥāra, nor, since he was permanently established in the country, the use made of this income. In this sense it is for example incorrect to speak, as has been done, of a "colonial" character of the Mamlūk state.

Even in places and times where the tendency to... number of factors limited the formation of a fully-developed military aristocracy. First of all, a system of law and custom which had been firmly established for generations and was linked in some degree to the Islamic religion itself could hardly be modified at the pleasure of the muḥāfaẓa. The Muslim law of succession, ignoring primogeniture, shared out the inheritance and consequently rapidly weakened the power of great families. Furthermore, the ḥāra, even when the right of inheritance to it was to some extent recognized, was still conditional on service. Otherwise it was replaced by a pension, and in fact quickly annulled. In any case, the resources drawn by rulers from the relative growth of the mercantile economy and from the retention of substantial domains almost always enabled them to buy new slaves with which to bring their former slaves back into line. Finally, no matter how external this factor was, it did happen in the East that the periodic recurrence of foreign invasions and conquests drove out or destroyed the aristocracies in the process of formation in favour of the newcomers, who in addition sometimes had different traditions.

From a very general point of view, the comparison of the development of different societies can still be justified. Nevertheless, it is much less instructive to make this comparison, as our "European-centred" education encourages us to do, between the Muslim countries and the very different society of Europe, than to make the comparison with the neighbouring Byzantine society, where the pronoia presents some obvious points of resemblance to the ḥāra. The development of the pronoia took place a little later. The ḥāra, therefore, owed nothing to the pronoia, and it is impossible to say whether the pronoia owed anything to the ḥāra. Both, however, bear witness to certain requirements of political and economic-social régimes which are, at least in part, comparable. As for the term "feudalism" as applied to the East, it is doubtless too late to attack an established custom, which (even for Europe) is sometimes dangerous. It is necessary only to underline the facts that there are as many differences as there are similarities between European feudalism and the feudalism of the East; that it is doubtful a priori whether one may apply to one society concepts drawn from another, and that such
a transfer cannot be justified by an equivalence between *ibda* and fief—an equivalence which arises only through the confusion of ideas of ill-informed translators.

**Bibliography:** It is obviously impossible to list here all the sources which might be relevant to the history of the *ibda*. Alongside the documents, papyri, inscriptions, etc., they would include almost the whole of the historiographical literature (particularly that of the 4th/10th century, Miskawiyah, Sabi etc.), the geographical literature, etc. References here then are restricted to the administrative treatises, such as Ibn Kirdā of Kudamā and al-Akhdām al-Sulāfinyāy of Māwarzāl for the 'Abbāsī-Būyid period, the Minhdāf fi 'ilm al-khurād of Mārzūmī (see Cl. Cahen, in JESHO, 1963), the Kāwinīn al-dawdawīn of Ibn Māmātī and the Description du Fayyum of Nābulūsi for Fāṭimid and Ayyūbīd Egypt, the Khtāf of Mārzāl and the chancery treatises of Nawayrī (in the Nīkhdī, viii), 'Umarī, Kalkašandī, etc. for the Mamlūk state, and finally the Daudīr al-khurād of Nābūsī and al-Salāfī, of his time. Zadī (i, Baku 1964) for the Mongol régimes of Iran.

**Modern Works:** It is still useful to consult the studies of a few 19th-century pioneers, though we should no longer be guided by them:—Sylvestre de Sacy, Nature et révolution du Droit de propriété en Égypte, 1828, the studies of Worms and Belin, in JA, 1842, 1852, 1870, Tischendorf, Das Lehnen vor moslem. Staaten, 1872, the latter including also the Ottoman Empire, Max Van Berchem, La propriété territoriale et l’impôt foncier sous les premiers Califes, 1886. A new phase of study begins with C. H. Becker, Steuerpacht und Lehnenweisen, in Isl., 1914 (reprinted in his Islamstudien, i, 1924), the first to have made use of the Egyptian papyri, but his conclusions should not be extended to other countries, or always regarded as final even for Egypt. A good résumé of the state of the questions by about 1925 is given in the article *ibda* by Salaboinah in EJ, dealing extensively with the stipulations of the jurists. Further useful information may be found in Pollak, Classification of laws in the Islamic Law, in Amer. J. of Sem. Languages, 1940, and Fr. Lokkegaard, Islamic taxation in the Classical period, Copenhagen 1950. The conclusions of Turkish scholars are presented by M. F. Kopriilī, Le féodalisme turc musulman au Moyen Âge, Communication au Congrès Intern. d’histoire, Zurich 1941, and Osman Turan, Le régime terrien sous les Seljoukides de Rum, in REJ, 1947.

Cl. Cahen has tried to give a more evolutionary historical interpretation of the whole question up to the 13th century in his article *L'évolution de l'qida*, in Annales ESC, 1953, and has discussed the special case of Salğūq Turkey in Pre-Ottoman Turkey, London 1968. A. K. S. Lambton, whose important work, Landlord and Peasant in Persia was published in 1953, took up the question again in a more synthesized form in her Reflexions on the *qida*, in Arabic and Islamic Studies in honour of H. A. R. Gibb, 1965; for Iran and 'Irāk in the 10th century, see also the important article by C. E. Bosworth, Military organisation under the Buyūids, in Oriens, xviii-xix (1967); for the Mongol period, I. P. Petrushevsky, *Zemledelie i agrarnye otnešeniya v Irane XIII-XIV vv.*, Moscow-Leningrad, 1960 (Persian translation by Karim Kishābvārz, Kishāhvārz va masnābāšt-i ard-i Iran 1967).

**IKTIBĀS** means to take a *habas*, a live coal or a light, from another's fire (Kurān XXI, IO; XXVII, 7; LVII, 13); hence to seek knowledge (*ilm*) and, as a technical term in rhetoric, to quote specific words from the Kurān or from Traditions but without indicating these as quoted. Some scholars limit the term to the use of Kurānīc phrases, while others extend it to the use of terminology from *fikr* and other sciences, but all agree that *iktibās* is found both in poetry and in prose. If the source is indicated and the quotation put into verse the figure is called *ʿāhid, binding*. A related figure is *talmīb*, allusion, which consists of alluding to famous passages in the Kurān or Traditions, or in profane literature. The practice of using Kurānīc expressions is often mentioned in works on literary theory, but rules for it and the specific term *iktibās*, instead of the more general *ṭadīm* (q.v.), may not have existed earlier than the 6th/12th century. Suyūtī mentions the existence of a legal controversy over *iktibās*, the Mālikis condemning it outright or allowing it only in prose and the Ṣafīites on the whole allowing it (cf. however Zarkashi, al-Burhān fi ʿulām al-Kurān, Cairo 1376/1957, i, 483-4 on the use of Kurānīc passages as proverbs). Saʿfī al-Dīn al-Ḥillī and, following him, Ibn Ḥijīdā distinguish three categories: praiseworthy, permissible, and objectionable (mardūd) *iktibās*. The last category falls into two sub-categories: (a) the use of Kurānīc passages in which Allāh refers to Himself and (b) the use of the Kurān in frivolous verse (the *ghazal* is not considered as such). Kazwīnī and those following him allow the borrowed phrases to be slightly changed or to be given a different application.

It should be noted that Rādūyānī in his Tarjumān al-Balīghā (ed. A. Ateī, 118-21, 125-7; cf. also 121-5) quotes verses with paraphrases in Persian, and that some writers suggest (though not in their chapters on *iktibās*) that the Kurān itself borrows from, or alludes to, not only the Old and New Testaments, but also pre-Islamic poetry and prose (see Usāma, al-Badī fi nād al-ghīr, Cairo 1380/1960, 284; Ibn al-ʿAlījīr, al-Dhimmī al-habīr, Baghdād 1375/1956, 245-6; Ibn Abī 'l-Isba, Badī al-Kurān, Cairo 1377/1957, 52-3; idem, Taftazam al-Ṭahbīr, Cairo 1383/1963, 180).
[1092] IKTIBAS — IL
Cairo 1358/1939, 166-9, 170-2; idem, al-Itkdn, Calcutta 1857, 262-6; Shuruh al-talkhis, Cairo 1937, iv, 509-14, 525-9; Mehreren, Die Rhetorik der Araber, Copenhagen/Vienna 1853, 138-40, 141-2, 204-2.

1092

[1092] IKTÎDÎB [see tâbînis; tâhîallas].

IKTİSÂB [see kâfiya].

IKWÂ [see kâfiya].

IL, Arabic orthography of the Turkish word il, more correctly šî, which has undergone a wide semantic development (see Radloff, Versuch ..., i, 805-5, 1421). (1) As defined by V. Thomsen as signifying, in its numerous occurrences in the Orkhon inscriptions: “un peuple ou une réunion de peuples considérés comme formant un tout indépendant et organisé et ayant à sa tête un kagan” (Inscriptions de l’Orkhon déchiffrées, Helsingfors 1896, 135), and thus approximately “empire”. In this sense it often appears in conjunction with the word budun (i.e. budûnum), “confederate” (cf. English: “lawful customs” (occurrences collected and discussed by R. Giraud, L’Empire des Turcs Célestes, Paris 1960, 67-72). It is presumably in this sense that it appears as an element in such Turkish regnal titles as il-êrîsh, il-etmîsh, il-tutmîsh (A. Caferoglu, “un peuple ou une réunion de peuples considérés comme formant un tout indépendant et organisé et ayant à sa tête un kagan” (see TADJNIS; TAKHALLUS).

(2) At an early period the word acquired the notion of “district over which authority is exercised”, so that Mahmûd Kâshghari gives the definition (ed. Kılıslî Rifai, i, 49; cf. tr. B. Atalay, i, 48): il-wildya: yuvâl minku ‘beş âlı ay wîldyat al-âmîr. Hence, in the sense “district, territory”, it appears as the first element in the Turkish personal names Il-âldî, Il-begi, Il-ghazî, etc.; and in Ottoman times very frequently as the second element of place-names, most notably in Rûm-âli (“Romelia”), a calque of “Romania”, “Byzantine territory [in Europe]” (see P. Witteke, Le Sultan de Rûm, in Ann. de l’Inst. de Phil. et d’Hist. Or. et Slaves, vi (1938), 361-90, esp. 377 f.), and also commonly for smaller territories, e.g., il-ii (q.v.). In such cases the first element is usually a personal name, so that the toponyms signify sometimes “territory conquered by so-and-so” (thus Kodja-îli (q.v.) is the region conquered by the ghâzi hero Aýçi Kodja (F. Giese, ed., Die altosmanischen anonymen Chroniken, i, Text), Breslau 1922, p. 13, lines 24-5); and the current names Aydın, Menteşe, etc. for the 8th/i4th century Anatolian emirates stand for Aydın-ili, Menteshe-ili, etc., the “language reform” movement, the word il was coined to replace kâza (so ibâb for valî, and iðçebây for kaymakâm).

(3) The word acquired also the sense of “people”, at first (apparently) in a hendiadys with the (?synonym kîrûn = “folk”). The hendiadys is a common expression in old Ottoman, in the form el gûn, also el u gûn (see TTS, i, ii, iv, s.v. il gûn), and survives in some fixed locations (see the discussion by F. Rundgren, in Orientalia Suecana, xvi (1967), 190-2), in modern Turkish el alone signifies rather “other people”, i.e., “strangers” (Türkçe Sözlük, s.v. el (II), with examples; cf. eldem, in which the first element is not the Arabic definite article but T. el + A. âlim). In Persia the word was used of “tribesfolk” (synonym: ulus (q.v.), having a quasi-Arabic plural ilâlî (q.v.).

(4) At an early period the word meant also “peace” (G. Doerfer considers this to be the original meaning), cf. Mahmûd Kâshghari, i, 50 = tr. B. Atalay, i, 49 (al-sulh bayn al-malikayn); from this derives perhaps elîs (q.v.), “ambassador” (i.e., “negotiator of peace”); cf. O. Turan, in Turan, vii-viii (1942), 197; and cf. Abû Hayyân, K. al-Idrîk, ed. A. Caferoglu, Istanbul 1934, 20: al-rastûl âldâdî yasîlîl al-sulh), and the Ottoman term ilîs, which may be both adjectival, “who has accepted peace”, i.e., (?) belonging to the Dâr al-sulh (q.v.) (cf. E. Zachariadou, in Diámeta, i (Athens 1966), at 212, where ilîs kâfîler, in a document of 870/1465, refers to the inhabitants of Patmos), and also quasi-nominal, “territory acknowledging [Ottoman] suzerainty” (cf. Mehmed 3’ârî’s introduction, page dâlî, to the so-called “Kânânâmé of Süleyman I”, “îdârê to TOEM, Istanbul 1329; the converse is yaghîlî, see text p. 24).

(5) By the 7th/i13th century the word had become current in Persian, with the meaning “submissive, obedient” (Rashld al-Din uses the expressions il kârdan, “to bring into obedience”, and il gûdan, “to submit”); from this usage arose the title Il-khân for the Mongol rulers of Persia as being subordinate to the Great Khân (see Hâdîdî); and from the adjective was formed the Persian abstract noun iî, “submission”. In Ottoman Turkish usage too el may be adjectival, both as a “Persian” loanword (e.g., Tursun, p. 157, i, 3: il u mûnhâd) and as a “Turkish” word meaning “state, province” (as opposed to towns). For the expression il-dîzn, apparently implying amân (q.v.), see V. L. Ménage, in S. M. Stern (ed.), Documents from Islamic chancelleries, Oxford 1965, 96-8.

ILAL — ILAH

ILAL, Kur'anic term (CVI, 1-2) which probably refers to economic relations entered into by the Kurayshis well before the advent of Islam, which presents problems of reading and interpretation which are not easily solved.

In the first place, this Sūra CVI, which is very short and certainly very early (no. 3 in the classification by R. Blachère), begins abruptly, after the *basman*, with the words *li-ildf* Kurayshī *ila* firmih rihat... *’l-ghidā* wa *’l-sayif*, which may be translated as: "because of the *ildf* of the Kurayshīs, [their] *ildf* of the journey of winter and of summer (let them worship the Lord of this Temple who has protected them against hunger and sheltered them from a fear)". But in the corpus of Ubayy, this Sūra was not separated from the preceding one, which deals with the fate inflicted by God on the *Ashāb al-Fīl* and appeared as a logical continuation of it: "Has thou not seen how thy Lord has treated the man of the Elephant... because of the *ildf* of the Kurayshīs..." (see Rs. 1031). Nevertheless, the preposition *li-* may also have the force of a final conjunction "in order that the *ildf* [may be possible]...". Finally the "readers" of the Kurān hesitate between *ildf*, *ildf*, and *ild*, which indicates that these verses did not seem very clear to the redactors of the Kurān, just as they later/proceeded to confuse exegists and translators (R. Blachère suggests three possible translations, but always translated *ildf* as "entente"; M. Hamidullah: "pact"; A. J. Arberry: "composing").

It is not certain that the word *ildf* has the same meaning in each of the two verses; in fact it really seems to have the force of a noun in the first and of a verb in the second, so that *ildf* Kurayshī can be regarded as a set expression and *ila* firmih rihat... as an equivalent to *tadhir*: "their organization of a caravan...".

Nevertheless, *ildf* had acquired a very precise connotation, and the lexicographers give this term the meaning of *ahd, dīhām, amān*, that is: "pact guaranteeing safety, safe-conduct, undertaking to protect"; the customary expression is *al-aḥadh il-ildf*, "to conclude an *ildf*".

 Tradition relates that the Kurayshīs had concluded with foreign peoples acts which guaranteed them freedom of trade, and it is Ḥāshim b. ’Abd Manāf (q.v.) who is credited with having obtained from the emperor of Byzantium authorization to send a caravan regularly into Syria and the assurance that it would come to no harm. His brothers, ’Abd Shams, al-Muttaṣīlī and Nawfal, had concluded similar pacts with the Negus, the Himyar rulers of the Yemen, and the king of Persia respectively; these four pacts which guaranteed them protection against hunger and sheltered them from a fear. It is not certain that the word *ildf*, as a triliteral, is no deity" (cf. Zamakhshari, Kashâkhāf, e.g., 227, and in XXVIII, 70, Ḥawa *’l-ildf* is la Ḥawa *’l-ildf*, "he is the deity other than whom there is no deity" [cf. Kashâkhāf, 1064], in which the juxtaposition of al-ildf/illf/īlāh is noteworthy.

*īlāh* is certainly identical with *īlāh* and represents an expanded form of an element -i*†* (i, et) common to the Semitic languages (see Enc. Biblica, i, col. 3323 ff.; Brown-Driger-Briggs, Hebr. Lex., 42 f.; Genesis-Buhl, Hebr. und aram. Wörterbuch, u.v.; Fleischer, Kleinere Schriften, i, 15 ff.; T. Fahd, Le Panthéon de VArabie centrale, Paris 1968, 41, and bibliography there given). The Arab philologists discussed at great length the etymology of the words *īlāh, al-ildh*, and *al-lidhl* (see al-Rāzī, al-Bulāqī; Genesius-Buhl, s.v.; Genesius-Buhl, 42 f., and bibliography there given). The Arab philologists discussed at great length the etymology of the words *īlāh, al-ildh*, and *al-lidhl* (see al-Rāzī, al-Bulāqī). The Basrans established no direct connexion between *īlāh* and *al-lidhl*, regarding the latter either as formed spontaneously (murtagil) or as *lāh* (from the root *lyh*) preceded by the article. Some held that *īlāh* was a loan from Syriac or Hebrew, but most regarded *īlāh* as a derivative (munkhs, munkhs), a contraction of al-ildhīl, and endeavored to attach *ildf* to a triliteral root; to explain it (see also al-Bayāḏwī, ed. Fleischer, i, 4), some ten derivations were suggested, from the following "roots":

1. *il* "to adore", but as al-Zamakhshārī pointed out (Kashākhāf, 8), the verb *alāh* is derived from the noun; *alāh*, "to be perplexed, confounded", for the mind is confounded in the experience of knowing Allāh (alāhī has the same meaning); *alāhī alāh*, "to turn to for protection, or to seek peace, or in long ing" (alāhī has a similar meaning); (2) *lyh*, which hence *lāh* "to be lofty" and *īlāh* ("the statues") of the *Baṣrians*; (3) *alāh* hence *lāh*, "to create"; (4) *rul* and *yul*, roots conveying the idea of "priority"; (5) Abū ‘l-Baṣṣār al-Kaffawi, Kulliyāyat al-ulām, Bālāk 1953, 69, regards the word Allāh as formed from
Ilah, the "noun of majority" and pronoun of the 3rd person, and the lam of possession.

On the other hand, lexicographers have pointed out that the terminations -il in some South Arabic proper names indicates the deity; on this question, see G. Ryckmans, *Les noms propres sud-sémitiques*, Louvain 1934-5, *passim*; for -i in the South Arabic inscriptions, see A. Jamme, *Le Panthéon sud-arabe présislamique d'après les sources épigraphiques*, in *Le Muson*, lx (1947), 57-147.

**Bibliography:** In the article.

(D. E. Macdonald*)

**ILAHABAD** [see ALLAHABAD].

**ILAH,** term used in Turkey of a genre of popular poetry of religious inspiration, consisting of poems sung—without instrumental accompaniment—in chorus or solo during certain ceremonies; the *ilahi* is thus distinguished from all other types of popular religious poetry by its melody and its use in ritual. Many texts not originally intended as *ilahis* may have become so later through the addition of an appropriate melody and been introduced in ceremonies which require the chanting of *ilahis.*

*Ilahis* were sung mainly at sessions of *dhikr* in the convents (*tekke*) of the mystic orders; as much by their rhythm as by their words, they encouraged the participants to reach a state of exaltation. But in more or less secular milieus and circumstances, *ilahis* are used as poetic and musical elements in various popular ceremonies. They are sung on the following occasions: as interludes during the relation of the story of the birth of the Prophet Muhammad, the *Mevlid* (*Mawlid* [q.v.]); on commemorative occasions; as a choral chant by pupils escorting a new pupil to his first lesson in a Kur'an school; by the procession accompanying the bridgegroom, on the last evening of the wedding celebrations, from the mosque to the nuptial chamber; during the ceremonies which take place on the departure of pilgrims to Mecca (and on their return).

Versions which have descended into children's folklore are also used to accompany the begging which takes place at the time of certain feasts: in the region of Çankiri these childish parodies of *ilahis* are known as *meneçim* (< *minâdçâj*); at Mudurnu (in the province of Bolu) these children's *ilahis* have lost all their serious meaning and have acquired humorous and farcical elements. Not only in these much debased forms, but also in the versions which still preserve their original function, *ilahis* have always been subject to a process of "folklorization," the cause of this being oral transmission and the extensive additions to the texts to which even the written versions are subject. Many *ilahis* which were initially the works of known poets have with time become anonymous; progressive deterioration has taken place, and the texts of various different authors amalgamated with one another, with the result that new "folklore" versions have been created.

The earliest surviving *ilahis* are by Yunus Emre (q.v.) (d. circa 1320). During the following centuries, the repertory of *ilahis* was enlarged by the works of many popular poets of religious and mystic inspiration; the most famous are: a poet (or more than one poet?) with the name of Yunus (9th/10th or 10th/11th century) whose *ilahis* are often confused with those of the early Yunus; Hâdîdî Bayram (d. 833/1429-30), Eshefoglu Rûmî (d. 874/1469-70), İbrahim Gülsenli (d. 940/1533-34), Üfâde (d. 988/1580-1), Seyfullâh Nişâmî (d. 1010/1602-2), Mubîyl (d. 1020/1611), Hüdâyî (d. 1034/1624-5), Hîmet (d. 1095/1683-4), Nîyâzî Mûsî (d. 1105/1694). These poets were all dervishes or *ilahis* belonging to mystic orders. The *ilahis* became part of the ritual of the orders of Sunnite tendency. In the ritual of the Mevlevîs as well as in that of the orders and sects of Şî'î-Âalawî tendency, the chants performing the same functions as the *ilahis* are more differentiated and are referred to by special terms.

Manuscript collections of *ilahis* have survived with an indication of only the mode and the rhythm of the melodies. Similarly, at the beginning of this century there existed lithographed copies of these collections, for the use of school-children. It is impossible to date the composition of the music of the earliest *ilahis*. It is known that, like popular poetry on secular subjects, the religious popular poetry was composed at the same time as the melody which was to accompany it; a certain number of melodies which have survived may be of the same age as their texts, and perhaps also by the same author. The names of some composers (of the melody only) of *ilahis* from the beginning of the 18th century are known; Çâlkânzâde (d. 1130/1718), Tosunzâde (d. 1127/1715), Hâmidzâde, Abidî àlîzâde (d. 1262/1846). The musical notation of the *ilahis* began to be printed in the first quarter of this century; a fair number of melodies have been transcribed by Seyyid Abdulâkîdî and Ra'îf Yekîte (d. 1935).

A modern Turkish composer, Adnan Saygun, has written an oratorio inspired by *ilahis* (*Yûnus Emre, oratorio en trois parties*, op. 26; Fr. tr. of texts of the poems published in Paris, 1947); of 13 poems sung in this work, several of which are very popular *ilahis*, 5 are by Yunus Emre (and thus of the 7th/13th century) and 8 are texts attributed to him.

ILAHI BAKHSH “MA‘ROF” — ILAT 1095

ILAHI BAKHSH “MACRUF”, Urdu poet, born c. 1156/1743, was the youngest son of Mirza ‘Arif Djan, the younger brother of Shahr al-Dawla Kāsim Djan (grandson of the emperor Dhu ‘l-Fakhr al-Dawla Nadîjā Khan (a street in old Delhi, Galī Kāsim Djan, is still named after Shahr al-Dawla; in it once resided many famous men, such as the Urdu-Persian poet Ghâlib [q.v.], Shâykh Fâkhr al-Din, the spiritual guide of the last Mughal emperor Bahâdur Shâh “Zafar” [q.v.], and the physician Ra’s al-Ātibba’ Muhammed Sharîf Khan, great-grandfather of Shifa’ al-Mulk Ḥakim A’dâjl Khan, d. 1227). He claimed descent from Ahmed Wâfiz and Muhammad Sharîf Khan, is al-Atibba’ (governor of a part of which place he frequently visited). As a reward for his military services, rendered first to Shah Muhammed Shâh and then resident in Lucknow. Although his grandfather, Khâlid al-Din Cishtî [q.v.], was 38 years of age, so that Ma‘rûf was disenchanted of the latter’s having close friendly relations with Ma‘rûf). (A. S. Bazmee Ansari)

ILÂHIYYAT (see ‘MAR‘ÎD)

I LAT. The word ‘ilâh (“god”) (pi. ‘alâhû), first used in Persian in Ilkhânid times, denotes nomadic or semi-nomadic tribes. ‘Ashkâl, kabbîl and tawdîf
are also used in this sense, and for tribes generally, whether strictly speaking nomadic or not. The combination *ilāt* and *asāḥ* is a phrase frequently encountered in medieval and modern times, and suggests that the two terms are broadly synonymous. In medieval times *ilāt* also occurs in conjunction with *ušā*, i.e., tribal followers, and *uymah*.

From early times the population of many parts of Persia has derived its living from pastoral agriculture, and was accustomed to take its flocks in summer to nearby pastures. Such groups, although they lived in summer in tents, were not properly speaking nomadic, though they were sometimes in a state of semi-nomadism. Instead, the keeping of flocks and a tribal structure of society were among the characteristics of nomadic groups, but neither was confined to them. What distinguished them from, and placed them over against, the settled population was the absence of settled villages and their seasonal migration whether for short or long distances. There were however also semi-nomadic groups, whose leaders lived part of the year in settled villages or towns, and who led a few of their number either in their summer or winter quarters, or both. In some parts of the country, the adoption of pastoral nomadism a larger population was able to adapt itself to climatic conditions than would otherwise have been the case. But it is not clear how early such practices became important on the Persian plateau as distinct from Transoxania and Central Asia. From Sal̲djūk times onwards, and more particularly after the Mongol invasion, the balance between the settled and the semi-settled elements of the population was a delicate one. Apart from a constant seepage of population from the nomad areas into the settled, drought and local over-population within Persia and beyond its frontiers in Central Asia led to major and minor movements into the settled areas by nomads. Whenever the nomad population and its flocks rose above the level which could be maintained by the available pasture, either because of natural increase or lack of rainfall, there would be a movement, violent or otherwise, into the settled areas.

We know little of the nomadic tribes of pre-Islamic Persia, but pastoral life was almost certainly important. The capitals of the Achaemenids, Parthians, Arsacids, and Sassanians were seasonal, and it is probable that the majority of the population were accompanied by flocks and that round their capitals there were large tented encampments. They had presumably in their armies some nomadic tribal contingents, but it is unlikely that they depended to the same extent as the Sal̲djūks and later Turkish dynasties on nomadic or semi-nomadic tribal support. From about A.D. 300 the Sassanians attempted to defend themselves from predatory incursions by the nomads from the Arabian steppe by an alliance with the semi-nomadic Lakhmid rulers of al-Hira (see *Ilāt*, iii: Pre-Islamic Arabia).

Although we have more information on nomadic and semi-nomadic tribes in Persia in Islamic times, it is nevertheless often difficult to trace their history and movements in detail. Their numbers were constantly changing: some prospered while others dwindled or became settled. Many of the tribes have eponymous ancestors, but their inter-relationship is complicated by alliances and intermarriages among their leaders, sometimes in settlement of blood feuds. Strong tribes attracted to themselves others, which they absorbed or with which they formed a federation, the various tribes of which might later break up and become regrouped in new federations. There was also deliberate fragmentation and settlement of tribes by different rulers in outlying parts of the empire, while the grant of land to their leaders in return for military or other services led to their dispersal throughout the country.

Leaving aside ethnological, anthropological, and sociological criteria, it will be convenient to divide the nomadic and semi-nomadic tribes in Islamic times into three broad groups: Arab; Turkomān and Turkish; and those which are neither Arab nor Turkush and were already settled in Persia at the time of the conquest. Of these three the last two are the most important in terms of numbers and continuing influence. The last includes the Kurds (*gūrūh*), Lurs (*gīrūh*), Bahaʿ (*gūrūh*). Dīlī, who were, however, cultivators and shepherds rather than nomads (cf. Ibn Hawkal, ii, 376), and others. The Kurds were the most numerous. They were tribal, partly living in villages and partly semi-nomadic. The Lurs appear to have been mainly settled until Timurid times. Neither were confined to Persia. The Kurds spread north-westwards into Syria, and in modern times are found in Persia, Turkey, Iraq, and Syria. Shībāb al-Dīn *Umari* mentions Lurs in Egypt and Syria in the 8th/14th century.

The early Islamic geographers in their descriptions of Persia give, on the whole, a picture of a settled and prosperous agricultural community, practising pastoral and arable farming, with well-developed handicrafts. They mention much pasture land. Ibn Hawkal, for example, states that the most widespread occupation in the Dībāl was the raising of sheep (*al-aqūḥām*, ii, 372-3). Little mention, however, is to be found in their pages of specifically nomadic groups, apart from those in Central Asia, either because these were outside their experience, or because, as seems more probable, they were less important and numerous than was to be the case later. It seems, indeed, fairly clear that the decline in settlement which occurred in Persia was brought about, not by the Arabs or the Sal̲djūks, but by the Mongols. The early geographers and historians refer to nomadic and semi-nomadic groups by the generic term *al-akrād*, by which they mean not necessarily people of Kurdish race but non-Arab and non-Turkish tent dwellers and herdsmen. Thus, Tabāri, under the years 23 and 29, calls the tribes of the Zagros the *Balaʿ*, who were accompanied by flocks and herds of camels and sheep (ii, 446); and Hasan b. Muhammad al-Kummi speaks of the *ahrād* of *Tabaristān*, "who are a group (**gurāḥ**) of Daylamites" (Zaʿīrī-Ḥ Ḳummt, (ed. Sayyid *Djalal* al-Dīn Tehrānī, Tehran 1934, p. 261)).

The main concentration of nomadic or semi-nomadic tribes in Persia in the early centuries seems to have been in the area between Kūhīzāstān and Išfahān and Fārs. Ištāḥkhrī (followed by Ibn Hawkal and others) mentions five tribal districts in Fārs, which he calls *rumām* (sing. *ramm*). Yākūt defines these as districts and quarters inhabited by Kurds (*makhāl al-akrād wa maqdmāškum*), see Barbier de Meynard, *Geographie de la Perse*, p. 263). The largest of these was the *Dijūla* (Kūhīgīlūa), also called the *ramm al-rumādīn*, which extended from Kūhīzāstān to Išfahān, and was bounded by Ištāḥkhrī, Shāpur, Ardājad, and Baydā. All the towns and villages in it came under the tax administration of Išfahān. The other districts were the *ramm al-Ḥāmid b. Layvī* (also called the *ramm al-Lawāldīān*), which was situated in the *kūra* of Ardāshīr Khūra,
the ramm of Ḫusayn b. Ṣāliḥ (also called the ramm al-diwdn), which was in the kura of Shapur, the ramm of Bahrāyīn (also called the ramm al-Bāsinjān), which was bordered by Sīf of the Banū al-Ṣaffār, the ramm al-Bāsinjān, Kirmān, and Ardashīr Khūra. According to Istāqkhārī, the inhabitants of these districts wandered in search of pastures in winter and summer “in the fashion of the Arabs” except for a few who remained in the summer season and made themselves independent. They numbered 500,000 tents, each of which could provide from one to ten men, counting herdsmen, hired men, and followers. Istāqkhārī adds a rider, however, to the effect that an accurate assessment of their numbers could only be obtained from the sadaqa registers. It was said that they comprised more than a hundred tribes, but Istāqkhārī himself knew of only thirty. They were numerous, brave, and strong in men, beasts, and horses. The government found it difficult if it wanted to reduce them or to assert itself against them. They owned sheep and mares but few camels. Their cattle were excellent but only those from Bāsinjān had good horses. Their method of herding was like that of the Arab and Turkish tribes. It was claimed that they were originally Arabs. Within each of these rūmām there were towns and villages. The khorṣīd was farmed by the leader of each ramm, who was responsible for the safety of caravans, guarded the roads and carried on the affairs of the temporal government (pp. 97-9, 113). Idrīsī, writing in the 6th/12th century, has a broadly similar, but rather brief, account. He mentions only four rūmām, omitting that of al-Kāriyān. He adds that the Kurdish tribes which frequented the country, the Khūva (?) and the Yazīd, numbered 500 families and that each tribe could put about 1,000 horse in the field. Quoting Ibn Durayd, he states that they were descended from the Banū Mzarr, Banū ʿUmar, and Banū ʿAmir (i, 406-7).

The leaders of the tribes, and perhaps the tribesmen also, apparently owned landed estates. Istāqkhārī states that the estates (al-ṭayyār) held by the tribal people (ahl al-rūmām) paid tax by mukāsama, according to charters (šukūd) which they held from “All b. Khālid” and the khāṣṭār (disorders) of the caliphs, paying one-tenth, one-third, one-quarter, and so on (p. 158). Ibn Hawkal gives a slightly different account. He says that the tribal districts (rūmām) were assessed by contract (mukāsama), estimation (ʿibrā), or by a share of the crop (mukāsama). In the last case, the tax was levied in one of two ways: if the estate was in the hands of tribesmen (kaum min ahl al-rūmām) or others who had a charter from “All, ʿUmar, or a governor appointed by the caliph, they paid one-tenth to one-third. If the villages had been taken possession of by the treasury because of disorders committed by the owners, or for some other reason, the cultivators paid one-fifth according to agreements concluded with them (ii, 302-3).

Ibn Balkhī, the author of the Fārs-nāma, alleges that the nomads (ḥurān) of Fārs, who had formed the flower of the Sasanian army, had all been killed during the Islamic invasion. The nomads who inhabited Fārs in his day were descended from a group whom the Buyid ʿĀḍud al-Dawla (d. 372/982) had brought to Fārs from ʿIsfahān. Ibn Balkhī knows these nodamic groups by the name of Shābānkārā. They presumably replaced or absorbed the earlier rūmām. In Ibn Balkhī’s time (he dedicated the Fārs-nāma to Muḥammad b. Malīkghāb, d. 311/1127) Fārs suffered much from disorders and raids at the hands of the tribes, until the Ābāgbālī Cawli, to whom Muḥammad b. Malīkghāb assigned Fārs, brought order to the province after several engagements with the rebels. According to Ibn Balkhī’s account, the Shābānkārā, who comprised five tribes or groups, had originally been herdsmen and wood-cutters in Fārs. On the disintegration of the Buyid rule, their power had increased, until finally Fāḍlūya, the leader of the Rāmān, the most powerful of the five tribes, was reduced and made himself independent, and was reduced from the Buyids an allowance. Subsequently Kāwūrūd was sent by Alp Arslān to reduce Fārs to order. Fāḍlūya was unable to resist and went back to Alp Arslān’s court. He was sent back to Fārs with a contract to farm the revenue of the province. He rebelled again and was besieged by a Saljuq army under Nizām al-Mulk and captured. He escaped and renewed his rebellion, to be eventually hunted down and caught (Fārs-nāma, ed. S. Le Strange and R. A. Nicholson, G.M.S., 1962, pp. 164, 166; Ḥāmid b. Zarkūb, Shīrāz-nāma, ed. Bahman Karimī, Tehran, 1931-2, pp. 38-9).

Of the five groups, Ibn Balkhī states that the Īsmāʿīlī, who had settled in Dāshī-i Urd after the Islamic conquest, were the noblest. Tāsh Farrāsh, Masʿūd b. Muḥammad’s general, expelled them from the region of ʿIsfahān; they first wandered southwards, and then, under pressure from the Buyids, westwards, and settled near Dārbāghīr. Internecine strife weakened them, enabling Fāḍlūya to interfere in their affairs (Fārs-nāma, 164-5; Shīrāz-nāma, 37-8). The Karzūbī were also shepherds. At the end of the Buyid period they obtained possession of Kāzirūn and the neighbourhood until Cawli dispossessed them. The Masʿūdī were an obscure group whom Fāḍlūya raised up. Rukan al-Dīn Khurāṣṭegīn, the Shāfī governor of Fārs, gave them ṭalās. They subsequently obtained possession of Fīrūzābād and most of Shapur Khūra. Finally they were subdued by Cawli (Fārs-nāma, 167). The fifth group, the Shākkānī, were mountain dwellers, living in the mountains of the garmsīr. They were alleged to be an evil people, committing highway robbery. Cawli reduced them also (Fārs-nāma, 167). In later times little is heard of the Shabankara. Either they became extinct, or they failed to recover from the losses inflicted on them by Cawli and ceased to have an independent existence. It may well be that they were absorbed by the Lurs, who increased in importance during the 6th/12th century.

The eponymous founder of the Lur-i Buzurg [q.v.], was Abū`l-Ḥasan Fāḍlūya, a Kurd living in Djalāl Sumak in Syria. Some of his descendants migrated through Mayāfārīqīyān and Ābāgbālīyān to north of Ushtrān Kūh, where they arrived about 500/1006. Their chief, Abū Tahir b. `All b. Muḥammad, distinguished himself in the service of the Salghūrī Sunkūr (543-56) in an expedition against the Shābānkārā, and was given as a reward the Kūhgilūyā and sent to conquer Luristān. He later quarrelled with Sunkūr and made himself independent. At the beginning of the 7th century, the Buyid tribes from Syria joined his son, Ḥāzārāsp. These included two Arab tribes, the ʿUkaylī (ʿĀlīlī and Ḥāshimī, and twenty-eight others, among whom were the Bahgāyarīs, Djaṃwānī, Gotwand, Lārāw, and Māmāsītī [?Mamansīn, see Bidlīsī, Sharaf-nāma, Cairo n.d., pp. 44 ff., and LUR]. In consequence of these movements, the Shīls were displaced and moved to Fārs (Ta`ṣīl-e Gūzīdā, pp. 537-9; see LUR-I BUZURG).
Mention is also made by the early geographers of tribal groups in Kirman, which appear to have been semi-nomadic. The Khufs (Kuc) and Balus (semi-nomadic or nomadic tent-dwellers) and that they were harried by the semi-nomadic or nomadic tent-dwellers (p. 471). Ibn Hawkal states that they lived on the frontiers of Manijdan and Hurmuz and that they were a branch (sinf) of the Kurds (i.e. semi-nomadic or nomadic tent-dwellers) and that they themselves claimed to be of Arab origin and to number some 10,000 men. The temporal government gave them allowances to keep them quiet. In spite of this they committed highway robbery and were a perpetual menace to communication between Kirman and the desert of Sistan and the frontiers of Fars. Their power was destroyed by the Buyid malik and they were dispersed (ii, 309-10). According to I斯塔khr they were Shifi (p. 167). The Hudad al-salam states that the inhabitants of the Kufidj mountains were divided into seven tribes, each under its own chief, and that the government tax-collectors did not go into these mountains, the chiefs paying an annual sum by mukafa'a (p. 124). Istaqhari and Ibn Hawkal make similar statements, but add that the Kufs had flocks and black tents like bedouins, and were pacific and did not molest travellers (I斯塔khr, 164; Ibn Hawkal li, 310); and that they were Shifs (167, ii, 312). Ibn Hawkal also mentions camel owning nomads or herdsmen in the neighbourhood of Khwah (ii, 313). In Saladin times Kauwir succeeded in establishing some measure of control over the Kufs and Balu6, confining the former to the mountain districts between Bam and Djuruf (see Afdal al-Din, Ibd al-ala, ed. *Ali Mohammad 'Amiri Nami, Tehran 1932-3, p. 66). With the influx into Kirmán of more Ghuzz after the death of Sandjar, the Balu6 appear to some extent to have been displaced and pushed further to the east.

As for the Arab tribes in Khuzistan and along the Persian Gulf littoral, the majority came with the 5th/nth century to the Balkans via the Black Sea, while a fourth and larger group, partly settled, remained in the region of the Sîr Darya (Faruk Sunem, Oflalar (Türkmendeler), Ankara 1967). Legend represents the Ghuzz as being divided into twenty-four tribes. Twenty-two, with their touches, were known to Mahmûd Kâshkâhârî, but only the Khul (to whom the Saljuqs belonged), Iva, Dûger, Yaghma, Salghur, and Aivyhr (Afsahr) appear before the Mongol period. Raqût al-Din mentions twenty-four tribes, but his list is not identical with that of Mahmûd Kâshkâhârî (C. Cahen, Pre-Ottoman Turkey, London 1969). The Saljuqs, although they became the leaders of a nomadic tribal migration, were nevertheless familiar with urban life and Islamic civilization. From the beginning they had settled capitals and do not appear to have lived in tented encampments apart from the local population as did the Mongol Ilkâhns—at least not to the same extent. Most of the independent or semi-independent Ghuzz bands who came to Persia were undisciplined and their activities unco-ordinated. The difference between their leaders and the Saljuqs was that the latter, on the whole, exercised control over their followers. Tughril Beg [q.v.] and Alp Arslân [q.v.] showed themselves to be competent commanders and rulers. Adopting the pattern of government existing in the lands of the Eastern Caliphate, they brought to it new interpretations from their tribal background (see further A. K. S. Lambton, 'The internal structure of the Saljuq empire' in The Cambridge History of Iran, v, Cambridge 1968, 203-82). On the whole, the Saljuq invasion brought remarkably little dislocation, and not more than that caused by the movement of government troops in the late Ghaznavid period. The numbers involved were not large—perhaps no more than tens of thousands. The coming
of the Saldjûks with their flocks may, in fact, have been beneficial to the country, so far as these provided meat and milk products to provision the towns, wool and skins for industry, and fertilized the stubble fields they grazed. Their herds of camels may also have been useful in providing additional transport for merchandise.

There is little evidence to show that the Ghuzz tribes came into conflict with other tribal and nomadic groups, except the Kurds and the bedouins in Western Âghanbâyjân and Upper Mesopotamia. There, indeed, the Ghuzz who were opposed. Settlement probably took place at first only on the lower slopes of the Kurdish mountains. At a later period there were conflicts between the Saldjûks on the one hand and the Şhabânkâra and the Kufs on the other, as stated above, but these arose from the attempt of the Saldjûks, who by this time had become the rulers of an empire, to assert the authority of the central government. They were not conflicts between rival nomadic groups over the possession of pastures. In general, the Ghuzz tribes do not appear to have established themselves—at least to any large extent—in areas such as Fârs, Luristân, the Kufs mountains, Tabaristan, or Kurdistân where there was already a tribal and semi-nomadic population. This raises the problem, which cannot be answered in our present state of knowledge, of whether their intrusion elsewhere brought about a contraction of the area under arable farming or whether they mainly utilized land which was not being fully exploited by the existing population for either arable or pastoral farming.

Once the Saldjûks had become the masters of an empire, they were forced to find a more stable basis of power than that provided by the Ghuzz tribes. Increasingly they depended for their military forces and for provincial governors on Turkish slaves and freedmen who had become separated from their nomadic tribal background. Considerable bodies of Ghuzz (or "Turkomans" as the Muslim Ghuzz who had entered the dâr al-tâlam are usually called in the Arabic and Persian sources) were, however, still to be found in the country, although the general tendency was for them to move in a westerly direction towards Syria and Asia Minor. Apart from these, the lands of the Ghuzz were reduced to the areas of Western Mesopotamia, Gurgân, Marv, and Âghanbâyjân, with some minor settlements in Khûzestân, Fârs, and elsewhere. The fact that many of their leaders were officers of the sultan enabled them, when the central government weakened, to transform themselves rapidly into local rulers. One of the most notable cases is that of the Artûkîs (q.v.).

Under Sandjâr, the Turkomans in Gurgân, Dihis-tân, and Marv were administered by a shîhna (q.v.) appointed by the sultan, who allotted to their leaders pasture and water according to the number of their tents, and through whom they referred to the government. They paid pasture dues and a due for the office of shîhna ("Atabat al-kababa, ed. Muhammad Kazwînî and ʿAbbâs ʿIkbâl, Tehran 1950, 8-12, 84-5). The grant of special allowances (nâhpâra) to the Turkomans is frequently mentioned. Nîzâm al-Mulk seems to have assumed that they would receive such, and recommended that numbers of them should be kept at court, some for military service and some as hostages for the good behaviour of their fellows. By the end of the reign of Sandjâr the grant of allowances to the Turkomans in Khûrâsân was probably primarily to assure their good behaviour rather than to reward them for military or other services—though it is clear that the Saldjûks, like other dynasties, employed the nomadic tribes, Turkomans and others, in their armies as auxiliaries.

By the middle of the 6th/12th century the Khîtâb conquest of Transoxiana was causing unrest among the Ghuzz who had remained in Central Asia, and it became increasingly difficult for the Saldjûk government to control those who were living on its borders. Their relations with Sandjâr illustrate both the difficulty experienced by a settled government in subjecting the nomads to control, and also the lack of understanding which characterized the relations between the settled population and the nomadic or semi-nomadic tribes. Disputes over the annual tribute in sheep due from the Ghuzz to the sultan's treasury and malpractices over its collection eventually led to a collision between Sandjâr's forces and the Ghuzz. An engagement took place in 548/1153. Sandjâr was captured and Khûrâsân pillaged (see further A. K. S. Lambton, Landlord and peasant in Persia, 58-9). In due course Sandjâr escaped captivity but was unable to restore control. After his death in 552/1156 more Ghuzz came into Khûrâsân. Some, under Malîk Dinâr, took possession of Kîrmân. These Ghuzz did not succeed in establishing an empire, as had the Saldjûks, and in contra-distinction to them brought about much devastation and dislocation (see further Muhammad îbrâhîm, Turîrî-k-i Saldjûqûydan-i Kîrmân, ed. M. T. Houtsma, Leiden 1886, 106 ff.). There was also a resurgence of nomadism in Fârs on the break-up of the Saldjûk empire when the Salghurids, basing their power on semi-nomadic tribes living in the region of Gûnamân, began to extend their rule (Abhâm b. Zârkûb, ʿIrâz-nâma, 48-9). The later Salghurids, however, conformed to the usual pattern of "settled" rulers.

The Mongol invasion was accompanied by a new influx of Turkish tribes on a large scale. Carried out by tribes organized for war, it was of a different order from the Saldjûk invasion. Political rule remained in the hands of the tribal leaders, who formed a kind of military aristocracy. They were hostile to settled life and exploited the peasants and the townspeople. The invasion was accompanied by widespread destruction and massacres. Much land fell out of cultivation because of the flight or death of its occupants in the Khîtâb or Ghuzz tribes. Settlement probably took place at first only on the lower slopes of the Kurdish mountains. This was caused by the tribal following of the Mongols and their need for pastures for their flocks and herds (cf. Rashîd al-Dîn, Turîrî-k-i muðarâk-i Ghâzâni, ed. Jâhîn, GMS, n.s. xiv, London 1940, 349 ff.). The tribal leaders were allocated, or took possession of, pastures. Many of them also received land grants, which they sometimes converted into private property, and were given control over the population living on the land. Various new taxes were introduced including bûhêtâr (q.v.), which was probably originally a pasture tax paid by nomads (though it was later to designate a tax on the settled population also). During the reign of Ghâzân Khân (694/1295-703/1304) there was a modification in the policy of the Ilkhâns designed to bring about a revival of agriculture and a reduction in the power of the nomadic or semi-nomadic tribes. This was only partially successful (see further L. P. Petrushevsky, "The socio-economic condition of Iran under the Il-Khans" in The Cambridge History of Iran, v, 483-537, and A. K. S. Lambton, Landlord and peasant in Persia, 72-104).

The centre of the Ilkhân kingdom was Âghanbâyjân, and it was there and in Arrân, and to a lesser extent in Asia Minor, that the tribes which
had come with the Ilkhanids were mainly concentrated. Many of them had close affinities with some of the Turkic tribes already in Persia. Among the tribes which came with or joined Hulagu were the Afšār (some groups of whom had apparently migrated with the Saldjūqs, see Arqārān). They settled mainly in Ādharbāyjān, and gradually increased in numbers and power.

Hamd Allah Mustawfi mentions districts to the south of Sultāniyya containing some hundred villages with good pastures, which were settled by Afshars, by G. Le Strange, G.M.S., (1919, 64-5), and Mongol winter quarters in the Mughān steppe (p. 83). Sawūd Bulāgh, near Ray, was according to him mostly inhabited by nomads (ṣārāb-nīghān, p. 63). Among these were probably the Ka‘rā Evlī. They were not numerous and eventually joined the Afšār, though some of them were absorbed into other Turkomān tribes (Kā‘līm Mākām, Muwshāhāl, ed. Dājdāngir Kā‘līm Mākām, Tehran 1950-60, 763). There were also according to Hamd Allah many nomadic Kurdish tribes (khayl-i akrād-i ṣārāb-i nishīrī) in the Nihāvand-Malāyīr district, though by nishīrī he may simply have meant tribes which were neither Turkish nor Arab. They paid an annual tribute of 7,000 sheep (gāsfand, p. 74). There appears also to have been an extension of nomadism in Luristan at this time. Mu‘īn al-Dīn Nātanž states that the Atabeg Șams al-Dīn Alp Arghūn, who was made governor of Luristan by Hulagū, found the province in a state of ruin and its peasants dispersed. He remitted taxation for a year, and by good administration restored agricultural prosperity. “One reason for the prosperity of the province was that the Atabeg adopted, after the fashion of the Mongols, the practice of moving from summer to winter quarters. He spent the winter in Idādji and Șādr and the summer in the Zardak mountain, in which the Zindarūd rises, so that the cattle of the soldiers had no need of barley and the peasants (rā‘iyād) were not subjected to tyranny by all kinds of people” (Mustaḥkab al-tawārīkh-i Mu‘īnī, ed. J. Aubin, Tehran 1957, 43-4). Among other Ǧuzz tribes which apparently came to Persia with the Mongols, passed through the country and came back later with the Ǧazwids, were the Begdūlī. The Ǧuzz tribes which passed through Persia but did not come to Persia with Dūrμagān. Some of them went on to Syria, where they became known as the Ṣāmīlū. They returned to Persia with the Ǧazwids, and were powerful under them and the Afšārīds. In Kādžār their centres were in Mazdakān near Tehran, and Marqāgh (Kā‘līm Mākām, op. cit., 368). Some small groups of Begdūlī were to be found near Tehran in the 19th century. According to tradition the Kādžārs also entered Persia with the Mongols, passed on to Syria and came back to Persia with Timūr.

By the end of the Mongol period, federations of tribes under new names were beginning to appear, of which the most important was the Adji Khān of Mughūlātān, who was known as the Afšār (see C. Cahen, op. cit., 314 ff.; see also J. Aubin, Un souverain Qara-Qoyunlu concernant le Buluk de Bawdandt, ed. S. M. Stern, Oxford 1955, for the distribution of Turkomān and Arab tribes in that region at the end of the 8th/14th century). From about 747/1346 there was a resurgence of nomadism in Khūrāsān also (cf. Mu‘īn al-Dīn Nātanž, op. cit., 197 ff.).

Meanwhile in Eastern Turkistan the break-up of the Mongol empire the nomads under the Çagātāy Khān of Mughūlātān began to press into Western Turkistan. This provoked a counterattack and eventually Timūr, having united the nomads of Western Turkistan, emerged as the defender of the Islamic borderlands against the nomads of Central Asia, thus giving to the settled population a measure of security in which to pursue their commercial activities and to continue their religious life (see further Mu‘īn al-Dīn Nātanž, op. cit. and H. Hookham, Tamerlane the conqueror, London 1962). After crushing the nomads of the Çagātāy appanage and the Kipchak hordes, Timūr then carried out a series of expeditions into the Islamic borderlands, as a consequence of which many of their inhabitants had to take refuge in his new dominions. Timūr’s military organization was similar to that of the Mongols. The basis of his power was a military tribal aristocracy, who with their followers and flocks migrated from pasture to pasture. Clavijo describing Timūr’s horde writes, “When Timur calls his people to war all assemble and march with him, surrounded by their flocks and herds, thus carrying along their possessions in company with their wives and children. These last follow the host, and in the lands which they invade their flocks, namely and particularly the sheep, camels and horses, serve to ration the horde” (Clavijo’s embassy to Tamerlane 1403-1406, tr. from the Spanish by G. Le Strange, London 1928, 191). He also mentions the numbering of the flocks of the nomads for taxation purposes (p. 187). Certain of the Çagaṭāyats, however, were exempted in return for military service (pp. 195-6). There appear to have been also nomadic Kurds (?) in Khūrāsān near Nayshāpūr. Clavijo, describing them, states “they own no other habitations but their tents, for they never take up their abode in any city or village, but live in the open country-side, both summer and winter, pasturing their flocks. These consist of droves of rams, ewes and cows, and the people of this particular tribe possess some twenty thousand camels. They wander over the length and breadth of this province living under the jurisdiction of Timur, and they give him yearly as his due in tribute three thousand camels, also some fifteen thousand sheep” (p. 182).

The death of Timūr was followed by a period of internecine strife. In the west the Turkomāns of the Karā Koyunlu and the neighboring Bayārūm Khāˈdja of the Baharūl tribe (d. 782/1380), had originally entered the service of Sultan Uways, the Dīlāʿir, invaded Ādharbāyjān in 812/1408 from Armenia, where they had been driven by Timūr. By 814/1410 they had taken Baghādār from the Dīlāʿūrs. They were subsequently superseded by the Āk Koyunlu, whose main centre was at Dīyar Bakr and whose leaders belonged to the Bayānūr clan [q.v.]. In the east also there were further tribal movements. In 870/1465-6, 15,000 tents of nomads from Irīk set out for Khūrāsān “because they had been reduced to straits by the tyranny and oppression of the Turkomans", and were given ʿursī in that province by the Timurid, Abū Saʿīd (Abd al-Razāk, Majlaʿ al-ṣaʿdāyin, ed. Muhammad Shafi, Lahore 1949, ii, 1296). About the same time, the Hazāras (who according to tradition came to Persia with the Mongols) apparently began to emerge as a distinct people. There have been increasing in the neighbourhood of Harat, and difficulties between them and the government over their refusal to pay taxes are mentioned (ibid., 1296 ff.).

The period of the Turkomān dynasties of the Karā Koyunlu and the Āk Koyunlu, who emerged successively as the most powerful group in Western and North-western Persia and finally in Central
and Southern Persia also, represents a reassertion of the rule of the Turkoman nomads and was accompanied by a movement of the Turkomans eastwards into Persia. Unlike the Saldju^s, whom they resembled rather than the Mongols and Timurids, they never succeeded in imposing their rule over the whole of Persia and succeeded only to a limited extent in uniting the various Turkoman tribes, who by this time had been familiar with Islam for generations, and some of whom had been won over to the more extreme forms of Shi^-ism. Their leaders, the most celebrated of whom was Uzun 'Asan (d. 882/1477-8), were in many cases men of ability; their administration was well organized and their courts, in spite of their nomadic background and habits, were centres of Persian culture and Turkoman poetry. (See further V. Minorsky, Persia in A.D. 1476-1490, London 1937, and also Travels to Tana and Persia by Barbaro and Contarini, Hakluyt ed., 1735). The death of Uzun Hasan was followed by a renewal of tribal forays with the main A^ Koyunlu centres in Adzbarbyjân and Shiraz, until finally the Safavids, having united the Turkoman tribes and given to them a cohesion which the Karâ Koyunlu and A^ Koyunlu had failed to do, established themselves as the rulers of Persia.

The great majority of Isma^-i's supporters belonged to tribes from Asia Minor, Syria, and Armenia, their very movement having detached them from the A^ Koyunlu and the A^ Koyunlu. The core of his force, the Kizilbâsh, was formed by the Ustadjlu, Shamlu, Tekkelu, Rumlû, Baharlu, Dhul-Kadr, Turkman, Khinislu, Kadjâr, and Afshâr tribes (see further V. Minorsky, Tadhkirat al-mulûk, G.M.S., 1943, 189 ff.). From the two last-named came dynasties which were exempted from the payment of divan dues ('A^lam al-khujafd*), which they held by direct grant or conquest. Many of them were also appointed to governorships. There was no clear dividing line between the tribal leaders, the military governors and the provincial governor. In the early period the chief military office, that of amir al-amîrs, was regarded by the Kizilbâsh as their prerogative. Under Tahmâsp the provincial governments were still mainly in the hands of the tribal leaders. They were moved from province to province, no tribe having a special claim to the government of a specific area; but under Shah 'Abbâs there were several cases of hereditary succession, and by 1034/1624 it had become common (see further Kâdî Ahmad Kûmml, Khulzat al-savâ'irâk, ed. H. Muller, Wiesbaden 1964). Tahmâsp was unable to control the tribal leaders and the jealousies between Turk and non-Turk and inter-tribal feuds, especially between the Ustadjlu and the Rûmul, threatened the existence of the state. The problem was broadly the same as that which had faced the Saldju^-s: how to integrate the tribes, upon which rested the ruling dynasty's control over power, into the life of the empire. The circumstances of the time, however, were different: in particular, there was no longer the possibility of settlement to the west, on or beyond the frontiers of the empire.

Tahmâsp's death was followed by struggles between the tribal leaders. Shah 'Abbâs (993/1587-1629) eventually reorganized the frontiers of Khurasan was for the Safavids, as it had been for the Saldju^-s, and reduced the importance of the tribal forces by instituting a special cavalry corps recruited from the descendants of Georgian and Armenian captives, converts to Islam, paid direct from the treasury. As a result the tribal and military leaders and also the tribes and the standing army to some extent became differentiated, although the tribes were still required to furnish contingents when called upon to do so. For example, in 1013/1604 Shah 'Abbâs ordered them to fight over and deliberately reduced to a state of desolation adversely affected the tribes formerly occupying it. Shah 'Abbâs further weakened the power of the tribal leaders by allotting provincial governments to amîrs resident on the frontiers and the contingents fixed for each province, many of which were provided by the tribes (pp. 100 ff.). With the increase in the size of the 'standing army' and its payment from khâssa (crown) lands, there was less land available for the tribal leaders, which fact further reduced their power and influence (See Tadhkirat al-mulûk for an analysis of the tribal affiliation of the leading amîrs in the Safavid empire, pp. 14 ff.). Moreover, the fact that the Turkish frontier region was repeatedly fought over and subsequently reduced to a state of desolation adversely affected the tribes formerly occupying it. Shah 'Abbâs further weakened the power of the tribal leaders by allotting provincial governments to amîrs from the court, whether slave or free, rather than to the tribal leaders. A number of tribes were moved by Shah 'Abbâs, some in order to contribute to the defence of the empire. Thus, the Kadjâr tribe was divided into three branches: the first stationed at Qandja to check the incursions of the Lusâq, the second at Marv to contribute to the
defence of Khurāsān against the Üzbeks, and the third at Astārabād on the borders of the Turkmān country. In the course of an earlier period the tribe had been divided into two sections, the Yūkārī-bāsh and the Aḥkārī-bāsh. Families of both went to Astārabād, Shāh 'Abbās also moved some tribes from frontier districts because of doubts as to their loyalty. For example, the Kazuklari tribe was moved from Karāli Dāgh to Dārāb-bīrdrīd in Fārs about 1024/1615 (ʿĀlām Arā, p. 623). Somewhat earlier (about 1000/1591-2) a group of Afghār came to Kaseh, and their head Khālija Pir Būdāq was given the governorship of the district by Shāh 'Abbās. The family continued to hold this government for some 250 years (Fāsā, Fārs-nāma-i Nāṣeri, Tehran, lith., 1894-6, ii, 250-2). Shāh 'Abbās also constituted a number of his supporters into a new tribe known as the Shāhsivān, which was later to become important in Ādharbāyjān.

According to the Dastār al-mušāk (written for Shāh Sultān Ḥusayn), the five main provincial governments were Georgia, ʿArabistān, Luristān, Kurdistān and the Bahktiyārī. The last four each had a large non-Turkish tribal and semi-nomad population. Whereas the influence of the Turkmān tribes had to some extent been reduced by Shāh 'Abbās, the importance of the non-Turkish tribes began to increase. Some of the lesser governments also, such as Karābāgh, and the Khāgilūya, were predominantly tribal areas, and others, such as Hamadān, had a considerable tribal population. The wāli of ʿArabistān was the most important of the five governors because of the numbers of the tribes (ii waʿa ʿagbar) under his jurisdiction. Luristān was the next in importance. (Muḥammad Tākā Dāniżhpāshū, Dastār al-mušāk, in Review of the Faculty of Letters, University of Tehran, July 1968, pp. 473-508, and November 1968, pp. 62-93). Chardin writing of this province states: "The people that inhabit it never mind the building of cities, nor have any settled abodes, but live in tents, for the most part feeding their flocks and their herds, of which they have an infinite number. They are governed by a kaan who is set over them by the king of Persia but chosen from among themselves; and for the most part all of the same race, the father and sons or brothers, or both, to the court as hostages. Shāh in Fars was his capital. That this was a tribal area probably had no special significance. Tabriz, Mughān, and certain other places in Ādharbāyjān, still one of the main areas of settlement by Turkish tribes, were entrusted to the sipahsārāt, the most important military officer after the kūrči-bāsh (see Dastār al-mušāk, loc. cit.). The Tahkhirat al-mušāk also gives lists of the enrolments of the amīrs resident on the frontier and the contingents fixed for each province, some of which were provided by tribes (pp. 100 ff.)." After this point, Shāh 'Abbās gave the control of the central government weakened and was only temporarily arrested under Shāh 'Abbās II. With this the tribes, notably the Ghulāzī and Abdāllā Afghān in the east, began to reassert themselves. The Balūt also raised up from Bāb and Kirmān; while the Kūrds revolted, captured Hamadān and raised up to Isfahān in 1719 (see L. Lockhart, The fall of the Safavi Dynasty, Cambridge 1956, 110 ff.). There were also uprisings by Lur and Bahktiyāris in the Isfahān district in the middle of the century (A chronicle of the Carmelites in Persia, London 1929, i, 660).

In a manuscript which professes to be taken from the state papers of Shāh Sultān Ḥusayn are details given of the location and numbers of the tribes. Although these figures appear to be grossly exaggerated, they probably indicate the general distribution of the tribes at the beginning of the 18th century. It may also be that the tribal population at that time was again on the increase. The writer divides the tribes into those of Persian and non-Persian origin. The former consisted of (i) the Lurs, comprising four great tribes, the Fāyli (centred on Khurramābād, with winter quarters near Hawaiā), Laks and Zands (who for a brief period under Katīm Khān Zand provided the ruling dynasty, centred on Kāzāzā, Bahktiyāris, and Mamassānis. The Bahktiyāris ranged from the Kūhgilūya to Isfahān and from Shūstār to Bībāhān. They paid revenue to the beglarbegi of Isfahān. The sun due, though more than that paid to the Bahktiyāris or the Fāyli. Their revenue was included in that of Fārs and was paid to the beglarbegi of that province. The Lurs were all Shīʿīs. (ii) There were the Garrūs, Kālkūr and Mūkī inhabiting the country between Hamadān and the borders of Marāgha. About one fourth of them were Shīʿīs. (iii) There were the Kurdish nomadic tribes in Khurāsān, of which the four main tribes were the Zafarānā (centred in Aghlamad), the Saʿdānā (centred on Khabbāshān, the Kavānūn in Rādkān, and the Dāvānūn near Dādājmār). They paid no revenue to the government. There were (iv) the Dīlāʾīr also in Khurāsān, ranging up to Marv-i Shāh Dīshān, (v) the Karāʾīr, centred on Turbat-i Dījām, and (vi) the Dīlāʾīr. The non-Persian nomadic tribes consisted of Arabs and Turks. The latter, according to the author of the manuscript, included the Afšār, the Kādājīr, the Shākākī (who were in fact Kurds) ranging from Ādharbāyjān to Gīlān, the Zangana (also Kurds) in the neighbourhood of Kirmānshāh, the Karagūzā in the neighbourhood of Hamadān, Burmaqīr and Nīvāvand, and the Shāhsivān, some of whom were in Fārs and others in Ādharbāyjān and Gīlān. The Afšār, according to Chardin, had introduced some new tribes to themselves and lost others. They included the Shāmīlī, Kiklūī, and Shirvānī. They held Yūs in Khurāsān and Urmiyīya in Ādharbāyjān. The Bayāt and Dūnbulī who held Nayşāpūr, Khwāy, and Salīmān, on the other hand, were no longer counted with the Afšārs. The Arab tribes consisted of the Čaḏb (Kaʿb), the Mūlāʾī of Hawaiā, who with various other Arab tribes ranged from that district up to Baghdad. In
There was also an Arab population in some other centres, including the Banū Shaybān in Tabās (see Ms. Dr. Caro Owen Miniasian Collection, Isfahan, OR Ms. Provisional No. 1134 (s & b)). A copy of this ms. appears to have been seen by Sir John Malcolm (see History of Persia, London 1819, ii, 372). In the 19th century there were groups of Mishmašt Arabs following a nomadic existence between Kāshān, Lār, and Lārzān (Mirzā Ḥabīb al-Rāmhūn b. Muḥammad Ibrāhīm b. KāṣĀnī, Mardā’ al-Kāṣānī, British Museum, MS Or. 3603, f. 61b).

The Safavids were succeeded by three dynasties whose founders were tribal leaders, Nādir Shāh, who belonged to the Kirklī tribe of the Afšār, Karim Kān Zand and Āqā Muḥammad Kān Kāqār. Nādir Shāh, who favoured the Sunni tribes, namely the Afghāns and Turkmāns, resettled a number of tribal groups elsewhere. In 1142-3/1730-1 50-60,000 families of tribespeople were transferred from Adhārbāyjān, Persian ʿĪrāk, and Fārs to Khorāsān. Two years later 60,000 Ābdāl were moved from Hārāt to Maḥbād, Naʿṣāḥpur and Dāmghān, and 5,000 families of the Haft Lang of the Bakhṭīyārī were sent to Khorāsān. A second group of Bakhṭīyārī, consisting of Haft Lang and Ḋāḥār Lang, amounting to 20,000 families were sent to Ḍānj in Khorāsān after a Bakhṭīyārī rebellion was crushed in 1140/1726 (L. Lockhart, Nādir Shāh, London 1938, 51-2, 54, 65, 110; see also M. Otter, Voyage en Turquie et en Perse, 1748, ii, 187). The widespread dispersion of the Afšār tribe in Persia in the 19th century presumably dates from that time of the reign of Nādir Shāh (cf. Macdonald Kinneir, A geographical memoir of Persia, London 1813, 46).

The murder of Nādir Shāh was followed by disorders. Muḥammad Ḥusayn Kān Kāqār, having established himself in Astarābād, where a branch of the Kādqār tribe, as stated above, was settled by Shāh ʿAbbās, extended his power over Māzdārān. A Bakhṭīyārī chief, ʿAll Mardān Kān, took possession of Isfahān and was joined by Karim Kān Zand. The two subsequently fell out. ʿAll Mardān Kān was murdered, and Karim Kān, after an initial defeat by Azād Kān, the Afghan ruler of Adhārbāyjān, regrouped his forces, defeated Azād Kān near Khišt and took Shirāz. A struggle then ensued between Muḥammad Ḥusayn Kān Kāqār and Karim Kān, in which the latter proved victorious. Karim Kān's court, like that of many other tribal rulers, was the resort of men of learning and culture (q. Malcolm, op. cit., ii, 86). His rule was on the whole peaceful. In Adhārbāyjān there appeared to have been an attempt to settle the tribes. A farnās dated 1271/1764 instructs the beqālabegī of Tabriz to treat the Shākkāy and other tribes in the province well, to cause them to engage in agriculture and government service (see Landlord and peasant, 133).

The death of Karim Kān was followed by anarchy and internecine strife among the Zands, in which there appeared to have been decimated finally Āqā Muḥammad Kān Kāqār, who had escaped from Shirāz where he had been held in captivity by Karim Kān, united the Kādqār tribe and made himself master of most of Persia, reducing the various tribal leaders who had established themselves in different parts of the country. Although Āqā Muḥammad Kān transferred the seat of his government to Tehran, Māzdārān and Gurgān remained the centre of the Kādqār tribe, with whom the ruling dynasty maintained its lines. Abbott writing in 1844 put the Kādqārs in Astarābād at only 20,000 families. They were exempt from taxation (London, P.R.O., F.O. 60:1:80. Account of Abbott's journey along the shores of the Caspian, incl. in Abbott to Aberdeen, No. 8, Encamp. near Tehran, 29 June 1844). Sir Justin Sheil, writing rather later, puts the Kādqārs in Māzdārān at 2,000 houses (Lady Sheil, Glimpses of life and manners in Persia, London 1856, 396). The ruling dynasty never entirely lost its nomadic background. William Osuely records that Fath ʿAll Shāh, like most other members of the Kādqār family, preferred 'an erratick to a settled life; a village to a city, and a tent to a palace' (Travels, London 1819, iii, 151). Lady Sheil also remarks on the nomadic habits 'so prevalent throughout the nation' (op. cit., 214). Even Naṣīr al-Dīn Shāh was, according to his French physician, Dr. Feuvrier, still a nomad at heart (Voyage en Armenie et en Perse, Paris 1906, 189). Many of the provincial governors came from the ruling family, which, however, became increasingly separated from the main body of the tribe.

Tribe contingents, as in the case of earlier dynasties, together with a standing army and the forces of the provincial governors, also containing tribal levies, composed the military forces of the Kādqārs (see Landlord and peasant, 137ff.). Morier states that Fath ʿAlī's standing army consisted of 12,000 men, drawn indiscriminately from the tribes or the population of the cities but principally from the Kādqār tribe of Māzdārān. The soldiers had their families and homes in Tehran and the neighbouring villages and were ready at call (A journey through Persia, Armenia, and Asia Minor to Constantinople, in the years 1808 and 1809, London 1812, 243-3). A register of the tribal levies was kept. Each tribe formed its own division in the army. These would attend at the Nawrūz at the royal camp. If their services were not required that year they would be dismissed. Whether retained at the royal camp or dismissed they received a stated pay. Jaubert describes the mixed population to be found at the royal camp (Voyage en Arménie et en Perse, fait dans les années 1805 et 1806, Paris 1821, 258-9).

ʿAbbās Mirzā was able to raise from three of the tribes in Adhārbāyjān 50,000 horse and foot, and the governor of Khorāsān from the tribes in that province 20,000. The Arabs and Frylis were exempt from the provision of military contingents (Morier, op. cit., 240-1).

Morier speaks highly of the military potential of the tribesmen. 'As raw materials for soldiers,' he wrote, 'nothing could be better than the Eelauts. Accustomed from their infancy to a camp life, habituated to all sorts of hardships and to the vicissitudes of weather, they are soldiers by nature. They have undertaken incredible marches without scarcely any food and without a murmur' (A second journey through Persia, Armenia, and Asia Minor to Constantinople, 1810-16, London 1816, 215). Sheil also speaks highly of the Persian soldiers, though he did not agree that the ḳādāns were necessarily the best (Lady Sheil, op. cit., 382). With the modernization of the army and the increasing dependence on artillery as the century proceeded, the importance of the tribal forces decreased, though it was not till after the first world war that they finally disappeared as a part of the military forces of the state.
HO4

In general the Kadjars were forced to administer the tribal areas through their own chiefs. The writ of the government and the administration in the frontier districts was conducted by a special minister of tribal affairs and administered customary law (see also Landlord and peasant, 158 ff.). The ỉk̪b̪āni and ỉḻešqi were appointed over the larger tribes. The nomination of these was confined to the leading tribal families. The shah might alter the succession by placing an uncle in the place of a nephew or younger brother in the condition of an elder, but normally he had no choice but to appoint as the leader of the tribe a man belonging to the family of the chief. The ỉk̪b̪āni and ỉḻešqi collected the government taxes and were generally responsible for their faithful observance and the tributary law. (cf. Layard, i, 499 ff.).

The ỉk̪b̪āni of the Kadjär tribe (who was not the reigning shah) presided over the tribal council of elders and enjoyed considerable influence (cf. Malcolm, op. cit., ii, 327).

The ỉḻešqi, ʿAḍūd al-Mulk, became regent in 1909 after the deposition of Muhammad ʿAlī Shāh.

Aḵa Muḥammad Khišān, like many preceding rulers, resettled various tribes. The ʿAbār al-Malik, one of their leaders, were transplanted from Fārs to Kalārḵāṭ and Kudjūr, as also were the Hāqqīdavāns. In 1844 the former numbered some 3,000 families and the latter 4,500. Both were settled, but the former had summer and winter quarters. They contributed, 1,500 horse to the government when so required (Account of Abbott’s journey, op. cit.). He also transferred the ʿAmala from Luris-tān to Kūčīk to Fārs. After his death many of them returned to their original encampments (C. A. de Bode, Travels in Luristan and Arabistan, London 1845, 118-19). Later rulers also transported various tribes (see Landlord and peasant, 158 ff.).

Realizing that the existence of large bodies of tribes, separated from the settled population, under leaders whose commands, whether to commit aggression against their neighbours, highway robbery, or resistance to the law, was unfavourable to internal tranquillity, Fāth ʿAlī Shāh devoted much of his energy to overthrowing the tribes. Many of the chiefs were put to death, others brought to court. Some tribes were broken up and others transplanted. The result was that by the middle of the century few of the tribal chiefs, except the ỉk̪b̪āni of the Kāsh-kāḵ in Fārs and the Zaḵarānān in Khorāsān were able to exercise a preponderating influence on the affairs of the tribe (op. cit., 158 f.). Macdonald Kinneir writing of the tribal chiefs states that they were “both from birth and influence, the men of the first of the men in the empire; they are always mutually jealous and hostile; and the king by fomenting their quarrels, and thus nicely balancing the power of the one against the other, insures his own safety and the peace of his dominions. It is the custom to detain at court, either the chief himself or some part of his family, as hostages for the fidelity of the tribe” (op. cit., 45).

The traditional policy of the government in the tribal regions from this time onwards consisted of dividē et impera—in setting one tribe against another, fomenting family feuds and jealousies, and bribing the chiefs with gifts or promises of support in their struggles, one with another for the headship of the tribal affairs and administering customary law (op. cit., 158 f.). Sometimes they were often extremely poor (cf. Lady Sheil, op. cit., 107-8).

Jaubert states that the nomads were attached to their nomadic life because of the independence which it gave them and which was for them the supreme happiness (op. cit., 252). Malcolm, writing of the Kurds, states that they preferred the freedom they enjoyed in their rugged mountains and felt a pride of taking hostages from the tribes was continued (cf. Malcolm, op. cit., ii, 338). This policy, although it enabled the government, in spite of its weakness, to maintain its power, shook the confidence of the tribes in the trustworthiness of the government, and contributed to the anarchy which frequently prevailed in the tribal districts. The government would invite tribal chiefs to parleys under flags of truce and after sending them as safe-conducts ʿUrāņs on which they had sworn to keep faith with them, would arrest them as soon as they had got them in their power or had them “accidentally killed” as the latter word may be interpreted in this view. The tribal leaders often had their own agents at court to keep them informed of matters which might be of interest to them and especially to give them forewarning of steps which might be contemplated against them. Another way in which the government attempted to control the tribal leaders was through marriage alliances.

During the reign of Muḥammad Shāh, and more particularly under ʿAbāb Mīrāzā and ʿAlī Shāh, the power of the tribes was further reduced and the authority of the central government asserted. In 1896 there was a proposal for the establishment of a special ministry or high council to have charge of tribal affairs, but little came of this.

Taxes were assessed on flocks and sometimes a poll tax or family tax was also paid. Many of the tribal leaders owned land in the districts occupied by the tribe or outside it, and so far as they or their followers held land they were subject to land taxes. The system of land tenure in the tribal areas was often complicated. Pīghaksh and special levies were also paid by the tribal leaders to the ruler or local governor at the new year. These were collected by the tribal leaders from their followers and often constituted a heavy imposition (see Landlord and peasant, 142-3, 158). Jaubert alleges that Fāth ʿAlī Shāh insisted that at least one fifth of the taxes due from the tribal leaders should be paid in cash (op. cit., 270). Some of the tribal leaders, especially in the frontier districts, held land free in return for the provision of military contingents. This was the case in Buḡnjurd, Dārā Gāz, and Ašraf in the second half of the 19th century (see Landlord and peasant, 165-4). There were also cases of tribes being exempted from taxation for some particular reason. The Karā Pāpāḵ, who were settled in Suldūz by ʿAbāb Mīrāzā after the Treaty of Turkmānchāy, were not required to provide soldiers or pay taxes (E. Aubin, La Perse d’aujourdh’hui, Paris 1908, 78-9). Disputes between the government and the tribal leaders over arrears of taxation were frequent. If the government felt strong enough, it would collect these by a military expedition, if not bills (bardtūds) would be drawn on the defaulters and sold at a large discount. The bardtūds were often to be found quartered on the recalcitrant taxpayers and might remain months or years until the sum, or a part of it, was paid (cf. Layard, op. cit., i, 499 ff.).

The numbers and condition of the tribes fluctuated. On the whole their life was one of hardship and uncertainty. Some among the Kurdish and Turkomān tribes were wealthy, but the smaller tribes were often extremely poor (cf. Lady Sheil, op. cit., 107-8).
in the privations and hardships to which they were exposed, when they regarded them as associated with their independence (op. cit., ii, 332). There is no doubt some truth in these statements, and on the whole the nomads, until recent times, have resisted settlement, fearing a loss of independence.

Baron de Bode, who travelled in south Persia in 1841, describing the character of the migrating tribes, states that he found this marked by much frankness, mixed with a great deal of cunning. He accounted for this apparent weakness partly by habit, partly by necessity, the chiefs led and partly by the necessity they were under of being constantly on their guard, in order to defeat the machinations of their adversaries or from their own inclination to encroach upon their neighbours' property (op. cit., i, 253). In general, the tribes were distinguished from the settled population by the greater freedom enjoyed by their women. Occasionally during the minority of a chief the tribe might be governed by his mother (cf. de Bode, op. cit., ii, 134 ff.).

Large areas of the Kâdîr kingdom were tribal districts. In some the tribes migrated long distances, as the Bakhtiyâri and the Khâshkâhî; in others the migrations were more limited, and in some the movement was no more than into tents on the village outskirts. There was no clear demarcation between tribal and non-tribal land, any more than between village outskirts. There was no clear demarcation among the tribesmen living in villages all or part of the year. They often contumacious and lawless and sometimes did extreme damage to crops and gardens (cf. Landlord and peasant, 157-8).

Macdonald Kinneir thought that the numbers of the Ilâs, wandering tribes, probably exceeded the town population (op. cit., 44). Sheil, who had a long experience of Persia in the reigns of Fatâb 'Ali Shâh and Muhammad Shâh, put the semi-nomadic and settled tribes together at possibly half the total population (Lady Sheil, op. cit., 393). In 1891 Mrs. Bishop recorded that the Ilâs "are supposed to constitute a fifth of the rural population" (op. cit., 84). The decrease in the figures given by Mrs. Bishop is perhaps partly to be explained by the fact that tribesmen who were living in villages were presumably excluded from the figures given to Mrs. Bishop. Sir A. Houtum-Schindler put the tribal population at 2,200,000 out of a total population of 9,000,000 in 1900. These figures were broken down as follows: 850,000 Turks, 800,000 Kurds and Laks, 300,000 Arabs, 230,000 Lurs, and 20,000 Balûc and gypsies. (Report on Persian Army by Lt. Col. H. P. Picot, Jaun 1900; see also Curzon, op. cit., ii, 493, who quotes figures drawn up by Houtum-Schindler in 1884, which differ slightly from the above). He notes that by this time very few of the Ústdîlû and Dhûl-Kadr remained. They resided in Adbârâyán. The Tekkélî had ceased to exist (Eastern Persian Ira, London 1898, 48-50).

One of the most important tribal areas in the north country was that inhabited by the Bakhtiyâri with whom the government had repeated conflicts, and who in the 20th century played a major role in the restoration of constitutional government in 1909 (see A.K.S. Lambton, Persian political societies, in St. Antony's Papers, No. 26, Middle East Affairs, No. 3, London 1963). They were divided into two main groups, the Haft Lang and the Cahâr Lang, the former having summer pastures in Châhr Mâjâlî and the latter in Firâydan; both had winter pastures in Khûzistân. Morier put their numbers in 1809 at 100,000 families (Journey, 242). Malcolm states that they continued to be ruled by their own customs and admitted hardly any interference by the officers of the government in their internal jurisdiction. They furnished troops and paid a small tribute. They were encouraged to settle in the plains with a view to rendering them more tangible to the laws of the country and, by giving them an interest in the general peace of the country, it was hoped to prevent the predatory attacks they had in common habit of making, on their neighbours (op. cit., ii, 332). De Bode states that many of the Haft Lang had been settled (op. cit., ii, 86). Fatâb 'Ali Shâh kept hostages from the Bakhtiyâri at Tehran, where a separate quarter was allotted to them (de Bode, op. cit., ii, 75). Later rulers continued the practice of taking hostages. This did not, however, prevent rebellion by the tribe or secure the safety of the roads. Morier, when passing through Isfâhân in 1811, mentions that the town was in a continual state of alarm lest Asad Khân of the Haft Lang should seize the city (Second journey, 156).

Rawlinson put the Bakhtiyâri (the Cahâr Lang and Haft Lang together with the Dînârûns) at 28,000 families about the year 1836. Their assessment was fixed at 100 kâtîrs, which term he states was used to denote a sum of money, which was increased or diminished according to the prosperity or otherwise of the tribes and the power of the government to exercise authority over them. Under the Atabegs a kâtîr had apparently been the equivalent of 1,000 tâmâns, but when Rawlinson was writing it was 100 tâmâns; but the government was unable to realize this amount. Muhammad Ta'ki Khân of the Dînârûn tribe of the Cahâr Lang was îlàkhân at that time. Rawlinson states that he could put 10-12,000 well-armed men in the field. He speaks highly of Muhammad Ta'ki Khân's justice and states that he had attempted to break the tribes of their nomadic habits and to some extent succeeded. He had bought land in Firâydan and founded villages and also settled tribesmen in the Râm Hurmuz plain, which he farmed from the government for 3,000 tâmâns a year. The Bakhtiyâri supplied Khûzistân with tobacco and exported a small quantity of grain and in 1841 the governor of the Dînârûns supplied Khûzistân with 9,000 heads of cattle, mostly bullocks and sheep. The Bakhtiyâri tribe of the Bakhtiyâri had its acknowledged hereditary chief or Khân who ruled his subjects with despotic sway (Notes on a march from Zohab, at the foot of the Zagros, along the mountain roads to Khûzistan (Russiana) and from thence through the province of Luristan to Kûrmânschah, in the year 1836, in J RGS, 1889, ix, 26-110). Layard also speaks highly of Muhammad Ta'ki Khân and of his wish to open the Bakhtiyâri to commerce. In 1841 the governor of Isfâhân, Mu'tamid al-Dawla, marched from Isfâhân to Mâlamîr to demand payment of arrears of taxation from Muhammad Ta'ki Khân, who was declared a rebel. Wishing to avoid conflict, he temporized, but was unable to reach a settlement. He then took refuge with the Ca'b at Fâlâyînya, but was persuaded to come to Mu'tamid al-Dawla, the latter seized him and took him a prisoner to Isfâhân, where he died in captivity in 1853 (see Layard, op. cit., i, 375 ff.).

De Bode states that the Cahâr Lang were taxed at 15,000 tâmâns but that the tax was not regularly collected since they could only be compelled to pay it by force (op. cit., ii, 82). Some 195 villages settled by Haft Lang paid 7,070 tâmâns in cash and 530 kharârs of grain, while those of the tribe who still

poverty which she saw among the Bakhtiyari with

she estimated the number of the Bakhtiyari at 29,100 families,

put the numbers of the Bakhtiyari at 20,000 (op. cit.,

Curzon wrote, this was no longer the case (op. cit., ii, 299). Curzon states that in addition
to the office of ilkhdnl and ilbegi, both of which were salaried by and in the gift of the shah, a third
class of chiefs, known as the kdtirs or "tribal kings," was also closely bound up with tribal politics, since
the tribal chiefs held landed property in Caahir Maahl (op. cit., ii, 295).

Luristâni Kâkîk was divided into Pîshkîh and Pught-i Kûh. The principal tribes of the former were the Silâstîl and Dilfûn, numbering according
to de Bode about 30,000 families, the 'Amâla (2,000 families or more), and the Bâlâ Gîrîwa (4,000 families) (op. cit., ii, 286 ff.). The Pught-i Kûh tribes, the Faylls, were less numerous. Rawlinson gives a
detailed list of the tribes of Pîshkîh and Pught-i Kûh, putting the former at 38,000 and the latter at
12,000 (op. cit.). The Lurs supplied mutton and milk products and charcoal to the bazaars of Burûjdîrd, Nîhawand, Hamadân, and Kirmângâh. They also made carpets and a coarse tenting made of goats'
hair, which was used for saddle-bags by muleteers (de Bode, op. cit., ii, 295).

Luristânî Kâkîk differed from that of the Bakhtiyari (the Lur-i Buzurg). Each sub-division had its
own leader or tîshmâlî, and they met as equals on occasion to discuss their common interests. The government of the tribe as a whole was in the
hands of an Ubegl, and his deputy, the ilkhdnl. The over-all security was left to the hands of a few officers of the day, Sultan Muhammad Khan,

The summer quarters of the tribe were near Isfahan in the winter quarters near the
coast. Several groups dwelt among the Bakhtiyari near the Djânûkî mountains and Mt. Dinî. They were rich in flocks and herds and did great harm
in their movements (Lady Sheil, op. cit., 398-9).

In addition to the Kashkâî and the Turkish tribes of the Khamsa, there were a number of other Turkish tribes in Fars, such as the Khalâlî in Kun-kâî, whose leader Mirzâ Kashmî Khân married the daughter of Dînî Khân, the ilkhdnl of the Kashkâî in the early part of the 19th century (Fasâ'î, op. cit., ii, 244). There were also small groups of Khalâlî in Kirmân and Agâh-râîyân (Houtum Schindler, Eastern Persian Arab, 50).

The Mamassani, living on the borders of Fars and Khûzistân, consisted of four main divisions, the Rustami, Bakîsh, Dîlî, and Dushmanzâyî.

The first two were the strongest and jealousy existed between them. The chief of the Dushmanzâyî, Muhammad Rûdâ Khân, was executed in 1840 on the orders of Fâryûnî Mirzâ, governor of Fars, and the tribe was accordingly weakened. The total number of the Mamassani about that time was said to exceed 4,000 families. The tax levied on them by the governor of Fars amounted to 7,000 tumdns (c. £2,800). They committed much robbery during the latter years of Fath 'Ali Shâh, when Fars was administered by Huseyn 'Ali Mirzâ. Wall Khân, the Bakîsh chief, was the main ringleader. He and his son Bâkîr
Khan were eventually captured and imprisoned in Tabriz and the power of the Mamassani was somewhat reduced (de Bode, op. cit., i, 270 ff.). De Bode puts the total number of the Khan at 10,000 tents and houses. The Teyyibi numbered some 3,000 families and the Bahma'i inhabiting the mountains north-west of Bihbahân, "the wildest and most unruly tribe among the mountaineers of Fars", were, de Bode thought, somewhat underrated at 2,000 families. At the time he was writing they had gone over to the Bakhštyârî leader, Muhammad Taki Khan. They were much split by blood feuds. There were also a number of small tribes of Arab and Turkish, occupying the plain of Bihbahân, some settled in villages and others living in tents (de Bode, op. cit., i, 275 ff.). The figures given for the tribes by Sheil were on the whole smaller than those given by de Bode. The power of the Mamassani had by the middle of the century been considerably reduced. Sheil puts their numbers at 8,000 tents and houses (Lady Sheil, op. cit., 399; see also Curzon, op. cit., ii, 318). According to Sheil's estimates of the tribes of Bihbahân and the Kühgîlâyâ the largest was the Bahma'i (2,500 tents) followed by the Buwayr Ahmadi (2,000 tents), Bâvî (1,200 tents), Cîrâmî (1,000 tents), Tâyyîbî (1,000 tents), and numerous smaller tribes. Many of them were poor, though the Tâyyîbî were said to be rich (Lady Sheil, op. cit., 399). Farhâd Mirzâ reduced the Kühgîlâyâ in 1852 (Curzon, op. cit., ii, 318). (See also Mahmûd Bâkwar, Kühgîlâyâ wa li-l-an, Tehran (?) 1945, and Manûchehr Zarrabî, Tâwâfî-kühgîlâyâ in Farhang-i Irân Zamin, ix, fas. 1-4, 278-352. See also F.O. 371:1728 for a genealogical tree of the kânûn of the Buwayr Ahmadi tribe and their numbers in 1913.)

The Ça'b in 'Arabstân increased in importance in the 19th century until the death of Shaykh Tâhemîr, after which they declined. Between 1870 and 1875 they occupied the territory that was previously occupied by the Buwayr. They were also obliged to provide, when called upon by the government (see Firuz Mirzâ Farman Farma, Tawaâfî Kühgîlâyî in Farhang-i Irân Zamin, ed. Mansûra Nâzîm Mâfî, Tehran 1963). Morier, writing in 1898, states that the Balûc, although once subject to Persia, had resumed their independence (Journey, 49-50). During the reign of Nâzîr al-Dîn Shâh some progress was made in bringing the Balûc under the control of the central government (see Frâz Mirzâ Fârmân Fârmân, Safar-nâmâ-i Kûrmân wa Balûcstân, ed. Mansûra Nâzîm Mâfî, Tehran 1963). Ferrier, who travelled in Persia in 1845, states that there were some 8,000 Balûc tents with very large flocks in Tûrsâq (op. cit., i, 277). Sheil puts their number rather lower at 2,000 tents, which were ruled by their chief Ahmad Khan (Lady Sheil, op. cit., 400). There were also Balûc at Kâ'în (Ferrier, op. cit., 411) and some 2,000 tents and houses at Turbat-i Haydari (Lady Sheil, op. cit., 400). The most important group in Turbat-i Haydari were the Kârâ'î, numbering 5,000 tents and houses. There were also various miscellaneous groups amounting to some 3,000 tents and houses (Lady Sheil, op. cit., 400). In the reign of Fath 'Ali Shâh, the Kârâ'î leader, Isbâk Khan, achieved a position of great influence. He was eventually seized with his son and killed by Muhammad Wall Mirzâ, governor of Kûrûsân (Watson, A History of Persia, London 1866, 175 ff.). Colonel Yate, who travelled in Kûrûsân in 1893, put the Karatâ at 3,000 families. They provided one regiment of infantry (Kûrûsân and Sîstân, London 1990, 53). In Tûrsâq there were 4,000 Arab tents and houses, 7,000 in Tûn and Tabas, and 12,000 in Kâ'în (Lady Sheil, op. cit., 400).

In Eastern Kûrûsân, the Hazâras, Taymûris, Mayîman, Pîrâshkûhîs, Dîzmûshkîs, and Zangîs, all Turkish tribes, were in the early Kâdîr period barely under government control, and on the death of Fath 'Ali Shâh and Muhammad Shâh they committed disturbances. Ferrier mentions that when he visited Kûrûsân 2,000 families of Hazâras had recently emigrated from Harrât to Shâh-i Naw near Mâhûm Dâbâd. The had some considerable numbers of horses in which they paid their tribute to the government. They were also obliged to provide, when called upon to do so, a contingent of 1,000 cavalry (op. cit., 137). By 1853, the number of Hazâras in Persia had apparently fallen. Yate estimates them at only 1,200 families (op. cit., 137). Sheil puts the Taymûris living in Khwâf at 4,000 tents and houses; a second group of 2,000 lived near Masghâd. There were a
number of miscellaneous Turkish and Persian tribes, amounting to some 11,000 tents and houses, round Mashhad. In Naishapur there were 10,000 Bayat and Kuragháh, who were settled. There were also Bayat in Burújird, Khurramábád, and Fars, apart from those who had joined the Kájár tribe, forming the sub-division known as the Shámhâyátli (Houtum-Schindler, *Eastern Persian Irak*, 48-50). The Kurdish tribes in Khurásán consisted of 14,000 houses and tents of Za'faránli at Kúchán, 2,000 Kánvaráli at Rádkán, and 3,000 Shádilíli at Budjnurd, and various other groups at Júdání and elsewhere (Lady Sheil, *op. cit.*, 400). The Za'faránli had originally been settled in Akhal by Sháh 'Abdás to repel the Özbeks, but they were driven out in the reign of Sháh Súltán Husayn, and retired to Kúchán, Shirwán, and Budjnurd (Yate, *op. cit.*, 180 ff.; see also Curzon, *op. cit.*, i, 97 ff., and 191-2).

The Central Asian frontier of Persia and control of the tribes living in the Turkomán steppe proved a difficult problem for the Kájárs, as it had for earlier dynasties. They were unable to prevent widespread raiding by the Özbeks and Turkománs, who plundered and, in the early part of the century, carried off many Persian subjects into slavery. The two most important Turkomán tribes on the Persian side of the frontier were the Gulkán and the Yamút, both Sunní. The former were not nomadic. The latter, who were found on both sides of the ill-defined frontier, were divided into two sections, Özbeks, who were cultivators, and lewrongás, who were nomads. The relations between the Yamút and the Aták villagers were hostile and raiding by the former was frequent. There was, however, often provocation by the latter and much oppression of them by government officials. The Gulkán, who occupied the area to the south-east of the Caspian Sea, lived in constant dread of the Yamút and were also on bad terms with the Kurds of Budjnurd and the Hándjáilí tribe of Kabúddjáma. Raids and counter raids were of common occurrence (cf. Yate, *op. cit.*, 245-7, for an account of a raid). Each section of the Gulkán and Yamút consisted of several awbás, each of which had its leader (áj sabáh), who held a hereditary *yurt*. There was no leader of the whole tribe. When necessary, the elders of the awbas and the *sikáyés* within (assasíyá) the Gulkán, and elsewhere, would assemble to decide on some course of action. When the *cambúrás* migrated and the *cumúrás* were left without their protection, the governor of Astarábád would levy a small poll-tax and *fískhás* from them. The Persian government, unable to coerce the Turkománs, as far as possible conciliated them (Account of Abbót's Journey, *op. cit.*). In the reign of Násir al-Dín Sháh, the Gulkán were compelled to furnish forty or fifty families as hostages, but this did not prevent their carrying on foraging excursions into Persia (Lady Sheil, *op. cit.*, 207 ff.). Yate in 1893 states that some of the Gulkán were wealthy. The Persian government numbered the Gulkán settled in the Gurgán district at 900-1,000 families, but others put them at 1,700-2,000. They lived in constant dread of the Yamút (*op. cit.*, 217 ff.). The Yamút were variously estimated at 7,000 to 15,000 tents. Yate thought the lower estimate the most nearly correct. Of them, 4,000 were said to be *cumúrás* and 2,400 *cambúrás* (*op. cit.*, 279-80). (See also Curzon, *op. cit.*, i, 189 ff.; and various reports from Karelin, the chief of the expedition sent to the Eastern shores of the Caspian in 1836, to the Russian Minister of Finance, translations of which are in F.O. 65:226, incl. in Durham to Palmerston, St. Petersburgh, 15 December 1836; F.O. 65:223, incl. in Durham to Palmerston, 1st March 1838; and confidential, St. Petersburgh, 13 February 1837, and F.O. 65:234. Incl. in Durham to Palmerston, no. 63, St. Petersburgh, 8 April 1837).

In the Tehran region there were a miscellaneous collection of tribes, of whom the Sháhsívan were the most numerous—9,000 tents—in the middle of the nineteenth century. They were dispersed according to the season between Kumm, Tehran, Kazán, and Zandján. The remainder consisted of various small groups, most of whom were extremely poor (Lady Sheil, *op. cit.*, 397). There were also Khládíadj near Kumm and Sáva (de Bode, *op. cit.*, ii, 318). Houtum-Schindler mentions some 1,000 Pážíklí families in Varámní and Khwár towards the end of the century. Some spoke Kurdish and some Turkish. He also mentions various other minor tribes in Eastern Persian Irák (*op. cit.*, 50 ff.).

The Khámsí district of Zandján was inhabited by a number of Turkish tribes. They lived in summer in tents, but did not move far. In winter they lived in houses, because of the severe cold. The two largest tribes were the Gárráns, numbering 4,500 houses, and the Sháhsívaní al-Afshár, numbering 2,500 tents (Lady Sheil, *op. cit.*, 397). By the beginning of the 20th century they had apparently all become settled,
except for a few Shahisivans and one Talish tribe, originally from Gilan (E. Aubin, La Perse d’aujourd’hui, Paris 1908, 147). Of the Shahisivan tribe in the Hamadan-Malayir-Tuyserkan-Farahan region was the Turkish tribe, the Karaguzlu. Macdonald Kinneir states that they could put 7,000 men in the field (op. cit., 127). The district between Kangavar and Hamadan was in the hands of the Afsær, centred on Assadabad (op. cit., 129). Sheil numbered the Karaguzlu at 4,000 houses. By his time they were all settled. There were also various Laki tribes, reckoned at 1,500 tents and houses, in the Hamadan-Malayir-Tuyserkan-Farahan area (Lady Sheil, op. cit., 398).

The Kurds, apart from the settlements in Khurāsān and elsewhere mentioned above, were to be found in Kirmānshāh, Ardalan, and western Ādharbāyjān. They lived on the frontiers of the Persian and Ottoman empires and in some cases migrated across these. This greatly aggravated the difficulty of controlling them. Sheil gives a list of the Kurdish tribes of Kirmānshāh, but states that the figures must be treated with reserve. According to this list the most numerous were the Kalkhūr, put at 11,500 tents and houses, the Zangana (including the Sandjābī) at 10,000 houses and tents, and the Gūrān at 3,300 tents and houses (Lady Sheil, op. cit., 401). Curzon, towards the end of the century, puts the Kurds of Kirmānshāh at some 24,500 tents and families, of which the Kalkhūr and Gūrān accounted for 5,000 each, and the Sandjābī 1,500 (op. cit., i, 557). Curzon’s figures presumably include many Kurds who were settled in towns. The Kurds of Ardalan were mainly sedentary, and until towards the end of the reign of Nāṣir al-Dīn Shāh were in fact independent of the interference of the central government because of the inaccessible nature of the country. Among them were the Hakākī, living west of Urmiyya near Salmās and on both sides of the Ottoman-Persian frontier (see Malcolm, op. cit., ii, 334-5). Gaspard Drouville, who was in Persia in 1872-73, states that the most important protection of Ābbās Mirzā and that they came annually with immense flocks to use the pastures in Persia. In time of war their flocks provided Ābbās Mirzā with horse and foot soldiers. As soon as they entered Persia, they were supplied and provided for by the shah. Drouville also states that the Kurds of Ādharbāyjān who provided Ābbās Mirzā with military contingents were exempt from taxation (Voyage en Perse, Paris 1825, ii, 7). The Shābaks under Saḍīq Khān, to whom Miyanā and the surrounding districts belonged, were said to be able to number 10,000 horse. On the death of Ākā Muhammad Khān, Saḍīq Khān made an abortive attempt to establish his independence. He rebelled again later and lost his life. The tribe was subsequently dispersed (Macdonald Kinneir, op. cit., 152). According to Sheil, the Shābaks and Mukri both consisted of 15,000 tents and houses. The latter lived round Sawdj Bulāgh (Lady Sheil, op. cit., 396). The figures given by Curzon are lower (op. cit., i, 555). The Bāban in Sulduz according to Sheil numbered 1500 houses (Lady Sheil, op. cit., p. 401). (See also Shāykh Muhammad Mardūḵ, Ta’rīḵ-i Mardūḵ, n.d., 2 vols., and Muhammad Mukri, Ta’rīḵ-i Kurd, Il-i Sandjābī, vol. i, pt. 1, Tehran 1934).

Of the Turkish tribes in Ādharbāyjān the Shāhsivan were the most numerous. Abbott, writing in 1844, states that they were usually estimated at 11-12,000 families, about 6-7,000 inhabiting Miḵūn and about 5,000 Ardabil. Both wintered in Miḵūn. In the Ardabil district they inhabited several villages, of which the population was partly made up of peasants and partly tribal. In these the government’s demand on the tribe was 1,000 tūmāns p.a. The tented families, on the other hand, paid 5,500 tūmāns, of which the Miḵūn division paid 4,000 tūmāns. These sums were paid by the heads of the tribe, who collected them from their followers (‘Account of Abbott’s Journey’, op. cit.). According to Sheil, the Shāhsivan numbered 10,000 tents (Lady Sheil, op. cit., 396). Houtum-Schindler states that the Inānū were the most important branch of the Shāhsivans. The Shāmūlī by this time existed partly as a branch of the Shāhsivan and partly as a separate tribe called the Bahārūfū, numbering some 2,500 families, half residing in Fārs, where they formed part of the Khamsa, and half in Ādharbāyjān (Eastern Persian Irāk, 48-50). By the 20th century many of the Shāhsivan had become settled. Aubin puts them at 19,700 families, divided into sixty groups or uḏjābs, each under a kadkhūd (op. cit., 106-7). The Mukāddam in the middle of the century numbered 5,000 houses and the Māḥmūdī 2,500; both were in Marāgha. The Bahārūfū and the Afsār, both in Urūmiyya, were reckoned at 2,000 and 7,000 houses respectively, the Dunbulī at 2,000 houses, the Karā Papakh at 1,500 houses. There were a few minor tribes also (Lady Sheil, op. cit., 396). In the early 20th century they numbered 5,000 families (Aubin, op. cit., 78-9). Houtum-Schindler puts the Afghāns in Ādharbāyjān at the end of the 19th century at 12,000 families (Eastern Persian Irāk, 48-50).

The tribes of Karādja Dāgh, Karā Dāgh and Tālīsh proved, like most of the frontier tribes, difficult to control, migrating from one side to the other. In the early Kāḏār period they played a restless part in the Perso-Russian wars, their allegiance vacillating. Sheil puts the numbers of the Cīlibiyānū in Arasbārān at 1,500 tents and houses, the Karāčurū at 2,500, the Hāḏḏijī ʿAllū at 800, the Begdālī at 200 and various minor groups at 129. These figures are probably too low (op. cit., ii, 129 ff.). (See further Bāyburdī, Ta’rīḵ-i Arasbārān, Tehran 1962, 121 ff. and Aubin, op. cit., 255). The Karāčurū were among the first of the tribes in Arasbārān to become settled (Bāyburdī, op. cit., 110 ff.).

By the beginning of the 20th century the position of the tribes had changed considerably. Many of the tribal leaders were familiar with urban life, either through government service or because of their detention in the capital by the government as hostages. A few had travelled abroad. Settlement both of the leaders and the tribesmen was growing, and, apart from the outlying areas, the tribes were becoming assimilated to the rest of the population (cf. Aubin, op. cit., 177-8).

With the Constitutional revolution a new period began in Persia, which affected the position of the tribes as well as that of other sections of the population. Tribal forces were found on both sides in the struggle for the constitution. Under the electoral law of 9 September 1906, dividing electors and elected into six categories, the tribes, apart from the Kāḏārs, were not reckoned as a special category, but were counted among the inhabitants of each province and as such had the right to vote subject to the conditions laid down (Art. 1, note 2). Under the electoral law of 7 July 1909, however, provision
was made for the Shahsivan, Kashka'i, Khamsa (of Pars), Turkomans, and Bakhtiyari each to send one representative to the assembly (Art. 63). In the later electoral laws no special provision was made for tribal representation. In the early years of constitutional government and during the anarchy prevailing after the suspension of the constitution in 1911 the government was unable to control the tribal areas. Because of this, with the discovery of oil in southwest Persia, special agreements were made between the Anglo-Persian Oil Company and the Shah, and the Shaykh of Mumawmara and the Bakhtiyari respectively on the other. The latter supplied labour to the engineers and provided guards for the protection of the oil-fields. During the first World War there was much unrest, rebellion and disorder in the tribal areas (see further Sir Percy Sykes, A History of Persia, ii). After the war Ridâ Khân, later Ridâ Shâh Pahlawi, reimposed the authority of the central government throughout the country. The Kurds of Aghdarbâyjân were subjugated and disarmed. In 1925 the Bakhtiyâris and Kashkâ'is were partially disarmed and the Turkomans to some extent reduced. Subsequently, attempts were made to settle the tribes (see Hassan Arfa, Under five Shâhs, London 1964, and Landlord and Peasant, 181, 283 ff.). During and after the second World War there were also disturbances in the tribal areas, especially a separatist movement in the Kurdish districts of Aghdarbâyjân and a serious tribal revolt in the south in 1946.

Sunderland, "Pastoralism and the social Anthropology of Iran", ibid., 611-83.

(_VECTOR_)

ILBIRA, Sp. Elvira, town and the associ¬ated province, near or identical with Granada. The Ilbira question is one on which much discussion and may be summarized as follows: The Roman town of Iliberri occupied part of the present site of Granada. The Arab governors of the region at first resided there, Arabicizing the name into Ilbira, but about 130/747 founded, 12 km north-west of modern Granada, a new capital which was called Kaštâla, Kaštilla, or Kaštiyâ. This however soon became known by the name of its predecessor, Elvira. The original Elvira continued to be populated, largely by Jews and Christians, but in time came to be known as Granata/Charnâta. In 401/1010, during the Berber insurrection, new Elvira was sacked by the Şanğâdja troops of Zâwi b. Ziri and the inhabitants emigrated to Granada. In 403/1012 Zâwi declared his independence and made Granada his capital. Henceforward Elvira declined though there was still a fortress there as late as 891/1486. The ruins are still visible and the name survives in the Sierra de Elvira and the Puerta de Elvira at Granada.

The name Ilbira as that of the region of which the capital was Granada continued in use long after the decline of Elvira town. See further GHARNATA.

(A. K. S. LAMBOT)
the early decades of the 7th/13th. Down to the death in battle in 590/1194 of Toghril b. Arslan, last of the Great Saljuqs of Iraq and Persia, the Ildenizids ruled as theoretical subordinates of the Sultans, acknowledging this dependence on their coins almost down to the end of the Saljuqs. Thereafter, they were in effect an independent dynasty, until the westward expansion of the Mongols and the Kharaizmshahs weakened and then brought the line to its close. All the Ildenizid Atabegs issued coins of their own.

Genealogical Table of the Ildenizids

1. Shams al-Din Ildeniz
2. Nusrat al-Din Djahan-Pahlawan Muhammad
3. Muzaaffar al-Din Kizil Arslan
4. Kutlug Inan6
5. Nusrat al-Din Abu Bakr
6. Muzaaffar al-Din Ozbeg
7. Amir-i Pahlawan Muhammad
Khadsh

1. Political history. The career of Shams al-Din Ildeniz himself is discussed above, s.v. Ildeniz. His name, most frequently spelled in the sources ‘yydzh, has been traditionally rendered “Ildiz” or “Ildeniz”, but V. Minorsky (Studies in Caucasian History, 92, n. 2) regarded a derivation from Turkish ‘iliz + deniz as “modernizing and impossible” and suggested, on the basis of the transcription of the name in Georgian and Armenian sources, the form Eldigiz. The links which he had forged with the Saljuk royal family—his marriage with Sultan Toghril b. Muhammad and Malik-Shah’s widow Mumtana Khattun and his support for the succession of Arslan b. Toghril—gave his offspring a commanding position in northwestern Persia, which they were for a considerable time able to maintain against rival powers.

Ildeniz’s eldest son the Atabeg Nusrat al-Din Djahan-Pahlawan Muhammad (571-82/1175-87) was Sultan Arslan’s half-brother and succeeded not only to his father’s lands of Arranz and those parts of Adharbaydjan not held by the Aghmaulis [q.v.] of Maragha, but also to Djibal, including Hamadhjan, Isfahanz and Ray; his brother Kizil Arslan was established in Tabriz as subordinate ruler. Pahlawan Muhammad continued his father’s policy of holding the Sultan in tutelage, and ‘Imad al-Din plausibly asserts that Pahlawan Muhammad poisoned Arslan in 571/1176 when he attempted to break free from the Atabeg’s control; the latter now set up Arslan’s young son Toghril as Sultan and thereby maintained his grip on real power in the state. A feature of Pahlawan Muhammad’s Atabegate, particularly stressed by Rawandi and Ibn Isfandiyar, is that he raised to positions of great power in the territories a body of his personal slave commanders, the Pahlawanimatediya, as Ibn al-Athir calls them. They were seemingly meant as a basis of support for Pahlawan Muhammad’s children after he was dead, but they seem in practice to have been more a divisive than a cohesive factor, contributing much to the confusion of western Persia during the last years of Sultan Toghril’s reign and the ensuing period (see Luther, Rawandi’s Report on the adminis-

trative changes of Muhammad Jahang Pahlawan).

When Pahlawan Muhammad died in 582/1187, he was followed in the Atabegate by his childless brother Muzaaffar al-Din Kizil Arslan (582-7/1187-91), in accordance with the Turkish practice of the seniorate. However, Pahlawan Muhammad also divided out his personal territories amongst his four sons, who were to be subordinate rulers under Kizil Arslan’s general supervision. This arrangement proved to be an unhappy one. The ghulams whom Pahlawan Muhammad had appointed
the old Ildenizid heartland of Adharbaydjan during Kyuugh Inan's Atabegate, and he now continued to rule there unchallenged. His authority in Dibajl, on the other hand, was only nominal, real power being in the hands of the ghulams (guards) of the Pahlavan-Ishfahani, whilst the Caliph al-Nasir controlled such towns as Isfahan, Kazvin and Hamadhan. Much of Abu Bakr's energy had to be concentrated on his family's old rivals, the Ahmadilis of Maragha. Ala

3. Culture. The Turkish Ildenizids shared to the full in the Perso-Islamic civilization of their period. At this time, the courts of northern Persia, including those of Sharwan, Arran and Adharbaydjan, were particularly attractive to poets and literary men. Ildenizid patronage was aimed for his piety and patronage of scholars; he built and endowed with asek the great madrasa in Hamadhan where he was ultimately buried. Even the notorious drunkard Abu Bakr was known for his attention to the "ulama" and his zeal for building mosques and madrasas. Dawlatshah stresses the great number of poets in the Ildenizid court circle, and mentions specifically Abu'din al-Din Abshaklat, Mudjur al-Din Baylakani, Zahir al-Din Faryabhi, Niqami, Kiwami, Mutarrizi and Yusuf Fu
doili; to these, 'Afwi adds "Ismad ad-Din Ghazawi and Shahrub Ishfahan, the eulogists of Pahlawan Muhammad. Of these poets, the roles of Mudjur al-Din, the pupil of Khakshiri, at Khakshir's court; and of Zahir al-Din at the courts of Khzir Arsln and Abu Bakr, are especially noteworthy. Nizami, one of his rare journeys outside his native Gandja to converse with Khzir Arsln, and no fewer than four of the Khamsa are connected with the Ildenizids: the Makbuz arm-r, was dedicated to Ildeniz; Khosruw u Shrin to Sultan Togrul b. Arslan, Pahlawan Muhammad and Khzir Arsln (from the last of whom the poet received the grant of four villages as a reward); and the first version of the Iskandar-nama and the Half payhar were dedicated to Abu Bakr (on the problems connected with the dedication of the two parts of the Islanand-nama, see Minorsky, Caucasius II, 872-3).

3. Conclusion. The historical significance of the dynasty is twofold. Firstly, the decay of the Saldjuks enabled the Ildenizids to convert the governorship of northwestern Persia, which was theoretically a reward for exercising the position of Atabeg over a Saldjuk prince, into hereditary rule. Whilst such strong personalities as Ildeniz and Pahlawan Muhammad directed the family's fortunes, they enjoyed de facto independence, at the same time deriving such prestige as remained from the position of Atabegs to the Saldjuks family. But their weaker successors found themselves only one element amongst many struggling for hegemony in northern and western Persia—rival Turkish amirs, the 'Abbasid Caliphs, the Kh'aran-Shahs, and on the western fringes, the Ayyubids, with whom Pahlawan Muhammad had diplomatic brushes over the heritage of the Shahr Armanids of Khilat (see for Ayyubid policy on the borders of Armenia and Adharbaydjan, V. Minorsky, Studies in Caucasian history, 150 ff., and F. Symposium, 1A, art. Pahlawan)—and outside Adharbaydjan their authority was frequently disputed.

Secondly, the consolidation of Ildenizid power coincided with a resurgence of military expansionism by the Georgian Christians, whose territories marched with Muslim Sharwan and Arran. The defence of the Caucasian frontiers had been one of Ildeniz's special concerns, and the efforts of the Atabeg and other local rulers like the Sharwan-Shahs and the Shahr Armanids had slowed down the dynamic of the Bagratid King Giorgi III (1256-84). However, the Georgians became again active during the reign of Queen Tamara (1284-1322). In her time, they interfered frequently in the affairs of the Ildenizids and Sharwan-Shahs, aiding rival Ildenizid princes in the period after Pahlawan Muhammad's death, until Abu Bakr in 607/1210 endeavoured to safeguard his position by marrying a Georgian princess. The Ildenizids were only barely able to contain the Georgians, and not until the appearance of the Mongols in the Caucasus were Georgian energies quelled.

ILDENIZIDS OR ELDIGUZIDS — ILEK-KHANS OR KARAKHANIDS 1113
Uzbak', Faruk Siimer, IA, s.vv. Pehlivan and Kizil-Arslan

For the cultural and literary history of the dynasty, see the references in Dawlatshah, Tadhkirat al-shu'ard*, Awfi, Togarfa armagan, T. Talqin, 125-6.

What has been said above about the internal structure of the Karakhanid confederation shows how these dominions were never ruled as a unitary state, but the eastern Khanate was not Islamized till some time after 742 A.D., part of the tripartite confederation of the Orkhon Turks or T'u-chueh, and then after 742 A.D., part of the confederation gradually becomes discernible. As amongst certain other Altaic peoples, there was a system of double kingship. The Great Khan ruled directly over the western part of the confederation, with his court at the encampment of Khak'ghar or Kara Ordu in the Çu valley of Semireythe. The Associate Khan was under the supreme authority of the Great Khan, and also ruled directly over the western lands, with his encampment at Talas or Käshghar. Beneath these two Khans was a complicated hierarchy of subordinates to Khans and regional governors of the Karakhanid family. These rulers all bore Turkish regnal names and titles, including a totemistic one (oqulam), and after their conversion to Islam they adopted Arabic names and titles. The Turkish titles changed as members of the family moved up in the hierarchy. The disentangling of the genealogy and chronology of the dynasty, on the bases both of literary sources and of coins, is accordingly very difficult.

Military activity along the Sämändid-Karakhanid borders, and commercial intercourse, led to the conversion of the Karakhanid in the course of the 4th/10th century. Much of this proselytizing work was doubtless done by dervishes and other Muslim enthusiasts; the name of one of these, Abu 'l-Hasan Muhammad Kalimât of Nishâpur, is accordingly very difficult.

Military activity along the Sämändid-Karakhanid borders, and commercial intercourse, led to the conversion of the Karakhanid in the course of the 4th/10th century. Much of this proselytizing work was doubtless done by dervishes and other Muslim enthusiasts; the name of one of these, Abu 'l-Hasan Muhammad Kalimât of Nishâpur, is accordingly very difficult.
but instead as a loose, tribal grouping. In the early 5th/nth century, two distinct lines emerged within the Karakhanid dominions inevitably led to disputes and rivalries. The Ghaznavid historian Bayhaqi already speaks of warfare amongst "the Khans and the Ilg" in the middle years of Mahommed of Ghazna's reign, and the Sultan encouraged these divisions in the hope of weakening the solidarity of the Karakhanids. In particular, he allied in 416/1025 with Yusuf Kadir Khan b. Harun Bughra Khan of Khotan and Kashghar and after 417/1026, of the capital Oezkend and Kashghar. The Ilig Nasr, the grandson Harun or Hasan Bughra Khan (the "Hasanids"), and the Ali Tigin plays a central part in the history of Transoxania at this time; his power had a secure base in the rich cities of Bukhara and Samarkand, and in alliance with the Saljuq bands of Arslan Is'rail, Toghril and Cahgir, he was the Ghaznavids' implacable foe until his death in 423/1034. All Tigin's sons, representing the Ilig Nasr line, were not long able to retain their father's principality in Transoxania once he was dead. The whole region was gradually conquered by two brothers of the 'Ali line, Muhammad 'Ayn al-Dawla and Bori Tigin, sons of the Ilig Nasr. Muhammad proclaimed himself Great Khan, and Bori Tigin became his Associate Khan (433/1041-2). From this date onwards, there were two distinct Karakhanid Khanates (cf. O. Pritsak, "Karachanidische Streitfragen. 4. Zwei Karachanidische Kugane"). The eastern one comprised the original Karakhanid territories of Semirecry, eastern Farghena and Kashgharia, with Balasaghun or Khar Ordu as its capital and with Khashgar as an important religious and cultural centre. The western one comprised Transoxania and western Farghena as far as Khudjanda, with first Oezkend and then Samarkand as its capital. The intermediate zone of the middle Syr Darya was frequently a subject of contention between the two branches. The eastern branch of the Karakhanids, the Hasanids, soon conquered the whole of Farghena. Their resources in manpower were augmented by the conversion to Islam of large numbers of pagans from the outer steppes; thus in 435/1043-4, 10,000 tents of Turks who nomadized "between Bulghar and Balasaghun" became Muslims. The Great Khan Muhammad b. Yusuf Kadir Khan was probably the grandfather of the pioneer Turkish lexicographer Mahommed Khashhari [g.v.]; Mahommed's father was Amir of the district of Barskh in Semirecry (cf. O. Pritsak, "Mahmu'd Kâşgarî kimdir?, in TM, x (1951-3), 243-6). During these years, Khashkar grew as a centre for cultural and religious life, and it was there that Yusuf Khâqân Hâdîlî [g.v.] wrote his Kudâddû biliq, dedicating it to the Khan Hasan b. Sulaymân (456/1064-5; 1102-3). In particular, Khashkar speedily became the chief starting-point for the spread of Muslim faith and culture over the Tarim basin and towards the frontiers of Mongolia and China.

Hasan Khan's son and successor Ahmad held in check the Western Liao or Kara Khitây [g.v.], a people who were probably of Mongol origin and who were at this time being forced to migrate westwards after the downfall of their two centuries' domination in northern China. But after Ahmad's death, the eastern Karakhanids were no longer able to stem the Kara Khitây advance. Balasaghun fell under Kara Khitây control and became their capital. Little is known of the eastern Karakhanid Khans of the later 6th/12th century; they were willy-nilly vassals of the Khitây Sultan, and their rulers had their capital in Kashgar. When the Nayan Mongol adventurer Kutulg overthrew the Gur-Khan and established his ephemeral empire in Semireczy, he released the Karakhanid Muhammad II from his previous detention at the Kara Khitây court, and restored him to Khashkar. Unfortunately, an internal revolt brought about the death of this last eastern Karakhanid before he could re-assume the throne (607/1210-11). Khashkar passed into Kutulg's hands and the eastern branch of the dynasty was finished.

The history of the western Khânate is better known that that of its eastern counterpart, for the Islamic historical sources deal more fully with Transoxanian events, these being frequently intertwined with happenings in Khourassan. Ibrahim Tamghach Khan, the former Bori Tigin (ca. 444-50/1052-68), secured a leading place in the "Mirrors for Princes" and adab literature as the exemplar of a just and pious ruler, although the historical sources show that Ibrahim was at the same time involved in many clashes with the over-powerful and ambitious class of "ulama" in Transoxania. A serious external threat to these Karakhanids arose from the rise of the Great Saljuq empire, which in the second half of the 5th/11th century was at its apogee under Alp Arslan and Malik Shâh [g.v.]. Ibrahim had already found it impossible to retain in face of Saljuq pressure the upper Oxus provinces of Khudjand and Chaghânîán, which he had previously conquered from the Ghaznavids. His son Shams al-Mulk Nasr (460-72/1066-80), famous for the splendour of his court and his patronage of scholars, had to endure a Saljuq invasion in 465/1072-3; in the following year, he had to sue for peace at Samarkand with Malik Shâh, and to acknowledge Saljuq suzerainty over Transoxania. Tension between the throne and the "ulama" was now a permanent feature of the western Khânate. In 483/1095 the religious classes called in Malik Shâh against Ahmad Khan b. Khûdîr, and the Sultan penetrated as far as Oezkend; soon afterwards, the "ulama" secured Ahmad's deposition and execution on a charge of sympathy for the Isma'ilîs. The next Khans seem to have been nominated by the Saljuqs. Muhammad II b. Sulaymân (497-524/1002-9) was Sultan Sandjar's nephew and son-in-law, but his reign was much troubled by the activities of rival Karakhanid claimants.

Muhammad's son Mahommed II was also Sandjar's nephew and was Great Khan from 516/1123 to 516/1141. It was he who came up against the Kara Khitây. After reducing the eastern Karakhanids to submission, the Kara Khitây marched westwards. In the great battle of the Katân Steppe in 536/1141, Sandjar and his Karakhanid protégés were disastrously defeated. Mahommed fled to Khourassan, and the Gur Khan set up Transoxania. The Gur Khan then set up various Karakhanid princes as his...
puppets, although the real power in Bukhara now lay with the Sunni religious leaders or 

With the deaths of Mahmud and his sons, the "Ali branch of the Karakhanids came to an end, and the rule over the western Khânate passed to the Hasanids

In Farghana, Karakhanid princes lingered on for a few more years. It seems that a separate line had arisen here, centred on Özked, after the Kara Khítica invasion of 536/1141. One of these Khâns, Arslan, in 608/1211-12 threw off Kara Khítica control and recognized the rising power of Şingiz-Khân. The line apparently persisted as governors of Farghana under the first Mongol Khân, but virtually nothing is known of them.

3. Cultural. Like the Saldjuk Sultans, the Karakhanid Khâns gradually assimilated themselves to the Perso-Islamic cultural and governmental traditions. The Khân's red ceremonial parasol or lâr is mentioned in the Kutadgu biiliq. Such pious and just rulers as Ibrahim Tamghac Khan stipulated that the Friday mosque of Bukhara and laid out the palace of Shahsâbâd near that city. Muhammad II b. Sulaymân was also a great builder, and restored the citadel of Bukhara. Such traditional duties as the defence of the frontiers of the Dar al-Islâm were undertaken by the Khâns, and we hear of Muhammad II leading expeditions against the "infidels" in the Karakhanid provinces. Such traditional duties as the defence of the frontiers of the Dar al-Islâm were undertaken by the Khâns, and we hear of Muhammad II leading expeditions against the "infidels" in the Karakhanid provinces. Such traditional duties as the defence of the frontiers of the Dar al-Islâm were undertaken by the Khâns, and we hear of Muhammad II leading expeditions against the "infidels" in the Karakhanid provinces. ILEK-KHANS OR KARAKHANIDS

also the anecdote concerning the titles of the Kara-
khanids and Mahmud of Ghazna's jealousy over them,
given in Nizam al-Mulk's Siydsad dilma, ch. xi, and
discussed by Bosworth in Oriens, xv (1969), 224-6.
The legends of Karakhanid coins also show that the
Uyghur script was used side-by-side with the Arabic.
The Kutadgu bilig of Yusuf Khass Haghjib [q.v.] was
completed at Kaghkar in 652/1159-60 and dedicated
to the then ruling Khán. Four years later, Mahmud
Kaghghari [q.v.] completed his Divan i-iughat al-Turk,
with the express aim of demonstrating that the Turk-
ish language was comparable to Arabic in its rich-
ness. The didactic nature of early Turkish poetry
was continued at the end of the Karakhanid period in
the 'Atabat al-hakdik of Ahmad b. Mahmud; the existence
of this work shows that the Kutadgu bilig was by no means an isolated phenomenon. Shaykh
Abmade Yasawi (d. 562/1166) left behind a collection of
vernacular Turkish verses, the Divan-i-iikmet, although
this is now regarded as of doubtful authenti-

4. General conclusions. The limitations of source
material make it difficult to assess the general
historical significance of the Karakhanids and difficult
to evaluate the changes which their rule brought to
Transoxania and the adjacent lands. As with the
Saldjûks, we have the establishment of a Muslim
Turkish power, not by Turkish slave commanders
(as in the case of the Ghaznavids) but by tribal
leaders and their hordes. Compared with the proceed-
ing regime of the Sâmanids, the Karakhanids brought
about a decentralization of administration and a
fragmentation of authority in Transoxania. One of
the continuators of the historian of Buhkárâ, Nar-
shakhi, says that taxes were everywhere lightened
when the Karakhanids supplanted the Sâmanids,
and it is further probable that indigenous landed
classes there, the dihkâns, enjoyed a resurgence of
local power. The Khán remained close to their
Khurul followers, who comprised such tribes as the
Çigil and Yaghma; certainly, in the time of
Shams al-Mulk Naçr the Khán were nomadic during
the summer months, residing in their capitals only
during the harsh steppe winters. Unfortunately, we
know little about changes in land utilization and
tenure, although it seems likely that the influx of
pastoral nomads did cause some changes. The mention
during Shams al-Mulk Naçr's reign of qurâns or tracts of
limiting ground established as crown
preserves (Continuator of Narshakhi, tr. R. Frye,
The history of Bukhara, Cambridge, Mass. 1954, 29,
125) may indicate a certain extension of pastoral-
ization.

The Karakhanid territories shared in the general
economic trend, whose causes remain obscure,
whereby silver coinage tended to be replaced by
gold. Nevertheless, the dirham remained the standard
coin circulating in Transoxania, and both dirhams mu'ayyad-iyya 'adîyya and the slightly baser qibret-
fiyya ones circulated in the later 5th/11th and the early 6th/12th century. These dirhams were,
however, considerably debased in relation to the
legal dinár, and the currency was obviously some-
what unstable at this time; the testimony of the
waftfiyya for Ibrâhim Tamâhâ Khân's madrasa,
mentioned above, suggests a figure of 47 dirhams
mu'ayyad-iyya 'adîyya to the dinár instead of the
legally desirable figure of 14¿ (cf. Cohen, in JA
(1967), 309-20, and Continuator of Nasrshakhi,
tr. Frye, 36).

Yet despite the Khán's identification with their
tribal contingents, their positions as Muslim sover-
eigns over such rich and fertile regions as Trans-
oxania and Farghânâ inevitably tended to raise them
to the general tribal level. As happened within
the Great Saldjûk Sultanate, social and political
tensions were generated. During the 6th/12th century,
the Khán were continually at odds with their
military supporters, the Karluq tribesmen, often
with dangerous consequences; it was Mahmûd II's
appeal to Sandjar in 536/1141 for help against the
Karluq that determined the latter to call in the
Kara Khâty as a counterweight. It is not clear
exactly how the Khán obtained in the Samânid period, and is an instance
of the essential continuity of the ruling
and society in Transoxania. Because of these tensions,
and because of the fragmentation of power within
the ruling dynasty itself, the Karakhanids were ill-
prepared to withstand such resolute opponents as
the Kara Khâtây and the Khánaraam-Shâhs.

Bibliography: A detailed bibliography is given by O. Pritsak at the end of his article Die Kara-
chaniden (see below), 63-8. The pre-Muslim history of the
Karluq can be pieced together from the diverse sources which bear on the history of Central
Asia; Chinese, Uyghur, Orkho-Turkish, Byzantine,
etc. For Muslim historians, the Karakhanids inhabited
the periphery of the Islamic world, and they tend to mention the Khán so only
as they impinge on the wider eastern Islamic world. There are, however, important notices in such
authors as 'Utbi, Gardizi, Bayhakhi, continuators of
Nasrshakhi, Nizâm al-Mulk, Dümâl Kârsh, Nasawi, Dhuwaynî and Ibn al-Âlîh. Light is
thrown on the culture of the Karakhanid period by the works of such authors as the
Yusuf Khâss Hâjjjib, Mahmûd Kâshghari, al-Kâbît al-Samar-
kanî, etc., and by the anecdotes given by Nizâmâ
'Ardâl and 'Awfi. Amongst secondary literature,
the following should be noted: E. Sachau, Zur
Geschichte und Chronologic von Khwardzm, in SBAK.
Wien, lxxiv (1853), 330-3; Sir H. Howorth, The
northern frontlagers of China. IX. The Muhammadan
Turks of Turkestân from the tenth to the thirteenth
century, in JRA, 467-502; F. Grenard,

(I. E. Bosworth)

ILERI, DJELAL NURI, in modern Turkish Celâl Nuri Ileri, Turkish modernist, writer, journalist and
critic, 1877-1938. He was born in Istanbul, from Crete, served as governor in various provinces and
gave a speech in 1908. His mother was the daughter of Abdülmecit Pasha (surnamed Dino, 1843-1908)
from Prizrin, a governor and vizier under 'Abd al-
Hâmid II and the author of a well-known commen-
tary on the Mathnawi. One of his brothers, Sübûl Nûri Ileri was a socialist writer and journalist and the
dehusabûn, or publicist, 1850-1936. He was educated at Galatasaray Lycée and Istanbul Univer-
sity, where he studied law, Djelal Nuri perfected his political to publish a few books in that
language, including a novel, Cauus i, about life in Istanbul under 'Abd al-Hâmid. He also learnt
English. His education owes much to his family
circle, which included his paternal uncle Sirri Pasha
and his wife, Leylî Şaz (1850-1936), the poetess and
composer, and author of valuable memoirs of 19th
century hareem life.

Djelal Nûri visited Europe several times and
published some of his impressions in two books: Küstük musâhabeleri and Şimdi hâtlıhâlari (see below).
He soon abandoned the legal profession to become a journalist and free-lance writer. He contributed to
many newspapers and periodicals (some of which he
founded), particularly İbâtâm, Âlî, Ileri, İlgîhâh, Edebiyyat-i 'Umûmîye Medîini, Türk Yurdu, Le Courrier d'Orient and Le
Jeune Turc. He wrote more than fifteen hundred
titles in the last-named French language news-
papers, many of great documentary value for the
period following the mutiny on 13 April 1909
(31 Mart waâbâsî) .

Djelal Nûri represented Gelibolu in the last
Ottoman Parliament, and was elected four times to
the Grand National Assembly. His wide legal know-
ledge and his familiarity with both Eastern and
Western culture made him one of the most sought-
after advisers of the new Nationalist Government in
Ankara. He was an honest, straightforward writer,
always consistent in his principles and in his advocacy
of liberalism and honest government. His strong
activity in the Istanbul daily Ileri, of authoritarian
rule and its abuses, and his contention that the
single-party system was incompatible with democ-

racy, resulted in violent polemics in the press.
Several extremist supporters of the Government,
particularly Aghaoglu Ahmed and Yûnûs Nâdi,
violely attacked him in Government organs. A
member of Parliament, Kûllûf 'Alî, whose name was
published in a list of deputies and officials accused
of having misused their influence, went to Djelal
Nûri's office and attacked him (for details of this
event and subsequent incident, see the newspa-
pers Ileri, Hâkimiyeyeti Milliyeye, Diyanetîyeyet
and Şon Telgrafî for June to August 1340 (fiscal)/
1924. Djelal Nûri's journalist brother Sübûl Nûri
published a strong article of protest the following
day in Ileri (31 July 1924). But Djelal Nûri himself
henceforward wrote only occasionally in the same
paper, and avoided polemics. He died in Istanbul
on 2 November 1938.

Djelal Nûri is the author of some thirty books
and thousands of articles, a few of which have been
published in book form. Without fully adering to any
of the three main groups of the post-1908 period,
that is, "Turkists", Islamists, and Westernizers, he made
his own compromise between the last two. He con-
ducted long polemics on social, political, religious,
juridical and linguistic issues with leading writers
of the period, and opposed equally the extremist
Nationalists, the radical Westernizers and the uncom-
promising Islamists (see Gökâlî, Dîewdet, Mehemed
'ârif, Panislâmîm, Tûran).

He himself was a moderate reformist. But he was
no systematic thinker, so that his ideas and sugges-
tions on various problems crop up in most of his
writings no matter the subject title. The following
are his most outstanding themes on controversial
issues of the period, and consequently polemists.

The legal system. The need for a radical
reform in this field is one of his main themes. The
legal system of a country must take into consider-
ation the historical development, the character, pecu-
liariies, conditions of life of the nation and the re-
quirements of the contemporary age. Midhat Pasha's
Constitution, Dîewdet Pasha's Medîîle and many
laws dealing with administration, jurisprudence, pro-

perty, the civil service etc., are, since they ignore
these conditions, inadequate. Laws are not unalter-
able; on the contrary they should at times be review-
ed and modified according to the changing circum-
cstances of the times.

The emancipation of women. Many social
evils in Ottoman society have as their primary cause
the humiliating position of women. Polygamy
should be prohibited and women should not be treated as
property. Laws concerning marriage, divorce and
childhood should be modernized. This too is in keeping
with the spirit of Islam; whose rules on women and
marriage have been misinterpreted for centuries.
Djelal Nûri's ideas on this subject were by many
found to be "too progressive".

The causes of Ottoman decline. The main
cause for the backwardness of the Ottomans are
that they had no part in the maritime discoveries,
the Renaissance, and the exploitation of printing.

Alphabet and language reform. The Arabic
alphabet not being suitable for Turkish, a reformed
alphabet based on the Roman script is necessary. As
far as the language itself is concerned, however,
Djelal Nûri's approach is conservative. He saw the
Persian-Arabic elements as being as natural and
necessary to Turkish as Latin and French words are
to English. Yet his campaign against the supporters
of "simplification" mellowed later in the republican
period.

Reform in Islam. Islam per se has never been
an obstacle to progress. But it has been constantly
misinterpreted and exploited by bigots and oppor-
tunists. A reform in Islam, particularly in Muslim
law, is necessary. The unity of the Muslim world
should be the ideal, and should replace the national-
istic ideologies of individual Muslim nations. Yet the
ideal of a theocratic state is an anachronism. To
ignore Western civilization leads nowhere. But there
are two civilizations: the technological and the real

civilization. The Turks, like the Japanese, should
adopt the first, but preserve their own Muslim-
Turkish civilization, improving it as necessary, by reforms. (This anticipates Gökalp's later differentiation between "civilization" and "culture").

His main works are: (1) 1327 senesinde Selânîkde münâbâa Îlîhâd ve Terâbbî Kongresine tabâdîn dâman musâhîlâtı, Istanbul 1327/1911; (2) Kenâîî münâm merkezîn, İstanbul 1328/1912; (3) Mây würdên-î-tarihî-i mânâmî yetim-i külhî, İstanbul 1329/1913; (4) Mânâmî-yi hâmîsânî-yi Mâmed dârî-ı-terâmî-yi, İstanbul 1330/1914; (5) Şimâlî fâlîlî-yi mânâmî-yi, İstanbul 1330/1914; (6) Hâtâyî-l-i mânâmî-yi, İstanbul 1331/1915; (7) Iltîhâyî-l-i İslâm; İstanbul 1331/1915; (8) Ka'darînî-wînîsî, İstanbul 1331/1915; (9) Ka'darînî-wînîsî ve hâmîsî-yi, İstanbul 1331/1915; (10) Ta'rikhî-î sîhîhî, İstanbul 1331-1/1915-6; 3 vols.; (11) Ta'rikhî-î sîhîhî-yi-ı mânâmî-yi, Istanbul 1331/1915; (12) Kâdêm-î emîsî, İstanbul 1332/1916; (13) Velî-âhî-âhî-yi-ı mânâmî-yi, İstanbul 1332/1916; (14) Mîllîmîlaları, Türklerke hâmîrât, dûxîlînî-yi râyî-yi, İstanbul 1332/1916; (15) IltîhâyÎ-î İslâm ve Almanyâ, 1333/1917; (16) Kâdêm-î ehtedîmî-nizîrî, İstanbul 1334/1918; (17) Hârîdên sîhîhî Türkleri-yi, İstanbül 1917; (18) İlahîhâk-î celâmî-yi, Istanbul 1926; (19) Türk inkılıbî, Istanbul 1926.

ILETMISH [see İLÎTİMİŞ].

İLGHÂZî [see MU'ÂMMA].

İLGHÂZİ (i.e., "champion of the people") is the name of two local Saljûq rulers of the Artûkî dynasty who attained power in northern Mesopotamia.

1. NÂDÎM AL-DÎN İLGHÂZÎ I. B. ARTUK. He was first of all a supporter of his brother-in-law Tutush in his eventful struggle for the throne of the Saljûq empire of Persia. After Tutush's defeat and death (488/1095) he withdrew to Jerusalem, which he had received as a fief from Tutush jointly with his brother Sulûmân. The two brothers had, however, after a 40 days' siege to surrender Jerusalem to the Egyptians (Shâ'bân 489/July-August 1096). At a later date (from 493/1099), İlgâzî joined the new pretender Sultan Muhammad, who appointed him governor of Baghdad in 494/1100-1. He held this important office for four years, ultimately in the service of Sultan Barkâyûrûcî and his son Sultan Malikshâh.

When Sultan Muhammad dismissed him from the governorship of Baghdad in 498/1105, he fell out with this ruler. Between 498 and 501/1105-8 İlgâzî captured the hitherto impregnable fortress of Mardin, one of the most important in the whole of the eastern frontier of the state in which also lord of Našîbûn. In 504, 505, 506-7 and 508/1111-5 he refused to partake in the war which the Muslim amirs of the west were conducting against the Crusaders in Mesopotamia and Syria upon Sultan Muhammad's orders. During the rest of these campaigns he, with two of his nephews, was the most effective of the commanders-in-chief of the Muslim armies after Sunkur al-Bursûkî and defeated him (May 1115). The Sultan sent a threatening message to İlgâzî, who fled to Damascus. Tughtakin, also on bad terms with the Sultan because of charges of complicity in the murder of Mawdûd, welcomed him, and the two decided on resistance to the Sultan and alliance with the Franks, with whom terms were agreed in a meeting at Lake Máthûn. İlgâzî left for Dýyar Bakr to assemble a force of Turcomans, but was captured at al-Rastan (between Hîms and İmmâtî) by Khîrîhâm, the governor of Hîms. Khîrîhâm appealed to the Sultan for troops to help defend Hîms against Tughtakin, whom meanwhile he held off by threatening to kill İlgâzî. The troops being delayed, he released İlgâzî in return for a hostage and a promise of İlgâzî's protection against Tughtakin. Released, İlgâzî went to Aleppo, collected his Turcomans, and returned to lay siege to Hîms. He was interrupted by the arrival of the Sultan's army commanded by Bursûk b. Bursûk. According to Walter the Chancellor, Tughtakin and İlgâzî occupied Aleppo with the intention of offering it to the Sultan, as a reward for the murder of Mawdûd. Their Frankish ally Roger, Prince of Antioch, hastened to dissuade them. After some inconclusive operations and a defeat by the Franks, Bursûk returned to the East, where he died while preparing a new expedition. İlgâzî established good relations with the Saljûq government after the death of Mawdûd and the accession of his son Mähmûd.

Lu'lu', the governor of Aleppo, was murdered towards the end of 510/1117. Owing to internal disputes the town and district of Aleppo were exposed to the inroads and depredations of the Franks. After İlgâzî had temporarily occupied Aleppo in 511/1117, but had withdrawn after encountering difficulties, he was appealed to in the following year by its inhabitants as their last hope and recognized as prince of Aleppo. In the second half of 512/1118 İlgâzî succeeded in definitively gaining possession of Aleppo and thus became a neighbour of the Franks, against whom he at once made energetic preparations. The numerically weaker Franks were outnumbered on 17 Rabi' I 513/28 June 1119 by his army of 20,000 men in the valley of Tell 'Afrîn, taken by surprise and for the most part cut to pieces or taken prisoner. Among those who fell was Roger of Antioch. It was one of the greatest battles which the Muslims had so far won against the Crusaders (the village of Balût, after which the battle is often called, appears in Ibn al-Čâdis as Roger's camp on the night of 20 June 1119, eight days before the decisive battle). Antioch now lay defenseless for the next 9 years (to 1128) under İlgâzî's feet; but he neglected to take the city.

The reputation of İlgâzî's military ability now spread far and wide and he received the chief command over the Muslims in the war which Sultan Mähmûd was waging in person against the Christian Georgians. İlgâzî suffered a very severe reverse (Ibn al-Čâdis, Ta'rikh Halâb, 515/1121; Ibn al-Čâdis, al-Čâmi, 514/1120), which resulted in the loss of Tifsîn to the Georgians. In 516/1122 he was granted by Haydâr Farrîkîn, the Sultan in addition to his other lands.

Soon afterwards, on 1 Rama'dân 516/3 November 1122 (Ibn al-Kalânîsî: 6 Rama'dân, al-Fârijît: 17}
Ilghazi died at the age probably of barely 60 at Mayyafarikin (Ibn al-Athir and Abu 'l-Su'd ed. S. Dahlan, ii, Damascus 1954, 206; at 'Aqilayn on the road from Mardin to Mayyafarikin, according to Ibn al-Alkanisi). Ilghazi possessed an influence unequalled at that time by Ibn al-Adim. The latter, however, he did not rule in Amid, the metropolis of this district. Ilghazi II left two sons, liusam al-Din Yuluk Arslan, and Malik the Syrian. At the end of Du'mada I 578/September-October 1182 or a little later.

For a general survey of the period and the bibliography, see artukids, adding to the sources there given for Ilghazi I: Walter the Chancellor, De bello Artischoeno, ed. Hagermeyer, 1896, important for his relations with the Franks, and especially the Georgians; see also the bibliography to crusades.

ILHAM (A.) means literally "to cause to swallow or gulp down" (Lisin, xvi, 29, especially last two lines). In the Kur'an it appears only in XCI, 8—

"then He (Allah) made her (a nafs) swallow down her sins and her godly fear" (Arberry: "and inspired it to lewdness and godfearfulness"; Blachere: "et lui a inspire son libertinage et sa piété"; Paret: "und ihm (je nachdem) die ihm eigene Sündhaftigkeit oder Gottesfurcht eingegeben hat"). The oldest exegetical tradition (Tabari, Ta'rif, xxx, 115 f.) gives two explanations: (i) Allah explained to the nafs; (ii) Allâh created these in the nafs. The Mu'tazilis chose the first (Zamakhshari, KashShid, ed. Lees, 1612) but orthodox Islam generally chose the second, the almost certainly correct view, because their hearts are prepared and purified for it. It differs from intellectual knowledge because their hearts are purified and prepared for it. It differs from intellectual knowledge (ilm 'alhil in that it cannot be gained by meditation and deduction; but is suddenly communicated while the recipient cannot tell how, whence or why. It is a pure gift from the generosity (fayd) of Allâh. It differs from 'awây only in that the angel messenger who brings 'awây may be seen by the Prophet and that 'awây brings a message to be communicated to mankind, while ilham is for the instruction of the recipient. From waswasâ or satanic whispering in the heart, it differs in respect of the cause—an angel as opposed to a devil; and in the things to which it incites—good as opposed to evil (al-Ghazâli, Fuyûd, ed. with comm. of Sayyid Murta'da, vii, 244 ff., 264 ff.; id., B. Macnamald, Religious attitude and life in Islam, 252 ff., 275 ff.). But while the fact of ilham was universally admitted,
even Şübs raised the question of the certainty of the knowledge given by it. So al-Hujwiri (Kash'f al-maḥdūb, trans. Nicholson, 271) only said that iḥām cannot give assured knowledge (maw'ārif) of Allāh; but al-Ghazālī would probably have said that al-Hujwiri was using iḥām in the sense of an idea which one found in his mind, and not of the flashing out of the divine light on the soul which, once experienced, can never be mistaken. Others taught that, while it was sufficient for the recipient, it could not be used to convince others or reckoned as a source of knowledge for men in general. This appears to have been al-Nasifī’s position; see his Kitāb al-‘Abādī with commentaries of al-Tafsīrānī and others, Cairo ed. 1321, 40 f. A very curious use is by Ibn Kathīr in the sense of “instinct” (Muḥad-dima, ed. Quatrémère, ii, 331, transl. de Slane, ii, 384; tr. Rosenthal, ii, 370) but this, though a natural development, does not seem to have been taken up by others. Yet Ibn Ḥazm speaks of iḥām as a jābī‘a and refers as an illustration to Kūrān, XVI, 70, on the instincts of the birds: Ḥajjār (871/1465).

(D. B. Macdonald*)

II, a large river in Central Asia. It is formed by the two rivers Tekes and Kunges, which rise on the northern slopes of the Tien-Shan Mts.; the united stream of the II then flows for some 950 kms. across the northern part of the region known in mediaeval times as “the land of the seven rivers”, Yeti-su or Semireçye, into Lake Balkhash. The lower course of the II falls within the Soviet Kazakhs Republic, whilst the eastern part of the II river system belongs to the Chinese Sinkiang-Uyghur Autonomous Region.

The II is first mentioned in the history of the Chinese T’ang dynasty, when one of the main roads from China to Turkestan passed through its valley (Chavannes, Documents sur les Toukous (Turcs) occidentaux, 11 ff.). The oldest Muslim source to mention it is the Hudud al-Sīlām (372/982-3), which says that the Ili runs into the Işk-Kol (the existence of Lake Balkhash was not known to early Islamic geographers). Kāshghārī calls the Ili or Ili “the Djaybūn of the Turkish country”, and he places the Turkish tribe of the Tujgh in the Ili valley, together with the Yaghma and part of the Cīgīl (tr. Atalay, i, 30, 81, 92, 408). The Huddād mentions a town in this region, probably to be identified with Kāshghārī’s frontier town Iki-ogīz (“situated between the two rivers”, i.e., the Ili and Yafindj, cf. Huddād, 77, 208, 276-7, 300-1.

It is not known when Islam first came to the II valley, but in the 7th/13th century it was regarded as marking the farthest boundary of the Đār al-Islām, and the lands to the east were only converted in the post-Mongol period. Immediately before the Mongol period, northern Semireçye, including the town of Kayaligh (see below), was ruled by the Karlik Ars-ān Khan. He threw off Kara Khiıtay suzerainty and negotiated with Cīngiz; consequently, the region did not suffer from the Mongol devastations so badly as Transoxania and Kūrāsān. The upper parts of the II basin contained good pasture for the nomads, and Cīngiz had his ordu on the Ili after Cīngiz’s death. The reports of such travellers as Rubruck (651/1253) and the Chinese envoy to Hūlegū’s court Chang-tee (657/1259) show that the II region was still reasonably flourishing, but that there was a trend towards pastoralization. Rubruck mentions that after crossing the II, he came to the town of Equeius (sc. Ili-bally “town on the II”), whose population was Tādíjk, and the Armenian King Hāitōn (Het‘ūm) also visited it. The nearby town of Cailac (sc. Kālīylagh) is also described as having many merchants (cf. E. Bretschneider, Mediæval researches from eastern Asiatic sources, i, 169), and the trading centre of Almahāl [q.v.], to the north of the II, was at this time the capital of a small Muslim principality. By the 9th/15th century, however, urban life seems to have disappeared from the region.

From the later 17th century until the destruction of Kalmuck power in Turkestan in 1758, Semireçye and the II valley were occupied by the Buddhist Kal-mucks or Oyrat. During the time of the great Khān Ghāldan (d. 1108/1697), the II valley became regarded as the Khān’s personal domain. In the 19th century, it was part of the lands of the Kazaks, but during the reign of Tsar Nicholas I was annexed by Russia. The upper II valley, and especially the town of Kūldjā [q.v.], suffered considerably during the Muslim rebellion in Chinese Turkestan led by Ya’kūb Beg. Because of Russian fears that the outbreak might spread, the district of Kūldjā was in 1871 annexed by Russia, but given back to China in 1883.

During the present century, the main centres of population have been Kūldjā and the small town of II, situated at the junction of the river and the Turkestan-Siberia railway. Navigation is possible during the ice-free months on the Soviet part of the river down to a point near the delta; the waters of the II’s tributaries are extensively used for irrigation, and the upper reaches are an important source of hydro-electric power (see BSE, xvii, 350-1, with a map).

ILĠPūR [see Supplement].

ILĠĐA (r.), “hot spring”, and a bath served by a hot spring (whereas in principle, in Ottoman usage, a hammām [q.v.] is a bath whose water is artificially heated), a characteristically Western Turkish word, the diminutivel? of II “hot” (< ṭüg, cited by Māmah Kāshghārī, Ar. text, i, 31 = tr. B. Atalay, i, 31, in contrast to “Turkish” yilän, as an example of the Oghuz tendency to drop initial y). According to ‘Alī bin Ṭāhīn (transl. of al-Firūq bādi’s Muḥt, s.v. al-kimma, = ed. of 1268-72, iii, 435; cited in TTS, i, 349), a thermal and curative spring is called “Ildja in Turkish, kapludjā in Bursa, and bāna [cf. Serbo-Croat banja] in Rumeli”; Red house distinguishes kapludjā as “a hot spring roofed in [kaplu] as a bath; especially any one of the hot-baths of Brousā”. These distinctions are perhaps etymological rather than real: kapludjā [q.v.] is admittedly used primarily of the baths, served by thermal springs, in the Cekirge suburb of Bursa; and Ḫilīlī Čelbi says of Sofiā (iii, 399) “in these regions an Ildja is called bāna”; yet he himself uses the word Ildja for the baths of Sofiā and Buda (vi, 242 ff.), and so too Feridūn (i, 599) uses the terms bāna and Ildja without apparent distinction in a “Rumelian” context.

Ildja is a common toponym in Anatolia (over thirty attestations in Türkiye’de meşhur yerler hakkavı, Ankara 1946-50).

(Ed.)

IliYă [see al-kūdās].

ILKHĀN [see TA’RĪKH].

ILK瀚S, Mongol dynasty ruling in
Persia in the 7th/13th and 8th/14th centuries. The first Mongol advance towards the Middle East (1218-21) had touched only the north of the Iranian area and only Khurāsān [q.v.] had, to a certain extent, been subjected to Mongol control. Therefore, when the territories were being divided up under the Great Khan Möngke (1251-9), who himself was fighting in China with his brother Kubilay, the task of extending control over Persia, Mesopotamia and, if possible, Syria and Egypt as well, was entrusted to their brother Hülegü [q.v.]. According to Barthold, about 125,000 men were levied for this purpose from the armies in different parts of the empire, and in about 1253-5 Hülegü advanced. He took the Assassin fortress of Alamāt [q.v.], but left the eastern and southern Iranian principalities (Herāt, Fārs, etc.) undisturbed for the time being in order to push forward his advance on Bagdad after negotiations with the Caliph had collapsed. Bagdad fell on 20 February 1258. Hülegü now held southern Mesopotamia and the north of the country fell to him in the following year; only Mayyāfārīkīn [q.v.] continued to hold out against him.

While Hülegü was absent from the army following the death of Möngke (1259), the advance was to be continued through Syria against the Mamlūks, which, in a certain sense, lasted beyond the year 1295 mentioned above. Syria and Palestine remained in the hands of the Mamlūks, with the western edge of the Euphrates valley forming the frontier. To the north of this area it embraced as dependent states Lesser Armenia and Saljiq Asia Minor, which threw off the suzerainty of the Golden Horde, along with the Caucasus region, which had hitherto been subject, albeit loosely, to this same suzerainty. Various attacks from the north in the following decades failed to loosen the bond between the Caucasus and the Ilkhans, even when the Georgians engaged in repeated insurrections. The course of the Oxus formed the frontier against Čaghatay's territories in Central Asia. In the east the principality of the Kart [q.v.] dynasty of Herāt remained more or less independent of the Mongol power; also in Makrān [q.v.] there existed for a time a frontier zone of uncertain ownership against the principalities in Balūcistān and the Pandībāb. Likewise the island state of Hurmūz [q.v.] with its possessions and the minor principalities in Luristān as well as in Gīlān and Māzandarān [q.v.] were able to remain largely independent; only in 1284, through the marriage of a Mongol prince, did Fārs [q.v.] come into the possession of the Ilkhāns.

The rulers of Persia bore this name to indicate that they were dependent on the Great Kāhn (in Peking). So it remained until the death of Kubilay in 1294, the final adoption of Islam by the Persian rulers (1295) severing the close relationship. From that time the name of the Great Kāhn disappeared from the Persian coinage and in place of the title "Ilkhan" there appeared the designation "Kāhn". It is customary, however, for historians to designate the rule of the Mongols in Persia until its end in 1356/1355 as the "Ilkhanid" period.

The territory of the Ilkhāns was, therefore, essentially a Persian state with the inclusion of Mesopotamia, and hence rather similar in extent to the Sassanian Empire.

For this reason, their policy towards Central Asia, the Golden Horde and Egypt had to be that of a government of Persia, and in internal affairs too the adoption of Persian culture and tradition was as swift as the corresponding process was in China. Indeed, these two Mongol states formed something of a community of interest against the nomadic states of Čaghatay and the Golden Horde) which, in a certain sense, lasted beyond the year 1295 mentioned above. The cultural assimilation to Persia and the linguistic acceptance of Turkish were certainly delayed so long as the religious differences persisted. Some of the Mongols who had invaded Persia had been Nestorian Christians, but the majority had been Shamanists; in the royal house and among the ruling class there soon became apparent (even under Hülegü) a tendency towards Buddhism, which perhaps is connected with the fairly close relations with China, and perhaps goes back to the missionary activity of Buddhist priests, bhikshus (details on whose origin remain doubtful, just as all our sources—all non-Buddhist
give scarcely more precise information about the spread of the Buddha’s teaching). In any case, it found a fertile ground among the rulers and strengthened them in their hostile attitude towards Sunni Islam, an attitude apparently dictated also for reasons of state during the decades of rivalry with Egypt (while conversely Islam formed the link for political and economic relations between Egypt and the Golden Horde, which led to an equally enduring coalition against the Ilkhan). The enmity against Sunni Islam resulted in a tolerance of the Shi’as, for example was achieved after the capture of Baghdad under the leadership of the mathematician and astronomer Naṣr al-Dīn Ṭūsī [q.v.]; this had very favourable effects for their social position and their admittance to the administration. Preference was shown also to the Christians, especially the Nestorians, to whom Hūlegū’s favourite wife Doḵzī Khātūn (d. 1265) belonged; she was also of assistance to the Jacobites and helped to win over the Christians in Syria for the Ilkhan cause.

At the same time the favourable policy towards the Christians made it possible to enter into diplomatic relations with the Christian West; these had already been initiated before Hūlegū, but became especially noteworthy under his son and successor Abāka (663/1265-680/1282), himself a Buddhist. This led to closer relations, particularly with the Papal See and the France of Louis IX (St. Louis) as well as with a few Crusader states, as being the stubborn opponents of the Mamluks. A proposed joint campaign against the Egyptian state (1269) miscarried as a result of the impossibility of agreeing on the time to undertake it. On the other hand, a simultaneous blow planned by the rival coalition in the Caucasus and on the Oxus (1268-69) was also unsuccessful.

Thus Abāka could carry through a strengthening of the state founded by his father within the frontiers described above, and thereby he became its true organizer. At the same time he promoted the Buddhist mission, and this openly by building many Buddhist temples. This was balanced by his tolerant attitude towards the Christians. The Nestorians thanked him for this in 1261 by the choice of a Christian Uygūr as Catholicos (Yḥābālāhā II, until 1317), who on account of his descent had access to the court and was able to achieve the capture of the Mamluks. A proposed joint campaign against the Egyptian state (1269) miscarried as a result of the impossibility of agreeing on the time to undertake it. On the other hand, a simultaneous blow planned by the rival coalition in the Caucasus and on the Oxus (1268-69) was also unsuccessful.

Abāka’s death of a fever (1282) introduced a period of confusion. His brother immediately embraced Islam and took the name Ahmad. This led to an easing of tension with Egypt which, however, did not endure after his fall at the hands of his nephew, Abaka’s son Arghun in 1284. The latter, zealously devoted to Buddhism but lacking any real ideas of the financial strength of his state, gave a free hand to the ważīr Ša’d al-Dawla, who remained true to his Jewish faith, gave control of many districts to his relatives, and by exorbitant demands for money repeatedly stirred up unrest among the population. This brought him to a violent end immediately after Arghun’s death in 1291. The new ruler Gaykhatu [q.v.], Arghun’s brother, confronted with a financial crisis, attempted the introduction in 1294 of paper money on the Chinese model (and called by the Chinese word Sad); he visited the country, since he now proceeded with severe demands against the Sunnis, who were still in the majority; the Christians also suffered more under him than they had under Ghazan (who had quickly suppressed the attempted campaign of terrorism against them in 1295-6). Thus, civil war was threatening the state when Oldjeytu died in 716/1316 and his young son Abu Sa’d (the first Mongol ruler with a purely Islamic name) reverted to Sunni Islam. His youth, however, permitted the various factions around him to indulge in many kinds of intrigues. The vizier Rashid al-Din, also important as an statesmanlike an of his own and fell victim to a plot three years later through a concatenation of unfortunate circumstances. From that time on the two factions of Cǔbān’s son, Ḥanūs Kūčūk, and his former son-in-law, Ḥasān Buzurg [q.v.], fought each other almost continually. Abū Sa’d no longer played a significant part in this; he died in 736/1335 on a campaign in the Caucasus.
With the death of Abū Sa‘id the Mongol dynasty practically came to an end, although until 756/1355 a motley succession of princes of the house — and even a princess in 1339-40 — were installed and deposed as Ḵāns. The real power lay in the hands of the two Ḥasan, of whom the younger was murdered in 1344 and the elder gradually repulsed to Bāghdād, where he founded the dynasty of the Ḍjāλāyirdīs [q.v.], whose sway remained limited to Mesopotamia. The outlying territories of Asia Minor, Georgia, Little Armenia and the Kurids had in the meantime broken away, with further emperors, the Indjīids (a.d. 1339) in Tabriz and the Sāfrānīds [q.v.] took control, in Māzandarān and further east the Sarbādārīds [q.v.], and central Persia had to endure the incessant battles of local rulers. In 1357-8, Aḥharbāḏyān was occupied for a short time by the Golden Horde. Only the campaigns of Timūr [q.v.] put an end to this internal collapse — and then only for a short time as the foundations of the empire he created also proved weak.

Under the Ḵāns of Persia, for the first time for centuries, was brought together as a territorial and political entity (even though this was thanks to the toleration of independent minor states): and thus this period must be regarded as of the highest significance for the country. There emerged an unusual development of the arts; and the promotion of various branches of science — while limited in aim (astronomy as a development from astrology, medicine, historiography) — finally raised the standard of the whole nation.

Our information on the period of the Ḵāns is very extensive; first we have the abundant Persian historiography, especially the works of Djiwānī, Raschīd al-Dīn and Wāṣṣāf [q.v.]; then the independent historiography by Syriac (Barhebraeus, Chronography), which views the course of events from a Christian standpoint and thus brings valuable supplementary information, especially on cultural history. Besides these sources, we have works in Arabic, firstly Ibn al-Fuwarīt [q.v.], whose work on events in Mesopotamia is very enlightening for administrative history, then the numerous works of early Mamlūk Egyptian history, which reflect the Mamlūk point of view and therefore shed light on external events and provide a contrast with Persian works. There are also works in Armenian, Arabic, Persian, Caucasian, and Western works which should not be overlooked. The large number of surviving coins form a reliable alternative for the almost complete lack of original documents.

For the coinage, besides the general works of Lane-POole and Markov, the catalogue of the Museum in Istanbul and other catalogues, see especially C. M. Frähn, *De Il-Chanorum sine Chulaguidarum nominis Commeniationes duae*, in *Mém. de l’Acad. Imp. des Sciences de Saint-Pétersbourg*, ser. 6, vol. ii (1833), 469-562.

Maps are to be found in the above mentioned works by Spuler, also in the Historical Atlas of the Verlag Georg Westermann-Braunschweig (1956), as well as in A. Hermann, *Historical and commercial atlas of China, Central Asia, and Mesopotamia*, London 1935 (Havard-Yenching Institute, Monograph Series). Full genealogies in Spuler and Howorth, as well as in E. von Zambaur, *Manuel de généalogie*, Hanover 1927, *Bad Pyrmont 1955, pp. 244-5* (B. Spuler)

**Architecture and Art**

Ilkhanid art represents the art of the Mongol period of Iran, that is from the time when Hulagu as-
ILKHĀNS
constitute the link between it and subsequent Timurid art.

Architecture. The religious and secular buildings within the present political boundaries of Iran have been described by D. N. Wilber (Architecture of Islamic Iran. The Il Khānīd period, Princeton 1955; Persian translation by 'Abd Allâh Fâyârî: Mi‘mârî-ye islâmî-ye Irân dar dawre-ye Ilkhânî, Tehrân, 1346/1967; for some corrections and additions see the review by Myron Bement Smith in JAOS, lxxvi (1956), 243-7). To this body of buildings should be added the Russian publications on the monuments of Adharbayjân and the Turkmen S. S. R. (sheikhend of Lują Dâr at Dâshlî, Kedârî and Azerbaidzana XII-XV vv. i ego mesto v arkhitekture perednego vostoka, Moskow 1966; G. A. Pugačen- kova, Iskusstvo Turkmenistana, Moscow, 1967). In general the plans, techniques and decorative schemes of the Salidjûk period continue, especially when after nearly five decades of inactivity a new architectural boom developed. This change of pace was due to the Islamization, Iranization and amalgamation of the dynasty under Ilkhan Khân (604-703/1295-1304). The main religious buildings were mosques, madrasas, mausolea, shrines and khânsâhs. The novel stylistic tendencies are a stress of the vertical by means of high, often ovoid domes, higher and narrower eyvâns (barrel-vaulted halls open toward the courtyard end), minarets flanking portals or eyvâns and colonnettes at corners; the subdivision and opening-up of non-bearing walls through windows, bays, niches and stairways; and stronger use of colour, not only in the form of painted plaster decoration, usually in relief, but more specifically, after about 710/1310, by the use of faience mosaic for total wall coverage (D. N. Wilber, The development of mosaic faience in Islamic architecture, in Ars Islamica, vi (1939), 40-7). The classic Iranian mosque developed in the Salidjûk period with four eyvâns cross-axially arranged around a courtyard and with a high dome chamber in front of the mihrâb occurs only in the Masджīd-i Dâjmî of Varâmîn (222-6/1622-6) and under Muzaффarid rule in Kirmânn (750/1349). However, the two earlier mosque types consisting of an open, domed kiosk based on the چââh-يâk fire-temple or of a large single eyvân still occur, namely in the Masджīd-i Bâbâ 'Abd Allâh in Nayîn of 700/ 1300, in the three mosques of about 725/1325 in the city of Varâmîn (in Karadaxî at Dâshlî, Pouradî and Ezrân, the Masджīd-i Dâjmî of Ardabîl rebuilt in the early 8th/14th century and respectively, in the monumental Masджīd-i Dâjmî of 'Allî Shâh in Tabriz of ca. 710-20/1310-20. While on his visit to Iran in 727/1327 Ibn Battûtâ speaks repeatedly of madrasas which according to him served not only as religious schools but also as یازیya (hostel, hermitage or convent). However, only four such buildings have been described, all of them of Ilkhânid proper style. Of these the most significant are the Masджīra Imâmi of 755/1354 and the Madrasa in the Masджīd-i Dâjmî built between 768 and 778/1366 and 1376, both in Isfâhân and following the four eyvâns-scheme with cells for the students between the eyvâns. The importance given to mausolea particularly to imâmzâdas (or burial places of descendants of the Shîite imâms) is apparent from their large number, as they comprise 39 monuments among the 119 listed by Wilber. They fall into two major categories, both with an inner dome over the burial chamber in the centre of which there is the sarcophagus, if the latter is not placed in a vaulted crypt underneath. They are either square chambered with more horizontally dominant features, of which the Gunbad-i یالیyâvan with very high florid stucco decoration of ca. 715/1315 (according to E. Herzfeld and Wilber, or ca. 1200-1250 according to D. N. Wilber (Art) and also that of Afrâm b. Abu '1-Hasan, known as Pir-i Bâkîr in Lîndîân of which the tomb chamber, deep eyvâns and entrance passageway were built between 695 and 712/1299 and 1312 and which is very important for its lavish display of carved stucco decorations and faience mosaics. The low tomb of Gâhâân built between ca. 1297 and 1305 in Gâhâânîyeh, a suburb of Tabriz, was destroyed by Shâh 'Abbâs I, but the undoubtedly even more remarkable mausoleum of Sultân Muhammad یلیyetsı Khudabanda in Sultâniyeh of 707-13/1305-13 is fairly well preserved, although various subsidiary buildings and a surrounding wall with towers have disappeared (a view of the town with this building as seen in 944/1537 in a MS of Nâşrâbâd al-Sulîhî al- Matraki is illustrated in colour in E. Akurgal, C. Mango and R. Ettinghausen, Treasures of Turkey, Geneva 1966, 201). A. Godard has characterized it as “certainly the finest example known of Mongol architecture, one of the most competent and typical products of Persian Islamic building and technically perhaps the most interesting" ("The Mausoleum of یلیyetsı at Sultâniyeh", in Survey of Persian Art, li, 1103-18; Wilber, op. cit., 139-41). While یلیyetsı followed the Shîite persuasion (after 709/1309), he meant to have the remains of the Caliph یلî and of his son, the Imâm Husayn, transferred to his mausoleum, but this project was not realized. The building is an enormous octagon, about 126 feet (39 m.) wide with the burial chamber containing the cenotaph of the Sultan in a rectangular addition opposite the outer wall, and built in three stages, each one broader than its predecessor. The facade, faced with faience mosaic and, on the inside, painting in the manner of book illuminations. Also in this period whole sanctuary complexes were constructed around tombs of venerated saints, such as that of Bâyazîd al-Bistâmi consisting of the shrine proper, a Masджīd-i Dâjmî and a tomb tower, built between 700 and 713/ 1300 and 1313 (A. U. Pope, in Survey of Persian Art, li, 1080-6; Wilber, op. cit., 127-9), that of Shaykh 'Abd al-Sâmâd al-Islâmî-ye Imâma, built between 704 and 725/1304 and 1325 which comprises besides the tomb a Masджīd-i Dâjmî, a minaret and a یلیyetsı (Pope, op. cit., 1086-9). A Godard, Najâns, in Al-ğârî -Îrán, i, 1926, 83-102; Wilber, op. cit., 133-4); and also that of Ahmad b. Abu یلی-Isân, known
as Shâykh Dâim, in Turbat-i Shâykh Dâim, where there is a fairly well-integrated congregate of various units erected ca. 1330 (Wilber, op. cit., 174). Finally a religious monument of great distinction is the mihrâb of delicately carved stucco of 710/1310 in a side prayer hall of the Masjîd-i Dâim of Isfâhân, which dates from the Shâhrite period of Ōldjâytī. That few secular buildings are preserved is partly due to the fact that Ōldjâytī rulers preferred to live in luxurious tents till the end of their rule and that such monuments were built of wood and other perishable material. In the Mongol mountain town of Sâturk, a site now called Taşkht-i Sulaymân, is a large ruined eyvân, decorated with niches topped by stalactites; it was part of a palace which according to Ḥamd Allâh Mustawfî was rebuilt by Abâs Bkân and has been dated ca. 1275 by Wilber (op. cit., 112). As the intensive German excavations between 1960 and 1964 elucidated, the intricate palace complex was composed of various units such as isolated eyvâns, cross-shaped hypostyles either with a central court or a central dome, rectangular halls, a twelve-sided building, etc., all erected along the four sides of a huge near-square layout with pillars forming an arcade around the courtyard with the oval lake in the centre. Wall tiles with geometric designs and partially glazed blue and green were discovered there, as well as two capitals decorated with Chinese dragons. In addition, a great deal of locally manufactured pottery, especially of the so-called Gârrûs type (which had previously been dated 5th/11th to 7th/13th century), and moulds for mihrâbs and animal sculptures appeared in the ruins. Furthermore, a square building with a carved doorway, apparently covered by a central dome was found to be Mongol (although it was formerly thought to be Parthian) and it was assumed that it might be a mausoleum. Finally, there was a large Mongol gateway. All these discoveries were unique and thus of the greatest importance for our understanding of secular Iranian architecture (R. Naumann, W. Kleiss, et al., Taşkht-i Suleyman and Zendan-i Suleyman, in Archäologischer Anzeiger, lxvi (1961), cols. 51-9; idem et al., ibid., 1962, cols. 660-70; idem et al., ibid., 1964, cols. 27-57; idem et al., ibid., 1965, cols. 697-723). In addition, three poorly preserved carved panels of the standard 3rd/9th century type were found near Marand (ca. 1330-5). Sin (730-1/1330-1) and Safâ (734/1333), of which in each case the best preserved part proved to be the single portal. In Sin it is followed by an unusual hexagonal vestibule, while in Safâ the cut stone entrance doorway and inscription above it betray Syrian influence. The most unusual secular building was probably the observatory built about 656/1258 at Marâqân on Hulârūd. Orders from plans prepared by Nasîr al-Dîn Tusi. The structure is known to have contained a dome and a library, to which Ghâzân Bkân added yet another dome, all of which were already in ruins in 1340 when Ḥamd Allâh Mustawfî wrote his Nuzhat al-khulâb.

A novel feature of the Mongol period was the massing of public buildings in newly constructed quarters, such as the Ghâznîyya of Ghâzân Bkân and the Takht-i Suleyman and Zendan-i Suleyman. In the 8th/14th century the depicted personages begin to wear Mongol costumes. Toward the end of the 7th/13th century rather coarse relief designs appear with Far Eastern motifs in the centre and large nasâk writing in white on a blue ground as the framing device. In the 8th/14th century there is a definite decline in the artistic quality. Throughout the 7th/13th century the pottery, too, followed Sâlûqûk tradition, but was slowly losing the Parthian's arcading and large inscription in white on a blue ground as the framing device. In the 8th/14th century there is a definite decline in the artistic quality. Throughout the 7th/13th century the pottery, too, followed Sâlûqûk tradition, but was slowly losing the Parthian's arcading and large inscription in white on a blue ground as the framing device. preference for a subdued chromatic range consisting of greys, browns and whites with dark blue and turquoise only discreetly used. The flower and animal motifs are often of Far Eastern origin and the figures wear Mongol costume. This type of pottery had a strong influence in other Muslim countries, even those politically at odds with the Mongols. Its style is therefore found not only in the pottery of the Golden Horde at Saray Berke, but also in Damascus and Cairo (A. Lane, Later Islamic pottery, Persia, Syria, Egypt, Turkey, London 1957, 6-20). The material evidence of the pieces themselves is corroborated and supplemented by a section in an Persian MS of 700/1300 in which Abu 'l-Kásim 'Abd Allah b. 'Ali b. Muhammad b. Abi 'Aabir, son and brother of two well-known Kāshān potters, provides information about the raw materials and technical processes involved in the contemporary Kāshān production of glazed ceramics (H. Ritter, J. Ruska, F. Sarre and R. Winderlich, Orientalische Steinbücher und persische Fayencetechnik, Istanbul 1935).

Metalwork. It is difficult to differentiate the Iranian objects from those made in neighbouring countries especially in the Dżazira. The designs on the brasses of the 7th/13th century and those of the 8th/14th century, inlaid with silver and sometimes with gold, and very rarely with copper, become progressively drier, more rigid and less imaginative in comparison to those of the Seldjuk period. However, they continue the earlier modes of decoration, particularly the deployment of the patterns in registers with skilfully arranged roundels and cartouches of various sizes set against formalized background designs, and often using human figures in court scenes. In this respect they show the strong imprint of Mesopotamian, especially Mawšil work, although it must be remembered that the pieces from that region were originally themselves influenced by the Iranian metal production. (For a study of a special group starting in 705/1305 with a bowl by a Sḫraḏ î artist see Eva Baez, Fisch-pond ornaments on Persian and Mamlûk metal vessels, in BSOAS, xxxi (1968), 14-27.) Chinese influence is occasionally found (R. H. Pinder-Wilson, A Persian bronze mortar of the Mongol period, in Proc. XIXth Int. Congress of Orientalists, 9th-16th August 1960, Moscow 1963, ii, 204-6). That the period is not without creative ability is demonstrated by a number of new shapes for caskets, especially a polygonal one with a domed cover. Dated pieces of the 8th/14th century indicate that in the second half of the Mongol period there is a growing predilection for the sole use of inscriptions, floral designs, arabesques and geometric patterns, although a bowl of 752/1351 still has human figures in the uninterrupted main register. L. Giuzalian has identified a production in Sḫraḏ made for the Inglī Sultan Oldjeytī (see Proc. XXVth Int. Congress of Orientalists, i, 174-8). Sḫraḏ work continued under the Muzaffārīd dynasty, as a signed piece in the Cairo Museum of 761/1360 indicates. A different type of metalwork, a huge bronze basin by an ʿIṣfahanī artist, carrying the name of the Sultan Qiyāḥāl dīn Muḥammad Abū Bakr of the Kart dynasty, was cast in 776/1375 for the Mādgjūl dī Ḍammī in Herāt (A. S. Melikian-Chirvani, Un basam iraniyen d’Iran 1275, in Gazette des Beaux-Arts, n.s. Ixxiii (1969), 5-18). A third, and again different post-Mongol group consists of a number of richly silver inlaid bowls with elaborate miniature-like court scenes in or between roundels which foreshadow the Timūrid painting style. (A general survey in D. Barrett, Islamic metalwork in the British Museum, London 1949, pp. XVII-XIX).

Textiles. There is no doubt that fabrics were woven in Iran during the Mongol period, but modern research has shown that it is not possible to distinguish them clearly from the products of other Muslim regions and possibly even from those made in China. These textiles called panni tatarici in Western sources represent an international luxury style. It is, however, obvious that the overall organization based on rounds with one or two heraldically rendered animals and an interstitial pattern which had been developed in the 8th/14th century was still recognizable in the Seldjuk period was no longer the main arrangement. Chinese ideas had thoroughly destroyed that convention of many centuries and had introduced new composition schemes and Far Eastern motifs. The arrangement which was closest to the old system was an overall pattern of pointed ovals formed by a system of stems which enclose animals in a circular setting. Otherwise there was often an open composition with animals in alternate rows placed in dense vegetation. The most common organisational schemes were bands of various width with Arabic inscriptions, flowers, geometric and other formal designs, and, to a lesser extent, with animals and birds. The key piece is the burial robe of Duke Rudolf IV of Austria (1365) in the Episcopal Museum in Vienna which has the name of Tčlān Sultan Abū Sa‘id woven in it; this in turn is close to the fabric found in the tomb of Cangrān I at Verona (1239) (G. Sangiorgi, Le stoffe e le vesti tombali di Cangrān I della Scala, in Bollettino d’Arte, n.s. i (1921), 441-57; see also Otto von Falke, Kunstgeschichte der Seidenweberei, Berlin 1913, ii, 50-63, now antiquated, but richly illustrative material; W. Mannowski, Kirchliche Gewänder und Stickereien aus dem Schatz der Marienkirche, Danzig 1929, vol. 3, vol. 2, nos. 30-35; Phyllis Ackerman, Textiles of the Islamic periods, in Survey of Persian Art, iii, 1942-61; A. Lane, Later Islamic pottery, 3-5).

The Art of the Book. The period’s earliest dated book binding of 676/1277 and 697 or 699/1299 or 1299 respectively, both from Marāqgha, use blind tooling to create a central mandorla-shaped medallion and triangular corner pieces within a simple frame. The punches are limited in number and all of a geometric nature (or, indeed, sometimes the exceptions on the flap of the second piece. In composition and in its filling devices this binding is still in the Seldjuk tradition and only in the following century does the style advance. Thus on a thirty-volume Kur’ān set made in Hamādān in 713/1313 for Sultan Oldjeytī gold tooling in the form of dots appears and is applied to a larger and more elaborate circular medallion filled with geometric patterns. Designs impressed into the lining (doublure) of the binding are first found in 704/1304 and the first signature stamp in 706/1306. By 735/1334 the central medallion and corner pieces have become bigger and have a more elaborate outline, while in 781/1379 the earlier mode of filling the decorative forms with geometric strapwork has been replaced by arabesques and even naturalistic floral branches. Over-all large scale geometric configurations as found in Mamlûk Egypt remain, however, unknown, and in the 8th/14th century the use of gold tooling remains still limited (R. Ettinghausen, The covers of the Morgan Manâfî manuscript and other early Persian bookbindings, in Studies in art and literature for Belle de Costa Greene, ed. D. Miner, Princeton 1954, 459-73; K. B. Gardner, Three early Islamic book-
More spectacular than the bindings are the illuminations, especially the "carpet pages" in Kur'an MSS and other MSS. Here again Oldjeýtî's was the great patron, as is shown by the large size, thirty-volume Kur'an set in the National Library, Cairo, created in Hamadân in 713/1313. Here colourful arabesques and knot designs were placed within ever changing geometric layouts. Other giant Kur'an MSS were written for the same sultan in Baghâd in 706/1306 and in 716/1316. However, the juxtaposition of Oldjeýtî's 710/1310 demonstrates that other MSS were also handsomely decorated, in this case with a carpet-like repeat pattern within a richly treated frame. Its design is, however, in a less monumental, more delicate style and the same general tendency is noticeable in later Kur'an MSS of 728/1327 and 738/1338. All these illuminations have a character of their own which distinguishes them from both the Seljûk and Timurid creations (R. Ettinghausen, Manuscript illumination, in Survey of Persian Art, iii, 1954-9).

In spite of conservative tendencies in certain early MSS and even in the late MSS painted in Shiráz between 731/1330 and 741/1341 under the Indjû Sultans, miniature painting of the Ilkhanid period achieved a complete break with traditions evolved by Arab or Seljûk Iranian ateliers, or as the Safavid calligrapher and painter Dûst Muhammad expressed it in 957/1544: "its first great master (Abd welded "withdrew the covering from the face of painting and invented the kind of painting which is current at the present time". The evolution developed rapidly from MS to MS and, as already the earliest MS, Dîwâni-i Ta'rikh-i Yûsûf of 691/1292 in the Bibliothèque Nationale in Paris, indicates, is engendered by a strong Chinese influence. In this earliest MS as well as in a group of undated small-size Shâh-nâmeh MSS of the early 8th/14th century and in the Shiráz MSS between 1330 and 1341 it is only Chinese motifs and Far Eastern costumes which betray the new trend, but in many miniatures of the next MS, Ibn Bakhshî's Manâdîs-al-ayawân of 697-690/1297 or 1299 in the Morgan Library, there is in addition a new indication of spatial depth, an interest in the rendition of landscape and impressionistic tendencies to landscape which is reflected in the more advanced style of the "Demotte Shâh-nâmeh", but still reflects its manner. A more advanced style, possibly from another locality, if the paintings were not executed at a later date than the MS, is found in another Kallla wa-Din-ma, the text of which is dated 741/1343 (in Cairo), where the figures are more diminutive while the landscape is purely decorative and the space hardly rendered. This is a general tendency which is clearly noticeable in various dated MSS of the second half of the 8th/14th century (L. Binyon, J. V. S. Wilkinson, Basil Gray, Persian miniature painting, London 1933, 29-48, 184; D. Barrett, Persian painting in the fourteenth century, London n.d.; E. Kühnel, History of miniature painting and drawing, in Survey of Persian Art, iii, 1933-41; R. Ettinghausen, On some Mongol miniatures, in Kunst des Orients, iii (1959), 44-55; B. Gray, Persian painting, Geneva 1961, 19-55 (bibliography: p. 173); B. W. Robinson, Persian painting, London 1967, 35-42; 84-5; on the albums: R. Ettinghausen, Persian Ascension miniatures, in XII Convegno Volta (Accademia dei Lincei, Roma 1957, 360-83; M. S. Işıpiroğlu, Salar-Alben. Diwân-i Khânumânî ve Berliner Sammlungen, Wiesbaden 1964; idem, Malerei der Mongolen, Munich 1965).

Bibliography of publications treating of the whole subject: "Ikhan Art", in Encyclopedia of World Art, vii, New York 1965, columns 788-98 with extensive bibliography; and chapters in the general histories of Islamic art, e.g., those by Georges Marcâis, Ernst Kühnel and Katharina Otto-Dorn. For the decorative arts and painting see also Oleg Grabar, Persian art before and after the Mongol conquest, University of Michigan Museum of Art, Ann Arbor 1959; idem, "The visual arts, 1050-1350" in Cambridge History of Iran, v, New York 1968, 626-58.---R. Ettinghausen

"ILLA "cause", pl. .qqāl.

i.—GRAMMAR

The idea of the ILLA is important, and appears in the earliest treatises. In fact, Ibn Sallâm al-Dîmâmî, who sees ʿAbd Allâh b. Abî ʿIshâk (d. 117/735) as the founder of naḥân, says of him: "he enlarged the scope of ʿiṣâs and explained the ʿilla" (al-Kîfî, in...
Few grammarians, however, have dealt with the question of Hillat al-Hillat with its own sake: Ibn al-Darradji, in several chapters of the Kitab al-Ikdah fl Hllat (Cairo 1371/1952); Ibn al-Sarradji, in several classes of the Khasis (Cairo 1310); from him we know that Ibn al-Sarradji dealt with it at the beginning of his Usuli and al-Husayn al-Dinawari al-Dalis (Beguya, 236) in the chapter Thimar al-sinda (in MS., see Brockelmann S T, 174). Al-Zadidiadji (d 337/948-9), in this ch. 5 Hillat al-nafrw, says that they are artificial (mustanbata) and not necessitating (laysat mudjiba), and puts them into three categories: ta'misinya, kiyasyya, jadalaisyya naqarisyya. The first are concerned with the teaching (ta'lim) of the language of the Arabs, permit it to be learnt and are included among the norms that rule it. One says: kdm Zayd**, "Zayd rose", with Zayd in the ra/ (nominative), and if the question is in the ra/ (predicate) in Hillat al-Hillat, the answer is— why is Zayd in the ra/? The answer is— and this is the Hillat—because he is the fi`il, "the agent" of the verb, which affects him and puts him in the ra/ of the Hillat. One says: inna Zayd** kdm** "Zayd is standing". Why, in this case, should Zayd be in the nafrw (accusative) and kdm in the ra/? The answer is: because inna, which puts the noun following it in the nafrw and the khasas (predicate) in the ra/. This reply expresses the Hillat.

Hillat kiyasyya are concerned with explanations founded on kiyas, "analogies": in the case of inna Zayd** kdm**, why should inna put the noun in the nafrw? Because Hillat kiyasyya it resembles a transitive verb; it is thus thought of as comparable with it and behaves like it, because of this resemblance. From a formal point of view, Zayd** is comparable with the object of the verb in the nafrw, and kdm in the ra/ with the fi`il, which is in the ra/.

Hillat jadalaisyya naqarisyya make up all the other explanations that are worked out by reflexion (nasar) and frequently brought into discussion (jadal), in answer to the questions that arise subsequently. The previous Hillat kiyasyya stated: a resemblance to a transitive verb. To what verb? To a verb in the past? In the present? In the future? In a comparison with a transitive verb, why select a verb the complements of which are fi`il or hadj, "faces". This, in fact, is only a resemblance to wudjuh > hadj, "have a time assigned for something", or hadj as in Hillat mudiib, "the cause that permits action", such as the changing of alif to waw in darib ("hitting") > dawarih in the diminutive; this is comparable with the causes of the theologians; (b) the Hillat that can be avoided, but in this case one must accept something disagreeable and repugnant; such as, for example, in saying: "ma`ukin (following the asl), without changing the y to w: ma`abin, "he who knows with certainty"; or muzan, without changing the y to y: mizan "balance"; its causation is not absolute. Thus he says (i, 87 end): "We do not claim that they [the Hillat al-nafrw] reach the same level (ta`ligh badr) of the Hillat of the theologians" (cf. i, 145, l. 9-12). He is not talking of the Hillat as the changing of alif to waw, but simply to note that they exhibit a more marked resemblance to one another. Thus, going beyond the Hillat of the jurists on the one hand, and on the other, more resembling the Hillat of the theologians, while falling short of the latter, the Hillat of the grammarians hold a peculiar position. As R. Arnaldes says (Grammaire et theologie chez Ibn Haem de Cordove, Paris 1956, 146): "The problem is this: is a sabab which permits but does not necessitate (see below, Rem. a). Hillat al-mudhiba remains. Is this of the type dealt with by the theologian or of that dealt with by the jurist? He says (i, 48, 145) that it is closer to the first than to the second, and superior to the latter (i, 50, l. 15), for the grammarians refer to sense (al-his) and speak of heavyness or lightness in the sounds of the language, which are clearly perceptible to everyone, whereas legal causation has recourse to signs (il-awad') and carries on in order that judgments may be made (see also: i, 48, l. 6-12; 51, l. 12-5). He also distinguishes, with al-Hillat al-mudhiba (i, 88, 164): (a) the Hillat that necessitates, leaving no possibility of evasion, such as the Hillat al-nafrw, in the sentence: functions, provided with formal signs, and relationships between the different signs in the sentence: functions, provided with formal marks.

What, however, does Ibn Dinni mean by Hillat al-mudhiba? Without doubt the first category of al-Zadidiadji and Ibn Dinni (cf. i, 12-5). Having rejected the Hillat Hillat of the latter, he has to confine himself to this first category, Now, to take one example, he makes frequent use of istithbakhal estimation of heaviness and, consequently, of lightness. Moreover, he uses the arguments of the grammarians by means of istithbakhal to show the Hillat.
difference between the 'ilal of the grammarians and those of the jurists (above and i, 48, l. 4). This istithkdl is a 'ilha nasariyya; in fact, in the cases quoted above Genuman > mahn > mishd > mishd in (non-absolute 'ilha madhiba) — 'ilha al-ta'tilimiyya simply states the changes: wy > y, tw > t; the "why?", however, the explanation by means of estimating heaviness, istithkdl, comes from the nasar, from reflexion on linguistic behaviour, in the particular case. What then are we to think? After careful examination, we must conclude that it is the term 'ilha al-ta'tilimiyya and the abuse of useless questions that Ibn Djinni has rejected (see i, 172, l. 1 ff.), but that he intended to go beyond the simple grammatical statement and to set up, in the real causes, an explanation that comes from the working of linguistic feeling, such as his istithkdl, or from that which he believes appropriate to the Arabic language. Granting the cases referred to (mahn, mishd et al.), yet when we consider how far he carries his use of istithkdl, e.g., i, 55, l. 4-5, we see that he reaches the limit of what he believes appropriate to the Arabic speech, because remains for him a domain that has a clear first limit with the ta'tilimiyya, but extends, more or less rightly, into the nasariyya; reservations are made, here, about the question of the kiydsiyya, in view of the extent of Ibn Djinni's discussion of kiyds. Al-Dinawari (wrote before 538 A.D.; Broekkman, S I, 514), in the Kitab mentioned above (with the ghfr of Ibn Maktum) (in ad-Suyuti, and ma'dala: Divisions of the 'ilha, Ithirah, 56-8), also introduces two divisions. The second apparently corresponds with that of Ibn al-Sarradj, but he does not discuss it (ibid., 58, l. 14-5). The first enumerates the 24 well-known types (naw') of the grammarians' 'ilha: ta'tarid 'ala 'alr wa-sumsa al qanun lugathim, "valid for the whole of the Arabic speech and referred to the canon of their language". These, however, are no longer merely the ta'timiyya or Ibn al-Sarradj's first division. For example, an important kiydsiyya is in fact to be found there: the 'ilha taghbi, "the cause of resemblance", such as the 'irab of the mudaris because of its resemblance to a noun, and the bind (absence of 'irab) of certain nouns because of their resemblance to the haruf (ibid., 57, l. 5-6); and the 'ilha farh, the "cause of difference" (l. 7-9), a purely systematic 'ilha nasariyya. While Ibn Djinni's procedure with respect to istithkdl is seen, and his tendency towards pure systematic nasariyya, it is not surprising to find ad-Dinawari produce such a mixture, in his count of the 'ilha. This means that the grammarian, in his grammatical speculation, comes no longer to distinguish clearly between the actual rules of the Arabic language (the ta'tilimiyya) and all the "whys?" that they have accumulated to account for these rules, and that he thus comes to ascribe to the former the same objective value as to the latter. Besides, al-Suyuti, repeating the enumeration of the 24 types mentioned, in the biographical notice of al-Dinawari (Bughya, 236), introduces them simply as: 'ilha al-nahe al-makhkara, according to that author. A 'ilha may also be basila, "simple" or murakkaba, "compound"; this is the subject of al-Suyuti's 5th mahala (ad-Dinawari, 61-2). A good example of murakkaba is the explanation of man' al-sarf, "prevention of sarf" for nouns with only two cases, by means of the combined action of two manis, "obstacle" (see also Ibn Djinni, 1, 174-80). The important part ascribed to the 'ilha in the theory of kiyds should also be noted; it can be seen in the account of Ibn al-Anbari: Luma ad-adilla fi usail al-nahe (ed. Atta Ame), 53: kiyds 'ilha is accepted by all bi-ijima, with unanimous consent, and it is the only one that enjoys ijima; kiyds al-gabah, "the kiyds of resemblance", is accepted by akhbar al-ulama, "most scholars".

Remarks: (a) 'ilha, sabab. Ibn Djinni appears to make a distinction between the two terms: al-'ilha al-mujjawwa is really only a sabab that permits and does not necessitate (above and i, 164, l. 6). al-Suyuti (d. 911/1505) (Ithirah, 59, l. 14), in a note that follows the end (which is clearly marked) of the quotation of Ibn Djinni, decides in favour of a firm distinction between these terms by means of this difference that which necessitates is called 'ilha and that which permits is called sabab. This is developed by the commentator on al-Ithirah, Muhammad al-All b. al'Allan (d. 1057/1648), quoted by the editor of the KhaSaqis, i, 164, n. 4. If the latter had noticed the intha that closes the quotation from Ibn Djinni he would not have attributed to him (ibid.) a self-contradiction. For 'ilha and sabab in Ibn Hazm, see R. Arnaldez, op. cit., 186.

(b) For another sense of 'ilha: huruf 'ilha or al-'tilal or al-huruf of the mu'all' ila. These are alifi, waw, ya?, known as "sick" huruf, as opposed to the others, the "healthy" ones, al-huruf al-sahiba. The changes to which they are subject are dealt with in Arabic grammars in the chapter on 'ilha or 'tilal, e.g., R. al-Shartuni, Mabdi' al-sarabiyya, iv (9th ed., Beirut 1961), 34-50; H. Fleisch, Traite de philologie arabe, i, 118-37.

Bibliography: in the text. Ch. 4 of the Ithirah of al-Suyuti, which is made up of quotations, has the advantage of gathering together the important texts; the author, however, makes certain cuts in his quotations from Ibn Djinni. (H. Fleisch)

ii.—PHILOSOPHY

Cause, in the exact sense of Aristotle's to atna. The term was adopted by Shi'i thought, by the falsafa and by the later mutakallimun in their resumés and refutations of falsafa. The mutakallimun, however, tended rather, in order to denote a causal sequence and the production of an effect, to use sabab, pl. asbab, which implies primarily the idea of "channel", "intermediary". A certain confusion of vocabulary sometimes arises from this, and all the more since the falsafa, in particular al-Farabi and Ibn Sin, use sabab freely as a synonym of 'ilha.

The term 'ilha seems to have been adopted very early in the translations of Greek texts. It would be tedious to try to trace it through, and we may simply remark the influence that the Neo-Platonic writings attributed to Aristotle may have had in this matter as to many others: especially, here, the extracts from the Elementatio theologica of Proclus, which in Arabic became the "Book of the Explanation of Aristotle concerning the pure Good" (al-khayr al-makhd), and were known to the Latin Middle Ages as the Liber de Causis (Arabic ed. by Bardenhewer, Freiburg i. B., 1882; re-ed. by A. Badawi in Neo-platonici apud Arabos, Cairo 1935). From the very first lines of the work, the relationship of the first Cause (here 'ilha al-ulama) with the second cause, as described in the text, makes it clear that the thing caused (ma'sul) is maintained in being by the universal first Cause, even when the immediate second cause ceases to exert its influence: "and even if the second cause is separated from the effect that follows it, the first Cause, which is above it, is not separated from that effect, since it is the cause of its cause". The Latin Middle Ages incorporated
this relationship in a purely creationist view of the world, and one of a world "commenced" in time, while falsafa—at any rate eastern falsafa—interprets it as requiring a necessary and eternal emanation.

Here, as a guide, are some of the more important references.

I. Shi'î thought. An epistle of the Khwan al-Šafā' is entitled "on causes (ši'â) and things caused (ma'âlûlât)" (Rasâ'îl Ikhwan al-Šafâ', Cairo 1347/1928, ii, 324 ff.). One chapter is devoted to the ideas in question (ibid., 336-7). The definitions refer to the more traditional idea of sabab: ši'â is the "intermediate" (sabab) necessary for the existence of another thing, and the ma'âl ("thing caused"), effect) is that whose existence requires some "intermediary". As for the various kinds of causes, their possible enumeration is governed by two points of view. (1) An analysis very close to that of Aristotle (Physics, ii, 3 and Metaphysics, Δ, 2) distingishes the efficient cause or agent ([ši'â fâ'îl], the material cause ([ši'â kâtib], the formal cause [ši'â sâri'îyya] and the final or "perfect" cause ([ši'â tamâmîyya]). These four causes, according to the text, are to be found in every "produced" object. (2) To this is added the list of what the agent that produces an effect needs, according to its nature. If the agent is a man, he needs matter, place, time, members as instruments, implements and certain movements. A "natural" agent, on the other hand, needs only matter, place, time and movements; an "animate" agent, endowed with vital (naʃfârî), breath, needs only matter and movements. The paragraph ends with the statement that the Most High Creator (al-bîrî) "needs none of this, since His Act is absolute beginning and creation" with regard to both matter and time, and to movements, instruments and implements. The epistle adds that obstacles created by deficiencies in the matter (mâddâ), by the difficulties encountered by the first matter (hayâlîd) in receiving form, by lack of instruments and implements or by personal inadequacies, may all constitute hindrances to the action of the agent. "How far removed is God Most High from all this!"

Beings that are caused are divided, in their turn, into four categories: those produced by men; "natural" beings (minerals, vegetables, animals); then two categories the details of which depend on certain Ismâ'îli views: on the one hand the pure naʃfâmîyya beings (planets, stars, elements), on the other the rûhânîyya or "spiritual" beings (first matter, separate form, soul, intellect).

This description of the causes certainly borrows many of its elements from the Aristotelian tradition. It is expressed, however, in an analytic framework that is not Aristotle's; it is more descriptive and less careful to refer to the hierarchies of beings. The examination of the causes seems less to satisfy the intellectual grasp of what constitutes things than to define the intermediate conditions without which things could not be brought into existence. These conditions, however, establish necessary links between the causes and their effects, and thereby lead to the recognition of the efficacy (talîẖîr) of the first on the second. The Ismâ'îli theory of the first matter, which gives a spiritual (rûhânî) reality to the hayâlî [ge.], diverts the idea of material cause in a new direction; the Muslim faith states that God transcends any operation of secondary causality, in the absolute immediacy of His creative (emanative) Act.

Shî'î (Ismâ'îli) thought follows, with less technical precision, the same lines and somewhat accentuates them. The first Cause (al-ši'â al-tâlî) is sometimes God Himself, sometimes the first Emanation, thought of as God's knowable and nameable. This refer only to the Kitâb Dîjâmî al-khimanatayn of Naṣîr-i Khusraw (ed. H. Corbin and M. Mu'în, Paris-Teheran 1953), e.g., 7-9, where temporal and local causes are added to the four classic causes, and 67-70, on the first Cause. Six centuries later, the world-view of Mullâ Sadrâ Shirzâi, which was profoundly monist and emanalist, led him to deny the relationship 'ši'â-ma'âl on the level of the constitutive intrinsic causes of quiddity (mašîyya), while affirming it all the more vehemently on the level of existence (cf. Kitâb al-Masâ'îrî, ed. and trans. H. Corbin, Paris-Teheran 1964, 53-4180-1). "That which is called cause is the origin and source (aʃl)"; the absolute Origin is the first Cause (ibid., 41/162).

II. Falsafa. The idea of ši'â is common in falsafa. Al-Kindî refers to it frequently. Thus a rasâ'îla on "the proximate efficient cause (al-ši'â al-fâ'îl al-barhâb), the proximate formal cause (ši'â sâri'îyya) and the final or "perfect" cause (ši'â tamâmîyya). These four causes, according to the text, are to be found in every "produced" object. (2) To this is added the list of what the agent that produces an effect needs, according to its nature. If the agent is a man, he needs matter, place, time, members as instruments, implements and certain movements. A "natural" agent, on the other hand, needs only matter, place, time and movements; an "animate" agent, endowed with vital (naʃfârî), breath, needs only matter and movements. The paragraph ends with the statement that the Most High Creator (al-bîrî) "needs none of this, since His Act is absolute beginning and creation" with regard to both matter and time, and to movements, instruments and implements. The epistle adds that obstacles created by deficiencies in the matter (mâddâ), by the difficulties encountered by the first matter (hayâlîd) in receiving form, by lack of instruments and implements or by personal inadequacies, may all constitute hindrances to the action of the agent. "How far removed is God Most High from all this!"

Beings that are caused are divided, in their turn, into four categories: those produced by men; "natural" beings (minerals, vegetables, animals); then two categories the details of which depend on certain Ismâ'îli views: on the one hand the pure naʃfâmîyya beings (planets, stars, elements), on the other the rûhânîyya or "spiritual" beings (first matter, separate form, soul, intellect).

This description of the causes certainly borrows many of its elements from the Aristotelian tradition. It is expressed, however, in an analytic framework that is not Aristotle's; it is more descriptive and less careful to refer to the hierarchies of beings. The examination of the causes seems less to satisfy the intellectual grasp of what constitutes things than to define the intermediate conditions without which things could not be brought into existence. These conditions, however, establish necessary links between the causes and their effects, and thereby lead to the recognition of the efficacy (talîẖîr) of the first on the second. The Ismâ'îli theory of the first matter, which gives a spiritual (rûhânî) reality to the hayâlî [ge.], diverts the idea of material cause in a new direction; the Muslim faith states that God transcends any operation of secondary causality, in the absolute immediacy of His creative (emanative) Act.
ence of God as first Cause); Nadžūt, Cairo 1357/1938, 211-3 and 235-43 (where the usages sabab-asbd and 'illa-šial occur indifferently); Ighārāt, ed. Flügel, Leiden 1892, 139-43. To these may be added the shorter summaries of the Daneghāna (French trans. Le livre de Science, Paris 1955, 127-33), the Risāla fi 'l-hudūd, on the words 'illa and mašīl (ap. Tis' rasā'īl fi 'l-hikma wa-šābīyāyād, Cairo 1360/1908, 100-1) and the Risāla fi 'l-fābīryāyād (ibid., 4), where the term used is asbd.

We cannot hope here to deal in detail with Ibn Sīnā’s “Treatise on causes”. In any case, he depends directly on the texts of Aristotle, especially Book Δ of the Metaphysics, which he subjects to a most searching analysis (particularly in the Shifā, and the Nadžūt), completing, or rather, going beyond them, and also diverting them in a Neo-Platonic direction. He does not merely give an analytical list of causes, but deals with the actual theory of causality (Shifāyya) and of “causedness” (mashīliyya), as Mīlī Gūchon translates it (Lexique de la langue technique d’Ibn Sīnā, Paris 1938, no 451). A few remarks:

(1) In a distinction that became classic (adopted, for example, in the Ta’rīfāt al-Dījūrdīn: ed. Flügel, Leipzig 1845, 160), Avicenna calls the intrinsic causes, that is to say, material (in potentia) and formal (in actu), “the causes of quiddity” (mashīliyya); the extrinsic causes, efficient and final, are “the causes of existence” (or of being, waṣājdī) of a thing. “A thing may be caused either with regard to its quiddity or with regard to its existence” (Ighārāt, 139). We find here an echo not only of the real distinction between essence and existence but also of Avicenna’s “extrinsicism”, in which existence “happens” to essence.

(2) The efficient cause (al-šīla al-fālīla) is considered as the determining constitutive of the existence of a thing; this is a direct application of the major thesis that any possible thing that is brought into existence is necessary ab alio (a statement already found in al-Fāraḥīb). In the treatise in the Shifā (Ighārīyyāt, ii, 357), Ibn Sīnā distinguishes in this regard between the “physicists”, who see a motive cause in the fašilā and the falāṣifā, who define it as causing the beginning of, and maintaining, being; he designates it as “the cause, vis-à-vis the world. He afterwards affirms the existence of God as first efficient Cause, which creates all things of being (cf. Ighārāt, 140), and no longer only the motive Cause, as in Aristotle. It is possible to see in this a source for Thomas Aquinas’s “second way”.

(3) Stress is laid on the final (ghābiyya) cause, which, in a strongly emphasized formula (Ighārāt, 139), is called “the efficient cause of the efficient causes” (cf. the text from the Rasā'īl al-Kindī already cited, i, 248). It is the cause of the causes (Shifā, Ighārīyyāt, ii, 292). As Ibrahim Madkour remarks in his introduction to the edition of the Ighārīyyāt (17), Ibn Sīnā, making an analysis of the four causes from this point of view, attempts to lead them all back to the final cause (ibid., ii, 294-8). The interrelationship between the efficient cause and the final cause is no less penetratingly defined. It is “by virtue of its quiddity” that the final cause is a cause, and “the idea that it represents belongs to the causality of the efficient cause” (Ighārāt, 140; trans. A.-M. Gūchon, Paris-Beirut 1951, 356), for it is, in as much as it is caused, caused by the latter. There is, then, an incessant interaction between the two extrinsic causes.

(4) The affirmation of the existence of God as absolute first Principle follows from the demonstration first of the impossibility of an infinite number, in actuality, of efficient and material causes and then of the impossibility of an infinite number of final causes (Shifā, ii, 327-43; cf. Ighārāt, 141-2). God is thus called “absolute first Cause” (‘illa šīla mutlaša) and “Cause of all other causes” (Shifā, ii, 340). He is, without doubt, the supreme efficient Cause, since he is the Principle (mudābi) of all being and of all contingent being, while transcending in some way any distinction of efficiency-finality in “absolute innovation” (ibdā' mutlaš). In itself the thing caused is non-existent (lasya); its cause makes it exist (ayš) (ibid., 266).

(5) The relationships of concomitance and anteriority between cause and thing caused recur frequently in the treatises of Avicenna. The principal distinction is as follows: there is anteriority of sense (ma'nd; we find later: “anteriority of nature”), but not of time (samān). In time, the cause is really such, in actuality, only as a concomitant of the thing caused, and the latter exists, in actuality, only through the existence of the cause (ibid., 261). If, then, the thing caused is removed the cause is removed (Risāla fi 'l-hudūd), and vice versa, at least as far as the cause in actuality (bi-l-f̄urū) is concerned. A cause in potentiality (bi-l-khwāra) can be anterior to the effect (the inner before the outer, his wood; cf. Nadžūt, 232-233); it can outlive it or disappear before it. A cause always in actuality, however, cannot exist without its effect, and this effect cannot exist without its cause. In consequence, God, the absolute Principle and the supreme Cause, Who is always in actuality, cannot produce the world from all eternity. The existential determinism of falsafa, and the eternity of the contingent world, externally “commenced” (kātīb), are based on the reciprocal relationship of cause and thing caused, defined thus.

(6) The vocabulary used by Ibn Sīnā is a supple and rich one. (a) Together with ‘illa and mašīl the more traditional terms sabab and musabbab also occur frequently—sometimes in the etymological sense: cause as intermediary or occasion, sometimes as a synonym for ‘illa. (b) The distinction between efficient and formal cause is perhaps the most characteristic, for the Greek term f̄ilā and širāyya, the material cause refers rather to hayūdī (first matter) than to madāda. This latter term, however, is also used (usually as “second matter”, already with form), and sometimes ānsūr, “element”, in the sense of “first receptacle” (al-šīla al-lusūrīyya is an expression already found in al-Kindī). The final cause is called ghābiyya, but talmāmiyya is not excluded. (c) In the course of elaboration (this Nadžūt, ibid.) there are distinguished the cause per se (bi-l-f̄īlah), the accidental (bi-l-‘arad cause), the proximate (karib) cause and the distant (bakdīdī) cause, the particular (ḡisīyya) cause and the general (āmmā) or universal (kullīyya) cause, the receptive (kābihā) and the dispositive cause... A resume and an important application of Avicenna’s theory of causes appear in the Kitāb al-Nafs of the Shifā (ed. F. Rahban, Oxford 1955, 228-9), where it is stated that the body and the soul are not in the same relationship as cause and thing caused; that the body can be only the receptive and accidental cause of the soul, and that the soul receives existence only through “separate causes” (al-šīla al-muʃāfīb). It would be interesting to compare Avicenna’s analyses and the corresponding ideas of S. Y. Suhrwardi, for example, in his Kitāb Ḥikmat al-istanbūl
 length (19 ff.)  

**Bibliography:**

**ILLSYÝN** (gentitive *illsiyyn*) is used in Sûra LXXXIII, 18 to mean the place in the book where the deeds of the pious (abrûr) are listed. In the two following verses (19 ff.) *illsiyyn* is described as an inscribed book (*kûdûb markûm*). In verse 21 it is said of this book that those close (to God) bear witness to it. Correspondingly in verse 7 of the same Sûra the place in the book where the deeds of evil-doers are chronicled is called *sidîdîn*. In the two following verses (9 ff.) *sidîdîn* too is defined as an inscribed book. In Tabari's view *illsiyyn* may be identified with the seventh heaven or the right foot of the divine throne, or some other place in heaven. He gives no explanation of the fact that *illsiyyn* and *sidîdîn* are themselves described both as books and as the place where the book of the pious or the book of the evil-doers may be found. Zamakhshari assumes that the book in which the deeds of evil-doers or the pious are recorded is, so to speak, a part of a main book (*kûdûb djîmân*, *dûunîn*) which is called *sidîdîn* or *illsiyyn*.  

---

(Ed. H. Corbin, Paris-Teheran 1952, 62-3, 91, 94-6, 147-8, 184, 186, 195); they have a basis of common ideas, but the latter exhibits a greater independence of the Aristotelian source and forgets a close link between the theory of emanation (and its descent from the luminaries) and the idea of cause; whence the expressions "effusive (fayydda) cause", "illuminating (nûrîyya) cause" and "existential illuminating (wud[udiyya nuriyya) cause" (195). The *illa* becomes the effusion from the "victorious luminaries", in which cause and thing caused correspond in an intellectual (*'âli) priority, "but not a temporal one; cause and thing caused remain both together in time" (63).  

If we turn now to western falsafa, we find an equally frequent use of causes (*'âli*) and of the principle of causality, the ideas and vocabulary of which are well established. Thus, a whole theory of causes can be extracted from the writings of Ibn Rushd, not only in his commentaries on Aristotle but also in the *Tadhfut al-tadhfut*, when he is replying to al-Ghazali concerning the eternity of the world (ed. Bouyges, Beirut 1930, 4 ff.; cf. Eng. tr., S. van den Bergh, London 1954, 1, 1 ff.). Reference to the four Aristotelian causes leads Ibn Rushd to state that the very idea of cause is analogical, and that only efficient causality is appropriate to the first Cause that produces the world. He also emphasizes that the infinite regression of causes is impossible as far as causes *per se* and direct causes are concerned, that is to say, "if every cause is a condition of the existence of that which follows from it"; this regression is not, however, impossible for causes *per accidens* and "circular" causes. It should be added that, the more Ibn Rushd reacts against the Neo-Platonism of his eastern (and Maghribî) predecessors, the closer he comes, on the subject of causes, as on so many others, to the historical Aristotle.  

III. *Ilm al-kalâm*. When it began, *ilm al-kalâm* was scarcely aware of the "theory of causes". When it encountered the idea, or one very similar, moreover, it expressed it by *asbab*, not by *'âli*.

Originally, the problem is not the relationship between first Cause and second cause, but the production of "commenced" actions, especially human actions. The various answers of the Mu'tazîlis, Aş'arî and Hanafi-Mâtûrîdî schools are known [see *Allân*, II, B]. Whereas the Mu'tazîls affirm the efficacy of the created agent on his effects, the predominate lines of the other schools hold to a non-necessary sequence of *sabab* and *masabab*, directly created by God, without intrinsic efficacy (*ghayr ta*ârîf) of the first on the second. In order to combat eastern falsafa in the *Tadhfut al-faldsifa*, al-Ghazâlî was obliged to borrow its ideas and vocabulary concerning cause and thing caused. Under the same influence, the usages *illa*, *illsiyyn*, *ma'srub* and *mâ'llîyya* appear more and more frequently in the major manuals of the following period, in general towards the end of the "philosophical preambles". An example of this is the *Muhâassal* of Ta'hâ al-Dîn al-Râzî (Cairo n.d.), where the four causes are mentioned (89-90), and a chapter is devoted to "cause and thing caused" (104-6). The *Mawâhib* of A'dûd al-Dîn al-Idjî, and the commentary on these by al-Djurdjâni, elaborate the same subject at some length (*Sharh al-mawâhib*, ed. Cairo 1325/1907, IV, 98-201). An analysis of the causes and a long discussion on the relationship between cause and thing caused are to be found there. The predominate idea is that "causes" are only the "condition" (*ghurî*) of their effects, and that there can be no efficacy (*ta*ârîf) of the first on the being of the second. It is with reference or non-reference to *ta*ârîf that al-Djurdjâni, in his *Tadhfut* (ed. Pfleger, Leipzig 1845, 160 and 121) appears to distinguish the ideas of *illa* and *sabab*. Later on, the vocabulary does not retain this precision, and the term *illa* goes somewhat out of favour. The *Muhaddîmât* of Ibn Khaldûn speaks only of *asbab*. The contemporary manuals, such as the *Muhaddîmât* of al-Sanûsî of Tlemcen or the *Hddîyya* (. . .) *alJuwaris* (Tahâ al-Juwâri), condemn the *Mufîrs* (the *illa* of Fâlqar, more strongly than the former) for *shirk al-asbab*, associating an operation of second causes with the divine Omnipotence (see *Muhaddîmât*, ed. and trans. Luciani, Algiers 1908, 92-5, 108-13). The existence of *asbab* is not denied, but they have no efficacy (*'adam ta'ârîfîn*) on the "effect" with which "they usually coincide". The affirmation of a *ta*ârîf of the cause on the thing caused, even when it is the result, as the Mu'tazîlis claim, of a "commenced power" (*hûdra khdîhâ*) created by God in the agent, is still considered by Aş'arism as being in opposition to the Power of God, or at least confining it. This entrenched position has weighty consequences for the problem of human freedom, which it leads its followers to deny. It may be asked, however, if it does not stem from a misunderstanding. Avicenna's theory of causes, for example, and his analysis of the very idea of causality is one thing; another, a view of the world dominated by a creation-emancation, doubtless willed by the first Being, but which is necessary and thus eternal. For Ibn Sinâ, as we have seen, a cause in actuality cannot not produce its effect, and maintain it, by its intrinsic efficacy. This is true, according to him, for the relationship of God with the world, but equally true for the action of second causes, which, in his view, thus remain part of an absolute existential determinism. Consequently, to admit the *ta*ârîf, the influence, of the cause on the thing caused appears to the *mu'takalûmun* as a denial of the divine free Will and free Action. The two questions of the intrinsic reality of the causal relationship and of the freedom of God in His creative Act (and thus of his transcendence of the created thing) are thus blocked together in the discussions of the schools.
The Arabic ʿillīyyūn is undoubtedly derived from a misunderstanding of the Hebrew ʿelyon (the highest), ʿalā ʿlā yān and may perhaps be explained on the following ground, that he had learned that the book in which were recorded the deeds of men was kept by the ʿelyōnīm; for this is the name which is frequently applied to the heavenly beings, who are called taʿfīt ʿnim, e.g., the highest). "Mohammed’s mistake can perhaps be for this is ʿelyon ʿnim, a misunderstanding of the Hebrew *elyonim, for he heard the word from Jews" (Horovitz).

The verb maʿrifa, fikh, hikma, and on the other hand with a number of shuṣur; is however the nuance of laborious study is implied; ʿilm Him taʿallama result of this action. is the first term in referring to the composite and to the imperfect, and also in the imperative, with the meaning of "to know", but in the imperative and in the perfect it seems often to mean basically "to learn" (without effort, the fifth form taʿallama being used when a nuance of laborious study is implied); ʿilm is the result of this action. ʿArafa means "to know" but, perhaps as a result of the particular meaning of certain early derivatives such as ʿarif or ʿarrāf (see T. Fahd, Division, index; al-Dāhibī, Tarbī, index), a difference appeared at an early date in Muslim thinking between maʿrifa and ʿilm, the first tending to be used of knowledge acquired through reflection or experience, which presupposes a former ignorance, the second a knowledge which may be described as spontaneous; in other words, maʿrifa means secular knowledge and ʿilm means the knowledge of God, hence of anything which concerns religion. In fact these distinctions are quite artificial and it is doubtful even whether a semantic study of the two terms based on an extensive collection of examples would throw any light on this problem, so personal is the way in which the different writers use them and so varied according to their various disciplines. In the field of mysticism, the relations between ʿilm and maʿrifa will be dealt with under maʿrifa and taṣawwuf; the theory of knowledge on the philosophical and theological plane will also be covered in the article maʿrifa. We merely state here that ʿilm had to fit in with the exigencies of the system of the mutakallimûn, who assigned to it a place in the schema of the Aristotelians; ʿilm is an accident (ʿarad) characterized by life (muhktās bi ʿl-haydt) and forming, with the will, power, etc., part of the class of the modalities (kayfīyydt) of the inferior appetitive soul (see al-Tiglī, Mawāṣif, with the commentary by al-Dījrī, Būlāk 1266, 272 f.; al-Tahānawī, Dict. of tech. terms, 1055-66). ʿilm is either eternal (ḥadīm) or produced within time (ḥadīṣ, muḥādāt) according whether it exists in God or in a created being, and there is no analogy between these two types. The mutakallimûn, who made a distinction between ʿilm and maʿrifa, used the first term in referring to the composite and to the universal, and maʿrifa for objects which are simple (bassī; see al-Dījrī, Tawīlī, s.v.) and particular (al-Taftazānī, on al-Nasafi, 40).

On the theological plane another difference concerns the relations between ʿilm and ʿamal, "works"; there is in fact a ʿilm naṣari, such as the knowledge of things, and anyone who possesses it may stop at that, and a ʿilm ʿamali, knowledge of religious obligations (iḥsādat), which is complete only when these obligations are fulfilled (al-Raghib, Muṣafādāt, 348). Al-Kairāwī’s explanation in the Tanbih (Cairo 1306, 193) is somewhat different: whoever possesses the knowledge of things and does not act according to what it teaches is only half obedient, whereas he who possesses it and also acts according to it has a double merit.

On a more general plane, ʿilm, applied to knowledge of a religious character, is contrasted both with maʿrifa, in the sense of profane knowledge, and with adab (q.v.), the meaning of which it is difficult to define precisely, but which refers in particular to a literary and professional training rather similar to maʿrifa. The active participle, ʿāsid, acquired at the same time the meaning of a scholar learned in religious matters [see ʿulaMA], and then, at a later period, simply scholar, for which formerly other terms were used (in particular baṣtim), whereas ʿilm acquired at a much earlier date that of learning in general.

It is true that in the expression faṣab al-ʿīlam the last word was regarded by the majority of Muslims as meaning “traditions” the search for which had involved long journeys, but it is doubtful whether the Prophet intended simply to allude to this activity in the numerous ḥadīths exhorting the faithful to seek for ʿīlam (“even in China”); therefore in the traditions in question this word should be translated by “knowledge”, just as it should be given the meaning of “learning” in texts dating from the first centuries of Islam. Furthermore the arts and the sciences were made, first by the philosophers and then by various thinkers and writers, the object of a series of lists (iḥsā al-ʿulām) and classifications of the sciences (marātib al-ʿulām), the evolution of which from the 3rd/9th century to today is particularly instructive: L. Gardet and M.-M. Anawati have drawn up a very instructive table of them in their Introduction à la théologie musulmane, Paris 1948, 101-24, where, in considering the place of baṣtim in the organization of knowledge, they present the various classifications of al-Fārābī, of the Ḥikwān al-Ṣafā, of al-Khuwārizmi, of Ibn al-Nadīm, al-Ghazālī, Ibn Khaldūn, mentioning also those of Avicenna (102, note 2) and of Dījrī Zaydān; to this table there may be added: Ibn ʿUtayba (G. Lecomte, Ibn ʿUtayba, Damascus 1965, 445-9); Aḥū Maʿyān al-Tawhīdī (see M. Bergé, in BEO, xviii (1963-4), 241-99); Ibn Ḥazm (Marātib al-ʿulām, ed. S. Al- ʿAhdīnī, Miskawayh (K. al-Sādā, Cairo 1948, 48-60), and probably some other writers.

It is surprising, on examining these lists, to see the relative importance given to the Arabo-Islamic sciences and the foreign sciences, the latter occupying progressively less space as the dates get later. Al-Ghazālī (d. 505/1112) seems to have played in this field a determining role by establishing a clear distinction between worthless (muddāmūd) and blameworthy (maḥḍīmmā) sciences, the latter including all the disciplines considered to be useless,
even harmful, to life on this earth and to the health of the soul in the hereafter (see *Ibid*, book i, ch. iv). A similar conception is merely the application of a more generally accepted principle according to which the true Muslim must "pay no attention to that which does not concern him" (*tark mdya*nta); see I. Goldziher, *Muh. St.*, ii, 137), and this attitude of mind clearly explains the indifference of Islam towards many of the sciences whose interest is not immediately obvious.

The general tendency did not however prevent a number of Muslims from transmitting the heritage of antiquity while adding to it their own contribution. Details of the various disciplines will be found in the articles on mathematics (*AL-DIJABR WA L-MUKABALA; AL-ILM AL-HISA*), medicine (*TIBB*, *BOTANY [NABAT*), alchemy (*KIMA*) , zoology (*HAYawan*), etc., while for general surveys of the history of the sciences in the Muslim world there may be consulted G. Sarton, *Introduction to the History of Science*, 1927-31, 2 vols.; A. Mieli, *La science arabe*, Leiden 1953; M. Kraus, *Ifryd*, *Al-Shanfara*, in *Aghdnl*, iii, 23, verses 3, 9, 10.

From these details there become apparent certain elements of Arab aesthetics such as the symmetry between the two halves of the body produced by slender hips, the contrasts of forms and colours: the hair (*fakhs* and the face (*aba*), the lips (*tama*), and in the poems of the *ghazal*), the figures were represented in the frescoes and sculptures of the Umayyad castles (R. Ettinghausen, *Arab Painting*, Geneva 1962, 31; D. Schlumberger, *Kasr al-Hayr al-Gharbi*, Ar. tr., Beirut 1945, pl. 186). It is interesting to note that the principles of unity and continuity were manifested in the mosques with their forest of columns and that symmetry appears most prominent in the poems of al-Salghra, of Kasr al-Tubab, of Mahatta and in the decoration of its facade. There should also be noted the contrast of the light and dark colours in the frescoes of Kasr al-Hayr al-Gharbi (Creswell, *A Short Account of Early Muslim Architecture*, 1958, 124 ff.; D. T. Rice, *L'Art de l'Islam*, Paris 1966, 21 ff.).

The idea of beauty underwent certain modifications under the *Abbasids*. Most characteristic of it during this period was the tendency to equilibrium, the interest accorded to spiritual beauty and the importance given to the harmony of the body (S. al-Munadjidji, *DJaml al-mar'a* 'inda *al-Arab*, Beirut 1958, 35-40). Beauty was a favourite subject of *adab*. Although it did not constitute an *ilm, djaml* was nevertheless a knowledge of some degree; whence the expression *al-basar bi* l-gharabi. The evolution of the study of human beauty has influenced literary criticism to the extent that we have Ibn Rašîk allowing a reduced form of *dād* to be compared to certain faults praised in the *gārîya* (al-`Umdu, Cairo 1934, i, 177). Literary criticism, given the lack of art criticism, illustrates the characteristics which are found in the *ghasar* and in the arts in general. It is a formal criticism expressed in concrete terms which may often be applied either to a person or to an expression (al-`Askari, *Sin`ululm*, Istanbul 1930, 131; Ibn Rašîk, op. cit., i, 106). The critics (al-`Askari, op. cit., 202; Ibn Rašîk, op. cit., ii, 3) insisted on symmetry (*tawdzun, tawdzla*) and contrast (*takd`*, *tibak*). Their analysis is only a partial one, since it deals not with the poem but with words, verses or expressions (Ibn al-`Aṣir, *Al-Mathal al-sal`ir*, Cairo 1952, i, 384, 386; al-Djurdjani, *Daw`al al-rid`a*, Cairo 1931, 31 ff.). The separation of art and religion which became the rule from the Umayyad period onwards is sufficiently clear in *Abbasid conception* (Kudama, *Nukh al-`Aṣir*, Cairo 1948, 14; al-Djurdjani, *Al-Wishts*, Sidon 1937, 57, 58). These same features can be found in the arabesque, in which the repeated continuation of a single decorative theme corresponds to the verse in the poem and the column in the mosque, in which abstraction is only a form of Arab idealization, where art has no goal outside itself, and where the unity of the whole is in agreement with a certain tendency towards unity in the attitude of the critics (Ibn al-`Aṣir, *Al-Mathal al-sal`ir*, Cairo 1932, 268; Ibn Tabashaba, *Ify al-`Aṣir*, Cairo 1956, 17, 112).
These artistic realities and these critical judg-
ments are echoed in the works of ... of the Umayyad
Dynasty and in the first one hundred and fifty years
of the cAbbasid—numerous texts on astronomy (and
adabi, 1968, 140 ff.); al-Tawhidi puts for-
cil, ful (cf. I. Isma
Sina expresses the sensory character of the beautiful
ward the idea of relativity in aesthetic judgement
(al-Imtd
reason and passion
Cairo
cwa 'l-mu^dnasa, Cairo
1953, i, 150); al-Ghazalli explains the attraction of
beauty by several other names in Arabic), is that branch of
knowledge which deals with the geometrical structure
of the universe, and which invents and employs
the instruments necessary to guarantee the utmost
accuracy in observations.
The geometrical structure of the universe, as con-
ceived by Muslim astronomers after about 800 A.D.,
by and large coincides with that expounded by Ptole-
my in his Almagest. The earth rests motionless near
the centre of a series of eight spheres which encom-
pass it. The eighth sphere, studded with the fixed
stars which were duly catalogued by such scholars
as al-Sufi (d. 376/986), revolves daily from East to
West; it also moves in the opposite direction at an
appropriate rate of precession, or oscillates with a
motion termed tredipation (this theory is primarily
known through Thabit b. Kurra and various Spanish
astronomers). The spheres of the five “star-planets”,
which are eccentric to the centre of the earth,
revolve in such a fashion that their centres of uniform
motion (equants) are not identical with their geo-
metrical centres; the model of Mercury has, as a special
arrangement, a “crank mechanism” which produces
two perigees in its orbit. On the surface of these
spheres are situated the centres of the planets’
epiphanies. The model of the Sun, however, involves
only an eccentric circle, while that of the Moon
utilizes both a “crank mechanism” which causes
the centre of its deferent to revolve about the centre
of the earth, and an epicycle in which the anomalous
motion is counted not from the epicyclic apogee, but
from a point on the line extended from the “opposite
point” on the circumference of the deferent to the
epicycle. Muslim astronomy is largely concerned with expounding the
intricacies of this system and with refining the
parameters which transform it from a qualitative
to a quantitative model of celestial motions; the core
of the cijles is constituted by the tables based on
the regular motions of the various parts of the model
and their determined parameters. It might be well
to mention here that the interference of Ibn al-
Hajjala al-Maghribi attempts to define the terms used in this
field, such as djamil, hasan, malih, etc., and to
establish a canon of ideal beauty formed of eight
groups of four. One of the eight groups is concerned
with morals (Dlw
djami, hasan, malih, etc., and to
establish a canon of ideal beauty formed of eight
groups of four. One of the eight groups is concerned
with morals (Dlw
Bibl. Nat. Paris, MS no. 3348, fol. 70). In the East,
al-Ghazali established a canon in twenty groups
of four (Majlis
1299, i, 268). The seven
groups which are common to the two canons show
slight variations which do not alter the general
conception. It is nevertheless important to point out
that these later canons, one western and the other
eastern, are similar in their general conception, the
beauty celebrated by the earliest Arab poets ten
centuries previously.

'ILM AL-DJAMAL — 'ILM AL-HAYA'

Bibliography: in the art.; see also FANN.

'ILM AL-HANDASA' [see Supplement].

'ILM AL-HAYA', the "science of the figure (of the heavens)" or astronomy (which is also known
by several other names in Arabic), is that branch of
knowledge which deals with the geometrical structure
of the universe, which determines the laws governing
the periodic motions of the celestial bodies, which
devises cinematic models to describe these motions,
which reduces them to tabular form so that a
computer can, with as much precision and ease as
possible, determine the positions of the heavenly
bodies as seen from any particular locality on the
surface of the earth, and which invents and employs
the instruments necessary to guarantee the utmost
accuracy in observations.
The geometrical structure of the universe, as con-
ceived by Muslim astronomers after about 800 A.D.,
by and large coincides with that expounded by Ptole-
my in his Almagest. The earth rests motionless near
the centre of a series of eight spheres which encom-
pass it. The eighth sphere, studded with the fixed
stars which were duly catalogued by such scholars
as al-Sufi (d. 376/986), revolves daily from East to
West; it also moves in the opposite direction at an
appropriate rate of precession, or oscillates with a
motion termed tredipation (this theory is primarily
known through Thabit b. Kurra and various Spanish
astronomers). The spheres of the five "star-planets",
which are eccentric to the centre of the earth,
revolve in such a fashion that their centres of uniform
on astrology involving a knowledge of astronomy) were translated into Arabic from Sanskrit, Pahlavi, Greek, and Syriac. For the first half or so of this period of translation Arabic astronomers were extremely eclectic, and this trend toward eclecticism continued to be strong for a much longer period in certain areas such as Spain. But the introduction of Ptolemy's rigorous methods and geometrical proofs at the beginning of the 3rd/9th century led to a rapid growth of observational astronomy, designed partly to investigate the discrepancies among the Greek, Iranian, and Indian systems, and partly to improve the Ptolemaic parameters. With the gradual recognition of the superiority of the Ptolemaic system, at least within the terms of the strongly Greek-oriented intellectual atmosphere that developed in Islam, the Almagest usurped a position of unchallenged pre-eminence in the estimation of most Muslim astronomers. This process was completed by the time of the publication of his Zīdī al-Šābī by al-Battānī in about 900 A.D.; and, despite the Indianizing tendencies of the Khawājahs, the attacks of the Aristotelians, and the successes of the School of Marāḡa, Ptolemy remained in his position of dominance until the introduction of modern Western astronomy in fairly recent times.

The translations from Sanskrit.

The earliest translation of a Sanskrit astronomical text into Arabic was apparently that of the Zīdī al-Ārkand (arkhand is a corruption of the Sanskrit ahargana) made in Sind shortly after 117/735; on it were based two other sidjes, the Zīdī al-Ḥasūr and the Zīdī al-Dīāms, both composed in Kandahār in the 2nd/8th century. The elements of the Zīdī al-Ārkand evidently were largely derived from the Khājahahbāyahākārī written by Brahmagupta of Bhilāmā in A.D. 665, though it was also influenced by the Zīdī al-Sīhā of Yazdīdīrīd III (632-652), which, like the Khaqānahbāyahākārī, belongs to the Midnight School (ādhrāʾābīrīhā) of Āryabhāṭa (b. 476).

In 742 yet another Sanskrit sidji was translated into Arabic. This work, composed in verse in imitation of the Indian texts, was given the name Zīdī al-Harbān, wherein ḥarbān clearly represents another corruption of the Sanskrit ahargana. This sidji was based on the Sunrise School (aṣūdāyāhā) of Āryabhāṭa—i.e., on the Āryabhāyśa that he wrote in 499.

The most important translation from Sanskrit into Arabic, however, was that of the Mahāsiddhānātha belonging to the School of Brahma (brāhmaṇaṇa); the Mahāsiddhānātha was primarily based on the Paitāmahāsiddhānātha (first half of the 5th century) of the Viṣṇudarmottaratpurāṇa and on the Brahmā-svarōṣasthīśāhāṭa written by Brahmagupta in 628, though some elements derived from the Āryabhāyśa are discernible in its fragmentary remains. The occasion for the translation was provided by the visit to the court of al-Mansūr at Baghdād of an embassy from Sind in 154771 or c. 156773; the translator is alleged to have been al-Fāzārī, who, in his Zīdī al-Sīnḥīndī al-habīr, mixes Iranian material in with the Indian. Al-Fāzārī also wrote a Zīdī al-aṭār sīm al-ʿābī, based on his earlier work, which must have been the first set of astronomical tables to employ the Arabic calendar; the date of this work is c. 790. Another scholar who evidently had independent access to the Mahāsiddhānātha, Yāʾkūb b. Ṭairīk, composed a Tārkīb al-aṣīhāk in 777 or 778 A.D. as well as a sidji and a Kībūb al-ṭalī, all of which reflect a mixture of Indian and Iranian elements. These works of al-Fāzārī and of Yāʾkūb constitute the basis of the Sīnḥīndī tradition, which will be discussed further below.

At some time around 800 another Arabic version of the Ārāhathāyśa known as the Zīdī al-Arīγābāhī began to circulate among Muslim astronomers. The only one to follow it was apparently one Abu l-Ḥasan al-Awzālī, though it was also certainly known to Abū Maṣʿūr (qq.v.) (d. 727/886). None of the works mentioned in this section or in the next, it should be noted, is extant; the account given here, then, may well be in need of some revision, and certainly will not be free from controversy.

The translations from Pahlavi.

Sasanian literature on astronomy, like that on astrology (both are known primarily through Arabic translations and adaptations), was an amalgamation of Greek and Indian material. Ptolemy's Almagest existed in a Pahlavi translation already in the third century, and a text belonging to the Midnight School of Āryabhāṭa was available by 556; one belonging to the brāhmaṇaṇaṇa has been published under Yazdīdīrīd III, was turned into Arabic, however, by one al-Tamūlī under the title Zīdī al-Sīhā. This was drawn upon by al-Fāzārī (especially for its planetary equations) and by Abū Maṣʿūr; manuscripts of it were still circulating in the time of al-Bīrūnī (qq.v.).

The translations from Greek and Syriac.

The most important Greek text on astronomy translated into Arabic was, of course, the Almagest of Ptolemy; translations were made from both the original Greek and a Syriac version. That due to al-Hagīdīrī in the first years of the 3rd/9th century exercised a strong influence over the astronomers gathered together by al-Maʿmūn; but the most authoritative version was that produced by ʿIṣḥāk b. Ḥunayn and corrected by Thābit b. Qurra (qq.v.). During the course of the 3rd/9th century Ptolemy's Hypohthesēs, Thēon's "Handy Tables", and the corpus of minor Greek astronomical writings known as the "Little Astronomy" were, later, when it became convenient to begin the study of astronomy by mastering Euclid's Elements, as the "Middle Astronomy") were also translated into Arabic, and a number of treatises on the astrolabe based on Greek and Syriac sources were published. This material, to a greater or lesser extent influenced by the translations from Sanskrit and Pahlavi (the most impressive influence is to be seen in the Muslim development of a trigonometry far more effective than Ptolemy's out of the Indian system which employs only the sine, cosine, and versine functions), forms the central core of Islamic astronomy after the ninth century.

The Ptolemaic tradition.

Arabic texts on planetary theory and the structure of the universe, as indicated above, normally reflect the Ptolemaic system. But, because of the paucity of detailed studies, it is at present difficult to assess the extent to which any particular set of astronomical tables or sidjes has depended on Indian, Persian, or Greek material. It is clear, however, that even in the majority of Ptolemaic sidjes one will find parameters, methods of computation, or other elements derived from the Sīnḥīndī or the Sīhā. This is true of the Zīdī al-muḥālaḥan of Yāḥyā b. Abī l-Mansūr.
c. 214/829) and in the several zidies of IJabash (c. 235/850); Abu Ma'shar in his Zidi al-hazdrdt made a conscious effort to combine the three systems in order to substantiate his claim that they are all descended from a unique ante-Diluvian revelation.

The Zidi al-Sābī of al-Battānī (c. 287/900), however, is almost entirely Ptolemaic; in this it presumably reflects the strong Hellenistic atmosphere of the Syrian, and particularly the Harrānian, astronomical and astrological schools. Al-Battānī's parameters were adopted by Kūshyār b. Labbān (c. 400/1010), though Kūshyār was generally a follower of Abu Ma'shar in his astrological works, and one suspects that this influence can also be traced in his zidies. The Zidi al-kabīr al-Hikimi written by Ibn Yūnis (c. 380/990) in Cairo is extremely important for the historical information it contains.

Al-Kānum al-Mas'ūdi of al-Bīrūnī (421/1030), whose works are also of immense importance for their historical information, often reflects the author's interest in Indian astronomy. The Zidi al-Sangarī was composed by al-Khāzīnī (c. 514/1120) in Iran; a later epitome was translated into Greek by Gregory Chioniades, who obtained the manuscript at Tabriz, in c. 700/1300. Al-Khazinī, despite his interest in Abu Ma'shar's Indian theory of cycles, continues to compute according to the Ptolemaic tradition. And the Zidi al-Ālā'ī of al-Fāhhab (c. 545/1150), not extant in its original form, was one of the texts translated into Greek by Chioniades, and its elements were used by al-Fārisī (c. 658/1260) in his Zidi al-nimaršṭan al-Musafīrī.

The Sindhind tradition.

The foundation of this tradition lies in the works of al-Fazārī and Ya'qūb b. Tātīk, wherein already, as we have seen, some Sasanian and Greek elements had been mingled with the brāhmaṇapakṣa and Āryabhaṭiya material. But the most influential representative of this tradition was the Zidi al-Sindhind of al-Khwārizmī (q.v.) (c. 215/830). Only fragments of the original text survive, but we do have a Latin translation of the revision made by al-Majrīqī in Cordova (c. 390/1000); the translator was Adelard of Bath (c. 1126). We also have commentaries on al-Khwārizmī's zidi written by al-Masūrī (c. 261/875) and by Ibn al-Muḥannā (4th/10th century; this commentary survives only in Latin and Hebrew translations made in Spain) as well as fragments of the commentary composed by al-Farghānī (q.v.) (c. 235/850). The details of the preservation of al-Khwārizmī's work that have just been given are indicative of the strong Andalusian predilection for the Sindhind; this impression is strengthened by the fact that the Naṣīm al-ṭiḥb of Ibn al-Adami (c. 308/920), one of the principal Eastern representatives of the Sindhind tradition, is primarily known through a quotation in Sā'īd al-Andalusi. The two other Eastern zidies which followed the Sindhind after 900—the zidi of al-Nayrīzī (c. 287/900) and that of the Banā' Amādīr (c. 297/910)—are mainly known from citations in Ibn Yūnis and in al-Bīrūnī.

In Spain the tradition was continued by al-Majrīqī's pupil, Ibn al-Samb (416/1025), whose zidi is available in fragmentary form; the zidi of Ibn al-Ṣaffār is probably also lost, though a manuscript in Paris may contain it. But the principal zidi of Muslim Spain was the "Toledan Tables" of al-Zarqallā (c. 473/1080); this work is a mixture of materials from al-Khwārizmī and al-Battānī. It had an enormous influence among Muslim (Ibn Kāmīnār, Ibn al-Bannā', etc.), Jewish (Abraham ben Ezra, Proflatius, etc.), and Christian (the "Aulonson Tables" and its successors) astronomers in Western Europe until the end of the 15th century.

The School of Marāgha.

Spain, as we have seen, was the home not only of the Sindhind tradition, but also of the Aristotelian assault on Ptolemy. Far more impressive astronomically was the effort generated at the observatory at Marāgha (founded by Naṣīr al-Dīn al-Tūsī in 657/1259) to modify Ptolemaic theory, and continued at its successors at Tabriz and Damascus. At Marāgha itself, where Chinese astronomers assisted their Muslim colleagues, the problem of revising Ptolemaic astronomy was seen as being essentially that of replacing the equant of each planet so that all celestial motions might be uniformly circular. The Tūsī couple invented by Naṣīr al-Dīn and explained in his Tadhkīra provided the basic approach for the solutions later proposed by his pupil, Kutb al-Dīn al-Shāṭīr, in 680/1281 and 683/1284, and by Ibn al-Shāṭīr of Damascus in c. 750/1350, though each of them advocated different numbers, dimensions, and arrangements of the epicycles. It was only Ibn al-Shāṭīr who finally reached a satisfactory solution for the two most difficult planets, Mercury and the Moon; but by the middle of the 8th/14th century, then, Muslim astronomy had worked out planetary models that depended solely on combinations of uniform circular motions, eliminating the equants from the models of the five "star-planets", and the "crank mechanism" and "opposite point" from that of the Moon.

This accomplishment of Ibn al-Shāṭīr shares many features with the models proposed by Copernicus two centuries later; in particular, their models of the Moon and of Mercury are identical, they both employ the Tūsī couple, and they both eliminate the equants in essentially the same way. There can be little doubt, then, that Copernicus knew of Ibn al-Shāṭīr's work; the details of the transmission, however, remain obscure. It is true that manuscripts of the Greek translations of various Arabic zidies made by Gregory Chioniades in c. 1300 upon his return to Constantinople after his studies at the observatory at Tabriz were in Italy by the middle of the fifteenth century, particularly those containing diagrams apparently illustrating the Tūsī couple, but they contain no details about Kutb al-Dīn's work and are, of course, too early to have been influenced by Ibn al-Shāṭīr. Some other intermediary must have existed.

The later observatories.

The observatory at Marāgha and the zidi which it produced—the Zidi-i Ilkhānī—served as a model for later Muslim astronomical efforts, though the modifications of Ptolemaic theory that we have just described are not known to have been influential in Islam after the 8th/14th century. The most famous imitator was the observatory founded by Ulugh Beg at Samarqand in 623/1228, where a number of astronomers headed by al-Kāshi and Kādżāda prepared a Zidi-i Sulṭāni (c. 84/1440); al-Kāshi also published a zidi of his own, the Zidi-i Khābānī. All three of these zidies are essentially Ptolemaic, though improvements are made in the parameters and in the structure of some of the tables, and material on the Chinese-Uyghur calendar is added to the other calendrical information common to all astronomical tables.

The last important Muslim observatory was built for Taḳī al-Dīn in Istanbul between 983/1575 and
985/1577. But the five observatories built in imitation of that at Samarkand by Djayasimha, the Maharadja of Amber from 1693 to 1743, at Diayapura, Udilga-
yin, Delhi, Mathurâ, and Vârânâsat desirous to be men- tioned, as they represent an attempt, though an abortive one, to revive Indian astronomy so as to make it conform to the Muslim Ptolemaic tradition. A more fruitful influence of the later Muslim observatories on their neighbours was that exercised by Marâghâ, Samarkand, and Istanbul upon European astronomy; several of the instruments and some of the organizational features of these establishments appealed to Tycho Brahe (1546-1601) and his collaborators at Uraniborg (1576-1612) and Stjerneborg (1584) observatories. The development of the astronomical observatory, the achievement of the School of Marâghâ, the advances in trigonometry and in the structure of tables, and the constant attempts to improve parameters stand out as the most impressive accomplishments of Islamic astronomy.

**Bibliography:** The vastness of the field of Muslim astronomy obviously precludes any extensive listing of the relevant literature; the following notice mentions only standard reference works and the latest books and articles reflecting advances in our knowledge of specific aspects of the subject. The standard reference work for the astronomers themselves and their works remains, despite its age, H. Suter's *Die Mathematiker und Astronomen der Araber und ihre Werke, Abhandlungen zur Geschich-
te der Mathematischen Wissenschaften, s. 1, Leipzig, 1900* (reprinted Ann Arbor 1963); this can be supplemented by H. P. J. Renaud's article in *Isis*, xviii (1932), 166-83, by C. Brockelmann's *GAL*, Pearson, and by the relevant articles in the *Encyclopaedia of Islam* and in the forthcoming *Dictionary of Scientific Biography*. The fullest account of the *qîdâs* is E. S. *Ulm Al-Hayâ* — *Ulm Al-Hisâb*
of the quadrivium (geometry, astronomy and music), classifications of numbers; perfect, over-perfect and deficient numbers; amicable (mutalfi'daa baa) numbers; series, etc. The influence of this work can be seen in the writings of the Ikhwan al-Safa' [q.v.], whose first Risāla, "On Numbers" (English trans. by B. Goldstein, in *Centaurus*, 1964, 129-60), is in large part a paraphrase of the *Introduction*, and in which the authority of Nicomachus and Pythagoras are repeatedly invoked. According to the Ikhwan, arithmetic, the first stage on the way to wisdom, is a study of the properties of existing things through a study of the individual numbers corresponding to those things: "existing things are in accordance with the nature of numbers". Even when a conventional classification of numbers is made, such as their classification into units, tens, hundreds and thousands, it is inspired by a universal pattern in nature—in this case, the four natures, the four elements, the four humours, etc. The prototype of the number one is The One; and just as all things proceed from the One, it may be seen that everyone of the principle of numbers but is not itself a number. Speculations of this kind are not to be found solely in scientifically weak writings; one of the great mathematicians of Islam, Ḥumar al-Khayyāmi [q.v.], believed that the study of mathematics—being the purest part of philosophy—was the first step on the ladder that leads to salvation and to knowledge of the true essence of Being (Risāla fi sharh má agha'ala min muṣūndarī d Uḥdīdate, ed. A. I. Saba, Alexandria 1961, pp. 3 and 75). And we should remember that the translator of Nicomachus' *Introduction* was one of the ablest mathematicians of the 3rd/9th century.

One is struck, however, by the paucity of writings on *ilm al-ṣadīd proper*. A somewhat extended treatment of this subject is Marāṣīn al-intisāb fī *ilm al-ḥisāb*, written in Damascus in 774/1373 by the Spanish Arab Ya'qub b. Ibrāhīm b. Yūsuf al-ʿUmawi; it contains a treatment of pyramidal numbers (Saidan, in *Ivii* (1966), 475-90). As well as applying Indian schemes of calculation to the old finger arithmetic (see below) and to sexagesimal place ( diferentia, mansio: ṭartaba, ṭansia); the Liber algorismi also calls zero ciffre or siffre, reflecting the Arabic  šifr, "empty". In performing the fundamental arithmetical operations the numbers are placed one above the other and the process begins on the left. Erasure and shifting of numbers are used, thus clearly implying that the operations were performed on a dust-board. A particular feature of the book is the treatment of duplumination and mediation as separate operations; this practice was preserved by Arabic arithmeticians as late as al-Kāshī in the 9th/15th century (though not in al-Karaji's *Summa Banā'a*, c. 619/1222, or al-Kalāṣādī, d. 882/1477 or 897/1490, and was also continued by many writers in Europe up to the 16th century.

Extant among the earlier introductions to Indian-type arithmetic is the *Uṣūl hisāb al-hind*, which Abu 'l-Ḥasan Kūshyār b. Labbān al-Dilli composed in about 390/1000 (*Principles of Hindu Reckoning*, facsimile of the Arabic text with English translation, etc. by Morris L. Levey and Marvin Petrucci, Madison and Milwaukee 1965). It is in two parts. The first part introduces the 'nine letters' and the principle of decimal place value. A small circle, 'ṣifr', indicates the absence of number from the place position (martaba) which it occupies. Kūshyār then deals with addition (ṣiyāda), subtraction (nuksan), multiplication (gār) and division (kisma). Duplication (lādīfī) and mediation (lansīf) are described as 'other kinds' of addition and subtraction respectively. There follows a treatment of the square root (dahr) and this part ends with a short chapter on maedalīn, in which the check by casting out nines is applied to multiplication, division and the extraction of square roots. Fractions are here expressed exclusively in the sexagesimal scale. A half, for example, is thirty parts of one, and accordingly the final result of halving 5025 appears as 2812. Similarly the re-

minder in a division is multiplied by powers of 60, then divided by the divisor. The second part is entirely devoted to the 'compound' sexagesimal system of calculation (including the calculation of square root) with the help of multiplication tables of numbers up to 60 (missing in the extant text). In these tables numbers were expressed in the traditional abjad notation, but the calculations themselves employ a pure place-value system of numeration using the nine figures and zero. A final chapter illustrates the process of extracting the cube root (kāb) in the decimal system. Throughout the book the calculations are performed on a dust board (takht) and involve rubbing out and displacement of numbers, the final result replacing one of the given numbers. To multiply 325 by 243 the following figures successively replace one another on the board: 325 6 325 72325 72925 77765 243 ' 243 ' 243 ' 243 ' 243 ' 78925 78975 78975 243 ' 243 ' 243 ' 243 ' 243 ' 243 ' 243 ' 243 ' 243 '

But already before Kūshyār's time highly sig-
ficant innovations were being introduced, as is witnessed by Kitāb al-Fusul fi 'l-ḥisāb al-hindā, which Abu 'l-Ḥasan Ahmad b. Ibrāhīm al-Uklidisi composed in Damascus in 341/952-3. Though not yet published, this important book has recently been studied by A. S. Saidan in the unique Istanbul MS Yeni Camii 802 (*Ivii* (1966), 475-90). As well as applying Indian schemes of calculation to the old finger arithmetic (see below) and to sexagesimal
fractions, al-Uklidisi set out to alter the dust-board methods to suit ink and paper. Not only was the awkwardness of these methods apparent, but the association of the $takāb$ with astrologers earning their living by casting horoscopes and the unbecoming practice of rubbing off the sand with the hand made it undesirable. Thus it is interesting to note that when, in the same century as al-Uklidisi, Abu 'l-Wafā al-Buzjdani wrote his handbook of arithmetic for the use of the government bureaucracy (Mā yaḥttd dīyāt al-khullāb wa 'l-ummāl min sin'āt al-hisāb; cf. M. Medovoi in $Isto rico-matemati shke$ Issledovanii, xiii (1960), 253-314), he showed the Indian type schemes which he sometimes employed from the dust-board and erased. Al-Uklidisi claimed to be the first to offer a satisfactory treatment of cube root; but the most surprising feature of his book is the explanation and application of decimal fractions, an innovation which until very recently was attributed to al-Kāshī, five centuries later. The idea reappears in some form in the $Takmīla fi ʿtim al-hisāb of Abū Maṣūr ʿAbd al-Kāhir al-Baghdādi (d. 428/1037), who expressed our 17.28 by the arrangement 02 (see Saidan in $İs is$, loc. cit., 487-8 08 and in ĮC, xxxix (1965), 210, 220). But the invention appears to have been generally lost until, five centuries after al-Uklidisi, al-Kāshī re-introduced decimal fractions ($al-kusūr al-aśhdriyya$) in his $Mīfṭdh al-hisāb: $These are the $gdhrāriyya (numerals),$ and they are also called Indian, but their use has become prevalent among the people of the Maghrib and among those who follow them" (MS. Princeton University Library, Yah. 3407, dated 1037/1627-8, fol. 827).

Both forms of the numerals were known to the Arabs by A.D. 733, if not earlier. It may be noted, however, that up till now no one has found in Arabic treatments on arithmetic any reference to Indian authors or titles—unlike the situation in Arabic astronomical writings. Moreover, these treatises show no trace of the Hindu division of arithmetic into some twenty operations but rather follow the familiar Greek division; and in their designations of powers higher than the square and the cube they always considered the sums, as in Diophantus, not the products, as was the Hindu practice. They expressed the sixth power, for example, as $kāb kāb (kubōkubō), not as the square of the cube or the cube of the square (cf. H. T. Colebrooke, op. cit. in Bibl., p. xii). On the other hand, the phrase $hisāb al-ţahh wa'-l-tarfūb ("board and dust calculation") is clearly the equivalent of the Sanskrit padaśaṇa and dhaši-karma (Datta and Singh, op. cit. in Bibl., l, 123-4). And there is a parallel in Sanskrit usage for the fact that $al-djamʿ wa'-l-tarfūb (or, as in Ibn al-Raḥli, al-damn wa'-l-tarfūb), two terms which in the extant treatises always denote addition and subtraction respectively, could also designate the whole of arithmetic (ibid., l30; and cf. J. Ruska, in $B. Heid. Ak. Wiss., Phil.-hist. Kl., 1917, 14-21). Thus the Īghvān al-Ṣafā defined $hisāb as $al-damʿ al-ṣadd wa-tafrikuhu (the combining and separating of numbers); and al-Khwārizmī is reported to have written a book on al-djamʿ wa'-l-tarfūb, which could not have been restricted to the elementary operations of addition and subtraction.

Before the spread of Hindu methods of reckoning there prevailed in the Islamic world a kind of arithmetic which al-Uklidisi called $hisāb al-Rūm w'al-'Arab. Books dealing with it (such as the treatise of Abu 'l-Walī mentioned earlier) gave rules for effecting the arithmetical operations including the approximate determination of square roots. These operations were usually performed mentally, and the partial results obtained in the process of reaching the final solution of a problem were 'retained' by holding the fingers in certain positions. Because of these features this arithmetic came to be known as $hisāb al-yad (hand reckoning), $hisāb al-ʿuḥd (finger reckoning), $hisāb al-ha-waʿi (mental, or literally, air reckoning). To deal with fractions, finger reckoning applied the sexagesimal scale or converted the fractions into parts of the local units of currency or measurement. Another system used by it appears to have been suggested by certain characteristics of the Arabic language, in which only the fractions 1/3, 1/4, ..., 1/10 are expressible by words derived from names of their denominators (′third′ from ′three′, etc.) (′Half′ is not derived from ′two′ and is therefore called $mawdū, i.e., formed by convention.) Some other fractions can be reduced to fractions of the former group: 1/12, for example, is half one sixth. Others, such as 1/11 or 1/13, cannot
be so expressed and for this reason they and their denominators are called asamm. In this sense of the word the ʿIİfğwān al-Šāfī‘a speak of 11 as 'the first asamm number'. To express 1/n one has to say: ‘one part out of eleven’. In other contexts asamm was used to render Euclid’s ṣIRRJOS as applied to a number, such as $\sqrt{2}$, that cannot be expressed as the ratio of two natural numbers.

Although treatises on finger computation continued to be written even after the advantages of Hindu reckoning were clearly recognized, the general aim of Arabic arithmeticians, and perhaps their chief achievement, was to fuse together the methods available to them into one system of arithmetical notation according to the theories of N. Bubnov, in Isis, xix (1933), 181-94; Rida A. K. Irani, Arabic numeral forms, in Centaurus, iv (1955), 1-12; idem, A sexagesimal multiplication table in the Arabic alphabetical system, in Scripta Mathematica, xviii (1952), 92-3; M. Destombes, Un astrolobe carolingien et l’origine de nos chiffres, in Archives internationales de l’histoire des sciences, xv (1963), 3-45; H. T. Colebrooke, Algebra from the Sanscrit, London 1817; B. Datta and A. N. Singh, History of Hindu Mathematics, pts I and II, Bombay 1962; G. Sarton, Introduction to the History of Science, i-liii, Baltimore 1927-48 (contains articles and bibliographies on individual authors); H. Suter, Die Mathematiker und Astronomen der Araber und ihre Werke, Leipzig 1900. (A. I. SABRA)

I.—Definition. It is difficult to establish precisely when ʿilm al-kaldm came to mean an autonomous religious science (or branch of knowledge). In any case, whereas the term fikh meant originally —especially in the Ḥanafi school (cf. fikh ʿakbar) —speculative meditation, hence distinguished from ʿilm in the sense of traditional knowledge, the term kaldm, literally ‘word’, quickly acquired the senses of ‘conversation, discussion, controversy’ (cf. A. J. Wensinck, The Muslim creed, 1933, 70), including two hadITHS of Muslim. In his ḤaḍITH ʿuṣūlām, al-Fārābī regards ʿilm al-kaldm as ‘a science which enables a man to procure the victory of the dogmas and actions laid down by the Legislator of the religion, and to refute all opinions contradicting them’. The doctors of kaldm (mudahlillim) themselves were to take a very similar view: this is one of many well-known definitions: kaldm is the science which is concerned with firmly establishing religious beliefs by adding proofs and with banishing doubts” (from the Mażāhīl of al-IJJ, 8th/14th cent.). Similar
definitions are to be found in Ibn Khaldûn, and again in Muhammad ’Abduh: they summa-

ize a place for reflection and meditation, and hence for reason, in the elicitation and defence of the content of the faith. It takes its stand firstly against “doubters and deniers”, and its function as defensive “apologia” cannot be over-stressed. A fairly common synonymous term is ‘ilm al-tawhid, the “science of the Unity (of God)”. The great schools did not merely use the divine unity but with all the bases of the Muslim faith, especially prophecy (e.g., al-’Ofir, al-Shahrastâni, Ibn Hazm) and refutations. Again, it is not always the same thinkers who are linked together under this or that comprehensive label (e.g., Kâddrijya); and mere tendencies should not be transformed into “schools” in the strict sense. This or that mutualism may be presented as showing diverse—even opposing—tendencies according to the problem he is dealing with. There follow here, as a general indication, a few points of reference.

The Kâddrijya were those most opposed to the Umayyad régime, most critical of the ways of the court at Damascus. The name was ordinarily applied to those who recognized that man had a power (kudra) over his acts so extensive that determination (kadar) belonged to man alone, and who saw in “works” thus freely performed an integral part of the faith. Hence the man who deliberately committed a great sin became khâtir, infidel. This last notion, which does not seem to have been supported by all, was to remain one of the characteristics of Khâridji thought. Ghaylân and Ma’bad al-Djushâni are the members of the Kâddrijya most frequently quoted. To them may be added, but with reservations, Wâsîl b. ’Ataâ and ’Amr b. ’Ubayy (2nd/8th century), who are regarded as the founders of the Mu’tazili school and are, with them, sometimes called “political mu’tazîlis”. This tendency re-appears in later Khâridji or Shi’î kalâm. The term Kâddrijya was later readily applied to the Mu’tazili proper, who disclaimed it. Some of them, interpreting differently the etymology of the term, used it of those who upheld the absoluteness of the divine Decree (kadar); this interpretation is found later in the works of their opponent Ibn Taymiyya.

In this second sense, Kâddrijya becomes practically synonymous with what had been its opposite, the Mu’taziliyya (or Mudjibira (q.v.)), the upholders of djibrîyâ, the divine “compulsion”, which creates man’s acts, good or bad, so that nothing is attributed to the man who performs them. The Mu’taziliyya is called djibrîyâ those (including Ash’aris) who rejected their doctrine of kadar. Ash’arî heresiographers accorded the term djibrîya—perhaps somewhat hastily—to the disciples of Djâhm.

It was on the question of faith, sin and salvation that the Murdji’a (q.v.) disagreed with the Khâridjîa. A great sin (kabira) does not involve loss of faith. On the basis of Kûrân, I, 106, the sinner’s future fate is left in suspense (iridîd), awaiting God’s decision. It is Ghaylân and Chassân (who seem to have had Hanafi connections) who are usually (e.g., by al-Shahrastâni) named as belonging to the Murdji’a.

Later heresiographers constricted these diverse tendencies into condensed formulas, which probably over-simplified and distorted them. But in these very first efforts to support politico-religious attitudes by means of rational argument the main lines of later discussions are already drawn. With greater or less success, the Kâddrijya anticipate some of the main theses of the Mu’tazila; the Ash’aris were to seek a “happy mean” to reconcile the “compulsion” of the Djâbriyya and human responsibility; the Murdji’a prefugre, to some degree, in their treatment of the problem of retribution in the next world, the explanations of the Mâurîlâ-Hanafîs and many Ash’aris. Full discussion of this question would re-
quire a detailed study (which would however be risky for lack of documentation) of Ghaylan, who is sometimes classed with the Kadiariyya, as having asserted the human liberty of choice, and sometimes with the Murdja', thanks to his theory of the future lot of the sinful believer.

We are dealing therefore with tendencies rather than with established "schools of theology", and with overlapping views which later were to diverge. Thus it is with the adherents of the sect of the Djahmiyya (q.v.), who regarded as their founder Dja'm b. Sa'faw (executed in 128/746) but whose thought they took from different sources of their opponents. To summarize: on the problem of kadar they would ally themselves with the Djabiariyya, and on that of faith with the Murdja'. Beyond this, however, they refused to recognize any distinct existence of the divine attributes, stripping them away (ta'fil) from the divine essence in order for the better to protect its perfect and absolute unity. Finally, they supported the thesis of the created God acts with a via remotionis (tanzih), which their opponents readily identified with the ta'fil of the Djahmiyya. God the Creator, an absolutely spiritual being, is inaccessible and can be seen neither in this world nor in the next. (2) Justice (al-aslah): God acts with a purpose. Things, by their nature, contain both good and evil. God can will only the good, and is obliged to accomplish that which is better (al-aslah). Thus He neither wills nor commands that which is evil. Man, "creator of his own acts" by a contingent power (kadra) which God has created in him, is responsible for what he does, and God is obliged to reward or punish him accordingly. (3) "The promise and the warning" (al-wad' wa 'l-wa'id) or "the names and the decrees" (al-asma' wa 'l-akhdam): to possess faith is to perform the acts prescribed by the Kur'ân. Whoever commits a "great sin" and does not repent is destined for hell. The thesis elaborates the "decrees" for the believer and the unbeliever. It deals also with "traditions" (ahhab): contrary to the normal doctrine, it does not insist that all the "transmitters" should be believers; and sifmâ (q.v.) is not infallible. (4) "The intermediate state between faith and lack of faith (al-mansia bayn al-mansilatayn)—the position of the "believer who sins" (fâshi (q.v.), a characteristic thesis of the school. The sinner is neither a true believer (mu'min), nor a true infidel (kâfir). He has failed to perform the "witness of the limbs", but his faith in God keeps him within the Community. It is here that are discussed the conditions for imdama and the respective merits of the first four Caliphs: (5) "The enjoining of what is good and the forbidding of what

The school of Baghdad was perhaps less illustrious than that of Basra. It derived from Bîghr b. al-Mu'tamir (d. between 210-268/825-90), who was for a time imprisoned by Hârûn al-Rashid, was criticized by Abu 'l-Hudhayl, and was to influence Mu'ammar, Al-Murdj, Thumâma, Al-Khayyât and Al-Kâbî (d. 319/931) brought fame to this group.

As the oft-quoted remark of Ahmad Amin (Duhâ al-Islâm, Cairo, iii, 204) puts it, the Mu'tazzils were "firstly men of religion and secondarily philosophers". It is not (pace D. B. Macdonald in E.J., s.v. Kalâm) the atomic theory (nor that of the "models") which characterizes the mutakallimun, but their primary concern to engage in disputation and argument to defend the faith against the sanadikâ of the period, the "free-thinkers" inspired by Mazdeism or Manichaeism, and later by pure Greek rationalism. Although nuances of doctrine, sometimes important, divided them, they were inspired by one and the same spirit: respect for reason (âbâl in the defence of religious tenets (âbâl becoming even the criterion and can be seen neither in this world nor in the next). (2) Justice (al-'adâ): God acts with a purpose. Things, by their nature, contain both good and evil. God can will only the good, and is obliged to accomplish that which is better (al-aslah). Thus He neither wills nor commands that which is evil. Man, "creator of his own acts" by a contingent power (kadra) which God has created in him, is responsible for what he does, and God is obliged to reward or punish him accordingly. (3) "The promise and the warning" (al-wad' wa 'l-wa'id) or "the names and the decrees" (al-asma' wa 'l-akhdam): to possess faith is to perform the acts prescribed by the Kur'ân. Whoever commits a "great sin" and does not repent is destined for hell. The thesis elaborates the "decrees" for the believer and the unbeliever. It deals also with "traditions" (ahhab): contrary to the normal doctrine, it does not insist that all the "transmitters" should be believers; and sifmâ (q.v.) is not infallible. (4) "The intermediate state between faith and lack of faith (al-mansia bayn al-mansilatayn)—the position of the "believer who sins" (fâshi (q.v.), a characteristic thesis of the school. The sinner is neither a true believer (mu'min), nor a true infidel (kâfir). He has failed to perform the "witness of the limbs", but his faith in God keeps him within the Community. It is here that are discussed the conditions for imdama and the respective merits of the first four Caliphs: (5) "The enjoining of what is good and the forbidding of what
is evil" (al-amr bi 'l-ma'ruf wa 'l-nahy 'an al-munkar): this thesis at first was of major prominence, but later lost relevance. "The enjoining of what is good" is an obligation upon every Muslim (contrast with 'ilm al-kalâm, of Basra). As against the more prudent view prevailing later, the Mu'tazilis advocated direct intervention, if necessary with the sword. One may and should deploir guilty leaders, one may and should compel opponents, on pain of death, to profess the true doctrine (cf. al-Ash'ari, Mabālīlī, ed. Cairo, ii, 466). This was the attitude of the Mu'tazilis in their days of triumph under al-Ma'mūn, when they denounced to the courts the supporters of the doctrine of the uncreated Kur'ān. The fact remains that the writings of the great Mu'tazilis, apart from the polemical Intiṣār (a defence of Mu'tazilism by al-Khayyat, against Ibn al-Rāwandi), are available to us only at second hand. After being for a time the official doctrine, Mu'tazilism was in its turn condemned and most of its productions were destroyed. It is only recently (in about 1958), that there have come to light, in the Yemen, the writings of a Mu'tazzī (unfortunately, late), the kāfī ʿAbd al-Djabār (d. 415/1025): first al-Mukhīl fi anwār al-ta'wīd wa 'l-ladī, a true "summa", now (1965) being edited in Cairo, and second the Kitāb al-Madīmī (ed. Cairo 1584/1965 by ʿAbd al-Karīm al-Mājudt, probably composed by a Zaydi disciple, the imām al-Mandakīm. We may mention also, in the line of ʿAbd al-Djabār's teaching, the Mu'tamād fi wasl al-fikhr, by his disciple the jurist Abū l-Husayn Ibn al-Tayyib al-Bāsiri (ed. Damascus by Hamidullāh). ʿAbd al-Djabār makes frequent reference to the "early masters" of the school ("our gharāʾib"), more readily to the school of Baṣra, and especially to al-Džubba and Abū al-Hāšım. Thus we now possess quotations from the early doctors and resumés of their thought presented from the Mu'tazī viewpoint: this reveals, incidentally, how objective are the Maḥālīl of al-Ash'ārī (and tends to prove that the first part at least of this work was composed during the years that the author adhered to Mu'tazilism). Again, the late date when ʿAbd al-Djabār was teaching induced him to conduct polemic against the Ash'ārīs and set out the replies of the Mu'tazīs to the attacks mounted against them. The discovery of these works in the Yemen is another proof that under the challenge of the 5th/11th century reaction the influence of the school continued to be felt in non-Sunni milieus.

Before passing on from the climate of thought of the first great schools of ʿilm al-kalām, we may mention the group whom al-Ash'ārī calls Ahl al-ihbāt or Muḥībbīna (cf. W. Montgomery Watt, op. cit., 194). It is by no means easy to define it precisely. It comprised a certain number of thinkers, Dirār, al-Naḍījīr, Muhammad Burghēt, whom later heresiographers readily classed as Mu'tazīs; but they were opposed by various supporters of the school of Baṣra (thus al-Nadījīr was opposed by Abū l-Hudhayl and al-Nazzām), and al-Ash'ārī saw in them his forerunners. They are said to have taught, inter alia, that God is the creator of human actions, and to have foreshadowed the theory of kasb or ikhtīsāb, which defined and limited man's possession of the acts thus created. Reference to the Ahl al-ihbāt allowed al-Ash'ārī to present himself as being in no sort an innovator in the field of ʿilm al-kalām.

C. The Ash'ārī reaction. — The "resurgence of Sunnism" under al-Mutawakkil and throughout the 5th/11th century was accompanied by an indictment of Mu'tazilism and concurrently, at least by ʿAbnā and Zāhirī traditionists, of kalām as such: what was questioned was the basic principle of reasoned and discursive argument starting from the tenets of the faith. ʿīm al-kalām however not only survived but renewed itself, thanks to the new direction given to it by Abū l-Husayn al-Āsh'ārī (260-324/873-935), a former Mu'tazzī. He is rightly regarded as the founder of the Aghā'īryyya (q.v.), of the most accepted and official school of kalām from the 4th/10th century to the 19th century. A certain number of his works (notably Luma, Ibnāna) have survived, and his Maḥālāl al-Īslāmīyyīn remain to-day an unrivalled source for our knowledge of the earlier tendencies and schools.

Throughout the centuries, several very famous names brought the Ash'ī to renown: to Ash'ārī kalām. It is certain that manifold tendencies appeared in this school, and that varying—even divergent—attitudes were adopted. Thus al-Bākīllānī summoned to the service of Aghā'īren the atomism first expounded by Abū l-Hudhayl; however, al-Diwa'nī did not follow him at all on this point, but took up again the theory of "modes" of Abū al-Ḥāšım (and Bākīllānī), which was abandoned by al-Ghazālī. But the basic viewpoints from which the major tenets of the faith are thought out remain the same; in spite of doctrinal differences—due largely to historical accidents and the diversity of the opponents it was necessary to refute—it is legitimate to speak of an Ash'ī "school" (singular), perhaps more coherent than the Mu'tazzī schools had been.

Is it necessary, as has been suggested, to admit a radical distinction, even a split, between the thinking of the school's founder and that of the school named after him? It is true that in the Ibnāna, al-Ash'ārī preceded his "credo" by a declaration of obedience to the teaching of Ibn Ḥanbal, and that although the declaration of faith which became traditional in the school could find justification in the Luma yet it is notably different from those set out in the Ibnāna and the Maḥālāl. Nevertheless, the obedience to Ibn Ḥanbal declared by al-Ash'ārī did not deceive the Ḥanbalis, who violently attacked the very principle of the defence of the faith by rational argument; and again, many propositions of the Luma had to await elucidation by later disciples, who were influenced in their turn by new historical circumstances. Thus there are not two "Aghā'īsmes", one of the founder and one of his followers, but, fundamentally, a single common attitude which was to be progressively developed and variously coloured by successive apologetic discussions.

This common attitude is the unblurred affirmation of God as the inscrutable Almighty. Who does not act "with a purpose in view" and Who "is not to be questioned"? In the strictest sense, God is "the sole Being and the sole Agent". He does not command an act because that act is just and good; it is His command (amr) which makes it just and good. God is the creator of human acts, of which man is merely the receiving subject (maball). But God "attributes" to man his acts (theory of kasb or ikhtīsāb), and hence are justified both human responsibility and the Judgement promised in the Kur'ān. Every statement of the Kur'ān corresponds to reality; the "ambiguous"
(mutashdbih) verses are absolutely true as regards their affirmation of existence, but the anthropomorphisms which they present must be accepted literally, but without asking how. With a return to Hanbali attitudes and against the Mu'tazilis it is asserted that the Kur'an is uncreated (ghayr maklük) and that the divine attributes are real. The attribute of the Word is not that it is "contingent": it subsists in God. But the school later taught the existence of the interior (zahir) divine Word, which is uncreated, and tended to admit that the "signs" which express it are created: such a distinction was to incur the vehemence of criticism of the Hanbalis, and a return to their methods of argument, so that it is possible to establish the following distinct chronological phases: (1) the works of the founder, al-Ash'arī; (2) the first disciples: al-Bākili, who adopted the theory of atoms and the theory of modes, which later were sometimes accepted and sometimes passed over in silence or rejected; al-Baghdādi; Ibn Furāk, the opponent of the Karrāmiyya; al-Bayhaki and al-Diuwany, supporters of the "modes"; (3) this last, al-Diuwany, al-Ghazālī's teacher in kalam, is already a forerunner of that line which Ibn Khaldūn calls "the moderns" and which continued to summarise and discuss the attitudes of the great falsafīs; this line gained glory from the most renowned mutakallimūn': al-Ghazālī, al-Shahrastānī, Fālārī-Dīn al-Rāzī (one of the most original thinkers of this school), al-Iṣfahānī, al-Tāhlīlī, al-Durrādīnī, al-Dawānī (on whose works Muhammad ʿAbduh later wrote a commentary): these "moderns" did not refrain from employing a certain degree of (moderate) tawīl to explain the anthropomorphic elements in the Kur'an (cf. al-Rāzī's Kitāb ʿAṣās al-tadbīd); (4) the manuals of "fossilized conservatism", which merely repeated and systematized the solutions presented by the masters of old time, reproducing their replies to Mu'tazili or falsafīs who were progressively less familiar directly: the works of al-Sanūsī of Tlemcen, al-Lākānī, al-Fudlālī, al-Bāqīrī.

D. Māturīdī-Hanafi tendencies. These became, with Ash'arīsm, the second officially approved line of teaching. "Tendencies", we say deliberately, and not "school", believing correct the remarks of Father Allard on this subject (Le problème des attributs divins dans la doctrine d'al-Asfari et de ses premiers disciples, Belrut 1965, p. 420). Al-Asfārī himself treated the Hanafīyya as a branch of the Mūjidīya (Makhlūkāt, I, 202-3). However, we are here concerned with a line of thought sufficiently coherent to deserve study in its own right.

It appeals on the one hand to the ancient texts entitled al-Kindī al-akbar and Wasīyat anbi Hanāfī, and on the other to al-Māturīdī of Samarkand (d. 333/944), the author of a Kitāb al-Tawhīd edited by one of his pupils. The Hanafī professions of faith (see A. J. Wensinck, op. cit.) have their peculiar characteristics: the connexion between ʿilm and imān, the statement of faith by baṣil, etc. But al-Māturīdī, in advance of his contemporary al-Asfārī, seems to have combated various falsafīs (and also dualists, materialists, esoteric sects; secondarily, Mu'tazilis and anthropomorphists). Although he, like others, deals with the divine attributes and Names, the main question which concerns him is the creation of the world. It is very possible that he did not literally "found" a school, but all the same many mutakallimūn looked to him as a point of reference. In later years it becomes difficult to distinguish clearly between followers of al-Asfārī and of al-Māturīdī: although Fālārī-Dīn al-Rāzī, al-Dawānī, al-Lākānī are ʿAshārīs under the influence of al-Māturīdī, Abu l-Barakāt al-Nasafī and al-Taftāzānī may be regarded as belonging primarily to the Māturīdī-Hanafi line and only secondarily to ʿAshīrīsm (they accepted the theory of atoms).

Indeed as compared with ʿAshīrīsm, Māturīdī-Hanafism, as presented by certain manuals (e.g., ʿAbd al-Rahmīn Ibn ʿAllī, Kitāb Naṣm al-jārāṭ, Cairo, 2nd ed.) puts forward solutions which are more psychological and intellectualist in character. As to the first: God creates in man the aṣīr, the root of his acts, whatever they may be, but it is human freewill which gives them a good or an evil specification. As to the second (see Allāh, p. 413): the divine decree (kādār) and predetermination (kādār) are no longer related to the divine will (as with the ʿAshīrīs) but to the divine knowledge; and the connexions between one and the other in time and in eternity are reversed (see al-Risdāl wa'l-kaldār).

E. Modern period. The revival (nahda) of ʿArabīo-Muslim thought, which has taken place from the end of the 19th century, has concerned particularly culture in the general sense, predominantly in the field of literature and under the strong influence of modern Western thought, but it has had its repercussions upon the "religious sciences". We have in mind here the reformism of the Salyafīya, and thus in exegesis (tafsīr) and in ʿusūlī fīlāh. Is it legitimate to speak of a resurgence in ʿilm al-kaldār? To answer this question we adduce the Radd ʿalā Dahrīyya ("Refutation of the materialists") of Dja'far ibn ʿAbd al-Rahmīn Ibn ʿAllī (Cairo, 2nd ed.) puts forward solutions which are no longer related to the divine will (as with the ʿAshīrīs) but to the divine knowledge; and the connexions between one and the other in time and in eternity are reversed (see al-Risdāl wa'l-kaldār).

This interest of the Risdāl al-tawhīd arises from the fact that it claims to reject nothing inherited from the great periods of the past and to put to profit the positive achievements of every school. Muḥammad ʿAbduh adheres primarily, but without rigidity, to ʿAshīrīsm (divine names and attributes; no "end" to God's actions, etc.). But he does not hesitate to draw inspiration from attitudes customarily regarded as Māturīdī, or even to adopt Muʿtaṣīlīl positions. Hence arises his famous declaration: "The Law came to reveal what exists; but it is not the Law which made this good (ḥasan)" (ibid., 80). ʿAbduh seeks to pass beyond the disputes of past ages in order to reconcile the various tendencies in kālām.

All the same, his rôle was less that of a thinker (or "theologian") than that of a reformer. When he
comes up against the mystery (ghayb) of divine Action on the world, he does not attempt to bring to bear on his intelligence as illuminated by the revealed truth, in the way that such a thinker as Fākhr al-Dīn al-Rāzī felt himself obliged to do. In order to maintain both the affirmations of the faith and of human experience, he prefers to take refuge in an admission of ignorance: “As for going further, seeking to reconcile God’s Omniscience and Will (which are proved to us) with man’s freedom of action (which are demonstrated by evidence), that is to seek to penetrate the mysteries of the divine Decree; and to open the door (so that) men plunge into this abyss and concern ourselves with matters that reason is nearly incapable of grasping” (ibid., 61; cf. Fr. tr. by Michel and M. Abd al-Rāzik, Paris 1925, 43). The distinction should be noticed between “proof” (by the Kūr’ānic text) of divine Omniscience and Will, and the (experimental) “evidence” of his freedom which man achieves. It may be said that in giving this reply Muhammad ‘Abdūraham is not carrying forward ‘ilm al-kalām but re-stating in new terms a traditional problem and leaving it open.

III.—Method and problems

A. Argumentation and types of reasoning.

Thus the solutions advanced and the criteria selected are extremely varied; but they have in common the fact that they always vary according to the doctrine being defended or the adversaries being opposed. We will limit ourselves to a few remarks on the two great “schools”. Mu'tazilism sought to valorize, under the attacks of the sandaliba, the absolute Unity and the absolute Justice of God; but this valorization quite quickly becomes, thanks to the arguments advanced to bring conviction, a “justification”: the divine Essence and Action become justified before and through human reason (‘aql). It is to counter this reduction of the mystery that the Ash'ariyya take their stand, proclaiming the Omnipotence and the Omniscience of God, rejecting any ontological basis for human freedom of action, but seeking to refute the Mu'tazilis (using the same weapons as they) and at the same time, on the other flank, and inopportunists (mujazzima) of every shade.

In both cases, for Ash'ariyya as for Mu'tazilis, the starting point for the dialectical arguments assumes that confidence may be placed in 'aql, and that a harmony is to be acknowledged between religious law and the efforts of reasons brought to bear on it. This is, we believe, the primary basis of 'ilm al-kalām, that which above all makes of it an autonomous discipline—and not this or that cosmological or noetic theory, whether it is dealing with atoms or with modes. But whereas in Mu'tazilism reason may and should account for its agreement with the Law, in Ash'arism it is the Law which defines the limits of reason and controls its activity. In both cases, the religious Law is the bearer of absolute truth—delimited, in the view of the Mu'tazilis, by the criterion of 'aql, whereas for the Ash'ariyya it is only because the Law enjoins upon him to do so that a man may “reflect upon the signs of the universe”.

The method of 'ilm al-kalām is thus basically explicative and defensive. It always postulates the existence of an opponent who is to be won over. Not merely the choice of arguments but even the method of presenting them will vary according to the nature of the opponents. It is noteworthy that “rational” arguments were often the first to be advanced; they are primarily dialectical, and pursue very subtle lines of reasoning; whereas the “modern” manuals clothe them in a syllogistic guise. Up to al-Djuwayni, and sometimes also with the “moderns”, they are based on logic “with two terms”, on the classical Semitic pattern, by way of implication and involution, or concordance, or opposition. A suggestive summary is found in the Bayā'an 'an usul al-imān of al-Sumnānī, a disciple of al-Bākīlānī (cf. Gardet and Anawati, Introduction à la théologie musulmane, Paris 1948, 358-61, 357).

“Rational” arguments are followed (or sometimes preceded) by “traditional” arguments, or, in other words, arguments from authority. These revolve around citations from the Kūr’ān, on the one hand those added in direct support of an argument and on the other those quoted by opponents whose faulty interpretation of them is attacked. To these may be added hadīths, sometimes numerous, sometimes few. This is especially the procedure of the first great Ash'ariyya. Most of them also rely upon texts guaranteed by īdma; “It is agreed that...” is a favourite argument. Al-Djuwayni, among others, gives an important place to īdma. The fact that these “traditional” arguments are in some manuals listed after the “rational” arguments indicates that the former are to be regarded as a confirmatur to the results of dialectical reasoning. The defensive and apologetic character of kalām is thus manifested in its very recourse to the tenets of the faith to supply arguments.

From al-Djuwayni onwards, the old-style dialectic and its reasoning from two terms yields place (without disappearing) to reasoning in three terms of the syllogistic type, with its universal middle term, and its recourse, implicit or explicit, to the principle of causality [see ʿILLĀ]. The falsāfsa now become the usual opponents, as much as or more than the Mu'tazilis. They must therefore be refuted on their own ground, and Aristotelian logic (with Stoic influences) becomes more and more influential in the arguments of kalām. The first manuals of the so-called “modern” tendency (the Muhāṣṣāl of al-Djurdjum, etc.) introduce questions regarding God and His Action with extended and purely rational discussions in which they are surveyed the logical, cosmological, noetic and metaphysical themes of the falsāfsa. Logic is here treated according to the Aristotelian schemas, sometimes with modifications (notably the four or even five figures of the syllogism). Yet the old argumentation from two terms does not entirely disappear; an indication of this may be found in the favourite selection of reasoning by the dilemma: this is probably Aristotelian in manner, but the implicit middle term is often suppressed in favour of the argument from authority (of a fact or of a text) or in favour of the dialectical judgement of existence [see BURHĀN].

The school of the “moderns” may be distinguished from the first generations of the Ash'ariyya by its advancing of more subtle solutions and its posing of some new problems. It is distinguished particularly by its use of the syllogism with a universal middle term and by its recourse to causality, even when, on the ontological plane, the efficacy of secondary causes is denied. Hence, to take a rather summary view, it is possible to re-classify the schools as follows: Mu'tazilī kalām and early Ash'arī kalām are opposed in the doctrines they maintain but may share the same attitude to the problems and use the same methods of reasoning; early Ash'arī
ILM AL-KALĀM 1147

kalām and the Ash‘ariism of the “moderns” support practically the same doctrines but differ perceptibly in their approach to the problems (adoption of “philosophical dreams”) and most still in their methods of reasoning; finally, “fossilized conservatism” took up again the now classical doctrines and combined the dialectical and the syllogistic approaches, without always distinguishing one from the other.

Early Ash‘ari kalām (al-Bakillānī, al-İsfa‘arînî, and al-İshārî himself) professed, according to Ibn Khaldûn in his Mu‘addalatīs (Cairo ed., 191, tr. de Selincourt, 192, French tr. 192, i.e., “the nullity of a proof implies the nullity of that which it was sought to prove”). It is thus, according to L. Massignon’s comment (Passion d’al-Hallâj, Paris 1922, 550, n. 1), that al-Bakillānī declared the atomistic view of the world to be “co-essential” with the text of the Kur‘ān. Such a procedure, Ibn Khaldûn adds, in which truths to be proved and probative arguments are interwoven, does not “conform to the rules of the art”. This remark would be fully justified for a logical statement in three terms, but not in a dialectic of like and like (or its opposite). The “proof” to be adduced is no longer the result of a deduction. It, too, is a fact, a witness of truth. For al-Bakillānī, the atomistic discontinuity of the thing created “proves” the absolute transcendence and subsistence of God, the sole Agent, in the sense that this is its opposite correlative, its mubābal, and that these two facts, presenting themselves to the spirit in a single apprehension, can only affirm themselves or deny themselves together (cf. Gardet and Amawātī, op. cit., 155). L. Gardet, La dialectique en morphologie et logique arabes, in L’ambivalence dans la culture arabe, by J. Berque, J.-P. Charnay, and others, Paris 1951, 255-305. It is less the strictly logical validity of reasoning by implication and its “conformity with the rules of the art” that is in question here than the degree of universality and probative validity of the two procedures, dialectical (with two terms) and syllogistic (with a universal middle term). For the formulation of problems. This study of the methods of thought and of argument employed in ʿilm al-kalām emphasizes that the struggle of Ash‘arism with Mu‘tazilism is part of a continuous process. There is a split as to the chief doctrines professed but not (we cannot repeat too often) as much as to the type of arguments or the method of reasoning employed, nor as to the general lines or the plans of the treatises. From this point of view, kalām, as an established discipline, is greatly indebted to the Mu‘tazilīs. Their five ʿusūl continue, with some variants, to dominate the whole question: so it is in the Luma‘ of al-İshārî, and to a large extent also in the Tamlakī of al-Bakillānī.

From al-Djuwaynî onwards, however, and particularly from al-Râzî, new three main importations appear: (1) introductions or preliminary remarks, on the character of reasoning (al-Djuwaynî, İrshād), on the nature of kalām (al-İshārî, İhbayd), and finally in the general principles of logic, natural philosophy and ontology (al-Râzî, al-İdīj, al-Djuwaynî) become of ever increasing importance until they figure in the actual treatises themselves. (2) In the more strictly “theological” themes, a distinction arises between on the one hand the ʿakīyyāt, i.e., the chapters concerning God, which (some attributes excepted) consist of a rational elaboration built up on scriptural bases, and on the other the sam‘iyyāt, the “traditional” (ex auctó) chapters, whose very argumentation depends on positive data. The philosophical chapters and the ʿakīyyāt are combined under the term ʿakīyyāt; the sam‘iyyāt deal with “prophecy”, with eschatology, with the descriptions and the names (problem of faith) and with the enjoining of good. Some authors (al-Djuwaynî, al-İghazâlî) make prophecy a link between ʿakīyyāt and sam‘iyyāt. (3) Finally, a distinction is made (a matter reconsidered by Muḥammad ʿAbduh) between “that which is necessary in God” (existence and attributes), “that which is possible for God” (visibility, creation of human acts, justification and reprobation, prophecy), “that which is impossible for God” (God and for God (the contrary of the attributes)). These various additions are often intermingled. Al-Djuwaynî, insisting on the tripartite division of the necessary, the possible and the impossible, included prophecy and the creation of acts in the chapter treating of “what God can do”, reserving the term sam‘iyyāt for the other “traditional” chapters.

These new principles of distinction seem to be due to the influence of falsafa. It was in order to reply to the falsafa that the Mu‘tazilīs, who had already elaborated philosophical chapters became more numerous; the term ʿakīyyāt is part of the vocabulary of the falsafa, and the distinction of the necessary, the possible and the impossible was made by them. The formulation of problems of the great Ash‘arî treatises of the “modern” age will therefore derive certainly from the old formulation of Mu‘tazilism and its “five bases”, but also from the organization of philosophical knowledge characteristic of the falsafa (and in particular as presented by the summa or the compendium of Ibn Sīnā).

The richest and most detailed manual, the Sharḥ al-Ma‘ṣūbīf of al-Djuwaynî, still studied in specialist courses of the great teaching-mosques, is arranged as follows: Two-thirds of the work (books-i-iv) treat of logic, natural philosophy and general ontology. The last third is divided between the ʿakīyyāt (the divine essence, the unity and unicity of God, His positive attributes, and His “possible” attributes, namely, visibility and cognozibility), the Actions of the Almighty (creation of human actions), the divine names, and the sam‘iyyāt (which are relatively short). There is no question here of a distinction between “philosophy” and “theology” in the Western sense and the attempt to harmonize them, but of a reply, which seeks to be exhaustive, to the treatises of the falsafa or of the Mu‘tazilīs. Since this reply seeks to use the weapons of the opponents, the vocabulary and the arguments of falsafa are found widely incorporated in ʿilm al-kalām. It is in sense through the intermediary of the mutakallimūn that the influence of the “philosophers” penetrated Sunni thought in general.

IV.—The position of ʿilm al-kalām in Muslim thought.— ʿIlm al-kalām remains one of the officially recognized religious sciences. But in the universities of Muslim countries the faculties of religious sciences are called kulliyāt al-şari‘a, a term generally rendered by “Faculties of theology”; fiqh is there taught as much as, if not more than, kalām. Kalām, based as it is upon its function of defensive apologia, does not hold the leading place in Muslim thought that theology does in Christianity. To find an equivalent for “theology” in the Christian sense it is necessary to have recourse to several disciplines, and to the ʿusūl al-fiḥk as much as to kalām. We turn now to establish the limits and results of this fact, and to place it in its historical context.
A. Three opinions. (a) In his Iḥṣād al-ʿulūm, al-Fārābī groups the sciences according to the schemes of Aristotelian classification, appending to them the strictly Muslim disciplines of fikhr and kalām. His summary of the methods of argument employed by the mulakkālimān is far from being laudatory; he emphasizes, to put it at its highest, its apologetic character, and seems to make of kalām an extension of fikhr: "the mulakkālim procures the supremacy of the principles which the fikhr uses as bases but without deducing from them any new consequences" (ed. Žabálka 1912, 56).

(b) In his Ḥṣāṣṣāl, al-Qazzāl devotes three of the four chapters of his introduction (ed. Ankara 1962, 11–15) to the nature and the role of ʿilm al-kalām. This discipline has its place among the religious sciences because it is concerned with curing doubters and refuting the denials of those who deny it. But its role is essentially "medical"; hence the study of it, as the ʿilm al-ʿulūm al-dīn states (ed. Cairo 1352/1933, 1, 3), is an obligation upon the community (ʿād al-ʿam) but not the concern of every individual Muslim, for it could be dangerous for a simple soul firmly anchored in its faith. And the Munkhādīn al-ṭalālī (ed. Cairo 1372, 1952, 56) reproaches kalām for its insufficiently proved rational principles. (c) The authors of the great "modern" manuals (hence Idji-Djurdjam) on the contrary esteem kalām so highly as to define it as the most exalted science of all, since it "proves the truth known by faith. Some would make the study of it a personal obligation (fard al-ʿayn) on every Muslim capable of undertaking it. This estimate is repeated verbatim by the manuals of "fooled conservatism". For al-Bājduri, for example (ʿĀṣhīyaʿ alā ..) Ḥqawwarat al-ṭauhīdīd, ed. Cairo 1352/1934, 26), faith through tahlīd (meaning here mere acquiescence in what has been handed down) loses all value as compared with faith firmly rooted in science, ʿan ʿilm, such as kalām can provide.

B. Opposition. In fact throughout its history kalām had two great lines of opponents. on the one hand the Hanbali (and Zāhirī) traditionists, who refused to bring rational arguments to bear on the absolute truths provided by faith; and on the other, the ṣalāfīs, who passed from silence, indeed from acquiescence in what has been handed down) were able to speak of a second mīna when, after the death of al-ʿAṣḥārī, his tombstone was destroyed in the cemetery of Baghādad. In the 5th/11th century, the vizier al-Kunduri had Ḥṣāris could be argued as the next step was to establish a second school of kalām. A. After objectively sum-
marizing their thought in the Mašāṣī, al-Ghazālī undertook to refute them in the famous Tahdfut al-falāṣīfā (ed. Bouyges, Beirut 1927). He there denounced twenty of their tenets as erroneous, and branded four of them as incurring infidelity (taḥfir); the eternity of the world ante, the eternity of the world post, the symbolic interpretation of the resurrection of the bōdy, and the divine lack of knowledge of the individual as such. The autobiogra-

phy of the Munkidh min al-dulād (ed. Bouyges, Beirut 1927). He there branded four of them as incurring infidelity (taḥfir). His work was undertaken to refute them in the famous Tahdfut al-Tahdfut of Ibn Rushd (ed. and Fast al-mafāfī, apologia sua "adversary of the falsafa, and Kur'anic teaching; the agreement between al-Razi and the Munkidh min al-dulād, the literalists and the Zanddika that Muḥazilism combated the falsafa. It is nearly always eastern falsafa; but proposal is sometimes in a Hanafi, and sometimes in a Ḥanafī, and in the great mosques had been given only by means of "fossilized" manuals, without any striking intrinsic merit and without originality. (2) The subject-matter of a defensive apology must be based on new themes. Are the attacks failed to shake the legitimacy which the Hanbalis and the "pious men of old", on the other hand, left a legacy of distrust and suspicion. Thus if one wishes to establish the place of "ilm al-kalām in Muslim thought, it should not be regarded as a discipline developing in a self-sufficient manner; it is linked with the other religious sciences, particularly usul al-fikh, as a discipline developing in a self-sufficient manner. We find some traces of this at the present day, to the extent that the influence of the "men of old" (salaf) inspires the "return to the sources" advocated by modern reform movements. It is true that "ilm al-kalām, as embodied in its most eminent doctors, remains as a venerated achievement of the great cultural centuries of Islam. But if one excepts the attempt of Muḥammad ʿAbdūh, it is difficult to point to any modern and living renewal; it might be truer to speak of a certain alienation from kalām.

Two reasons may, it appears, be advanced: (1) For too long the teaching of this "religious science" in the great mosques had been given only by means of "fossilized" manuals, without any striking intrinsic merit and without originality. (2) The subject-matter of a defensive apology for the faith is meaningful only so far as it relates to immediate issues. Now the content of these manuals is dictated by the refuta-
tion of adversaries (the Muṭazilis of the 3rd/9th century and the falāṣīfā of the 4th/10th century) who have long since vanished from the scene, whereas the burning problems of today are ignored. A defensive apology must be based on new themes. Are the efforts of al-Afghānī and ʿAbdūh in this direction to be continued? Interesting as their attempts are, they fall far short of the philosophico-theological standard achieved by the great doctors of the past. Al-Afghānī and ʿAbdūh were first and foremost reformers and men of action, not muṭakallīmūn.

We can conclude only with a series of questions. Will anything take the place of "ilm al-kalām, with more widespread perspectives and serving a practical, rather than a speculative, attitude? Or shall we see a renewal, with regard to the tenets of the Muslim faith, in which the great questions raised in the past regarding God and man and the conditions for man's salvation will be taken up again, but this time taking account of the demands of scientific discoveries and present-day thinking? For this the

C. ʿIlm al-kalām and the juridical schools.

—ʿIlm al-kalām presents itself as an explanation and a defence of the faith. It is on these grounds that Muṭazilism combated the zanddika and the literalists of the first centuries, and that the Ḥanfīs challenged the Muṭazilis, the literalists and the falāṣīfā. We find however that the Hanbalis and the Zanddika refuse to recognize the legiti-
macy of this undertaking. Now Ḥanbalism and Zanddīrīsm are schools of fiqh, and it is as such that they reject the dialectical argument of the muṭakallīmūn but propose to ensure, by their own procedures, this defence of the faith which kalām claimed for itself. Thus one may find in the works of such writers as Ibn Ḥazm or Ibn Ṭaymiyya many expositions on the attributes of God, human actions, prophetic-
schor would require a two-fold objective acquaint-
ance both with the great works of the classical age
and the contemporary problems.

It is appropriate to emphasize here the recovery of fav-
our enjoyed today by Mu'tazilism: not directly for its de-
fence of the Unity and the justice of God,
but for its assertion of human liberty, in the very language of
belief in the One God, the Creator, the All-mighty. Ash'arism no longer appears to be necessi-
ted by the demands of the faith. Will there take place a synthesis of the different tendencies of 'ilm al-kalâm, operating through a revised set of philo-
osophical equipment? The study of the text of the Qur'an and a more fully developed anthropo-
logy seem here to be called for, not to replace the "que-
tions concerning God" (jāhāyāt), but to open wider perspectives for their discussion. From the 3rd/9th to the 9th/15th century 'ilm al-kalâm enjoyed a glorious past and produced works which
demand the historian's fullest respect. It may be
hoped that a new kalâmiyya will arise, to play its part in animating the old in its methods, its arguments and its approach,
will one day arise, to play its part in animating a cultural recovery in the religious sciences of Islam.

Bibliography: I.—Some classic works of
(or concerning) 'ilm al-kalâm beyond those mentioned in the text: Ahmad Ibn Hanbal, al-Radd 'alā 'l-şarhā'ī wa 'l- outputFile of the persons figuring in
isndds, or concerning either the materials transmitted or the
details which will provide the necessary checks on
the technical meaning, is the science devoted to the study of
theology of al-Ash'ari, Beirut 1953; Abu Bakr al-Muhassal, Falsafat Qutb, Paris 1956; Ch. Pellat, Le doctrine of *Abd al-Diubbdr on the Kurgan as the
created Word of Allah, in JRAS, 1948-9). (L. GARDET)
appear the best-known partisans of 'Ali or of one of the first šudmailin, gradually became confused with *ilm al-tardjim (which forms an integral part of ibadim), although both of them claim to conform to precise and distinct Kur'anic precepts. Hence there does not seem much point in the distinction made by some authors, which shows as the ancestor of the Twelver authors of *ridjl the Raḍīf (or perhaps Wākīfī) Kūfan Abū Muḥammad 'Abd Allāh b. Dhaḇala b. Ḥayyān (or Ḥanān) Ḍabbār (or b. al-Ḥurr) al-Kaṇānī, d. 219/834 and referred to as of al-fasl in the Tābit al-Shī'a (p. 232, with many traditions taken from al-Nāḏajjī, p. 160, who gives the variants of the name), while, on the other hand, giving as the first author of *talāḏir (Tābis, loc. cit.) the Munḥī of 'Ali b. 'Ubayd Allāh b. Abī Rāfī', whose name appears, with others, in al-Nāḏajjī (p. 4-5), who took a particular interest in *ridjl, and in the Dhārīa (x, no. 84), according to which he is one of the most competent of the early writers in this field. It is therefore not surprising that the meaning of *ridjl changed from that of reporters of traditionists respectively.

The strict limitation of the term *ilm al-ridjl would exclude such works as the Māḏalīs al-muʿmīnin or the Kissā al-ulamā', without which we should have a confused and inexact idea both of the importance and of the Twelver *Shī'ī conception of the biographical science, an interesting expression of a culture pivoted on a precise sense of the need to refer, in every case and in whatever specific context, to the ever present šudmailin model. To draw up a complete list of the Twelver biographical works, which has not yet been done and which would be very useful, would involve three sorts of difficulty: the enormous quantity of material which it is difficult to classify under one or other of the two genres because of the confusion mentioned above; the fact that many of the works mentioned in the various lists has not been published; and finally the fact that, without a published edition and the necessary comparison of manuscripts, it is always possible to distinguish, by reference to the title alone, between works which are substantially independent and those which are merely elaborations and adaptations of others.

The first great names which may be mentioned are those of the Fīrīṣr of Ibn al-Nadīm and the Fīrīṣr of al-Ṭūsī, the second based directly on the former (cf. Abāṣ al-Ikbal, preface to his ed. of the latter, pp. 2-3, no. 6), and both of a bibliographical character: this explains how, among texts considered as basic for biograhy, purely bibliographical compilations are often cited. We give here a brief list of some of the most important of the early works:

1) Māʿṣīṣa aḥḥāb al-ridjl of al-Kaẓḥalī (q.v.).
2) Fīrīṣr of shaykh Abu ʿl-Farāḍī Muḥammad b. Ḥishāb b. Abī Yākūb al-Nadīm, compiled circa 377/987. It concerns our subject in two places: in al-fann al-ṭāblīn min al-maḥāla al-šamīsīn, and in al-fann al-ṣāḥīn min al-maḥāla al-ḥāmisīn, in which it deals with the *Shī'ī ridjl, mutakallimīn as well as with Twelver, and, more specifically, in al-fann al-štāmis and in al-fann al-ṣāḥīn min al-maḥāla al-ṣādīsīn, devoted to the ḥajām and grammarians and to the traditionists respectively.

3) Fīrīṣr kutub al-Shī'a (Nāḏajī 1937) of the shaykh al-taṣʿīf Abū ʿl-Dīfā'ī Muḥammad b. Ḥasan b. ʿAlī al-Ṭūsī, d. 450/1067; this is the earliest work specifically devoted to this subject and it has been much used by the Sunnis, who have a high regard for it. Although it is based on material provided by the Fīrīṣr of Ibn al-Nadīm, it completes it and adds more precise details on *Shī'ī works and writers on *ridjl. Among the more specific writers the subject of the *ridjl mention should be made of Abū ʿl-ʿAmīr al-Kaḥṣānī, whose many (according to al-Nāḏajjī) inaccuracies he corrected, and Abu ʿl-Ḥasan b. Ḥusayn b. ʿUbayd Allāh b. al-Ghādirī, a famous writer whose work was later taken up by, among others, Ibn Ṭābūs.

4) Kitāb al-ridjl (Nāḏajī 1961) by the above-mentioned al-Ṭūsī; it deals in particular with the badīmūn stemming from the Prophet and the first šudmailin and lists the names in alphabetical order with numbers within each letter.

5) Asmā' al-ridjl by the shaykh Ahmad b. ʿAlī al-Nāḏajjī, d. 455/1063. This work, sometimes listed under the title of Kitāb al-ridjl, is one of the most often quoted and cited. It deals briefly with the first *Shī'īs, after which the *ridjl follow in alphabetical order. One bāb is devoted to each ism and a final bāb contains the kunyas. To judge from the index of the edition by Muṣṭafawi, Tehran n.d., it covers 1226 persons.

6) Asmā' maḏalīs al-shaykh al-ridjl wa-ṣawmaṣṣaftihim, of Muntāḏjab al-Dīn Abu ʿl-Ḥasan 'Abī b. Abī ʿl-Ḥasan b. ʿUbayd Allāh b. al-Ḥasan . . . b. al-Ḥusayn b. Bābāya the Kummī. This work has been commissioned by the nāḏkī of the Ahmadī, Rayy and Abāh, ʿIzz al-Dīn Yābī b. Abī ʿl-Ḥāfī Muḥammad al-Ṣarīf al-Muṭtajdā, who, in entrusting the author with this task, informed him that nothing had been done in this field since al-Ṭūsī (which seems to indicate that Muntāḏjab al-Dīn did not know of the work of his contemporary Ibn Shahrāḡī). The date of this compilation cannot be later than 522/1196, the date when the nāḏkī died, or earlier than 573/1178, the date of the death of Kutb Rūwandī, mentioned as marāḥim in the work; it deals with the authors and shaykhs who were contemporaneous with or later than al-Ṭūsī and who are not found in the Fīrīṣr.

7) Muʿalīm al-ulamā' (ed. A. Ikbal, Tehran 1934), of Abū ʿl-Dīfā'ī Muḥammad Raḍīd al-Dīn b. 'Abī b. Shahrāḡī al-Māḏandarānī al-Sārāwī [see ibn Shahrāḡī(9), d. 588/1192. This work, like all the above-mentioned, was written in Arabic, and is similarly conceived as a complement to the Fīrīṣr of al-Ṭūsī, to which are added 300 brief biographies of shaykhs up to the compiler's contemporaries; it must have been compiled before 582/1186, the year during which the author mentions the Muʿalīm in an isgāza. Among the teachers listed are Abu Maṣūr Ahmad b. ʿAbī Ṭabaršī and Abu ʿl-Ḥāfīd b. Ḥasan Ṭabaršī, Kutb Rūwandī and Abu ʿl-Futūḥ Rāzī, the father of the author, Zayy, and Abu ʿl-Ḥasan Bayḥakī; these names reveal the *Shī'ī aims of the author. In the edition consulted, the number of persons described is 990; the first 874 are arranged in alphabetical order, divided into bābīs consisting of one or more letters of the alphabet, with subdivisions of fāsī; numbers 875 to 962 are given under their kunya, and numbers 963-990 under their latāb or a
nisba. The work ends with a bibliographical nisba incorporated in the bob al-djdmi*, which is followed by a very short devoted to the poets of the akh al-bayit; these are divided into four groups according to the genre of their compositions.

There follows a period of mere compilation until the Ridlj of Ta‘l al-Din Hasan b. ‘Ali b. Dâwûd al-Hilli, born in 647/1249-50, a pupil of al-Mubâqbkî al-Hilli (Tehran 1932-3), and the work of Abû Mansûr Dâjm al-Din Hasan b. Yûsuf b. ‘Ali b. Mu‘âmmad b. Mu‘âshar al-Hilli, d. 725/1325, who was the author, in particular, of a famous new Kitâb al-Ridjâl (Tehran 1932). These latter represent, in addition, five special judges (miifettishes) for wakf affairs—three in Istanbul (dealing with the

These latter were, at least for their successors, the undoubted masters in this period and they paved the way for the characteristic productions of the Safawid period; in that period, within the framework of the genre of biography, the encyclopaedic spirit which prevailed from then on (as shown, e.g., the Majdalis al-mu‘minin, Tehran 1286/1865 and 1292/1872, written in Persian in 990/1582 by the sayyid Nîr Allâb b. Sharîf al-Mar‘ashi [q.v.], who had the rank of the highest order of Ottoman ulamd* and was interested in the local scholars who proclaimed the victory of Shi‘ism in Iran: Amâl al-âmîl fî ‘ulâmâ‘ al-wâlî al-mu‘minin wa-l-sâlat, Tehran 1300/1920-23) of Mu‘âmmad b. Hasan b. ‘Ali al-Hurr al-Âmîlî, d. 1097/1686, or Lu’lata‘ây al-Bahrayn (Tehran 1269/1853) of Yûsuf b. A‘âsh b. Ibrâhîm al-Bâbrâni, d. 1187/1773-4. These lead directly to the most modern bibliographical dictionaries, the most important of which is given in the bibliography and which, so far as material on the early Muslims is concerned, consist of a systematized reproduction of the details already collected since the early centuries of Islam rather than original monographs written by specialists.

ILMIYYE, the body of the higher Muslim religious functionaries (‘ulâmâ‘ [q.v.]) in the Ottoman Empire, especially those administering justice and teaching in the religious colleges [see M ADARAS]. Their elaborate hierarchy, unprecedented in Islam, was headed, from the 10th/16th century onwards, by the mufît [q.v.] of Istanbul called shaykh al-‘ulâm [q.v.].

The organization of the bâdîs, who formed the highest order of Ottoman ‘ulâmâ‘, changed over the centuries as a result of Ottoman expansion and withdrawals and of the variations in the relative importance attached to certain posts. Their division into several classes evolved gradually until it assumed a more or less definitive form in the 12th/18th century. The chief positions were the Kâdi‘-’asker [q.v.], or, after his office was divided into two towards the end of the reign of Sultan Mehmed II (d. 886/1481), the Kâdi‘-’asker of Rûmî (sadîr-i Rûmî) and that of Anatolia (sadîr-i Anadolî). Both were ezârîs i.e. officials members of the olive and were behind, the shaykh al-‘ulâm, until the nineteenth century, was not. They nominated the provincial bâdîs with the exception of the higher ones (mollâs) who, as well as the müddîries and the wad’ûs of Istanbul mosques (see below), were in later centuries appointed on the advice of the shaykh al-‘ulâm.

Below the Kâdi‘-’askers ranked the greater mollâs, the highest of whom held the judgships of the principal cities of the Empire with a salary of 500 akçe a day. Later on they were subdivided into several classes. The highest was that of the judge of the capital (İstanbul bâdîsi or efendisi), whose importance was enhanced by his authority over the guilds and responsibility for provisions and prices in the capital. Moreover, he and the judges of the town suburbs (see below) disposed justice in the Grand Vizier’s davâm.

Further down in the hierarchy were the judges of the two Holy Cities (harameyn), Mecca and Medina. The latter was raised to the status of Mecca in 1355/1722 (Kûcûk Celebi-zâde ʿÂsim, Ta‘rîkh, Istanbul 1328/1871, 161 f.).

They were followed (since the eighteenth century) by the judges of the four Cities (bîldî-i erba‘a‘): the two former capitals, Edirne and Bursa, and the two ancient seats of the caliphate, Cairo and Damascus. At a certain period Filibe (Plovdiv) was added as the fifth of the bîldî-i erba‘a.

The next lower group included, in varying order, the judges of the suburbs of Istanbul (Galata and, at times, Eyyûb and Usküdâr), Jerusalem, Aleppo, Izmir, Salonika and Yehîşîhehir (Larissa), as well as, in certain periods, Trabzon, Sofia and Crete. They had the rank of mağârî mollâlar, since these posts were given to müddîries “going out” of their class for the first time.

The judges mentioned so far were, strictly speaking, the only ones to carry the title of mollâ (also mondâ or mondî, from Arabic mawdûl [q.v.]). In practice, however, this title was also granted to those immediately inferior to them in rank, the leaders of the so-called devriyeye posts. These were (since the eighteenth century) the judges of 10-13 important towns—Belgrade, Bosna-Saray (Sarajevo), Baghdad, Aynâbî, Mar‘a‘î, Diyar Bakr and others. To the highest class of mollâs also belonged in most periods the preceptor (mu‘allâm, or bâdî) of the Sultan, his two private smâmans, the chief Palace physician (hokîm-bâshî [q.v.] or re‘îs al-atîbbà) and the chief astrologer (mûnedîsîm-bâshî [q.v.]). From the end of the 18th/17th century the office of Dean of the Descendants of the Prophet (nasîb al-aşhaf [q.v.]) used also to be bestowed on a mollâ of this class descended from Muhammad.

Lower in rank than the greater mollâs there were, in addition, five special judges (mujâfîtîyes) for wa‘âf affairs—three in Istanbul (dealing with the
Almost all higher judges were recruited from among the professors (mediresses) of these colleges, who formed the other principal hierarchy of Ottoman 'ulamā'. In earlier times there existed no strict rules for the promotion of the mediresses and their appointment to judicial posts. Later, however, admission to the clan of greater mollās was granted only to the hibār-i medierrisin, i.e., professors at the Istanbul mediresses which belonged to one of the four highest of the twelve grades—Müşille-i Süleymaniyye, Khawāmis-i (Kayibe-i) Süleymaniyye, Süleymaniyye, and, of the highest of all, Dār-al-Hadith.

Since every year only eight (later eleven) of them "passed out" into this class of judges, promotions to the higher ranks of medierrises were necessarily limited. The main bottleneck was the important sixth grade of mediresses, the Şahni-iThemān or "Courtyard of the Eight [Medresses at the Fāṭih Mosque]". Most of the numerous aspirants to these eight medierris posts got stuck in the immediately lower grade of the Müşille-i Şah, therefore called 'the bog' (bataş). To satisfy those waiting for promotion, the number of high medierris posts was gradually increased, and many nominal appointments were made at mediresses that no longer existed. Medierrises at the lower-ranking mediresses of Istanbul and the provinces, including even the ancient colleges at Bursa and Edirne, could in later times apply only for a dewriyye post or become ordinary kadis. In the provinces many medierrises served simultaneously as mufīfs. Students (softa, dārmgh-mend) who had not graduated from one of the higher-ranking mediresses of Istanbul were appointed nā'ibs or mufīfs.

The preachers (waqt) of the main mosques in Istanbul and other cities of the Empire formed a distinct order of the 'ulamā'. They were organized in a definite hierarchy, the highest position being that of the Şaykh of Ayasofya.

The 'Ilmiyye, like the other ruling institutions in the Ottoman Empire, began to decay about the end of the 19th/20th century. Favouritism, corruption and inefficiency increasingly spread among the high-ranking 'ulamā' charged with the administration of justice in the provincial and the provinces (for details see 'ulamā'). The teaching of the mediresses suffered also from the general decline in the religious institution. Dogmatism more and more replaced the creative rationalism developed in the Ottoman mediresses under Mehemmed II and Süleyman. The ignorance of the 'ulamā' trained in the mediresses could not but adversely affect the social and economic life of the Ottoman Empire. However, the 'ulamā' enjoyed the respect of the common people even in the 12th/18th century, when the abuses in the 'Ilmiyye reached their peak. This was probably due to the better conduct of the lower ranking 'ulamā', who were in closer touch with the people.

By this time the 'Ilmiyye had become a conservative class led by an aristocracy of Molla families, collaborating with the Janissaries to maintain their privileges. The spoils of war and peace also increased for the remaining number of candidates, the usual term of office was gradually reduced to one year for mollās and to 24, 20, 18 and finally 12 months for ordinary kadīs. While out of office (ma'sīl), they waited in Istanbul for a new appointment, presenting themselves every Wednesday at the divān of their kadīs-mashrej. While out of office (or in retirement) many mollās resumed teaching at a medressa.
zimát period restricted the jurisdiction of the sharí' courts to the area of personal law. Similarly, the establishment of secular schools largely took over the function of the medreses in the field of education. Attempts to reform the Ilmiyye were undertaken from the early years of the eighteenth century. The hânıms issued by Sultan Selim III (1789-1807) in the kdnuns (1854) to train competent nuwwâdb for the modernization of the Ottoman religious institution took place under the Yong Turk regime. Indeed, in 1914 the Mu'allimkhâne-i nuwwâdb became the Medreset al-şu'dâl, and the Dâr al-khildfe was established in the same year in Istanbul to train able ulema for the modernization of the Ottoman religious institution.

Attempts to reform the Ilmiyye did not bring lasting results; the newly established Turkish Republic abolished the Caliphate on 3 March 1924 and the suppression of the 'ułamâ' and the laicization of the State followed.

ILSH [see ALSH].

ILTIZAM, as a term of rhetoric [see LUZUM MA LÂ VALZAM].

ILTIZAM, a form of tax-farm used in the Ottoman Empire. On the Ottoman Ilti zam in general, see MUTelegram. The immediately following article deals with the iltizâm in 19th century Egypt. (Ed.)

The iltizâm as an agrarian system was incompatible with Muhammad 'Ali's endeavour to establish a centralized bureaucratic régime in Egypt. During the period preceding his rule, iltizâm had come to be granted no longer for a year or even for a few years but for the lifetime of the holder, or even as heritable and alienable property. Thus the state was deprived of part of the agricultural revenues. In addition, the hereditary iltizâm formed the basis for the emergence of new centres of power. Important iltizâm of that period were tribal sha'yhs and 'ułamâ', who in this capacity amassed considerable riches and achieved great political influence.

During the French occupation of Egypt an attempt had been made in 1814 to abolish iltizâm (cf. the Editors are very grateful to the Bibliography: M. O'Dohsson, Tableau général de l'Empire ottoman, Paris 1787-1791, iv, 482-616; Djedvet, Tavhit, Istanbul 1909, i, 105-17; Mustafa Nuri, Nedâd-i al-ulmahâ, 4 vols., Istanbul 1827, passim; Ilmiyye sâlihdimesi, Istanbul 1934, 308-20, 642-52; Pâkalin, s.v.; Gibb-Bowen, i/2, chapters 9-12; Niyazi Berkes, The development of secularism in Turkey, Montreal 1964, index; Ismail Hakki Uzunçarşılı, Osmanlı devletinin Ilmiye teşkilatı, Ankara 1965; Bernard Lewis, The emergence of modern Turkey, London 1968, index s.vv. (U. Heyd and E. Kurban)
state to take over services or levy dues directly. The abolition usually resulted in a considerable rise in revenue.

ILTUTMISH, b. Ėlām Kīrān, the greatest of the so-called Slave kings who laid the foundations of Muslim rule in India, came of the Iberi (or Alp-) branch of the Karakhita'i Turks. The third sultan of the Slave dynasty and the founder of the Shamsiya line of rulers, he ascended the throne of Delhi in 607/1211 after defeating Arām Shāh, son and successor of his master Kūb al-Dīn Aybak [q.v.], who had purchased him as a slave in Delhi. Nothing in detail is known about his early life except that he spent a part of it in slavery at Ghazna, Bukhārā and Baghdād. He very soon won the confidence of Aybak, who rapidly promoted him to high offices of state and married his daughter to him. Before his accession to the throne he successively held the governorship of Gwālīyār [q.v.], Baraṅ and Bādāwān [q.v.], and finally became the commander-in-chief. Historians do not brand him ungrateful, for he occupied the throne only with the approval of the ‘ulama' and at the invitation of the nobles, who were dissatisfied with the rule of Arām Shāh. The first three or four years of his reign were spent in preparing to meet the threat posed by Tādī al-Dīn Yildīz, governor of Ghazna as the suzerain of India. In fact he issued letters patent to Iltutmish as his viceroy. On being driven out from Ghazna by ‘Alī al-Dīn Muḥammad Khwārazmshāh in 611/1214, Yildīz took refuge in Lahore, seized the city and expelled the governor who held it on behalf of Nāṣir al-Dīn Kābācā, the ruler of Multān and also a son-in-law of Aybak. Iltutmish, as Kābācā's sovereign, protested, and on Yildīz's refusal to withdraw marched against him and defeated him in a pitched battle at Tārāqūt in 612/1215. Yildīz was taken prisoner and despatched to Bādāwān, where he died in confinement the same year. Thereafter Kābācā re-occupied Lahore, and in 614/1217 Iltutmish had to dislodge him forcibly. In 619/1221 Djalāl al-Dīn Khwārazmshāh, fleeing from the Mongols, also sought refuge in Lahore and asked Iltutmish for asylum. Sensing danger to his dominions, Iltutmish diplomatically warned off the threat by diverting the Khwārazmians towards the refractory Kābācā whose territory they plundered and on whom they also levied heavy tribute.

Feeling now secure at home, Iltutmish in 622/1225 marched against Bengal, where Ghiyāth al-Dīn ‘Īwād Kāhādī had declared his independence. On Iltutmish’s approach ‘Īwād lost heart, submitted to the sultan and acknowledged his overlordship. Next year Iltutmish turned his attention to Multān and Mandāwar (near Bījnāwū) and captured both places.

Firmly settled on the throne, he now decided to settle old scores with his rival Kābācā. He consequently attacked in 625/1227 Utch [q.v.], the seat of Kābācā's government, and invested the town, which surrendered after a heroic resistance of some three months. In the meantime Kābācā, who had fled to Bhakkar [q.v.], was drowned in the Indus while trying to escape.

After the defeat of Kābācā, Malik Sinān al-Dīn Ėnāsīr, the ruler of lower Sind and Daybūl [q.v.], acknowledged the supremacy of Iltutmish and became his vassal. In 626/1229 an embassy, led by Raḍī al-Dīn Ḥasan al-Ṣāḥbānī [q.v.], bringing the robes of honour for the sultan, his sons and the nobles, arrived from the Ambāсид caliph, al-Mustanṣīr bi'llāh [q.v.] and was received with great pomp. This was the first occasion when an Indian Muslim ruler was recognized by the caliph as the sultan of India. To mark the occasion Iltutmish issued a new silver coin bearing the legend "Nāṣir Aml al-Mu'mīmin", showing his allegiance. It was also inscribed in Nāgāri on the billion currency.

Next year (627/1230) Iltutmish had again to march to Bengal, where, on the death of his son and deputy Nāṣir al-Dīn Māhmūd, confusion prevailed and a certain Bahlāl Kālājī had risen in revolt. The sultan was brought to book, peace was restored in the country and the sultan returned to his capital. In 630/1233 Iltutmish after a prolonged siege recaptured Gwālīyār which had reverted to the Hindūs. In 632/1234 he invaded Mālwā, captured the fort of Bīlsīs, sacked Udījayān and demolished the sacred temple of Mābākālī, together with the stone image of Rādā Vikramadītyā, after whom the current Hindū era is known.

Soon after his triumphal return from Mālwā a serious religious disturbance broke out at Delhi. The Ismāʿīlīs, who had come to establish themselves at Delhi, after having been driven out from their former stronghold of Multān by Muḥammad Ghiyār, made an attempt on the life of the sultan while engaged in the Friday prayer. The sultan escaped unhurt but the heretics were hunted down and killed. As a measure of retaliation and in order to mop up suspected pockets of Ismāʿīlīs in Multān, Iltutmish in 633/1235-6 mounted an expedition against the Gakkhārs [q.v.], who then professed Ismāʿīlism. There was reason to suppose that it was they who were behind the plot against his life. He, however, fell seriously ill on the way, was carried back to Delhi, and after a rule of 26 years, died in Sha'bān 633/July 1236.

An enterprising, able and efficient monarch, he has been described as the foremost of the slave kings. A deeply religious man, he had great respect for the magāşāhs and ‘ulama'. Among the literati who adored his court were Amīr Rūhānī, the poet and philosopher, who had migrated from Bukhārā, Sadīd al-Dīn Muḥammad ‘Awfī, author of Lubb al-Dīn, ‘Īlābād and ‘Īlhām al-‘īlādāh, and Mas‘ūdī-ālī Sīrāj al-Dīn Djalālī [q.v.], the celebrated historian. In 629/1231-2 he founded the famous Kūt Mānkā in honour of the saint Khwādā Kūt al-Dīn Bākhṭyār Kākī, to whom he was deeply devoted, and in 627/1229 built the Hawā Shamsī, the water reservoir of old Delhi. For those seeking justice he had a bell with a chain installed on the gate of his palace which anyone could ring (cf. Ibn Batūṭa, iii, 164). Ably helped by the capable vizier Fakhr al-Dīn Muhammad adja Kutb al-Dīn Bakhtyar [q.v.,] who had served the caliphs in Baghdad, he streamlined the administration, as is reflected in the manual of Fakhr-i Mudabbir, the Adīb al-barš wa‘l-ḥādā‘a, which was presented to the sultan. The inner circle of ghulāms, known as the ṭab ‘alā, was very powerful and gained historic significance during his reign. It was they who op-

**ILYÂSÎS, a minor dynasty which ruled in Kîrmân in south-eastern Persia during the middle decades of the 4th/10th century. Their establishment there marks the final severance of Kîrmân from direct Caliphal control, which had been restored earlier in the century after the collapse of the Saffârîd empire.**

The founder, Abû 'Ali Muhammad b. Ilyâs, was a commander in the Sâmâdîn army and of Soghdian origin. He was involved in the revolt against the Sâmâdîn Amir Nasr b. Ahamd of his brothers in 317/929, and when the rebellion collapsed in 320/932, he withdrew to Kîrmân and seized power there. He withstood Sâmâdîn forces sent against him, but in 324/936 had to flee temporarily to the Saffârîd in Sîstân when a Bûyîd army under Ahamd b. Bûya (the late ruler of Transoxiana) defeated the Sâmâdîn, and, on the other hand, the Arab geographers credit him with considerable activity in building and charitable works throughout the province. During his reign, the capital of Kîrmân was transferred from Srajdân in the west, which had been the chief town in the early Islamic period, to Bardasîr or Gwâdîsîr (the later city of Kîrmân), apparently as a protective measure against the neighbouring Bûyîdîs of Fârs. The Bûyîd forces later withdrew and Muhammad b. Ilyâs returned; he was now unmolested in his principality, whilst recognising the nominal overlordship of the Sâmâdîns. Some sources condemn Muhammad b. Ilyâs as an *âyyâr* and *âlîb*, i.e., as an adventurer and brigand, and it does seem that he had understandings with the predatory Kûfs and Balûkh mountaineers of Kîrmân for the division of their spoils. On the other hand, the Arab geographers credit him with considerable activity in building and charitable works throughout the province. During his reign, the capital of Kîrmân was transferred from Srajdân in the west, which had been the chief town in the early Islamic period, to Bardasîr or Gwâdîsîr (the later city of Kîrmân), apparently as a protective measure against the neighbouring Bûyîdîs of Fârs.

Muhammad b. Ilyâs died in 356/967, having at some time before this made over Kîrmân to his son Ilyâsât. Ilyâsât maintained his power against his brother and rival Sulaymân. However, he was not long able to withstand the powerful and aggressive Bûyîd Amir 'Achûd al-Dâlwa (q.v.). He was speedily driven out by the latter, and fled to the Sâmâdîns (357/968). This really marks the end of Ilyâsid rule.
in Kirmān, except that further members of the family continued for some years to hover round the borders of Kirmān seeking an opportunity to interve-

n. Sulaymān and another Ilyāsīd, al-Ḥusayn, led armies in Kirmān, aided by the turbulent Kufis and Bahlī, but without success. After 364/975, the Ilyāsīds disappear from recorded history, and the Būyids hold on Kirmān was henceforth undisturbed until Ghaznavid times.

Bibliography: The main sources are Mis-
kandīsh and the Fāris ibn al-Ḍhībīr, to be supplemented by Usbīt’s Yāmīnī, by scattered notices in the geo-

graphers and by the 6th/12th century local history of Kirmān, the Ṣfd al-latūd al-Dīn Ahmad b. Ḥāmid Kirmānī; see also Zambaur, Manuel, 216. All these sources are utilized in the study of C. E. Bosworth, The Banī Ilyās of Kirmān, in the Minorsiyān memorial volume (forthcoming).

IYĀSIDS — IMĀD AL-DĪN

IMĀD AL-DĪN, All b. Buwayh (of Būyeh), the eldest by many years, but the least known, of the three Daylamīs [q.v.] who became the founders of the dynasty of the Buwayhīds or Būyids [q.v.]. At first in the ser-

vice, together with a group of his compatriots, of the Sāmānīd Naṣr b. Ahmad (321-9 [q.v.]), then of his lieutenant in Iran, Mākān b. Kālī [q.v.], he be-

trayed the latter in favour of the rival Zangādīdī [q.v.], from whom he obtained, in equivocal circum-

stances (and thanks to his relations with the secretary of the governor of Rayy, the father of the future vizier Ibn al-ʿAmīd), the governorship of Karadād and of the Māh al-Brāṣra [q.v.]. By means of calculated acts of generosity with funds drawn from the treasu-

ries and storehouses, in particular of the Khurramīs, to which he managed to gain access, he gathered round him there a large number of Daylamīs ready to serve the employer who offered most. This natural-

ly aroused the anxiety of Mardāwīdī, who prepared to attack him. Then ʿAll, taking the initiative, occupied for a short time Iṣfāḥān, which he was unable this time to hold, and then, definitively, the citadel of Arradjan [q.v.], where he set himself up in open rebellion (321/923). In the following year he drove out from the caliph’s governor Yāqūt, in spite of the support received by the latter from the independent governor of Braṣra, al-Bardī [q.v.]. Threatened by a combined offensive by all his enemies, he obtained from the caliph’s vizier Ibn Mūkla [q.v.] his official recognition as mūḥāfīz of Fārs, attempted to negotiate with Mardāwīdī, and was finally saved, without apparently being involved himself, by the assassination of Mardāwīdī at his youth in his native town and at Kashan, but returned to private life and devoted himself to literary and historical works, which earned him the favour of al-Thālabī, the governor of Rayy, the father of the future vizier Ibn al-ʿAmīd, the governorship of Karadād and of the Māh al-Brāṣra [q.v.].

IMĀD AL-DĪN MUḤAMMaD b. MUḤAMMaD Al-KĀThīR Al-ĪṣFĀḤĀNī, famous stylist and his-

torian, born at Iṣfāḥān in 519/1125 of a distinguished family to which belonged also the famous kātib al-

ʿĀzīz, whose biography is given in Ibn Khalīlīkīn, Wafayāt, ed. Wüstenfeld no. 77 (cf., concerning him, Houtsma. Recueil, ii, preface, XIX ff.). He spent his youth in his native town and at Kāhān, but studied in Baghdad, in particular the fikhs, and made a journey to Mosul and other places. When the Saljūqīs turned to the Zangīs of Syria, who knew his family, especially his uncle Al-

ʿAzīz mentioned above, for help, from whom he received the independent governor of Braṣra, al-Bardī [q.v.]. Threatened by a combined offensive by all his enemies, he obtained from the caliph’s vizier Ibn Mūkla [q.v.] his official recognition as mūḥāfīz of Fārs, attempted to negotiate with Mardāwīdī, and was finally saved, without apparently being involved himself, by the assassination of Mardāwīdī at his youth in his native town and at Kashan, but returned to private life and devoted himself to literary and historical works, which earned him the favour of al-Thālabī, the governor of Rayy, the father of the future vizier Ibn al-ʿAmīd, the governorship of Karadād and of the Māh al-Brāṣra [q.v.].

IMĀD AL-DĪN—MUḤAMMaD b. MUḤAMMaD Al-KĀThīR Al-ĪṣFĀḤĀNī, famous stylist and his-

torian, born at Iṣfāḥān in 519/1125 of a distinguished family to which belonged also the famous kātib al-

ʿĀzīz, whose biography is given in Ibn Khalīlīkīn, Wafayāt, ed. Wüstenfeld no. 77 (cf., concerning him, Houtsma. Recueil, ii, preface, XIX ff.). He spent his youth in his native town and at Kāhān, but studied in Baghdad, in particular the fikhs, and made a journey to Mosul and other places. When the Saljūqīs turned to the Zangīs of Syria, who knew his family, especially his uncle Al-

Imād al-Dīn was in the company of Afdal al-Dīn Ahmad ibn al-Aswad in Baghdad, in spite of the superiority which this conferred on him in the eyes of many Muslims, never prevented ʿImād’s considering himself, and being considered by others, as an equal to his brothers, as his works show (cf. especially his other works, in a scholarly and mannered style, in the tradition of the kutābī, the high-ranking secretaries-epistolographers of the administration — 1157 }
In the same style and on a wider scale, he wrote the most remarkable work of his time, the Recueil (q.v.), covering the years 573/1177-575/1179, and part v, covering the years 578/1182-579/1183. An abridgement by al-Bundari of the first (?) half, entitled Sanâ al-Bark al-Shdmi, exists in a unique manuscript in the Esad Efendi collection in Istanbul, and will shortly be published in an edition by Dr. R. Šešen. It contains the years 569/1174-572/1177. There are extensive and numerous citations from the Barkh, in an abridged form, in the Rawdatayn of Abu Shâma (q.v.).

Continuations after the death of Saladin, up to ? 597 are cited as al-Uba wa'l-Uba (Abû Shâma, ii, 226-31), Nišâlat al-Râhî (ibid., i, 231-2), Khâfâf al-Bârîk wa'ajat al-Shârîk (ibid., ii, 233-45). They are also mentioned by al-Bundari in his introduction to the Sand, as three volumes on three years.

'IMÂD AL-DÎN ZANKÎ [see ZANKI].

'IMÂD AL-MULK, GHÂZî 'L-DÎN KHÎN, FIRÔZ DIANG (III), was named Shîhâb al-Dîn after his great-grandfather Ghâzî 'l-Dîn Khân, Firûz Diang I [see Shîhâb al-Dîn, Mir]. His mother was the daughter of the wazar, Kamar al-Dîn Khân (d. 1101/1746). He was eight years old when his father, (Mir) Muhammam-

mad Panâh (q.v.) died suddenly at Awrangâbâd in 1165/1754 during his abortive attempt to seize the viceroyalty of the Deccan. On his father’s departure for the Deccan, Shîhâb al-Dîn had been left behind at Delhi in the care of the minister, Abu 'l-Manṣûr Šâfîr Diang (q.v.). He seems to have been a precocious but cunning child, much older than his years, for he ingeniously obtained, early in life, the office of Mir Bahâshî (Quartemaster-general) with the help of Šâfîr Diang. Fired with ambition, he turned against his former guardian, invasion, captured the Marâthâs, who deposed and blinded Ahmad Shâh, the sultan (1161-7/1748-54) and installed 'Aliamir II as emperor of Delhi. A born diplomat, he was well-versed in the art of statesmanship. In 1169/1755, on the death of his maternal uncle Mir Muîn al-Mulk (Mir Munnu) b. 'Imad al-Dawla Kamar al-Dîn Khân, who was governor of the Pandjâb, he captured Lahore and made it over to Âdina Bêg Khân, the paramour of Mughulani Bêgum, widow of Mir Munnu. Ahmad Shâh Abdalî (q.v.), furious at the rise of this upstart, at once marched on Lahore (1170/1756), expelled Âdina Bêg Khân and soon thereafter went to Delhi with 'Imad al-Mulk in attendance. 'Imad al-Mulk now sided with the Durrani chieftain and took part in the operations against Sûrajî Mal Dîst of Bâharapur (q.v.) and Shoûdîî al-Dawla of Awadh (q.v.). His ingratitude earned the displeasure of the Abdalî, who appointed Naqîb al-Dawla Âmîr al-Umarî of Hindustan. On Ahmad Shâh’s departure from India 'Imad al-Mulk, seeking revenge, besieged Naqîb al-Dawla in the fort of Delhi and with the help of the Emperor of the Marâthâs, allies of 'Imad al-Mulk, at the battle of Pânîpât in 1761.

'Imad al-Mulk’s game of power-politics was now practically over. Afraid of his powerful adversaries, he sought protection among the Dîstas and stayed for a time with Sûrajî Mal; on his death in 1177/1763 he went to live with Ahmad Khân Bangash, Nawwâb of Farrûkhsâb (d. 1185/1771). Two years later, he went to the Deccan and received some land in Kâlpî from the emperor, and in 1179/1765 called in the Marâthâs in his services. Feeling insecure there, he went to Sûrat to live with the British; he was seen by Col. Goddard disguised as a pilgrim and was for a time put into confinement (cf. Mill, History of India, ii, 414). After his release he went on the Pilgrimage to Mecca, and was seen in Sîn in 1195/1781, having returned to India via Bârzâ and Kandâhâr. He subsequently sought service with Timûr Shâh Abdalî (reg. 1187-1207/1773-93) and was in 2nd employment of Zanîn Shâh (reg. 1207-16/1793-1801) when he invaded the Pandjâb in 1211/1797. He lingered in obscurity for some time and died at Kâlpî on 29 Rabi‘ II 1215/ 1 September 1800, aged 54 years.

A hafiz, a good scholar and a fine penman, he composed poetry in Persian, Arabic, Urdu and Turkish under the pseudonym (takhlîs) of “Asâf”, which he later abandoned for “Niżâm”. His Persian diwan (Malkât al-Shâhînâbâdî) was published in 1301/1883-4. His other poetical compositions include a poem in praise of ‘Ali b. Abî Tâlib (Mankabat-i Niżâm dar madh-i ‘Ali), a κατάδικα and some mathnawis on the miracles of the saint Fâhîr al-Dîn Chîhî Shâhîjâhânâbâdî, whose life also he wrote under the title Manâkib-i Fâhîrîyya (ed. Delhi 1315/1897). He had four sons, of whom Hamîd al-Dawla entered the service of
Nizam al-Mulk Asaf Djah II and obtained the rank of "5,000".

'**IMAD AL-MULK** — 'IMAD SHAHI

'Imad Shahi, the title of a ruling family, founded by a Hindu convert to Islam, which ruled over Berar [q.v.] for nearly a century from 866/1459 until 928/1524. The founder of the dynasty, Daryay Khan, better known to history by his title Fatih Allah 'Imad al-Mulk, was descended from the Canarese Brahman of Vidyanagar [q.v.]. He fell as chief minister of Adil Shah Bahmani II (reg. 866/1459-827/1423) into the hands of his master, Path Allah joined the court at Bidar in 881/1475, and through the good offices of the chief minister Khwaja Darya Khan, better known to history by his title Fatilj (the king being a minor). At the same time Shaykh Ali Barid, who was exploiting religion only for his own ends and not for references to this dynasty in the histories of the neighbouring kingdoms, practically nothing is known of the history of this dynasty. No buildings or works of art or public utility constructed during their rule have been discovered; they rather devoted their time to the welfare of their subjects and the prosperity of their state. Another reason for not finding a historian to record their deeds was that theirs was the only Sunni kingdom in a region, including the site of the present-day city of Nagpur, was covered with jungle.

Partly because the founder of the dynasty was a convert, who had risen to power through military exploits, and partly because the rulers had little love for literature and art, no history of this dynasty was ever recorded and no man of letters paid any attention to the story of their rise and fall. Were it not for references to this dynasty in the histories of the neighbouring kingdoms, practically nothing would be known about them (Firishta devotes a separate section of his work to this dynasty). No buildings or works of art or public utility constructed during their rule have been discovered; they rather devoted their time to the welfare of their subjects and the prosperity of their state. Another reason for not finding a historian to record their deeds was that theirs was the only Sunni kingdom in a region, including the site of the present-day city of Nagpur, was covered with jungle.

So powerful that in conjunction with Nizam al-Mulk he conducted all the affairs of the government during the minority of the king, enjoying throughout the support of the queen-mother. Mahmud Shah, smarting under the overbearing attitude of the two ministers and provoked by the casual remark of a Habshi [q.v.] courtier, ordered their assassination. Both of them, however, managed to escape with their lives, being expert swordsman. 'Imad al-Mulk retired to his government of Berar, nursing a grudge against the monarch and watching for an opportunity to shake off his yoke. A few years later he declared his independence in 896/1489, striking his own coins and causing the Shah to be read in his own name. Yet he refrained from calling himself "Shah", either out of respect for the royal family whom he had once served or (more probably) out of political expediency. He was not destined to enjoy the fruits of independence long, as in that very year he died. He was succeeded by his son 'Ala al-Din, who, confident that the effete Bahmani monarch could not assert himself, assumed the title of Shah in 896/1490; he established his court at Kavel, following the example of Malik Ahmad Bahri, son of the late Nizam al-Mulk and Yusuf 'Adil Khan of Bidjar, who had earlier in 894/1489 declared their independence, the former founding the city of Ahmadnagar [q.v.].

In 910/1504 Amir 'Ali Barid, son of Kashim Barid, the regent of Bidar [q.v.], who had won full control over Mahmud Shah Bahmani, in league with Malik Ahmad Bahri in league with Malik Ahmad Bahri, a lad of twelve, who was later designated to become the founder of the 'Adil Shah dynasty of Bidjar, took part in the expedition against Belgam, which was conquered and added to the jagir of the chief minister. On the execution of Mahmud Gawan on a charge of treason in 886/1578, 'Imad al-Mulk became apprehensive of his own safety and showed signs of disaffection. Mahmud Shah Bahmani II, fearing an open rebellion, placated him by confirming him in his government of Berar. In 889/1482, on the accession of Mahmud Shah Bahmani II, a lad of twelve, he was raised to the office of a minister in reward for the slaughter of "foreigners" (gharibdn), the supporters and adherents of Yusuf 'Adil Khan, the governor of Bidjar, thus paving the way for Nizam al-Mulk, a Dakhini nobleman, to usurp all power for himself (the king being a minor). At the same time Shaykh Ali Barid, who was exploiting religion only for his own ends and not for references to this dynasty in the histories of the neighbouring kingdoms, practically nothing is known of the history of this dynasty. No buildings or works of art or public utility constructed during their rule have been discovered; they rather devoted their time to the welfare of their subjects and the prosperity of their state. Another reason for not finding a historian to record their deeds was that theirs was the only Sunni kingdom in a region, including the site of the present-day city of Nagpur, was covered with jungle.

This "aged and experienced statesman" as Firishta describes him, resolved to maintain strict neutrality, and having perceived the intentions of Amir 'Ali Barid, who was exploiting religion only to destroy Yusuf 'Adil Shah, intervened with the king on behalf of Yusuf 'Adil Shah. Amir Barid, now left practically alone, fled from the field along with the king, leaving the royal camp to be looted by the allies.

Yusuf 'Adil Shah struck back strongly, compelling Mahmud Shah and Amir 'Ali Barid to seek help from others, including 'Imad al-Mulk. This aged and experienced statesman, as Firishta describes him, resolved to maintain strict neutrality, and having perceived the intentions of Amir 'Ali Barid, who was exploiting religion only to destroy Yusuf 'Adil Shah, intervened with the king on behalf of Yusuf 'Adil Shah. Amir Barid, now left practically alone, fled from the field along with the king, leaving the royal camp to be looted by the allies.
Ten years later, in 920/1514, Mahmūd Shāh, whose prestige had suffered considerably and who was now tired of the overbearing behaviour of Amir ʿAli Barid, eventually decided to drive him out. ʿImad al-Mulk’s troops, marshaled on Gulgarga [q.v.], the capital of Barid, decided to give battle and sallied forth from the citadel. Meanwhile, Mahmūd Shāh, who was weak both in body and mind owing to old age, suddenly decided to change sides and join the troops of Amir ʿAli Barid, thus putting ʿImad al-Mulk in a difficult situation. ʿImad al-Mulk immediately repaired to his own country, leaving the fickle king to his fate. After this mishap without a blow, he proceeded to annex them to his own kingdom. This act of usurpation aroused the hostility of Burhān Nizām Shāh I [see niẓām Shāh-i]. Consequently, frequent battles were fought between the two ruling houses, who were also related to each other, resulting in the defeat of ʿAllāʾ al-Din ʿImād Shāh.

In 930/1524-5, ʿAllāʾ al-Din joined hands with Burhān Nizām Shāh I, his former enemy, to recover the fort of Shālpur, which Ismāʿīl Ṭāhir Shāh had promised to give to his sister Maryam as part of her dowry when she was given in marriage to Burhān Nizām Shāh. Ismāʿīl Ṭāhir Shāh stoutly opposed this joint invasion and finally ʿImad al-Mulk fled. Yet he continued to smart under the insult that he had suffered at the hands of Burhān Nizām Shāh. Consequently in 933/1527 he occupied the fort of Pātrā, belonging to Burhān Nizām Shāh, at the instigation of Ismāʿīl Ṭāhir Shāh and Sultan Kuli Khān Shāh of Golconda [q.v.]; it was recovered after a siege of two months by Burhān Nizām Shāh, who later completely destroyed it. Flushed with his victory Burhān Shāh proceeded to reduce some other places in Berar, spreading panic in the land. ʿImad al-Mulk, finding himself unable to withstand alone the onslaught of the Ahmadnagar troops, fled to Būchānpīr [q.v.] and sought the help of its ruler Mirān Muhammad Shāh Fīrūzī in repelling the invasion. The allies, however, suffered a crushing defeat at the hands of Burhān Nizām Shāh, losing their guns and elephants. Mirān Muhammad Shāh, burning for revenge, appealed to Bahādur Shāh (reg. 932/1525-943/1537) of Gujjarāt, who was also his maternal uncle, to come to their relief. Bahādur Shāh readily agreed and marched in 934-5/1527-8 towards the Deccan with a large army. When he reached Dīalānpīr [q.v.] he overtook the enemy, crossed the river and proceeded to advance. ʿAllāʾ al-Din ʿImād Shāh, sensing his intentions, lost no time in satisfying his vanity and readily acknowledged his supremacy by having the ḥaḍbaa read in his name. By this act of expediency he not only saved his own territory but induced Bahādur Shāh to attack Ahmadnagar and humble its sovereign. Burhān Nizām Shāh, being unable to resist such a powerful monarch as Bahādur Shāh, had to flee. Consequently the joint army of Shāh and Fīrūzī reached Ahmadnagar unopposed and took up its residence in the palace of Burhān Nizām Shāh I, where he regaled himself for forty days. Burhān Nizām Shāh I, however, continued to harass the Gujjarāt troops by frequent skirmishes until he was obliged to sue for peace and to promise to return the forts and elephants he had captured (although he later broke his word). The object being achieved, both ʿImād al-Mulk and Mirān Muhammad Shāh returned jubilantly to their respective capitals.

Two years later, in 937/1532, ʿAllāʾ al-Din ʿImād al-Mulk died and was succeeded by his eldest son Daryā ʿImād Shāh. He was married to Khādijā, a sister of Ismāʿīl Ṭāhir Shāh of Bidjāpur (and not to his daughter as inadvertently stated by Fīrūzī in another place, cf. Brīg’s trans., iii, 458), and born of a Hindu princess whom Yusuf Adil Shāh had married. A consummate statesman, he was well-versed in the art of diplomacy, as was shown on the occasion when he found himself in a difficult situation as a result of the march of Bahādur Shāh against Ahmadnagar, whose ruler, although his close relative, did not scruple to engage in an armed conflict with ʿImād al-Shāh, and who had to pay for his fault by submitting to the Gujjarāt monarch.

The history of the reign of Daryā ʿImād Shāh is so dispersed throughout the pages of Fīrūzī that it requires patient research to piece it together. His account is extremely meagre; nevertheless, it is from the work of this author supplemented by the Būrān-i māłātār, that a readable account of his reign can be gleaned. The story is so involved and entangled that even a clear-headed and experienced historian like Fīrūzī confused Daryā ʿImād Shāh with his father ʿAllāʾ al-Din ʿImād Shāh in describing the events after 939/1532 (although on Fīrūzī’s own showing ʿAllāʾ al-Din ʿImād Shāh had died in that year). He admits that he failed to obtain any written account of the ʿImād Shāhis and hence had to depend on oral traditions and hearsay (cf. Brīg’s trans., iii, 500).

In 949/1542 Burhān Nizām Shāh along with his ally Amir Barid, taking advantage of a serious rift between Ibrahim ʿAdil Shāh and his able minister Asad Khān Lārī, marched against Bidjāpur and besieged it. Ibrahim ʿAdil Shāh, deprived of his experienced minister’s advice and finding himself unable to oppose the invaders single-handed, approached Daryā ʿImād Shāh, his kinsman (here Fīrūzī confuses him with his father. cf. Brīg’s trans., iii, 92) for help, who readily acceded to his request; the combined forces of Barer and Bidjāpur compelled the invaders to raise the siege and to sue for peace. This successful military adventure raised the ʿImād Shāhis prestige high and the ruling prince came to be looked upon as a powerful monarch whose voice counted in the Deccan. To strengthen his position further, ʿImād Shāh married his sister Rābi’a to Ibrahim ʿAdil Shāh in 950/1543. This naturally aroused the jealousy of Burhān Nizām Shāh, the old enemy of his house, although Daryā ʿImād Shāh soon after his accession had tried to placate him by marrying his daughter Bibi Dawlat to Husayn Nizām Shāh, a son of Burhān Shāh by his wife Amina, who was later to succeed him. The very next year (951/1544) some differences cropped up between Ibrahim ʿAdil Shāh and Daryā ʿImād Shāh, which provided Burhān Shāh with an opportunity to invade Bidjāpur. He formed an alliance with Sadgījarīvārī (Kāmaradā of the Muslim historians), the Hindu ruler of Vīdīyanagar [q.v.], and the Shī‘a ruler of Golconda. It is not known what the results subsequently played by the ʿImād Shāhs in the battles that took place between the combined Muslim forces and the troops of Vīdīyanagar. It is hard to believe
that while the combined Muslim states were closed in a fierce struggle against the Hindus, the state of Persian expression or orthodox faith, should have remained aloof. It is probable that personal grievances, such as the murder of Diqāngir Khān, rather than religious motives were responsible for the estrangement between the kingdoms of Ahmadnagar and Berar. Soon after Husayn Nīzm Shāh's accession, his full brother 'Abd al-Kādir fled from Ahmadnagar and sought asylum in Berar. Earlier, such a prominent noble as Sayf 'Ayn al-Mulk, who held the rank of commander-in-chief under Burhan Nīzm Shāh I, had similarly sought refuge in Berar from the oppression of Husayn Nīzm Shāh. Fīrūṣta places this event in 959/1552—which is puzzling, as Burḥān Nīzm Shāh I was still alive in that year. The authorities agree that he died in 961/1554 (corroborated by the chronogram sawāl-i ʿabūrāwān), the year in which also Mūṭād Shāh III of Gujjārāt and ʿĪṣān Shāh Sūr (qq.v.). In any case, we find him on the side of Ibrahim 'Adī al-Mulk, his brother-in-law, who was then espousing the cause of Shāh 'All, his nephew, a son of Burḥān Nīzm Shāh and his sister Maryam. He was a pretender to the throne of Ahmadnagar against his step-brother Husayn Nīzm Shāh, the ruling prince. Dārūy 'Īmād Shāh seems to have been drawn against his will into this struggle for power, inasmuch as we find him playing only a passive role, most probably out of regard for his sister's son. Here Fīrūṣta's account is both perplexing and confusing. He places the insurrection of prince 'All, while describing the events of the reign of Ibrahim 'Ādī Shāh, in 959/1551 (cf. Briggs's trans., iii, 106), yet while writing the history of his father Burḥān Nīzm Shāh he says that the latter was still alive in 961/1553 (cf. Briggs's trans., iii, 235). It is difficult to reconcile the dates.

However, in the engagement that took place at Shālpārr between the 'Ādī Shāhī forces and the Nīzm Shāhī forces, Dārūy 'Īmād al-Mulk was put in charge by Ibrahim 'Ādī Shāh of the right flanks (maymāna), while he commanded the centre in person. At a critical juncture Ibrahim 'Ādī Shāh lost heart and fled from the field, wrongly believing that his ally Sayf 'Ayn al-Mulk had crossed over to his former master's son and successor Husayn Nīzm Shāh. The fate of Ibrahim 'Adī al-Mulk is not known, but it may be assumed that he too returned to his capital unmolested. Thereafter he is not heard of any more, and in the words of Fīrūṣta seems to have enjoyed a reign of great tranquillity and peace till his death in 969/1561 (cf. 'Abbād al-Ḥaḍārī, Taʾrīkh-i Dākan, ii, 79). He was succeeded by his son, Burḥān 'Īmād al-Mulk, who was then only three years old. Tūfāl Khān Dāhan, his minister, began to rule in his reign. An ungrateful and ambitious man, he usurped all power in 976/1568 and placed the young king in confinement. This usurpation was much resented by the people of Berar, who began to seek an opportunity to restore the boy-king to the throne.

In 973/1565 Mūṭād Nīzm Shāh, taking advantage of the minority of the king, invaded Berar in conjunction with 'All 'Ādī Shāh of Bigāspūr. They laid the country waste, and on the approach of the rainy season retired to their capitals. Soon afterwards Berar was invaded by Mīrān Muḥammad Shāh, the ruler of Khāndesh. Burḥān 'Īmād Shāh appointed Diqādev Rā'ū, the disaffected minister of Golconda, to command the forces of Berar, and he defeated the Khāndeshī troops in several engage-
of Ghaznin (d. 508/1114), and later migrated to the court of lmadi al-Dawla Fararsar at Rayy, in whose praise he composed the largest number of odes. Some time before lmadi al-Dawla’s death, lmadi made a second migration to the Court of the Saldjukid Sultan Tughrul b. Muhammad b. Malik Shih (d. 529/1134). Among his many patrons, the following may be mentioned:

Malik Arghun b. Alp Arslan (d. 499/1056); Malik Tughlan b. Alp Arslan; lmadi al-Dawla Fararsar (d. 530/1135); Sultan Tughrul b. Muhammad; Kawsami al-Din Abu ‘l-‘Ism; and Almadi’s minister of Tughrul (d. 527/1132); Abu Mansur al-Muzaffar ‘Abbd-Allah b. Abil-Rahman (d. 547/1152); Amir ‘Abd al-Rahman Tughryak (d. 541/1146). lmadi’s original Divan has been lost. Taki Kashi claims to have seen four: three in the British Museum and one in the British Museum Library contains the largest number of lmadi’s extant verses, namely 1174.

lmadi’s reputation as a poet is indicated by the fact that several notable contemporary poets, namely Sayyid Hasan-i Ghaznawi, Abild-Sahib b. Isma’il Tirmidhi, Falaki Shirmpani, Kawsami Razi, Sa’d al-Din As’sad b. Shibh b. Bughra, Majd al-Din b. A’mdn, Yusuf b. Naqr al-Katib, took his verses as a model. lmadi is highly praised by most of the notable biographers of poets.

lmadi’s death took place between 530/1135 and 550/1155, probably nearer the former than the latter.

IMADA — IMALA

"inflection" (verbal noun of fourth form, amala), a phonetic phenomenon. It consists in "alif’s "tending towards y and "alif’s "tending towards kasura" (Ibn al-Sarrad, Masa’di, 139). Modern phonetics regards it as a palatalization, produced by a rising movement of the tongue towards the roof of the mouth. Since the extent of this movement, the vowel a shifts from its zone of articulation to that of e or to that of e (or even to that of i). Arab grammarians distinguish an amala shadda, "strong" (probably a > e) and an amala mutawassita, "medium" (probably a > a). The question arises particularly with regard to long a, and it is this that will be considered here.

Arab grammarians speak of imala as a phenomenon conditioned by the presence of a kasra (i) or a y (y) in the neighbourhood of the alif (a); these draw the alif towards themselves, in order to make it more like them. Chapter 477 of Sibawayhi deals with the imala of alif when there is a kasra in the syllable that immediately follows or precedes it, such as: ‘alim "knowing", masajd ‘mosques’, hild ‘dogs’, gima‘ld ‘swift (she-camel)’; similarly bayydy ‘seller’, bayydy ‘measurer of grain’. The following, however, are without imala (i), (ii, 280 lines 2, 4-6); ajisser ‘bricks’, tal ‘condiment’, ggamd ‘mineral’, albalal ‘the great disturbance’, gwm ‘reunion of people of all kinds’. One says: ra’aytu Sasya, but ra’aytu ‘Abd ("I saw Sayyid... ‘Abd") (i, 282, lines 6-7). Chapter 480 of the same author mentions, rightly, the hur ‘that inhibit imala. This kind of inhibition may be found, whether or not the imala is conditioned, but Sibawayhi here considers it from the point of view of the conditioning indicated. These are the seven musarfiya, the four emphatics, the velars th and kh and kaf, whether they are the first, second or third consonants of the root, for example, as first: s’did "going up", qsid ‘absent’, ksid ‘sitting’; as second: qsid ‘sneezing’, ndkid ‘criticizing (a written work)’, ndkid ‘sieveing’; as third: nhd ‘rising’, nhd ‘blowing’, nd ‘selling well (merchandise)’, md ‘straps’, mharid ‘scissors’. An i, however, in the syllable preceding a long a (provided that an emphatic does not open the latter syllable) restores the operation of the imala, thus: si’pb pl. of sa’ ‘difficult’, kdb ‘doses’, kdb pl. of khabh ‘bad’, misbah ‘lamp, torch’.

All this clearly points to a conditioned imala, and there are other clear examples in chapter 478 of the Kitab (ii, 283, lines 6-7, 10, 12-3); there are, however, also a number of cases that are less clear: imala of: ramd (radical: md)r’al ‘threw’, r’al (r. d ‘us, passive d’ta) ‘he called’, khd, k kh w j, jst pers. khfsu ‘he feared’, nd pl. niy ‘canine (tooth)’, ho ‘pregnant (woman)’. Arab grammarians adduce the influence of morphological associations [see the data given in the parentheses] where they find the kasa or the ya? that they require. They can find no arguments, however, in the cases of kdsalid ‘proper name, bdb ‘door’, m ‘moose, reed’.

In the writer’s opinion, in addition to a conditioned imala, which is widely used, there exists an unconditioned imala, which Arab grammarians have not recognized as such and have forced into the framework of the first, without, however, leaving us the means to discriminate precisely between the two. Furthermore, they have not answered all the questions; for example, what was the situation with alif mandada from this point of view? At all events, we cannot follow J. Canetineau when he states (Cours. 98): "imala must be considered as an unconditioned phenomenon, which affects every long a (however with a possible distinction between an internal a and a final a), provided that no preservative action is brought to bear on them".

Imala was not general among the Arabs; it appears that it have had a different meaning in the East; in the East, in the East, and others, as opposed to the Hidazis (cf. Sibawayhi, ii, 280, line 1, 281, line 5, 283, line 16). It is, however, received in Kur’danic recitation (see al-Duni, Taysir, 46-68, Bibl. Isl. 2). It was a simple realization of the phoneme ã. In modern dialects it comes to acquire a distinctive value; thus in Kfarabad (M. T. Feghali, Ifardu d’Arabic (Liban-Syrie), 96): rã ‘returning’ and rã ‘begin again’, rã ‘flowing’ and rã ‘more, more’.

Remarks: (a) Sibawayhi (ii, 284, lines 1-3) stresses the diversity that is to be found in the practice of imala, and it is probable that he does not produce all the facts concerning this phenomenon. When one has experience of modern dialects with imala, as for example the Lebanese vernaculars, one can only agree with Sibawayhi; each region has its own system, and indeed the system may differ from village to village. That of Kfarabad (94-5), for example, is not free from "exceptions" (see 95, 3°).

(b) The case of li ‘he was good’ (Sibawayhi, ii, 281, line 13), ãra ‘he became’ (ibid., line 14) is separate. Either it is a matter of non-valorized emphatics, of a type compatible with imala, or one should read: ãba, ãra, forms comparable with those of Ethiopic, such as ãa ‘he walked’, ãi ‘he ran’.

IMĀLA — IMAMA
IMAM A'ZAM [see KHALIFA]
AL-IMĀM AL-A'ZAM [see ABU BANIFA]
IMAM AL-HARAMAYN [see AL-JUWAYNI]
IMAM AL-HUDĀ [see ABU L-LAYTH AL-SAMAR-
KAN JABRAS]
IMĀM-BĀRA, literally "enclosure of the Imāms", is a term used in India for the buildings where the
Shī'īs assemble during Muharram and recite elegies on the martyrdom of Hasan and Husayn and in which the taʾṣīyas (q.v.) are stored. The Imām-bārā is an Indian institution, whose beginnings may be traced to the 18th century, when many of the Shī'ī institution and practices took their ritualistic form. Sa'dar Djang (1708-54) constructed a building in Delhi for the purpose of the Muharram rituals; it was not known as Imām-bārā, but may well be considered its forerunner. An almost similar building constructed by his grandson Aṣaf al-Dawla in Lucknow, however, became known as "Imām-bārā-i Aṣa-
fi". After that it became a practice with the Nawwabs of Awadh to build Imām-bārās, which came to be used also for the final resting-places of the heads of the families to which they belonged. The Imām-
bārā of Husaynabād built by Muhammad 'Ali Shāh (1837-47) shows the influence of European architecture. According to Dja'far Sharif, the 'Aqīṣur-
khāna of Southern India is replaced in the north by the Imām-bārd.
(K. A. NIZAMI)
IMĀM SHĀH, IMAM AL-DIN 'ABD AL-RAḤIM B. Ḥasan (b. 856/1452; d. 919/1513), was a saint (pir) of an Isma'īlī sect known as Imāmshāhs, and better known as sat-pañthis (followers of truth). Sat-panñh (the true path) was a term applied originally to Eastern Isma'īlism in India. Later the sat-panñhists denied all connection with the Khodjas, although there is a great similarity in their doctrines. His tomb is at Pirana (near Ahmadābād, Gujarat), where Imām Shāh lived and taught. It is greatly venerated by his followers, who are also to be found in Madhya Pradesh, near Burhanpur, where a sizeable community still exists. Their doctrines and ritual are mostly Hindu; they believe in karma (incarnation) and although they confess to faith in the Kur'ān, they hold that their Imām is the tenth incarnation of the Hindu God, Vishnū. 'Ali was the first of the Imāms and the possessor of the Divine Light. The Kur'ān was in 40 partes (parts), of which only 30 are preserved. The true interpretation (ta'wil) of the Kur'ān is called alamākār. The Imāmshāhs are generally vegetarians. Their devotional poetry, known as gnāms, of which there are several collections, is beautiful and touching, and fully deserves study and publication. The gnāms are greatly revered by the sectarians, who pay greater reverence to them than to the Kur'ān. The best account of the sect is by W. Ivanov, The Sect of Imām Shāh in Gujarāt, in JBRRAS, xii (1936), 19-70.

IMĀMA, the imāmate in the meaning of "supreme leadership" of the Muslim community after the death of the Prophet. The present article will deal with the theological and judicial theory. For the institutional development see KHALIFA.
Early development. The establishment of Abū Bakr after the death of Muhammad as Khilafat Rasūl Allāh, "Vicar of the Messenger of God", affirmed the continued unity of the Muslim community under a single leader. It favoured a preferential right to the imāmate for the early Meccan, Kurayshite Companions of the Prophet and implicitly denied any right on the basis of blood relationship with him. Although these principles did not remain unchallenged from the beginning, broad theoretical discussion of the imāmate was opened by the crisis of the caliphate beginning with the rebellion against 'Uthmān. At the end of the civil war, which left Mu'awiyah as de facto ruler, the community remained divided mainly on points concerning the rightful imāmate. The upholders of 'Uthmān as a just caliph, commonly known as the 'Uthmāniyya, repudiated the revolt and the caliphate of 'Ali resulting from it. The 'Uthmāniyya comprised besides the partisans of Mu'awiyah the upholders of the principles of the early caliphate, i.e., in particular the right of the families of the non-Ḫāǧihmīte early Companions of the Prophet, now mostly living in Medina. Although criticism of 'Uthmān had been wide-spread among the latter during his caliphate, they had not looked with favour upon the succession of 'Ali, and accepted the verdict of the arbitrators appointed at Ciffin that 'Uthmān had been killed unjustly. They did not favour Mu'awiyah, since he did not belong to the early Companions, but accepted him for the sake of unity. The partisans of 'Ali, commonly called his ḥīfs, upheld the justice of the revolt against 'Uthmān, who in their view had lost his title to the caliphate by his unjust acts. As against the claim of Mu'awiyah to the caliphate as the avenger of the murdered 'Uthmān, they looked for leadership from the clan of Muhammad, especially among the sons of 'Ali, in order to re-establish the rightful imāmate. Their support of the claims of the family of 'Ali al-bayt (q.v.) to the imāmate did not imply a repudiation of the first two caliphs Abū Bakr and 'Umar. The belief that
‘Ali was the divinely appointed heir of the Prophet and was endowed with supernatural powers, commonly attributed by the sources to the largely legendary figure of ʿAbd Allāh b. Saba’ (q.v.), was at most marginal. The Khāridjīs, successors from the ranks of the partisans of ‘Ali, shared the views of the latter concerning ʿUṯmān and the rising against him and upheld the initial legitimacy of the caliphate of ‘Ali. They repudiated ‘Ali from the time of his agreeing to the arbitration of his conflict with Muʿāwiya and equally repudiated Muʿāwiya as a rebel against the initially legitimate caliphate of ‘Ali.

The second civil war beginning after the death of Muʿāwiya and resulting in the definite establishment of Umayyad rule on a dynastic basis, further sharpened the fronts between these parties. The supporters of the traditions of the early caliphate, after the failure of ʿAbd Allāh b. al-Zubayr’s attempt at restoring it, lost all hope. They came to idealize the period of the first three caliphs. Although they supported Umayyad rule and were opposed to revolt, they did not, in contrast to the Syrian supporters of the Umayyads, consider this rule as part of the genuine caliphate, which had ended with ʿUṯmān. The violent death of al-Ḥusayn, grandson of the Prophet, at the hands of the supporters of the Umayyads, considered this rule as part of the authentic caliphate. Their acts and rulings were binding without any act of recognition by the Muslim community. Ahmad b. Hanbal specifically affirmed the movement of the Murdijiyya, initiated by al-Ḥasan b. Muhammad b. al-Ḥanafīyya, attempted to close the gap between the moderate Shiʿa and the ʿUṯmāniyya. The early Murdijiyya affirmed the superiority of Abū Bakr and ʿUmar over the caliphs and the ʿUṯmāniyya restricted the caliphate of the Rāshidūn to the first three caliphs and rejecting the caliphate of ‘Ali. However, Kūfani traditionalist opinion firmly endorsing the inclusion of ‘Ali among the Rāshidūn spread rapidly. It was eventually favoured by ʿAbd b. Ḥanbal, who originally had supported the doctrine of the ʿUṯmāniyya. By the 4th/10th century the caliphate of the four Rāshidūn became indisputable Sunni dogma. Ḥanbalī and Ashʿarī doctrine strongly insisted that the four Rāshidūn ranked in excellence according to their sequence in the caliphate. This agreed with the view implied in the Ḥanbalī creeds and expressly affirmed by al-ʿAshʿarī, that only the most excellent (al-afḍal) in the Muslim community could be the rightful caliph. The imāmate of the less excellent (al-majfūḥ) in the view of al-ʿAshʿarī is worldly kingship. Though the caliphate is a matter of worldly kingship, the Rāshidūn doctrine strongly insisted that the four Rāshidūn might come close to fulfilling the ideal conditions of the caliphate, as was often affirmed for the pious Umayyad ʿUmar b. ʿAbd b. Ḥaṭir, that there was no expectation that the Vicariate of Prophecy could ever be restored after the passing of the thirty years which it was to last according to a famous ḥadith. For the later imāmate there were only minimal conditions. The imām had to be a Muslim and a Kurayshite. The imāmate could become binding without any act of recognition by the Muslim community. ʿAbd b. Ḥanbal specifically affirmed the validity of the imāmate by usurpation (qalaba). While the Muslim must not get involved in a civil war when there is no imām, absolute obedience and active support of the established imām, whether he be just or oppressive, pious or depraved, incumbent or hāṣir, except on the imāmate of the ʿAbū ʿAshir. The imāmate could be forfeited only through apostasy or by neglecting the duty of the imām to provide for the communal prayer, as affirmed by a ḥadith.

Hanafi and early Māturīdī doctrine was close to the traditionalist views. Abū ʿAbd Allāh, belonging to the Murdijiyya, did not express a preference between ʿUṯmān and ‘Ali, while ranking them below Abū Bakr and ʿUmar. This view was admitted as legitimate in some Hanafi creeds, but the majority upheld the hierarchical ranking according to Abū Bakr and ʿUmar. The obligation to obey the ruler was rather implied in the prohibition of drawing the sword against fellow Muslims.

A different doctrine developed in ʿAṣṣāfīsīm and the kalām school of the Kullābiyya associated with it and increasingly also influenced ʿAṣṣāfīsīm after al-Bāṣillī (d. 403/1013). The ʿAṣṣāfīsīm did not restrict the rightful imāmate to the most excellent in the community. It admitted the imāmate of the less excellent, especially if discord could be avoided.
by choosing him. Al-Shafi’i and some prominent early Shafi’i scholars reportedly ranked Ali in excellence above Uthman (though below Abü Bakr and Umar). Al-Shafi’i’s imamate thus was that of the “less excellent”. This less rigid approach permitted the Shafi’i’s to treat the post-Rasulid caliphate as a basically sound imamate which could be judged by standards derived from the ideal early caliphate. A comprehensive legal system, strongly influenced by Mu’tazili theory, was elaborated concerning the qualifications, investiture, and functions of the imam. This development reached its climax in al-Mawardi (d. 450/1058), whose work al-Ahkam al-Sultaniyya became widely accepted as an authoritative exposition of Sunni doctrine concerning the imamate. The book, written at the time of the Umayyad caliphate, it legitimized this development, while maintaining the full sovereignty of the caliph over these offices. Al-Mawardi’s work was immediately imitated by the Hanbali Abü Ya’la al-Farrâ’î (d. 458/1066), who accepted al-Mawardi’s exposition, modifying it only in some points in accordance with Hanbali-Madârî doctrine. Hanbali-Madârî doctrine reaffirmed the validity of the imamate by usurpation and denied the forfeiture of the imamate by immorality, injustice, or heterodoxy. Among the Maturidi Hanafists, Abu ‘l-Yusuf al-Bazdawi (d. 493/1099) discussed many of the Shafi’i doctrines, modifying them from the point of view of Hanafi tradition. The rise of Sunni valuation of the post-Rasulid caliphate in this time is reflected by the endeavour of the Hanbali Abü Ya’la and the Ahqâfî Abü Bakr al-Fürâ’î (d. 478/1085-6) to prove the legitimacy of the imamate of Mu’awiya in addition to that of the four Basrâni caliphs.

Major points in the fully developed Sunni doctrine were the following: The establishment of an imâm is permanently obligatory (udâdî’b) on the community, according to the common doctrine on the basis of his functions under the revealed law, not on rational grounds. The holder of the imamate may change at any time. The view that two countries separated by a sea preventing mutual military aid might each have an imâm was exceptional. Specifically the doctrine of the Karrâmîyya that ‘Ali and Mu’awiyâ were imâms at the same time was rejected. Qualifications for the imâm were: Kûrayshite descent, knowledge of the law as required for the judgeship, probity (ud’dî’î) as required for legal testimony, majority, physical fitness, capability of carrying out the political and military duties of the office. The imâm may be invested either through appointment (’ahd) by his predecessor or by election (’ibkhir) or by the common view held that Abû Bakr was elected to the caliphate, the opposite view, that he had been appointed by the Prophet, was upheld by such prominent Sunni scholars as al-Hasan al-Basri, Ibn Hazm, and Ibnu Taymiyya. Any Muslim of probity with knowledge concerning the nature of the imamate, and discernment in choosing a proper candidate, qualified as an elector. Views concerning the number of electors or “people of loosing and binding” (a’hl alhall wa l-’ahd [q.v.]) necessary for the election to become binding on the community varied from a single one, the common Agâhî doctrine traces this “generosity” (idâmûrî) of the electors, stipulated by Abü Ya’la, to the election was not conceived as a free choice between candidates, but as a selection of the “most excellent”. Though the election of the less excellent, if qualified, was binding, it was considered permissible only for proper cause. The imâmate was invalidated through loss of mental or physical fitness or loss of liberty. According to many Shafi’îs it was forfeited by loss of probity through immorality, injustice, or heterodoxy, but this was denied by others and by Hanbalî and Hanafî doctrine. The duties of the imâm were defined as: guarding the faith against heterodoxy, enforcing lawful justice between disputing parties, dispensing legal punishments (hadd), protection of peace in the territory of Islam and its defence against external enemies, conducting the djihâd against those resisting the supremacy of Islam, receiving the legal alms, taxes, and the fifth of the booty, distributing the revenue in accordance with the law, and the appointment of reliable and sincere men in delegating authority. Mu’tazili doctrine and the movement of the Mu’tazili scholars (d. 493/1099) discussed many of the Shafi’i doctrines, modifying them from the point of view of Hanafi tradition. The rise of Sunni valuation of the post-Rasulid caliphate in this time is reflected by the endeavour of the Hanbali Abü Ya’la and the Ahqâfî Abü Bakr al-Fürâ’î (d. 478/1085-6) to prove the legitimacy of the imamate of Mu’awiya in addition to that of the four Basrâni caliphs. Mu’tazili doctrine and the movement of the Mu’tazili scholars (d. 493/1099) discussed many of the Shafi’i doctrines, modifying them from the point of view of Hanafi tradition. The rise of Sunni valuation of the post-Rasulid caliphate in this time is reflected by the endeavour of the Hanbali Abü Ya’la and the Ahqâfî Abü Bakr al-Fürâ’î (d. 478/1085-6) to prove the legitimacy of the imamate of Mu’awiya in addition to that of the four Basrâni caliphs.
authorities of later Mu'tazilism, left the question of the superiority of Abu Bakr or 'Ali open and held the imamate of the less excellent to be permissible for proper cause. Abu 'Abd Allâh al-Hasan (d. 357/977) and 'Abd al-Djâbîrî in his later doctrine upheld the superiority of 'Ali.

Early Mu'tazilism, in agreement with Kârîgîlî doctrine, generally did not restrict the imâmâte to members of the Kuraysh. While the eccentric Mu'tazili Djârîr b. Amr held that of two otherwise equal candidates a non-Kurayshite should be preferred to a Kurayshite, the common opinion preferred the Kurayshite in this case. Later Mu'tazili doctrine maintained that no non-Kurayshite could become imâm if a qualified Kurayshite was available.

The establishment of an imâm was considered obligatory on the community except by a group of early Mu'tazilis inclined to asceticism, who held that the community should choose leaders for the gîhâd and officials for other necessary functions on a temporary basis so as to frustrate any ambitions for worldly power. The majority rejected the view that the establishment of an imâm was obligatory on rational grounds, which was admitted by al-Djahîz, Abu '1-Kâsim al-Balkhî, and Abu '1-Husayn al-Basîrî. The common doctrine insisted that there could be only a single imâm at any time. Only Abu Bakr al-Âsamm held that because of the wide expansion of Islam it was preferable to have many imâmîs to choose its own imâm. In all other respects the Mu'tazili doctrine agreed substantially with Sunni doctrine.

Imâmî: Zaydiyya. The Zaydiyya, supporters of the revolt of Zayd b. 'Ali in 122/740, unlike the Imâmîyya did not recognize a hereditary line of imâmîs but were prepared to support any member of the al-Husaynî dynasty who claimed the imâmâte by "rising" (âihtîd) if it was perceived as necessary. While some Zaydi authorities in the 3rd/9th century considered all descendants of 'Ali's father Abu '1-Tâlib as eligible for the imâmâte, the prevalent doctrine restricted it to the descendants of al-Hasan and al-Husayn.

During the 2nd/8th century, Zaydism was doctrinally divided into two major groups, the Bati'rîyya and the Dhârîdîyya. The Bati'rîyya, following the traditions of the moderate wing of the Imâmîyya (Shî'îs), upheld the imâmâte of Abu Bakr and 'Umar the governor of 'Uthmân during the first six years of his rule on the basis that 'Ali had pledged allegiance to them. They repudiated 'Uthmân during the last six years of his rule, just as they repudiated all opponents of 'Ali. Considering 'Ali the most excellent of men after the Prophet they permitted the imâmâte of the less excellent. The Dhârîdîyya, adopting the more radical views of the Imâmîyya, rejected the imâmâte of the first three caliphs and held that the Prophet had invested 'Ali as his executor (wââsî) by designation (nasâ'). Holding that the great majority of the Companions of the Prophet had gone astray by following Abu Bakr and 'Umar, they, unlike the Bati'rîyya, rejected the tradition of the law handed down by them and relied for religious knowledge on the descendants of al-Hasan and al-Husayn as a whole, not merely those recognized as imâmîs.

From the 3rd/9th century onwards the tendencies of the Dhârîdîyya came to prevail in Zaydism.

The major points of Zaydi doctrine, as it was fully developed during the 4th/10th century in discussions with representatives of Mu'tazill and Imâmî doctrine, were: the establishment of an imâm is obligatory on the community, according to the common view, because of his functions under the revealed law, not on rational grounds. The first three imâmîs, 'Ali, al-Hasan, and al-Husayn were invested by the Prophet through designation (nâsî). This designation was obscure (kafr, ghiyâr dâlî), so that its intended meaning could be discovered only by investigation. Through this doctrine the Zaydiyya, in contrast to the Imâmîyya, tended to alleviate the sin of the early community in disobeying the order of the Prophet. After al-Husayn the imâmâte belongs to any qualified descendant of al-Hasan or al-Husayn who calls to his allegiance and rises against the illegitimate rulers. The imâmâte becomes legally valid through the formal "call" to allegiance (dâ'wâ) and "rising" (âihtîdî), not through election (âihtîlâr) and contract (âqîd). The qualifications of the imâm were, aside from his descent, essentially the same as in Sunni and Mu'tazilli doctrine, with special emphasis on knowledge in religious matters, ability to render independent judgment (âihtîdî) in law, pietry, moral integrity, and courage. The imâmâte is forfeited by the lack of any of the qualifications, in particular by moral offences. Only the most excellent can be the rightful imâm, and if a candidate excelling the imâmâte rises and claims the imâmâte, the excelled imâm must surrender his position to him. This qualification of the imâm was rejected by some later Zaydi authorities. The prevalent doctrine admitted only a single imâm at any time. The existence of two separate Zaydi communities in the coastal areas south of the Caspian Sea and the Yaman in some instances led to a later recognition of two contemporaneous claimants as imâmîs, but the formal admission of the legitimacy of two contemporary imâmîs was exceptional. There must be someone qualified for the imâmâte at any time. Knowledge of the imâm after he has issued his call to allegiance is incumbent on every Muslim.

The list of recognized Zaydi imâmîs has never been absolutely fixed, though there was a consensus on many of them. The high requirements for the imâmâte, in particular in respect to religious learning, excluded many 'Alid pretenders and rulers. These could be recognized as restricted imâmîs (muhâsîbîn or mulkîsîadu, or "callers" (du'alî), in contrast to the full imâmîs (sibî'în). Only late Yemeni Zaydism developed a formal doctrine concerning the sîbî'îd imâmâte. The Zaydi authorities defined it as "ordering the proper and prohibiting the improper", defending the community against external aggression, and protecting the rights of the weak. He was not authorized to lead the communal prayer, to collect alms and taxes, to wage offensive war, and to carry out legal punishments.

Imâmîyya (Twelver Shi'îs). Imâmî doctrine on the imâmâte in its basic conceptions was formulated in the time of Imâm Dja'far al-Şâdîk (d. 148/776). It founded the imâmâte on the permanent need of mankind for a divinely guided, infallible leader and authoritative teacher in religion. The imâmâte was thus raised to the level of prophecy. The only difference between the messenger prophet (râsîl) and the imâm was that the imâm did not transmit a divine scripture. To ignore or disobey the divinely invested imâm was infidelity equal to ignoring or disobeying the prophet. The conception of the imâm must be fully immune (ma'sûm) from sin and error was fundamental to Imâmî thought. The imâm might, however, practice dissimulation (lâkîyâ) in case of fear for his own or his followers' safety. Although the imâm was entitled to political leadership as much as to religious authority, his imâmâte did not depend on his actual rule or any attempt to gain it. Following the traditions of the radical wing
of the early Shi'a, the Imamiyya repudiated the caliphaties of Abu Bakr, 'Umar, and 'Uthman and maintained that the Prophet had appointed or restricted his wasi by designation. The great majority of the Companions had apostatized by ignoring this designation. The imamate after al-Hasan and al-Husayn was to be handed down among the descend-ants of the latter by designation from father to son until the Mahdi. The succession of the seventh year old Muhammad al-Djawad in 203/818 raised the question whether minority superseded an appointed imamate, and how the imam received his perfect knowledge. The majority asserted that a minor could fulfill all the functions of the imamate, and that he was endowed by God with integral knowledge in religious matters. The crisis caused by the death of the eleventh imam without an apparent son was resolved by the affirmation of the existence of a son and the doctrine of the absence, ghuya [q.v.]. The twelfth imam, though in concealment, continued to live on earth and could fulfill the essential functions of the imamate. He was identified with the Mahdi, whose return before the end of the world is expected.

Authoritative Imami hadith embodies these beliefs concerning the imams: The world cannot exist for a moment without a hadith (proof, guarantor = imam) of God. There can be only a single imam at any time, though there may be a silent (jamit) imam (his successor) besides him. The imams are referred to in many passages of the Kur'An by such terms as the "light of God," His "witnesses" (khudadad), among mankind, His "signs" (salam), those "firm" (rastkhun) in knowledge etc. They are the "vicegerents" (khalifa) of God on earth, the "gates" (abdd) through which he is approached, the heirs of the knowledge of the Prophet. The imams are in possession of all revealed books. Only they have perfect knowledge of the Kur'An in both its exoteric (sahir) and esoteric (batin). They have been given the "greatest name of God" (ism Allah al-'a'lam). They have inherited the arms of the Prophet and the books Sahifa, Djafar, Djami'a, and the Mudaf of Fattima containing secret knowledge. The knowledge of every imam is identical with the knowledge of the Prophet. Though the imams are not endowed with a native faculty of knowing the hidden (ghayb), they have perfect knowledge of all crafts and all languages. God gives them knowledge of anything they desire to know. The imam receives the perfect knowledge of his predecessor in the last moment of the latter's life. In the night of al-kadr of every year the imam receives the judgments of God concerning every event in the following year. The imam is spoken to in the crisis caused by the death of the eleventh imam without an apparent son was resolved by the affirmation of the existence of a son and the doctrine of the absence, ghuya [q.v.]. The twelfth imam, though in concealment, continued to live on earth and could fulfill the essential functions of the imamate. He was identified with the Mahdi, whose return before the end of the world is expected.

The esoteric (basi) Isma'ili doctrine, the imam represents a grade (hadd) in the religious hierarchy between the nasih and the asas and above the hadith. The imam in his time assumes the function of the nasih in expounding and preserving the exoteric (sahir) meaning of the revealed law, while his hadith succeeds to the role of the asas in revealing the esoteric (batin) meaning of the revelation. The imam is the head of the hierarchy in his time also is the mediator between the believer and the principles of the spiritual world. The seventh imam was considered sometimes as a depository imam, since the imamate was carried on among the descendants of al-Husayn, the muslim imam. This theory served, however, rather as an explanation of the irregularities of the succession in the past than as a pattern for the future. The seventh is called Imami, because his successor (imam) after him by clear designation (nass) was appointed 'Ali as the imam after him by clear designation (nass). The seventh imam had initially been legitimate. Any Muslim who does not declare his solidarity (tawalld) with the imam is considered infidel, unless they repent. Thus both 'Uthman and 'Ali became infidels, although their imamate had initially been legitimate. Any Muslim who does not declare his solidarity (tawarrra) from them, shares their state of infidelity. Similarly, any Muslim who does not declare his solidarity (tawarrra) with the just imams, like Abu Bakr and 'Umar, is an infidel. In the esoteric Imami the Mahdi is considered the "Great Man," and the imamate was modified in Fatimid doctrine by the recognition of the Fatimid as imams of the sixth era, removing the eschatological expectations further and further into the future. The efforts to explain the continuity of the imamate between the disappearance of Muhammad b. Isma'il and the rise of the Fatimids, commonly referred to as the time of "occultation" (safir), the eschatological significance of the seventh imam, and irregularities in the succession of the Fatimid caliphs led to constant readjustments of the doctrine, which cannot be followed here in detail. Deviations from the strictly linear descendence in the succession to the fatimid imamate were often explained in terms of a "deposi-tary" (mustawada') imamate which had to be returned to the line of "permanent" (mustabarr) imams. Thus al-Hasan was sometimes considered as a depository imam, since the imamate was carried on among the descendants of al-Husayn, the muslim imam. This theory served, however, rather as an explanation of the irregularities of the succession in the past than as a pattern for the future. The seventh is called Imami, because his successor (imam) after him by clear designation (nass) was appointed 'Ali as the imam after him by clear designation (nass). The seventh imam had initially been legitimate. Any Muslim who does not declare his solidarity (tawalld) with the imam is considered infidel, unless they repent. Thus both 'Uthman and 'Ali became infidels, although their imamate had initially been legitimate. Any Muslim who does not declare his solidarity (tawarrra) from them, shares their state of infidelity. Similarly, any Muslim who does not declare his solidarity (tawarrra) with the just imams, like Abu Bakr and 'Umar, is an infidel. In the esoteric Imami the Mahdi is considered the "Great Man," and the imamate was modified in Fatimid doctrine by the recognition of the Fatimid as imams of the sixth era, removing the eschatological expectations further and further into the future. The efforts to explain the continuity of the imamate between the disappearance of Muhammad b. Deviations from the strictly linear descendence in the succession to the fatimid imamate were often explained in terms of a "deposi-tary" (mustawada') imamate which had to be returned to the line of "permanent" (mustabarr) imams. Thus al-Hasan was sometimes considered as a depository imam, since the imamate was carried on among the descendants of al-Husayn, the muslim imam. This theory served, however, rather as an explanation of the irregularities of the succession in the past than as a pattern for the future.
a more excellent candidate appears. The imposition of conditions on the imām was, however, considered by others. Khāridji doctrine unanimously rejected the prerogative of the Kuraysh to the imām and held any qualified Muslim, even of slave origin, to be eligible. Exceptional was the view of the followers of Shabib b. Yazid in the time of al-Hādīdādī, who considered women eligible for the imāmate. There, an only single imām at any time according to the prevalent view, though some splinter groups admitted the legitimacy of more than one imām, but they could not function together. The other qualifications and functions of the imām are substantially the same as in Sunnism. Special emphasis is placed on his moral austerity as well as his duty of “commanding the proper and prohibiting the improper” and of leading the dhīd ad against the non-Khāridji Muslims.

Of the many Khāridji sects the Ibadīyya (q.v.) is the only one whose doctrine can be studied through its own writings. A systematical investigation has not yet been undertaken. The Ibadīyya, while agreeing with the general Khāridji doctrine, recognized different types of imāms corresponding to the four states or “ways” (masdīk) in which the community of true believers could face its enemies: the state of manifestation (zuhur), when the community was strong enough to overcome the enemy; the state of defection (dī‘a), when it could merely resist a powerful enemy; the state of self-sacrifice (gharme), when a small group of believers chose to rise against the enemy seeking martyrdom; and the state of concealment (ḥīmān), when the believers were forced to live under the rule of the enemy and to practise dissimulation. Only the imām of the state of manifestation can exercise all the functions of the imām, such as the execution of legal punishments, the collection of the tithe and of the non-Muslim, and the distribution of booty. Against the doctrine of the splinter group Khālafīyya, the common doctrine affirms that there cannot be more than one imām belonging to the same “way” at any time.

Later development. Sunnī thought on the imāmate, having been closely tied to the contemporaneous ʿAbbāsid caliphate in the time of al-Māwardi, changed in response to its changing fortunes. Among Khāridji, al-Ghazālī (d. 505/1111), under the impression of the powerful Sālīḥī sultanate, was prepared to view the caliph as merely the representative head of Islam, established by the pledge of allegiance of the effective ruler, whose rule in turn is legitimized by his formal recognition on the part of the caliph. This recognition of the legitimacy of the actual political institutions was motivated, as al-Ghazālī noted, by the overriding necessity of preserving the legality of the acts of governors and judges throughout the empire. The preservation of this legality in the execution of the gharaṣa became a fundamental concern after the fall of the caliphate of Baghdad. In the east, which for decades fell under the rule of non-Muslims, al-Tafṣīrī (d. 791/1389) affirmed that the legality of judicial acts could not depend on the presence of a qualified Kurayshī imām at a time when it was impossible to establish such an imām because of the predominance of error and tyranny. The ʿAbbāsīd shadow caliphate established in Cairo by the Mamlūk sultanate was practically ignored even by Sunni jurists writing under the Mamlūk regime like Ibn Taymiyya (d. 728/1328) and Ibn Dījāma (d. 732/1332). Considering the actual exercise of power as essential to the imāmate, they implicitly vested its functions with the actual ruler. In contrast to al-Ghazālī, they no longer tied his legitimacy to a nominal recognition by the caliph. The ḥādīṣ restricting the caliphate to thirty years, after which worldly kingship would take its place, was commonly quoted again and dominated Sunni thought. Since kingship belonged to the holder of power irrespective of qualifications, the qualifications of the imām stipulated in the classical doctrine could be ignored or expressly waived by the doctrine of necessity (darūra). The classical doctrine made the ruler imāmate, but rather treated as being in abeyance. Following al-Djumayli and al-Ghazālī, later Sunni scholars often emphasized that the imāmate properly belonged to the derived legal matters (furūʿ), not to the fundamentals of religion (ṣul al-dīn), even though traditionally it was discussed in the ṣul works rather than the expositions of the law. This consideration, originally meant to counter the Shiʿi view placing the imāmate at the core of religion, now served to mitigate the impact of the realization that the imāmate in fact no longer existed. Later Sunnī creeds commonly did not refer to the imāmate at all or mentioned only the caliphate of the Rāshidūn.

The modernist Sunnī attitude toward the question of the imāmate has varied. The need for an imāmate defined by religion was sometimes completely denied, as by the tract on the caliphate endorsed by the Turkish Grand National Assembly in support of the abolition of the Ottoman sultanate in 1923 and by the Egyptian ʿAbd al-Rāzīq in his treatise al-İslam wa-Usul al-İmām (1923). Others have advocated the restoration of a universal imāmate modelled upon the ideal caliphate of the Rāshidūn. Most notable were the detailed proposals of the Syrian ʿAbd al-Riḍā (q.v.) set forth in his book al-Niḥafas wa-l-İmām al-İmām (1923). Basic in modernist thinking on the imāmate and Islamic government is the emphasis on government by consultation (shurā [q.v.]) and on election as the sole way of establishing the imām. These principles are viewed as the traits which distinguished the righteous caliphate of the Rāshidūn from the despoticism of the later caliphate. The modernist Sunni attitude toward the question of the imāmate has varied. The need for an imāmate defined by religion was sometimes completely denied, as by the tract on the caliphate endorsed by the Turkish Grand National Assembly in support of the abolition of the Ottoman sultanate in 1923 and by the Egyptian ʿAbd al-Rāzīq in his treatise al-İslam wa-Usul al-İmām (1923). These principles are viewed as the traits which distinguished the righteous caliphate of the Rāshidūn from the despoticism of the later caliphate.

Imāmism fully retained its classical concepts of the imāmate and the questions of succession and the creed. Beginning with the 7th/13th century Imāmī doctrine became greatly elaborated, partially under Sufi and Ismāʿīlī influence. The eternal reality of the imāmate, now commonly termed wakḍa (quality of a wall, “friend of God”), was defined as the esoteric aspect of prophecy. The imām thus was viewed as the initiator into mystical truths by virtue of the theophanic quality of his essential nature as well as by his teaching as expressed in the transmitted logia of the imāms. Imāmīs survived the Fātimid caliphate mainly in two branches, which developed substantially different esoteric thought. ʿAbīyīb Ismāʿīlī recognized al-Tayyib, the infant son of the Fātimid al-ʿAmīr (d. 547/1153), as imām and denied his death. ʿAbīyīb doctrine affirms that the Imām al-Tayyib, though in concealment (ḥīmān), as in touch with his community, did not specifically reject the Imāmī notion of the ḡayba of the imām. The concealed imām is not identified with the eschatological Rāʾīm. In its esoteric doctrine ʿAbīyīb Ismāʿīlī discusses in particular the cosmological nature and role of the imām. The divine nature (lāhīt) of the imām, as distinct from his human nature (nasdīl), is viewed as a temple of light (haykal nūrīn). After the passing (nāḥis) of the imām the light temple,
in which the souls of his followers are gathered, rises to the horizon of the Tenth Intellect, ...

The belief in the tombs of the imams is used to designate both the descendants of the descendant of a Shi'ite imam and the shrine of such a person (with which this article is mainly concerned). The imāmahādāgan are thus sayyids ([q.v.]), but all sayyids are not accorded the title of imāmzāda. In common usage it is given to the sons and grandsons of the imams, but excluding those who themselves became imams, and also to those of their descendants distinguished by special sanctity or by suffering martyrdom. It is not normally accorded to the female descendants of the imams. The lives of many of the imāmahādāgan are recorded in biographical and hagiographical works; the details of the lives of others are obscure, and there is sometimes doubt over the actual descent of some of those who are revered and whose tombs are visited by pilgrims.

The first movement of imāmahādāgan in any number into Persia was probably to Kumm. The Ta'āīk-i Kumm of Hasan b. Muhammad al-Kummi mentions the coming of various descendants of the imams Husayn, Husayn b. Mas'ud, b. Da'far, and others to Kumm. He also states that some of them settled in Ābā and Kāshān (ed. Sayyid Dājjāl al-Din Tahirī, Tehran 1934, 194 ff.). After Ma'mūn's declaration of the Imām Riḍā as his wali 'āsh, many of the imāmahādāgan came to Persia. On the death of the Imām Riḍā, they were dispersed. Although many of them were buried within the precincts of the shrines of the imams, notably at Mashhad and Nadjaf, the tombs of others and the tombs of their descendants, or what are believed to be their tombs, are to be found through the length and breadth of Persia. Many of these have become centres of pilgrimage. From early times it was common for both Sunnis and Shi'ites to visit the tombs of holy men, including the descendants of the imams, but all sayyids are not accorded the title of imamzadeh. This list states that the custom was sanctioned by the learned doctors of the faith although it was doubtful if traditions from the imams themselves could be cited as giving authority for pilgrimages to the tombs of their children (Tuhfāt al-ażīrin, lith. Tehran 1857, 420, quoted by D. M. Donaldson in The Shi'ite Religion, London 1928, 258). He recommends, however, that such pilgrimages should be made. "In all cities", he writes, "there are many tombs attributed to the imamzadehs and other relations of the Imams. The graves of some of them are marked, however, and in case of others there is nothing in particular that is known of their lives. It is advisable to visit all of them whose tombs have been identified. Honour shown to them is the equivalent to honouring the Imams. While no separate instructions are given for these pilgrimages, it is well that their tombs should be visited in the same manner as those of other believers. If a distinction is made in the mode of addressing them let the salutation to be the same as to the Imams, with whatever words flow to the tongue to show them honour. Any written salutations that the learned doctors have included in books are also acceptable" (ibid., 429, quoted by Donaldson).

Many of the imāmahādāgan are only of local interest

Encyclopaedia of Islam, III
and some of those which are popularly considered to be imāms are in fact the tomb of some holy
man, as for example the tomb of Shaykh Ahmad
Ghāzali in Kazvīn, which is known as the Imāmzāda
Abād (Sayyid Muhammad ʿAlī Gurzī, Minādār yā Bāb al-dīgnāt-i Kazvīn, Tehran, 1958, 672. Cf. Ibn
Karbalāʾ, Rauwād al-dīgnān wa-dīgnāt al-dīgnān, ed. Dīḏar Sulṭān al-ක, Tehran 1965, 175, who
mentions a tomb in Tabriz wrongly described as an
imāmsāda. Cf. also the story of how the alleged
burial place of an imāmsāda was discovered in the
andārān of one of Nāṣīr al-Dīn’s palaces in Tehran
related by Dūst “Alī Muḥammad al-Malāmī in Yād-
dashtāhā az-īndāgī-i Ḵūṣūṣi-i Nāṣīr al-Dīn Shāh,
Tehran n.d., 43).

There are special sīyārat-nāmas for many of the
imāmsādas. The place where the shrine first comes
to the pilgrim’s view is known as the saḥāmah. In some
country districts, especially in the tribal
districts of southern Persia, heaps of stones, placed
there by generations of pilgrims, mark these spots.
Pilgrimage to some of the imāmsādas is associated
with a special season of the year, as for example the
annual pilgrimage to the shrine of the imāmsāda
Sulṭān ʿĀlī, a descendant of the Imām Muḥammad
Bāḏrūr, who was killed at the village of Maḵaḥād-i
Ḵāḷī, near Ardahāl, near Ḵaḡān. According to tradi-
tion, an selectable spot was carried in a carpet to
where the shrine now stands. An annual fair is held
at the shrine on the seventeenth day of autumn when
the carpet, followed by a procession, is taken from
the shrine and washed, with much ceremony, in the
near-by stream and returned to the shrine. (ʿAbd
al-Rahīm Ḍarḏāl, Taʿrīḵ-i Ḵāḥān, Tehran 1956,
300 ff. and A. Houtum Schindler, Eastern Persian
Īrān, London 1856, 85, note). This practice is still
current. In many other shrines relics of the imāmsāda
over whose remains the shrine has been raised are
also to be preserved. For example at the shrine of the
Imām Maḥmūd, reputed to be a descendant of
the Imām Mūsā b. Ḏiḏār, near Arūn and Nāz-
maḵān, what is claimed to be the sword of Sayyid
Ḏiḏār al-Dīn is in the keeping of the mutawwāli.

Miracles and special properties are attributed
to many imāmsādas. Like mosques they became,
by custom, places in which asylum or badt [q.v.]
could be taken. Criminals and fugitives from justice
frequently had recourse to them. Nāṣīr al-Dīn Shāh
[q.v.] made abortive attempts to limit the practice.
One of the best known imāmsādas is that of Shāh
ʿAbd al-ʿĀṣīm near Tehran (see Donaldson, op. cit.,
260). Owing to its proximity to the Kāchal capital,
those who were protesting against the actions of the
government frequently took refuge there in the late
nineteenth and early twentieth century. Ḏiḏār al-
Dīn Aḥfānī [q.v.] sought asylum there in 1891, but
after some seven months his sanctuary was violated
and he was seized by government troops. During the
struggle which ended in the grant of the Constitution
the supporters of the movement took refuge at Shāh
ʿAbd al-ʿĀṣīm in the spring of 1905, while in the
summer of 1907 a number of mutawwāls supporting the
Despotism retired there.

Many of the more famous imāmsādas have aubāf for
their upkeep; some others have small aubāf, while the
more obscure often dispose of no funds at all except what pilgrims may give. There is
often a strong hereditary tendency in the office of
mutawwāli (see Mīrāḏ Ṣafīʾ, Dastūr al-Mutchāh, ed.
Muḥammad Ṭakī Dānishpāzhūh, in Recueil de la
Faculté des Lettres, University of Tehran, XVI, no. 1-2,
68-9 for the office of mutawwāli of the shrines at
Ardahāl and Shāh ʿĀbd al-ʿĀṣīm; and H. Busse,
Untersuchungen zum islamischen Kanzleiewesen, Cairo
1950, 157-75).

main cities of Persia see ʿAlī Ḵāber Sālīnsāzī, Taʿrīḵhā-
i Wafā dar Ḵāle, Tehran 1964. Many local histories have information on
imāmsādas situated in the regions with which they deal.

(Al. S. L. Lamont)

IMĀN (a.), faith (in God), māzdār of the 4th
form of the root *mn*. The root has the connotations of
“being secure, trusting in, turning to”; whence:
“good faith, sincerity” (amana), then “fidelity, loyal-
ty” (amdn), and finally the idea of “protection grant-
ed” (amān). The fourth form (āmnah) has the double
meaning of “to believe, to give one’s faith” and (with
by) “to protect, to place in safety”. The root *mn*
is one of those most frequently found in the vocabu-
lary of the Kūrān, where imān means sometimes
the act and sometimes the content of faith, some-
times both together. It may be said that the Kūrān
continually teaches the necessity of faith and pro-
claims its demands.

I. Elements and conditions of the act of
faith. What is “to believe”? The schools of
the Ḥanbalī and of fiṣṣīḥ very soon posed this
question and continually returned to it. Three prin-
cipal elements concur in an act of faith: the internal
conviction, the verbal expression, the performance
of the prescribed works (ʿiḥād [or taʿṣīḥ] bi ʿl-balī, ʿiḥād bi ʿl-lūsān [or kawl], `amāl). There follow
now the main solutions, which sometimes overlap,
but according to different perspectives. It should
be added that each term of the definitions proposed
must be considered in relation to the schools or
tendencies which use it, and to their ideas.

(1) The Aṣḵārī school stresses conviction or
internal judgement. We find in al-Aṣḵārī himself
two ideas of faith: (a) that of the credos of the
Hānbalī (Cairo ed. 1348, 11) and of the Māḵāli (ed. ʿAbd
al-Hamīd, Cairo n.d., i, 327), which defines faith
(in the Ḥanbalī tradition) as “words (kawl)
and works” (b) that of the Luma (ed. with Engl. tr. by
R. J. McCarthy, The Theology of al-Aṣḵārī, Beirut
1953, 75-104) which states: “faith is taʿṣīḥ in God”;
that being understood as an internal judgement
of truthfulness, which gives itself to God. The
vocabulary may vary, al-Ghazālī will speak of ʿabād,
“pact”, agreement of the heart, and al-Durjānī
(Tarīḵā, ed. Flügel, Leipzig 1845, 41) prefers ʿiḥād;
but the school as a whole considers the “pillar”,
the formal constituent of faith, to be the conviction
of the heart (or of the intellect, ʿabāl): the verbal
profession of this is, unless it is impossible, the
condition required, and the “actions of the limbs”
the accomplishment of the prescribed works) inter-
vene to perfect it. When therefore the electicism of al-Ghazali’s *Ifriyā ʿulum al-din*, Cairo ed. 1325/1933, i, 109) unites the three elements to define faith as *tasdīk* (or *ʿabād*), plus *ḥanūf* and plus *ʿamal*, it cannot be said that he is diverging from Ḡarāʾirī tradition.

(2) In the Ḥanafī-Mūtarrīdi tendencies, the stress moves from *‘.thumb to *ḥanūf*, without omitting *tasdīk* and joining to it the “knowledge of the heart (ʾmaʿrīfa)”. “‘Faith’, says article 5 of the *Wasṣiyāt Abī Ḥanīfa*, which speaks about the thorny questions of the *Ikhwan al-Safa*’s conviction (*tasdīk bi ʿl-ḥanūf* and *knowledge of the heart (wa-ʾmaʿrīfa bi ʿl-hall*)”. More briefly, the *Fīkḥ Abī ʿl-Hārīrī II* (article 18) states: “faith is *ʿīşr*ār and *ṭasḥīl*”. The profession of faith expressed in words (as it is formulated, essentially, by the “two members of the *ṣahāda*)” thus appears here as the constituent of the act of faith: and the conviction which is given to it becomes the condition of it. In some manuscripts of the *Wasṣiyāt*, sometimes *tasdīk* and more often *ʾmaʿrīfa* are missing. It remains that an appeal to the “knowledge of the heart” is characteristic of the Ḥanafī-Mūtarrīdi tendencies. In his *Makālāt al-ʿālimīyyīn*, Abū ʿl-Ḥarīrī saw in it even the first of the elements of faith according to Abū Ḥanīfa. As Wensinck points out (The Muslim creed, Cambridge 1932, 132), it is possible that there is here a new agreement with the Mūtarrīdis’ definition of faith, which considered it to consist in the knowledge of God, of the Prophet and of his teaching.

The *Makālāt* (i, 197-8) mention in this connexion Ḏāhm b. Ṣafwān and the *Dhimayyīa*. Abū ʿl-Ḥarīrī describes the Ḥanafīyya as a Mūtarrīdi sect (*ibid., 202*), while recognizing that they (unlike the *Dhimayyīa*) include in faith *ʿīşr*ār with—and after—*ʾmaʿrīfa* (*ibid., 203*). However, the brief article of the *Fīkḥ Abī ʿl-Hārīrī II*, mentioning only the verbal confession and internal conviction, was to be the main theme of the Mūtarrīdi line (e.g., Abū al-Raḥīm Ibn ʿAll, *Kitāb Naṣm al-fardʿī*), Cairo n.d., 49 ff.). We find again that Abū ʿl-Ḥurānī, in his *Ṭarīqāt* (*loc. cit.*) agreed with this opinion.

(3) As we have seen, various Ḡarāʾirī texts mention the “works of the limbs” (in contrast to the Mūtarrīdis’, for whom works are only “ways” or “means” *ṣahāda*). They do not, “in confession (of faith) by the tongue” they not consider them to be a formal constituent of it, nor even an obligatory condition. An earlier attitude, which was later challenged by Sunnism and in which Ḥārīqīs, Ṣāḥīfs, Kādāris and Muʿtazīlīs joined, saw “works” as an integral part of faith, even as faith itself. By Abū ʿl-Ḥurānī, Kādāris, Muʿtazīlīs joined, saw “works” as an integral part of faith, even as faith itself. By Abū ʿl-Ḥurānī, Kādāris, Muʿtazīlīs joined, saw “works” as an integral part of faith, even as faith itself. By Abū ʿl-Ḥurānī, Kādāris, Muʿtazīlīs joined, saw “works” as an integral part of faith, even as faith itself.

Faith must not only be expressed by words and by “the works of the limbs”, but it should arise in the heart of the believer the virtues of the faith of God (ḥanāf*), of submission to God (tausawwirl), of humility (maḥsūl), and to fulfil the pillars of Islam (cf. the last sentence of the ʿAbd al-Raḥim, “To believe with—and after— *ṭasḥīl*”). We find again the distinction between external (ʾākhir) faith and internal (bāṭin) faith. The first is verbal affirmation; the second, which is the true faith, is defined as the innermost thoughts of the heart brought to bear, with experienced certainty, upon the truths professed by the tongue; and it is thus no longer a case of *ʿīsha* of belief, or adherence, or of *ṭasḥīl*, judgement of veracity, but of the “idea” of intellectual conception (iḍmār) which “realizes” the certainty (ṣuḥūl) of the object of faith (cf. the ʿṣuḥūl preached by al-Ghazālī, who goes so far as to call “the reality of faith” an experienced taste of internal evidence). The following chapters of the *Ikhwān al-Ṣafā* combine with this “certainty” the religious sentiments of *tawakkul*, *iḥlāl*, *ṣubr*, etc. (cf. *cit., iv*).
Faith and freedom: “Let whosoever will believe, and let whosoever will disbelieve” (Kūrān, XVIII, 29). How should this verse be understood? The degree of freedom recognized in the act of faith is linked with the problem of the freedom of human action; the assessment of it thus varies according to the schools. The Mu’tazilis consider the act of faith to be “created” by man by virtue of a power created in him by God; the Ash’aris consider it to be directly created by God, without any man’s act, but the act of the heart, thanks to that of tasdiq which is itself “the creation in man of the power to obey” (al-Taftażānī, Mahāṣid, Instanbul n.d., 118). This definition, although given by al-Taftażānī, is more Ash’ari than Māturīdī. Indeed, in general, the Māturīdī Ḥanafis consider the root (qād) of every human act to be created by God, whereas its qualification arises from the judgement of man. Applied to faith, this attempt at conciliation is aimed at reconciling the ideas both of God’s creation of actions and man’s freewill as recognized by the Kūrān, XVIII, 29.

(2) Faith and salvation: All the schools state that faith ensures salvation. Their divergencies on the conditions of salvation arise from their divergencies concerning the formal constituents of the act of faith: for the Ash’aris it is centred on internal tasdiq, for the Māturīdī Ḥanafis on the expressed profession of faith and the adherence of the heart, for the Mu’tazilis on the performance of the “prescribed duties”, for the Hanbalis and the Wahhābis on the profession of faith and the performance of the basic duties. If a common denominator is sought for all these various opinions, it might be said imān, summed up in šahāda, is the witness made to God, the affirmation that He is Lord, according to the terms of the “pact”, of the miḥāk of pre-eternity: “Am I not your Lord? … Yes, we testify” (Kūrān, VII, 172). In this way agreement can be reached on the well-known hadith: “No one shall enter hell who has an atom of faith in his heart” (in the Šahih of Muslim) and again: “Hell will not welcome anyone who has in his heart an atom of faith” (second part of a hadith of al-Bukhārī, 81, 51). But the interpretations of these traditional texts diverged in their turn. For the person who regards the performance of the prescribed works as an integral part of faith, the sinner guilty of grave acts of disobedience is no longer truly a believer. For the person who regards works as merely the perfection of faith, the believing sinner remains a believer; he may be punished for a time in hell, but in the end he will be one of the “guests of paradise”: for the Ash’aris it is centred on internal tasdiq; for the Ḥanbalis and the Wahhābis, faith is that of the heart, and render

III. The value of faith. There should be mentioned three problems.

(1) Faith and freedom: “Let whosoever will believe, and let whosoever will disbelieve” (Kūrān, XVIII, 29). How should this verse be understood? The degree of freedom recognized in the act of faith is linked with the problem of the freedom of human action; the assessment of it thus varies according to the schools. The Mu’tazilis consider the act of faith to be “created” by man by virtue of a power created in him by God; the Ash’aris consider it to be directly created by God, without any man’s act, but the act of the heart, thanks to that of tasdiq which is itself “the creation in man of the power to obey” (al-Taftażānī, Mahāṣid, Instanbul n.d., 118). This definition, although given by al-Taftażānī, is more Ash’ari than Māturīdī. Indeed, in general, the Māturīdī Ḥanafis consider the root (qād) of every human act to be created by God, whereas its qualification arises from the judgement of man. Applied to faith, this attempt at conciliation is aimed at reconciling the ideas both of God’s creation of actions and man’s freewill as recognized by the Kūrān, XVIII, 29.

(2) Faith and salvation: All the schools state that faith ensures salvation. Their divergencies on the conditions of salvation arise from their divergencies concerning the formal constituents of the act of faith: for the Ash’aris it is centred on internal tasdiq, for the Māturīdī Ḥanafis on the expressed profession of faith and the adherence of the heart, for the Mu’tazilis on the performance of the “prescribed duties”, for the Hanbalis and the Wahhābis on the profession of faith and the performance of the basic duties. If a common denominator is sought for all these various opinions, it might be said imān, summed up in šahāda, is the witness made to God, the affirmation that He is Lord, according to the terms of the “pact”, of the miḥāk of pre-eternity: “Am I not your Lord? … Yes, we testify” (Kūrān, VII, 172). In this way agreement can be reached on the well-known hadith: “No one shall enter hell who has an atom of faith in his heart” (in the Šahih of Muslim) and again: “Hell will not welcome anyone who has in his heart an atom of faith” (second part of a hadith of al-Bukhārī, 81, 51). But the interpretations of these traditional texts diverged in their turn. For the person who regards the performance of the prescribed works as an integral part of faith, the sinner guilty of grave acts of disobedience is no longer truly a believer. For the person who regards works as merely the perfection of faith, the believing sinner remains a believer; he may be punished for a time in hell, but in the end he will be one of the “guests of paradise”: for the Ash’aris it is centred on internal tasdiq; for the Ḥanbalis and the Wahhābis, faith is that of the heart, and render

III. The value of faith. There should be mentioned three problems.

(1) Faith and freedom: “Let whosoever will believe, and let whosoever will disbelieve” (Kūrān, XVIII, 29). How should this verse be understood? The degree of freedom recognized in the act of faith is linked with the problem of the freedom of human action; the assessment of it thus varies according to the schools. The Mu’tazilis consider the act of faith to be “created” by man by virtue of a power created in him by God; the Ash’aris consider it to be directly created by God, without any man’s act, but the act of the heart, thanks to that of tasdiq which is itself “the creation in man of the power to obey” (al-Taftażānī, Mahāṣid, Instanbul n.d., 118). This definition, although given by al-Taftażānī, is more Ash’ari than Māturīdī. Indeed, in general, the Māturīdī Ḥanafis consider the root (qād) of every human act to be created by God, whereas its qualification arises from the judgement of man. Applied to faith, this attempt at conciliation is aimed at reconciling the ideas both of God’s creation of actions and man’s freewill as recognized by the Kūrān, XVIII, 29.
Kur‘an, XX, 14. This first meaning, which is the basis of the idea of “uncreated faith”, by no means excludes the second meaning of muʿāmin, one who gives security and protection. Allāh muʿāmin means therefore: God, the source of security (and thus, of faith), the Protector. While referring to the first meaning, Fakhr al-Dīn al-Rāzī (Lawāmi‘), Cairo 1323, 1435-5) seems to prefer the second one.

Nevertheless, for the majority of the Ashʿarīs, the “atom (dharra) of faith” which makes salvation, is readily considered as a created participation in the “uncreated faith” of God, placed in the heart of man at the time of the mīhāk. IV. Questions concerning faith. Very many related questions are raised by the consideration of faith. We give here a list which is not exhaustive: (1) the “status” (ḥukm) of muʿāmin in this world and the next; (2) the relation between faith and disbelief (kufr); (3) the relation between imān and īslām; (4) may a person “hide” his faith? (the problem of takḥīyya); (5) should the proviso “if it pleases God” be added to the statement “I am a believer”? (6) can faith increase and decrease? (7) the degrees of faith. (Cf. L. Gardet, Les grands problèmes de la théologie musulmane: Dieu et la destinée de l’homme, Paris 1967, 308-90.) The first five questions will be treated in the articles MU’MIN, KUFR, ĪSLĀM, TASDĪK, ĪMA, respectively. We discuss here only the last two.

(1) Can faith increase and decrease? This question appears at a very early stage in the enquiries of the schools; it is related to the definition accepted for the act of faith. The Kur‘ān mentions many times the possibility of an increase of faith (thus, III, 173; XLVIII, 4; LXXIV, 31). Certain opinions, however, present it as immutable. Two examples are: (a) The Kharījis and the Karrāmiyya consider that faith is given as a whole and is retained or lost in its entirety, according to whether obedience to the Law is maintained or lost; it cannot vary. (b) The Māturīdis and the Māturīdi–Hanafis consider faith to be immutable, but not as this is understood by the Kharījis. “Faith”, says article 2 of the Wasiyyat Abī Hanīfa, “cannot grow or decrease. In fact its weakening can be conceived only in connexion with disbelief (kufr) and its progressive weakening in connexion with kufr. This would imply the possibility of being at the same time both a believer and a non-believer: and how could this be possible?” (cf. Wensinck, op. cit., 125, 138). This thesis was to be defended, against the Āsh’arīs, by the later Māturīdi manuals (cf. ‘Abd al-Rahim Ibn ʿAll, op. cit., 52-4, which appeals to Abū Hanifa and al-Māturīdi). It implies a radical distinction between “faith” and “works”. To omit an obligatory work is an act of disobedience, but it does not affect faith, either in itself or in its state of perfection.

But a very early tradition, in conformity with the Kur‘ān, admitted possible variations of faith. Al-Būghārī and Ibn Māḍā, citing the Companions, stated this thesis in their introductions to the chapter on faith. And this was to be the opinion followed by the majority of the schools. Thus: (a) the Muʿtaṭzīls consider that faith is the witness of works: hence it can vary in itself; it increases according to the accomplishing of the prescribed works and decreases according to their omission. (b) Ibn Hanbal (ʿAkhīda, i, 24) regards faith, defined by word and works, as being susceptible to growth and to decrease. Hanbal thinking is unanimous on this point. Ibn ʿAta: “Interior adherence (tasdīk) grows with the words and the works of goodness (ḥasān); it decreases with disobedience (maṣi‘ya). It has a point of departure and a beginning; then it is possible for it to progress and to increase endlessly” (op. cit., 487). The same opinion is found in Ibn Taymiyya and the Wahhhībīs. This thesis (we may note) was found also in the creeds of the Muhālīdī and of the Ibāna of al-Āsh’arī. (c) The whole of the Āsh’arī school was to uphold this theory of the growth and decrease of faith, but at the same time stressing that it was a matter of the degree of perfection brought to it (or not) by works accomplished. (Cf. Ibn ʿAfīf, al- Tabsīr, Cairo 1352/1934, 50): the “uncreated faith” of God and the faith of the angels can neither increase nor diminish; the faith of the prophets may grow according as the mission is faithfully accomplished, but it cannot decrease, because of the ‘isma, the prophetic “infallibility”; the faith of common men alone can increase or decrease. But the formal constituent of imān being defined, following the Luma‘ of al-Āsh’arī, by the interior tasdīk, the school habitually distinguished, at the root of faith, an immutable nucleus (the “atom of faith” of the hadāth) created by God in the heart: it can be lost entirely by an act of disbelief, but it cannot vary. Thus the Āsh’arīs admit both the immutability of faith in its main nucleus (cf. Māturīdi–Hanafis), and its variability in its degree of perfection (cf. Hanbalis).

(2) The degrees of faith: This question, to a certain extent connected with the last, is nevertheless different from it. It is no longer a matter of lower or upper levels of faith within the same subject, according to “obediences” or “disobediences”. It is a matter of the degrees of faith according to its intrinsic nature in different subjects.

The Āsh’arī and Shāfi’i lines, which consider takhīd to be an unreasoning imitation and a passive acceptance, were severe on “faith through takhīd” as being valid only for a person incapable of rising to anything higher. The Hanbalis, on the other hand, who defined takhīd as an intentional and conscious imitation of the Prophet, of the Companions and of their successors, regarded it as a fundamental attitude of the believer (cf. H. Laoust, Ibn Bāja, 7, n. 2, and 9, n. 11). The same opinion is found in Ibn ʿAsīl, however, was suspicious of it, fearing that recourse to takhīd would substitute imitation for the seeking of proofs (cf. G. Makdisi, Ibn ʿAsīl et la résurgence de l’Islam traditionniste au XIe siècle, Damas 1965, 524-5).

The majority of the manuals of kalām regard as much superior to “faith by takhīd” faith based on knowledge (or science), imān an ʿilm: an enlightened faith, which “proves” its object. The “proof” in question being understood as arising from the arguments and readings of the mutakallimīn, the “scientific” faith thus lauded was exposed to attacks by opponents, both Hanbalis and falāṣīfī. Al-Ghazālī (Ikhān, i, 107-8) mentioned a third degree, higher than the preceding one, the “faith of certitude” (yaḥīn). There is probably to be seen here an influence of both Shīʿah and Sufism: this higher degree based on the yaḥīn is for al-Ghazālī the only true faith, as was the “interior faith” for the Ikhwān al-Ṣafī. The same influences are very probably present in Ibn Taymiyya. After defining faith through īslām, that is through the proclamation of the yaḥīn and the performance of the basic duties (Kisāʾ al-imān, 32), and after enumerating the feelings of experience which it produces in the heart of the believer (cf. above), he distinguishes in ascending order the faith of the wāli (one “close” to God), that of the tasdīk.
(the most truthful, the just), and that of the prophet. Starting from a "conformist ritualism" (H. Laoust), faith, according to Ibn 'Atiya, ends as ifšā (virtuous conduct), ḥikāya (sincerity and unadulterated purity), and in the annihilation (fānā) of the created will in a total submission to the divine Commandment.

**Bibliography:** in the article. A complete bibliography would be immense; in it there would need to be mentioned the "professions of faith" of the various Sunni schools and of the fārāb, almost all the manuscripts of Ṣūlān al-balāmah and of usūl al-dīn, and many Sūfī spiritual works.

(ḤĀDI)) IMMĀD AL-ḤĀDI AL-MUḤADDIR AL-ḤIMM DI AL-MĀHKĪ B. MUḤAMMAD AMīN AL-FARQĀN, the spiritual guide and preceptor of a number of leading religious personalities of India (including Muḥammad Kāsim al-Nānawtāwi, founder of the Dār al-Ulūm at Deobānd [q.v.], Rashīd Ahmad al-Angārī of Gaṅghōd (d. 1323/1905), a well-known muḥaddith, fākhlī, divine and scholar of his days and Asgāfr 'Alī Thānāwī [q.v.], was born at Nānawtā (dist. Sahārānpūr, India) in 1321/1851.

A hāfīz of the Kurān, he was moderately well educated in Persian, Arabic grammar and syntax and jurisprudence, but was never regarded as an álim in the traditional sense. He spent his youth in gaining a good knowledge of tasawwuf and soon established himself as a shaikh in a mosque in his home-town of Thānā Bhaṅwān (18 miles N.W. of Muzaffarnagar), which later came to be known as the Khankāh-i Ḥimmatīyā, the seat of his sīsilā. It was burnt down as a reprisal in 1857, following the insurrection of the local people, but was rebuilt and in course of time produced such great figures as Asgāfr 'Alī Thānāwī, one of whose disciples was Sulaymān Nadwī, the celebrated Urdu biographer of the Prophet.

He performed his first pilgrimage to Mecca in 1261/1845, thus gaining the honorific of "Ḥādī", which raises the Arabic numeral of his name. During the Indian Mutiny of 1274/1857 Imdād Allāh and his colleagues also declared ḥikāya against the British, following the execution of a certain 'Abd al-Rahīm, a leading citizen of Thānā Bhaṅwān, who was accused of being in league with the mutineers. After establishing parallel government in the town they attacked Shāmīl, a small neighbouring place, but were routed by the British. Imdād Allāh succeeded in making good his escape but the other ring-leaders of the rebellion were arrested and treated rather leniently. Apprehensive of being arrested, the Ḥāḍī succeeded in leaving the country incognito and reaching Mecca (1276/1859), where he permanently settled. As a stranger, not esteemed very highly by the local population, he passed some very difficult days in the beginning owing to poverty. Besides his other activities he delivered lectures on Djalāl al-Dīn Rūmī's Ṣ素养īn the Haram al-Sharīf. Gradually his fame as a šīfi spread and he began to attract many followers. People from India, mostly scholars from Deobānd, went all the way across the seas to contract his bay'a. Asgāfr 'Alī Thānāwī being one of them. While in Mecca he married three times at a fairly advanced age, but none of the wives bore him children.

He is the author of: (4) Di'yāl al-ḥasbū (in Persian; ed. Delhi 1877) composed in 1282/1865, on the ṣarbār wa-'an-sabārī (formulas and practices) of the Qādīya, Shāftīya and Ṣ素养īn al-Dīn in Urdu, containing strange tales and parables in verse warning against the wiles of Satan; (5) Di‛kād-i akbar, a long poem in Urdu composed in 1268/1852 on the virtues and merits of kītal, in fact a translation of some anonymous treatise in Persian, which shows that even before the Mutiny of 1857 he had been cogitating on the subject of ḥikāya which led to his military setback at Shāmīl in 1857 (see above); (6) Tawḥīd al-mushtāq-i Ḥimmatīyā, a treatise composed in 1281/1864, on gnosis and divine cognition and on alḥākhā wa 'l-magāzī; (5) Dārīnāma-i ghamākh, a small poem in Urdu composed as a plaintive dirge of a forlorn lover; (6) Irshād-i mursīdī (again a poem in Urdu composed in 1293/ 1876) on spiritual and esoteric experiences, also containing his moral exhortations and aphorisms; (7) Wāḥadat al-mushtāq (in Persian) composed in 1299/1883; a brief treatise on the doctrine of the Unity of Being as propounded by Ibn al-'Arabī; (8) Faysalā-i ḍaf māsāla, a treatise on seven controversial topics of the day, such as simʾā, the visiting of graves, the celebration of the death anniversary of a saint etc., which led to a rift among his own followers; (9) Gulār-i māsirīf, a collection of his Persian and Urdu verse on spiritual and mystic matters; (10) A Ḥimmatīyā in Persian on the Maḥμaw (ed. Cawnpore 1314-1321/1898-1903), partly published posthumously; (11) Mawābūt-i Ḥimmatīyā (ed. Asgāfr 'Alī Thānāwī, Lahore 1966), a collection of 50 of his Urdu letters written from Mecca during the closing years of his life (the last letter is dated 1327/1899); (12) Marākūmāt-i Ḥimmatīyā, 61 letters in Persian published as an appendix to Imdād al-mushtāq (ed. Asgāfr 'Alī Thānāwī, Lahore 1915); (13) Kullāyāt-i Ḥimmatīyā, a collection of his poetical works, repeatedly published in India and Pakistan (ed. Cawnpore 1325/1898, Shāhkhōf, dist. Shēkhjōhpūr, n.d.). Most of these compositions are in verse but he never claimed to be a great poet. These books have been published repeatedly in India and Pakistan with the exception of the Ḥimmatīyā on the Maḥμnaw.

He died in 1371/1899 in Mecca widely acclaimed as a great spiritual teacher, at the ripe age of 84, and was buried in al-Maʾālā, the historic graveyard wherein also lie buried Khadījā, the first wife of the Prophet, and his uncle Abū Taibī. **Bibliography:** Asgāfr 'Alī Thānāwī, Imdād al-mushtāq, Thānā Bhaṅwān 1327/1909; idem, Karāmāt-i Ḥimmatīyā, Shāhkhōf (dist. IMPIETY, IMPIOUS [see KAFIR]

IMRAN, IMRA'LI [see EMRELI]

IMRAN (Ibneb) 'Amram (modified to an authentically Arabic name, cf. Horovitz, Koranischen Untersuchungen, 128), name given in “Israelite” history as related by Muslim authors to two persons: the first appears in the Bible but not in the Kur'ân; the second vice versa. The first is the father of Mûsâ, Hûrân and Maryam (q.v.), the son of Kâhiy (Kohah, the son of Lâwî (Levi) according to the Biblical genealogy (Exodus, vi, 20) followed by al-Ya'âbî, ed. Horovitz, 51 (tr. G. Smit, Bijbel en Legende, 1932), al-Mas'udi, i, 92; tr. Pellat, i, § 85; others, for example al-Tabari, i, 443, and the Kâlûb al-Bad' wa 'l-tarîkh, iii, 81/83 insert between 'Imran and Kâhiy, Yishar, who according to the Bible was the brother and not the father of 'Amram.

Rabbinal legend referred to 'Amram as an important person in Egypt. In the fabulous version of al-Mas'udi, i, 92, 93, he was again betrayed and went to the Azd in Rudh (relying on information obtained from members of the Sufriyya, 527, f); Ash'arî, Mahallî, 120, 5; 'Agâhî, vii, 152-7; Amin, Mu'tahfî, 91; 'Abdali, Mu'tafî, ii, 256; Ibn Hadjar, Aynî, i, 276; Ibn 'Abidîn, ed. M. Gauderfroy-Demobymes, Mahomet, Paris 1957, index s.n. 'Imran(‘Amran; for the Jewish legend, see L. Ginsberg, The legends of the Jews, ii, 1949, 229 = 1957 ed., p. 331).

Bibliography: Ibn Sa'd, viii, 113; Dâhid, Bayan, i, 132, 136; Mubarrad, Kâmîl, 530-8 (relying on information obtained from members of the Sufriyya, 527, 7); Ash'arî, Mahallî, 120, 5; 'Agâhî, vii, 152-7; Amin, Mu'tahfî, 91; 'Abdali, Mu'tafî, ii, 256; Ibn Hadjar, Aynî, i, 276; Ibn 'Abidîn, ed. (J. EISENBERG—[G. VAJDA])

‘IMRAN B. HITAN, a famous Arab sectarian and poet. He hailed from the Banu 'l-Harith b. Sadûs, a clan of the Banû Shaybân b. Dhuw. He was first a Sunni, and is mentioned by Ibn Sa'd (vii/1, 113) in the second class of the “followers” (tablûn) of Banû 'Alâ, a name given to the transmitter in the collections of the Banû 'Alâ, Abû Dâwûd, and Nasâ'i. It is said that he was converted by his wife to the doctrine of the Khawârij (q.v.) and became the leader of their moderate wing, the Sufriyya (q.v.), which rejected indiscriminate political

murder (isti'âd [q.v.]) and were lenient towards those Khawârij who sometimes abstained from fighting and stayed at home (al-ba'âd). They were interested in theological problems, and 'Imran had no equal as their muftî and the expounder of their doctrines. Of his life very little is known. When the great revolts of the Khawârij started in the reign of 'Abd al-Malik, 'Imran was persecuted by order of al-Hâjîdâlî and had to leave Basra. Under a false name he found refuge with Bedouin chiefs in the desert, but had to move on to Khawarîd (q.v.) in Basra, the Khawarîd started in the reign of 'Abd al-Malik, which did not however prevent him and his band on occasion from continuing to pursue his favourite occupation.

For a year he stayed in Syria with Rawb b. Zinbâ al-Dîjââmî, a favourite of 'Abd al-Malik, who inadvertently led the caliph to detect his guest's identity. So 'Imran fled to Zufar b. al-Hârîth al-Kilâbî, the leader of the Khayyâylân. This happened apparently before Zufar was besieged and subdued by the caliph in 71/689. 'Imran then fled to Oman, where they were living many followers of Abû Bîlîl (see MIRSAI B. UDAYWA); they received him kindly, but he was again betrayed and went to the Azd in Rûdî Maysân near Kûfâ or according to others (Yâmû, iii, 889) in Fârîth in the district of Wâsît. He died there in 84/793.

'Imran had a great reputation as a poet; according to Faraḍâk (Agâhî, vii, 232) he would have been counted the greatest poet of his time, had he not devoted all his verses to the cause of the Khawârij. His diwâns, mentioned by Yâkût, U'dâbî, vi, 133, is lost. He lamented (Kâmîl, 550, etc.) the death of Abû Bîlîl, who was killed in battle in 61/680; he eulogized (Agâhî, vii, 153, etc.—the whole poem is extant in al-Âamâsâ al-Bâsiriyâ) Ibn Muldjam (q.v.), the murder of 'Ali. In other poems he praises his hosts Zufar (Kâmîl, 532 f.; Agâhî, vii, 254), Rawb (Agâhî, vii, 253) and the Azd (Agâhî, vii, 154; see above Yâmû, i, 448). Some of his verses contain pessimistic reflections on life and death.

Bibliography: Ibn Sa'd, vii/1, 113; Dâhid, Bayan, i, 132, 136; Mubarrad, Kâmîl, 530-8 (relying on information obtained from members of the Sufriyya, 527, 7); Ash'arî, Mahallî, 120, 5; 'Agâhî, vii, 152-7; Amin, Mu'tahfî, 91; 'Abdali, Mu'tafî, ii, 256; Ibn Hadjar, Aynî, i, 276; Ibn 'Abidîn, ed. (J. W. FÖCK)

‘IMRAN B. SHAHIN, one of the best known of the bandit-lords who, from the marshes of the Badhâ (q.v.) where they were entrenched, periodically defied and even threatened the authorities of Baghdad itself. A native of al-Dîjâmîa, a place between Wâsît and Basra, 'Imran was obliged to go into hiding following a crime which he had committed, and then on led the life of a brigand, for which the region where he dwelt was very suitable. He next entered into relations with Abu 'l-'Ismân al-Bârîdî (see al-Bârîdî), who saw in him the man he needed to defend the marshes against his enemies.

But as his banditry was threatening the security of the road to Basra, the Bûyûq Mu'izz al-Dawla was several times obliged to send troops against him; this however, because of the local conditions, produced no result, and the government soldiers were usually lured into some place from which they could not escape. Mu'izz al-Dawla was reduced to appointing 'Imran officially governor of the region, which did not however prevent him and his band on occasion from continuing to pursue his favourite occupation.
Repeated attempts by Mu'izz al-Dawla and his successor Bakhtiyar to put an end to his situation by force were no more successful than formerly; Bakhtiyar was in fact reduced to asking 'Imrān's help to fight against 'Aḍud al-Dawla, the bandit receiving the official laḥab of Mu'ān al-Dawla. He remained master of the marshes until his death in 369/979 and passed on his power to his son Husayn, with whom 'Aḍud al-Dawla had the same experience as his predecessors had had with his father; however in 372/982-3, Husayn was killed by his brother Abu 'l-Haydja, who himself suffered the same fate the following year at the hands of the bādīq al-Muzaffar b. 'All [q.v.], who had been a general under the rule of his father, and who then proclaimed as ruler a son of Husayn (a minor) named Abu 'l-Ma'ālī; but soon afterwards he established himself in his place, basing his authority on a forged title of investiture bearing the signature of the Būyid Șanşām al-Dawla. On one other occasion, in 412/1021, a son of 'Imrān, Abu 'l-Haydja b. Muḥammad, attempted to seize power, but he failed.

Bibliography: See especially Miskawayh and 'Abd al-Malik al-Ḥamadhānī, Takhmila; see also Būyids.

AL-‘IMRĀNĪ, Muʿīn al-Dīn al-Ḥindī, distinguished theologian and scholar of Delhi, whom Shaykh 'Abd al-Haqq Muḥādhdhī calls usād-i șahr, "teacher of the (whole) town". He wrote commentaries on Kanz al-’dāvīya, al-Manār, al-Muḥāfīz, al-Takhkīs, al-’Uṣūmd and Talwūth (for MS, Zuhayr, cited below). Muḥammad b. Tughlūkh (725/52-1324/51) held him in high esteem on account of his erudition and sent him to Shīrāz to persuade Kādī 'Aḍud al-Dawla to come to India. The ruler of Shīrāz received him with respect, but persuaded the Kādī to decline the invitation from Delhi. 'Imrānī was at first critical of the sūfis, but his pupil Mawlānā Khādījī gradually drew him to the mystic path, and he developed a devotion to Shaykh Naṣīr al-Dīn Ḥaḍīḏ [q.v.]; according to the author of the Ma’ārīḍī al-walāyāt, he received khīḍāfī also from him.

( K. A. NIZAMI)

IMROZ, Ottoman name of the island of Imbro, in the Aegean Sea, some 15 km off the southern end of the Gallipoli peninsula (Thracian Chersonese), and thus of strategic importance as commanding the entrance to the Dardanelles, Șançal-Keke Boghaft [q.v.]. In 1444, when it was visited by Çyrılç, a journal, it was still Byzantine (although the neighbouring islands of Thasos and Samothrace were in the hands of the Gattilusio family). When news of the fall of Constantinople (857/1453) reached it, it was still Byzantine (although the province of Panakale, pop. (1960) 5776.

During the First Balkan War, Imroz, with the other Aegean islands, was taken by the Greek fleet (November-December 1912); Greece maintained possession of the island, which was formally ceded to her by the Treaty of Sèvres (August 1920). By the Treaty of Lausanne (July 1923) it was returned to Turkey, with the stipulations that it be demilitarized and that its predominantly Greek population be excluded from the proposed exchange of populations [see MURADE]. It is now the province of Çanakkale, pop. (1960) 5776.

IMRū al-KAYs [slave of [the god] Kays], by-name of several Arab poets. Al-Āmidī mentions ten of them (al-Mu'allīf wa-l-mu'llīfāt, Cairo 1961, 5-9), while Fīrūzābdī lists eleven of them (al-šāmās al-mu'llīf, Cairo 1930, ii, 244) and the Suyūṭī fifteen (Muṣḥar, Cairo 1968, ii, 456). Taking account of all the variants in their genealogies, H. Sandūbi has drawn up a list in which their number reaches twenty-five (Abhāb al-Marāshīsa wa ashrūkum fi l-dhāhīyya wa-sādīr al-İslām, printed as a continuation of Şarh ālīsu Imro z al-Kays [Cairo 1959, 233-368]. The most famous of all these poets is Imru’ al-Kays b. Ḥudīr [see next art.]. Mention should also be made of the following two: Imru’ al-Kays [Adl b. Rabī’al-Taghībī, best known under the name of al-Muḥallī, who was the maternal uncle of the Imru’ al-Kays b. Ḥudīr, and according to some, the creator of the form of the classical kašda (Ibn Kusayyib, Șhīr 164-6; Șhīr, viii, 63; Ǧāhīma al-adāb, i, 302-4; Fu’ad Bustānī, Șu’ār 46, and references there given; Sandūbī, op. cit., 231-301); Imru’ al-Kays b. ʿAbī al-Kindī, who is included among the Companions of the Prophet (Sandūbī, op. cit., 339-47 and references there given). (S. BOUSTAVY)
IMRÎ' AL-KAYS B. HUDJR, name of a pre-Islamic Arab poet, who is generally considered to have died circa 550 A.D. Unfortunately the biographical details on the poet come mainly from Kufan writers of the second half of the 2nd/8th century, who practically never give their sources and who very often contradict one another. As little as two centuries later, authors collecting these contradictory facts had denounced them as untrustworthy. Hence the portrait of the poet, so far as it emerges from the existing information, is that of an obscure and semi-legendary personality.

His personal name is reported as ‘Adî or Mulayka or Hûndudûj. In addition to that of Imrû' al-Kays ("slave of the god Kays"), he is said to have had the by-names of Dju 'l-kurîh ("the man covered with ulcers") and al-Malik al-dillî ("the wandering king"); there are also attributed to him three kunyas: Abu 'l-Hârijh, Abû Wabb and Abû Zayd.

On his genealogy the sources disagree. The chain of ancestors given by the Baṣran al-Asma'i differs on several points from those provided by the Kufan Ibn al-A'râbî, the Baghdîdî Mûhammad b. Hâbib or other sources which the Aghdâmî cites without naming them. There is even disagreement over the name of the father of Imrû' al-Kays (Hudjr or al-Simm), that of his grandfather (al-Hârij or 'Amr or Imrû' al-Kays), and of his mother (Fâtima bint Râbi'a or Tamâlik bint '4Amr).

The most usual version of his life may be summarized as follows: as a child he had lived at the court of Hudjr, the last king of the Kinda, of whom he was the youngest son; but soon his passion for poetry, and especially erotic poetry, led to his being expelled from his father's house. Here there comes an episode which has all the characteristics of a romanticized addition: the father, in his anger, instructs his freedman Râbi'a to put the young poet to death and to bring him his eyes; Râbi'a, seized with pity, merely kills a young antelope and takes its eyes to the hasty father. Later, the father repents, learns of the substitution, summons his son and is reconciled to him. Once again however, and for the same reasons, Imrû' al-Kays was expelled from his father's house and began to lead the life of a carefree vagabond. At the head of a band of roughs, he began to wander in the desert, dividing his time between hunting, drinking and song. In order to enliven his libations he had taken with him his singing slave-girls.

It was during a drinking session that he received the news that his father had been assassinated. The Banû Asad had revolted against their ruler and had succeeded in having him killed. From then Imrû' al-Kays's only aim was to avenge his father.

Helped by the Banû Bakr and the Banû Tabîhî, he succeeded in inflicting heavy losses on his enemies and in putting them to flight. His allies, considering that he was sufficiently avenged, refused to continue the fight and abandoned him. It was then that he began to wander among the tribes, at first in Kays, and that of his, after the king of Hira had sent troops in pursuit of him, seeking a refuge. It was thus that he arrived at the court of al-Samawâlî, prince of Taymâ, who gave him refuge in his castle al-Abîl. Al-Samawâlî next recommended him to the Ghassânî al-Hârijh the Lame, who helped him to reach the court of Justinian in Constantinople.

Justinian is said to have received him well and agreed to give him the command of an army whose task was to restore his throne to him and to avenge his father's death. Imrû' al-Kays then set off on the return journey, and he was already near to Ankara when he was met by an emissary bringing him a present from the emperor: this was a shirt of Nessus which poisoned him, covering his body with ulcers and finally killing him. He was thus punished, it is related, for having, while in Constantinople, seduced Justinian's own daughter (though in fact history does not mention that Justinian had a daughter). But neither the crime nor its punishment seems to have destroyed the poet's glory, since it is said that the emperor erected a statue to him on the actual site where he was buried, a statue which was seen by al-Ma'mûn.

This is of course not the only version of the biography of Imrû' al-Kays. The available sources contain other variants, all equally romanticized and agreeing only on the most important points. Furthermore, the facts reported about the poets said to have been in direct contact with him, such as 'Alkama, 'Abîd b. al-Abraq and 'Amr b. Kama, are just as imprecise and suspicious; they throw no light at all on his life. Of the same order are the statements of Nonnosus and Procopius, in which certain modern authors have thought to find a reliable historical basis which would confirm the statements in the Arab traditions. In fact it is now established that the two historians are not referring to Imrû' al-Kays (or Imrû' al-Kais) but to Kaisos, i.e., Kays b. Salama b. al-Hârijh; by the same token, the arguments which some have thought they found in them to prove that Imrû' al-Kays was a Christian are valueless, and this remains a pure hypothesis. It should moreover be pointed out that the Kaisos of whom the two Greek authors were writing was converted by Justinian himself and that he returned home with a Senatus consultum, having been appointed Phylarch of Palestine. Neither of these two sources mentions his death on the way.

The poems which bear the name of Imrû' al-Kays were collected towards the end of the 2nd/8th century by the Kufans Abû 'Amr b. al-Shaybânî and Kâhil b. Khalîfîmî, the Baṣran al-Asma'i and, later, the Baghdîdî Mûhammad b. Hâbib. Based on these collections, two definitive recensions were established during the 9th/10th century, one by Ibn al-Sikkît and the other by al-Sukkari. Ibn al-Nadîm mentions also a partial recension made by Abû 'l-'Abbas al-'Abwâl.

On the authenticity of these poems, we have the testimony of one of these authors, al-Asma'i, who says: "All the poems which have survived under the name of Imrû' al-Kays have been transmitted by Ḥammâd al-Râwîya except for some poems communicated by Abû 'Amr Ibn b. al-'Allî."

It is known that the Baghdadî Muhammad b. Hâbib. Based on these collections, two definitive recensions were established during the 9th/10th century, one by Ibn al-Sikkît and the other by al-Sukkari. Ibn al-Nadîm mentions also a partial recension made by Abû 'l-'Abbas al-'Abwâl.

form, in terms which vary according to the transmitters, expresses high regard for Imru' al-Kays, and makes him the "leader and standard-bearer" of the poets; the latter praises his ingenuity, affirms his superiority, and stresses the disinterested driving-power which lay behind his poetic production.

Those who have proclaimed his superiority have admired above all the ingenuity of his metaphors and his concise and skilful treatment of various traditional forms and poetic themes. They state also that he was the "king of the kaus" and that his poetic achievements are the work of his maternal uncle Mu'adhil, and that the Banu Bakr consider it to have been 'Amr b. Kamla, as if it had been his companion on his journey to Constantinople. It should however be noted that in spite of the two traditions just mentioned and the arguments of his admirers, the majority of the scholars of Kufa continued to prefer al-Asma'i, and that of Kufa continued to prefer al-Asha to him, those of the two traditions just mentioned and the arguments of the same scholars, sometimes hesitated to prefer him to al-Nabigha.

His *dīwān* was first published by de Slane, in Paris, in 1837. This edition consisted of the 28 poems that formed the recension of al-Ašma'ī. Next there appeared the edition of Ahlwardt (London 1870), which contained 68 poems and which reproduced the recension of al-Sukkari with some additions drawn from various literary sources. The section edited by de Slane was reprinted in various editions appearing later in Egypt, Iran and India. There have been other more scholarly oriental editions, the most important of which were that of al-Sandubi (Cairo 1930) and that of Beirut (1958). The most complete edition remains that of Muhammad Abu 'l-Faql Ibrāhīm (Cairo 1958; 2nd ed. 1964). In it there appears the recension of al-Ašma'ī, another attributed to al-Mu'afdal al-Dabbi and approved by his pupil Ibn al-Arābi (it cannot be very different from that of Abū 'Amr al-Shaybānī, another pupil of al-Mu'afdal, to which the author of the recension refers for certain corrections), as well as the recension of al-Sukkari (67 poems), and some additions which could have originated from the other collections mentioned by Ibn al-Nadim. The total number of verses in this edition is 1399, only 485 of which come from the recension of al-Ašma'ī.

Among the poems in this *dīwān*, it is the *mu'allāba* which has aroused the most interest. Appearing in the collection of the *mu'allābāt*, it was edited and translated, with all the other *mu'allābāt*, into Latin by L. Warner (Leiden 1749), into English by W. Jones (London 1782), Clouston (Glasgow 1881) and Johnson (London 1881), into Swedish by B. M. Bolme (Lund 1824), into French by S. de Sacy (Mém. de l'Acad. des Ins., 1, 411), Caussin de Perceval (Essai sur l'hist. des Arabes, ii, 326-32), and by Raux, into German by A. T. Hartmann (1802), Nödeke (1899) and Gandz (1913), and into Russian by Murkea. It appears also in the various editions of the commentary of al-Zawawi (1st ed. by Hengstenberg, Bonn 1823), that of Nābūs (Leiden 1748 and Halle 1876), that of the Badawi (Calcutta 1834) and of the Turkish commentary by Farsak (Istanbul 1316 H.).

*Imru' al-Kays b. Hudjr — Imtiyāzāt*

**Imtiyāzāt**, commercial privileges, capitulations.

i.—The earliest documentary evidence for commercial privileges emanating from Muslim chanceries in the Mediterranean world dates from the 6th/12th century. While it is unlikely that these documents represent the origin of such privileges, they are, with very few exceptions, unilateral and, from a juridical point of view, represent decrees (mardīm) or even agreements (nd*āb*). The retention of such documents to the head of the community (imām) or his representative (nda*b). The retention of the technical term amān is to be understood as an attempt at the rhetorical concealment of juridical innovation.

All of the commercial privileges included, either explicitly or implicitly, the following provisions with respect to the status of non-Muslim, non-dhimmī merchants in dār al-islām:
1. General security of person and property, including:
   A. Testamentary rights, freedom of worship, burial, and dress.
   B. Repairs to ships, emergency rations, aid against attack by corsairs, and abolition of the
      les naufragi.
   C. Permission to address complaints to the head of the Muslim community.

2. Exterritoriality, including:
   A. Consular jurisdiction.
   B. Consul's salary and other exemptions.
   C. Abolition of collective responsibility.

The oath and affixing an attestation appear to have been limited to such of these privileges as
constituted an instrumentum reciprocum, or which were negotiated in dar al-harb. The period of validity
is occasionally specified in the North African documents, seldom in the Levantine ones, though source
material external to the documents themselves would seem to indicate either indefinite duration or
renewal for two year periods coincident with the appointment of consular representatives for a particu-
lar merchant community.

The question of cross-fertilization between the
concessions to harbis, the Ottoman authorities
imposed its will by threatening to
boycott Ottoman ports. If, after the conclusion of
the English capitulations of 1086/1675. The
Ottomans maintained this terminology; but the
ahdnames, like all documents conferring a privilege, was
drawn up in the form of a berdt (a kind of
*ahd). The oath in the document (for the formula see V. L.
Ménage, in Documents from Islamic chancelleries,
Oxford 1965, 94) is the element binding the Sultan
before God and hence guaranteeing his promise to the
musta'min. The character of the *ahdname as
a unilateral and freely-made grant or concession is
well described by J. Porter (Observations, London
1777, 362). The Sultan retains authority to decide
unilaterally when the musta'min has broken the
pledge of "friendship and sincere goodwill" (biyalar) and
in consequence the *ahdname is rendered
void. It is for this reason that in firman...
precondition of “friendship and sincerity” had been broken (cf. Mas Latrie, Traites de paix, 114-5). When the Venetians were unable to guarantee secure passage by land and sea for Muslim merchants operating in Venice (for whom see A. Sagredo-F. Berchet, Il Fondaco dei Turchi in Venezia, Milan 1860; S. Turan, Venedik’ten Türk ticaret merkezi, in Belleten, xxxii/126 (1968), 247-83), the Ottoman government warned them to remember their obligations to give reciprocal protection (letter of Rustem Paşa, publ. by T. Venetoglu, in Belgeler, i/2, 161; Turan, op. cit., 276). In the capitulations of Turkey’s princes of Anatolia (see below) and in Ottoman ‘ahdnamés, the principle of reciprocity was expressly stated in such matters as compensation for damage inflicted on sea, individual (and not collective) responsibility for debt, the seizing of fugitive debtors, and the protection of the lives and goods of victims of shipwreck (cf. the Venetian capitulations of 947/1540, publ. Gökbilgin, Belgeler, i/2, 248-50). This principle of reciprocity enabled especially dhimmis, Ottoman subjects (Jeys, Armenians, Greeks and Slavs) to engage in business operations in Europe. In Eastern Europe, particularly in Poland, the Levant trade passed almost entirely into the hands of such dhimmis enjoying the Sultan’s protection. Many dhimmis, after serving Western merchants in Levant ports as dragomans, brokers and agents, became powerful rivals to West European merchants in Venice and Leghorn, so that the Venetians and the French contemplated attempting to limit their activities (Ch. Roux, 153; Porter, 433-7; H. Inalcik, Capital Formation in the Ottoman Empire, in J. Econ. Hist., xxix (1969), 97-149. The Ragusans, enjoying the status of hizadr-güzar, could profit most from Ottoman protection. Reciprocity was therefore a reality, from which the whole Empire benefited.

I. The creation of musta’mim communities and their privileges. Groups of foreign merchants resident in an Ottoman city or port would choose for themselves a representative to act for them in dealings with the authorities, variously known as bailo (T. balıkoz), consul (T. konsolos) or (for the Florentines) emiss (T. eminenism); the Sultan would grant this representative a berdt setting out his duties and the extent of his authority, and an official of his nation according to his home country’s laws could leave port without his authorization, and he was immune from interference, at his residence, on the road, or at overnight halts; his personal goods were exempt from customs’ dues (for an example of a consul’s berdt see London, PRO, SP 105/334, for W. Rye, of 1039/1629). In the execution of these duties the consul could call upon the assistance of the Ottoman authorities (this power being one of the factors which made it essential for him to hold a berdt). The ambassador and the consul were each granted a tawüz and one or more Janissaries (also termed yasakç; cf. Kurat, Türk-İngiliz müneşabe, pp. 39, 45) by the Sultan, to super-

The consul was empowered by his berdt to supervise the affairs of his millet; to register incoming goods; and to collect the appropriate dues for the ambassador and the consul. No ship of his “nation” could leave port without his authorization, and he resolved disputes and settled suits between members of his nation according to his home country’s laws and customs. His person, his servants and his animals were immune from interference, at his residence, on the road, or at overnight halts; his personal goods were exempt from customs’ dues (for an example of a consul’s berdt see London, PRO, SP 105/334, for W. Rye, of 1039/1629). In the execution of these duties the consul could call upon the assistance of the Ottoman authorities (this power being one of the factors which made it essential for him to hold a berdt). The ambassador and the consul were each granted a tawüz and one or more Janissaries (also termed yasakç; cf. Kurat, Türk-İngiliz müneşabe, pp. 39, 45) by the Sultan, to super-

The consul’s judicial authority, based on the concept of “personality of law” (Venetian caps. of 927/1522, art. 16; French caps. of 977/1569, art. 12; English caps. of 988/1580, art. 16), is a principle going back to the earliest capitulations (Mas Lat. Traité..., 87-9). The French government organised this in the Ottoman Empire by detailed laws and regulations (K. Lippmann, Die Konzularjurisdiction im Orient, Leipzig 1868; A. Benoit, Étude sur les capitulations..., Nancy 1890). Criminal cases and suits between a musta’mim and a Muslim had to be heard in Ottoman courts. Many new articles were inserted into the ‘ahdnamés to ensure that the musta’mim received just treatment in the courts: proceedings could be instituted only in respect of transactions which had been entered in the kādit’s register and for which a kādit’s certificate (a maliyet) had been given (for example in the Venetian caps. of 977/1569, art. 6; English caps. of 988/1580, art. 6); a case could not be heard unless the musta’mim’s dragoman was present (Venetian caps. of 927/1522, art. 17; French caps. of 977/1569, art. 11; English caps. of 988/1580, art. 15); the testimony of a dhimmis was to be accepted in cases between a musta’mim and a dhimmis (Venetian caps. of 927/1522, art. 23); cases and appeals involving more than 4,000 akces

gesch., vii, 249-95; Fr. Ch.-Roux, Les Échelles..., 171-93; R. Paris, Histoire du commerce de Marseille, v, 199-237; comparison of the Venetian, English and Dutch systems, see N. Steensgaard, Consuls and Nations in the Levant, in Scandinavian Economic History Review, x/1-2 (1967), 13-55. In the 17th-17th century, the Western states tried to impose on the Ottoman government their own interpretation of the status of the consul by procuring the insertion into the capitulations of articles declaring him to be the deputy of the ambassador, that he could not be imprisoned, that damages inflicted at sea, individual (and not collective) responsibility for debt, the seizing of fugitive debtors, and the protection of the lives and goods of victims of shipwreck (cf. the Venetian capitulations of 947/1540, publ. Gökbilgin, Belgeler, i/2, 248-50). This principle of reciprocity enabled especially dhimmis, Ottoman subjects (Jeys, Armenians, Greeks and Slavs) to engage in business operations in Europe. In Eastern Europe, particularly in Poland, the Levant trade passed almost entirely into the hands of such dhimmis enjoying the Sultan’s protection. Many dhimmis, after serving Western merchants in Levant ports as dragomans, brokers and agents, became powerful rivals to West European merchants in Venice and Leghorn, so that the Venetians and the French contemplated attempting to limit their activities (Ch. Roux, 153; Porter, 433-7; H. Inalcik, Capital Formation in the Ottoman Empire, in J. Econ. Hist., xxix (1969), 97-149. The Ragusans, enjoying the status of hizadr-güzar, could profit most from Ottoman protection. Reciprocity was therefore a reality, from which the whole Empire benefited.

I. The creation of musta’mim communities and their privileges. Groups of foreign merchants resident in an Ottoman city or port would choose for themselves a representative to act for them in dealings with the authorities, variously known as bailo (T. balıkoz), consul (T. konsolos) or (for the Florentines) emiss (T. eminenism); the Sultan would grant this representative a berdt setting out his duties and the extent of his authority, and an official of his nation according to his home country’s laws could leave port without his authorization, and he was immune from interference, at his residence, on the road, or at overnight halts; his personal goods were exempt from customs’ dues (for an example of a consul’s berdt see London, PRO, SP 105/334, for W. Rye, of 1039/1629). In the execution of these duties the consul could call upon the assistance of the Ottoman authorities (this power being one of the factors which made it essential for him to hold a berdt). The ambassador and the consul were each granted a tawüz and one or more Janissaries (also termed yasakç; cf. Kurat, Türk-İngiliz müneşabe, pp. 39, 45) by the Sultan, to super-

The consul’s judicial authority, based on the concept of “personality of law” (Venetian caps. of 927/1522, art. 16; French caps. of 977/1569, art. 12; English caps. of 988/1580, art. 16), is a principle going back to the earliest capitulations (Mas Lat. Traité..., 87-9). The French government organised this in the Ottoman Empire by detailed laws and regulations (K. Lippmann, Die Konzularjurisdiction im Orient, Leipzig 1868; A. Benoit, Étude sur les capitulations..., Nancy 1890). Criminal cases and suits between a musta’mim and a Muslim had to be heard in Ottoman courts. Many new articles were inserted into the ‘ahdnamés to ensure that the musta’mim received just treatment in the courts: proceedings could be instituted only in respect of transactions which had been entered in the kādit’s register and for which a kādit’s certificate (a maliyet) had been given (for example in the Venetian caps. of 977/1569, art. 6; English caps. of 988/1580, art. 6); a case could not be heard unless the musta’mim’s dragoman was present (Venetian caps. of 927/1522, art. 17; French caps. of 977/1569, art. 11; English caps. of 988/1580, art. 15); the testimony of a dhimmis was to be accepted in cases between a musta’mim and a dhimmis (Venetian caps. of 927/1522, art. 23); cases and appeals involving more than 4,000 akces
were to be heard only in the Diwdn-i Humdyun (English caps, of 1010/1601, art. 24); cases arising among themselves (see Belleten, xxvi/93 (1960), 71), in later years the less heavy court fees sometimes prompted Muslims to prefer the consular courts (Steengaard, 23).

By the draft capitulation (see below) of 943/1536, a musta'min who settled in Ottoman territory would have to assume the status of a djinnm, subject to djizya, after ten years residence (although by Hanafi law he was permitted to remain musta'min for only one year; Mevküfati, i, 348). In practice, the Ottomans did not enforce any rule, regarding the musta-‘mins merchants as continually coming and going. Yet from time to time attempts were made to make them liable to djizya (e.g., in 1025/1616, see Belin, Les capitulations, 85; Wood, 56, and later: Basvekâlet Arşivi, DHY, Françalı no. 26, docs. of Rabî’ II 1059 and Radjab 1061).

After Istanbul, the most numerous foreign millets were resident at Smyrna (from the end of the 16th/17th century; chiefly the English, then the French and the Dutch, a few Venetians); Sidon (French); Aleppo (French, Venetians, English, Dutch); Salonicca (after 1066/1658 the French, later other nationalities); Cairo (French, Venetians and, for a time, English). The suggestion that Mehemmed II accorded recognition to various special privileges of the Genoese of Galata and that these privileges were later extended to the Latın milleti (Magnifica Communîtā di Pera) (see M. A. Belin, Hist. de la Latinité de Constantinople, Paris 1854, 166) needs re-examination (see for the moment, Belin, op. cit., 156-65; E. Dallegio d’Ale- sio, Traité entre les Genois de Galata et Méhmet II, in Échos d’Orient, xxix, 161-75; T. C. Skeat, Two Byzantine documents, in BMQ, xviii (1953), 71-73).

In the original text of the ‘ahdnamâ (in Greek) dated 23 Djamâda I 857/1 June 1453 (text given by Skeat, loc. cit.) the Sultan promises, under oath, that he will not bring troops and destroy the walls (according to some translations: he will destroy the walls) and that the Genoese may live there according to their own laws and customs under a Khândmâ elected from among themselves. But when, before leaving for Edirne on 3 June, he visited Pera, he changed his mind (in the light of the demands of public security) and had the land walls destroyed here and there, thus cancelling one of the principal terms of the ‘ahdnamâ; Pera became an entire “Ottoman” town, under the control of a subâh and a kâdî (see ISTAN- BUL).

From the very earliest period the principle of the collective responsibility of the millet for crime (see Diva) or debt had been excluded (cf. Mas Latrie, 92); all the same, the Ottoman government, like other earlier Islamic governments, obliged the musta‘min community to pay a collective fine, a kind of indemnity for damages, when the “guest” nation imposed loss on the “host” state or its populations—through attacks by pirates, failure to pay a public debt arising from the farming of a source of revenue (siltââm, see MülZeım), or the circulation of forged currency (see, e.g., Chardin, i, 15; Abbott, Under the Turk, 237-43; Masson, i, 176): the Ottoman justification for this was that the “guest” nation had thus blatantly infringed its promise to maintain “friendship and sincerity”. These levies must be distinguished from the avanias, Fr. avanies, which paghas exacted for their own personal profit. (The word avanias, signifying collective forced levies of all sorts, derives not deriving to B. Homay, Les capitulations, 57, from A. humâna; but more probably its origin is ‘awds, “anything extorted”, from the root ‘awrd; a connection with ‘awdrîd is most improbable.) The attitude of the central government to the extortion of avanias by paghas varied according to the circumstances and the prevailing climate of relations with the “nation” involved. There are in the Ottoman state archives documents ordering the extortion of avanias (Basvekâlet Arşivi, DHY, xxxi, 177-201; Roux 53-6; R. Paris, 292-316; Svoronos, 56-66). Demands for avanias were contested by ambassadors and consuls in the name of the millet; the coltîma due, collected by consuls on the trade of goods of their millet in order to meet avanias, came to be a regular impost. The Venetians collected 1% on some imported wares, especially cloth (see Brit. Mus, Ms Or. 9053, fol. 282), the French imposed on every ship loading at an Ottoman port a fixed sum graded according to the tonnage of the ship (Masson, i, 176; Svoronos, 70-5).

II. Privileges of individuals.

The number of privileges accorded to individual merchants increased as new articles were appended to the ‘ahdnamâ. These were in practice long-standing rights recognized by custom, which, through the pressure of the musta‘mins, were progressively codified as specific articles in the capitulations (for a systematic description of these old articles, see Mas Latrie, 83-110).

The amân, which guarantees the harbî’s right to travel within the dar al-șadâm without being enslaved or having his goods looted as ghanima (q.v.), was valid for the whole Ottoman Empire (bi ‘l-djamâl memâlîk-i Othmânîyye); but for the practical implementation of this general amân by the individual, any musta‘min proposing to travel needed to obtain (through the intermediary of his ambassador) and to carry with him a special authorization from the Sultan, an idhn-i humdyn (see J. H. Mordtmann, Zwei osmanische Passbriefe, in Zwei osmanische Passbriefe, in Geschichte der osmanischen Auslandsbeziehungen in der Welt, Vol. III, Belin, 1919, 102; Ménage, loc. cit., 96-9; this document was termed mürsurenmâne; a similar authorization granted by a kâdî or another official was called yol tehdîrîesi; for an article relating to these: Venetian caps. of 928/1521, art. 21). In fact musta‘mins were normally resident only in a limited number of ports, and within these ports in specified quarters and kâhän (the merchants of Sidon were confined to their kâhän, see DHY, Françalı 26/1, a document of 1059/1649; but in other places, Smyrna, Aleppo and Galata, they enjoyed considerable freedom of movement). The kâhän registers reveal instances of foreigners being enslaved by Muslims (e.g., Bursa, Siğfillât; cf. Derschmann, Tagebuch, ed. F. Babinger, Munich 1923, 42). Separate articles permitted them, in order to avoid maltreatment, to wear Muslim dress and to carry arms.

The residences of musta‘mins could be searched by Ottoman officials only if there was a suspicion that they were harbouring fugitive criminals or slaves, or smuggled goods. The abuses to which this exception opened the way gave rise to new articles (e.g., French caps. of 1153/1740, art. 65). As to a musta‘min’s property, if he died in the Ottoman Empire leaving a will, his property went
to the designated heir(s). If he died intestate or if his heir(s) were resident elsewhere, his estate was
in the hands of local authorities and masters of the
consul or to the deceased’s partners and friends.
This rule—a principle of 

to the designated heir(s). If he died intestate or if
his heir(s) were resident elsewhere, his estate was
in the hands of local authorities and masters of the
consul or to the deceased’s partners and friends.
This rule—a principle of 

Guarantees for travel by sea elaborated from the
principle of amdn did not figure in the early works of
M. Khadduri, 109-17), but are found in the
earliest capitulations (Mas Latrie, 97), so that a
musta’min was entitled to invoke amdn when
threatened by a Muslim ship. But it should be noted
that the principle of reciprocity appears most clearly
in those articles concerning relations at sea. The
Ottomans seem to have regarded their suzerainty as
extending over the Aegean Sea, the Black Sea, the
Red Sea, the Straits (Bosphorus and Dardanelles) and
the Strait of Otranto (see the Venetian treaty of 928-
1521), or, in other words, they regarded these waters
as forming part of the Dār al-Islām. In 1595-1747,
during the War of the Austrian Succession, the
Ottomans attempted to forbid French and English ships
from engaging in hostilities east of a line from the
tip of the Morea to the Western extremity of Crete
and thence to Egypt. In 1109/1697, all warlike de-
monstrations were forbidden off Ottoman ports
without a formal threat of the citadel (PRO, SP 105, 33; 9109/1698). As in earlier capitulations, so in the
Ottoman ‘ahdndmes, musta’mins were granted free
navigation by sea, with security against attacks by
Muslim vessels; the right to anchor in Muslim har-
bours and to take on supplies and water at any point
on the coast; exemption for ships and crews from
being impressed for any angarya duty; help and
protection at sea or if driven ashore; security for
their persons and their goods if they were compelled
for any reason to land; joint protection against
pirates; and indemnity for losses due to piracy
(Venetian caps. of 928/1521, arts. 4, 5, 7, 13, 14, 22,
25, 26; French caps. of 977/1569, arts. 1, 2, 13, 15, 17;
English caps. of 1086/1675, arts. 1, 3, 4, 6, 17, 19).
As long as the “Barbary Pirates” were under Ottoman
suzerainty, new articles were drawn up to ensure
peace, e.g. M. Khadduri (French caps. of 1094/1684,
arts. 19, 20; English caps. of 1086/1675, art. 47). In
the 11th/17th century when mussim’sms’ ships were
permitted to engage in the carriage of passengers and
goods between Ottoman ports, new articles appeared to
cover this (e.g., English caps. of 1086/1675,
arts. 43-4).

IV. Guarantees for the free transport and
sale of goods.

These matters are usually dealt with in the first
articles, immediately following the declaration of
the grant of amdn, and to them were later added
additional articles framed to deal with abuses. They
reserved the right of local authorities and masters
of Ottoman warships to search for prohibited or
smuggled goods (articles against abuse of this right:
French caps. of 103/2604, arts. 30, 32, 44; English
caps. of 1086/1675, arts. 17, 20, 23, 33). It was con-
ceded that after ships had been inspected in Istanbul
and in the Bosphorus they need not be inspected
again at Gallipoli (Venetian caps. of 928/1521,
art. 26). Occasionally a customs officer would force
a merchant to unload goods against his will (hence
art. 17 of the French caps. of 103/1604); local mer-
chants would intrigue or exercise pressure to buy
goods at a price they determined (hence art. 33 of
these last caps., art. 5 of the English caps. of 1086/
1675), or to sell at their own price (hence docs. in
DHY, Français no. 1675). The price was the price
as it was on the market, in the port of destination.

Various obstacles were encountered by foreign
merchants when, for example, the Ottoman state
from time to time prohibited the export of various
wares (especially cereals, leather, cotton and metals)
in order to prevent the starving of internal markets,
or granted monopolies or ilfidms for the sale of
different commodities; these gave rise to new articles
in the capitulations (French: art. 14, English:
art. 53)—although the usual remedy was to resort
to widely-organized smuggling (Masson, i, 417).

In their earliest ‘ahdndmes the Ottoman authorities
were content to prescribe that customs and other
dues should be levied “according to custom and the
current regulation” (Talet ve kandn userte), without
mentioning a specific percentage. Hence Mehemmed
II had no difficulty in raising the custom’s rates
from 2% to 4% and finally, at the end of his reign,
to 5%, 5% was the general rate in the 10th/16th
century, but the Ottoman customs tariff varied ac-
cording to the status of the importer, the nature of
the commodity, and the area where it was enforced;
now or was clearly distinguished from dues levied
on goods in transit within the Empire (see Maks).
As a result of the numerous disputes provoked by
these inconsistencies, the musta’mins succeeded,
without great difficulty, in getting the minimum
customs rates fixed at 3% (for the history of this
struggle, see Wood, 27) and in obtaining exemption
from all other dues (i.e., principally bāshābıyı or
bāshā-akces, maşarıyı, rafiyı, yazakel, bâdı—
for all of which, see Maks). The traditional practice
of making payments to clerks and servants in the
custom’s department brought the customs rates
up from the official 3% to a real 4½%,. Some
commodities were also subject to additional duties:
cotton to kandn-resmi, silk to måmåh-resmi, etc.
Again, each ship had to pay to the high officials of the port at which it called a
fixed sum (at first 300 akčes, in the 11th/17th century
9000 akčes), under the name of selâmlık or selâmsiyı. Musta’min merchants also had to contribute to the
support of their ambassador and consuls, by paying
a due of 2'/4% as “consulage” (T. kösosos hahhı or
bâshā-hahhı). The usual remedy was to bring basic
customs duties, brought the total rate in practice
to at least 9%. In order to prevent disputes the
ambassador finally managed to procure the estab-
lishment of fixed tariffs and their inclusion in the
capitulations (e.g., the English capitulations of 1086/
1675, arts. 62-5).

B. Historical Survey.

(1) Period of the Italian maritime states (700-1300-
1569).

The Seljuk sultans of Anatolia had granted com-
mercial privileges to the Kingdom of Cyprus and
to the Venetians as early as 603/1207 (O. Turan,
Türkiye Selçukluları hakkında resmi vesikalari,
text to survive dates from Dhu ‘l-Ka’d 616/January
1220 (Tafel and Thomas, i, 438, ii, 143; O. Turan,
Turkia, 96, 33, 122, 124, 127). For a French merchant in Konya in 1225, see Belin, 37).

When the Ottomans first entered Rumeli in 753/
1352 [see CELİBOI] they were in friendly relations
with Genoa (then at war with Venice) and granted
her the first Ottoman capitulations. Although this
first text is lost, that of 19 Dhu ‘l-Ma’d 1789/June
1387 has survived (Latin text in Silvestre de Sacy,
Notices et extraits, xii/1, 59-61: cf. M. Belgrano,

1182 IMTIYAZAT
in *Atti della Soc. Lig.,* xiii, 146-9). The oldest commercial concession to a Latin state made by a Turkish prince of Anatolia is in the peace treaty of 1348 between the Holy League (the Papacy, Venice, the Knights of Rhodes, Cyprus) and the Aydin oglu Khider Beg (text in Tafel and Thomas, iv, 313); but as early as 711/1312 Rhodian merchants had been operating in the principality of Menteşe (Heyd, i, 36), and a commercial agreement was later concluded. Venetian consulates were established in the middle years of the 13th century, the capitulations of 915/1509 (Kalekci and Palatia (Balat) (Heyd, i, 545). When, under Bâyazed I, these places came under Ottoman suzerainty, the Sultan confirmed these privileges and extended them to "all places under his rule, by sea and by land, in Anatolia and Rumelia" (in G. M. Thomas, *Diplomatarium,* iv, no. 134). From the time when Edirne was occupied by the Ottomans (762/1361) Venice was attempting to obtain capitulations from the Sultan (J. Bratianu, *Études Byzantines,* Paris 1938, 167). In 786/1384 she was making diplomatic advances in order to procure permission to import grain from Ottoman territory and to establish a commercial settlement on Ottoman soil, preferably at Usküdar opposite Gâlata (Thomas, *Dipl.,* ii, no. 147; F. Thiriet, *Regestes,* i, 165). The peace treaty of 922/1419 mentions an agreement between Venice, the Sultan, and the Prince of Epirus, but in 936/1528 Murad I (Thomas, *Dipl.,* no. 172). Bâyazed I used his power to permit or withhold grain exports as a political weapon against Venice (M. Silberschmidt, *Das Orient, Problem ...* , Leipzig 1923). In the period of civil war after the battle of Ankara, Ottoman pretenders recognized the necessity to conciliate Venice. Süleymân Celebi actively sought Venetian support (Forja, Nosi, i, 122), and in the peace agreement of 806/1403 for the first time granted important concessions to the members of the League (Venice, Byzantium, Genoa, the Knights of Rhodes) (text in Thomas, *Dipl.,* ii, no. 159). Mûsa Celebi confirmed these at Phanar on 13 Džumâdâ I 814/3 September 1411 (Thomas, *Dipl.,* no. 164). There followed the agreements of 17 Shawwâl 822/5 November 1419 (Thomas, *Dipl.,* no. 172), 15 Dhu 'l-Hijja 833/4 September 1430 (ibid., no. 186), and 3 September 1431. The final agreement of 6 Dhu 'l-Qa'dâ 866/1 January 1458, original in Archivio di Stato, Venice, was permitted, besides the privileges formerly conceded, permission to trade with Kefe and Trabzon in the Black Sea. In 904/1498, before embarking again on war with Venice, the Ottoman Sultan granted a capitulation to the Kingdom of Naples (S. N. Fisher, *The foreign relations of Turkey ...*, Urbana 1948, 61). In the Ottoman-Venetian treaty of 24 Ramadan 909/24 March 1503, the concessions were further extended (Marino Sanuto, v, 42-7; cf. Bonelli, *Il trattato ...*, 363). These were renewed by Selim I (6 Shawbân 919/17 October 1513) and Süleymân I (27 Muharram 928/17 December 1521) (Turkish originals in Archivio di Stato). It is noteworthy that the treaty of 2 Džumâdâ II 947/2 October 1540 (L. Bonelli, *Il trattato ...*, 332-3; W. Lehmann, *Der Friedensvertrag,* and now (Turkish text) T. Gökbelgin, in Belgeler, i/2, 121-8), the commercial privileges were extended, the Arab lands and Bosnia being included,—but Trabzon and Kefe were excluded. The hostile relations between Venice and the Ottomans in the years 978/1570-980/1572 facilitated the intervention of a new competitor in the Levant-France. Until this time Venice had enjoyed commercial predominance in the Levant, in Istanbul, and in Egypt. (For the later Venetian capitulations see Murat Bâhi, *Toestra Yezâmid, Library, MS Esad Ef. 2362, 63-70; (Rabîb II 1204/ December 1595) Belin, in *JA,* VII Series, viii, 384-442; cf. Noradoungjian, i, 408-9.)

With the Ottoman conquest of Syria and Egypt, the value of capitulations increased enormously. Selim I renewed the capitulations granted by the Mamlûk sultans to Venice (see B. Moritz, *Ein Firman des Sultan Selim für die Venetianer,* in *Festschrift Sachau,* 429 f.) and the consul of the Catalans and the French (at Gazzara, in Rabîb II 923/May 1517; for the Italian and French texts of the terms as renewed by Süleymân I, see Charrière, i, 121-9). The suggestion that these more elaborate capitulations were the model for the capitulations later granted to the states of Western Europe (J. H. Mordtmann, *Die islamisch-fränkischen Staatstrakte,* in *Zeitschrift für Politik und Diplomatie,* xxv/3-4 (1949), 225-58) is an exaggeration: the Ottomans seem rather to have followed the practice of the Anatolian emirates.

The capitulations granted to the joint Catalan-French consuls in Egypt was not in fact an instrument between states. In 943/1536, however, the King of France, seeking the profit from the close relations he had established with the Sultan, attempted to obtain a direct capitulation for France. The *tratté* which his ambassador J. de la Forest drew up in discussions with İbrahim Paşa (see Charrière, i, 285, introduction) was not confirmed by Süleymân (cf. Charrière, i, 203, art. 17)—and soon afterwards İbrahim was executed (22 Ramadân 942/15 March 1536). This draft, as finally drawn up by de la Forest, bears the form of a treaty concluded between two equal parties: this is the sole example of such a "treaty" among the "capitulations" (all the others of which were granted as unilaterally conceded) (cf. Charrière, i, 293-4, art. 17)—and soon afterwards İbrahim was executed (22 Ramadân 942/15 March 1536). That the document remained only a draft is clear from Rûnun's letters sent from Istanbul (Charrière, i, 359, 396-7, 413-4); its text was discovered only in 1777 by the Comte de Saint-Priest in the papers of d'Aramon (see G. Zeller, *Une légende qui dure ..., in Revue d'hist. mod. et contemporaine,* ii (1955), 127-32; and (in answer), M. E., *Les capitulations de 1535 ne sont pas une légende,* in *Annales E.S.C.,* xix (1964)).

(a) Period of the predominance of the states of Western Europe (977/1569-1188/1774).

The first authentic Ottoman-French capitulations are those of 7 Džumâdâ II 1371/17 October 1569. Those attributed to the reign of Süleymân (Belin, 89) must be that the sultan's renewal of the Mamlûk capitulations, which had been extended to embrace the whole Ottoman Empire (Charrière, i, 125). A new capitulation in 977/1569 became necessary through the accession of Selim II and the imposition in Egypt of a measure which destroyed French commerce (see Safvet, in *TOEM,* iii, 993, and the introduction to the capitulations). The King sent Claude du Bourg to Istanbul to regulate this affair (Charrière, iii, 64, note 1;
Mission diplomatique de Claude du Bourg, in Revue d'Hist. Dipl., 1895), and he, without difficulty, obtained from the Ottoman government the right to trade in Constantinople (see art. 16, and the charter published by I. H. Uzuncarşı, in Belleten: xli/5i (1950), 615, doc. 2). In trade, London 1933, 21-71). Two enterprising London merchants, William Harborne and acquiring raw materials like tin and steel which were required for making arms. By a letter of 4 Ramadan 987/25 October 1579, Elizabeth had asked the Ottoman government, ignoring French protests, to sail under the protection of whichever power they wished.

As a result of the fierce competition between the European states, a “most favoured nation” clause began at this period to figure in capitulations (e.g., the English capitulation of 1580, art. 19). Other new clauses too which the Western states caused to be inserted in their capitulations are a reflection of the contemporary situation and pressures. In the new English capitulations obtained by Lello in 1610/1601 (Turkish text in Feridun, Munsha’dt, ii, 38:1) 17 new clauses appear (see Sanderson, Travels, London 1931, 282-7): the “most favoured nation” status of England is confirmed; the Dutch are put under the English flag (a defeat for the French); gold and silver currency are exempted from customs dues and permitted to circulate freely. This last clause is connected with the trade in silver currency (see art. 19), which was then an important economic question (see H. İnalcık, in Belleten, xv/60 (1951), 656-61). Another important clause was that subjecting the English to ad valorem duties on goods they brought in from Venice and other places: this encouraged other nations, subject to a 5% rate, to ship their exports under the English flag. In a later renewal, a clause was inserted to combat the misuse of bills of exchange (Noradounghian, i, 195, art. 58).
In Djumada II 1086/September 1675, during the embassy of John Finch, a new capitulation was drawn up embracing all the earlier privileges and the khat-fi sherif of the Ottoman Empire in Europe. The new clauses granted as an unveiled gesture of reciprocity for political assistance. By a khat-fi sherif of 1101/1690, the French won the reduction of customs dues in Egypt from 10% to 3%, and the return to the Catholicos of various sacred sites in Jerusalem (Paris, *Hist. de Marseille*, 89-90). When France made peace with the Habsburgs in 1109/1697, the Porte turned to England; the English were granted the monopoly of the carrying trade by sea between Egypt and Istanbul, and an English consulate was opened in Egypt (Fedden, *op. cit.*, 13-14). A rapprochement with France between 1128/1716 and 1153/1740 changed the picture again: the Marquis de Villeneuve, who acted as intermediary in the negotiations leading to the Treaty of Belgrade (1152/1739) and brought his sovereign's guarantee of it (see A. Vandal, *Une ambassade française en Orient sous Louis XIV*). At this time, Paris 1887), obtained the most extensive privileges yet conceded (1153/1740; Turkish text in Mu'âkedhat mejmû'âsî, i, 14-35; Fr. text in Testa, i, 186-210; Noradounghian, i, 277-300). The Sultan even confirmed these capitulations on behalf of his successors (cf. the Prussian capitulations of 1174/1761 in Mu'âkedhat mejmû'âsî, i, 90). The Ottoman government thus sacrificed the valuable bargaining counter that new capitulations had to be negotiated at the beginning of every new reign. The new clauses contained nothing of great substance. In the following years the French held an unchallenged position in Levant trade and in transportation between Ottoman ports (see R. Paris, 93-109). Each state of Europe which was enjoying any degree of economic development was now forming a Levant Company and attempting to obtain capitulations from the Porte. The Ottomans responded, following a policy of weakening the privileged position held by France, England and Holland (Sweden: 1149/1737, text in Noradounghian, i, 239, Turkish text in Mu'âkedhat mejmû'âsî, i, 146; the Kingdom of the Two Sicilies: 1153/1740, text in Noradounghian, i, 270; Denmark: 1170/1766, Fr. text in Noradounghian, i, 308, Turkish text in Mu'âkedhat mejmû'âsî, i, 52; Prussia: 1174/1761, Fr. text in Noradounghian, i, 315, Turkish text in Mu'âkedhat mejmû'âsî, i, 83; Spain: 1197/1783, Turkish text in Diewdet, Ta'riîkhî, ii, 338-43 and Mu'âkedhat mejmû'âsî, i, 212, Fr. text in Noradounghian, i, 344). In granting these capitulations the Porte was swayed chiefly by the political aim of acquiring friends in Europe (see especially the account of the Spanish negotiations in Diewdet, ii, 184-203).

The new stage had been fully entered when the supremacy of the Western nations in the Levant was threatened by the reluctant concession, under pressure, of capitulations to the Habsburgs and to Russia —to the Ottoman Empire's two powerful enemies.

(3) The capitulations as an instrument of European imperialism.

As early as the middle of the 13th/15th century, German merchants from Augsburg and Nuremberg had been active, under Venetian protection, in Instanbul (see H. Kellenbenz, *Handelsverbindung zwischen Mitteleuropa und Istanbul*, in Studi Veneziani, ix, 193-9). Customs documents also attest the import of cloth overland from Breslau into Ottoman Hungary (L. Fekete and Gy. Kaldy-Nagy, *Rechnungsbucher von 1570*); the Ottoman government had enjoyed since 1014/1603 (Feridun, ii, 340 and 341). At the end of the 17th century, when the Ottoman Empire in Europe was beset by dangers and the Porte needed diplomatic support from Western powers, the institution of the capitulations entered a new stage. Henceforward, new privileges were granted as an unveiled gesture of reciprocity for political assistance. By a khat-fi sherif of 1101-1090, the French won the reduction of customs dues in Egypt from 10% to 3%, and the return to the

Encyclopaedia of Islam, III

75
trade, with a customs rate of 3%; furthermore, Jesuit priests were allowed to reside in Ottoman domains and be wished for the wounded (art. 14). Russia sought to take an active part in Levant trade by founding a trading company (H. Hassinger, Die erste Wiener Handelshompanie, 1667-1683, in Viertelj. für Soz. und Wirtschaftsgeschichte, xxxv/1 (1942), 53). In the upshot, hostile between the two empires prevented these commercial privileges from being effectively exploited. Although by the Treaty of Carlowitz of 1111/1699 (art. 14) the Ottomans agreed to protect the caravan of European nations to the nations subject to the Habsburg Emperor, the latter obtained full capitulations only after the Treaty of Passarowitz (1130/1718) (Fr. text in Noradounghian, i, 220-7; Turkish text in Mu'âhêddät meğîmêtâsî, iii, 112-20). By these, ships were allowed to navigate freely on the Danube—but not to enter the Black Sea (art. 20); the Emperor could establish a consulate wherever another state had a consulate and wherever else he wished it; Austrian and Persian merchants were permitted to trade via the Danube and the Black Sea, subject to a customs rate of 5%. It is noteworthy that no oath figures in these capitulations. Trade with Germany expanded, via the Danube, but mainly via Trieste and Venice (H. Grenville, Observations, ed. A. S. Ehrenkreutz, Ann Arbor 1965, 54). These capitulations were renewed in 1160/1747 (Turkish text in Mu'âhêddät meğîmêtâsî, iii, 135-43), the Emperor obtaining the concession that merchants from the Grand Duchy of Tuscany, Hamburg and Lübeck should travel under his flag (as had Genoese merchants since 1137/1725). Rivalry with Russia prompted Austria to exact new clauses and a seneç guaranteeing that they would be honoured (1197/1784, Fr. text in Noradounghian, i, 379-85, Turkish text in Mu'âhêddät meğîmêtâsî, iii, 152-5); these clauses included the right to establish consulates in Wallachia and Moldavia, the same right of navigation by sea (including the Black Sea) and by the great rivers as Russia enjoyed, and the acknowledgement that an Austrian passport alone was a guarantee that they would be treated with the same consideration as Russian passports. Other clauses granted further privileges with regard to criminals (art. 6), diplomatic immunities of ambassador and diplomat (arts. 5 and 9), and the protection of Christians (arts. 7, 8 and 14); and finally, the Czar was granted the title Pâdishâh (art. 13). Since all these privileges were embodied in a reciprocal and bilateral "treaty" (in the modern sense), they differed both in form and in legal character from the əxânâmânes unilaterally granted by the Porte to Russia. For example, five years later the Porte attempted to restrain ships carrying to Russia provisions required for supplying Istanbul, Russia regarded this as a "violation of the treaty" (naqâd-i ışâh: Djewdet, ii, 135). The establishment of Russian consuls in such sensitive areas as Wallachia, Moldavia and Simop led to tension (Djewdet, ii, 144; iii, 125-7). The Porte indeed still evidently regarded capitulations as concessions freely granted to the subjects of friendly powers—but Russia now began to put on the pressure: in the explanatory convention of Aynall Kavak (1193/1779) Turkish text in Mu'âhêddät meğîmêtâsî, iii, 275-84; Fr. text in Noradounghian, i, 338) the construction of Article II of the Treaty of Küçük Kaynardja was reviewed, and it was repeated (art. 6) that it was a mutual engagement which could not be unilaterally denounced. Finally, on occupying the Crimea, Russia forced the Porte to recognize the annexation and to grant a full capitulation of 81 clauses "on the basis of the capitulations granted to the French and the English" (1197/1785: Turkish text in Mu'âhêddät meğîmêtâsî, iii, 285-319; French text in Noradounghian, i, 371-3). In the preamble and the conclusion it was stated that this əxânâmâne was a pact supplementary to the Treaty of Küçük Kaynardja. This instrument was to lend a new character to the Porte's capitulatory agreements with Western powers: in particular, they reacted to the opening of the Black Sea to Russian ships, and at first, hoping to expand her trade, Russia encouraged them (Wood, 180-1). Since the 10th/16th century the English (Wood, 49; Grenville, 49-54) and the French (Mason, ii, 637-55; R. Paris, 455) had repeatedly—but in vain—attempted to obtain annexation to the Black Sea. When Russia was granted this right, they asked the same concession for themselves, on the basis of the "most favoured nation" clause in their capitulations. But this was not granted immediately; the English obtained it in a "note" of 1224/1799 (text in Noradounghian, ii, 35-6) and France by art. 2 of the Treaty of Paris (1217/1802: text in Mu'âhêddät meğîmêtâsî, 36; for the negotiations, see I. Soysal, Fransiz İhtilâl ve Türk-Fransiz mânine betterleri, 1789-1802, Ankara 1964, 315-37); the same right was later granted to other powers (Sardinia, Denmark, Spain, the Two Sicilies, Tuscany; see Noradounghian, ii, 102, 137, 140, 219). (4) Abuse of the Capitulations and attempts to abolish them.

Until the end of the 17th/18th century the Ottoman state in its dealings with the mercantilist nations of Europe continued to enjoy a disproportionately large share of commercial relations with Russia and variously offered the latter privileges in commercial matters and granted generous privileges, based on the concept of əmân, without considering the dangerous results which might ensue. In about 1771 Porter considered (Observations, 357-464) that it was hardly possible to ask for more to be conceded. An expert on the Levant trade recognized (Mason, i, 473) that the Ottoman state afforded "toute la securité et toutes les facilités nécessaires";
he observed also that the Europeans abused these privileges in the most outrageous ways. The growing exploitation had, in the last years of the century, brought the Ottoman Empire to a position of political and economic subordination to Western Europe, so that the French ambassador Choiseul-Gouffier could in 1788 call the Ottoman Empire "une des plus riches colonies de la France" (Masson, ii, 279). Before the 18th century, these privileges presented no great threat to the Ottoman state and its economy, the Ottoman government still being powerful enough to prevent abuses. With the European states used pressure and threats towards the weakened Ottoman state in order to maintain and extend the concessions, and managed to obstruct the correction of abuses.

The abuse which really undermined the Empire was the extension of capitulatory rights to dhimmis subjects of the Porte. The musul'mins from a barbi land enjoyed greater privileges than an Ottoman subject; and some dhimmis hit on the method of winning these privileges for themselves, namely, to obtain from the Porte, through the bribing of foreign ambassadors and consuls, patents of appointment (be-râts) as dragomans. By the capitulations, ambassadors and consuls had the right to employ a stipulated number of dragomans, and by the berât granted to such a dragoman (for specimens, see bagiçekâlet Arşivi, DHY Ecnebi defterleri; London, Public Record Office, SP 105/334) the Sultan exempted both the bearer and his sons and servants from poll-tax (çizzya) and the other taxes to which the ra'âşû were liable. In the 11th/17th century, the Western nations obtained also various diplomatic immunities for their dragomans (see, e.g., art. 45 of the English capitulation of 1086/1675: Mu'addhadî melâmmû'ût'l, i, 252; Noradounghian, ii, 157). Ambassadors and consuls began—for a consideration—to procure such berâts for dhimmis who had no pretensions at all to be dragomans, and so to make quite large sums. These berâlîs (q.v.), or "baratâres" and their servants ("sous-baratâres"), who enjoyed the same privileges, had the same financial and juridical advantages as the musul'mins, and paid the same lower customs duties. In 1208/1793, in Aleppo alone, some 1500 dhimmis merchants held dragomans' berâts only so as to be granted patents of appointment to act as genuine interpreters (Kisbi 'arâ RKhi, âphd Djeved, vi, 130. For the check carried out in Salonica in 1178/1764, see Svoronas, 152; for further checks in 1200/1786 and 1221/1806, see Djeved, iii, 130, 270, viii, 107).

This was not the only abuse. A capitulatory power had also the right to extend the privileges arising from the capitulations to "protected persons" who were not its own nationals, so that an Ottoman subject needed only to obtain a patente from a compliant ambassador or consul to enjoy the privileges accorded by capitulation to foreigners. In about 1225/1808 the Russians had enrolled 120,000 Greeks as "protected persons" (for the "baratâres" and "protégés" see especially F. Rey, La protection diplomatique et consulaire dans l'Empire ottoman sous le sultan Muste'min (Paris 1899). During the reign of Selim III Ottoman statesmen united in a general reaction against the capitulations, and various measures were taken to rescue Ottoman subjects from the unprivileged status to which they had fallen. Thus by a berât granted in 1207/1792, a dhimmi merchant and his two assistants who traded with Europe were granted "all the privileges and exemptions enjoyed by the dragoman of a musul'min and his servants" (see O. Nûrî, Meşjet-î umîr-i beledîyesî, i, 675-8). Such merchants were called "Avrupa提速di'ârî". Shortly afterwards some Muslim merchants trading with Persia and India were, by berât, granted the same privileges (op. cit. 681-5), and called "Khahirîyîye提速di'ârî". Their affairs were regulated by a special administrative system and a special court.

The a'âyân, local despotis who at this period were rising to power in various provinces of the Empire (in Palestine, Şaykh Zâhir and later Djezzâr Ahmad Paşa; in Egypt, Meşmed 'Ali; in Rumelia, Tepeş Mehmed Përshî, Şeyh Zahir and later Dżazzâr Ahmad Paşa), sought to use the profits for their own treasuries, struggled effectively against the evil effects arising from the abuse of the capitulations by such measures as forbidding the export of certain goods, imposing monopolies and farming the sale of monopoly wares, fixing the prices of wares for export and abolishing the rights of navigation enjoyed by musul'mins. The central government too began increasingly to use the devices of monopoly (yedi-i wâhid) and ilîsizâm (q.v.) of export goods in order to increase revenue. This was an old principle, entirely the internal customs duties and other dues levied on internal commerce were matters outside the purview of the capitulations. Nevertheless, in about 1830 the Western powers, and principally England, in the new circumstances created by the Industrial Revolution, were feeling the need that the markets of the Levant should become still more accessible, secure and stable. By exploiting a political crisis England succeeded in this aim through the Convention of Balta Lîman of 1254/1838 (text: Great Britain, Parliamentary Papers, 1830, 291-95; Noradounghian, ii, 249 and note at p. 254; V. J. Puryear, International economics and diplomacy in the Near East 1800-1876, 1969, 117-26). This commercial treaty not only confirmed for ever all existing capitulary privileges (art. 1) but imposed customs duties ad valorem of 3% on imports and 9% on exports (art. 4). This 9% duty represented a rate imposed as compensation for the various duties collected on internal trade, and thus closed one of the loopholes through which the Ottoman government could exercise its freedom in customs' policy. Furthermore, the English obtained the abolition of the old limitations on their population for their own treasuries, and also sought to assure them of safe-conducts and travelling-passes, etc. and of the monopolies: in internal trade they were to enjoy the status of the "most favoured" Ottoman subjects, and could both export and also sell freely within the Empire the goods which they bought. This agreement was followed by others concluded with the other capitulatory nations (Noradounghian, ii). These changes made the Ottoman Empire an entirely open market just at the time when European mechanised industry was seeking outlets for its products. In the next ten years, local industry collapsed (O. Sarp, Ottoman industrial policy, in Ch. Issawi (ed.), The economic history of the Middle East, London and Chicago 1966, 46-60).

One of the basic causes of the Crimean War was Russia's claim, based on a distortion of an old capitulation privilege, to extend her protection over all Orthodox Christian subjects of the Ottoman Empire. To counter this, 'Ali Paşa maintained at the Paris peace congress (1856) that since the Ottoman Empire had now joined the European comity of nations, it should be treated according to the rights of nations recognized among them—and hence the capitulations ('âkîl-i âlîâ) should be abolished. It was agreed that the question should be examined at a separate
conference, to be convened in Istanbul (L.-J.-D. Feraud-Giraud, *De la juridiction française dans les Échelles du Levant et de Barbarie*, Paris 1866, ii, 54-8). This news was taken very seriously in Istanbul (A. Fu’ād, *Ridājat-i mühlîmîm-i siyâsîyye*, Istanbul 1928, 70), but the powers never met: in 1861 and 1862, when the commercial treaties were renewed (Noradounghan, ii, 130-91), the capitulations were re-affirmed in their entirety, and a few modifications were made only in customs rates (see MAKS). The statesmen of the Tanzimat generation believed firmly that the first step in the recovery of the Empire was to win freedom from the capitulations. With this aim in view, while taking fundamental measures of reform in the Westernization and secularization of the administration and the legal system, they also sought methods of suppressing at least the worst abuses of the capitulations. By a firman of 1884/1867 (text in Testa, vii, 745-7; Aris-tarchi, i, 16-18; Turkish text in *Dustûr*, i, 230), while foreigners were granted the right to own property, it was also decreed that they should be subject to the same conditions as Ottoman subjects, pay the same taxes, and be answerable to Ottoman courts of law. The French ambassador commented that this new privilege "ensured to European capital the right to develop unlimited mineral, agricultural and foreign riches of the Ottoman Empire" ([*La Turquie*](https://www.persee.fr/doc/letr_0036-4518_1900_num_16_0_590675), newspaper, issue of 12 September 1868). The powers complained that the old exemptions bestowed by the capitulations were not included, but finally accepted these terms (text in Testa, vii, 730-3; for Ziya Paşa’s objections to this new privilege, see Tanzi-mât, i, Ankara 1940, 835-6). At the end of the document the Porte expressly stated that it reserved the right to alter the *şûbâd-ı fattâḥ*, *i.e.*, the capitulations. 4 Ali Paşa at one point (1867) considered adopting the French civil code in order to do away with the abuses of the capitulations (Turkish text: Testa, vii, 526-7), by enacting that a purported change of nationality was void without the approval of the Ottoman government. This provision too the powers were obliged to accept. A little later, in a memorandum circularized to the powers (Testa, vii, 548-54), 5 Ali Paşa, while recognizing that the capitulations bore the character of a "traité", drew their attention the principal points which were abused, maintaining that these abuses were contrary not only to the "law of nations" but indeed to the terms of the capitulations themselves, and that the Ottoman government was obliged to see them rectified. The principal abuses were: the status of the "protected persons"; exemption from the taxes owed by Ottoman subjects; the extraterritorial status of consular courts; the interference of foreign agents in the domestic sphere; the fact that foreigners were not answerable to Ottoman law and civil courts, which their own governments did not recognize; the interference of consular courts in the affairs of Ottoman courts; the dragoman’s claim to take part in the Ottoman judge’s decision (see J. de Testa, *Observations sur le mémoire de la Sublime Porte relatif aux capitulations*, Istanbul 1869). This memorandum had followed a Code of Regulations (*nişâmînâme*) on Consuls (1863: text in Arıstarchi, iv, 15-19) and a Protocol (*matba’a*) on the investigation of foreign criminals (1867); but the powers would not permit modifications with the points of internal taxes, the presence of dragomans in the courts, and the opening of mission schools without the permission of the Sultan, etc.

The other powers were gravely offended when, during the negotiations for the renewal of the commercial agreements in 1890, Germany agreed to the abolition of the capitulations,—but she had made this subject to the agreement of the other powers. The Ottoman capitulations were now weighing even more heavily on the Ottoman Empire because the European powers were extending their fields of activity and extending their capitulary privileges into them, so that the Empire now had no better than a semi-colonial status. Banks, railways, mines, gas and electricity, port installations, ports and telephones—indeed all the important public services—were now in the hands of privileged European companies (see N. Verney and G. Dambmann, *Les puissances étrangères dans le Levant*, Paris 1900; C. Morawitz, *Les finances de la Turquie*, Paris 1902). Behind this abuse of the capitulations and the activities of missionary societies lay the threat of the political and military pressure which an imperialist state could bring to bear. Public opinion in Turkey, at last awake to the dangers, was now violently hostile to the capitulations. From 1908 onwards, every government placed their abolition at the top of its programme (C. BibeL, *Losan*, i, İstanbul 1933, 63). In two memoranda which he delivered to the British government in May 1913, the Grand Vizier Hakki Paşa proposed some urgent modifications, such as the raising of customs’ duties to 15%, the abolition of foreign post-offices, the imposition of a profits tax on foreigners, and the setting up of a commission of lawyers to carry through the complete abolition of the capitulations. Great Britain claimed that for these the agreement of all the powers would be necessary and that the commercial and financial regulations concerned not the capitulations but the recently concluded commercial treaties (British documents on the origins of the War, x/2, docs. 64, 80, 95, 97). With the outbreak of the First World War the Ottoman government took up the abolition of the capitulations. With the British, French and Russian governments as a principal matter determining her attitude towards maintaining neutrality—but the Allies would make no clear promise (Y. H. Bayur, *Tûrîh Inkilàbî târîhi*, iii/1, Ankara 1957, 156-62). Thereupon, by a firman of 17 Şawwâl 1332/8 September 1914, the Sultan proclaimed the abolition of “all the existent foreign privileges known as financial, economic, juridical, and administrative capitulations, so that foreign nationals resident in the Ottoman Empire would be treated in the framework of the general law of nations” (Bayur, *op. cit.*, iii/1, 162; text of the note to the Powers: Bilsel, *op. cit.*, 65-7). Immediately thereafter there was promulgated the “Code of Regulations concerning the separation of şerî‘î courts and *nişâmî* courts”. The capitulary states protested, denouncing this action as unilateral and arbitrary abrogation of treaty rights. By the Treaty of Sèvres the capitulations were restored without modification and their privileges were extended to the other victorious allies; but by the Treaty of Lausanne (24 July 1923) the allies were obliged to accept their complete abolition.

**Bibliography.** I. Archive material: The most important Ottoman source is the series of 106 *Ecnebi Defterleri* in the series *Dowân-i Hümâyûn*.
Defterleri, containing copies of documents relating to the capitulations with European states for the 13th/14th centuries. In the same subject, partly alike, is the Archivio dei Stato, Venice, for which see A. Bombaci, La collezione di documenti turchi dell' Archivio di Stato di Venezia, in RSO, xxiv (1949), 95-107; for the British archives, see A. N. Kurat, Ingilis devlet arşivi ne ve Kültüphanelerinde Türkiye tarihinin bazı malzemeye dar, in AUDTCFD, vii (1949), the important series being PRO SP 105/216 and 105/334. The very extensive material in Western languages in the French archives has been used by P. Mason, A. Vandal, Ch.-Roux, E. Charrière, G. Tongas, V. Svoronos and R. Paris. Documents in English have been used by A. C. Wood, A history of the Levant Company, repr. 1964, see pp. IX-XII.

During the seventeenth and eighteenth centuries European trade was carried out in Persia under the protection of farmans given by different shāhs to individuals and companies. These were sometimes of a general nature and sometimes included the grant of privileges and immunities. Those who sought the grant of such farmans and the shāhs who gave them may well have been influenced by the negotiations for the grant of extra-territorial privileges to French subjects in the Ottoman empire in the first half of the sixteenth century (see J. C. Hurewitz, Diplomacy in the Near and Middle East, a documentary record. 1535-1914, Princeton 1956). In 1566 and 1568 Shāh Tahmāsp gave the Muscovy Company farmans in which he accorded them immunity from tolls and customs, freedom of travel throughout the country, protection for their merchants "from all evil persons", legal recovery of just debts, immunity from robbery,
permission to build or buy houses for their own use, and assistance in unloading (texts in Hurewitz, op. cit., i, 40-2).

Thus, both in the case of the Netherlands and France, the judge of the locality (text in Hurewitz, op. cit., i, 18-19). New farmans were granted in 1642 and 1694. On 7 February 1651 a Dutch agent of Shah Safi obtained a grant of extra-territorial privileges for Persian merchants in the Netherlands. This instrument was on the pattern of contemporary arrangements prevailing between European nations (text in Hurewitz, op. cit., i, 20-22). In fact, it did not become operative because Persian merchants did not establish themselves in the Netherlands.

In October 1653 the English East India Company obtained a farman in general terms from Shah Abbas. Two years later, in 1656, Edward Connock obtained a farman framed in more specific terms, which was confirmed by Shah Safi in 1659. It granted freedom of trade and creed and the right to pay the same rates of customs as paid by Persian subjects. English subjects, in the event of their committing disorders, were to be punished by their own ambassador. If any difference arose between English subjects and Persian in buying and selling “if the said differences pass or exceed twenty tomanis, the Justice shall send them to the Ambassador to be decided, that he in the presence of our Justices might do whatsoever shall be conformable to honourable and noble laws” (text in Hurewitz, op. cit., i, 18-20). This farman was confirmed by Shah Sulayman and renegotiated with Shah Sultan Husayn by James Bruce in (or about) 1657 (India Office Records, E/3/51/5410. See further R. W. Ferrier, British-Persian relations in the 17th century, unpublished Ph. D. thesis, Cambridge 1970, 455 ff. See also Calendar of State Papers, colonial, Vol. IV, No. 852, E/3/12/1294, and ibid., No. 857, E/3/12/1296).

The French in February 1665 and December 1671 obtained farmanis giving French merchants trading privileges comparable to the English and the Dutch. On 7 September 1706, however, a treaty was concluded between Shah Sultan Husayn and Louis XIV. By this, French merchants were given the sole right to decide any difference arising between Persian merchants, but the investigation and decision of differences arising between Persians and members of other nations was to belong to the judge of the locality (text in Hurewitz, op. cit., i, 40-2). Thus, both in the case of the Netherlands and France
there was, at least in theory, some degree of reciprocity in the arrangements made. Article 2 the traders and merchants of England and Hindustan in the service of the English government were permitted to settle in Persia and no government duties, taxes, or requisitions were to be collected on any goods which were the property of either of the governments, the usual duties on such to be taken from purchasers (Art. 2). By an Additional Article it was laid down that the duties levied on purchasers of iron, lead, steel, broadcloth, and purperts that were exclusively the property of the English Government were not to exceed 1%. All duties, imports and customs which were at that period established in Persia and India (on other goods) were to remain fixed and not to be increased. Article 4 stated that "If any person in the empire of Persia die indebted to the English Government, the ruler of the place must exert his power to have such a demand satisfied before those of any other creditor whatever. The servants of the English Government, resident in Persia, are permitted to hire as many domestic natives of that country as are necessary for the transaction of their affairs; and they are authorised to punish such, in cases of misconduct, in the manner they judge most expedient, provided such punishment does not extend to life or limb; in such cases the punishment to be inflicted by the ruler or governor of the place". Freedom to build houses in any part of the Persian Empire (Art. 4). Both parties were allowed to have agents or consuls in such cities as they might deem fit (Art. 6). In 1736 the English received a rabam renewing most of their privileges (Selections from State Papers, Bombay 1908, 48), but neither they nor the Dutch or French merchants secured full renewals of their privileges.

On 12 April 1763 an English East India Company agent concluded an agreement with Shaykh Sa'din of Bushire, which gave the English exemption from customs duties on imports and exports and laid down that only 3% should be taken from merchants who bought and sold to the English (Art. 1). The import and sale of woolen goods was to be solely in the hands of the English (Art. 2). The English were to have ground on which they could erect a factory on which they could hoist their colours and have twenty-one guns for saluting (Art. 6). No European nation was to be permitted to settle in Bushire as long as the English had a factory there (Art. 3). The brokers, linguists, servants and others of the English were to be entirely under the protection and government of the English (Art. 4). On 2 July 1763 Karim Khan gave a grant in similar terms to the English. They were given permission to have ground for a factory in Bushire and to build factory houses in any part of the Persian kingdom and were granted the same exemptions, monopolies and privileges as granted by Shaykh Sa'din (texts in C. U. Aitchison, A collection of treaties, engagements and sanads relating to India and the neighbouring countries, Calcutta 1933, xiii, 41-4). On the death of Karim Khan confusion and disorder broke out again. His nephew Dja'far Khan gave a farman to the English for unrestricted trade throughout Persia and exemption from all customs dues (text ibid., 44-5), but this was in fact of little value since Dja'far Khan's writ did not run throughout the province of Fars, let alone the rest of Persia.

In the nineteenth century contact between Persia and Europe was once more joined in a more permanent form by the establishment of commercial relations with the English and French. These relations were the result of the treaty of 1722, which gave the English rights to trade in Persia and on the Persian Gulf. The treaty, which was concluded on the same date under Article 10 of that instrument, fixed the conditions governing the trade of the English and French in Persia without payment of duty on merchandise brought from Russia to Persia for sale or barter, and to permit Russian merchants to build houses and stores to hold their merchandise (Art. 3). The Russian empress for her part promised that the subjects of the Shāh coming to trade "in her states or passing through her states for other lands would enjoy all freedoms and advantages that may be granted according to the customs and charters of her Empire" (Art. 4). Both parties were allowed to have agents or consuls in such cities as they might deem fit (Art. 6). In 1736 the English received a rabam renewing most of their privileges (Selections from State Papers, Bombay 1908, 48), but neither they nor the Dutch or French merchants secured full renewals of their privileges.

On 12 April 1763 an English East India Company agent concluded an agreement with Shaykh Sa'din of Bushire, which gave the English exemption from customs duties on imports and exports and laid down that only 3% should be taken from merchants who bought and sold to the English (Art. 1). The import and sale of woolen goods was to be solely in the hands of the English (Art. 2). The English were to have ground on which they could erect a factory on which they could hoist their colours and have twenty-one guns for saluting (Art. 6). No European nation was to be permitted to settle in Bushire as long as the English had a factory there (Art. 3). The brokers, linguists, servants and others of the English were to be entirely under the protection and government of the English (Art. 4). On 2 July 1763 Karim Khan gave a grant in similar terms to the English. They were given permission to have ground for a factory in Bushire and to build factory houses in any part of the Persian kingdom and were granted the same exemptions, monopolies and privileges as granted by Shaykh Sa'din (texts in C. U. Aitchison, A collection of treaties, engagements and sanads relating to India and the neighbouring countries, Calcutta 1933, xiii, 41-4). On the death of Karim Khan confusion and disorder broke out again. His nephew Dja'far Khan gave a farman to the English for unrestricted trade throughout Persia and exemption from all customs dues (text ibid., 44-5), but this was in fact of little value since Dja'far Khan's writ did not run throughout the province of Fars, let alone the rest of Persia.
term "capitulations" is applied only to the régime instituted by the Treaty of Turkomancay. Strictly speaking, the term is applied to the extra-territorial rights granted by that treaty and extended to other nations under most favoured nation treatment. In practice, however, the capitulatory régime covered also, or was closely connected with, trading privileges, and became closely associated with the question of protection, which in turn became connected with asylum, both matters which gave rise to many disputes between Persia on the one side and Great Britain and Russia on the other.

By Article 1 of the separate act relative to commerce Russian subjects provided with passports were to be allowed to trade throughout Persia. Persian subjects were to be allowed to import their merchandise by the Caspian or the land frontier between Persia and Russia and to enjoy most favoured nation treatment. By Article 2 contracts, bills of exchange, securities and other engagements in connection with business transactions between Persians and Russians were to be registered before the Russian consul and the governor (hakim). Merchandise imported into Persia or exported from Persia by Russian subjects and Persian produce imported into Russia by Persians or Russian merchandise exported from Russia by Persians were to be liable to a duty of 5% levied once and for all at their entrance or exit. Russia undertook not to increase the duty of 5% should the demand arise to make new customs regulations and new tariffs (Art. 3).

Articles 5, 7, and 8 were specifically of a capitulatory nature. Article 5 stated that, "Seeing that, according to the existing usages in Persia, it is difficult for foreign subjects to find houses, ware-rooms or proper places for the storage of their merchandise to let, it is permitted to Russian subjects in Persia not only to rent, but also to acquire, by every right of ownership, houses to dwell in, as well as ware-rooms and places in which to deposit their merchandise. The servants of the Persian Government shall not be allowed to enter by force the said houses, ware-rooms or places without having recourse, in cases of necessity, to the authority of the Minister, or of the Chargé d'Affaires, or of the Consul of Russia who shall depute an officer or dragoman to be present at the inspection of the houses or the merchandise".

Article 7 read "All lawsuits and litigations between Russian subjects shall be submitted exclusively to the investigation and decision of the Mission or of the Consuls of Russia in conformity with the laws and customs of the Russian Empire. So also shall disputes and lawsuits arising between Russian subjects and those of another Power, in case the two parties shall consent to such a course. Whenever any disputes or lawsuits shall arise between Russian and Persian subjects, the said lawsuits or disputes shall be brought before the Hakim or Governor, and shall not be investigated and decided except in the presence of the Dragoman of the Mission or of the Consulate. Once judicially disposed of, such disputes shall not be allowed to be instituted a second time. If, however, circumstances should be of such a nature as to render a second trial necessary, it shall not take place without previous intimation being given to the Minister, or the Chargé d'Affaires, or the Consul of Russia; and in that case the action shall be brought and decided only in the Dufter, that is to say in the Supreme Court of the Shah at Tabriz or at Teheran, likewise in the presence of a Dragoman of the Mission or of the Russian Consulate".

Article 8 stipulated that "In case of murder or any other crime committed among Russian subjects, the investigation and decision of the case shall be within the exclusive province of the Minister, or Chargé d'Affaires, or Consul of Russia in virtue of the jurisdiction delegated to them over their own countrymen. If a Russian subject should happen to be implicated with individuals of another nation in a criminal suit, he shall not be prosecuted nor molested in any way without proofs of his participation in the crime; and even in that case, as in the one in which a Russian subject should be charged with direct culpability, the tribunals of the country shall not be competent to proceed with the trial and judgment of the crime except in the presence of a delegate of the Mission or the Russian Consulate, and if there should be none on the spot in which the crime has been committed, the local authorities shall take steps to send the delinquent to a place where there is a Consul or a constituted Russian agent. The evidence both for and against the accused shall be faithfully taken by the Hakim and by the Judge of the place, and attested by their signature; transmitted in this form to the place where the offence is to be tried; this evidence shall constitute a record or authentic summary of the proceedings, unless the accused should clearly demonstrate the falsity of the same. When the accused shall have been duly convicted and the sentence passed, he shall be handed over to the Minister or Chargé d'Affaires or Consul of His Imperial Majesty, who shall send him back to Russia, there to receive the punishment awarded by the law" (text in ibid., pp. xxii-xl). From time to time as regards the payment of customs duties and exemption from internal tolls and road taxes the subjects of other European powers were placed on a similar footing to the Russians, but this was resisted by Persia, and in 1851 the Ministry for Foreign Affairs announced that the subjects of all countries not having commercial treaties with Persia would be called upon to pay the same duties as Persian merchants. In due course, however, many European and American states acquired capitulatory privileges by either special articles included in treaties concluded between themselves and Persia or a clause giving most favoured nation treatment. The Treaty of Paris 1857 also accorded most favoured nation treatment in the matter of customs duties by Article 1 of the commercial treaty concluded with Persia in 1842 (text in ibid., xlii-xliv). Similar privileges were acquired by France (1855), the U. S. (1856), Austria-Hungary, Belgium, the Netherlands, Denmark, and Norway and Sweden (1857), Greece (1861), Italy (1862), Germany and Switzerland (1873), Mexico and the Argentine (1902), and Chile, Uruguay, and Brazil in 1903 (see A. Matine-Daftry, La suppression des capitulations en Perse, Paris 1930, 67-81.). The capitulations were less elaborate in Persia than in the Ottoman Empire and less burdensome. They were, nevertheless, onerous, particularly because of the derogation of sovereignty which they involved, the privileged position which they gave to foreigners in matters of trade and the inviolability of their persons, domiciles, and goods, and the opportunity which they gave to Persian subjects to place themselves outside the authority of the Persian law if they succeeded in obtaining the protection of a
foreign power. Their operation depended much upon the circumstances of the moment and the temper of the diplomatic officials concerned.

Special tribunals under a department of the Ministry for Foreign Affairs, known as the diwan-i mu'ahhadat-i hādiyīga and staffed by officials of the ministry, were set up in the capital for the settlement of disputes between Persians and foreigners. In the provinces, representatives of the Ministry for Foreign Affairs, known as karghūdāris, presided over special councils for the same purpose. A general supervision of the activities of foreigners. Unlike the Ottoman empire, the procedure and machinery for the settlement of disputes by these courts was of the rudest kind (cf. A. C. Wratislaw, A consul in the East, London 1924, 190). Foreign consuls had, in effect, the power of veto because the decision of the court could not be put into effect unless counter-signed by the consul (Matine-Daftary, op. cit., 79-80).

Throughout the nineteenth century and in the early twentieth century there was a constant state of contention and friction between the Persian government and the agents of foreign powers arising out of the capitulary regime, but it was not until the Great War of 1914-18 and the unilateral abrogation of the capitulations by Turkey in 1914 that serious consideration was given to their abolition in Persia. In 1918 the cabinet of Šāmsān al-Dawla announced their unilateral abolition. This was followed by nothing more than a declaration of intent and was of no immediate effect. A demand for their abolition submitted by the Persian government to the Peace Conference in March 1919 was also abortive: the delegation, for reasons unconnected with this demand, was not received. On 26 June 1919, however, there was an exchange of notes with the Soviet government on the abolition of Russian consular jurisdiction. In the following year, on 1 June, a treaty was signed with China which contained no extra-territorial provisions, showing the lines along which the Persian government was thinking. On 26 February 1921 a treaty was concluded between the Soviet government and the new Persian government, which had seized power by a coup d'état early that year. This treaty was the first major step in the abolition of the capitulations. Article 7 declared that there would be no Russian consular jurisdiction in Persia. Article 16 confirmed the abolition of consular jurisdiction over Russian subjects in accordance with the note of 26 June 1919, and declared that subjects of the Soviet Union in Persia and Persian subjects in the U.S.S.R. would enjoy equal rights with the nationals of the country and be subject to the local tribunals of justice. (Texts in Alitchison, op. cit., i.xxxvii-xxxv. See also Matine-Daftary, op. cit., 151-3).

The Persian government under Rīdā Khān (who became Rīdā Shāh in 1925) now embarked on a vigorous programme of modernization. This involved, inter alia, the promulgation of civil, commercial and penal codes, the recruitment and training of judicial officials to apply the new laws, and the abolition of the capitulations. The commercial code was passed in three parts in February, April, and June 1925, and the penal code promulgated in February 1926. In 1927 after a reconstruction of the government all judicial tribunals were dissolved and the new minister of justice, Mr. Davar, authorised to prepare bills for the reorganization of the judicial system. On 26 April 1927, at the opening meeting of the commission charged with this work, Rīdā Shāh announced his wish to abolish the capitulations (Matine-Daftary, op. cit., 180, 210). Following upon this, the president of the Council of Ministers, Mustawfi al-Mamalik, announced in the National Assembly on 30 April that the government would include the abolition of the capitulations in its programme (ibid., 211). Towards the end of the year a commission was appointed to draw up a civil code. On 10 May 1928 it came into provisional operation. On the same date the Acting Minister for Foreign Affairs delivered notes to the legations concerned denouncing all treaties containing capitulare provisions and stating that they would cease to be effective as from 10 May 1928 and that states which enjoyed similar provisions by virtue of most favoured nation treatment would cease to do so after 10 May 1928. Provincial tribunals presided over by the karghūdāris were dissolved by the law of 12 Shahrivar 1306/3 September 1927 (ibid., 222-5).

iv.—Modern Egypt

Muhammad 'All and his successors, especially Sa'id and Ismā'īl, were eager to attract foreigners and promote their economic activity in Egypt in order to modernize and Europeanize Egypt as rapidly as possible. Moreover, for political considerations they felt the continuous need of conciliating the European Powers. As a result they permitted the privileges of foreign powers to expand far beyond the limits fixed in the texts of the Capitulations. Almost all these privileges grew in Egyptian usage to much larger proportions than in other parts of the Ottoman Empire.

(a) The privileges of foreigners in Egypt

1. Taxation. The fiscal clauses of the Capitulations were primarily aimed at exempting Western European states from the heavy burdensome taxes. However, in nineteenth century Egypt they were interpreted as denying the Egyptian government the right to impose any taxes on the nationals of Capitulatory Powers without the previous consent of their governments. There was one exception to this rule: the obligation to pay a land tax was tacitly accepted by foreigners as incidental to the privilege to own land, a privilege that was granted to foreigners in 1785 and that was formally conceded by law in the Ottoman Empire in 1867. But even the payment of this tax involved many complications (cf. G. Baer, A history of landownership in modern Egypt, London 1952, 65-6). The payment of all other taxes by foreigners had to receive the explicit consent of the Powers. Customs were covered by commercial treaties (see below). The Convention of London, signed on 17 March 1885 by the six principal European Powers, accepted the house tax decree of 13 March 1884 (with certain modifications concerning the representation of foreigners on the tax commissions). In 1890 the Powers agreed that the newly established municipality of Alexandria be entitled to impose municipal taxes on foreigners. In 1930 consent was given to an additional rate on urban property for the payment of night-watchmen; similarly, during the years 1932-6 a tax on cars and some minor taxes were conceded. However, before the abolition of the Capitulations in 1937 the Powers prevented the introduction of many other taxes in Egypt, for instance an income tax.

2. Customs. There was no difference between the customs tariffs of Egypt and those of the Ottoman Empire before the Khedive of Egypt had been given the right to conclude commercial conventions
3. Individual liberty. Foreigners in nineteenth century Egypt enjoyed greater individual liberty than in other parts of the Ottoman Empire in two respects. First, the Ottoman regulation that no church could be built or repaired without the explicit permission of the authorities was not enforced in Egypt. Second, in Egyptian usage the Ottoman restrictions on the freedom of foreigners enacted in 1844 and 1869 were not applied. Thus Egyptian authorities generally did not ask foreigners disembarking in Egypt for passports nor were they required to carry a tadhkira (q.v.).

4. Inviolability of domicile. In Egypt the principle of inviolability of domicile was considerably expanded and included the premises of any business. For instance, in Turkey customs officers used to visit all vessels entering harbours and keep officers on board till the cargo was landed. In Egypt, on the other hand, they could only watch the discharge and seize contraband when it was actually on shore. The privilege of exemption from search was claimed even for fishing boats by their Maltese, Greek and Italian owners. The restrictions of this privilege which were agreed upon between the Sublime Porte and the Powers in 1868 and 1874 did not apply to Egypt, and only in the commercial agreements between Egypt and the Powers of the 1880's and the 1890's did Egypt acquire effective rights to search vessels for detecting contraband.

5. Legislative immunity. In Turkey, there had been the Tampin-decrees, which Nubar was compelled to be contented with. In Egypt, on the other hand, the powers under the Ottoman law were applied to foreigners (Scott, 198). In Egypt the foreigners' immunity from local legislation was complete. No Egyptian law was applicable to foreigners unless it had received the explicit consent of the Powers. This principle frustrated many attempts to introduce modern institutions (e.g., Sa'id's police regulations; for its detrimental influence on the development of municipalities see G. Baer, The beginnings of municipal government in Egypt, in Middle Eastern Studies, iv/2 (Jan. 1968)).

6. Jurisdiction before 1876. The principle of the personal, rather than territorial, nature of law found in Egypt its most extreme application. Gradually the maxim actor sequitur forum rei became well established, i.e., the defendant's court had jurisdiction in all cases, not only in cases involving foreigners of different nationalities but also in other parts of the Ottoman Empire. Thus the consular courts claimed jurisdiction in any criminal, commercial or civil case in which one of their nationals, or even 'protected persons', was the defendant. Moreover, in Egypt, but not in Turkey, cases concerning immovable property involving foreigners of different nationalities were also judged in the consular court of the defendant. The consuls normally applied the laws of their own countries. If an appeal was made, it had to be addressed to the defendant's home court, and for the execution of the consul's sentence in criminal cases the foreign criminal often had to be sent to his home country.

In addition to the reasons for the general expansion of foreign privileges in Egypt mentioned above, this difference between Egypt and other parts of the Ottoman Empire has been explained by the rule of most of the Capitulations that cases involving foreigners and Ottoman subjects which exceeded a specified sum should be judged by the Imperial Delaw. Since travel from Egypt to Istanbul was long and expensive, it was generally preferred to submit the case to the court of the defendant (Barakat, 173).

(b) Judicial reform and the abolition of the Capitulations

1. Mixed Courts before 1876. Attempts to establish a unified system of courts at least for cases in which persons of different nations were involved, as well as to provide for Egyptian representation on the bench in cases in which Egyptians were the plaintiffs, were made in Egypt even prior to similar attempts made in Turkey. A mixed commercial tribunal was established in the early 1820's under the presidency of Muhammad 'Ali's agent, the prominent merchant Muhammad al-Mabruki (F. Mengis, Histoire de l'Egypte sous le gouvernement de Muhammad-Aly, Paris 1923, ii, 447; for 1824-1827-8 see Amin Sânî, Talâhim al-Nil, Cairo 1928, ii, 335). After long periods of inactivity the Mixed Commercial Tribunals were reorganized in Alexandria and Cairo according to an order of 3 September 1861 which provided for the appointment of Egyptian and foreign members and of an Egyptian president. However, these tribunals never worked effectively since foreigners did not recognize their competence in cases in which they were the defendants and had recourse to them only when they were the plaintiffs (Stoddart to Aberdeen, 31 December 1845, Public Record Office, London, F. O. 78/624, and Report by Consul Green, 2 April 1856, F. O. 78/1222).

2. The reform of 1875. In a report of 1867 Nûbîr Pashâ, at that time Egyptian Minister of Foreign Affairs (Tieck's) proposed the establishment of mixed courts with jurisdiction in all cases in which foreigners were involved—commercial, civil, or criminal. After long negotiations, in the course of which Nûbîr was compelled to be contented with reforms more modest than his original ideas, the Réglement d'Organisation Judiciaire was enacted in 1875. The new Mixed Courts, which were established in 1876 according to the Réglement, had jurisdiction in all civil and commercial cases between foreigners of different nationalities and between foreigners and Egyptians. Their power extended also to foreign litigants of identical nationality in all cases concerning land held in Egypt, and even to cases where an Egyptian corporation was involved against Egyptian litigants if there was foreign capital invested in the corporation (so-called 'mixed interests'). In the sphere of criminal law, the Mixed Courts were only empowered to deal with police offences of foreigners for which the maximum penalties were a fine of 50 lira or one week's imprisonment, and offences committed directly against the administration of justice by the Mixed Courts themselves. All other penal offences of foreigners were dealt with by the consular courts, which also retained jurisdiction in matters of personal status of foreigners.
and civil actions, other than those involving land, between foreigners of the same nationality.

Foreign judges of the Mixed Courts were appointed by the Egyptian government after consultation with the Ministers of Justice of the countries from which they came, and the proportion of their number to that of the Egyptian judges was fixed. There were three District Tribunals and one Court of Appeal, as follows (data for 1937):

<table>
<thead>

<td><strong>23</strong></td>
</tr>
</tbody>
</table>

Since the Mixed Courts were open to nationals of all foreign states, their establishment involved conceding new privileges to nationals of non-Capitulatory Powers.

The Mixed Courts judged according to 'Mixed Codes' based mainly on the Code Napoléon and French law. Since these codes could not be altered without the unanimous consent of fifteen governments, a Legislative Assembly was established in 1911 which was competent to approve additions and modifications (but not to endorse measures contravening the fiscal immunity of foreigners).

3. The abolition of the Capitulations and of special jurisdiction of foreigners. At the outbreak of the First World War the Turkish government declared the abolition of the Capitulations, which was subsequently recognized by the Capitularies in Article 28 of the Treaty of Lausanne 1923 (including financial legislation) and the Mixed Courts were permitted to submit themselves to the jurisdiction of the Native Courts. All vacancies up to two-thirds of the total membership of the District Courts were to be filled by Egyptian judges, who were also permitted for the first time to become presidents of these courts. Judgment was to be given in Arabic as well as in a European language.

On 15 October 1949 the Mixed Courts and the Consular Courts were closed, jurisdiction was transferred to the National Courts, and the law codes were revised and unified.

Bibliography:

IMUḤAGH, IMUṢHAGH. [see AHAGGAR, BERBERS, TAWĀ'RĪK].

IMZAD (Berber) or ʿimzad, ʿumzad according to the dialect, "hair, fur", denotes a musical instrument in use among the Touareg (Tawārīk q.t.), and generally compared with a violin. The sounding-box consists of a half-calabash of varying diameter (20 to 50 cm.), over which a goatskin, tanned quickly and stripped of hair, is stretched and fixed with cord or acacia thorns; often decorated with motifs painted in bright colours or with inscriptions in tifinagh [see BERBERS, vi], the goatskin is pierced with one or two sound-holes (in Ahaggar, tinjagg, tinj "eye") either to the right and left of the bridge, or between the bridge and the visible part of the wooden neck which passes under the taut goatskin and emerges on the other side. At each end of the neck the single string, formed of horse-hairs coated with resin, is fixed by means of a thin strip of leather; the tension of the string, which is held above the goatskin by a bridge composed of two small strips of wood tied together in the form of a cross, is regulated by means of a "noose" consisting of a moveable strip knotted to the neck, its distance from the end being adjustable. The bow is a curved wooden wand semi-circular in shape, between the ends of which is stretched a string also made of horse-hair coated with resin from the gum-tree instead of rosin.

The ʿimzad is held by the player on her thighs as she sits low down, just above the ground, with legs tucked back; her left hand holds the outer part of the neck, with the thumb on the noose, the right hand holding the bow at right angles to the string, pointing towards the chest. Thus the ʿimzad is "constructed partly like a percussive instrument, held like an instrument with plucked strings, and played like an instrument with a bow"; the playing of the ʿimzad is the subject of a technical study (see Bibl.) from which it appears that the music played on this instrument is of an archaic kind entirely unconnected with Islam.

In the time of Father Ch. de Foucauld, the ʿimzad was "the favourite musical instrument, noble, elegant par excellence" which in some measure symbolized the Touareg's fatherland. It was played in the courts of love known as aṭṭ, and to deprive men of music was a severe punishment, particularly after an unsuccessful raid; to play or, more accurately, "to strike" the violin (awt ʿimzad) signified "to utter charming and flattering words". While at that period half the noblewomen played it—though good players numbered only four or five—today this instrument is almost abandoned and it is even forbidden in certain encampments on account of its harmful influence on the young.
The expression **in shā Allah**—or an equivalent—reappears many times in the Kurṣān, especially, it seems, in the sāras of the Medinan period: to leave to God's will the realization of a wish, the announcement of a reward or a punishment, or the future execution of a given order (e.g., II, 70, VI, 41, IX, 28, XI, 33, XII, 99, etc.). Two similar formulas are: "if God had willed" (law; still more frequent), and "so far as God wills it" or "unless God does not will it" (ṣād ma. . .; x, 49, xi, 107-8, etc.). This "leaving to God" required by the *istiṣḥād* may be compared with a similar teaching in Christianity, *James*, iv, 19. The problem arises whether the expression is

**shā Allah** may (or must) be used in the case of a definite promise, of an oath or a giving of witness. The question is whether it is then an attestation "in the form of a circle" (yāmin dā'ira; cf. Massignon, *ibid.*), causing to intervene (by invoking God) a possibility that the attestation made (in the name of God) may be vain. The answer of the devout Muslim is that human oaths and witness "are valid only if they correspond to the divine truth" (*op. cit.*, 586) which transcends our assurances and our resolutions. It is only with God's help that we are able to keep our promises to God and to men.

The use of the *istiṣḥād* in the conclusion of contracts raised arguments among the jurists, who maintained that there was a risk that it might become a "ruse" to escape from the engagements undertaken, or even an abdication from all responsibility. Some, among them Ibn Masʿūd, suppressed the *in shā Allah* only in contracts or attestations "with immediate effect" (*fi l-hal*); others tended to suppress it from every contract or attestation, even those whose effect was in the future: such were the Muʿtazilis and the Māturidis. The Khāridjis on the other hand retained it absolutely; similarly, with some nuances, with Ibn Ḥanbal and al-Aḥṣārī (*ibid.*, 585). One of the aims of *fiḥ* was to restrain any abuse of the *istiṣḥād* by conditions "linking the contracting parties in case of the non-execution of an agreement".

Nevertheless this expression of reliance on the inscrutable will of God had a profound influence on the mentality. One of the main questions raised is that of the relations between faith (*imān* [q.v.]) and the "formula of exception". It can be seen moreover
as a particular instance of the juridical problem concerning contract or witness: inman is a pact (tahd) which is labour'd to God. Is it permitted to say: "I am a believer—if God wills" (anā mu'min—in shā' Allāh)? We give here the main answers of Sunni Islam (cf. L. Gardet, Les grands problèmes de la théologie musulmane: Dieu et la destinée de l'homme, Paris 1967, 385-90).

1. Against the istithnā': (a) Mu'tazilis: Man is "the creator of his own acts", it is a man's own will which makes the believer. Hence the formula "in shā' Allāh" (Kur'ān, XVIII, 29). The "formula of exception" may not therefore be joined to the affirmation of faith. (b) Māturidī-Hanafis: "The believer is truly a believer and the unbeliever truly an unbeliever (kāfir)", it is stated in article 3 of the Wasiyyat Abī Ħanīfah: "there cannot therefore be any doubt concerning faith, nor concerning unbelief,—according to the word of the Most High: 'Those in truth are the believers' (Kur'ān, VIII, 74), 'those in truth are the unbelievers' (IV, 153)" (cf. A. J. Wensinck, The Muslim creed, Cambridge 1932, 125, 138-40). The formula anā mu'min expresses present faith. If a man who at present has faith later dies without faith, he will have changed from happiness to unhappiness, from being saved to being damned (for the Māturidī position in detail, see in particular ʿAbd al-Raḥmān Ibn ʿAllī, Kītab Nazm al-fard'id,* Cairo n.d., 62-4). The attestation given in the present certainly does not have any effect on the divine decree for the Hereafter; the believer must therefore affirm his faith without placing any limit on his witness. (c) Some ʿAshʿarīs, among them al-ʿIṣfārāʿīnī and al-Bākīllānī are against it "through determinism" (L. Massignon, op. cit., 585, n. 2). Acts, whatever they are, being created by God, to invoke the Divine Will has no real significance. 2. Supporters of the istithnā': (a) Ibn Hanbal in particular (ʿAbīlādī, i, 25) and the whole of the Hanball line. It should be mentioned here that the Hanball attitude is against the opposite theory of the Murdhīs; Ibn Baṭṭaṣa insists on this (cf. H. Laoust, Ibn Baṭṭaṣa, 48-97/82). After listing various doctors who desire to join in shā' Allāh to anā mu'min, and quoting a Kur'ānic text and two hadīth, Ibn Baṭṭaṣa states that it is not only "formulation of exception" but not only "formula of exception" but not only "formula of exception" but not only "formula of exception" but not only "formula of exception" but not only "formula of exception" but not only "formula of **INÁL — INAL AL-ADJRUD**

**Bibliography:** All the literary references (Ibn al-Azrak, the continuator of Ibn tfawddith, etc., Middle East; A. Gabriel, *Les sources orientales de la Turquie*, in JA, 1935; supplemented by idem, *Mouvements populaires...*, in Arabica, 1958, 244; and for archaeology and epigraphy, replacing the earlier works, A. Gabriel, *Voyage archéologique dans les provinces orientales de la Turquie*, with the epigraphical supplement by J. Sauvaget, inscriptions nos. 62-5; see also the article ARTUKIDS, and Z. Saba, *Les premiers Urtukides*, Cairo 1961. (C. Cahen, *Les premiers Urtukides*).

**INAL or INALCUK,** the governor of Utrar [q.v.] under Sultan Muhammad Kârazm-Shâh [q.v.]. A kinman of the Sultan's mother, Terken Khatun, he had been given the title of Kaylr-Khan. It was the execution by his orders of an ambassador of Çingiz-Khan [q.v.] and a caravan of Muslim merchants accompanying him that led to the Mongol invasion of Muhammad's empire. Captured at Utrar after offering desperate resistance, he was put to death at Samarkand in the spring of 617/1220.

**Bibliography:** Djuwayni-Boyle, 79-86, 367-8; Barthold, *Turkestan*, 398-9. (J. A. Boyle)

**INAL (or AYNÁL) AL-ADJRUD, AL-MALIK AL-AMIR AL-ASHRAF, SAYF AL-DIN ABU 'L-NASR ABU 'L-NUR AL-ZAHIR AL-NASIRI, Mamluk Sultan (857/1452-865/1461) of Egypt and Syria. A Circassian by birth, he had been bought in 799/1379 by the trader Aynal (or Aynalkus, the governor of Utrar) and sold to Barkuk [q.v.] (al-Malik al-Zahir, latterly Cairo and sold to Barkuk [q.v.] (al-Malik al-Zahir, whence Inal's nisba al-Zahirin). He was enrolled in Barkük's corps of al-Muhtaraat, remaining in the Kidîbiyya until the reign of the sultan (al-Nasir) Faradî [q.v.]. Transferred then (whence his nisba al-Nasirî) to the Kâdâsakhiyya, in 824/1421, under al-Mu'ayyad Shâh, son of al-Mu'ayyad Shâykh, he became a "captain of ten"; under Barsbay [q.v.] he was promoted to Amir al-islâhînÎ, then to Ras' nisbaa, and in 830/1427 to Amir arba'in, Ra's nisba al-Zahirin. Appointed 'amîd of Ghaza in 831/1428, he took part in Barsbay's campaign of 836/1433 against the Ak-Koyunlu chief Kara-Yuluk 'Uthmân Beg, when 'Amid (Diyârbakr [q.v.]) was attacked. The assault on the citadel, vigorously defended by 'Uthmân Beg, was beaten off by the Mamluk force returned to Egypt. In 843/1439, he was summoned to Cairo by the sultan 'Alâ' ad-Dîwân al-Mu'ayyad Shâh, son of al-Mu'ayyad Shâykh, and was appointed 'amîd of Ruhab (Edessa), with the rank of Amir mîta taqâda alî fi 'l-diyr al-Misrîyya. Until 839/1436 he was engaged in numerous skirmishes with the Ak-Koyunlu, and the next year was appointed 'amîd of Sa'dad. In 843/1439, he was summoned to Cairo by the sultan Çâmpak (like him an 'âlî) and was given the post of Mu'addam and then, in 846/1444, of Chief Dawdâr. In 847/1444 and 848/1444 he took part in the unsuccessful attacks on Rhodes.

On the death of Yâshbak al-Sûddîn in 850/1446, Inal succeeded him as 'Alâdîk al-tasâfi (= Al-'Amir al-habîr). When Çâmpak died in 857/1453, Inal fell out with his son and successor 'Uthmân over the donative to be paid to various groups of mamluks; in the subsequent street-fighting he occupied the Kaft al-Djaabal and was appointed sultan, by an assembly including the ('Abhcâsid) shadow-caliph and the four 'âdâdi al-Çacâdi, with the title al-Malik al-Ashraf Sayf al-Din. He was then 73 years old. His first preoccupation was to appoint 'Alâ'is to various posts, to break up the group of royal Mamluks formed by his predecessor, and to proclaim the abolition of various mazlâm-courts.

Inal's brief reign was full of incident. In 857/1453 he sent the second 'amir al-Çakâr Barsbay as envoy to the Ottoman Sultan Mesh ëmedd II in reply to an Ottoman embassy announcing the conquest of Constantinople. The following year he defeated the attempts of the Dhu 'l-Kâdîr-oghlu Fâyâyîd Beg to make himself 'amir of Albâstan, installing instead his brother Sulaymân Beg. In 859/1455 he put down a rising caused by dissension between his own mamluks and rival groups; he deposed the caliph al-Kâ'im, who had been involved, and appointed his brother al-Mustandjid in his place. Ignoring a complaint from the Kârâmân-oghlu Ibrahim II that the Ottoman Sultan had been given the title of Kaylr-Khan, he not only sent an embassy to confirm the good relations with Mehemmed, but also despatched a force under Khoqshâdam to block Kârâmânîd expansion in Câlicia; that these troops occupied four fortresses in Kârâmân and burned Lârenda provoked strong criticism of Inal's policy. The same Khoqshâdam was sent against the Ak-Koyunlu ruler Uzun Hasan [q.v.], who was besieging Malatya.

The next crisis was over Cyprus, which since 830/1427, in the reign of Barsbay, had been tributary to the Mamlûk sultan. The Lusignan king John II (1432-58) had in person attended the ceremonies in Cairo upon Inal's accession. When he died, to be succeeded by his daughter Charlotte (1458-60) (with Louis of Savoy as joint ruler), John's illegitimate brother James, Archbishop of Nicosia (in Mamlûk sources: Dahâm), feeling his life to be in danger, fled to Cairo. The dignitaries of Cyprus and the Knights of Rhodes preferred Charlotte as ruler, but the populace of Cyprus favoured James, who now found support among the Mamlûk amirs. Ambassadors for the various parties came to Cairo, where Inal upheld the claim of James and proclaimed him King of Cyprus. James was sent back with the support of an Egyptian fleet and occupied Nicosia, but was unable to take Chermes (Kal'fat Sharina), held by Charlotte. The Mamlûk troops suffered heavy losses, and the bulk of the Mamlûk force returned to Egypt.

The sources represent Inal as a just ruler and his reign as prosperous, mainly because of his monetary reforms: silver and gold coins of inferior weight were withdrawn from circulation and a new fâls (of eight to the dirham) was issued. He died on 13 Dhjumâd I 865/26 February 1461, at the age of 80 or 81, having reigned for eight years. He was described as dark, tall and thin; his scanty beard won him the nickname âdârîd. He left two sons and two daughters. As Inal had enjoined, his son Ahmad succeeded him, as al-Malik al-Mu'ayyad, but was deposed after four months, to be succeeded by Khoqshahdam [q.v.].

(M. C. Şehabeddin Tekindao) İNAİ, IBN AL-AMIN MAHMÜD KEMAL (in modern Turkish: İnbülemi Mahmûd Kemal İnal), 1870-1957, Turkish biographer and writer, a significant figure as being the last outstanding representative of traditional Ottoman scholarship and erudition. His father Mehmed Emin Paşa (1837-1908), also known as “Mühürdar,” since he held the post of private secretary to his patron and relative Yusuf Kâmil Paşa (1808-76), Grand Vizier under Abd al-Aziz and son-in-law of Muhammad ‘Ali of Egypt) served in various provinces in Anatolia and retired in 1908 as governor (muastaşar) of the Aegean Islands. His mother Hamîde Nûgîs died in 1933.

Mahmûd Kemal’s ancestors came originally from Bukhâra and were known as Seldjûq-oghûl (Selçuklu), a name which was engraved on the personal seals of the family. Later in life he wrote that he regretted having adopted the surname İnal (as a “translation” of Emino) when family names were introduced by law in 1934, and not taking instead their old name Seldjûq-oghûl, as some members of the family did (I. M. K. İnal, Pratt hillatlar, 672, n. 1). The by-name İbn al-ı Amin (İbnul Emîn) begins to appear in his earliest writings, in the 1890s. From the end of the First World War to the dissolution of the Government of Istanbul (1918-22), he served as editor of the official government newspaper Tacirvâmi-i Wehâsî, and in the last two months as head of the Government Chancery (Dîwân-i Humâyûn Bûlgîkâb), in this capacity he represented the Grand Vizier’s office on the special political committee of under-secretaries appointed to draw up the Turkish view on the forthcoming peace-treaty negotiations (Col. İsmet Bey, the future İnönü, represented the Ministry of War on the same committee).

After a temporary appointment in the Administration of the Ottoman Public Debt (Dîvân-i Umûmiye [q.v.]), where he worked in the company of many leading writers and intellectuals of the period, he was in 1924 made president of the Commission for the Classification of Historical Documents (Weţêkî-i Ta’rikhiyye tasmîf heyetsî) by the Ottoman Historical Society (Ta’rikhi-i 6‘elmîname Endûmeni), of which he had been elected a member in 1923. In three years’ concentrated work on the commission he was able to collect valuable material for his later works. In 1927, through the good offices of two of his friends and admirers, the poets Khalîl Nihâd (Bostepe) and İbrahim ‘Alî al-Dîn (Çokun), the new Ankara Government appointed him Director of the Museum for Pious Foundations (Ewâbî: İlamîyeyi Müzesi), later renamed Museum for Turkish and Islamic Arts (Türk ve İslâm Eserleri Müzesi) located in the Süleymaniye Külliyye. He kept this position until his retirement in 1935.

In 1936, with the support of the Egyptian Princess Khadjda ʻAbbâs Halim, he went to Mecca on pilgrimage, and addressed Egyptian Prince Muhammad ʻAlî, then the heir-apparent to the Egyptian throne, invited him (together with the calligrapher Kâmil Ackdik) to Egypt to help classify his collection of Islamic calligraphy. On his return to Istanbul in February 1940 he found himself appointed adviser to the Editorial Board of the Turkish edition of the Encyclopædia of Islam. This was a personal decision of Hasan Ali Yücel (1897-1961), writer and publicist and an able Minister of Education, who during his eight years in office and afterwards constantly encouraged him, urging him to publish his major works (which were mostly in the form of disjointed notes, and were edited as they actually went to the printers). Mahmûd Kemal brought himself to sort his immense quantity of material and concentrate it only when he was officially commissioned to write (A. H. Tanpinar, İbnül Emeno Mahmûd Kemal’de dair, in the introduction to İnal’s posthumous work Hoş sada, Istanbul 1958, p. LIV). From 1940 until his death on 24 May 1957, he devoted most of his time to preparing, correcting and supervising the printing of his books.

Mahmûd Kemal was probably the last surviving example of the old-style Ottoman gentleman, who anachronistically insisted on leading the life of that extinct class and on preserving in his house the nostalgic illusion of bygone days. His genuine respect
and admiration for the Ottoman past made him ignore the changes which were taking place around him; ... forward for action, was a perennial one for Islamic rulers and commanders. Unless inducements such as extra pay awards, bequeathed his to the Imam-Hatip school of Istanbul. Of many Turkish scholars, he presented to the Ho§ sada work than others. Published in the introductory part of his posthumous many people in his conversation, he was in his highly sensitive temperament, his strong likes and combined with a strong sense of humour, he often gives patrons of his family and himself (e.g., writings very conscientious, balanced and just. With the masterly use of first-hand archive material, privately obtained contribution is in the field of biography. He essentially continued but later went far beyond the traditional Ottoman biographical pattern. In his biographies he history, and often suffered at the hands of Abd al- Mudros, the Allied forces moved into Istanbul in 1919, Mahmud Kemal was given 24 hours' notice to evacuate his konak. Most of the documents, manuscripts and precious objects which had been stored in the house were found to be 'looted, destroyed, desecrated or lost' when the konak was returned to him after 18 months, as he comments bitterly in his autobiographical note (Kenende deir, in Son asur Türk sa¿leri, Istanbul 1930-1942, pp. 2201-42).

Mahmud Kemal was little more than a child when he published his first articles in the newspaper Tarik in the 1880's. Encouraged by the famous writer and publicist Ahmed Mîdhat, he contributed for years to Mîdhat's paper Tercüman-i Hafizbat. Henceforth his new surname Ibn al-Âmin appeared regularly in many Istanbul and Salonika papers and periodicals. Pamphlets of various length followed. His writings covered the fields of religion, ethics, literature and history, and often suffered at the hands of Abd al-Hamîd's censors. But Mahmud Kemal's real contribution is in the field of biography. He essentially continued but later went far beyond the traditional Ottoman biographical pattern. In his biographies he does indeed give the usual uninspiring enumeration of his subject's patron himself with advancing age, he adds is always more important. With the masterly use of first-hand archive material, privately obtained documents, illuminating authentic anecdotes, relevant analogies, unbiased analyses of contemporary conditions, and insights into human psychology combined with a strong sense of humour, he often gives the most vivid, unforgettable and convincing portrait of his subject. It is remarkable that in spite of his highly sensitive temperament, his strong likes and dislikes, his prejudices, his cutting remarks about many people in his conversation, he was in his writings very conscientious, balanced and just. Perhaps it is fair to add that the close friends and patrons of his family and himself (e.g., Yûsuf Kâmil Pa§a, Kâmil Pa§a, Kûlik Sa¿d Pa§a) are treated with perhaps a little more sympathy and attention than others.

The text of Mahmud Kemal's testament has been published in the introductory part of his posthumous work Ho§ sada (see below). Following the tradition of many Turkish scholars, he presented to the University of Istanbul his rich private library and bequeathed his Konak to the Imam-Hatip school of Istanbul.

It was hard for Mahmud Kemal to get accustomed to the new Roman alphabet (1928) with its strictly phonetic rules, and he ignored until the end the new spelling rules of modern Turkish, insisting on writing his books printed in his own peculiar spelling, which tried to reproduce the historical spelling of Ottoman Turkish. Also, like the purists of the school of Mu'allim Nâdı¿, he would prefer the "correct" forms of some Arabic loan-words and ignore phonetic adaptations in the present Turkish usage (e.g., yusalet, akraba, tehlikê, instead of yusalet, akraba, tehlikê). Apart from minor typographical corrections and many pamphlets and newspaper articles, Mahmud Kemal is the author of the following published works: (1) Ewâhî-i Hümayûn Nercetinini târîq-i teşkilâtî ve nüsurâtâr terâdiq-i ahmûdî, Istanbul 1335/1917, a history of the Ministry of Wa¿fs with biographies of the ministers. Although the book was entrusted to a team, no contribution was made by his colleagues; (2) critical edition of the Diwân of the 11th/12th century poet Shaykh al-Islâm Vâyû, with a 65-page introduction on the life and poetry of the author, Istanbul 1334/1916; (3) critical edition of the Diwân of the 19th century neo-classicist Herselîki ۰Rifî Hikmet, with a 78-page introduction, Istanbul 1334/1916; (4) critical edition of the Diwân of the 19th-century neo-classicist Lesîgofîlî Ghalîb, with a 47-page introduction, Istanbul 1335/1917; (5) critical edition of Mustafa ۰Ali's Konîlêk-i hikâyatên, with an important introduction of 133 pp. on ۰Ali's life and works, Istanbul 1926; (6) critical edition of Musta- takîmzâde Süleymân Sa¿d al-Dîn's Tuhfet-kehatîfîn, a bibliographical treatise on calligraphers, with an introduction in 85 pp., and notes, Istanbul 1928; (7) Son asur Türk sa¿leri, biographies (uncritically selected and of uneven value) of 19th and 20th century poets with short specimens of their work, published in 12 fascicules (1230 pages) Istanbul 1930-1942 (the original title Kamâl al-shu'arâ being changed by the Turkish Historical Society, which undertook the publication); (8) Osmanî devrinde son sadrasamâlar, Istanbul 1940-49, his most important work, contains much unpublished material on the lives and times of the last 37 Grand Viziers, conceived as the sixth and last supplement (dheyây) to ۰Uhmân-zâde Tabî¿s, Hadîhât i hunver-dîn, acent and of uneven value) of the 19th and 20th centuries. The first 128 pages are from his own pen, the remainder (pp. 129-314) compiled and completed, mainly from Mahmud Kemal's notes, by Avni Akta¿. The 72-page introduction includes the text of his testament, articles by Hasan-Áli Ýücel, Ahmet Hamdi Tanpinar and two of his doctors, K. I. Gürkan and M. E. Ýûşên, with important data on his life, personality and character.

Bibliography: The main sources for Mahmud Kemal Inal's life and works are his own works, as listed in the article. (FAHIR İZ)

INÅM (A.), "favour, beneficence", more specifically donatives, largesse, given to troops, etc. The problem of keeping armies in the field, once mustered and brought forward for action, was a perennial one for Islamic rulers and commanders. Unless inducements such as extra pay awards,
promises of unusually attractive plunder, etc. could be dangled in front of the troops, there was danger that an army might disband itself and melt away once the immediate battle or object of a campaign had been achieved; not infrequently, it was difficult to get an army to fight in the first place. Whilst one Muslim army faced another Muslim army, each recruited on a similar basis and facing the same problems of recruitment, supply and deployment in the field, the difficulties common to both sides tended in general to be lessened. But this problem of keeping an army in the field was a serious one for Muslim commanders during their wars with the Crusaders. The Franks had settled in their Levantine conquests and had established a feudal system on the lines familiar to them in mediaeval western Europe; their knights were accordingly kept permanently ready for war as a condition of their feudal tenure. Their Muslim opponents had to organize professional armies of mercenary soldiers, Arabs, Turkmens and Kurds, with all the attendant problems of paying the soldiers and keeping them together for lengthy periods of service (baykär = Pers. paykär), some of which dragged on for years. It says much for the heartening effect among the Muslims of the Ayyūbid Saḥḥ al-Din's leadership that he was able to lead his troops into battle year after year; here, personal influence rather than financial inducements or promises of promotion, etc. The highest commanders might receive presents of luxury items of clothing and robes of honour or ḥāsā' [see khilāf]. As the 'Abbāsid Caliphs gradually fell under the control of the Turkish generals, and lost much of their independence of action, succession crises and confs d'État increased. Rival claimants had to secure the allegiance of the guards in the capital, and this was usually only possible through financial inducements. In the 4th/10th century, these came to be expected by the army as a matter of course whenever there was a change of régime, and they acquired the technical designation of māl al-bay'a (bāb al-bay'a, rasm al-bay'a). These payments may be compared with the ḥulūl akbār later extracted by the Janissaries from the Ottoman Sultans. Thus when al-Muqtadir was restored to the throne in 317/929 after his second deposition, he had to pay the māl al-bay'a aresh: six nāṣib (monthly allotments of pay) and an extra payment, ziyyāda, of a dinār for each infantryman; and a third of a rīš (i.e., the pay for a period of 90 days, cf. Hoeran-bach in Isl., xxix (1950), 279) and a ziyyāda of three dinārs for each cavalryman (for the technical term ziyyāda, see Khummel, 225). A decade later, in C. E. Bosworth in JESHO, xii/2 (1969), 143-4). When the cash in al-Muqtadir's treasury was exhausted, the stocks of clothing and other valuables had to be sold to meet this commitment (Miskawayh, in Eclipse of the 'Abbāsid Caliphate, i, 199-200, tr. iv, 224-5). Stormy or disputed successions became common under the Buyids, and accession payments became the norm. When 'Izz ad-Dawla Bahāʾīdyār succeeded his father Muḥammad ad-Dawla in 356/967, he attempted to dispense with Daylamī support and rely on his Turkish troops. But the Daylamī leaders rebelled and demanded their normal pay plus an additional, extraordinary payment as accession money (raṣqa mansūba ili-i-bay'a ghayr mahṣūba). In the end, Bahāʾīdyār had to compromise and give them a third of a raṣqa (seil. a month's or perhaps six weeks' pay), and of the other payments, in Eclipse, ii, 226, tr. v, 250; cf. also Hilāl al-Sāḥi, ibid., iii, 159, tr. vi, 466, demands of the Daylamīs in Başra for accession money from Bahāʾī al-Dawla in 370/980).

In circumstances like these, the allegiance of the army would simply go to the highest and swiftest bidder. After the death of Ḥālam al-Dawla, his son al-Malik al-ʿAziz Abū Manṣūr was unable to find the required māl al-bay'a quickly enough, and his cousin Abū Kādishār eventually stepped in and bought over the allegiance of the Buyid troops in Iraq (Ibn al-ʿAthir, ix, 333, cf. H. Bowen, The last Buwayhids, in JRAI (1929), 232-3). Only the strongest of rulers could avoid these payments. According to Hilāl al-Sāḥi, Aṣḥāb al-Dawla refused to make any additional payments above the base allowances (ziyyāda fi l-ʾudūl) except on justifiable occasions, such as after victories or when a special policy of conciliation was required (cf. C. E. Bosworth, Military organisation under the Buyids of Persia and Iraq, in Oriens, xviii-xix (1966-67), 162). Mahmūd of Ghaznaʾs son Maṣūfī achieved the throne of the Ghuravīd empire in 431/1030, and shortly afterwards was strong enough to dispense with the māl-i bay'at payment to the army, and he even got back from the leading commanders the money from the state treasury which his brother Muhammād had paid out in a fruitless
In addition to these succession crises, soldiers were well placed for blackmailing their commanders into giving extra payments at such times as before crucial campaigns or battles. When ʿĀṣim b. ʿAbd Allāh al-Hilālī, newly-appointed governor of Khurāsān, was in 116/734 commanding the rebel al-Ḥarīb b. Suraydī (q.v.), he had to placate the Arab government troops (al-gālūnd) from Marw with the offer of a dinār per head before they would engage the Khurāsānīs, and they in the end rise to three dinārs (Tabārānī, ii, 1579-80). In 195/811 the Caliph al-Ḥātím appointed ʿAll b. ʿĪsā b. Māḥān governor of western Persia and commander of his army there; he thought it prudent to make sure his army’s loyalty by granting it a great sum of money and distributing amongst the troops 2,000 jewelled swords and 6,000 sets of robes of honour (ṣilāt, ʿubbād). The ʿAṣṣawāʾīn Amār ʿAmr b. al-Layth kept a special treasury from which rewards could be given to outstandingly brave soldiers (cf. C. E. Bosworth, *The armies of the Saffarids*, in *BSOAS*, xxxi (1968), 549). On occasion, it was politic for a commander to single out for a particular honour a section of the troops which had especially contributed to a victory. The Būyids were at times able to play off the Daylamīs against the Turkish element in their armies, and so preserve a loyal following of some kind; but often, they had simply to purchase support through financial inducements. Faced by a serious revolt in 345/956-7 of the Daylamī general Rūzbāhān b. Windād-Khurshīd, Muʿīz al-Dawla had to buy the loyalty of the Turks of Baghdād, a body of his young slaves and the minority of Daylamīs who had remained faithful to him, by increased pay allowances and promotions (Miskawayh, in *Eclíptica*, ii, 163, 166, 173-4, tr. v, 174, 178, 186-7; Ibn al-Athīr, viii, 386). Because of their outstanding rôle in the victory over his uncle Kāwūrūd in 465/1073, the new Sālṭjūqī Sultan Malik-Shāh gave the Arab and Kurdish commanders of his army an extra share in the plunder, special honours and a distribution of land grants or ṣīḥād’s (Bundārī, 49; Ibn al-Aṭhīr, x, 53).

"Mirrors for Princes" literature frequently adverted to the necessity of keeping the troops’ loyalty by means of timely donatives, especially after outstanding victories or feats of valor. Kay Kāʾūs advises the wise prince, “Pay special regard to anyone who fights valiantly, overthrows or wounds one of the enemy, seizes a horse or performs any other laudable deed. Reward such a man for his services by presentation of a robe of honour and increasing his pay; do not spare money at such a time” (*Kābūs-nāma*, ch. xii, tr. R. Levy, 220). Ṣafīqī b. Mudābir’s ʿĀdāb al-harb wa l-ṣiḥādā’ has a special chapter on the obligation of the ruler or commander to reward his soldiers for special services, bravery in the field, etc., with marks of honour (*taqāfīr*), financial awards (*silāt, ʿinnām*), gifts of horses and weapons, and pensions (*nāmāra*). He goes into considerable detail about the proportionate rewards for various deeds, such as bringing in the severed head of an enemy, capturing a horse and rider together, or a horse or rider alone, leading or withstandning a charge, going out in single combat, carrying off the enemy’s standard or ceremonial parasol (*lātir*), and so forth (*India Office Persian Ms. 647, ch. xxxvi, ff. 126b-128a; ed. Aḥmad Subayyī Khāṃsārī, Tehran 1346/1967* (based on the British Museum Ms. alone), ch. xxx, 542-7).

**Bibliography:** given in the article. There are no special studies devoted to this topic.

ʿĪNĀN, poetess who was very famous in Baghdād in the second half of the 2nd/8th century. The little that is known of her life is of doubtful authenticity. She was a *mawṣūladda*, and was born, and received a polite education, in the Yamāmā, which was to produce a little later another famous poetess, Paḍī. ʿĪnān was brought to live in the capital by her master, Abū Khālid al-Nāṭfī, then probably lived in ʿAbd Allāh Khurshīd, and died in 192/808 (Ibn ʿAbd Rabbīh, *Makānī* (Nisd*), 53). She enlivened literary society during the reign of al-ʿAbīd, who expressed great admiration for her and wished to acquire her, but she is not mentioned under any of his successors.

She was considered as the first woman to have won literary fame under the ʿAbbasīs. The *Fihris* attributes to her only a *ḥiṣb* of twenty leaves, of which a few poems have survived. The longest is a laudatory petition of fourteen verses addressed to ʿAbd Allāh Kāhīlī (Ibn al-Muʿtazz). These fragments show signs of a real talent. In bold language and a vocabulary which is simple but not without subtlety, ʿĪnān writes harminious poems in which the ideas are supported by a prudent use of the stylistic figures of *bādī*, which were fashionable at this period. Her reputation, like Paḍī’s later, rested on her skill at improvisation, an attribute which found her so much fame that it forms the subject of most of the anecdotes about her. Several of her dialogues in verse with such skilled opponents as Abū Nuwās, al-ʿAbbas b. al-ʿĀnaf and Marwān b. Abī Ḥaṣṣa show that she was capable in any situation of producing the rhyming repartee which established her reputation as a poet in the eyes of her contemporaries. Her profound knowledge of early poetry enabled her, in exercises in *idās*, for example, to improvise after a verse by Dījar a poem in the manner of that great poet (ʿAghdānī, *Idā*). This throws some light on the techniques of composition of certain writers who continually used a style inherited from their predecessors.

But it seems that it is mainly her role as the centre of a literary circle that should be noted. Her house was frequented by the most brilliant people, notably those of the famous group of "libertines." The brightest of them held discussions in her presence and submitted their works for her judgement. She was in addition regarded by a number of them as their inspiration. Abū Nuwās, Ibn al-ʿĀnaf and Abu l-ʿNaḍīr, the Basran attached to the Barmakīs, all dedicated love-poems to her, though their sincerity is doubtful. The first addressed her with much wit and discreet allusion. The main point is that she represents a type of woman who mixed freely with writers and sometimes accompanied them to some of the places of amusement in the suburbs of Baghdād. The love which poets expressed for her was an exercise of wit rather than a true emotion. The courtly exchange, racy or even erotic, became a genre which was cultivated in emulation. It can be imagined that someone like ʿĪnān had a considerable influence on its development by helping to establish the rules of courtliness and by taking part in the flowering of the new love poetry in the second century, which was so progressive of new forms.

In early life he held an office under the Moghul emperors. He seems to have died at an early age, when the family ancestral home was at Lahore. How and when his father died is not certainly known, his father's name was mentioned as Ali Nausar and his father's brother, who speaks of him in very affectionate terms and calls him his patron. In early life he held an office under the Moghul emperors. He seems to have died at an early age, when the family ancestral home was at Lahore. How and when his father died is not certainly known, his father's name was mentioned as Ali Nausar and his father's brother, who speaks of him in very affectionate terms and calls him his patron.

'INĀYA (A.), "providence". The word which etymologically evokes the idea of care, solicitude, is not part of the Kur'ānic vocabulary. Nor does it belong directly to the vocabulary of ʿīm al-ḥalām, but to the language of falsafa (and of the sīraḥ of Subhawardi)—it was to be taken up after this by the later works and manuals of ḥalām which summarize and discuss its theses (among them al-Shahrastānī, al-Dīwān, etc.). It should be mentioned however that it has no place in the Taʾrīḵ of al-Dīwānī. 'Ināya appears in the Śūṭī lexicon, but with only the more precise meaning of divine benefaction, or of a "gift granted" by God.

Certainly, if "providence" is understood as the order by which God conducts all things, this idea recurs throughout the Korān. Muslim piety insisted on this, and such divine names as al-Muḥaṣṣīn (the Vigilant), al-Razzī (the Dispenser of all good), al-Ḥafiz (the vigilant Guardian), al-Muḥīṭ (the Feeder), al-Raḥīb (the Jealous Guardian), al-Māʾīn (the tutelary Defender), could not fail to turn the mind towards the notion of a provident God. But it seems to have been the falsāfīs who more precisely adopted 'ināya to signify divine providence. And their view of it is closely linked with their theory of "necessary and willed" creation.

It suffices to give some main references taken from Ibn Sīnā. It is he in fact who provides the clearest definitions of 'ināya (cf. A. M. Goichon, Lexique de la langue philosphique d'Ibn Sīnā, Paris 1938, no. 488-9, and L. Gardet, La pensée religieuse d'Ibn Sīnā, Paris 1949, 131-5). The metaphysics of the Ṣīfaṁ refers to it twice: concerning divine knowledge (īḥāsiyyāt, Cairo ed. 1960, ii, 398) and in particular in the chapter (mainly ii, 415) which deals with the introduction of evil (ṣarār) in the predetermining divine decree (ḥaddā). This text has been repeated in the Naqāḍī (Cairo 1357/1938, 284): "He [the prime Being] knows therefore the order of good according to the best order in the line of the [the being] possible, and there flows from Him that which He knows has a certain order and a good, according to the best which He knows, in a flow (fasū) which leads perfectly to order, according to the line of [the being] possible: and such is the meaning of the word 'ināya". (Definition reproduced by al-Shahrastānī in his refutation of Ibn Sīnā, ed. Fārābī, London 1846, ii, 288).

The Ḥarārī returned to the same theme, underlining, more clearly perhaps, its double theme of knowledge and necessity: "Providence is therefore the full comprehension which the First [God] has, in his science, of all and of the necessity for all to rest on Him so as to be according to the best order. [He fully understands also] that this comes necessarily from Him and from the total grasp which He has of it" (ed. Forget, Leiden 1892, 185; Fr. tr. A. M. Goichon, Beirut-Paris 1951, 458). It is characteristic that these lines are presented as a "remark" (taʾrīḵ) in the section of "general knowledge with new words" (see another text, ibid., 150).

This conception of 'ināya cannot accommodate either God's liberty or gratuity, a fact which accords perfectly with the existential determinism of Ibn Sīnā. Certainly providence, in its obvious sense must be understood, he says, from "the thought by the First of what is good and just", and the divine thought is the principle of providence (cf. Al-Kūthī, al-Dīwān, ed. M. Badawi, in Ar-Ra ṣ ā al-ʿAraḵ, Cairo 1947, 63). It may be objected that the coming into being of existing things from the prime Being is "a simple overflow (inbīgās) which has no connection with the thought which He has of them, even although this thought accompanies it". (Ibid.; Fr. tr. G. Vajda, in Revue Thomiste, li (1951) 369). Ibn Sīnā replies by distinguishing between the necessary ṣarār also (in the order of existence) and the possible (in the order of essence). He concludes: for things, "the best becomes one of the possible things for them, after the best having been thought necessarily. This is providence, that is to say, the thought of the best possible" (Ibid., tr. 390). And again: "His [the prime being's] essence is that from which necessarily derive the things which have the possibility of deriving from it because He thinks them. It is thus that providence succeeds in becoming providence" (Ibid. 64/390-1).

The idea of providence as divine knowledge which is a realization of the good and just ordering of existing beings is thus clearly settled. But Avicennan determinism makes this ordering, whatever its "possibility" may be as regards the essence of things, into an existential necessity: which the prime Being knows and wills, but which He could not refrain from producing and which He could not modify. When the later Ashʿarī manuals debated 'ināya according to the falsāfīs, this was in order to oppose to this providence which is (and is no more than) a necessary producing knowledge, the productive gratuitous dispositions of the free will of the Most High. It is true that they do not distinguish at all between common providence and particular decree. Everything is providence, and everything is decree (ḥaddā and ṣarār). It is the chapters on ṣarār and ḥaddā which deal with the designs and the government of God.

Finally it may be added that the Śūṭī vocabulary contrasts maḥabbā (or ṣīgh) and 'ināya. According to al-Hallādī, love is "a perennial (sarmaṣṣiya) attitude" and a pre-eternal liberality (ʿināya asalāsiyya; cf. L. Massignon, Passion, 610; Massignon here translates 'ināya by "grace"), Al-Hujwīrī, in his Kaṣāf al-mahāḏib, referred to 'ināya in the sense of divine favour (Nicholson translates this sometimes by "grace", sometimes by "favour"; Eng. tr. Leiden-London 1911, 203, 268).

Bibliography: in the article. (L. Gardet)

'INĀYAT ALLĀH KANBŪ, elder brother of Muhammad Sālīh Kanbū, author of ʿelmāl-i Sālīh or Sālīh, a history of the Moghul emperor, born at Elahbād, near Lucknow, has been born at Elahbād, near Lucknow, 19 1219/31 August 1608, though his ancestral home was at Lahore. How and when his parents came to Burhānpūr is not known. His father seems to have died at an early age, when the family returned to Lahore. Himself well-educated, he attended to the education of his orphaned younger brother, who speaks of him in very affectionate terms and calls him his patron.

In early life he held an office under the Moghul
The Muslims were divided in their attitude to the Congress between two incompatible schools of thought, one stressing the common interests between Muslims and Hindus, the other emphasizing the cleavages between the two communities. The first school was exemplified by Bardar al-Din Tahiybdi, who presided over the third session of the Congress. He called upon Muslims to regard the Congress as a "truly representative national gathering," promoted co-operation between Muslims and Hindus, and urged Muslims to identify themselves with the objects of the Congress. Although these views appealed to only a small section of the Muslim community, they were advocated throughout the history of the Congress by prominent Muslims, notably Dr. M. A. Ansari, Mavian Abu 'I-Kalan Azad, and Dr. Dagar Husayn, who felt no contradiction between their Islamic beliefs and their membership in the Congress. However, most Muslims dissociated themselves from the Congress: they were convinced by Sir Sayyid Ahmad Khan that the Congress was a sectarian organization designed to advance the exclusive interests of the Hindus, and they shared Sir Sayyid's apprehensions that the Congress was striving to establish Hindu rule, in which the Muslims would be a deprived minority.

The Congress endeavoured to attract the Muslims to its annual conventions and resolved to drop any subject to which Muslims objected. Moreover, the Congress did not extend its official approval to the popular agitation against the partition of Bengal which was permeated with Hindu religious fervour; nor to the anti-Muslim activities of the Arya Samaj in the Punjab; nor to the militant anti-Muslim festival of Shivaji and the Cow-Protection Association in Maharastra. Nevertheless, most Muslims saw in the Congress a Hindu movement. Since Muslims lagged behind Hindus in acquiring western education, in taking advantage of the new economic opportunities and in forming a political organization, they became particularly conscious of their backwardness and were anxious to accelerate the advancement of their interests by claiming special minority rights.

Notwithstanding the foundation of the Muslim League [q.v.] in December 1906, and the provision of separate electorates for the Muslims by the India Act of 1909, the Congress continued to claim that it alone represented the people of India.

For a brief period Muslims and Hindus jointly supported the Home-Rule League in 1910 and co-operated in 1920 in the Khilafat and Civil Disobedience movements. But when the Civil Disobedience movement was stopped by Gandhi without consulting the Muslims, and when the Khilafat movement collapsed after Ataturk abolished the Caliphate, the Muslims became depressed and frustrated, and the brief reconciliation between Muslims and Hindus turned into discord and antagonism.

When the Nehru Report was published in 1928, the Muslim League regarded the refusal of the Congress to recognize special electorates and other measures as proof of its contention that the Muslims would be a deprived minority under Congress rule. The fears of the Muslim League were intensified when the Congress overwhelmingly won the 1937 elections, formed seven ministries, and stipulated that it would accept Muslim representatives into its ministry of the United Provinces only if they merged into the Congress.

While Nehru dismissed the complaints of the Muslim League of discrimination against Muslims in the Congress Ministries as side issues which weakened the struggle for Swaraj (self-rule), M. A. Dinar rallied the Muslims to the Muslim League with the warning that Swaraj meant Hindu-râj. While the Congress promised the Muslims equality of rights, the Muslim League argued that since the Hindus were better educated, more prosperous, and wealthier than the Muslims, "equality" meant the perpetual inferiority of the Muslims as well as constant economic and political oppression. While the Congress assured the Muslims of religious toleration, the Muslim League warned the Muslims that they might be absorbed into Hinduism and lose their identity, and that therefore any Muslim who was not with the Muslim League was a traitor to Islam. Nevertheless, the Congress courted Muslim members, many of
Indian National Congress — Indjl

whom attained eminence in the Congress party; this position still holds.

Until 1940 the Muslim League endeavoured to gain special rights to safeguard the interests of the Muslims as a minority; from 1940 it asserted that Hindus and Muslims were two different nations and that the Muslim League, and it alone, represented the national aspirations of the Muslims which aimed at the establishment of a national home. The Congress rejected the equation of religion with nationalism and feared that Muslim issues might lose their religious animosity for political ends. However, the 1945 communal riots widened the gulf between the Muslim League and the Congress, and the schism reached its climax in 1947 in the partition of India and the foundation of Pakistan.

Indian Ocean [see Bahr Al-Hind].

Indigo [see nil].

Indjli, Arabic transcription of the word ὑπάγεταιν, gospel, through the Ethiopian ὑπάγεταιν (Nöldeke, Neue Beiträge, 47; Grimmie, in Festsch. Goldscher, 164; Jeffery, Foreign Vocabulary of the Qur'ān, 72-2). The variant indjll may arise from a Mesopotamian Persian influence.

The word indjli occurs twelve times in the Kur'ān (III, 2, 43, 58; V, 50, 51, 70, 72, 110; VII, 156; IX, 112; XLVIII, 29; LVII, 27) and refers to the Revelation transmitted by Jesus. The word also means the scripture possessed and read by the Christian contemporaries of Muhammad (V, 52; VII, 156), i.e., the four Gospels, often extended in current usage to mean the whole of the New Testament.

In this article there will be studied successively: I. The relations between the Kur'ān and the Gospels; II. The place of the Gospels in Indjli; III. The knowledge of the Gospels possessed by Muslim writers; IV. The place of the Gospels in Sīfsim; V. The Islamic-Christian controversy over the Gospels.

I. The Gospels and the Kur'ān. There appear in the Kur'ān a certain number of Gospel characters: Jesus, Mary, St. John the Baptist (Yahyā), Zacharias, the Apostles, and a certain number of facts (the Annunciation, the miracles of Jesus) whose resemblance to those in the Greek versions has given rise to discussions, so that the question arises of how exactly they are related to the Gospels, which preceded them.

For believing Muslims this question presents no difficulties: it is the same God Who reveals both books, and the Prophet Muhammad, having received the Revelation directly from God, had no need to consult, directly or indirectly, the Scriptures in order to be able to reproduce some of the features which are found in them.

The historian of religions however feels obliged by his discipline to seek for possible historical connexions. The first question is therefore: what knowledge could Muhammad and the first Muslims have had of the Gospels? This leads to the question of the translation of the Gospels into Arabic, since any knowledge of Greek, Syriac, or Coptic on the part of Muhammad and his Companions may be excluded.

In a memoir presented to the Reale Accademia dei Lincei in 1888 (see Bibli.), Ignazio Guidi raised the question of the question of the translation of the Gospels into Arabic before the advent of Islam. Sprenger (Das Leben und die Lehre des Moh., i, 131 ff.) thought he recognized in a passage of Muhammad b. Iṣbāk (ed. Westenfeld, 149-50) a fragment from a translation made after the time of Muhammad. The fragment contains John XV, verses 23-27, and the word which is used in them to translate παράδειγματως is al m-n-w-m-na, which is neither Arabic nor Syriac but Palestinian and probably quite early (cf. Gildemeister, De evang. in arabic., 35). According to a text of Bar Hebraeus (Chron. eccles., ed. Abbeloos and Lamy, i, 275; Assemani, Bibli. orient., ii, 335; cf. Gildemeister, op. cit., 30, note 1), a translation was made between 631 and 640 A.D. by the Mono-

physite Johannes on the instructions of an Arab ruler, 'Amr b. Sa'd. But these first translations, if they existed, amount only to isolated and disputable details.

On the other hand, extant manuscripts attest that from the 2nd/8th century, Arabic versions of the Gospels were in the hands of the Christians of Syria. The many manuscripts of the Gospels in Arabic may be divided into six classes: (A) Those which were translated directly from the Greek. They originate from the monastery of Saint Sabas or from near there; two of them (Vatic. arab., 13, of the 8th century, and manuscript Borgia, K. 11, 31 8th or 9th century) are the oldest known. (B) Texts translated from the Peshitta, or at least revised on the basis of this Syriac version. These are of different periods (Tischendorf manuscript at Leipzig, 8th-9th century; Codex Vaticanus, 13). The translation of the Diastaros of Tatian was made in the 3rd/4th century by Ibn al-Ṭayyib. (C) Texts translated from the Bohairic Coptic translation, which is neither Arabic nor Syriac. There exists a translation into Arabic before the appearance of the Codex Vaticanus, (capit. q). The passages from the Gospels mentioned in the History of the patriarchs of Egypt by Ibn al-Muṣaffa [p. v.] (4th/10th century) are based on the Coptic translation, perhaps in the form of lectionaries. The same or a similar Coptic version seems to have been used by al-Ghazali in al-Radd al-djamil (cf. R. Chidiac, Réfutation excellente de la divinité du Christ, Paris 1939). (D) Texts of ecclesiastical recensions, made in the 7th/13th century in the patriarchate of Alexandria to become the canonical versions. The first work on this was done circa 650/1250 by Ibn al-As'ad Abu 'l-Farādi Ibn al-ʿAssāl. (E) Texts which are distinguished by their more particularly literary form (Leiden MS 2348 and those in the Vatican, cod. arab., 17 and 18). The two latter, in a Coptic transcription, are based on the Gospels in Arabic, the translation of which is known to be from the end of the 4th/10th century. Other versions in the same genre were made later. (F) Arabic versions of Western origin (cf. H. Hyvernat, in Dict. de la Bible, i, col. 851-6).

We may thus conclude, with Graf (Geschichte, i, 41) that in the present state of knowledge it cannot be asserted that Muhammad and his first companions could have had a direct knowledge of the Gospels in Arabic.

In addition to the canonical Gospels, there exist
Arabic recensions of the New Testament apocrypha: the Gospel of the Childhood, the Protevangelium of James, the Gospel of Thomas, the Life of Paul, the Gospel of Peter and a sermon of Simon, a martyrdom of James and one of Simon, and a small number of others which do not appear to have been known in Muslim circles. Rubens Duval, La littérature syriaque, Paris 1899, 96, mentions an apocalypse of St. Peter as being an Arabic composition of the 7th/8th century.

The spread in Arabia of Christian ideas in addition to the narrative accounts of the Gospels and the apocryphal books, before the arrival of Islam, took place largely, if not entirely, through oral teaching and the exchanges of everyday life. There existed in the Yemen a Christian community (cf. Nallino, Ebrei e Cristiani nell'Arabia preislamica, in Raccolta di Scritti, iii, 122-9), which was in active rivalry with the Jews and had close relations with the Ethiopians.

The occupation of the Yemen by the latter certainly strengthened the position of this community. In the north-east, the influence of the Nestorian church spread from al-Hira, whence it was carried not only by the monks and perhaps by preachers, but also, although more superficially, by the poets who frequented the court of the Lakhmid princes. In addition, the Christian or Christianized poets of the Hijaz, Zayd b. 'Amr b. Nufayl and Waraka b. Nawfal of Mecca, and Umayya b. Abi 'l-Sa'it of Ta'if, are represented as having relationships with the Christians of the Yemen and of Syria, whereas the Ghasanid princes or the tribes which were under their influence had adopted Monophysism. It is even stated in the Aghānī (iii, 14) that Waraka, the cousin of Khadhija, wrote translations or copies of the Gospels.

It is thus probable that the passages in the Kurān which reflect the canonical or apocryphal Gospels derive from these Christian communities, and this possibility is confirmed to a great extent by the large proportion of Ethiopian and South Arabian terms which they contain (see, e.g., V, 112-3). The greater part of these passages describe the births of Jesus, of Mary and of John the Baptist, the mission, the miracles and the ascension of Jesus (see Ḥisā, Māryam, Yāhya). There are also references to several parables, the Apocalypse of Paul, the Parable of the Flock (XLVIII, 29), that of the wise and foolish virgins (LVII, 13), the prophecy of the announcement of another Apostle (VII, 157) and to several other passages. More surprising, but not intrinsically improbable, given the rivalry between Jews and Christians in the Yemen, are also those echoes of the arguments directed against the Jews in the Gospels and the Epistles, which, as has been pointed out by Tor Andrea and Ahrens (see Bīhī.), are sometimes used in the Kurān as much against the Christians as against the Jews.

The influence of the New Testament on tradition (hadith) is important. A number of the miracles, proverbs and ideas attributed to Muḥammad or to his followers have their source in the Gospels. For example, Muḥammad increases the amount of some water or supplies of food. Many traditions on the dignity of the poor and the difficulty for the rich to enter the Kingdom of Heaven reflect the teaching of the Gospels and are in contrast with the attitude of the pagan Arabs. Goldziher mentions an adaptation of the Paternostera which an Arab traditionist puts into the mouth of Muḥammad (Abū Dāwūd, i, 101). The parable of the Labourers in the Vineyard (Matthew, XX, 1-16) is applied to the Jews, the Christians and the Muslims in the Muwatta' of Mālik (Risāya al-aṣḥābī, bāb al-tasaḥsīl). Similarly in the legends on the Mahdi and in eschatology, apocalyptic precedes an immanuelism.

III. As Islam spread in the formerly Christian countries and contact between Christians and Muslims became more frequent, the Muslims gained a deeper knowledge of the Gospels. Thus several Muslim historians display a fairly extensive knowledge of them. Al-Ya'qūbī, one of the earliest Arab historians, quotes an extract from them; al-Mas'ūdī, who had an enquiring mind, makes no secret of his relations with the Christians; he mentions visiting, in Nazareth, a church much venerated by the Christians, and he learned from them a number of Gospel traditions; he knew of the birth of Jesus in Bethlehem, his childhood in Nazareth, God's words reported in Matthew III, 17: "This is my beloved son . . .", of which he reproduces a variant; he had also heard the story of the visit of the Magi to the infant Messiah, according to the Gospels and other versions, he gives accurately the account of the calling of the Apostles; he names the four Evangelists, and refers to the "book of the Gospels" as if he had seen it, giving an exact summary of it, though exhibiting a certain mistrust of it, as compared with the respect with which it is treated in the Kurān. Similarly al-Mas'ūdī is relatively well-informed concerning the lives of the Apostles. He twice mentions the martyrdom of St. Peter and of St. Paul, but attributing to both the type of execution which, according to tradition, was that suffered by St. Peter; St. Thomas is known as the apostle of India, he seems moreover to be the apostle who, after St. Peter, was best known to the Muslims; even St. Paul was less well known.

Even better informed than al-Mas'ūdī is al-Būrānī. This writer must have consulted Christians in order to write his Chronology. Several texts of the Gospels were known to him, as well as the commentary by Dādibūn (Jesudān, cf. Duval, Litt. syr.*, 84) and he mentions it with some criticism. He regarded the four Gospels as four recensions, which he compares to the three versions of the Bible, Jewish, Christian and Samaritan, remarking however that these four recensions differ greatly from each other. This author relies largely on the works of Joseph the Syrian, given by Matthew and Luke, and, in a very interesting passage, he mentions how the Christians explain the difference between them. After this he mentions other gospels in the possession of the Marcionites, the Bardesanes and the Manicheans, the first two, according to him, differing "in some places" from the Christian Gospels, the others being contrary to them. Given all these differing versions, he considers that the prophetic value of the Gospels is not greatly to be trusted.

The Persian version of the Chronicle of al-Ṭabarī (Fr. tr. by Zotenberg) contains some legends on New Testament subjects more developed than in the Arabic original and similar to those found in the "Stories of the prophets" (Kīsās al-anbiyā'). Certain details concerning the Passion are related in it: the denial of "Simon", the betrayal of one of the Apostles, who is not named, Mary's station at the foot of the Cross. The author admits however, following Muslim belief, that there was substituted for Jesus some other person, whom he calls Joshua. Concerning the Apostles, he reproduces the tradition that makes John travel to Edessa.

IV. In Muslim mystic literature are found many references to the Gospels and there can be detected some knowledge of the interpretation given
to certain passages by the Christian Fathers. Nevertheless the words which the Muslim mystics attribute to Jesus are far from always agreeing with the Gospels; thus those reported by al-Ghazālī and collected by Asīn Palacios (see Bibli.) are almost all inexact. On the other hand, al-Mubāsibī and al-Suhrawardī give an exact and complete transcription of the parable of the Sower. The writings of al-Hāwīn al-saḥīf contain some remarkable passages on the crucifixion of Jesus (Cairo ed., iv, 99), the reality of which they admit, and on the resurrection, the meetings of the Apostles in the Upper Room and their dispersal throughout the world. The Acts of the Apostles (ṣaḥīf al-bawārīyā) are expressly quoted in this work (Dieterici, 605). For other features, cf. L. Massignon's Hallāj: there exists a miniature showing al-Hallāj on the cross with the face of Christ; also the fine epic romance of Ḥamza (Sirāt al-amīr Ḥamza, Cairo n.d., iii, 822 f.).

V. Islamo-Christian controversies about the New Testament. The basic dogmas of Christianity, such as the Trinity, the Incarnation and the Redemption, based essentially on the New Testament, very soon gave rise to polemic between Christians and Muslims, each party trying to prove that its attitude was based on truth.

From the Muslim side, attacks were very chiefly on the authenticity of the Gospels and it was stated that they had undergone tahrīf (q.v.): the meaning or words distorted, passages suppressed, others added, etc. They said that Jesus had never stated that he was God; the Trinity and the Redemption were doctrines invented by St. Paul. Recent polemicists (19th and 20th centuries) added as sources for the Christian attitude Greek philosophy and the pagan mysteries or the religious beliefs of India.

Authors the desire to adopt in part, in particular in matters relating to the Gospels, Christian attitudes. There should especially be noted in this respect the works of Mahmūd at-Šākīk (Abbaruṣiyat al-Masih, Cairo 1932) and the Kārṣa'at al-ṣayma of Kāmil Ḥusayn, Cairo 1954, both of them largely based on the Gospels. For details of all this see Anawati, Polimiche, etc.

Authors mentioned: Ya’qubî, ed. Houtsma, i, 74-9 (cf. Klamarth, Der Auszug aus den Evan- gelien bei dem arab. Historiker Ya’qubî, in Festschr. des Wilhelm-Gymnasium, Hamburg 1885; G. Smit, Bijbel en Legende bij den Arabischen schrijver Ja’kubî, Leiden 1907); Mas’udî, Murâdî (new ed. and tr. in preparation by Ch. Pellat); Birûnî, Chronology, tr. Sachau; Tabârî, tr. H. Zohnen, 1867-74; Muhâbî, K. al-Râ’îyâ, ed. M. Smith, 1940, 2; Suhrwardî, Anâwîr al-ma’ârif, in the margins of the Ihyûdî of Ghazâlî, ed. 1312 (see the parable of the Sower, i, 78-9, probably borrowed from the earlier passage of Muhâbî); Die Ab- handlungen der Ichwân es-Safá, ed. Dieterici, Berlin 1886, 594 ff.

**INDJÎL — INDOCHINA**

This name, properly speaking the term (Turkish indjîl) applied to royal estates under the Mongols, is usually given to the dynasty which reigned ca. 703/1303-758/1358 in Fars (Shîrâz), the founder of the dynasty, Shârâf al-Dîn Muḥâbî-Shâh, having been sent thither by Šâhâb al-Dîn, to administer the royal estates. According to the Ta’rîkh-i Guzîda he was a descendant of ʿAbd Allâh Anâqî (q.v.). Under Šâhâb al-Dîn’s successor, Šâhâb al-Dîn, ʿAbd Allâh Saʿîd he not only retained his office but was able to extend his power so that by ca. 721/1325 he was practically the independent ruler of Shîrâz and almost the whole of Fars. After the death of ʿAbd Allâh Saʿîd, he was executed by the order of his successor, Arba Arba Khwân in 739/1336. According to the Shîrâz-nâmâ he had four sons: Šâhâb al-Dîn, Masʿud-Shâh, Ghiyâth al-Dîn Kay-Khwaraz, Shams al-Dîn Muḥâbî and ʿAbd ʿIshâq Djamâl al-Dîn. The first two were already ruling in Shîrâz during his father’s lifetime down to ca. 735/1335, when in his absence his brother Kay-Khwaraz took his place, refusing upon his return to restore him his authority. Hostilities then broke out between the brothers ending only in 739/1338-9 with the death of Kay- Khwaraz. Masʿud-Shâh had imprisoned the third brother Muḥâbî in Kâfaʿ-yi Saʿîd, but he managed to escape and enlist the support of the Golden Horde of Huanguyuan. The latter crossed a Mongol army and advanced on Shîrâz with Muḥâbî; Masʿud-Shâh was forced to flee, and Pir Husân entered the town. When, shortly afterwards, in 740/1340, he put Muḥâbî to death, the population adopted so threatening an attitude that he found it advisable to withdraw, but only to return the next year at the head of fresh forces. On this occasion also luck was against him; he quarrelled with the Golden Horde and, when the two sides were drawn up in line of battle, was left in the lurch by his own men and sought refuge with Ḥasan-i Kûchâ (q.v.), by whom he was put to death. Meanwhile, Masʿud-Shâh had made his way to Luristân, where he allied himself with Yaghî-bastî, a brother of Ashraf, while Ashraf himself took the part of Masʿud-Shâh’s sole remaining brother ʿAbd ʿIshâq. Masʿud-Shâh, with Yaghî-bastî’s aid, succeeded in reaching Shîrâz, where he met the same fate as his brother Muḥâbî: he was treacherously murdered by Yaghî-bastî in 743/1343. The latter then quarrelled, and was reconciled again, with Ashraf; and they were engaged in a joint attempt at the subjugation of Fars when the news of their brother Ḥasan-i Kûchâ’s death caused their troops to disperse. ʿAbd ʿIshâq, who had previously received the town of Isfâhân from Pir Husân, now became the ruler of Shîrâz and the whole of Fars. As he endeavoured to extend his rule over Yazd and Kîrmân, he came into conflict with the Muzaffarids (q.v.), with varying success. The final result was that ʿAbd ʿIshâq was not only driven from Yazd and Kîrmân but was besieged in Shîrâz itself, which surrendered to the Muzaffarids in 754/1353. Before the surrender he had escaped to Kaft-yi Saʿîd and remained there, refusing upon his return to restore him his authority. Meanwhile, Buzurg, had made his way to Isfâhân. Besieged once again, he was taken prisoner and handed over for execution to the relatives of a skhat which had been put to death by his orders. This was in 758/1357. The Persian poet ʿUbayd-ı Zâkânî has commemorated his patron in a marâqya or elegy.

**INDOCINA** (Islam in.) The union of Indochina, created by a decree of 19 October 1887, was definitively completed and organized under the governor- in-chief of Paul Doumer (February 1897-March 1902), who had previously received the town of Isfâhân from Pir Husân, now became the ruler of Shîrâz and the whole of Fars. As he endeavoured to extend his rule over Yazd and Kîrmân, he came into conflict with the Muzaffarids (q.v.), with varying success. The final result was that ʿAbd ʿIshâq was not only driven from Yazd and Kîrmân but was besieged in Shîrâz itself, which surrendered to the Muzaffarids in 754/1353. Before the surrender he had escaped to Kaft-yi Saʿîd and remained there, refusing upon his return to restore him his authority. Meanwhile, Buzurg, had made his way to Isfâhân. Besieged once again, he was taken prisoner and handed over for execution to the relatives of a skhat which had been put to death by his orders. This was in 758/1357. The Persian poet ʿUbayd-ı Zâkânî has commemorated his patron in a marâqya or elegy.
Neither historical records nor legends suggest that the religion of Muhammad was widely adopted by the Chams before their kingdom was absorbed by the Vietnamese in the 9th/15th century. It may reasonably be thought that it developed rather among the Cham refugees in Cambodia in the 15th century, and that this occurred through the intermediary of the Malays, their brothers in race, after the Malay immigrations of the 14th and 15th centuries. And these Muslim Cham of Cambodia tried, it seems, in their turn, to propagate Islam, with relatively little success, among their brothers remaining in Central Vietnam.

Muslim Cham and Malays in Cambodia, from the 17th to the 19th century, built mosques, made converts, fomented troubles and even took part in the political life of the country. It was thus that, in 1820, one of them, Tuan Saït Ahmad (= Shaykh Ahmad), became vicar before being put to death by his political adversaries. After the establishment of the French protectorate (1863), they formed in Cambodia as in south Vietnam (Châu-Dōc, Saigon, Phan-Thiêt) fairly closed communities living apart from their Cambodian and Vietnamese compatriots.

There is little original about their observance of Islam and they share the beliefs of the Cham and the Malays. All observe the five prayers, the ablutions, and circumcision, and that at the age of 15; they abstain from the flesh of pigs, dogs, tortoises, crocodiles, elephants, peacocks, vultures, eagles and crows, and also from strong or fermented drinks. If any one worships a strange idol, he is expelled from the community. Some make the pilgrimage to Mecca or pay a certain sum, for which a representative is sent on their behalf. In Cambodia the mosques are almost always built of wood and are placed on small eminences. The finest are large bare rooms with a platform at the back. The mats which are used as praying carpets are hung up in a sack from the rafters. On the left at the entrance there is usually a large drum painted red (Cham ganang = Malay gendang, Javanese kendang). Outside is a little basin of masonry for ablutions.

Within these precincts the imāms give the children instruction (in reading and writing) and in reciting the Kur'ān. The assembly or jam'a cannot take place without a quorum of 40 believers. Ramadān is strictly observed by all, and pious families are quite abstemious in this period. On Mondays they refrain from sexual intercourse.

The Chams of Cambodia also observe the bulan dh hajj (fasting month of the pilgrims) also called bulan Oslah (month of Allāh) three months after Ramadān. They also observe the molot or melut (cf. Achenese molot; Arabic mawlid), when a lock of hair is cut from the children of 3 to 13 and they are given a religious name, which for boys is always 'Abd Allāh or Muhammad, for girls Phwatimob (Fātimah). The imāms, at least four in number, are invited to pray in the house in which the ceremony is being performed. This custom of hair cutting seems to be borrowed from the Cambodians.

The tamael (Arab tamma) is a ceremony nearly always confined to the family circle, at which a boy who has learned the Kur'ān entirely by heart, which however happens very rarely, is led round the village on horseback amid the acclamations of men and women. He is dressed in his best clothes and is greeted with the greatest reverence by men and women.

The swa'al (pursuit), which is celebrated in the first Cham month, is accompanied by two days'
fasting and commemorates the migration of the Prophet (Hijrda).

By the tapat, which we also find among the Chams of Annam, who call it tubah = Ar. tasbeha, old persons are purified from their sins by means of prayers and sprinkling with holy water.

Malays and Chams have common religious officials in Cambodia, who are given the following names according to their office.

All are exempt from taxation. The four first have the following Cambodian names: 1. okhia radd kale, 2. okhia raya kale, 3. okhia tek kale, 4. ohia pakh. They are appointed by the King, belong to his council and are the official superiors of the Muslims of Cambodia. They are regarded by the faithful as representing the four caliphs of the Prophet and enjoying great spiritual authority.

The religious dignitaries are usually chosen from the most prominent families, whose sons can become imãms at the age of 15 and whose daughters are educated with special care to make them worthy wives.

The Muslims of Cambodia respect the graves of saints, which they call la-lak; they believe in witches, the werewolf, evil spirits, and in magic, and have retained certain agricultural customs which are also found among the neighbouring peoples, such as the Cambodians and Annamese; these are relics of an old animism.

The family bonds among the Muslims of Cambodia are very strong; the father has great authority. The wife is well treated but kept strictly within the house as are the daughters, who are very early initiated into household duties and, being under strict control, are rarely allowed to marry Muslims.

The Muslim Chams of Annam are to be counted among the Muslims mainly through their naive conviction that they are Muslims. They call their Hindu countrymen kafir without the slightest derogatory intention and consider themselves as basi, “the sons of religion”, or Cham Asalam (= Islam), “Chams of Islam”. They say that they worship Oblah (Allah), but also P© Devata Thwov (Çvor) (Sanskrit Devata Starga), “God, Lord of Heaven”, and they offer presents in certain agrarian rites, e.g., two eggs, a cup of rice brandy, and three leaves of betel, to P© Ovlah T©k Allah, the “mysterious king of the underworld”; in reality it is the Muslim expression Allah ta’alah, out of which they have made a god. They also worship the Brahman goddess P© Ino Nogar = “Mother of the Land” (Umã, Bhagavati), and her husband P© Yang Amô, “the Lord God, the Father [of the land]” (Sîva), whom they identify with P© Havah (= Hawawâ), i.e., Eve and P© Adam, the ancestors of mankind.

The Kaphir Cham of Annam with as broad a tolerance have taken into their Pantheon P© Ovlah = Allah, an undefined bodiless god, the creator of Po Raqullâk (= Rasal Allâh) and of P© Lãhâ, who lives in Môkah (Mecca) and who was created by P© Ovlahuk (= Alâhû) the father of nobi Mahamad (= Naâbi Muhammad); we thus see that the Kaphir have made three gods out of the misunderstood formula: Lã silãha sila ‘llahu, Muhammad rasul-il ‘llah!

The Bani of Annam have a very high but vague notion of Nobi Mahamad, i.e., the prophet Muhammad, and to them the Kur’ân is tapuk (= kitâb) nobi Mahamad = the book of the Prophet Muhammad; the call it also tapuk asalâm (= kitâb al-Islâm), the book of Islam, kitâb alamadu = kitâb al-İslâm, the book of praise, tapuk akâhârû, the talisman book. They never use its real name. The Kur’ân moreover is hardly to be found among them at all. The few copies which exist are incorrect, and written on Chinese paper with the brush and not with the reed pen. The Bani seem to esteem equally highly a mystical compendium which much resembles the Javanese primbon and is called nérbonan by them. The “priests” copy it only during ramotion (= Ramadãn) and they receive the princely remuneration of a buffalo for each copy.

The Cham of Annam pray only on Fridays and during Ramadan the five sab or vabut (= wakî) (“prayer”), the names of which they corrupt as fol-
The festival takes place on the second day at the rise of the morning star. After the modin has invoked the deities and exchange the turban for a kind of disc, which is covered with white cloth; on these occasions they bored through the middle and fastened to the fez by long gru. A white sarong, a cane, the roots of which are woven into the form of a basket only for the mimbars. The people observe Ramadan only for 3 days. These mosques or cisterns under the penthouse roof of the mosque. The others are performed using the great cisterns under the penthouse roof of the mosque. These mosques or sang mogik (samōgik, samugik; cf. Ach.: mösōgit), which are turned towards Mecca and, while they do not eat pork, the priests as well as the faithful enjoy spirits made from rice, as well as other intoxicating liquors; the religious dignitaries do not however drink in the mosque. If the number of "40" is not present on Friday in the mosque, those making offerings by sacrificing a piece of linen. The whole looks like the biretta of a judge. These "priests" are almost as ignorant as their simple followers; they can hardly read Arabic, hardly study it at all, and only roughly understand some sūras which they repeat only because their fathers also did so. They are free from taxation and forced labour and are held in fairly high esteem by the people; they are the more educated class, however slight the education may be. As they are quite indifferent and tolerant, they do not think ill of the faithful when they make offerings to the Pō Yang or various Hindu deities, endeavour to propitiate evil spirits and perform certain agrarian rites or magic ceremonies which have nothing Muslim about them. They live in perfect harmony with the Hindu bapaq, invite them to their religious and domestic festivities and are invited in turn—only the food for the imōms must be prepared by a Muslim woman—and give each other places of honour. From mutual tolerance the two communities refrain from eating both pork and beef. Only from the Hindu cremations do the Muslim priests carefully absent themselves, and this religious horror of corpses was previously, it is said, the reason why they alone could enter the royal palace to pray with women in child-bed and to watch his wives and children during the absence of the king. Either as a result of ancient customs or of the Malay-Polynesian matriarchal system, or through contact with the Hindus of Annam who have priestesses called padju, the Muslims of Annam have priestesses for a domestic cult; they are called radja or ri tenía. If a sick member of the family has to be healed, for example, or a journey or business enterprise to be undertaken auspiciously, the imōm first of all recites various prayers, then this radja—often the housewife herself—accompanied by the mōdin, who sings and beats the drum, performs certain ritual dances or falls into a state of great excitement in order to influence the 'deities' or 'spirits of the dead', to whom sacrifices are at the same time made. This ceremony is always followed by a great feast. The radjas, who must not eat the flesh of the pig or of the sand lizard, even play the principal part at the great annual festivals, which are celebrated in December-January and are probably of Malay or Indonesian origin—the name Java is repeated by the Muslim Cham as the "New Year festival of the ancestors". The festival lasts two days and three nights. A great booth is built in an enclosure, if possible of new material, and the interior is hung with white cotton cloth. The altar is a simple large tray, with dishes on which are betel, food and fruits. Wax lights are stuck on the edge of the dishes and they also are bound round with cotton threads of different colours. A swing hung from two pillars is for the radja: she is assisted by three imōms and the mōdin, who with his tom-tom conducts an orchestra consisting of a clarionet, a violin, cymbals and an oblong drum (pass). The festival, which is interrupted by numerous meals, is opened with the bismillāh, then follows the invocation of the mountain and forest spirits and of the shades of the "spirits beyond the sea, which may not be mentioned by name"; and finally the invocation of 38 deities or spirits by name; at each of them the three imōms recite prayers. The most characteristic part of the festival takes place on the second day at the rise of the morning star. After the mōdin has invoked the deities and
the radjá has performed a special dance in their honour, they take a small boat made out of a single piece of wood, which is said to have come from Java or China to collect tribute. The master of the house in which the festival is held pretends not to understand Javanese and the modin acts as interpreter. Amid joking all round, eggs, cakes and the figure of an ape with jointed limbs are put in the boat, the participants then break up the walls and roof of the booth and fight for the cakes. On the third day the radjá goes, accompanied by the officiants and the orchestra, to the river and solemnly places the boat with the ape on the water. This ends the festival.

While circumcision is only symbolic with the Bani of Annam, the tubals for the old men is practised as in Cambodia and the karôh (literally, "enclosing") marks the declaration of a girl's fitness for marriage. Not till then dare they put up their hair and marry; until then they are tabung, i.e., unapproachable, and the seducer would be severely punished. This festival takes place under the presedency of the ong gru and of two imôms for a considerable number of girls on each occasion and lasts two days. It is opened with prayers to Allâh, Muhammed, the Hindu deities and the shades of their ancestors as well as with a feast at which the priests eat apart. Two booths are erected, one for the ceremony—ong gru—and the other as a dressing room for the girls, who sleep there under the supervision of four matrons. The imôms spend the night praying; at 7 a.m. the girls appear wearing their finest clothes and ornaments, their hair loosened and covered with a triangular mitre. Before them goes an old woman and a man clothed in white, who carries a year-old child dressed exactly like the girls except for the mitre. They throw themselves down before the ong gru and the imôms. The ong gru places a grain of salt in the mouth of the child, cuts off a lock of its hair and gives it some water to drink. The same is done with the girls, who then return in procession to their booth. If a girl has been seduced the lock is cut off at her neck as a mark of shame. A second feast, at which the priests eat before the faithful, concludes the ceremony.

Birth customs in Annam among the Bani are similar to those among the Kaphir except that the Bani do not sacrifice to the gods on such occasions. The seduction of girls is also severely punished. They do not marry till they are 17 or 28. In Panrang, evidently the result of the old Malay matriarchal system—which has left other traces also, like the right of inheritance of women and the tracing of descent through them and their practising the cult of ancestors—the custom prevails that the girls seek the young men in marriage, but everywhere else in Indo-China the reverse is the custom. The wedding (Cham lihkah-Arab. nikāh), which is the occasion of long and costly festivities, is usually replaced by public cohabitation, which causes no scandal; the pair are free to celebrate it later when they can afford it, and they may already have two or three children before they take part in it. It is far more elaborate among the Bani than among the Kaphir. The imôms repeat prayers; the ong gru, who represents the "lord Muhammed", asks the bride, who is considered to be Fâtima, whether she accepts the presents of the bridegroom, the lord 'Ali. Rich feasts take place at the weddings. The dowry given to the woman remains her property in case of a divorce. Divorce is fairly easy and leaves nearly two-thirds of the joint property in the hands of the woman. Mixed marriages are rare, and in them the children follow the religion of the mother. It sometimes happens that a Muslim woman marries a Hindu, very rarely the contrary.

The burial service is as simple among the Bani as it is elaborate among the Kaphir. The corpse is wrapped in white cotton sheets and placed in a small hut, where the ong gru and the imôms repeat prayers. As soon as night falls the dead man is buried, with four imôms present, almost secretly, without a coffin and with the face turned to the north. The relatives beseech his spirit not to come and afflic the living. On the 3rd, 10th, 30th, 40th and 100th day as well as on the anniversary of his death a padhi, i.e., a service at the tomb with prayers, a meal and presents for the imôms, is observed at his grave. Those of the 7th and the 40th day are the most important. The dead person is almost always exhumed after a certain period on an anniversary of his death. His bones as well as his golden or silver ornaments are placed in a small coffin which is again buried in a particular place and considered sacred.

We thus see that Islam, while it has remained fairly pure in Cambodia, has been overlaid in Annam with a mass of elements and customs, partly anamistic and partly Hindu. The Cham nevertheless desire to be good Muslims: it is only their ignorance and long usage that are the causes of their errors. Malay kadigis who have come from the Archipelago or Cambodia on a religious mission have repeatedly succeeded in putting an end to sacrifices to heathen deities in various villages, although they have been unable to stop the enjoyment of rice brandy.

Under the influence of "modernism" and westernization, all these customs have become very much less rigid, losing all those elements which might seem archaic or incompatible with the demands of present-day life.

The French administration attempted, though not very forcefully, to preserve the Cham from complete assimilation and from the extinction as a separate community to which they seemed doomed at the beginning of the 20th century. It succeeded in saving the essential part of what remained of the monuments they had built, and managed, with less happy results, to preserve their countryside intact. Their future, which now depends on their own will to survive, is still very uncertain.

(A. CABATON-[G. MEILLON])
The Republic of Indonesia comprises some four-fifths of the archipelago which, stretching eastwards from the south-eastern angle of Asia, separates the Indian from the Pacific Ocean, at the same time as it constitutes a discontinuous land link between Asia and Australasia. Extending for approximately 3,400 miles from west to east, and about 1,250 miles from north to south (in a zone bounded by longitudes 92° and 141° east and by latitudes 6° north and 11° south), it embraces some 3,000 islands of highly diverse size, character and resources. In popular topographical terminology these are perceived as constituting four groups. The Sunda Raja or Greater Sunda complex, including the four large islands of Sumatra, Java (Djawa), Celebes (Sulawesi), and the larger part of Kalimantan, constitutes the core of the country from the point of view of areal extent, size of population, wealth of natural resources, and intensity of economic activity. The Nusa Tenggara or Lesser Sundas form a chain of smaller islands extending from Bali to western Timor (the eastern half of this latter island is under Portuguese control). The third group, known as Maluku, includes the island arcs lying north of the eastern Lesser Sundas and east of the Sunda and Sahul Shelves, and the half of the island of New Guinea, which was incorporated within the Indonesian polity as recently as 1963, is by all standards the least developed part of the country.

Structurally the Indonesian archipelago comprises three main tectonic components, each with a distinctive morphological expression. Both the western and eastern sectors—known to physiographers as the Sunda and Sahul Shelves respectively—are developed on stable continental platforms of ancient indurated rocks, relatively subdued relief, and comparatively shallow seas. Between, and partially bounding, these platforms are a series of geologically recent mountain ranges that now appear on the map as fragmented but structurally continuous island arcs separated from each other by deep semi-oceanic basins. As might be expected in view of their geological history, these island arcs are zones of instability, manifested primarily in earthquakes of high frequency but moderate intensity and, more particularly, in a wide range of volcanic activity. On the continental platforms the starkness of this tectonic skeleton is peripherally mitigated by a mantle of alluvium giving rise to extensive coastal plains: elsewhere slopes tend to be steep, and level land exiguous. Finally, deriving from this structural context are substantial mineral resources: notably petroleum, tin ore, coal of various grades, and bauxite, all from the Sunda Shelf and its borders; low-grade iron ores from Borneo and Celebes; and small quantities of high-grade magnetite and hematite elsewhere. Other mineral resources which have been exploited on a small scale include nickel in Celebes, manganese, phosphate, sulphur, and iodine in Java, and gold and silver in Sumatra and West Java.

Indonesia's location determines that its climatic régime is broadly equatorial. Variations in insolation intensity and duration are minimal, so that temperatures at sea level are uniformly high and extremely constant. Annual ranges are small, usually of the order of 5°F, with diurnal ranges up to three times that amount. The season, distribution, and quantity of rainfall depend on location and aspect, as well as on relation to the seasonally reversed wind systems which the presence of continental land masses here imposes on the equatorial régime. Whereas an annual total of at least 80 inches is experienced throughout most of the archipelago, slopes athwart the warm moist air streams that prevail during the northern-hemispheric summer are much wetter. Padang, at the foot of the Barisan Range, for example, has an average annual rainfall of 177 inches. In the eastern half of Java and the Nusa Tenggara, by contrast, an extremely southerly location within the Indonesian polity combined with coastal orientation to the arid zone to produce average annual totals of less than 60 inches. This is also the only part of the country to experience a markedly drier season. Generally speaking, rain everywhere tends to fall in heavy showers of comparatively short duration.

High temperatures and abundant moisture ensure that soils, apart from those developed on recent alluvium or volcanic ash, tend to be strongly ferrallitic in character, their outstanding agronomic feature being a low natural fertility. In primeval times virtually the whole territory was covered by a mantle of equatorial rain-forest of great floristic richness, which itself subsisted a variety of plant associations ranging from true rain-forest to coastal mangrove, fresh-water swamp-forest, limestone associations, and mountain vegetation. Centuries of human occupation and the spread of new crops, such as sugar, tobacco, coffee, and subsequently rubber, and by the imposition in Java, by a paternally inclined colonial government, of an agro-industrial system which intruded the disequilibrating forces of commercial agriculture into the very heart of the village, often making the javanese farm worker occupationally conduplicate, coolie and peasant at the same time.

Indonesia is the fifth most populous nation in the world, with a current population exceeding 100 million souls. Of these, approximately two-thirds are living on the islands of Java and Madura, which together comprise only seven per cent of the land area of the country. In terms of average densities, this means something like 1,200 persons per square mile in Java, but only 62 per square mile in the Outer Islands (though this figure conceals wide variations within the region, e.g., Bali with 750 persons per square mile; Sumatra with 50; and Kalimantan with 78, and Irian Barat with 6). In large measure this imbalance in population distribution is
attributable to what Clifford Geertz has described as the concentrative and tumescent qualities of the wet-padi ecosystem as integrated with commercial farming in colonial Java. The dispersive, inelastic properties of the swidden ecologically would seem likely to make large-scale transfers of population from Java to the apparently underpopulated Outer Islands not only unpopular, but also ineffective unless accompanied by a major transformation of the ecosystem.

The population of Indonesia is disposed in a hierarchy of settlements ranging from innumerable villages to the principal cities of the colonial jayas, at the highest. Although Jakarta, with a population of three million, is more than twice the size of Surabaya, the next largest city, it appears to accord better with the graduated distribution of city sizes characteristic of economically developed countries than with the concept of the primate city as evidenced in numerous other formerly colonial territories. In fact the notion of primacy would seem to be more appropriate to the situation in the Outer Islands, where some of the higher order urban centres are nearly four times as populous as the next largest cities in their territories. Whereas urbanism reaches a higher level in Java than elsewhere in Indonesia, urbanization appears to be proceeding more rapidly in the Outer Islands. The several levels of the city hierarchy subsume a considerable variety of urban forms, ranging from traditional ceremonial and religious foci to the commercial-administrative conurbations which rose to pre-eminence during the colonial period, from largely unchanged pre-industrial market towns dominated by the expediential mores of the bazaar to modern industrially oriented port cities.

II.—ETHNOGRAPHY

The cultural diversity of the several hundred ethnic groups of Indonesia is striking; a common pattern underlying the diversity is discernible, but elusive and hard to specify. For this reason, no consensus has been reached on a classification or taxonomy of Indonesian peoples and cultures. A workable, if somewhat imprecise, classification is as follows: (A) societies (or tribes) which adhere predominantly to a territorial basis; (B) societies, politically organized on a territorial basis, but with chiefs of genealogical groups also having political and legal powers; (C) societies in which political power is exclusively vested in chiefs of genealogical groups (or of local segments of such groups).

Societies of group A constitute real states, which have played an active role in the history of South-East Asia. Examples are the principalities of Java and Bali, the Malay states of eastern Sumatra and of the Malay Peninsula, and the sultanates of the Bugis-Makassar area of southern Celebes. Without exception they have adopted a world religion: mostly Islam, but a syncretic form of Hinduism and Buddhism in the case of Bali. Political authority is (or was)—in Indonesia these States have lost the semi-independence they have preserved in Malayas in the hands of established dynasties, assisted by courtiers, administrators, and territorial chiefs who form a nobility, and in the case of Java drew their emoluments from the taxes they levied in the district granted to them by the ruler as an apanage of their office. The rulers, and their regalia, are usually considered to be the sacred centres, the spiritual depositories, of the wellbeing of their realms. Kinship organization in these societies is generally of the bilateral (cognatic) type, based on single-family households. Economic activities are centred on agriculture (rice grown on elaborately irrigated fields), stockbreeding, and trade (some of it interinsular).

Societies of type B (such as the Batak and the Minangkabau, both of Sumatra) have or had some measure of centralized political government, but the chiefs of genealogical groups (clans and lineages) have considerable authority over their kinfolk. The lineages in question may be patrilineal (Minangkabau) or matrilineal; they have a tendency to maintain regular marriage relationships with specific other lineages, in which the bride-borrowing lineage is superior to the bride-receivers. This type of social structure links up with a whole system of cosmic classifications, involving dichotomies as male/female, upperworld/underworld, and superior/inferior, and speculations on numerology and colour classification. Such a system appears most clearly among those Batak groups which are not yet converted to Islam or Christianity.

Rice cultivation (on irrigated fields as well as by the slash-and-burn method) is important, as is the growing of commercial crops (coffee, rubber). Peoples of this group are no less prominent in modern Indonesian affairs than those of group A.

Societies of type C, finally, occur on the smaller, and in the interior of the larger islands: the Dayak peoples of Borneo, the Toradja of Celebes, etc. Many still adhere to their original religion, or were only recently converted to Islam or Christianity. The archaic religion is predominantly an ancestor cult,
with elaborate, frequently potlatch-like, mortuary rites and (e.g., with the Dayak) a developed priestly theology and rich mythology, manifesting the same type of classification system as mentioned for B. Kinship forms vary around the theme of matrilineal combined with patrilineal descent or inheritance. Agriculture (“dry” rice, maize, sago) predominates, foreign trade is rudimentary. For these people in particular a general Indonesian problem is acute: how much of their traditional way of life can and should they preserve in a nation striving towards a modern and unified culture?

(E. de Josselin de Jong)

iii.—LANGUAGES

With a few exceptions which will be mentioned, the indigenous languages of Indonesia belong to the Austronesian family. Austronesian languages extend over Madagascar, southern Vietnam, Taiwan, the Philippine Islands, Malaysia, Indonesia, Papua/New Guinea, the Melanesian, Micronesian and Polynesian islands and New Zealand. Although the existence of such a family was postulated as early as 1780 by William Marsden, it was left to W. von Humboldt, in 1836, to define it more closely and to give it the title “Malayo-Polynesian” by which it was to be known for more than a century; this has now been displaced by “Austronesian”, a term coined by Wilhelm Schmidt in 1889. The Austronesian family, comprising perhaps some 500 languages in all, is currently subdivided into three subgroups, Indonesian, Polynesian and Melanesian; Micronesian is held by some to constitute a fourth subgroup. The majority of the people who have embraced Islam in this area speak Indonesian languages; therefore it is these languages that are important to the study of Islam in South East Asia, particularly Malay, Javanese, Sundanese, Achinese, Minangkabau, Buginese and Macassarese.

Owing to the lack of real evidence, the early history of the speakers of Austronesian languages is little more than conjecture. Their probable original homeland, which would of course be the homeland of the ancestors of the Indonesian languages, has been located by speculation in places ranging from Tartary, the Indo-China area and southern China to Melanesia or Taiwan.

Not all the languages of Indonesia belong to the Indonesian subgroup; communities speaking non-Indonesian languages can be found in North Malaya, Ternate, Timor and Irian Barat (formerly known as West New Guinea). Besides these should be mentioned the non-indigenous languages spoken in the country, such as Chinese (mainly Hok-kien, Khoe, Cantonese), Dutch, English and Arabic.

On the other hand languages of the Indonesian subgroup are spoken by communities beyond the borders of Indonesia: Malay in Malaysia, southern Thailand and Brunei, and other languages of the Indonesian subgroup, Sarawak, Sabah, Sarawak, the Philippines and Portuguese Timor. In addition, Malay or other Indonesian languages are spoken by communities of Indonesian origin living in Ceylon, South Africa, Surinam and the Netherlands.

There is no general agreement on the total number of languages within Indonesia. Apart from the absence of an agreed definition of language, detailed linguistic studies are lacking for most areas. A figure commonly mentioned is 250, but possibly more reliable estimates are those which put it at 200, or a little less. The number of speakers of any single language can vary from perhaps over 50 millions, as in the case of Javanese, to the 40,000 or so who speak some of the lesser tongues. Some idea of the distribution of the main languages can be obtained from the accompanying language map; for some suggested amendments to the data given in it, see I. Dyn, A lexicostatistical classification of the Austronesian Languages (Indiana University 1965, 48-49). Generally a map cannot show the minority speech communities which have grown up outside their original areas as a result of population movement.

A broad division of the Indonesian languages into Western and Eastern, suggested by the Dutch scholar J. L. A. Brandes, failed to withstand the test of time.

Epigraphic material. The decisive early external influence on Indonesian culture was unquestionably Indian, and the earliest known inscriptions are written in Sanskrit. One of these, found near Kutel in the island of Kalimantan (formerly called Borneo), is thought to date from about 400 A.D.; it commemorates the rule of Mulavarman over a Hinduized state. The earliest inscriptions from the Malay Peninsula, Buddhistic texts, and also the earliest epigraphic evidence from Western Java, are judged likewise to date from this time.

The oldest evidence of a language indigenous to the area is found in inscriptions on stone from South Sumatra, dating from 682 A.D., and associated with the state of Srivijaya; despite the occurrence here too of many Sanskrit words, the basic language has sufficient affinity with later Malay to be given the name Old Malay. Although Old Javanese inscriptions begin only about a century later (circa 780), subsequent material in this language proved to be much more abundant than that in Old Malay; copper inscriptions appeared up until about the 12th/13th century. Epigraphic evidence of the other recorded ancient Indonesian language, Old Balinese, begins in 882 A.D., and continues to appear over nearly two centuries. It may be noted that all three languages employed scripts of Indian derivation. There is of course no reference to Islam in the early inscriptions. Malay and Bahasa Indonesia, probably in Sumatra, has been disseminated widely through the Indonesian area, in which it has for centuries been the lingua franca. On account of its usefulness for commercial, political and religious purposes it has always attracted more attention from foreigners than have other Indonesian languages. It is the language of a considerable corpus of manuscript material produced in the 15th-16th/17th-18th centuries. Malay, the official language of Malaysia, and Bahasa Indonesia (see below), the official language of Indonesia, have both been developed directly from this earlier form of Malay. Linguistically speaking, Malay and Bahasa Indonesia can scarcely be held to be separate languages; the two different names reflect the political division of the Indonesian cultural area which ensued on the Anglo-Dutch Treaty of 1239/1824. The following remarks on some of the characteristics of Malay apply equally to Bahasa Indonesia.

We may mention first some features of the Indonesian languages in general which are at the same time applicable to Malay. Observers have noted conspicuous mutual resemblances between the languages of the Indonesian subgroup. The number of vowel phonemes is limited, being basically [a], [i],
I2l6 INDONESIA
and, with sometimes a considerable range of non-phonemic variation (\[i\] to \[e\], \[u\] to \[\text{a}\] etc.); variation in the length of vowels, when it occurs, is also non-phonemic. Common diphthongs are \([\text{ai}]\), \([\text{au}]\) and \([\text{ui}]\). The consonantal system is relatively simple; the glottal stop (\text{hamsa}) is widespread; single consonants are preferred, and consonantal clusters avoided, both at the beginning and end of words; but certain two-consonant combinations, notably nasal combinations such as \(-\text{mb}-\), \(-\text{nd}-\), etc., may occur within the word. Thus the common pattern for the Indonesian "word-base", which is likely to be disyllabic, will be consonant/vowel/consonant/vowel/consonant.

Affixation, another trait of the Indonesian languages, can best be illustrated with specific reference to Malay examples; but it must be mentioned that infixation is no longer productive in Malay, if indeed it ever was a feature of this language. Very briefly, the verbal prefixes in Malay include \text{ber-}, \text{mas-}, \text{pe(r)}- and \text{ter-} and the suffixes are \(-\text{i}-\) and \(-\text{kan,-s}\); a verb may occur without any affix; in certain cases two prefixes may be used simultaneously, as may prefix and suffix. Prefixes commonly employed in conjunction with or to form substantives are \text{ke-}, \text{pe(r)}- and \text{per-}, while a common suffix (which again may be used in conjunction with a prefix) is \(-\text{an}\).

Further, it may be remarked that substantives have no grammatical gender, and they do not normally undergo morphological change for case or number; thus \text{mata} unless further qualified can be translated 'eye' or 'eyes'. Reduplication of the substantive, a very common feature of Indonesian languages, can correspond to the plural number, but does not always do so. Perhaps the one syntactical feature of Malay which ought to be mentioned is the fact that the affirmative adjective follows the noun it qualifies.

External influences on Indonesian languages. Of the languages which were introduced into the area in historical times, it was undoubtedly Sanskrit which first exerted a major influence. The occurrence of Sanskrit and partially Sanskrit inscriptions has been mentioned. Javanese and Malay proved to be particularly susceptible to Sanskrit influence, and it was via these languages that Sanskrit influence reached other languages of the area. Sanskrit has given to these languages common grammatical particles, and moreover has enriched the lexicon in the spheres of religion (for example \text{iśama}, \text{dosa}), of ideas (e.g., \text{buddhi, jiva}), court ritual (e.g., \text{uṇācara, āstāma}), of statecraft (e.g., \text{dāla, drohaka}), of relationship (e.g., \text{ṣuśmin, puṇa}), and so forth, with appropriate adaptation to the morphology of the recipient language.

Arabic is the other language which has exerted a significant influence on the Indonesian languages over a long period if time; perhaps none was more deeply influenced than Malay, and Arabic influence has permeated through to the other languages often via Malay. This influence can be seen in Malay syntax, at least in religious writings, and in the 'popular' lexicon as well as the 'learned', though understandably to a greater extent in the latter.

Examples of everyday Malay words of Arabic derivation are: \text{asad (}<\text{aqīs})}, \text{fasal (<\text{faṣīl})}, \text{hal (<\text{kāl})}, \text{ilmu (<\text{ilm})}, \text{mangkin (<\text{mumkin})}, \text{perlu (<\text{fard})}, \text{sebab (<\text{sabab})}, \text{selamat (<\text{salāma})}, \text{tawab (<\text{tauba})}. Before the coming of steam, contact between Arabia and the Indonesian Archipelago was maintained mainly via India; traces of Indian languages, and Persian, consequently appear in borrowings from Arabic. This possibly explains also, perhaps, the unexpected occurrence of words of Sanskrit origin in the vocabulary of Islamic practice in Malay; so for 'heaven' \text{shurga (<\text{Skt. svarga})} is preferred to the Arabic \text{sama}; for 'heil' \text{naraaka (<\text{Skt. naraaka})} rather than \text{jahannam or al-nār}; for 'fasting' \text{puasa (<\text{Skt. upāvāsa})} rather than \text{ṣawm}. Alternatively—and this seems more likely—the use of these words may be due to the taking over by the first Muslims of terms already current in the area of pre-Islamic Malay.

The relative position of Sanskrit and Arabic as sources of influence on Malay and other Indonesian languages can be summed up thus: Up to and including the 7th/8th century Sanskrit held the field; during that time Sanskrit appeared in inscriptions in combination with Indonesian languages, and indeed inscriptions wholly in Sanskrit occasionally appeared. However, by the beginning of the 8th/9th century Islam had secured a foothold in the Archipelago, and before the century was out Arabic influence had begun to manifest itself on the language; in that century appears the first clearly Islamic Malay inscription, known as the Trengganu Stone, written moreover in an Arabic type of script. From then on, Sanskrit was steadily to yield ground to Arabic in the field of language; some of the Sanskrit vocabulary in the inscriptions has failed to survive into modern times, while there has been no comparable loss of Arabic elements once they have been incorporated in the language. The position of Arabic has of course been strengthened by the force of religion exerted through religious instruction and the Kurān, and numbers of manuscripts in Arabic have been brought into, or produced in, Indonesia. Excepting possibly in the island of Bali, no comparable Sanskrit subculture persists; nevertheless, since 1942 Indonesian linguists have often resorted to Sanskrit when creating new terms for Bahasa Indonesia.

The remaining non-Indonesian languages which have influenced Malay and Bahasa Indonesia are relatively unimportant and can be dealt with briefly. Considering the centuries of Chinese contacts with the Archipelago, Chinese dialects have had a remarkably slight influence, excepting possibly at the colloquial level; from India has come vocabulary of Hindi, Persian, Urdu, Tamil derivation; three European languages which have exercised significant influence are Portuguese, Dutch and English, the last, being the most widely taught foreign language in Indonesia, can be expected to exert a continuing influence on Bahasa Indonesia. Through the centuries there has of course been a continuing interaction of the Indonesian languages on one another.

Scripts. Broadly speaking, the pattern of influences which emerged in the previous section will be reflected in any discussion of the scripts used in Indonesia. The earliest Sanskrit inscriptions were written in a Pallava script, and developments of this were used subsequently in the inscriptions and other writings in Indonesian languages: Old Javanese (from which modern Javanese script has been derived), and the Bugis (from Old Malay language sources from Sumatra), Balinese, Madurese, Sundanese; also in the Sumatran languages Batak, Redjang and Lampung, and others. Although superficially very different, the Bugis and Makassar scripts show definite affinities with those mentioned. In fact, there is so far no evidence to refute an opinion put forward by H. Kern and others that all the early scripts of the Archipelago are of Indian origin.
For some languages (exemplified by Malay), though not for others, the diffusion of Islam resulted in the adoption of a new Arabic type script. For Malay the adoption was virtually total, and apart from epigraphic material referred to above no writings are known in pre-Arabic script. As far as the other languages are concerned the new script met with varying degrees of acceptance; in Javanese it was used for certain kinds of literature, in Bugis and Makassarese it was rarely employed, while in Achenese and Minangkabau for example it came into general use. The principal modification to the script necessitated by Malay phonology was the addition of the following letters to represent sounds not found in Arabic: چ for ch; چ for ng; چ for r; چ for g; and چ for ny. In the Malay alphabet (which in this respect is more consistent than some other alphabets of Perso-Arabic origin) the چ precedes the چ. The vowel signs چa, چa and چa are seldom used; their Malay names (baris diatas, 'line above', baris dibawah 'line below' and baris dihadapan 'line in front', respectively) are reminiscent of the equivalent terms in Persian. The letters of this script are known in Bahasa Indonesia as huruf Arab, but in Malay as Jawi. Use of this script is declining in Malaysia, and in Indonesia it has almost disappeared, surviving only in the religious sphere. It has been superseded by romanized script, introduced from Europe as early as the 11th/12th century by Christian missionaries. Thus other languages than Bahasa Indonesia, Javanese for example, make use of a romanized script for publications at the present time. The romanized spelling of Bahasa Indonesia and of Malay, being based respectively on Dutch and English orthography, tend to emphasize the dissimilarity of the two; however, on 27 June 1967 agreement was reached on a new unified spelling to be used both in Indonesia and Malaysia. The letters which functioned identically in the two former orthographies have been retained in the new spelling: b, d, f, g, h, k, l, m, n, p, r, s, t, w, z; so have the combination ng, and the letters q, s, and x which occur in some borrowed words. Where usage in the two former orthographies differed, changes had to be made:

The agreed new symbols for the vowels are a, e, e, i, o, and u (thus, except in material for reading practice, there will be no differentiation between the symbol for e taling ("long e", sometimes hitherto given an accent sign), and e pèhèt ("short e", sometimes written hitherto [i]). The present spellings for diphthongs (ai, au, oi), are retained. It is not yet certain that the new spelling will be generally adopted in Indonesia.

Bahasa Indonesia. It has been seen that both Old Javanese and Old Malay appeared on the early inscriptions. In the intervening centuries both languages have developed and they have played prominent roles in the cultural history of the Archipelago, Javanese as the language of the sophisticated polities of Central and Eastern Java, Malay as the language of the port-states and of mercantile intercourse in general. In view of the numerous literary works produced in Javanese, and of the cultural prestige of the Javanese in the area, it would not have been surprising to find Javanese become the language of Indonesia; however, owing in part perhaps to the complexities arising from the "stratification" of the Javanese language, in part to the geographical dissemination of Malay through the island archipelago, Javanese was not adopted as the vehicle of the independent nation. The modern Indonesian form of Malay is known officially as Bahasa Indonesia (literally "the language of Indonesia"); foreign writers generally use this term to refer to the language in preference to the less precise "Indonesian". The adoption of Bahasa Indonesia to be the official language of the country was virtually assured even before Dutch rule ended in 1949. In spite of advocacy by some that Dutch should become the primary language, and misgivings on the part of others as to the capability of Bahasa Indonesia to function as the language of a modernizing state, the determination of Indonesian nationalists to utilize the language as the vehicle of expression of their will in the end decided the issue. In 1928 the nationalist youth movement formally resolved in this sense; and the suppression of the Dutch language as a consequence of the Japanese occupation of the East Indies in 1942 removed another obstacle from the path of Bahasa Indonesia, which was declared to be the official language of the new Republic of Indonesia in the constitution adopted in 1945. The present situation therefore is that Bahasa Indonesia is in general use for radio, newspapers and books; it is spoken and understood by nearly all Indonesians, the exceptions being mostly middle-aged or elderly; since it is now taught in schools throughout Indonesia it may be assumed that within a generation or so it will be the everyday tongue of all Indonesians—and thus incidentally the everyday tongue of more Muslims than any other language. The majority of Indonesians will continue to study and speak a regional language as well (Javanese, Sundanese etc.), which will in fact be their mother tongue. The use of Dutch, still surprisingly popular with older educated Indonesians, is bound to decline rapidly; to a great extent it is being displaced by English.

Bibliography: For a survey of the Indonesian languages in their wider context see A. Capell, Oceanic linguistics today, in Current Anthropology, iii/4 (October 1962), 371-66, and comments by others; also C. F. and M. Voegelin, Languages of the world, Indo-Pacific, in Anthropological Linguistics, iii/4 (1964), "Indonesian and other Austronesian", see O. Dempwolff, Vergleichende Lautlehre des Austronesischen Wortschatzes, 3 vol., Berlin 1934-8, and for "Proto-Indonesian" R. Brandstetter, Wurzel und Wort in den Indonesischen Sprachen, Lucerne 1910, and other monographs by Brandstetter [four of which are translated by C. O. Blagden in An introduction to Indonesian Linguistics, London 1910]. On the "Austronesian homeland" theories there is a useful survey with bibliography by J. C. Anceaux in BTLV, deel 121 (1965), 417-32. J. Gonda's Sanskrit in Indonesia (Nagpur 1952) gives much more information about Indonesian languages than is implied by the title, and numerous articles on Indonesian linguistics by this scholar are to be found in BTLV, Lingua and elsewhere.
On Arabic influence on Malay see Ph. S. van Ronkel, Over Invloed der Arabische Syntax op de Maleishe, in TBB, deel 41 (1899), 498-528, and C. Skinner, The influence of Arabic upon Modern Malay in Intisari (Singapore), ii/1 (1966 (?)), 34-47. For specimens of scripts see K. F. Holle, Tabel van Oud- en Nieuw-Indische Alphabetten, The Hague 1882, also Ararkin (below). Of the many grammars of Bahasa Indonesia which have been produced, so far none has achieved recognition as a standard work.

A general discussion of the Indonesian languages is to be found in V. D. Ararkin, Indonezyshie Yazyuki, Moscow 1965, with an extensive bibliography of works in various languages. A very useful series of critical bibliographies on Indonesian languages is being published in Leiden by the Koninklijk Instituut voor Taal-, Land- en Volkenkunde; those that have appeared so far are: P. Voorhoeve, Critical survey of studies on the language of Sumatra, 1955; H. A. C. van Es, De reder en E. M. Uhlenbeck, Critical survey of studies on the languages of Borneo, 1958; A. Tceuw (assisted by H. W. Emanuels), A critical survey of studies on Malay and Bahasa Indonesia, 1961; E. M. Uhlenbeck, A critical survey of studies on the languages of Java and Madura, 1964. For a comprehensive collection of linguistic maps, see Richard Salzner, Sprachenkress des Indonezyshen Raumcs, 2 vols., Wiesbaden 1960. (Russell Jones)

iv.—History: (a) Islamic period.

The earliest known record of probable Muslim settlement in the Malay-Indonesian Archipelago is a Chinese report of the existence of an Arab settlement in east Sumatra (San-Fu-Chi = Srwidiyaja = Palembang) headed by an Arab chief in 53/674. A more definite statement on large-scale Muslim emigration into the Archipelago was given by al-Mas'udi, who reported that in 265/878 there were about 120,000 or 200,000 merchants and traders consisting mainly of Muslims (Arabs and Persians) who had settled in Kahanu (Canton) which was massacred following a troublesome peasants' rebellion in south China under the T'ang emperor Hi-Tsung (265/878-276/889). Consequently large numbers of Muslim merchants and traders fled from Canton and sought refuge in Kalab (Kedah) on the mainland or in the Malacca region. This considerable emigration of Muslim merchants and traders effected a transference of the entrepot for Muslim trade with the Chinese empire from Canton to Kedah. We may reasonably assume that since the Muslims had had quite a considerable settlement in Canton (which dated from as early as the 1st/7th century), enjoying a high degree of religious and civil autonomy, they must have perpetuated their mode of settlement and social organization in Kedah, and also in Palembang, whither they had similarly emigrated. This event seems to have marked the beginning of the coming of Islam in the Archipelago.

There is evidence of Muslim settlement in the Phanrang region in south Champa in Cambodia in 421/1029 or earlier. The Leran inscription near Gresik in east Java dated 475/1082 indicated an earlier Muslim presence in the region.

According to the Acehnese (Malay) chronicles, Islam was introduced into the northern tip of Sumatra sometime around 506/1122 by an Arab missionary whose name is given as Shaykh 'Abd Allāh 'Arif. One of his disciples, Shaykh Burbān al-Dīn, later carried on his missionary work as far as Priaman down the west coast. The date of the establishment of Islam in north Sumatra is given as 601/1204, when Djōbān Shāh became its first Sultan. The Hikayat Radja-Radja Pasai related that the Sharif of Mecca sent a certain Șayḫ Ȭ ṭūl all Īl ā at the head of a mission to spread Islam in north Sumatra in the middle of the 7th/11th century. The Pasai region of north Sumatra, consisting of the realms of Perlak and Samudra, was already Muslim by 682/1282. The Sultan, al-Malik al-Šāhīb, died in 707/1307 or 707/1307.

In Trengganu on the northeast coast of the Malay Peninsula a Teofrastos inscription dated 701/1301 was discovered at Kuala Berang indicating earlier Muslim settlement in the region. A Muslim tombstone at Bud Dato on the island of Jolo in Sulu dated 710/1310 indicates that Muslims frequented the region, perhaps in the course of their trade relationship with China.

Towards the end of the 8th/14th century, the kingdom of Malacca on the west coast of the Malay Peninsula was founded by Parameswara, a Palembang prince who had fled from Java and ruled for a brief period in Tumisik (Singapore). It is possible that the coastal regions near Malacca had already been used by Muslims for their commercial activities at an earlier date, seeing that they had settled in Kedah long before. By 812/1409, the ruler of Malacca, through Muslim proselytizing efforts, had embraced Islam and concluded a family alliance with the Sultan of Pasai by marrying the latter's daughter. Both Pasai and Malacca had by then become centres of Islamic learning and of the propagation of the faith throughout the Archipelago. Sufism was to play a dominating role in the Islamization process for the next two centuries. Scholars and missionaries from all parts of the Archipelago as well as from Arabia gathered in these two emporia to disseminate religious knowledge. Among these were found many from Java including two future saints of Java, Sunan Bonang of Tuban and Sunan Giri, who on their return to Java propagated the faith there.

Pasai during the reign of al-Malik al-Zāhīr (beginning of 8th/14th century), a grandson of al-Malik al-Šāhīb, was the earliest centre of Islamic learning in the Archipelago. When Ibn Baṭṭūṭa visited Pasai in 746/1345-747/1346, he recorded that the Sultan was fond of religious debates, and zealous in propagating Islam in the surrounding country by means of confraternities. By 830/1427 the rulers of Aru, Samudra, Pedir and Lambri, who were all included in the realm of Atjeh, had become Muslim, and Atjeh was expanding her power to the south.

According to a tarsila (silisila: genealogical record of noble families) of Sulu, Islam was introduced there in the second half of the 8th/14th century by an Arab missionary called Sharif Awliyā Karīm al-Mahkūdīm, who had come from the region later known as Malacca, where he was credited with having converted the inhabitants to Islam. He is said to have reached Sulu in 782/1380 and settled in Bwansa near Jolo. The latter was the first Sultan of Sulu at the end of the 8th/14th century.

On Java, Arab and Persian missionaries had been propagating Islam since 803/1400. One of them, a famous wālī, the sayyid Mawlānā Malik Ibrāhīm, died in Gresik in 822/1419. He had made attempts to persuade the king of Maqājahīt (Vikramar-vaddhana, 788-1386/833-1429) to embrace Islam.
However, it was during the reign of Kertawidjaya (Bhre Tumapel, 851/1447-855/1451) that Islam gained a foothold in the royal court of Madjapahit. This event was initiated by the coming of Raden Rahmat, the son of an Arab missionary of Champa, whose important and decisive role in the Islamization of Java had been foretold by another Arab missionary of Java, Shaykh Mawilain Djumád̤a al-Krubá. Raden Rahmat established his centre at Ampel (Surabaya) and later was to become venerated by the Javanese as the chel wall (master) of Java with the title Sunan Ampel. Another famous sayyid missionary of Java was Mawilain Ishák of Pasai who was entrusted by the Sultan of Pasai with the mission of converting Balambangan in the easternmost region of Java. Both Sunan Bonang, a son of Sunan Ampel, and his own son by his marriage with a daughter of the king of Madjapahit, Raden Paku (Sunan Girı), studied under him in Malacca and Pasai. Upon the death of Sunan Ampel (972/1467), Sunan Girı succeeded him and made Ampel (Java) still further as the centre of Islamic learning and the propagation of the faith in Java. Another son of Sunan Ampel also became recognized as a wali and was known as Sunan Dradjat of Sidaryu. On the island of Madura, Pangeran Sharif, also called Khalfi Husayn, held sway. The fall of Madjapahit in 883/1478 has been traditionally linked with Raden Patah, a son of the king and foster son of Arya Damar, a Madjapahit governor of Palembang, who had converted to Islam by Raden Rahmat sometime before 844/1440. Raden Patah settled in Bintara (Demak), where he built a mosque, completed in 894/1488 (and still standing). It was in Demak, which also became a centre of Islam in Java, that another celebrated wali, Sunan Kalidjaga, ingeniously made use of the wayang (theatre) for spreading Islam.

Islamization in the southern region of Sumatra began in the beginning of the 9th/15th century. By the beginning of the 15th century, the region was already Muslim. Certain areas in the Minangkabau region had by then also been Islamized. Palembang is generally held to have been Islamized initially through the influence of Raden Rahmat and Arya Damar some time after 844/1440. The Lampung region in the south was converted through the influence of Bantem, where Islam had taken root at the end of the 9th/15th century. It is reported that another famous wali, Sunan Damar, who used to sail to the Moluccas, also took part in the spread of the faith in Java. The districts were governed by their own walis, of whom the most famous was Sunan Gunung Djati, who used to sail to the Moluccas, also took part in the spread of the faith in Java. The districts were governed by their own walis, of whom the most famous was Sunan Gunung Djati, who used to sail to the Moluccas, also took part in the spread of the faith in Java. By 879/1474 through missionary efforts. From Celebes, Islam was carried by Macassar missionaries to the island of Sumbawa, and perhaps also to Lombok, between 947/1540 and 957/1550.

On the Malay Peninsula, Kedah had become Muslim by 790/1484 through missionary efforts. Nothing much is known about the penetration of Islam in the Malay Peninsula, but there are indications pointing to missionary activities centred at Malacca and Pasai.

Sukadana in southwest Borneo was Islamized by Arabs and Malays chiefly from Palembang. By 1000/1591, all the coastal regions of Borneo had become Muslim.

The Luzon islands and districts such as Manila, Cebu, Oton and others were Islamized by
missionaries from Brunei and Atjeh, as were also those of Mindanao and Sulu. Around 1009/1600, the Spanish missionaries from Brunei and Atjeh, as were also those of Mindanao and Sulu. Around 1009/1600, the Spanish missionaries from Brunei and Atjeh, as were also those of Mindanao and Sulu. Around 1009/1600, the Spanish missionaries from Brunei and Atjeh, as were also those of Mindanao and Sulu. Around 1009/1600, the Spanish missionaries from Brunei and Atjeh, as were also those of Mindanao and Sulu. Around 1009/1600, the Spanish missionaries from Brunei and Atjeh, as were also those of Mindanao and Sulu. Around 1009/1600, the Spanish missionaries from Brunei and Atjeh, as were also those of Mindanao and Sulu. Around 1009/1600, the Spanish missionaries from Brunei and Atjeh, as were also those of Mindanao and Sulu. Around 1009/1600, the Spanish missionaries from Brunei and Atjeh, as were also those of Mindanao and Sulu. Around 1009/1600, the Spanish missionaries from Brunei and Atjeh, as were also those of Mindanao and Sulu. Around 1009/1600, the Spanish missionaries from Brunei and Atjeh, as were also those of Mindanao and Sulus.

The beginning of the 10th/16th century, under the first maker of Greater Atjeh, Sultan 'Ali Mughāyat Shāh (d. 937/1530), Atjeh had conquered several territories in the south and eastern coastal regions. His son, Sultan 'Ali al-Din Ri'āyat Shāh al-Kahhar (d. 976/1568), who hired mercenaries from the Yemenis, conquered more territory and began the series of Central Sumatra (Batak region) in 944/1537. Not all the Batak people were converted to Islam, but the Muslims were to score their greatest missionary success there much later, after the arrival of Christian Protestant missionaries in 1315/1897; this was no doubt also due to the effect of the zeal of the Wadhdh-inspired hādżī who promoted a revivalist movement in 1218/1803 [see RAIK]. In the years 983/1575 and 990/1682, there arrived in Atjeh certain 'ulamā' from Mecca, Yemen and Gujerat to discuss metaphysics and ḥaṣāwewa. These discussions, which seem to have begun at the beginning of the 9th/15th century, continued with ever-increasing depth and produced prolific writings in Malay, which continued to maintain intellectual interest for over two centuries. Their significance was to indicate the inner intensification of the Islamization process in the Archipelago, chiefly affecting Sumatra and Java. Some of the most profound and best examples of such writings are those of the Malay Sūfi poet and writer on doctrine, Ḥamza Fānsārī [q.v.], who belonged to the Kādirīyya Order and flourished during the reign of Sultan 'Alā al-Din Ri'āyat Shāh (Sayyid al-Mukkāmal, 998-1013/1589-1604). During Sultan Iskandar Muda's reign (1026/1617-34), Atjeh reached its zenith in military as well as in commercial power. Atjeh continued till 1054/1644 and became chief ḥādī of the realm under Sultan Iskandar II (1047-51/1637-41). The next important event following this period was the Malay translation of the Kurān, together with al-Baydawī's commentary, made by 'Abd al-Ra'ūf al-Sinkīlī (born ca. 1030/1620 and d. after 1104/1693 [q.v.]), a member of the Ṣaṭṭārīyya Order, who flourished during the reign of Sultan 'Alā al-Din al-Sultān Shams (937/1530-990/1682), the first of four queens who ruled Atjeh from 1051/1641 to 1111/1699. The line of Sultans of Atjeh continued till 2021/1903 [see ATR]

In Celebes, the kingdom of Bolaang-Mongondow in the northern peninsula east of Minahassa was Islamized gradually by Arabs, Bugis and other indigenous Muslim missionaries. Between 1098/1686 and 1121/1709, the kingdom was ruled by its first Christian king, Jacobus Manopo. By 1260/1644, its last Christian king, Jacobus Manuel Manopo, had embraced Islam. The famous Padri, Tadj al-Alam al-Safiyyat al-Din Shah (1051/1641-1111/1699), who was a profound and best example of such writings, was to indicate the inner intensification of the Islamization process in the Archipelago—till after the arrival of Nūr al-Din al-Rānī (d. 1077/1666 [q.v.]), who was Şaykh al-Islām of Atjeh. Discussions and polemics on the teachings of the Wahhabi-inspired Ḥāshids, which continued to maintain intellectual interest for over two centuries. Their significance was to indicate the inner intensification of the Islamization process in the Archipelago, chiefly affecting Sumatra and Java. Some of the most profound and best examples of such writings are those of the Malay Sūfi poet and writer on doctrine, Ḥamza Fānsārī [q.v.], who belonged to the Kādirīyya Order and flourished during the reign of Sultan 'Alā al-Din Ri'āyat Shāh (Sayyid al-Mukkāmal, 998-1013/1589-1604). During Sultan Iskandar Muda's reign (1026/1617-34), Atjeh reached its zenith in military as well as in commercial power. Atjeh continued till 1054/1644 and became chief ḥādī of the realm under Sultan Iskandar II (1047-51/1637-41). The next important event following this period was the Malay translation of the Kurān, together with al-Baydawī's commentary, made by 'Abd al-Ra'ūf al-Sinkīlī (born ca. 1030/1620 and d. after 1104/1693 [q.v.]), a member of the Ṣaṭṭārīyya Order, who flourished during the reign of Sultan 'Alā al-Din al-Sultān Shams (937/1530-990/1682), the first of four queens who ruled Atjeh from 1051/1641 to 1111/1699. The line of Sultans of Atjeh continued till 2021/1903 [see ATR].

Bibliography: For the spread of Islam in the Malay-Indonesian Archipelago, the best narrative account based on translations from the Malay, Javanese, and other original sources, contemporary non-Muslim sources, and the research mainly of Dutch scholars, is in T. W. Arnold, The preaching of Islam, London 1935, ch. 12. There are many Muslim and other sources giving general or particular accounts of Islam in the Archipelago, among them the Ḥiḥāyat Raṣa-Raṣa Pasaī (History of the kings of Pasaī), edited by A. H. Hill, in JMBRAS, xxxii (1960); the Ḥiḥāyat Atjeh (History of Aceh), ed. T. Iskandar, The Hague 1959; the Būṣīn al-salāṭin of al-Rānī, ms Or. 1971 and Or. 5303 in the University Library, Leiden; the
Sejarah Melayu (Malay Annals), edited by T. Situmorang and A. Teeuw, Djakarta 1958; the Sedjarah Banien (Annals of Banien), edited by R. H. Djadjiningrat, Haarlem 1913; idem, Critisch overzicht ... maleisische ... gegevens over de geschiedenis v. h. Soelanaat van Alijt in BTLV, lxv (1911), 135-265; the Babad Tanah Djawi (History of Java), tr. from Javanese and ed. W. L. Othoff, The Hague 1941; T. Fires, Suma Oriental, tr. from Portuguese by A. **b) Colonial period.**

When the first Dutch merchants arrived in Java in 1596, they heard news of a major kingdom in the interior of the island. There, the Islamic state of Mataram was emerging after a century of confusion following the fall late in the fifteenth century of Madjapahit, the last major Hindu-Buddhist kingdom on Java [q.v.]. The Mataram hegemony was expanding over the Islamic port-principalities of the northcoast, as well as over other interior states. The greatest of the Mataram monarchs, Sultan Agung (1613-1645), completed the subjugation of Java with the conquest of Surabaja in 1625.

reforms was the land rent system which entailed the
Western controlled bureaucracy by abolishing the
Daendel's reforms further towards the creation of a
administration largely under Lieutenant-Governor Thomas
Stamfoid Raffles (1811-16). A radical reform of the
istration largely under Lieutenant-Governor Thomas
and the Indonesian 'Regents' or Chiefs.
indigo and tea. The more profitable monopolies such
as former government monopoly crops such as pepper,
offered by the Javanese cultivator of a fixed
activity in the islands outside Java, and the bringing
of the nineteenth century was increased colonial act-
ivity in the islands outside Java, and the bringing
of the powers of the Regents (prijaji) were returned.
During the first ten years of the Culture System
exports from Java rose by 200 per cent, shipped by the
now prosperous Netherlands Trading Company.
The profits accruing from the sale of these exports
were paid to the Netherlands treasury and used to
reduce taxation and finance public works in Holland.
During nearly fifty years (1830-77) that contributions
from the Culture System were paid, approximately
832 million guilders were remitted from Indonesia.
Pressure to abolish the system came from the liberals
in the Dutch parliament, which came increasingly
to control colonial affairs, and from those like E.
Douwes Dekker (Multatuli) whose famous novel,
Max Havelaar (1860), focused attention on the
abuses of the system.
From 1863 onwards successive governments sought
to relieve the Javanese of the worst abuses of the
system, and gradually to dismantle it, handing over
to private merchants and investors the exploitation of
former government monopoly crops such as pepper,
indigo and tea. The more profitable monopolies such as
the sale of opium and the cultivation of sugar and
coffee, however, remained for many years. The last,
coffee, was not produced until 1917.
Another aspect of developments in the second half
of the nineteenth century was increased colonial act-
ivity in the islands outside Java, and the bringing
eventually of all of them within the Dutch adminis-
strative system. This activity had already been apparent
for some years before 1863, and was at first exclusively governmental. It was aimed primarily at
forestalling other colonial powers and freelance ad-
venturers who might try to establish themselves in
regime, modified to meet its obvious shortcomings.
The individual method of land rent assessment gave
way to the village system. This produced better
returns but not sufficient to meet the growing costs
of administration. In attempt to bolster the flagging
economy a new trading company (Nederlandsche
Handel Maatschappij) was founded in 1824 to keep
colonial trade in Dutch hands, but it failed to fulfill
expectations.
Dutch financial difficulties at this time were
aggravated by heavy military expenditure occasioned
by the Java War (1825-30) and the so-called Padrisk
War (1821-30), in the Menangkabau region of central
Sumatra [q.v.]. Both of these wars were in part
conflicts within Indonesian society itself which arose
from the tension already noted between the santri
or orthodox Islamic factions and the abangan or
traditionalist elements. The growing strength of the
santri groups posed a challenge to the influence over
the predominantly abangan peasantry of the trad-
tional ruling castes, who were in turn supported by
their Dutch allies. The two conflicts therefore
possessed also the nature of anti-colonial conflicts
against the hajir, and the eventual victory of the
Dutch cemented the identity of interest between
them and the majority of the Indonesian traditional
dhie (known as prijaji in Java) for the remainder of
the colonial period.
The heavy burden of colonial debt incurred by the
Java and Padrisk Wars and by the secessionist move-
ment in Belgium led to the appointment of Johannes
van den Bosch as Governor-General with instructions
to make the colonial possessions pay. Van den Bosch
(1830-34) commenced the introduction of the so-
called Culture System (cultuur stelsel) under which
large areas of arable land in Java were utilised for the
cultivation of coffee, sugar, indigo and other crops
for the world market. As part of the reform many
of the powers of the Regents (prijaji) were returned.
During the first ten years of the Culture System
exports from Java rose by 200 per cent, shipped by the
now prosperous Netherlands Trading Company.
The profits accruing from the sale of these exports
were paid to the Netherlands treasury and used to
reduce taxation and finance public works in Holland.
During nearly fifty years (1830-77) that contributions
from the Culture System were paid, approximately
832 million guilders were remitted from Indonesia.
Pressure to abolish the system came from the liberals
in the Dutch parliament, which came increasingly
to control colonial affairs, and from those like E.
Douwes Dekker (Multatuli) whose famous novel,
Max Havelaar (1860), focused attention on the
abuses of the system.
From 1863 onwards successive governments sought
to relieve the Javanese of the worst abuses of the
system, and gradually to dismantle it, handing over
to private merchants and investors the exploitation of
former government monopoly crops such as pepper,
indigo and tea. The more profitable monopolies such as
the sale of opium and the cultivation of sugar and
coffee, however, remained for many years. The last,
coffee, was not produced until 1917.
Another aspect of developments in the second half
of the nineteenth century was increased colonial act-
ivity in the islands outside Java, and the bringing
eventually of all of them within the Dutch adminis-
strative system. This activity had already been apparent
for some years before 1863, and was at first exclusively governmental. It was aimed primarily at
forestalling other colonial powers and freelance ad-
venturers who might try to establish themselves in
the areas in which the Dutch claimed paramountcy, and took the form of the imposition of treaties by which local Indonesian rulers acknowledged their states to be part of Netherlands India. Sometimes, as in Bali in 1846 and 1849, this involved a military expedition and a Dutch Resident. In other cases, as in the tin-island of Billiton in 1851, full-scale occupation and direct administration was necessary. In most cases however only a paper claim to Dutch supremacy was involved.

After the beginning of the so-called 'Liberal' period, however, this governmental activity in the outer islands was reinforced and intensified by private Dutch and foreign enterprise and capital seeking to exploit the agricultural and mineral resources of economically favoured areas. From many examples one may mention the large-scale development of estate cultivation, beginning with tobacco, in the East Coast residency of Sumatra. This is partly because the Siak tobacco concessions of 1863 were amongst the largest and earliest of these private enterprises, partly because they provoked an important political and military confrontation between the Dutch and the Acehnese, who claimed to exercise suzerainty over the leased tobacco lands.

The Atjeh War [q.v.] (1873-1904) was long, arduous and financially ruinous for the Dutch. More important, since many of these who sought to resist the imposition of Dutch control and the extinction of their independence were by long tradition a fiercely Islamic society, maintaining close links with the centres of their faith in the Middle East, the war raised the whole issue of the colonial government's Islamic policy. It also brought to the fore two men of influence and note—Snouck Hurgronje, a scholar and the government's adviser on Islam from 1890, and Van Heutsz, a soldier and administrator. Snouck Hurgronje advocated as a general principle ruthless suppression of all Muslim leaders who opposed Dutch political control combined with complete freedom for the day to day practice of the religion and customs of Islam under Dutch administration. The execution of the first part of this policy was entrusted to Van Heutsz, who not only brought the war in Atjeh to an end but as Governor General (1904-1909) brought virtually the whole of the remainder of the outer islands under effective Dutch administration.

The beginning of the twentieth century thus saw the whole of what is now Indonesia linked by Dutch administrative control, consolidated by the operations of the inter-island shipping company the KPM (Koninklijke Paketvaart Maatschappij), founded with government support in 1888. It witnessed also the emergence of a new school of thought, embodied in the so-called 'Ethical' policy, which took as its objectives not only administrative efficiency and economic development but also the enhancement of the welfare of Indonesians, and the repayment of the "debt of honour" which had been incurred by the acceptance of the financial profits which Holland had drawn from Indonesia since the inception of the "wilj" or "private" enterprise. The so-called 'transformation of Javanese culture for the purpose of modern political party. Very quickly, Sarekat Islam developed into the organizational expression of massive popular unrest, part traditional messianic movement and part modern political party.

The decade between 1912 and 1922 marked the high point of political Islam in Indonesia. Sarekat Islam was by the far the largest and most influential Indonesian organization; it reflected a developing popular consciousness of an identity that transcended regional cultural boundaries, and this broader unity was seen in terms of Indonesian adherence to Islam. In Malaya, the process of pan-regional awakening was to lead to a lasting identification of Islam with Malay-ness; but in Indonesia the connection proved ephemeral. Sarekat Islam was not organizationally and politically capable of bringing the desired concrete reforms and amelioration of people's living conditions, so that its following was fluid, dissolving in one area only to expand where it had not yet been tried and found wanting; this was a process which could not continue many years without general disillusionment. Moreover, in the early 1920s mounting government pressure caused the Sarekat Islam leaders to become increasingly outspoken opponents of foreign rule. This was followed by their expulsion of the Indonesian Communist Party (PKI), which had hitherto flourished as a bloc within the larger movement. The Communists took with them the bulk of the now much reduced membership of Sarekat Islam, and thus control over Indonesia's largest mass following passed into secularist hands.

To some extent the PKI-Sarekat Islam schism seems to have rested on the "santri-abangan" cultural contrast. But there were important Islamic Communist movements in Central Java and West Sumatra in the 1920s and the principal areas of Communist rebellion in 1926-27 (Banten and West Sumatra) were strongly Muslim. Moreover, a high proportion of Communist cadres arrested in the wake of the 1930s "crisis of the Acehese" were identified with Islam. In fact the main basis of choice between PKI and Sarekat Islam seems to have been the demand for action against foreign rule. The most disaffected Sarekat Islam members—including a considerable portion of petty entrepreneurs, merchants, and wealthy farmers—turned to the Communists in desperation, and their eventual revolt exhibited many traditional millenarian features. Of those Sarekat Islam followers who did not seek action at
all costs, the great part turned apathetically from politics; the remainder—more economically and socially secure and more willing to organise for limited and largely non-political objectives—constituted the subsequent clientele of the Sarekat Islam and its successors.

The Netherlands Indies government had not been insensitive to the emergence of a modern-educated elite and the transformation of Indonesian society by advanced forms of economic exploitation. It was, however, only after some time to decide whether to concentrate on shoring up traditional social structures and muffling the impact of economic modernization on the Indonesian populace, in the interest of maintaining the status quo, or whether to stress opportunities for Indonesian participation in the modern sphere, in particular providing a place for the emerging modern elite as the future source of native leadership and as an instrument for the peaceful modernization of the society. The latter approach was favoured by the advocates of the so-called Ethical Policy, the principal political accomplishments of which were the establishment of parties and the foundation in 1916 of the Volksraad, an advisory assembly involving some Indonesian representatives and a restricted Indonesian electorate. However, it very soon appeared to both the Indonesians and the Dutch that the ideas concerning the scope and pace of native participation were very different, and it seemed increasingly questionable if their ultimate interests were compatible at all. Ethical assumptions were dealt a severe blow by Sarekat Islam involvement in popular disturbances in 1919, and the coup de grace was provided by the abortive Communist rebellion of 1926-27. Thereafter, Netherlands policy stressed measures that favoured the restoration of traditional authority; strongly repressive action was taken against efforts by Indonesian politicians to acquire a mass following.

Politics thus once again became restricted to the small circle of the modern-educated elite, located for the most part in the great cities of Java. This group still represented a tiny and privileged minority. It was, however, radical and its members were sufficiently separated from the world of their fathers to reject reforms for some time to come, their primary focus of identity. Tradition was to them a dead weight which must be sloughed off if the Indonesian people were to unite in effective struggle against colonial rule. Their goal was the realization of a modern Indonesian nation-state, unqualified by such internationalist ideological aims as had been represented by the Sarekat Islam and the PKI.

Some of these nationalists involved themselves in religiously-orientated organizations, but most joined or founded movements of explicitly secular bent. One reason for this was the increasing Westernization—and therefore secularization—of the modern Indonesian elite, to whom Islam seemed part of the outmoded traditional world. Moreover, they were mostly of prijaji origin. This placed them on the abangan side of the sandhi-abangan cultural contrast and aligned them with the alternative focus for popular loyalty and hence as a potential source of social unrest.

Indonesian politics was henceforth marked by a deep split between religious and secular movements. On the Islamic side when Sarekat Islam abandoned its radical opposition to colonial rule it identified itself more closely with the Javanese merchant and entrepreneur elements from which it had originally sprung. These were strongly modernist in their orientation and had already found non-political expression in the Muhammadijah, a social and educational welfare organization founded in Jogjakarta in 1912. Muhammadijah modernists dominated Sarekat Islam of the 1920s and involved it in Pan-Islamic endeavours; in reaction to this, more traditionalist Javanese Muslims formed a new Islamic organization, Nahdlatul Ulama, in 1926. This was orientated more towards the opinion of the countryside, where it drew its leadership from religious notables and the more prosperous peasantry. Neither of these two religious orientations or their social bases were attractive to nationalists derived from the traditional bureaucratic elite; and in turn the Muslim groups viewed the prospect of the secularists gaining power with justified apprehension.

Within the secular nationalist camp there was an even greater schismatic tendency, but during the colonial period it reflected quarrels over personalities and strategy rather than any fundamental ideological division. The most serious disagreement was between those who considered it appropriate to take advantage of what representational possibilities the Indies government granted and those who considered this to be collaboration with the enemy. The most prominent of the non-cooperative groups was the Indonesian Nationalist Party (PNI), founded in 1927 and led by the future Indonesian president, Sukarno. It dissolved in 1930 following its leader's imprisonment, to be succeeded by two organizations reflecting another difference of nationalistic opinion—the Indonesian Party (Partindo), which called for an emphasis on unity and the acquisition of as much of a mass following as was then possible, and the 'new' PNI, led by Hatta and Sjahbir, which urged the development of an ideological and organizationally disciplined cadre.

Conscious of sectarian feehness and the general futility of non-cooperation, the nationalists of the mid-1930s sought fusion, first in the Greater Islands Party (Parindra) in 1935 and then in the more radical Indonesian People's Movement (Gerindo) of 1937. The urge toward unity also affected the Islamic organizations, bringing modernists and traditionalists together in the All-Indonesian Islamic Council (M.I.A.I.) of 1937. Finally, both religious and secular groupings combined in the Indonesian Political Coalition (G.A.P.I.) in 1939.

Neither this strenuous effort at unity nor the abandonment of non-cooperation by the radicals achieved any significant modification of colonial rule. The repressive post-Ethical policy seemed to the Dutch to have worked well; even the united Indonesian political organizations were weak, and their most troublesome leaders were in jail or exile. It consequently seemed better not to tempt fate by opening the Pandora's box of politics again. The last years of Dutch rule therefore gave little hope to even the most moderate of Indonesian nationalists for the reform of the colonial regime. There was very little to make them feel a stake in the Dutch presence and a good deal, once the Japanese seized the colony in 1942, to make them fear a Dutch return.

(R. B. McC.)

(c) Post 1942 [see DUSTUR p. 662; HIZB p. 534].
immediately visible and dominating imprint on the Indonesian's thought and action. Even so, this imprint is not uniform throughout the vast area of the Indonesian archipelago. There are notable regional differences. On the other hand, Indonesia clearly constitutes one of the outer fringes of the world of Islam. There is relatively much adaptation of Islam to local customs and traditions; conversely there is relatively little positive contribution to Islam, whether as doctrine or as practice, even so far as Indonesia proper is concerned, let alone the more central parts of the Islamic world.

Neither the chronology nor the nature of the spread of Islam in the Indonesian archipelago is satisfactorily established, especially for the earlier period.

The nature of the spread is often described as a combination of two kinds of process. At times it operates like an oil stain, with people (on an individual or on a familial basis) gradually deciding to embrace Islam. At other times it goes by leaps and bounds, with entire communities opting for Islam, often as the only available means to hold their own, for example in the face of Western expansionism or other critical events. Under the latter kind of circumstances, prompting or pressure by Muslims may occasionally play a role. On rare occasions the use of force has been recorded, but this appears as untypical. Whatever the nature of its spread, Islam reached Indonesia as a fully-grown way of life: there was no necessity for an Indonesian contribution to its tenets and practices.

During historic times, the cultural, religious, economic and political history of the area has been marked to a large extent by three successive waves of influence from outside. One originates from the Indian subcontinent and is expressed in terms of the naturalist religions and philosophies of that area, especially Hinduism and Buddhism. The second is Islamic; at first it originated from the Indian subcontinent as well, but later on its source of inspiration shifted to the Middle East. The third is European, especially Dutch; it has a Christian component, but this has not been preponderant at all times. A fourth outside influence, not comparable to a wave but this has not been preponderant at all times. A fourth outside influence, not comparable to a wave but this has not been preponderant at all times.

A common characteristic of all three waves is that when each of these waves first arrived, the territory of the present-day state of Indonesia was not distinct as such. To discuss these forces as impinging on "Indonesia" is therefore an anachronism. Yet as a descriptive device it is not too objectionable, for four reasons: (1) Irian (New Guinea) does not really count for present purposes, (2) the Philippines, where Islam arrived through Indonesia, have always had a separate status, (3) Malaya cannot be overlooked entirely but needs no more than casual reference, and (4) the Moluccas in the Moluccan archipelago, not belonging to the Indonesian Republic, like Northern Kalimantan (Borneo) or half of Timor, play no significant part in Indonesian Islam.

A common characteristic of all three waves is that their first approach was prompted by trade activity; the third differs from the other two in that it has gradually taken shape as political-economic conquest by foreigners, followed by colonization. The three are alike once more in that none has resulted in a full disruption of Indonesian continuity, but they differ again in that the bearers of both the Hindu-Buddhist and the Islamic waves have gradually identified with, and become virtually indistinguishable from, their new Indonesian setting, whereas the carriers of Western impact have assiduously and to an increasing extent maintained a separate identity. Moreover, of the first and the second, the second is now predominant and the first greatly reduced both in visibility and in importance.

As regards the chronology of the spread of Islam, it is generally agreed that Islam gained a foothold on Indonesian soil, in the ports of the Northern tip of Sumatra, towards the end of the 7th/8th century. Although the history of Muslim trade with China is rich in vicissitudes, it has existed, more or less successfully, ever since the 8th century AD. There is no reason to assume that it did not occasionally involve parts of the Indonesian archipelago. In this connection one thinks in particular of the spice trade, involving especially the Moluccas area. But it is only in 1292 that the Venetian traveller Marco Polo, visiting the North Sumatran ports of Perlak, Samudra and Lambri, refers to the former two as more or less Muslim port towns in fully pagan surroundings. A stone dated 696/1297, made in Cambay (Gujarat), marks the tomb of a ruler Malik al-Sālib of Samudra-Pase, who must have been a Muslim. The strong links between this area and India are also emphasized by another traveller, the Moroccan Muslim Ibn Battūta, 748/1345-6. The slow spread that would have been likely, given such a foothold, gained a dramatic impetus by the Islamization of the coastal state of Malacca, originally the creation (around 1400 AD) of an expatriate Javanese. A highly successful maritime empire, Malacca became a centre for the diffusion of Islam in all directions. Another Cambay tomb stone covers the remains of one Malik Ibrāhīm, who died in Gresik, East Java, in 822/1419. Malaya and the various parts of Northeast Sumatra were islamized in the coastal areas; and in the early 15th/16th century some small Muslim principalities existed on the North coast of Java. What introduced the decisive element of competition was the Portuguese crusader spirit, established in India in 1498 and immediately carried Eastward in the capture of Malacca—the centre of all commercial and religious traffic in the area—by a Moslemמסלח. Malay was not yet a language, when reaching Indonesia, was engaged in a race against the second. Thus, the further spread of Islam acquired a disproportionately important element of religious-commercial-political strategy.

As regards Sumatra, the second half of the 10th/11th century saw the Islamization of the Lampung and Bengkelen areas; but it was only in 1170 that the last group of people in the inland parts of South Sumatra became Muslims. Menangkabau was Islamized soon after the fall of Malacca by people from North Sumatra, the realm of Atjeh, who engaged in the spice trade. Indeed, during the 14th/15th and 16th/17th centuries the ever continuing spice trade served as the token under which virtually every major commercial-political-religious event in the archipelagic state unfolded. As regards the interior of South Sumatra, Kalimantan (Borneo) has kept its pagan interior up to the present. Its coastal areas have been settled, and largely islamized, by people from various other
parts of the archipelago, and particularly in the North and West of Indonesia, and also by Chinese and Islamic Arabs. The various emerging realms had invariably a Muslim, sometimes Hadrami, imprint. Notable amongst these were the realms of Banjarmasin, Kutai and Pontianak. The former lasted from the middle of the 10th/16th to the middle of the 19th century, and it included the Hulu Sungai area.

Celebes (Sulawesi), in its turn, remained mostly pagan in its central area where only the Toraja embraced Christianity. Its Northern tip became Christianized. But its two Southern tips, containing important maritime areas—again in the spice trade—, were islamized, mainly from Java, early in the 17th/18th century. This spread was not without violence.

The Moluccas succumbed partly to Portuguese efforts at christianization and then saw Catholicism replaced by Protestantism under Dutch pressure. But as from the second half of the 16th century the realm of Ternate was a centre of diffusion of Islam, both Westward and Eastward.

The Lesser Sunda Islands, another clear demonstration is how the spread of Islam was related to political vicissitudes. The phenomenon of emergent realms imposing themselves by means of religious identification is visible even in these relatively remote parts. Thus, the Western tip of Bali and also the islands of Lombok and Sumbawa have been vaguely islamized at some time, while the remaining islands have hardly been touched by Islam until recently.

In Java, the political overtones of Islamization have been even more noticeable. The Muslim coastal principalities already mentioned began as vassals of the Hindu-Buddhist kingdom of the interior. Gradually, there was a shift in supremacy. Once united under the realm of Demak, Muslim power could tip the scales. As from the second half of the 10th/16th century, all of Java and also Madura have become formally islamized: by leaps and bounds in the political centres and much more slowly in remote mountain areas.

A shift, gradual but important, in the overtones of Indonesian Islam has occurred with the onset of modernity. The dominance of the commercial and religious (that is, cultural) roles as powers behind the throne—for example in Java the nine holy men (walis) credited with bringing the religion that has won out in the long run, even protected status, they are not necessarily inclined to embrace it.

As to the nature of the reception of Islam in Indonesia, the earliest more or less detailed data refer to northern Sumatra in the early 17th century. There are Islamic manuscripts and there are (Dutch) eye-witness reports. The area was clearly still a major centre of diffusion of Islam. The data suggest a relative predominance of mysticism of the philosophical-speculative kind, represented by various brotherhoods; but it soon comes under the emergent attack of a more orthodox theology.

There are Islamic manuscripts, often arguing against the spread of Islam. It thus might have been during an apparently critical period of Muslim expansion Islamic scholars, and especially mystical philosophers, have played decisive roles as powers behind the throne—for example in Java the nine holy men (walis) credited with bringing Islam, and in Sumatra at least one mystic who also served as prime minister.

The third, the Western wave of influence, has injected itself into the archipelago as competitive, both commercially and religiously (that is, culturally), against the spread of Islam. It thus might have offered the Indonesians an option as regards the creed that could most suitably be adopted for purposes of survival. But the options that might have never appeared so attractive as Islam, in consequence of the continued non-integration of the Western element. In remaining alien, it did not really lend itself to adoption with modification. Church authorities have usually scorned attempts at a more or less sectarian, and mostly local, adoption of Christian ideas. Besides, inasmuch as Christianity is to Muslims a superseded religion, and one of protected status, they are not naturally inclined to embrace it.

In consequence, the religious map of Indonesia shows Christianity in a few areas converted from paganism before the advent of Islam (for example, part of the Moluccas, Northern Celebes, part of the Batak area of Sumatra) and amongst mixed urban populations. It shows Hinduism-Buddhism entrenched in one area (central Java and eastern Bali). It shows survivals of paganism in some remote parts, mostly in the interior of islands. And it shows Islam as the religion that has won out in the long run, even though the political stress of the 1950's and 1960's has somewhat undermined its predominance. It is often said that the Muslims constitute 90% of the Indonesian population. Statistically unverifiable, this figure is generally accepted as a rough estimate. Given a total population of about 130 millions, this
makes the Indonesians one of the largest sections of the world Muslim community.

The specific characteristics of Islam thus spread and still spreading throughout Indonesia are so difficult to sum up that time and again disputes have arisen, mostly between non-Muslim observers, as to the question whether Indonesians are or are not true Muslims. Those trying to argue a negative answer have tended to assert that Islam is merely a veneer under which the solid base of Indonesian paganism, with its many highly differentiated and typically Buddhist elements, remains fully distinct. If there is truth in this, yet it does not detract from the efficacy and tenacity of the Islamic identification of the Indonesian Muslims. The rationalization and legitimation even of things possibly pre-Islamic in origin or conception yet currently effective will invariably occur in terms of Islam and be generally deemed adequate as such.

In matters of law, the Shāfi‘ī school reigns supreme, and seems never to have suffered from real competition. Even so, the Indonesian situation may well have been more markedly complex than situations elsewhere, especially because colonial administration has tended to emphasize rather than to obscure such matters as the discrepancy between formal Islamic law on the one hand and customary law on the other. Indeed Islamic law has figured for long years as the least important of three competing sources: customary law, as represented by quite numerous and very different systems in the several parts of the archipelago, Dutch code law (constitutional and penal, not civil) as more and more emphatically imposed for purposes of uniform administration, and Islamic law itself, adopted by Indonesians for quite limited purposes only, and to an extent varying with time and place. The tendency has been to have such legal systems represented by their own jurisdictional arrangements. In the case of Islam this has tended to bring to the fore the category of the scholars of Islam, the ‘ulama or kyahi. Not only was this one way in which these scholars of Islam managed to maintain part of their importance dating back to the pre-colonial days of the early Muslim expansion; it also pitted them, unintentionally perhaps yet quite effectively, against the traditional education, the pesantren, and the Hindu-Javanese Islamic dervish conventicle. But the preponderant feature of the pesantren, in turn perhaps reminiscent of the Indian ashram, is to be a centre of learning and of education for pupils from nearby and—if it is well-known—also from far away. The leader, kyahi, is primarily the scholar who retains his authority over his pupils even after having granted the iǧāza [q.f.] or licence to teach. He will be the spiritual leader and mentor at all times. In the notion of his teacher, the Indian idea of the guru has come to emphasize the Islamic respect for the šālim. There has traditionally been unorganized, yet more or less regular, intercourse between the best of these schools and the centres of learning at Mecca and Cairo: the former reflecting, with a time-lag, what went on in the latter. It has proved extremely difficult, both in colonial days and later, to forge a link between this type of schooling and so-called modern education. This has by and large worked to the detriment of traditional Muslim education. Gradually, the name madrasa has been adopted for religious schools conforming to a more “modern” pattern of education. By 1954, there were three levels of these, namely elementary (13,057 schools), intermediate (776), and secondary (16).

Another peculiar aspect of Indonesian Islam is architecture. With a few rare exceptions, of imitation of Arab style (e.g., Medan, Kebajoran), mosques in Indonesia show a style that illustrates nothing better than the continuity from pre-Islamic into Islamic periods. Mosques like the one of Kudus recall Hindu-Javanese building styles, even though they are now unequivocally recognized as Islamic buildings. A common feature is the roof in three or four layers or tiers, almost pagoda-like, that contributes significantly to the circulation of fresh air. An entirely Indonesian feature is the use of the bedug, a huge drum, to announce the times of prayer even to those who might fail to hear the adhan. On the other hand, the various grades of mosque personnel are hardly exceptional.

As regards the fulfilment of religious obligations, Indonesians are again not very special or exceptional. The salāt is variably performed, as everywhere; the payment of zakāt is haphazard. In matters of ritual purity Indonesians are relatively strict, perhaps on account of traditions older than Islam. Also the pilgrimage has always tended to be an attraction and a challenge to Indonesians. Relatively many, including women, will perform it when circumstances allow. Indeed the pilgrim may achieve a kind of special status in his community. The ḥajjī is a potential leader of opinion if he returns to a relatively recent and contemporary political organizations of Muslims.
small and remote community. The pilgrim will not enjoy great prestige unless he is at the same time well learned in Islamic doctrine. This applies the more since the pilgrimage has become safer and more within the means of relatively many: all this thanks to means of transport made available by non-Muslim Westerners. The attraction of the pilgrimage is demonstrated by the tendency for Indonesians to borrow money for the journey, in contravention of the explicit injunctions of Islam.

Mysticism remained influential for quite some time. In Northern Sumatra, its sway must have stretched at least into the first decades of the 20th century. In Southern Celebes, it seems to have lasted almost until the Japanese occupation. In these areas there are indications of the existence of local chapters of various mystic orders, including the more famous ones from the heartlands of Islam. The list of brotherhoods is impressive and includes such famous names as Shādiliyya, Radārīyya, Nakhshbandiyya, Khalwatiyya, Samariyya, Ṣafī-ʿīyya, Tijānīyya. There is however no effective record of their organization, let alone of their functioning. Nor is it clear what role they have played in the spreading of Islam or, for that matter, in society at large.

The two areas referred to differ from the third area influenced by mysticism, Java, in one major respect. In Javanese Islamic mystical writings a clear and decisive adaptation of mystical ideas is manifest. At the point where Sumatran took over from Indian mystics, not much of a break occurred; but here, one sees a complete change in the spiritual climate. On the other hand, this specifically Javanese mysticism does not seem to have spread to other islands.

 Everywhere, orthodox teachings have gradually gained the upper hand. Unfortunately, this process and its causes have hitherto eluded historical research. Accordingly, it comes as something of a surprise to see that in the middle of the twentieth century numerous organizations of a more or less esoteric (kebatinan) nature flourish, several of them adorned by names of famous mystical brotherhoods, that seem to attract quite a few urban intellectuals. At a later stage this phenomenon will be discussed in more detail below. These were inadequately studied at the time. A sectarian movements and organizations appeared. They tend to congregate in the neighbourhood of a mosque.

The turning-point was, in a sense, the period of enlightenment in colonial policy, which was at the same time the period of more or less forcible introduction of effective Netherlands-Indies administration in parts of the archipelago hitherto not really controlled. Most notable for its expressly Muslim resistance was the so-called Atjeh war of 1873-1904. This is also the period during which the Netherlands Indies authorities, guided by the famous orientalist and islamologist C. Snouck Hurgronje, adopted a new policy. Its aim was, in the last resort, to promote effective Dutch rule by removing Islamic motives for resistance; or, to express it more crudely, to rule effectively notwithstanding the potential or actual adverse implications, for such rule, of the fact that so many Indonesians identify as Muslims.

During roughly the same period, Indonesian Islam shows a variety of tendencies, as is to be expected in times of turbulence.

To begin with, Indonesia has seen the reflexion of the so-called reformist or modernist tendencies in the heartlands of Islam, even though no Indonesian thinkers have arisen who could be compared with modernistic Muslim leaders in an area like the Indian subcontinent. It has even seen its own variant of the breach between the two components of this tendency: one ending up in the rationalism of a Muslim assertion of a predominantly political nature, the other in a more typically Indonesian variant of fundamentalism such as Wahhabism, the next section will be discussed in more detail below. The latter, somewhat belated in its effective manifestation, appeared after the end of the Japanese occupation, first in the remote mountains near the South coast between Central and Western Java in the form of a small, entrenched state, the Negara Dūr al-Islām founded by Kartosuwiryo in 1948 (suppressed in 1962), and then also as a militant movement in areas like Southern Celebes and Kalimantan (1949). It was subdued, but not necessarily eliminated so far as its true inspiration goes, by the Indonesian state.

In the second place, a range of more or less sectarian movements and organizations appeared. These were inadequately studied at the time. A common trait seems to be that if they strive for the reassertion of the Islamic identity, this does not so much aim at determining the full round of life but rather at providing adequate shelter under adverse circumstances. Some of this sectarianism is imported from elsewhere in the world of Islam. Wahhābīsm (see Wahhābīyya), a forerunner here as everywhere else, had made its influence felt in Sumatra and also in Java already by the end of the 12th/18th century. The Indian sect of the Ahmadīyya (q.v.) maintained missionaries in Indonesia for a number of years before and after the Japanese occupation; but it
does not appear to have reached more than a handful of more or less marginal individuals, mostly in towns. Not unlike the Ahmadiyya in their basic inspiration, various sects have emerged on Indonesian soil in the course of time, each representing some syncretistic attempt to harmonize elements from various sources (old-Indonesian pagan, Hindu-Buddhist, Christian, Muslim) into religious-philosophical teachings, not without mystical or even magical (invulnerability!) elements, to satisfy thirsty souls. The combination of elements has, however, never been formally mentioned. Some parts of Indonesia are clearly more fertile in this respect than others; at all times the appeal of sects of this kind is mostly local. It is not unusual to find the leaders of such sects described as *kyahi*, the word that, as stated, also serves as the Indonesian translation of *ulim* scholar in the sciences of Islam.

In the third place, there is the phenomenon, already alluded to, of Islam serving as an ideological support for political action. This places Islam in a somewhat odd context, namely as one out of three main competing bases for the political self-assertion that nationalism purports to achieve. Another is Marxism, whether in the strict (Russian or Chinese) communist form or in more diluted, socialist-revisionist presentations. The third is nationalism purporting to which assumes the goals of national self-assertion as against Western domination to be a sufficient ideology in its own right: in the last resort, a kind of anti-ideology, as represented, for example, in Sukarno's ideal of the ongoing revolution. In this connection, a source of confusion exists in the circumstance that Islam as an ideology is not necessarily restricted to one of the three basic positions, but will in fact tend to permeate each of the others as well, if only to an unclear yet limited extent. The point is that whilst the three formulae are mutually exclusive, and thus fiercely competitive, they are at the same time necessarily comprehensive, in the sense that each must make a point of embracing any of the specific features of the others, lest it forfeit public appeal. After all, each is, by its own standards, the movement that embodies the entire nation in its effort to reassert itself. Indeed, before long they worked for all practical purposes one and undistinguishable.

The actual manifestation, during the four decades prior to World War II, of the three tendencies just described, has been greatly influenced by the adoption of Western organizational patterns and communication devices. This is the period of emerging Muslim organizations of many different kinds. Sometimes (as in the case of most sects) they are regionally confined; but not seldom they aim at, and achieve, a nation-wide scope.

The first properly Indonesian association, a Javanese one with mainly educational purposes, was founded in 1908. It was followed in 1911 by the first typically Muslim organization, *Sarekat Dagang Islam*, later *Sarekat Islam*. Conceived as an organization of (small) traders, it was initially economic rather than political, and anti-Chinese rather than anti-Dutch. Within five years it was perhaps still to some extent religiously determined and *kyahi*-influenced: but to all intents and purposes it had become a political party of a clearly nationalist character.

The year 1912 saw the establishment of a somewhat different organization, the Muhammadiyya. Guided by such men as K. H. Dahlan, it represented an attempt to spread amongst Indonesian Muslims the modernism then fashionable in Egypt and India. Given the Indonesian setting, this movement was perhaps somewhat more orthodox-puritanical than similar organizations elsewhere, and also somewhat more concerned with education. Significantly, these and other organizations tended to operate a number of subsidiaries, through which to reach special categories of people, such as women and youth.

A third Islamic organization emerged in 1926, under the name of *Nahdatul Ulama*; it was meant to serve as a stronghold of more traditionalist or *ulim* orthodox ideals that had been ignored by the *ulim* established scholars. But whilst competing for public support with the other two and whilst unable to avoid acquiring political significance, it was prevented from becoming fundamentalist in the same way as, much later, the *Dar ul-Islam* movement did.

Among the three organizations, as also in connexion with other political organizations, a pattern of unsteady and not always easy relationships developed; the mounting significance of nationalism tended to make for a special kind of unity, effective specifically as against the impact of Dutch colonial rule. Together, these organizations have succeeded in galvanizing the highly varied Indonesian population into an emergent nation, and one that in asserting itself in response to colonialism, however developmentally oriented that might be, acted in certain respects as a nationalist Muslim. On the other hand, the simultaneous existence of important non-Muslim parties and organizations proves that there were limits to political unity in the name of Islam.

A shift in organizational alignment occurred in 1937, with the Muhammadiyya and the Nahdatul Ulama jointly creating the *Majlis ul-Islam ul-A'la Indonesia* (MIAI), the Supreme Islamic Council of Indonesia. This competed with the third organization, then called *Partai Sarekat Islami Indonesia*, until their merger in 1939. But in 1938 a new *Partai Islam Indonesia* had been created, formed to some extent from the earlier *Jong Islamieten Bond* (Young Muslims' Association).

The *Japanese* interlude, 1942-5, had a double significance for Indonesian Islam. Envisaged in the long run, it hastened decolonization in a manner entirely unconnected with Japanese intentions. Seen in the short run, it brought a unique understanding of Islamic policy on the part of the ruling authorities; and the change was not quite the same in Java as it was in the other parts of the country.

The Islamic policy of the Japanese forces was a relatively well-prepared two-pronged attempt to solve two problems at once: to nip any Muslim opposition in the bud, and to obtain if possible public allegiance through making Muslim leaders of public opinion rally to the Japanese cause. A specially trained Japanese staff was in charge. On the one hand the existing organizations were abolished and a series of efforts made to replace them by one comprehensive organization that would abide by Japanese instructions. On the other hand, the *kyahi* category were made into special targets of opinion-control. This went to the extent of making them attend special courses. In order to support the activities concerned, a network of offices was maintained throughout the area, as a kind of perverted development from the one Office for Indigenous Affairs that the Dutch had maintained previously. Notwithstanding all this, there was an element of wavering on basic issues in the Japanese Islamic policy that only strengthened the urge of Indonesian Muslims to assert themselves regardless of outward appearance, and that did nothing to help them articulate this urge.
The end of the Japanese occupation, in August 1945, ushered in Indonesian independence, in two stages. The emergency declaration of independence of 17 August [see DUSTUR, p. 665] resulted in an Indonesian Republic, really effective in part of Java only, vying with Dutch attempts to set Indonesia on its feet again according to a new formula. Sovereignty was officially transferred in 1949, to the Indonesian state. During the intermediary stage, the two claimants for authority were equally preoccupied with soliciting the allegiance of Muslims; and in this process Muslims were largely left to their own devices in their attempts to overcome the disruptive effects of Japanese-imposed organization and ideas.

Since independence, Indonesian Islam has played mainly two roles in public life. On the one hand, it is one of the main tributaries to the national identity and indeed to national ideology. The Panitia Sila, the five-point national doctrine, has been carefully phrased so as to allow Muslims to recognize it as theirs, without alienating non-Muslims. One of the five points is the recognition of the overlordship of the Almighty. Yet as an ideological creed it stands for a nationalist ideology, which is in the last resort competitive with Islamic ideology and which as such is a rallying point for Christian and other groups. All this is reflected at the more institutional plane. Insofar as independent Indonesia has come to have its own Islamic policy, it stands on a necessity different from both the Dutch and the Japanese policies, it manifested itself as part of the activities of the newly installed Ministry of Religion. Intended to cater for the needs of any religious community, this ministry has inevitably acquired a strong Muslim imprint, and this with a kyahi shading.

On the other hand, Islam has become one of the three major political forces in the country, in the sense that it has proved possible to use people's identification as Muslims as a means to rally them around certain political causes, not necessarily of a clearly or exclusively Islamic nature. This is sometimes explained as an after-effect of denomination- alism in the Dutch political party system; but the true explanation may well lie in the traditional role of Islam in the social fabric of the country, its identification. A significant occurrence in this connexion is the Piagam Djakarta of June 1945, a kind of preliminary document to the constitution, in which mention is made of Islamic law as having to be applied to all Indonesian Muslims. As a political force Islam finds itself competing with two other forces already mentioned, namely Communism and ideological nationalism. Under these conditions there does not appear to exist an immediate urge for Muslim leaders to elaborate and expound relatively novel ideas of an explicitly and consistently Islamic nature. In effect, the pre-war pattern of more or less exclusively political organizations of Muslims has returned, with names somewhat modified—this also being the inevitable result.

vi.—Literatures

In the vast area of the Indonesian archipelago, where more than two hundred languages are spoken, we find as is only natural various literatures. Insofar as these languages are spoken by Muslims (some parts of the archipelago were not Islamized) the literatures of these languages underwent, some to a greater, others to a lesser extent, the influences of Islam. This influence is two-fold: on the one hand Islam caused much of the older literature, in particular religious works, to disappear; on the other hand it enriched these literatures by substituting new genres and new works for those that fell into oblivion, and by adding to the literature that already existed.

In this article we confine ourselves to those aspects of Indonesian literature that bear on Islam. The influence of Islam on the literatures of Indonesia is predominantly an influence of Islam as a religion. Its main features are translations, reworkings and adaptations from Arabic and Persian works written with a view to educating and for purposes of edification: textbooks of Arabic, grammars, translations
of the Kur'an, commentaries, sacred history, philosophical treatises and religious tracts, works dealing with theology, law and mysticism, in short with any aspect of Islamic spiritual life. The adab-literature, an important element in the civilization of Islam, poetry and belles-lettres in general, is rather poorly represented compared to the mass of purely religious works; works dealing with Islamic sciences, technical works and works on geography and Islamic history are virtually non-existent or found in a very few instances only.

Notwithstanding the great and visible impact of Islam on Southeast Asia, the influence of Islam was a limited one and remained confined mainly to the sphere of religion. This can easily be explained from the fact that the Indonesian archipelago was situated on, or even outside, the periphery of the civilization of Islam. Moreover, seen in a historical perspective, Islam came late to Southeast Asia and the process of Islamization stretched over several centuries; it is, in fact, still continuing at the present day.

For a long time, from the 7th/8th century until well into the 11th/12th century, contacts between Indonesia and Arabia were difficult and few. The majority of those who undertook the long and dangerous voyage to the great centres of Islamic spiritual and political life did so in order to perform the Hajj, Pilgrimage, often combining it with a visit to other holy places. Quite a few, however, stayed on in Arabia for a longer period, sometimes for several years, in order to deepen their knowledge of religion. The works which they studied, copied and later brought with them to their country of origin, were almost exclusively textbooks of religion.

Another factor of great importance was the trade within Asia. This trade made it necessary for many foreign merchants—Arabs, Persians and in particular traders from the mercantile ports of the Indian subcontinent—to settle in the archipelago, and it may be assumed that besides bringing their commodities, they also brought cultural goods, among them literary works such as stories and romances which were adapted or translated into Malay and so found their way all over the archipelago. The harbour cities were centres of radiation of this international culture. They had had from of old an international character with a very mixed population. The majority of those participating in the inter-Asianic trade were bilingual or even spoke more than two languages, and this considerably facilitated the adaptation, translation and diffusion of products of Islamic literature in the archipelago.

The medium which was made use of by Islam for the spread of the faith was the Malay language. Although data about the history of Malay are rather scant, it may be assumed that already before the coming of Islam to the archipelago this language was the common vehicle for interinsular intercourse. The new task assigned to it has left many traces in the Malay language. Not only did the vocabulary, and it may be assumed that besides bringing their commodities, they also brought cultural goods, among them literary works such as stories and romances which were adapted or translated into Malay and so found their way all over the archipelago. The harbour cities were centres of radiation of this international culture. They had had from of old an international character with a very mixed population. The majority of those participating in the inter-Asianic trade were bilingual or even spoke more than two languages, and this considerably facilitated the adaptation, translation and diffusion of products of Islamic literature in the archipelago.

The medium which was made use of by Islam for the spread of the faith was the Malay language. manuscripts of the Hikajat Nabi mi’raj, about Mu-
hammad’s ascension to heaven, a tale found in vari-
ous versions. Of a different kind again are tales like the Hikajat Nabi mengadjar Ali (Teachings of the Prophet to his daughter Fatima), which is of a mystical character on the four stages of the mystical path, shari’a, tarbi’a, ma’rifa, and ma’rifat. Of a different kind again are tales like the Hikajat bulan berbelah, which contains the well-known story of Muhammad splitting the moon. Edifying and exhorting the reader to a life of piety are among other texts the Hikajat Iblis dan Nabi Muhammad, containing a discourse between the Prophet and Iblis; Hikajat tatkala Rasul Allah memberi sedekah kepada seorang dermawan (the tale of how the Prophet of God gave alms to a dervish), and Hikajat Nabi dan orang miskin (the Prophet and the poor man), the last two containing an appeal for generosity towards the poor.

In an enumeration of tales about the Prophet mention must be made of the Hikajat waqaf Nabi (The Prophet’s death), reworked from Persian, and the Hikajat Mulud (maulud, maulid), commemorating the Prophet’s birth. Widely known both in the past and in modern times is the Mulud berdjandji (a popular etymology of Bareslangi, the name of the original author, an Indian), a liturgical text recited on the occasion of the birthday of Muhammad. In addition, mention must be made in this connexion of the well-known and very popular Burda [q.v.] of al-Bûsîrî, sometimes with interlinear Malay transla-
tion.

(3) The third group of tales consists of those devoted to persons who lived at the time of Mu-
hammad, both šâhiba and others, opponents of the Proph-
et. In the first place we must mention the Hikajat Radja Khandak (Hindik, Unduk, from Arabic khandaq, moat), containing a very romanticized story of the War of the Ditch, the contents of which considerably deviate from the facts of history. The Arabic word for moat (khandaq) has become a personal name in this tale. The same is the case with the place-name Bareslangi, the name of the original author, an Indian), a liturgical text recited on the occasion of the birthday of Muhammad. In addition, mention must be made in this connexion of the well-known and very popular Burda [q.v.] of al-Bûsîrî, sometimes with interlinear Malay transla-
tion.

The last group of tales to be considered in the frame-work of tales about persons around the Prophet are those of which ʿAli, Fâtima, their children Hasan and Husayn and their stepbrother Muhammad b. al-Hanafîyya are the main characters. About the last mentioned there exists a famous romance, or perhaps better “epic tale”, the Hikajat Muhammad Hanafijjah, also known under the title of Hikajat Ali Hanafijjah. The majority of manuscripts of this text commence with the tale of the Nûr al-nubuwâwâ, and then pass on to a description of what happened to the main character, who here in this tale contrary to historical fact is victorious over Yazid, but at the end withdraws into seclusion and lives on as a kind of hidden imâm who will reappear to his follow-
ers in due time. This hikajat goes without a doubt back to a Persian original. Reminiscent of the martyrdom of Husayn is the Hikajat Tabûh (The Coffin), so named after the coffin which used to be carried round in procession at Padang and Bencoolen in former days. In this tale Shî’i influence is obvious, but is probably due to Indian troops stationed there during the British interregnum.

(4) An important and interesting group of tales are those dealing with the heroes of Islam. Without going into details we mention here a few titles only: the Hikajat Iskandar Dhu ‘l-Karnas, the tale of Alexander the Great, also found in Arabic and a number of other languages outside Indonesia. The Malay tale is probably a translation of a harmonized Arabic-Persian version; the Hikajat Amîr Hamasî, in Malay reworked after a Persian original, too, but with Malay extensions; the Hikajat Saiﬁ Dhu ‘l-Jazan, on the half-legendary, half-historical pre-Islamic ruler of South Arabia, translated from Arabic; and finally, the various versions of the Hikajat Sultan Ibrahim ibn Adham, the renowned saint so highly regarded in Islamic tradition.

(5) A very copious group consists of the theolog-
ical works in the stricter sense of the word. This literature can perhaps best be characterized with the name “kitab-literature”, religious and juridical works and treatises bearing on the three-fold Islamic “knowledge”, namely ‘ilm al-kalâm, ‘ilm al-fîkh and ‘ilm al-ta’lîwî, together with the disciplines per-
taining to it. As a transition between the groups already mentioned above and this kitab-literature may perhaps be considered the Hikajat (or kitab) Seribu Masa’ilah (The Book of the Thousand Questions), well-known in world-literature and (together with the Kur’ân) among the first works in Arabic which already at an early stage were translated into various European languages. In the Indonesian archipelago, too, this work found many readers. Besides the reedition in prose, at least one versified version is known to exist. It contains the tale of the Jewish scholar ʿAbd Allâh ibn Salâm of Khaybar who put a number of questions to Muhammad (cosmological and eschatological questions, questions about heaven and hell, and questions pertaining to secular, i.e., non-
revealed, knowledge) and who embraced Islam when the Prophet was able to answer his questions in a satisfactory way. This kitab-literature is very extensive. In fact, it is a technical literature, written for and studied by a certain group, the religiously minded and in particular the theologians and the teachers of re-
ligion. The language is Malay, but a Malay which is characterized by a multitude of technical terms and shows the influence of Arabic both in syntax and in vocabulary. It is this genre of literature that has exercised a considerable influence on the Malay
language. The greater part of this literature was reworked and translated from Arabic, in several cases in Mecca and Medina, by people from Indonesia for the benefit of those of their compatriots at home who had no knowledge of Arabic. The author's and translators' names of a number of works of this kind are known, and it is here that Malay literature somewhat loses its characteristic anonymity. In accordance with Arabic custom these authors used to add to their names a word indicating their place of origin, so that the names are followed by such words as al-Palimbâni, al-Bandjâri, al-Samâtrâ'î, al-Fânsârî, al-Bâni, al-Mahasâri, al-Kalanâtâni, al-Fâlânî, and so on. The subject-matter treated in this kitâb-literature shows a great variety, comprising in effect all aspects of Islam as a religion: the Kurâân, tafsîr, taqâyâd, hadîth, ar-khân al-Islâm, fiqh and wasil al-fîkh in the widest sense of the word. Some of them are voluminous compilations, others are small and deal with one special subject only, such as prayer, marriage or certain aspects of the law of inheritance. Numerous, too, are works dealing with mystical knowledge (simu sufî, simu tasawwuf), sufi orders, treatises on djihâr, collections of litanies (rawâûth) and primbons, books of notes on various subjects. Then there are collections of prayers (duâ'ûth). A special group is formed by collections of djîmâms (from Arabic 'âjâm), small booklets containing prayers and charms, often written in a very corrupt Arabic, which serve as measures of protection from the machinations of enemies and as a cure for illnesses.

During the 12th/13th century, in the flourishing period of the Sultanate of Atjêh in the North of Sumatra, we meet with four outstanding religious leaders whose influence was felt all over the Indonesian archipelago for a long time afterwards, namely Ha'mza Fansûrî, Shams al-Din al-Masâ'dî, Nûr al-Dîn al-Ranîrî and 'Abd al-Ra'ûf al-Sûngkîlî. The Achinese court played a prominent role in the development of the Malay religious literature of the 12th/13th century. At that time there flourished in Aceh a heterodox mysticism based on the doctrine of the seven grades of being (Ibn al-'Arabi, 'Abd al-Kâdîr al-Djîlânî, known under the name of Wudjûdîyya. Ha'mza Fansûrî [cf.], famous on account of his skill in composition, introduced into Malay poetry by means of the rhyming scheme a-a-a-b/b-b-b-b) of great lyrical power and outstanding literary value in Malay literature, such as the Sajîr dajîfî (the Poem of the Wanderer), Sajîr bunung pînggi (the Poem of the King) and Sajîr fêrâhu (the Poem of the Ship). In addition, he has a number of prose works to his name, e.g., the Sharab al-Sâkhînî, consisting of seven chapters, the first four dealing with the four stages of the mystical path (sharâ'î, tarîba, khâtîba and ma'rûfîa), the second two following the Chapters on the Being (wudjûd) and Attributes (isfâd) of God, and the last chapter on berahi dan sjukur, i.e., mystical enthusiasm; another prose work ascribed to him is entitled Arsrâr al-'ârifân fi bayd 'ûm al-suluk wa l-wajûd, which also is a mystical work. Commentaries on a number of his works were written by Shaykh Shams al-Din al-Samâtrâ'î, known also under the name of Shams al-Din of Pasâî, Shams al-Din, who died in 1039/1629, also wrote several works, but there is some doubt whether all the works ascribed to him are really his. Some of his works are in Arabic, e.g., Djuhâr al-khattabî, some in Arabic and Malay, e.g., Nûr al-dâkhîlî, others in Malay, e.g., Mi'ra' al-mu'mînîn, an Arabic treatise quoted in a Malay translation.

Nûr al-Dîn al-Ranîrî (d. 1068/1658 in India) was (as is indicated by his nisba) born in Rânrî (modern Ranar) in India and therefore was not a Malay. He was a prolific writer, who during his comparatively brief stay at Atjêh (1047/1637-1054/1644) wrote a great number of works, some of them voluminous, both in Arabic and in Malay. Some of his works were written outside the Indonesian archipelago. He was an orthodox shaykh, who took great pains in his works to attack the mystical school of 'Abd al-Rahmân and Shâms al-Dîn and their followers. Among his exegetical works directed against the wudjûdîyya is the Tûbyân fi ma'rûfîat ad-djân, consisting of two bûhs, one dealing with the various religions from Nabi 'Isâ until Muhammân, the other about the variant tenets adhered to by the religious schools; and in particular his Hudjûdî al-djâdî dik lâ dajîfî l-sînîdî, further Hâli al-sîlî and Shufî al-kulbî. Widely known and still read today is his Shirâr al-mustashîm (sic; the first article is dropped according to Indonesian usage), a translation from Arabic, and his voluminous Abûbâr al-alhîmra fi ahwâl al-hiyyâm, a treatise on eschatology and after-life, compiled from various Arabic sources. The last book begun by al-Ranîrî but left unfinished owing to his departure from Atjêh was Djuhâr al-lûlâm fi khân al-mâ'tâmîn. It was completed by one of his students. It is an important work, in which al-Ranîrî gives a detailed and systematic account of his theological views. For his large encyclopaedic work, Bustûn al-saalânîn, see below.

'Abd al-Ra'ûf al-Sûngkîlî, after his death known in Atjêh under the name of Teungku Ki Kuala (he presumably died about the beginning of the 13th/14th century) studied in Arabia for 19 years, amongst others with Ahmad al-Kushashi and Mawla Ibrâhim. After obtaining the idjâma from the latter, he returned to Atjêh, where he introduced the Shâttariyya tarîba, which was very popular in Indonesia for a long time. (The Shâttariyya tarîba, also reached the Indonesian archipelago through other channels independently of 'Abd al-Ra'ûf.) His best-known work, Umdat al-muhtâdîn il-sâlûk mas-lah al-mufradin, is a textbook of practical mysticism giving detailed information about the methods of djihâr and containing litanies (rawâûth), formulas to be recited; it was illustrated with figures, daers, to explain certain mystical truths. 'Abd al-Ra'ûf, too, was a prolific writer. Mention should be made here of his translation of parts of the Kurâân commentary of al-Baydâwî, which, in editions printed in Egypt, is still used in Sumatra and Malayâ today. For further titles we refer to Voorhoeve's article listed in the Bibliography.

Besides works on mysticism as mentioned above, there exists a great mass of orthodox literature which can only be mentioned here. Widely read was, e.g., Biddâyû al-hiyyâm, a work of al-Ghaßâlî translated into Malay with additions of his own by 'Abd al-Samad al-Palimbânî, who also edited the fourth book of al-Ghaßâlî's Tûbyân in Malay under the title of Sâyûr al-sâkhînî il-sâbîd Rabb al-sâlim, both works were written by 'Abd al-Samad while he was in Arabia. Of the numerous catechisms, mention may be made of the popular Masalî al-muhtâdi il-tuhûd al-mufradî, of which there are a great many manuscripts and which, moreover, was printed several times.

Closely related to religious literature are the so-called risâlats and wawâds (from Arabic wahâd), which appear at times in the wake of disturbances or catastrophic events like floods and
earthquakes. The purpose of these writings was to admonish people to atone for their sins and to return to a pious life. The form as a rule is traditional, the author relating how the prophet appeared to him in a dream and ordered him to convey such and such a message to his, i.e., Muhammad's community.

Finally, mention must be made of two genres which are a good illustration of certain aspects of Indonesian popular Islam and popular beliefs, namely the hadith and the hikajat. The latter, with the "Maulid" and founders of tarikahs. The hikajat (or biographical works) do indeed contain medical prescriptions, but on the other hand they have a markedly magic character because recitation of prayers (du'a) or incantations and formulas, among them verses of the Qur'an, for a certain number of times are considered an important expedient for curing illnesses. Another means of healing is, e.g., by making various calculations based upon the numerical value of the Arabic letters of the name of the patient. The tales about prominent religious teachers and saintly persons of bygone times and of founders of tarikahs are not strictly biographies but rather stories in which all kinds of miraculous deeds performed by the main characters are related. The miracles stand as proofs of the sanctity of their performers. These tales, legends of the saints, are composed for edifying purposes. Examples are Hikajat Sjaint Awal al-Djadir al-Djilal (Ar. Shaykh Abd al-Kadir al-Djilali) and Hikajat Sjaint Muhammad Samman.

As for belles-lettres, in the first place mention must be made of two important texts, both written for Achehnese Sultans in the first half of the 11th/12th century. The first is Tadj al-qaliluj, about whose author, named Buquljar Djobhori (or Djawhiari), nothing is known. This text, a Mirror for Princes, was written in 1012/1603, without a doubt after Persian originals. The second is the Bustan al-qaliluj of al-Ranirl, dated 1047/1638, an encyclopaedic work and a compendium of Islamic knowledge with a special chapter on the history of the Achehnese Sultanate and the genealogy of its Sultans. Besides these, there are a great number of romances, both in prose and in poetry. These works, mostly dating from the 9th/16th and 12th/19th centuries, are very loosely connected with Islam, only the motifs and the subject matter being derived from international Islamic literature, their surroundings being set in the central lands of Islam. A few titles may suffice: (poetry) Sjaar Tadj al-muluk, Sjaar Siti Zubaiddah, Sjaar hijajat Radja Damsjik, and (prose) Hikajat Komala Bahrain, Hijajat Shahi Mardan (= Hijajat Bitbrana Ditja Djaja), Hijajat Ahmad Muhammad, Hijajat Djauhar Manikam, Hijajat Abd al-Rahman and Abd al-Rahim, Hijajat Radja Damsjik, Hijajat Tawaddud, and many others.

Of the literatures of Achehnese, Macassarese and Buginese (Macassarese and Buginese have, like Javanese, been able to maintain their original scripts), the same can be said as has been said of Malay literature, although the Islamic literature in these languages is more restricted so far as numbers of titles is concerned; but on the other hand, in addition to the works in these languages, there was a wide circulation of works in Malay. For details the reader is referred to the catalogues listed in the Bibliography.

As regards Javanese literature, here too we find essentially the same pattern as in Malay literature: textbooks of Arabic, translations and commentaries of the Qur'an, works dealing with the sacred history of Islam, tales of Muhammad and the prophets before him, of the heroes of Islam, and so on. The majority of these works consist of translations from Malay, and are, like their Malay originals, anonymous. One characteristic of the Javanese translations and reworkings is that they have been expanded and as a rule, in accordance with Javanese literary taste, have been versified. The story of Hamza has here grown into a voluminous and very popular cycle, the "Maulid" and other tales are likely to have developed round the tale of Yusuf, which has become extremely popular in Java and Madura. In almost all cases it is written in Javanese script on palm-leaves (lontar). A well-known orthodox theologian in Java and author of several works which were widely studied was Ahmad Rijang (= Rifai) of Kali Salak, Pekalongan.

According to Javanese historical tradition, Islam was introduced in Java in the 8th/9th century by the seels, saintly persons of great spiritual power, usually nine in number. They may be considered as culture heroes; it is believed that they also invented the wayang, the Javanese shadow-play, and the gamelan, the well-known Javanese musical instrument. These seels preached a heterodox mystical doctrine of the relation between the Creator and the creature and of the unity of being. This doctrine is expressed in anonymous mystical songs, called suluhis. A very few are in Javanese, but they were written by seels, the majority are of a later date. Some of them are brief songs explaining mystical concepts, sometimes in the form of questions of a student to his teacher, of a son to his father or of a wife to her husband, together with the answers. The language is often cryptic. Some of them are very literary—which is exceptional in Javanese literature. Their wide circulation all over Java is apparently due to wandering students travelling from one kiai (spiritual leader) to another. The voluminous romanticized cycles of tales like Tjabolang, Tjentjini and Djatiswara are likely to have developed around suluhis of the same name. They are conceived as travel stories in which the main characters travel about in search of each other; in places of rest, often the homes of famous spiritual teachers (kiahis), discussions are held on sacred history. A very few of these suluhis are too trivial to the loftiest, among which figure very profound religious and philosophical speculations.

The Arabic script failed to supersede the Javanese script, although specifically religious works were written in Javanese in an (adapted) Arabic script, the so-called pegon. Besides the indigenous literatures, there existed a vast literature in Arabic imported from abroad. This Arabic literature is represented in a great number of manuscripts. The Museum Pusat (formerly the Museum of the Batavia Society of Arts and Sciences) in Jakarta is one of the libraries which possess a large collection of these texts. Other manuscripts of this kind are preserved in the Leiden University Library, mainly derived from the collection of Professor Snouck Hurgronje. The following categories can be distinguished: theology, law, sacred history of Islam and biographies, philology, and (although very few in number only) poetry and tales. For details the reader is referred to the catalogues.

Modern developments in Islam have left practically no visible traces in Indonesian and Malay literature. It is a secular literature although there are, of course, such authors as Hamka (Hadj Abdul Malik Karim Amruhlah), who bear a markedly Islamic stamp.

INGUSH, a Muslim people belonging to the central group (wujukh) of the Ibero-caucasian linguistic family of the northern Caucasus. Chechen, Batshi and Kist are languages belonging to the same group. The name Ingush comes from the Aul Angush, founded in the foothills of the Caucasus in the 17th century. The term was first used by the Kabards [q.v.], then by the Russians. The indigenous name is Galgy, which is the name of one of the most important Ingush tribes, or Lamur (= "Mountainers").

The Ingush live in the western districts of the present-day Checno-Ingush Autonomous Republic, mainly in the upper and intermediate valleys of the Terek and the Sunja and their tributaries, between the Checens [q.v.] to the east and the Kabards to the west. Very little is known of the history of the Ingush tribes before the 18th century. They had been subdued in the 11th century by the rulers of Georgia, from whom they received Christianity. At the beginning of the 15th century the Ingush were paying tribute to the Kabards. Sunni Islam only penetrated the country in the second half of the 18th century as a result of the activities of the Chechen Naksabandis and did not triumph until the beginning of the 19th. Christian Ingush were still to be found in 1865 (3,405 as compared with 11,960 Muslims according to Semenov, Geograficheskiy i Statistichesskiy Sjovar Rossishchoy Imperii, St. Petersburg 1865, ii). It was also at the beginning of the 19th century that the Ingush began their slow migration from the high lands to the more fertile plains of the Terek and the Sunja. This movement continued during the first half of the 19th century.
Unlike their Čečen neighbours, the Ingush offered little resistance to the advance of the Russians whose first detachments entered their country about 1790. On the contrary, they even helped them against the Kabards and took no part in the revolt of the Čečen shaykh, Manṣūr Ughurma [q.v.], nor in the great movement of the Imām Šamil [q.v.].

After 1850, the Russian presence in the lands of the Ingush was not characterized by indigenous revolts, as it was in Dāğhīstān and the lands of the Čečens; and it was only in the second half of the 19th century that relations between the Ingush and the Russians became noticeably worse. The conflict began about 1860 when the Ingush settlements around Nazran on the Sunja were pushed back by the Cossacks towards the infertile lands of the high mountain. At the end of the 19th century and the beginning of the 20th the political climate deteriorated rapidly when the lands of the Ingush were again disturbed by severe troubles between the Ingush and the Terek Cossacks.

Until the Revolution, the Ingush, like their neighbours, the Čečens, maintained a pre-feudal social structure. All the Ingush clans considered themselves as free and equal and were grouped in “free societies” (the most important were the Galgaj, Djerak Kistin and Galash). The large, undivided family was preserved, and patriarchal customs (levirate, polygamy etc.) were faithfully observed. Ingush society was not divided into classes; there was no aristocracy, although an élite, made up especially of officers and public officials, had begun to form at the beginning of the 20th century.

During the October Revolution the Ingush played a part in the confused struggles which involved the northern Caucasus in great bloodshed between 1918 and 1921. Because of their enmity towards the Terek Cossacks who had driven them out of the rich lands of the Caucasian foot-hills, the Ingush supported the Bolshevik forces.

On 7 July 1924 the Autonomous Region of the Ingush was founded with an area of 3,200 sq. km. and a total population of 81,900. (At this time the Ingush numbered 75,200). On 15th January 1934 the Region was united with that of the Čečens to form the Čečeno-Ingush Soviet Socialist Republic on 5 December 1936.

In 1943 the advance guard of the German armies reached the western districts of the Ingush lands. In 1944 when the region was recaptured by the Soviet Army, the entire Ingush population was accused of “treason against the Soviet fatherland” and “collaboration with the Germans” and was deported to Central Asia (at the same time as the Čečens, the Balkars, the Karaçay, the Kalmucks and the Crimean Tatars), their national republic being suppressed. In 1957 this measure was recognized as an error arising from the “cult of personality” and the Ingush were officially rehabilitated and allowed to return to their re-established republic. In 1959 they numbered 106,000 (as against 92,000 in 1939), but their birth rate is one of the highest in the Soviet Union.

In 1959 the Čečeno-Ingush Autonomous Republic had a total population of 710,000, of whom 292,000, i.e., 41%, were Muslims. Of this number only some 48,000 were Ingush.

The Ingush language was given a Latin alphabet in 1923; in the same year there appeared the first periodical in Ingush, Serdalo (“The Lamp”). In 1938 the Latin script was replaced by the Cyrillic script.

Bibliography: All the works dealing with the Ingush are in Russian. Among the chief ones are: B. Dolgot, Material po obolonamu pravu Ingushey, Vladikavkaz 1930; N. F. Grabovskiy, Ingushskii ’Ikhkit’ i obloqay, in Sbornik Svedenii o Kavkaskih Gor’ladh, ix, Tiflis 1876; Narodi Kavkaza, i, (Narodi Mira series), Moscow, Ac. of Sciences, Inst. of Ethnography, 1960, 375-91; I. I. Pantukov, Ingush, Tiflis, Kavkaskoe Otdelenie Russkogo Geograficheskogo Obshchestva, xii/3, 1900; G. V. Tertov, Ingushi Istoriyo-Sotsiologicheskoy ocherk, in Tershy i Inkhar, 1930, 1, Vladikavkaz. INKHĀR [see REGÈ].

INK [see MIDĀD].

INKĀR, “denial”, the opposit of ʾathrār [q.v.]; it is said that there is inkhār when a person who is summoned by law to acknowledge a debt denies that he owes it; this inkhār should not be confused with the refusal (nadd or tāhāb) of the beneficiary of an ʾathrā to agree to the said acknowledgement [see INKRĀ].

Faced with a debtor who refuses to recognize his debt or his obligation, the petitioner has the right to use any of the methods of proof which the law allows him and, in particular, can make him swear an oath, yamin al-munkir, which many Muslims in former times preferred to avoid pronouncing, even though they did not admit to being debtors. There could then take place a transaction which put an end to the legal conflict, usually irrevocably, and this was called sulh ʾalā inkhār.

(Y. Linant de Bellefonds)

INKILĀR [see THAWRA].

INNĀYIR [see INGUSH].

INNOVATION [see BIDĀ].

INŌNŪ [see SULṬĀN DĪWĀN].

INŚAF, equity. According to the L.A., this maṣdar of the fourth form has as synonym nasaf, nasafah, and implies the idea of “to grant rights” (ʾīṣā al-khabb); it is stated there that anṣāfa is to “assure to others the same right that one claims for oneself” that, thus presented, therefore corresponds strictly to equity, but it is not clear at what date this notion began to be rendered by inśaf. Although nasaf is attested in early poetry, inśaf does not seem to appear in the so-called pre-Islamic diwāns; nevertheless there is to be found, in the anthologists of the 3rd/9th century, the expression asfār munsifa (or asfār al-nasaf, al-inśaf), to indicate, if not a poetic genre, at least a theme which first appears among a certain number of poets of the end of the Djāhilīyya and of the very early years of Islam; in the verses thus described (which are most frequently in the ṣafir metre and contain often-repeated clichés), the poets praise the fervour and the valour in war of the rival clan and acknowledge that victory has been hard-won; these poems are thus a means of glorifying oneself without humiliating one’s adversaries. It is this contrast with the themes of the traditional ḥijād [q.v.] which attracted the attention of the anthropologists (Ibn Sallām, Albū Tammām, al-Blūṭuri and others) and led them to adopt the epithet of munsifa (see Ch. Pellat, Sur l’expression arabë asfār m.n.s.fāfāt, MéI, Marcel Cohen, 1970, 212-9).

The term inśaf does not appear in the Kur’ān, where the root ṣf is used in referring to equity, but it enlivened by its frequent and lavish use of roots which are conceptually either
close to it or opposed to it, such as *dw, ?ulm,* *adl, slfa, fan. The principle of *adl, slfa, fan, in particular by the Hananis, may be considered as a continuation of the Kur'ānic idea and terminology: it expresses, in fact, a more flexible and more circumstantial conception and practice of the over-rigid justice produced by the formal strictness of *biyās. In introducing concrete considerations, of time, of practice and of persons, *isti McN allows the adoption of solutions which tend towards equity. *isti McN*" (Ch. Checheta, *Études de philosophie musulmane du droit*, in *St. Isl.,* xxv, 138), "may be considered as the form which the idea of equity has taken in the mind of the Muslim jurists. *Benignitas* (*isti McN*) is a very human aspect of the principle *jus est aequi et boni. It belongs on the borderline between law and morals*. It is difficult to state precisely what this aspect of juridical thought owes to indirect influence (e.g., to *hilm* as indulgence, i.e., a higher form of justice, to Byzantine practice, to Medinan and *Trakî* *urf* etc.) and to direct influence. What is certain is that the *Nichomachean ethics* contain a penetrating discussion of equity (*épreuves*) at the end of book V on justice (*diké*). Aristotle’s thought stems from a very early tradition which opposed the unwritten law to the written law, which is too general to solve with equity all the individual cases. It is thus one finds here a very clear defence of equity as being the source of a higher law.

The *falāsifa* naturally took up this idea in order to praise its moral beauty. “The virtue of justice (‘adāla’), writes, for example, Miskawayh (*Tahdhib al-Akhlaq*, ed. Zurayk, 26), “confers on man a disposition (hay’a) which causes him to choose always to treat first himself with equity, then to treat others with the same equity (insdnintisdn) which he expects from them”.

The rationalization of this idea is pursued in the writings of the scholars, and *insdn* finally came to mean impartiality, objectivity, integrity, in short a complete ethical code for the activity of the man of learning (*’ilm* ‘i-s’im), which al-Mawardi, for example, describes at length under the name of “independence” (sīyās) (in *Adayat al-dīn wa-dīn yilıs tālī*, ed. Saqqa, 30 f. and passim). The importance of this ethical code explains the attraction for stories of figures like *Ktāb al-Insdn* or *Ktāb al-Insdn wa-l-insdn* (16 of them are to be found in Brockelmann).

Finally it may be mentioned that *insdn* is a method of argument in which, instead of immediately asserting the inferiority or error of that which is being attacked in comparison with that being defended, both are placed on a fictitious equal footing although it is granted that one or the other is inferior or wrong. In this way impartiality is displayed while one of the alternative propositions is implicitly considered as impossible or absurd. The model for this figure is provided by Kur’ān XXXIV, 23/4: "Either you or I are on the right path or in manifest error" (M. Canard, *Abhār Ar-Rādī fil-biḥār..., Algiers 1946, i, 67, n. 3; see also the commentaries on this verse where two lines of Hassan b. Thābit (wāfīr metre, ... al-rasul rhyme) are cited on this subject, lines 24-5 of the first piece of the *Dīwān* with the explanations of the editors).

*Bibliography:* In addition to the works mentioned in the article: R. A. Gauthier and J. V. Joll, *Aristote, Éthique à Nicomaque*, ii, 1, 431 ff. (M. Akrour) *INSĀN* (*A*), man (homo). The Kur’ān states that God created man weak (IV, 28). Several verses describe his holoclean trouble: he is trying to do evil, and when the trouble has passed, he forgets (X, 12; XXXIX, 8 and 49); he is very unjust (*falsām*, XIV, 34; XXXIII, 72); much inclined to be precipitate (*ṣaghil*, XVII, 11); versatile (*hāṣla*, LXX, 19); rebellious (XLVI, 6); a subtle reasoner and given to argument (XVIII, 54, XXXVI, 77).

The LR echoes this Kur’ānic teaching: all beings which are made with intelligence, a being whom any are given to argument, but man is more so than the others; on the other hand, it quotes a fantastic etymology, from Ibn ‘Abbās: “man is called *insdn* because he receives the alliance of God and then forgets (*ja nassaya*)”; the ajd of this word is said to be *insdn*, the *yfīlān* form of *nissān*.

On the physical reality of man, there are many verses in the Kur’ān. God created him “of a clay of mould moulded” (XXV, 6). In particular in XXIII, 12 ff. there is a detailed account of the development of the foetus: the primary source of the human body is clay; then there is successively the *nūjf* which fixes itself in the uterus, the *uṣla*, the *mudgha*; then the differentiation of the tissues: bone and flesh; and finally there occurs a “second creation”, which corresponds, according to the commentators, to the various phases of development from birth to death.

*Naṣir al-Dīn al-Rāzī* gives an Aristotelian interpretation to these passages: “Man is engendered from a flow of sperm; the sperm is engendered by an excess of the fourth type of coction (*min fādil al-hadīm al-rābi*), cf. the *μέρις*, that is the digestion, *Meteorologica*, book iv, 379152; *De Gen. Animal*. 724a 9 f.). But all this is engendered only by foods, which are animal or vegetable substances. But the animal substances are engendered from juices which themselves are engendered from the clarified juices of the earth and of water. Thus man is in reality engendered from a pure extract of clay (*min salālā miš fin*, cf. XXXII, 12). Next this pure extract, after passing successively through various stages (*aṭūr*, cf. LXXI, 14) of formation and through the circuits of elaboration, becomes semen*. "The explanation of “We have made him to grow in a second creation" (*insdn* in *Tahdhib al-Akhlaq*). The original *mulik* of this word is said to be *nāsī’a*, perhaps equivalent to *nassā’a*, because he receives the alliance of God and then forgets (*ja nassaya*). The ajd of this word is said to be *insdn*, the *yfīlān* form of *nissān*. The Kur’ān describes man by contradictions: grandeur and wretchedness (cf. *XCV*, 4-5): “We indeed created Man in the fairest stature/then we restored him the lowest of the low”. Al-Rāzī states that the word *lakwīn* may refer to the exterior form, to its balanced assembly of parts (some point out that man is the only animal which does not have its face turned towards the ground, *mikabb *ald wadj[h]], but which has an upright stance, *ardhal al-*umr*”.

The Kur’ān says: “We gave Adam the knowledge of the tree of life, the knowledge of good and evil; and we made a living being for Adam and which takes its food with its hand; cf. St. Gre-
gence begin to fail; strength diminishes and man becomes incapable of performing good works” (al-Rāzī). This is one aspect of man appears clearly in sūra II, where the angels comment on God’s plan to establish Adam as deputy on earth. This has given rise in the commentary of the Manār to an interesting anthropological view which has a certain analogy with some western ideas going back to Herder and developed in Germany during the 19th century. Unlike animals who know by instinct (iḥāmaṭ) what is useful to them and what is harmful, man acquires knowledge of his surroundings only by very slow degrees. But his progress has no limits, and on this point he is superior even to the angels, whose knowledge and actions are limited (mahbūd). This recalls al-Rāzī’s idea that man, unlike the angels and the beings which are inferior to him, has no determined function (waṣfā maʿlaṭyana). Thus man has been able to acquire a knowledge which gives him a considerable power over nature and which continually increases.

“He has invented, discovered, innovated, so as to change the shape of the earth (ḥattā gḥayyara shardh al-ārḍ)”, we read in the Manār. He has cultivated the uncultivated lands; he has grown, through hybridization, species which did not formerly exist, for example the mandarin (yāṣuf endendi) which “God has created through the hand of man (khālakah bi-yad al-ʾinsān)”. It is in this sense that man, without offending the angels, may truly be the khulṣa of God, in spite of all his deficiencies.

It is also from verses of the Kurʾān that the Iḥšān al-Ṣafā’ have many further ideas about man, all of them curious and interesting. To take one instance: in the same way that man is a microcosm, he shares all the particular characteristics of the animals (cf. Ep., iii, 19 f.). In this system, the stars serve as instruments, not of the Creator, but of the Universal Soul which obeys him. Thus man takes his place in the hierarchy of the universe.

The Iḥšān al-Ṣafā’ studied man mainly in the perspective of the Greek thinking concerning the nature of the soul, its relation with the body and the union of the agent Intellecit with the material intellect. “The rational faculty by which man is man is not in its substance an intellect in action ... it is the agent intellect which makes it become an intellect in action ...” (al-Fārābī, al-SAyiṣa al-madāniyya, Beirut 1964, 35).

Finally, al-Tahānawi, in his dictionary, gives in his article ʾInsān a long quotation from the commentary of Fakhr al-Dīn al-Rāzī on sūra XVII, 85: “Say: ‘The Spirit is of the bidding of my Lord’”. Intuition alone tells us that the spirit is what man means when he says “I”. But can this “I” be the organic body when it is well-known that its parts are always changing and being replaced? If man is not this body, is he a body in which the earthly element predominates, since this would be made of bone, flesh, fat and sinews, and nobody identifies man with these “thick, heavy and dark” tissues. It cannot be a body in which the aqueous element predominates, since this would be one of the four humours, and none of these is man, except that some consider that an exception should be made for the blood, since the loss of it brings death. Bodies in which there predominate the elements of air and fire are the spirits, bodies composed of air mingled with natural heat (al-harāra al-gharīsiyya) and engendered in the heart and in the brain. Spirits cannot dissolve or decline. They are noble, celestial and divine bodies, which penetrate into the organism as soon as it is formed and completely prepared to receive them. They remain there so long as the body is in good health, but when there arise thick humours which prevent their circulation (ṣarayda), they leave it, and this is death.

This doctrine, says al-Rāzī, “is powerful and sublime, and should be pondered since it corresponds exactly to the statements in the divine books on the states of life and death”. In fact God said to the angels: “I am creating a mortal of a clay. When I have shaped him, and breathed My Spirit in him, fall you down, bowing before him” (XXXVIII, 72, cf. XV, 29).
The doctrine of most of the physicians and of those who deny the soul, is based on the observation that each animal species is characterized by its own balanced arrangement of humour. The word "human" is applied to bodies having particular qualities resulting from the mixture of the elements according to an equally particular proportion. The metaphysicists on the other hand say that man is not a body. They teach the doctrine of a "return" (ma'dd) to God whereas the body dies, and they believe in spiritual sanctions in the after-life. Several sects of Islam have supported these ideas: the author cites Râghib and al-Ghazâlî (?), certain early Mu'tazilis, a group of Karramîyya, among the Shî'îs al-Shaykh al-Mufîd, and in particular the ascetics and the mystics. After this long citation, al-Tahânawi embarks upon the question of al-Insân al-kâmîl.

Bibliography: in addition to the references in the article, see al-Insân al-kâmîl.

(R. Arnaldez)

AL-INSÂN AL-KÂMIL The Perfect Man.

1. General observations on this concept. The idea of the Perfect Man, which occurs in Muslim esoteric mysticism, is not derived directly from the Kur'ân. It may be compared with gnostic conceptions which have assumed various forms: that of the prîwos ânivîrios linked with Hermeticism (cf. Positanean) and the mandaic gnostics, may be the purest original source; another origin may be found in the Mazdaean myth of Gayomart, the primordial Man. These two currents come together in Manichaicism with the doctrine of the first Man (al-Insân al-kadîm) who, with the Mother of Life and the five elements, her sons and auxiliaries, constitutes the first Creation which the Father of Greatness raises up by his Word. For the disciples of Zoroaster and for Mani, however, this prototypal man has as his function the combatting of evil and darkness, in conformity with a dualist doctrine which developed in Iranian thinking and which Islam rejected with all its might. Nevertheless the idea of a role, if not of salvation, at least of conservation, assumed by the Perfect Man in regard to the inferior world, remains an essential one for the Muslim mystics who make use of this idea. A parallelism with the Jewish Cabala would be even more instructive: for which they found elsewhere various expressions of the mystical theory of the Merkabah there has been developed, in the Sepher ha-Zohar, the doctrine of the ten sephirût, among them being Wisdom (hokhmâh), Intelligence (binâh), Love (hesed), Mercy (rahamîn), Royalty (malkhût), and so on, which constitute the World of Union or transcendent Man. It is through these that divine life is diffused into the entire creation. Thus Jewish mysticism also finally reaches this conception, that the Infinite (En sêf), by the emanation of its light, forms the Âdâm Qadmon, from whom the light of the sephirût produces the total emanation. This kind of refraction of light through light calls to mind the kur'ânic expression "Light upon light" (mîrâ'în 'alî mîrâ'în), in XXIV, 35. Similarly one sees, in al-Dhill, for example, that God created the muhammadan forms (cf. infra) from the light of his Name of Creator (Bâdî) and Powerful (Kâdîr); then he irradiated (tâqîllâh) on these forms with His Name of Benevolent (Lâîfî) and Grantor of Absolution (Ghâfir). Here too, there is an irradiation of light in light. From these similarities must it be concluded that a real influence existed? Might there be a "unity of initiatory origin among all the religious mysticism of ancient Asia"? L. Massignon thinks not. In this matter he sees "coincidental terms, without any real relationship existing between their respective processes of formation" (Essai, 57 and n. 5). It seems indeed that there may be reason to observe some parallel developments, in particular between the Jewish Cabala and the Muslim (irfân). But it is not excluded that independent reflection upon the Kur'ân may have led certain mystics to conceptions for which they found elsewhere various expressions and symbols that they could adopt.

2. The kur'ânic contributions. The idea of al-Insân al-kâmîl appears in the Qur'ân that, in the whole of creation, man occupies a leading position, entirely apart. Now the Kur'ân adds many revelations to this effect. First of all there is the affirmation that the universe, the heavens and the earth with all that they contain, are placed in the service of man by the tâshîr. The expression sâkkhâra labûm (He has caused to labour for you) or lâma (for us) occurs about ten times in the Kur'ân. Next, there is the choice of man as God's vicegerent (khâli'fah) on earth (II, 30), a choice which was to surprise the Angels; then, the proposal put to man to assume responsibility for the amânâ (trusting of faith): he accepts, when the heavens and the earth had refused, through fear (XXXIII, 72). In the commentary of Fâghr al-Dîn al-Râzî there occurs an observation which gives us an indication of what constituted the Perfect Man for the interpreters of these mystics: according to one of them, there are those who perceive both the universal and the particular; these are men. Some others who perceive only the particular are the animals; while those others who perceive only the universal are the Angels. Man has therefore an intermediate position which endows him with a value unique in creation; thus, despite his weakness, he will bear the amânâ.

But it is the verses referring to the light which are above all important. In two passages (IX, 32 and LXI, 8) it is written that, in transmitting it to men, God gives His light a complete perfection (yustimm nîrâhu; mulîm nîrûn). Al-Râzî comments: "God promises Muhammad an increase (mâstâl) in aid and power, as well as a raising in degree (iîkal al-darajât) and the perfection of the hierarchical rank (hamâmîl al-rutbât)". In II, 257, we read—"God is the wall of the ones who believe; for example, God makes a covenant with the darkness to the light", i.e. to all His creatures; or finally because He loves the Believers because to all His creatures, He is said to be in a very particular sense the wall of the Believers (sakhkhara lakûn). Now the light is in one sense faith or Direction (hudd); it is also revelation; it is a Book (Torah, Gospel, Kur'ân); but it is also that through which the Prophet causes men to pass from darkness into light (XI, 1).

It is then among Believers, the Friends of God (auûtîyâ; cf. the singular wall), the prophets and especially Muhammad, that one must seek the Perfect Man. The celebrated verse 35 of the Surah of Light (XXIV) has been given an important interpretation. A distinction has been made between the opening section which speaks of God as light, and the continuation introduced by mînâhîrî nîrûn, apparently referring to the light which descends on certain of His creatures. For some, the niche (mîghâfîh) is the
heart of the Believer, and the lamp which is found there is the light of the heart. For others, such as al-Kharraz, the reference is to the heart of Muhammdd and to a light which shines there, lit by a sacred tree which, for al-Kharraz is Abraham, for some Şûfis the inspirations (îlâmîyat) of the Angels, for Muqâtîl prophecy and mission. These ideas were finally to lead to the doctrine of the Muhammadan light (nûr muhammadi [q.v.]).

3. Transposition of an alchemical idea. The symbol of the Perfect Man is connected also with the alchemical conception of man as a microcosm and of the macrocosm as "meganthropos" (însân kabir). According to al-Djârî, in his Definitions, the perfect man unites the totality both of the divine (îlâmîyya) worlds and of the engendered (kawnîyya) worlds, universal and particular; he is the Writing which combines the divine Writings and the engendered Writings; indeed, in respect of his mind and intellect, he is an intelligible Book, named Umm al-Klâb; in respect of his heart, he is the Book of the Lawh Mahfûz; in respect of his soul, he is the Book of the Abolition (mahû) and Establishment (îlâmîl) of being. The relation of the Prime Intellect to the macrocosm is that of the human Spirit to the body and its faculties: the universal Soul is the heart of the macrocosm, just as the rational soul is the heart of man. Thus the universe is called al-Insdn al-kâmîl, his perfect creature, the perfect man in Ibn ʿArabi (e.g., Fusûs al-Ifîkâm, ch. 14, De la Sagesse divine dans le Verbe adanime trans. Burckhardt, La Sagesse des Prophètes, 231 and in al-Djîlî, al-Insdn al-kâmîl, ch. 53, On the Prime Intellect: "The Science of the prime Intellect and that of the sublime Calamus are one single Light whose relation to man is called the prime Intellect, while its relation to God is called the sublime Calamus. This being the Intellect ascribed to Muhammdd, it is from him that God created the Angel Gabriel in pre-ernity. Thus Muhammdd is a father to Gabriel and a principle for the totality of the World").

4. Ibn ʿArabi. The idea of the Perfect Man is found in Ibn ʿArabi, in the Fusûs al-Ifîkâm, as a development of the kurrânîc revelation, according to which man is the "mirror" (masâbîh): "One ephemeral and eternal, it is through his existence that the world was completed. "He is to the world what the stone is to the ring: the stone bears the seal which the king affixes to his treasure-chests". To man is entrusted the divine safeguarding of the World, and the world will not cease to be safeguarded so long as this Perfect Man shall remain there. God first created the whole world like a mirror which has not yet been polished. In order that He might be perfectly manifested in it, it was necessary that by means of divine Order (amr) this mirror should be made clear, "and Adam became the very clarity of this mirror and the spirit of this image". Therefore the Prophet says that God created Man in His image, that is to say that Adam is the prototype [the universal soul] which synthesize all the categories of the divine Presence, Essential (îlâmî, or attributes (îlâmîy) and actions (îlamîl) (cf. La Sagesse des Prophètes, 20, 22, 154 and 54, n. 1). The image of God is no other than His Presence, "so that, in this noble epitome which is the Perfect Man, God manifested ... all the divine Names and the essential Realities (habâ'îb) of all that exists outside Himself, in the macrocosm, in detailed fashion. ... From the Perfect Man He made the spirit of the world, and subjected the high and the low to him. Just as there is nothing in the world which does not exalt God by praise of Him (XVII, 44), so there is nothing in the world which does not serve this man...”. Here Ibn ʿArabi recalls the tashqîr, and he concludes: “Everything the world contains is subject to man. This is known to him who knows, that is to say the Perfect Man, and is not known by him who does not know, that is to say man the animal” (p. 154).

5. The Muhammadan Reality (Habîba muhammadiyya). Ibn ʿArabi writes in his Fusûs al-Ifîkâm, ch. 6, "One can never consider and wishes to express them publicly (ibd.) And so, among other denominations, beings are "sublime letters", as Ibn
Arabi says: “We were sublime letters which were not read.” In order to read them, just as to speak, there must be a will which sets in motion and a breath (nafaqā) which animates. God has willed that letters should be made to pass, from the invisible world of the ghayb to the visible world of the ghaibāda. But He has especially spelled out Man by a breath from His own Spirit (XXIII, 9). The same observation occurs in Ibn Ka‘īb al-Bārī in his Maṣāḥīf al-Īlāhīyya. From this starting-point, al-Bārī works with the idea of the human man being a copy of Himself (mushhada); if you looked into yourself, you would find for each of His attributes a copy in yourself” (i, ch. 20).

“The Perfect Man is the pole (kubṭ) around which the spheres of existence turn, from the first to the last”. Ibn Ka‘īb al-Bārī says that man is the point of the sphere which serves as a pivot (madār) for existence. The Perfect Man is unique in all eternity. But he appears in different guises (malābīya) and receives various names. His name in principle is Muḥammad, his kunya Abū ʿl-Ḳasim, his attribute ʿAbd Allāh, his ṭ HASHAMS al-Dīn. His other names vary with each epoch, in harmony with the “guise” of that epoch. But all are united in Muḥammad. Spiritual men are in the image of Muḥammad (al-ṣūra al-Muḥāmmadiyya), which refers to the muḥāmmadan XXIII, 72). All the epiphanies of the essence (dākhla) there, but merely the irradiation (tadžalli) of the Muḥāmmadan Reality in each era upon the most perfect of men, who thus become the representatives (khulūfā’) of the Prophet on the plane of manifestation (zāhir), while the Muḥāmmadan Reality is the hidden side (ḥārin) of their own reality.

The Perfect Man, in himself, is that which corresponds (mukābīl) to the totality of the Real. Al-Dīlī enumerates all these correspondences (ch. 60). As in God all opposites co-exist, so in the correspondences one discovers the same antitheses. In the Perfect Man the aspects of the ḫabb and the ḫahl are combined; he is the mirror of the Name of God (Allāh) and he corresponds to all the Names and Attributes; to Iṣṣeity (ḥusayya), to Egoity (miyāyya). Thus, God has entrusted the whole of such images to him (XXXIII, 2, a). All the epiphanies of the essence (dākhla) of the God of Truth (Ḥabb), from the ʿUkhlīyya (the being-Allah) and the Ḥaddīyya (absolute Unicity) to the ʿUkhlīyya (the Unity of the multiple), the Ṭahmāsīyya (virtue of mercy, which extends to all individuals and supports them in their being) and the Ḥuḥūbīyya (the Lordship which directs them), recur in the “copy”, that is to say the Ḫānān kāmil. This recalls the theory of the divine Powers, of the Man of God, and of the Logos in Philo of Alexandria, and is also close to the theory of the Sephirōt in the Zohar.

As for the Perfect Man, regarded not as the prototype but as the believer, the “saint” or individual prophet who is to be “clad” in the Muḥāmmadan Reality, he passes through three intermediate zones (barzakh): the first, in the initial stage of the actual knowledge of the Names and Attributes; the second, the middle stage, is that of the touch-stone (muhakk), which proves the spiritual relations of man with God (rabāʾik insaniyya) by the divine Realities; the third is the knowledge of the diversification of Wisdom in the creation of that which is the subject of the divine Decree. After that, there is the Seal (ḥulām, XXIII, 26), then the final term, the Majesty of Greatness (kibrisya, XLIV, 37), which is infinite. 7). Conclusion. There are more concise defini-

tions of the Perfect Man, for example in al-Ḳānuwān: “The forty-fourth degree of existence is the Perfect Man. It is with him that the degrees reach their completion, that the world is perfected and the God of Truth manifests Himself to the world by the most perfect manifestation”. In his Isḥākāb, al-Ṭahānawī records that the Kitāb al-Fuṣūs contains this passage: “The Perfect Man is the isthmus (baraṣih) between necessity (enḏūd) and possibility (ismān), the mirror which combines the attributes of eternity and its laws with the attributes of generation and death (ḥidūkām). He is the central point between the ḫabb and the ḫahl. Through him and through his hierarchical rank (marṭaba), the emanation(ʿayyid) of the Ḫabb and the presence (madād), the source of subsistence(ʿabād) of that which is not God, make their way to the entire world, the upper and the lower. Without him and without his quality of barṣih (baraṣihīyya) which does not cut itself off in either of the two extremes, nothing in the world would receive the divine presence of the Unique, for lack of relationship and link”. Al-Ṭahānawī notes that the same things are found in the Sharḥ al-Fuṣūs of ʿAbd al-Rahmān al-Dānī. Finally, he makes an observation which well emphasises the exceptional situation of the man neither within nor outside the world, neither united with it or separated from it. “His coming into existence, the only one in the world, is a begulement (tadbir) and of a free disposition (lasarrūf)”. INSRIPTIONS [see KITĀBĀT].

INŚHĀ (INŚHĀ), strictly “construction”, “style” or “composition”, i.e., of letters, documents or state papers; then used elliptically for ‘ism al-inśhā (as, e.g., in mahālāt al-inśhā)’ or even for a synonym for “mumākāt”, “documents composed according to the rules of inśhā”; finally also to designate a form of literature, popular and widespread in the area of the Islamic cultural languages (i.e., Arabic, Persian and Turkish), in which were included what in the West would be counted under the heading of style-bks for chancery scribes, copy-books and letter manuals. Thus inšhā literature offers important material not only for epistolography and diplomatic, but also for the literary history of the Islamic world, especially since it often includes models from the pens of prominent letter-writers, poets or statesmen. This literature comprises works of various types. Some are limited to the collection of precepts for writers of letters and documents, i.e., for the chancery scribes (ḥātib [al-ṣūr], mūnāḥ), whilst others contain collections of model letters of every type, private and public, and especially materials originating from the chancery, i.e., documents, diplomas and state papers. Some works include only one or the other—either precepts for scribes, including stylistic directions, or simply models of style—but those in which both elements are represented are numerous.

The themes of private correspondence to be found in inšhā works are those of eulogy, congratulation, condolence, gratitude, remembrance, etc. They are addressed to members of the family, friends or acquaintances. The various kinds of documents and State papers are dealt with in the article DIPLOMATIC.

Copies of documents actually drawn up and issued are often offered as examples of style; but fabricated texts, to which however a certain relative value may be assigned, are also occasionally used. Since both authentic and fabricated examples of style are produced at random and without any distinguishing
indication, careful verification is needed in each case as to whether a given text is authentic or not. Special care is required if the compiler of an inshā2 work wishes to show the documents of bygone times, for example documents or state papers of an earlier ruler or some other prominent personality. In this case fabricated texts could be inserted all too easily, when, though authentic examples were lacking, the compiler wished to show how documents of such a kind might have appeared. This need not imply an intent to mislead, since the compiler was guided by subjective or in any case literary motives, not usually by historical and much less juristic purposes. Fabricated texts, however, cannot be ruled out, even if the author of an inshā2 work cites, as often happens, documents which he himself has composed, possibly in his capacity as an important chancery official. These may only be drafts which were no doubt submitted but were not ratified; yet they seemed to the author worthy of inclusion on stylistic grounds. Care is also called for with regard to formularies, since it is not always possible to establish whether they have been taken from genuine documents drawn up according to the rules but omitting specific details such as the address, date, place of issue, etc., or whether they have been freely invented.

The lack or scarcity of historically relevant original documents from certain periods of Islamic history has attracted the interest of historical research to inshā2 literature, in the search for substitutes for lost or destroyed originals, and with good reason, since, given the non-historical motives of their compilers, most of the inshā2 works—apart from the special cases just mentioned—are not a limine suspect of spuriousness or intent to mislead. For this reason our knowledge of inshā2 literature has improved considerably over the last decades with regard both to the content and to the form of individual works or whole groups of works. On account of the almost exclusively historical interest of the researchers, little or nothing has been said from the point of view of style, aesthetics or literary criticism. Too many questions about the origin and early development of inshā2, questions important in several cases, however, have been left unsolved. It is of the greatest importance that what we are offered on these topics still consists largely of guesswork.

It seems probable that already in the time of Muhammad the people of Mecca made use of Arabic written documents in their diplomatic and commercial transactions. That specific rules were already in use and held good for such purposes may be seen also in the conduct of the Meccan delegation to Hudaybiya for the bay'at al-risāla: against Muhammad's desire to use the basmala, they insisted on the customary formulary already in use. We do not know, however, whether there were already tabulations of those rules or even collections of formulae which might be regarded as the precursors of the later inshā2 literature. For the time being literature of this type can be traced back only as far as the end of the Umayyad period. Although this literature is without doubt Arabic in origin, yet the influence of Persian and Byzantine models is to be taken into account, as can be seen in the character of the letters and documents themselves. In any case it must always be remembered that, after the Arab conquests in Persia and Mesopotamia, the Pārsā or Persian chancery and its personnel was taken over by the new rulers, as was the Byzantine chancery and its personnel in Egypt. Furthermore, in each case many years elapsed before the process of Arabization was complete, bringing with it the exclusive use of the Arabic language and Arab personnel in the chancellories.

As yet we do not know when the term inshā2 came into use. It appears already in Kudāma, hence around 288/900, in his Kitāb al-Khaḍārā fi 'sa'ādat al-kitāb, passim. It was used officially by the Fātimids in Egypt, under whom the institution known elsewhere as the dīwān al-risāla or dīwān al-muḥātha-bāḍ was called the dīwān al-inshā2. The practice commonly known as inshā2 goes back at least to the Abd al-Hamid b. al-Malik, who died ca. 133/415. It left a large collection of model letters, part of which has survived, as well as his Risāla ila l-ḥudūd (Italian trans. ayyūd F. Gabrieli). Even the reputation which 'Abd al-Hamid enjoyed as a kāthib illustrates the effect of Persian influence: up to this time the secretaries of the Umayyads had occupied only a humble position, while under the Sāsānids their position had been far superior. Persian influence appears even more clearly in the style of his letters. His Risāla ila l-ḥudūd, it is true, is still composed in simple prose, but in his other writings the use of artificial stylistic methods, for example sādī2 [q.v.], in accordance with Iranian models, is unmistakable. Sādī2 was to be the basis of the stylus ornatus, a characteristic feature of the later inshā2 literature, but also of various other genres. The presumption of Persian influence is confirmed by Ibn al-Muqaffa's [q.v.] advice to secretaries.

Under the 'Abbāsids, there took place an unprecedented rise in the position of the chancery secretary in the official hierarchy of the state, a process not unconnected, presumably, with other Persian influences. The elaboration of a body of literature relating to the secretary and his office went hand in hand with this process. Abu 'l-Yūsuf ʻAbd al-Muḥammad al-Mudabbir, appointed vizier ca. 264/876, appears as the author of the first handbook for secretaries, entitled al-Risāla al-ṣādīqā fi ma waṣāfa al-balāgha. The literature of the secretaries (inshā2) cannot at this period be clearly distinguished from the adab al-kāthib literature [see KATN], which is dealt with in the histories of literature and summarized by the writers. It is embodied in the highest points under the Būyids with Ibn al-ʿĀmid (d. 350/960), but especially in Egypt and particularly under the Fātimids, with Ibn al-Ṣayrafi (d. 463/1071), and finally under the Mamluks with Ahmad Fadl Allāh al-ʻUmari's work, al-Taʿrīf bi 'l-mustalah al-ṣarif, composed after 745/1340-1, and with al-Kalqashandi, whose work ʻṢāḥib al-aʿlaī2 fi kitābat al-inshā2, completed in 815/1412, an encyclopedia of all the information useful to the scribe, became in practice a handbook for the administration as a whole.

Arabic inshā2 literature continued to be productive for centuries longer, without, however, attaining any particularly high points. In the nineteenth century it even survived under European influence, as may be seen in works written in French by Arab authors. Before it reached this stage, however, it had had further secondary developments, which were to mark the decline of the power of the Caliph, local dynasties arose, and, as a result, other languages came into official use in the Islamic world alongside Arabic or in its stead. At that time, and especially after the collapse of the Caliphate, inshā2 literature developed in languages other than Arabic, first in Persian, then in Ottoman Turkish, in Čagatay, and in Urdu.

Persian was, it is true, used officially in place...
of Arabic in the chancery of the Seljuks of Rum as early as 657/1259. But this seems to have been simply the culmination of a development which had begun very much earlier. We know in fact that from the second half of the 6th/12th century at the latest Persian models were used in Khazar chancery purposes. They developed under Arabic influence, as is clear from the fact that the oldest collections contain both Arabic and Persian models (cf. Horst), e.g., the collection of Rashid al-Din Wa'iz, d. 578/1280, Mashhad, Bagdad, minister of the Khazar chancery, it is outstanding among contemporary or later masters of the art of inscribed. His work, Al-Tawassul ila 'l-tarassuli (ed. A. Bahmanyar, Teheran 1315/1935), was well known that, even in the 16th/16th century, the famous Feridun Beg Ahammad Beg [q.v.] could make use of it to "complete" his Munsha'di al-salatin. Similarly at the end of the 8th/14th century with the Dastur al-kabir fi 'l-farisiyya, and further the Dastur-i dbiri. From then on there is no end to the series of Persian inscribed works. They reached a peak in the second half of the 8th/14th century with the Dastur al-kabir fi 'l-maradith of Muhammad b. Hindushah Nakhchivani, who, moreover, also stated at that time his intention of compiling a Persian inscribed work as a sequel to his Persian one. More detailed information about Persian inscribed is to be found in Bjorkman, and Matuz, where a composed about 974/1264-5, two vtrtumes each), and in Ethe, Roemer and Herrmann (see bibl.).

Similarly at the end of the 13th century: From then on there is no end to the series of Persian inscribed works. They reached a peak in the second half of the 8th/14th century with the Dastur al-kabir fi 'l-maradith of Muhammad b. Hindushah Nakhchivani, who, moreover, also stated at that time his intention of compiling an Arabic inscribed work as a sequel to his Persian one. More detailed information about Persian inscribed is to be found in Bjorkman, and Matuz, where a composed about 974/1264-5, two vtrtumes each), and in Ethe, Roemer and Herrmann (see bibl.).

The Ottoman inscribed literature is directly linked with the Persian, and thus also with the Arabic. For various reasons it seems likely that the Ottomans drew exclusively on Persian traditions, but in the present state of research direct Arabic influences, e.g., from the Mamluks, cannot be excluded. In any case there are Turkish inscribed works containing Arabo-Persian and Turkish inscribed literary models. The origin of the Turkish inscribed literature is to be found in the 13th century, e.g., in the 13th century, e.g., in the 13th century,

...
INSHA: *makbās* of the famous Urdu poet, one of the most remarkable figures in Urdu literature, Insha Allāh Khān. The eldest son of Mīr Māgha Allāh Khān “Maṣdar” al-Di āfari al-Najjāfī, he was born between 1756 and 1758 at Murshidābād, though, having an income of Rs. 10,000 on his father, was far ahead of his times. Leaning towards the unconventional, his verse is both amusing and burlesque, constituting a landmark in the development of Urdu poetry. His style is laboured and artificial rhetoric. The rest is by Insha Allāh Khān, it shows the author’s vast vocabulary and poetic skill.

His *Kaliṣyāt* (ed. Lucknow 1321/1864), which comprises his Urdu, *rekhāt* and Persian *dīwāns*, *hasūds* and five or six *mathnawīs*, contains between 8,000 and 9,000 verses marked chiefly by virtuosity but little poetic feeling. He indulged in verbal gymnastics using most intractable rhymes, sometimes writing a series of *ghazals* in the same metre and rhyme merely to display his vast vocabulary and poetic skill.

He was equally at home in Arabic, Persian, Turki, Pūghti, Hindi, Bengālī, Pandjābi, Kāshmirī and Pūrī. His prose works comprise: (1) *Doryā-i iʿtāfāt* in Persian (ed. Murshidābād 1266/1850; Awrangābād 1916; Urdu tr. by Brījmohān Khatā Kaifī, Delhi 1935), the first work by an Indian author on Urdu linguistics and grammar, composed at the instance of Yamin al-Dawlā in 1222/1807 in collaboration with Mirzā Kāṭīl, a well-known poet of Persian, who contributed the chapters on logic, prosody and rhetoric. The rest is by Insha Allāh Khān. It shows the author’s wide range of study and his grasp of Urdu linguistics and morphology. (2) *Rānī Kheṭā Kihānī*, a romance tale with love, magic and adventure as its theme, written in pure Hindi, without a single word of Arabic or Persian origin. In spite of such limitations, the narrative is neither dry nor artificial although it is interspersed with archaic wordings and expressions (ed. Delhi 1937, Karachi 1953). (3) *Sīk-i Qawwar*, also a love story in Urdu prose, without any dotted letter, in clear imitation of the *Awadh* and *Pāvīnān*. He appears to have started composing poetry at a very early age, as he had compiled his *dīwān* of Urdu verses when he was still a boy, “in a new style and without the help of a teacher” (cf. Ahmad Āli, *Maḏżān al-qurdu*b, fol. 60b). He had also tried his hand at composing Arabic and Persian verses (ed. Murshidābād 1274/1858). Ahmad Āli styled himself a physician and became one of the courtiers of the last independent Muslim ruler of Bengal, Nawāw Bīrīmād al-Dawlā (g.v.); on the decline of his fortunes, he migrated to Farrūghābād (g.v.). Insha Allāh received his early education in various sciences including grammar and syntax, logic and philosophy at home, and at the age of sixteen left for Lucknow in search of a poet, he joined the court of Nawāw Bīrīmād al-Dawlā (g.v.); on the death of Bīrīmād al-Dawlā he left Lucknow in 1276 and served several nobles in turn in Bundelkhand, Delhi and Dīyānagar. Unable to find an appreciative patron, he returned to Lucknow, where he joined the retinue of Mirzā Sulaymān Shukkā (d. 1857), the third son of the Mughal emperor Shāh ʿAlām II, as a court-poet. Some time later Tafrīdī Husayn Khān ‘Allāmā, a Shīʿī nobleman and patron of art and literature, introduced him to Saʿādat Āli Khān, the ruler of Lucknow, who assigned him a monthly salary of Rs. 200. Soon they became close friends, but a chance remark on a delicate occasion offended the Nawāw, and led to his expulsion from Lucknow; though allowed to return later he spent the rest of his life in rather reduced circumstances. His sharp and sometimes caustic wit made him more enemies than friends. By his superior talents he outshone his rival Ghūlām Hamādānī Muṣṭafī, Tadhkira-i Hindī, Awrangābād n.d., 23; *Allāh Khān Khān ‘Allāh Khān* (incorporating Mirzā Allūt’s *Gulghān-i Hind*, ed. Lahore 1906, 35-7), Allagār 1934, 42-2; Kundrat Allāh “Kāsim”, *Madīmās-i Naqaḥ*, Lahore 1933, 80-1; Abād ʿAllāy Yartā, *Dastār al-fasāḥāt*, Rampur 1943, 103-8 (where several other references are given); Saʿādat Khān “Nāsīr”, Tadhkira-i Khān maʿrīkā-i ‘ibād, (MS in Urdu in Andijūmān Tarakī-kī Urdu Library, Karachi), fols. 192-9; Abād ʿAllāy Dīdār “Nāsīḥāb, *Sāḥib-i ‘ibārāt*, Lucknow 1293/1874, 52-5; Abād al-Karim, *Tafshīl al-’sāḥār*, Delhi

INSHA — INSTITUT D'ÉGYPTE

1848; 'Abd al-Hayy Lakhnawi, Gul-i ra'ānī, Lahore 1859, 213; Râmi, Bakr, Sokaroud, A history of Urdu literature, Allahabad 1940, 151-82; T. Grahame Bailey, A history of Urdu literature, Calcutta 1932, 54-5; Muhammad Sadiq, A history of Urdu literature, London 1964, 11-2, 120, 124-30, 178, 167, 314; Sri Râm, Khâmshâm-i gîhadî, Delhi 1968, 467-75; Amina Khâtûn, Taḥkîm nâsîrûd-dîn, Bangalore 1930, 8-66, 107-27, 133-53; 'Abd al-Sâlih 'Abînâ, 'Addâr al-Hind, in Inshâ, Delhi 1968; Garcin de Tacy, Histoire des lettres et des arts en Egypte, in BIE, 1907, 133-57 (deals only with the expedition of Bonaparte); R. G. Canivet, L'imprimerie en Egypte, in Bulletin de l'Institut d'Egypte, whose aim was to continue the traditions of the Institut founded by Bonaparte. European and Egyptian scholars met there on an equal footing. This "scientific and literary" society was transferred to Cairo in 1880. It adopted again the old name of Institut d'Egypte on 1 November 1918 and is still continuing its activities more than a hundred years later. Its Arabic name is al-Madîma 'alî al-miṣrî. According to its statutes, revised in 1918, there were envisaged fifty titular members, resident in Egypt; in addition there are appointed honorary members, the number of which must not exceed one hundred, and an unlimited number of corresponding members. The Institut publishes regularly a Bulletin (magazîn) which, from 1859 to 1918, was called Bulletin de l'Institut d'Egypte; then, from 1918, Bulletin de l'Institut d'Egypte; it also publishes Mémoires which appear at irregular intervals. It publishes in Arabic, French and English, but up to now the publications have been mainly in French and English. The best outline of the activities of the Institut d'Egypte is in the bibliographical work by Jean Ellul, Index des Communications et Mémoires publiés par l'Institut en dehors de la presidence de Monge, on 20 August 1798 (3 Fructidor). Its creation had been made possible by the existence in Bonaparte's expedition of a "Commission of the Sciences and the Arts", in effect an intellectual general staff which Bonaparte had decided should accompany him when he left France. The Institut d'Egypte held its meetings in the palace of Hasan Kâshîf, in a sort of academy which included scholars, artists, the high-ranking officers and the heads of the various services. It contained four sections (mathematics; physical and natural sciences; political economy; part of a standing collection of geographical maps and plates on a wide variety of subjects.

(b) On 6 May 1859, during a preliminary meeting, there was founded in Alexandria under "the illustrious protection of His Highness the Viceroy of Egypt" (Muhammad Sa'd Pasha), the Institut Égyptien, INSTITUT D'ÉGYPTE, one of the centres of intellectual and scientific life in present-day Cairo. Its history is in fact of that of two separate institutes.

[The text continues with a detailed account of the activities of the Institut d'Egypte and its role in the development of Egypt's cultural and scientific landscape.]
INTIHAR, "suicide", expressed more technically in Arabic by hāl nafs with pronominal suffix (as against kall nafs or al-nafs "homicide"). Intihar is designated originally, and does so in its occurrence in the hadith, suicide by piercing or cutting one's throat. At an undetermined but possibly quite early date, the word was singled out to mean suicide in general. It is thus used in modern Arabic and in Turkish, also in Persian.

The Kur'an contains several passages (II, 54/51, IV, 66/69, XVIII, 6/5) that might possibly be interpreted (but, in fact, are not) as indicating a factual, even condoning attitude toward suicide. No clear prohibition of suicide appears in it. The most relevant passage in this respect, IV, 29/33: "and do not kill yourself (anfusakum)", is interpreted by leading exegetes as referring to mutual killing, with anfus- to be understood as reciprocal in meaning, as in II, 85/79 and elsewhere. The context supports this interpretation. However, the verse is often cited as evidence for the divine prohibition of suicide.

The Prophet himself certainly disapproved of suicide. A number of hadith leave no doubt that Islam forbid it. The person who commits suicide, regardless of the circumstances (unless it happens accidentally), forfeits Paradise. His punishment in Hell will be the repetition of the very act by which he killed himself, and this is considered a metaphor for saying the customary prayers for a suicide. Suicide was thus generally considered a grave sin (for instance, al-Dhahabi, Kalâbîr, Cairo 1385/1965, 119 ff., ch. 29; Ibn Hadjar al-Haythami, Zaeddîj, Cairo 1370/1951, ii, 89 f.). At times, it was pronounced a more distressing act than murder (Ibn Kutayba, Úyûn, Cairo 1343-49, iii, 217; Ibn `Arabi, Fadîkalâ, Cairo 1329, ii, 234; ch. 147, iv, 463 f., ch. 960; cf. also the case posed by Kâdidîghân, Fadîkalâ, Cutcuta 1835, iv, 298 f.).

The legal literature has comparatively little to say about successful suicide, and no good evidence appears to be available as to the medieval legal attitude toward abortive suicide attempts. The most debated question, and no doubt the one of the greatest practical importance, was, and still is, whether the funeral prayers may or may not be pronounced. On this question, things are accordingly from school to school. The different legal schools have held divergent views on this point and the practice appears to have varied. The more charitable view may have widely prevailed. For instance, when Ḥâfiz b. Yûsuf al-`Irâkî, a blind professor at the Al-muniyya in Damascus, committed suicide under tragic circumstances in 602/1206, people refused to pray for him, but another prominent Shâfîitic scholar did (Ibn Kâfir, Bidâya, Cairo 1350-51, xlii, 44, from Abû Shâmâ). Details occasionally discussed by jurists were such points as the inapplicability of the ṣubûl [q.v.] in cases of suicide (Ibn Abî Zayd, Risâla, ed. trans. L. Berchet, Algiers 1949, 246); the disposition of the mahr [q.v.] of a woman who commits suicide before the marriage is consummated (al-Shâyâbhînî, al-Dhâmî al-ṣâgîrî, Bûlûk 1302, margin of Abû Yûsuf, Khurâbî, 37; Kâdidîkân, i, 436); the legal responsibility of the person who, by digging a well or the like inadvertently makes it a suicide. A number of hadith refer to the practice (for instance, Ḥâfiz b. Yûsuf al-`Irâkî, a blind professor at the Al-muniyya in Damascus, committed suicide under tragic circumstances in 602/1206, people refused to pray for him, but another prominent Shâfîitic scholar did (Ibn Kâfir, Bidâya, Cairo 1350-51, xlii, 44, from Abû Shâmâ). Details occasionally discussed by jurists were such points as the inapplicability of the ṣubûl [q.v.] in cases of suicide (Ibn Abî Zayd, Risâla, ed. trans. L. Berchet, Algiers 1949, 246); the disposition of the mahr [q.v.] of a woman who commits suicide before the marriage is consummated (al-Shâyâbhînî, al-Dhâmî al-ṣâgîrî, Bûlûk 1302, margin of Abû Yûsuf, Khurâbî, 37; Kâdidîkân, i, 436); the legal responsibility of the person who, by digging a well or the like inadvertently makes it possible for someone to commit suicide (Kâdidîkân, iv, 134, 454; for the Mu'taazzili view on the moral problems caused by knowingly enabling a person to kill himself, cf. Abu al-Djâbirr, Muqnis, xi, Cairo 1385/1965, 232 f.; cf. also Ibn Kâyîm al-Djâwwîzî, Makhîr al-su'râ, Cairo, n.d., i, 23) or, according to modern Shîa law, the validity of a suicide's will depending on the time it was made (A. A. A. Fyzee, Outlines of Muhammadan law, Cutcuta 1949, 300).
Lay views and attitudes with respect to suicide present a rather different picture. The threat of committing suicide was not infrequently used as a psychological weapon, in one instance even by the famous Sāfi ʿAbī ʿl-Ḥusayn al-Nūrī for the purpose of forcing the deity to confirm his sainthood for the sake of some minor miracle, provoking the strong disapproval of al-Dhaylāy (al-Sarrāqī, Lumaʾ), ed. R. A. Nicholson, Leiden-London 1974, 327; Taʾrikh Bagdādī, v, 132 f., omitting al-Dhaylāy's disapproval. A woman might threaten suicide in order to force her husband to give her a divorce (Ibn Taymiyya, Fadāwī, Cairo n.d. [1965-6], iv, 148). "Suicide is widely used figuratively to indicate voluntary exposure to serious danger in war or through such activities as excessive praying and fasting (which, however, is also literally branded as suicide, cf. al-Muhāshībi, Khālia, ed. I. A. KHALĪF, Damascus 1955, 33; al-Sarākhī, Usāī, Cairo 1372-73, i, 120; B. REINERT, Die Lehre vom tawakhlū, Berlin 1968, 267 f.) or, as the case mentioned by W. IVANOW, Satpanth, Leiden-Cairo 1948, Collectanea, 1, 18. Religious scholars would not accept. A philosophical instance, al-Daylāmi, ed. F. Schwarz, no. 127 (Agāhīnī, i, 158); Tamīm b. al-Muʿīn, Dīnān, Cairo 1377/1957, 50, 251; al-Thawālibī, Yatīma, i, 322 (cf. also Yākūṭ, Udabdī, ii, 188; am-Dīn al-Isfahānī, Khurāda, Syr. poets, Damascus 1752/1955, i, 556; al-Ībšīhī, Mustafā, Bālāk 1268, i, 220; al-Rāshī, Muhādārāt, Cairo 1287, i, 152; al-Safādī, Ghayth, Cairo 1305, ii, 262 f. Even religious scholars might make incidental reference to suicide to prove some particular point (ʿAbd al-Ǧīdābār, Muḥgīnī, vi, 16, 188, xi, 232 f., 393, 395 f., 422 ff.; al-Qazāzī, Iḥyāʾ, Cairo 1354/1933, ii, 212, iv, 219 f.).

Famous cases of suicide from pre-Islamic times are occasionally mentioned, as, for instance, King Saul (al-Yaʿqūbī, Taʾrikh, i, 533; Judas Iscariot (al-Mubārak, Balaqhq, ed. R. ʿAbd al-Tawwāb, Cairo 1965, 62); Ceopatra (Masʿūdī, Murādī, ii, 285 f., etc.); or the Jews fighting the Romans (Ibn Khaldūn, Ḥiṣb, ii, 120). The Indian custom of the self-sacrifice of widows and an assumed general Indian propensity for suicide cannot be proved. (Tabārī, Din, ed. A. Mīngana, Manchester 1923, 31; al-Muḥtājar, Bad, ed. C. Huart, iv, 16 ff., trans., 14 ff.; Ibn Bāṭtātīa, iii, 136 ff.). Cases of suicide of non-Muslims and heretics, wishing to retain their human dignity and to remain faithful to their beliefs, are reported with a mixture of disgust and admiration. Suicide because of unrequited or illicit love was celebrated by famous stories in many cultures. In works, in particular, the large literature on love (for instance, al-Daylāmī ʿAffī, ed. J. Vadej, Cairo 1962, 77, 122-125; Ibn al-Dawlī, Dīmām al-ḥawā, Cairo 1381/1962, 356, 358, 455, 570-581); for the heroine of a romance, it was only natural to think of suicide (Gurgānī, Wis rāmīn, Teheran 1373/1959, 76, trans. H. Māssê, Paris 1959, 93). The literary topic was often mentioned in connection with cowardice and frailty. It is likely that pre-Islamic roots seem to lie largely in the Hellenistic world.

Popular Hellenistic philosophy helped to strengthen the idea that death was preferable to a life of dishonour or otherwise unbearable. It probably also contributed to the discussion of whether wishing to be dead, without actually laying hands on oneself, was a legitimate desire—something that Muslim religious scholars would not accept. A philosophical view of the meaning of suicide was probably widespread among intellectuals of the 3rd/9th and 4th/10th centuries (cf. al-Dījjībīsī, Ḥayyānī, Cairo 1325-26, ii, 99, 114, or the poems addressed to a suicide cited by Ibn Ṭabīʿī Ṭayfūr, Manṭūḡrā, Ms. Cairo 1320, fol. 88b). Some of the discussion is preserved for us from the circle of Abū Ḥayyān al-Tawbīdī, Human existence, it was argued there, possesses value only if it is accompanied by virtue; otherwise, it is equivalent to non-existence, and consequently, it would seem to make no difference if a base and imperfect life is ended by suicide. Compelling circumstances for committing suicide are destitution, disappointments, situations a person is unable to cope with, and love affairs that go beyond one's ability to handle. The occasional and temporary prevalence of the non-rational powers, which is unavoidable since human nature is the result of the simultaneous presence of all the three powers of the soul, explains the occurrence of suicide. Suicide is to be condemned, not simply on the strength of religious tradition but as an irrational act that human beings should not commit but are at times unable to avoid (Muḥābatādī, Cairo 1347, 215 ff.; JAOS, lxv (1946), 248 ff.; al-Tawbīdī and Miskawayh, Haʾawātī, ed. A. Amin and A. ʿAshīrī, Cairo 1370/1951, 150 ff., cf. also 72 ff., and 187 ff. on the fear of or desire for death). al-Dīrānī, however, quoted Greek sources in order to condemn suicide (India, ed. E. Sachau, 284, trans., ii, 173).

Many types of suicide are mentioned widely dispersed in the sources. Even such incidents as the suicide note are reported (Yākūṭ, Udabdī, ii, 146; Ibn Ṭabīʿī, Bidāya, xii, 41 f.; Ibn Ḥadīrār, Durur, Hyderabad 1348-50, iii, 392). Since our principal sources of information are historical and political, it is not surprising to find as the most common motives the wish to anticipate certain capture or death at the hands of an enemy and, for both men and women, the desire to escape dishonour and humiliation in turbulent times. Use was made on occasion of the religious abhorrence of suicide in order to camouflage political murder as suicide. We also hear of unsubstantiated rumours of suicide upon the death of high-ranking officials, and suspicions of a person's orthodoxy gave rise to gratuitous accusations. Human existence, it was argued there, possesses value only if it is accompanied by virtue; otherwise, it would seem to make no difference if a base and imperfect life is ended by suicide. (ʿAbd al-ʿAzīzī, al-Maʿṣīrī, ed. A. Amin and A. ʿAshīrī, Cairo 1350/1930, ii, 672; Ch. Pellat, Ibn Śhuqaydī, Ammān [1966], 67-8). Insanity, guilt feelings, and the desire for revenge are attested as causes of suicide.

In the absence of meaningful statistics, it would be rash to draw any sociological conclusions. The common motive of conjugal problems, for instance, seems to play only a relatively minor role according to the medieval literature, but whether this is due to lack of information or to the social climate created by Islam cannot be decided. Suicides of religious scholars are rarely reported. Possible instances of such cases in which a scholar's political or administrative activities can be ruled out as the cause are the above mentioned al-Ṭrāṣī in 620; the eccentric Ibn Saʾbīn [q.v.] in 669; ʿAbd al-ʿRāḥīm b. Abī Bakr al-Dījarī al-Nāḥwī in 698; Muḥammad b. Mūsā al-ʿAṣkārī in 731 (Ibn Ḥadīrār, Durur, iii, 392); Abūnā b. Muḥammad b. al-Zarkašī in 782; ʿAbd al-Ḥādhīr al-Ḥanbālī in 801 (al-Sāḥibī, ʿAdī, iv, 300); or, in a very different environment, the case mentioned by W. IVANOV, Satparvā, Leiden-Cairo 1948, Collectanea, 12-18.
The total number of all cases that can be collected from the literature remains small. However, the case for metonymy of "suicide", the urgency of the discussion of the question of funeral rites, and similar matters, among them the constant presence of the thought of suicide in popular works such as the Arabian Nights and modern fairy tales and plays (for instance, W. Eberhard and P. N. Boratav, Typen türkischer Volksmärchen, Wiesbaden 1953; O. Spies, Türkische Puppenspiele, Emsdetten/Westf. 1959, 77, 104 f.; E. Littmann, Arabische Märchen und Schilderungen aus der Gegenwart, 2nd ed. 1962). Had it not been for the general consensus that suicide was a part of daily life in the medieval Muslim world, even if we take into account the likelihood that suicides were hushed up wherever possible because of religious scruples, and the fact that the bulk of available biographical information concerns scholars who were most sensitive to the religious injunction against suicide and pays hardly any attention to other, numerically much stronger, classes of the population, the impression prevails that, everything considered, suicide was of comparatively rare occurrence. The assumption that the teachings of Islam were an effective deterrent may very well be true.

Patton, in Encyclopaedia of religion and ethics, New York 1921, x, 38; Müftü Dağdau, al-Manbubahān fi 'l-Dīnḥiyyā wa-l-Islām, in al-Hilāl, xlii (1934), 473-9; L. Nemoy, A tenth century disquisition on suicide (from Yaḥqūb al-Qiqisānī), in Journal of Biblical Literature, lvi (1938), 411-20; F. Rosenthal, On suicide in Islam, in JAOS, lxvi (1946), 239-259, where much of the earlier literature is listed; H. Ritter, Das Meer der Seele, Wiesbaden 1955, 147, 239, 339, 430, 457, 517, 533. [The very dubious tradition that the Ottoman sultan Bayazid I (q.v.) committed suicide is discussed by M. F. Körprülü in Bell., ii/2 (1937) and by Mükrim Han Yulunç in IA, ii, 388-9.] (F. ROSENTHAL)
Nevertheless in translating thus, one comes up against the way in which the Arab grammarians envisaged this "inflexion".

It should be pointed out, first of all, that these grammarians had no proper term for "declension" and "conjugation", and no general term for "case" and "mood". They proceed in a purely formal manner. Taking sounds into consideration, they make the following division: (a) ra'f = nominative (as al-ra'dul-ai and indicative (as yawb-ul-ai), because both -a and -m are thus masculine (as mubr-ul-ai and subjunctive (as yawb-ul-ai), because both -a and -m are thus masculine, because the transformations are thus different, they act as a verb and the 'ad) and "although" (as yad-ul-i to the Kufans) = genitive (as al-ra'dul-ai), because it takes -i and is thus madjar (al-madjr).

This last has no counterpart in the imperative of the verb, the other, instead of adding a vowel, suppresses a vowel: they say: dijam "cutting" and this imperative is madjam "apocopeated" (as yahdul); it forms the jussive.

In this formal distribution of the three short vowels of the Arabic language the Arab grammarians mingle noun and verb. In addition, for the noun, they consider only the singular, adding merely the qualification munsarif to nouns of three cases (as al-ra'dul-above and gayr munsarif to those of only two cases, such as Ahmad: ahmad-ai (nom.), ahmad-a (gen. and acc.). In the imperative of the verb they impress this difference on the pronouns of the first and second persons only when these are formed by the addition of a short vowel (-u, -a) or by its suppression (madjamum). Arab grammarians, then, do not think of "declension" and "conjugation" as an organic whole, or as a system. Hence the lack of denomination in their terminology and also the difficulty of giving complete precision to "inflexion", when translating srab thus.

On the other hand, and this is most important, they always consider the occurrence of the short vowels in terms of a cause: a: tamil, a: "governing", Things are regarded from a syntactical point of view. This is true to such an extent that if srab is known all the *swaml are known, and the major part of Arabic syntax is also known; thus srab (Dict. of T ech. Terms, 17).

As for de Sacy, he considered that the verb srab could not be rendered more exactly than by "Syntax of terminations" or "terminational syntax" (Antho-

logy grammaticale, i, 186, end n. 2). The srab thus understood is outside morphology, as we understand it.

The conclusion from all this is that we have no adequate term directly to translate srab. A periphrasis is necessary; it is best to adopt the definition that Arab grammarians have themselves given of srab, for example that of the Tafsir of al-Djurdjiani (Cairo 1321), 20: huwa 'liltali 'alilhi bi-'liltali 'aw tadarrs, "it is the difference that occurs, in fact or virtually, at the end of a word, because of the various antecedents that govern it"; bi-haraka aw harf, "by haraka or harf", adds the Mu'assal of al-Zamakhshari (§ 26).

This definition is bound up with a whole system. By srab Arab grammarians denote, first of all, basically the use of the three harakat: damma (-u), kasra (-i) and fatha (-a), at the end of the singular noun, which is thus mubrab (the gayr munsarif is included). This is srab lufs, "actual srab". Words like 'asa-n "stick", muna-n "sense, meaning", which are, in fact, invariable in the singular, are nonetheless called mubrab, but tabarish, "virtually", because of the asl (base): ra'f, *asasun-un, munaun, etc., which is supposed "virtually" to exist behind these words. They contrast srab with its opposite: bi'nab be'tabda', which denotes the state of a word that is fixed to one final haraka or to none at all, independently of any *samil, or whatever the *samil may be. It is thus called mabini: mabini 'ala 'l-damma (as mubnul "since"), 'ala 'l-kasra (as hawula'these"), 'ala 'l-fatha (as ayna "where"?), or mabini 'ala suktan "fixed to quiescence" (as kam "how much?").

The energetic, on the other hand, is seen only as *yafrtula-n, taktul-na, which is thought of as constituting the harf (Sibawayhi, i, 4, line 8), for it can be suppressed without making the forms unrecognizable, like the d in Yazd. There is, strictly speaking, no srab, but the following n is a kind of *yafrtul, a "compensation" for the haraka and the tanin (n-, n-, n-) of the indefinite singular noun, which have disappeared in the formation (Sibawayhi, i, 3, 12-3, 17-8); this noun, in their view, precedes the noun defined by al-. In the imperative, on the other hand, the num, the sign of the ra'f in the masc. pl. yak tul-n, tabulul-n, of the duals yahdul-ai, yahdul-ul, yahdulul-ul, and of the fem. sing. tahdul-l-na, is thought of as constituting the srab (Sibawayhi, i, 4, line 8), for it can be suppressed without making the forms unrecognizable. As for the fem. pl. yak tul-ul, tabulul-ai, (tabilul-ai, Akili, i, 36, lines 14-5), it falls under bind, mubnul "sukin before -na, a damir (personal pronoun), from their point of view. The energetic, on the other hand, is seen only as comprising a particle, the num, before which the verb is mabni 'ala 'l-fatha (Sibawayhi, i, 5, 6): yahdul-n or yahdul-ul-na, etc.

The verbal forms are thus considered in isolation, not being included in a whole, a conjugation, and this confirms that which we have seen above. The interest of Arab grammarians lies elsewhere. That which they study is the organization of the srab, and of the srab, and of the duals, etc., or yadul, or yahdul-ai, or yahdul-ul in the feminine, etc., of the harf. The srab is a "compensation" for the harf and the tanin (n-, n-, n-) of the indefinite singular noun, which have disappeared in the formation (Sibawayhi, i, 3, 12-3, 17-8); this noun, in their view, precedes the noun defined by al-. In the imperative, on the other hand, the num, the sign of the ra'f in the masc.
talists. Like him, we think that "in this, too, it is
the simplest that is the most likely", that is, to
take 'arba'a in the sense of: "to Arabize, pronounce
a word in the manner of the pure Arabs" (cf. the
remark of Ibn Djinni, ibid., 36, lines 7-8). We would
wish to bring this out in the light of the linguistic
situation in which at least the first three generations
of grammarians, from 'Abd Allâh b. Abî Isbâk
(born about 30/651, d. 117/735) to Sibawayhi (d. 177/
793), found themselves: Arabic without 'arba'a learnt
and spoken by the Arabized, Arabic without 'arba'
spoke in the towns themselves that the Arab had
created (Basra, Kûfa; see H. Fleisch, Arabe classique
et arabe dialectal, in Travaux et Jours, no. 12 (1964),
43-5) and the contrast provided by contact with the
Beduin Arabs whose speech was still equipped with
'arba'a. The Arab grammarians wished to "Arabize"
the language of their society, to make it conform to
the speech of these Beduins, the carriers of the
"true" Arabic; this is most probable and quite
sufficient to explain 'arba'a, 'arba'a as we have taken it.
By doing this, we are maintaining that 'arba'a was
retained by the tribes at least until the end of the
2nd/8th century (without deciding for later times;
see H. Fleisch, Traité de philologie arabe, i, § 58).

al-Ashtarâbâdî, Shahr al-Khâfiyya, i, 14-80, ii, 1-2,
292-324; Shahr of Ibn Idrîs, Paris 1879).
IRÂDE, literally "will", a term adopted in
Official Ottoman usage from 1832 to designate decrees
and orders issued in the name of the Sultan. The
formal procedure was for draft decrees prepared
by ministers and officials to be addressed to the
Sultan's chief secretary (Serhâb-i shâhriyâr), who
read them to the Sultan and received and noted his
comments. If he approved, the chief secretary then
communicated the text to the Grand Vizier, as the
Sultan's will. Under the constitution, the Sultan's
function was limited to giving his assent to the
decisions of the government. The term Irâde
remained in use for this assent.
(Ed.)
IRÂFA [see 'Arâf, Kîhâna].
IRÂK, a sovereign State, of the Muslim religion,
for the most part Arabic-speaking, situated at the
eastern end of the Fertile Crescent.
I.— Geographical

The structure of 'Irâk paradoxically derives its
originality from the fact that it forms part of a large
geographical block of territory. From the Arabo-
Syrian desert tableland which it faces along its
south-western flank, it takes its general aspect and
its climate. All along its frontiers on the North-East,
on the other hand, it shares the orientation and
relief of the folded mountain-chains of western Asia,
which give it its two great rivers. But these two
rivers, and the vast plain they irrigate, endow it,
under its classical name Mesopotamia, with an in-
dividuality which is undeniable.

This division, into two areas facing respectively
South-West and North-East, is also that which
roughly speaking distinguishes 'Irâk 'arâbi and 'Irâk
şâhîmi. But there is a further and no less essential
division between Upper Mesopotamia and the other
area, and, in general, the Dijâlî, hemmed in between
the Tigris and the Euphrates, and 'Irâk
properly speaking or Mesopotamia, where the two
rivers follow a much more indefinite course.

The climate also reflects this difference; the mean annual
rainfall varies from 50 mm. in the South to 300 mm.
in the North. These two zones are linked together at
the level of the Baghdad region where the Tigris and
the Euphrates, approaching each other very closely for
the first time, make it possible for a whole system
of navigable routes to be established, providing the
necessary crossings and connections.

Symbolised by this intermediate region between
steppe and mountains in one direction, between
Upper Mesopotamia and Lower Mesopotamia in the
other, the situation of the country is indeed that of
a cross-roads, and not merely on a local scale. The
geography of 'Irâk evokes world history, at the meeting-place of
great routes, that from the Mediterranean to Upper Asia, and that from Western
Europe to the Indian Ocean.

Northern 'Irâk. It is in the Dijâlî that the
distinction between the steppe lands in the
South-West and the mountains in the North-East is
most clearly perceptible. There the steppe undergoes
a more or less regular transformation, from West to
East, to lower and less broken country: so regards
climate and ecology, this is a classical Bedouin zone,
and what is more, a zone of transitions and contrasts.

The Euphrates, which within the territory of 'Irâk
is not joined by any tributary strictly speaking, is
above all a river providing irrigation. Its valley,
excavated from a shallow layer of alluvial deposit which
contains the limestones and marls of the Arabo-Syrian
bed-rock, is the traditional home of a sedentary and
fixed agriculture. The river can be and has been
tap water is drawn from the river by means of
wheels with buckets or by systems of ropes and other
methods operated by animals. The agricultural
possibilities are however greater than these antiquated
practices would lead one to suppose: for since the
Middle Ages, when the Arab geographers spoke of
the fertility of the country (cf. Ibn Hawkal, trans.
Wiet, 214f.), the situation has deteriorated, to
allow a greater degree of bedouinization (see Ibn
Hawkal, 221, 223), the effects of which were finally
confirmed during the 18th century. Today, the State
of 'Irâk is proposing to undertake and develop a
policy of constructing large dams (the al-Ramâdî-
al-Habbânîyya complex), in order to facilitate and
develop irrigation while neutralising the considerable
divergences in flow (annual average, 838 cubic
metres/second; maximum discharge of 5,000 cubic
metres/second). In the North-East, the highest mountains
(2588 m), near al-Sulaymâniyya) are associated with the
temporary Zagros folds in Iran, while the Dijâb
Singâr which, to the West of Mosul, is an extension
of the more faulted part of the Palmyra region, is more
closely related to the geological formation of eastern
Syria. This mountain mass encroaches on a broad
front on the basin of the Tigris which, at the defile
of al-Fâbâ, has to cut through the sandstone folds
of the Diabāl Ḩamrān. The higher lands, being very abundantly supplied with water, derive almost no advantage from their damp margins, where the springs also occur, that both cultivation and human beings are concentrated, from the plain of Assyria which is more steppe-like and, around Mosul, is enclosed between the mountains of Sīnjār to the West, of Makūl to the East-North-East and of Makūl to the South, to the sub-alpine area of Arīb, Kīrkūk and Ḩamlūk, watered by the Sīrāf, the Tigris, the Little Zāb and the Diyalā. This region of traditional agriculture is also rich in oil (oil-fields of Mosul and Kīrkūk), and moreover possesses a highly developed system of communications. The Tigris, which between the Assyrian plain and Baghdād falls by 310 m., flows through a valley about 4 km. wide, under several tiers of terraces. At the end, the fall of the river is sufficiently slight, and its current sufficiently powerful (average of 1400 cubic m. per second), to allow navigation on quite a considerable scale, for which purpose rafts on inflated goat-skins are still often employed. But here again, the need to regularize the river and its affluents on account of the extension of irrigated cultivation has given rise to the planning and completion of various dams—the complexes of Samarra—Wādī Tharthār and Balastik (which has been constructed for the Little Zāb, and Derbendī-Ḵān for the Diyalā).

Southern 'Irāk. The geography of southern 'Irāk with its markedly different character, is wholly dominated by the dynamics of the great rivers. It is here that the powerful rivers flowing down from Iranian Luristān, the Kārūn and the Kergā, make their appearance and, at the point where they debouch into the plain, they build up a delta which extends across the basin of the Tigris; having already lost much of its force through the warping of the plain that is being practised farther to the North, the Tigris itself then allows its waters to linger in the marshes, mingling in a confused way with part of the waters of the Euphrates. The latter river has in the meanwhile become indubitably the feeblest of the rivers of Mesopotamia. Forced back from their course by the pressure of the hill, the great plain of yellow clay, caked by drought, the river has in the meantime become indisputably the river of the plain that is being practised farther to the North, the Tigris itself then allows its waters to linger in the marshes, mingling in a confused way with part of the waters of the Euphrates. The latter river has in the meanwhile become indubitably the feeblest of the rivers of Mesopotamia. Forced back from their course by the pressure of the hill, the great plain of yellow clay, caked by drought, the river has in the meantime become indisputably the river of the plain that is being practised farther to the North, the Tigris itself then allows its waters to linger in the marshes, mingling in a confused way with part of the waters of the Euphrates. The latter river has in the meanwhile become indubitably the feeblest of the rivers of Mesopotamia. Forced back from their course by the pressure of the hill, the great plain of yellow clay, caked by drought, the rivers, particularly at the time of the annual spring floods: in proportion, the Euphrates brings down as much silt as the Nile, the Tigris four times as much, the Kārūn perhaps even more. Thus a clear indication is given of the dynamics involved, the primary function of the mountains, since the rivers progressively lose their momentum as one goes from North-East to South-West; in contrast to the spent force of the Tigris and especially the Euphrates, it is the alluvial deposits of the Kārūn, amounting to about half a million tons annually, which alone create the bar of the Shāṭṭ al-ʿArab.

The constitution of the soil and its relations with water are directly linked with this hydrographic system, a synonym of both power and confusion. The sediments of the Tigris and Euphrates, in their lower courses where they are under pressure from the Kārūn, now consist solely of very fine mud or clay. As for the depositing of the heavier sediments, which can only take place farther up-stream, it is there compromised by the marshes, the dominant feature of the landscape: at their head is the vast sheet of water and reeds, covering an area 80 km. wide, between al-Hammār, al-Kurna and al-Ṣāliḥ. This shows that, here more than elsewhere, hydraulics is a vital necessity; in addition to the need for keeping the rivers in their regular channels and for normalizing their flow, it is also necessary to establish considerable reserves, in a country where the low water level of the Tigris is an annual and seasonal period, from the month of May onwards. The whole history of southern 'Irāk is dominated by the memory of the shifting of rivers from their courses or of devastation, in answer to which man is making efforts to maintain control over the rivers, with for instance the dams at Kūtt on the Tigris, and at al-Hindiyya on the Euphrates, and plans for improving the marches.

It is moreover by means of these rivers that one can distinguish two regions in Lower Mesopotamia. In the North, the great plain of yellow clay, caked with salt left by the flood-waters, is in essence pasture-land for camels, with typical steppe vegetation. But sedentary agriculture springs up again in the neighbourhood of the arms of the two rivers, or near canals, even temporary ones, and also, in the event of rain, upon cultivable land of a very precarious sort which for a time has been reclaimed from the steppe. Further to the South, on the other hand, when the rivers have become slower and before the marches have invaded the country, there is a somewhat humid region where, thanks to the presence of water at no great depth, cultivation can be practised regularly; the palm tree dominates the region, for a great distance. Beyond that, the reeds and the buffaloes are the chief features of the marshes, a zone whose subsistence and habitat are hazardous.

The Shāṭṭ al-ʿArab and the Persian Gulf. Land and sea here together form one single countrieside: while the tide can force back the fresh water of the great rivers for a distance of about 200 km. inland, and while the land, thanks to alluvial deposits, continues to expand into the Gulf (an average rate of 25 m. annually), the Gulf itself is merely a scarcely submerged estuary, the silt introduced by the rivers being 25 m. Taken as a whole, the natural conditions prevailing in the Gulf are severe—violent winds from Iran and Mesopotamia, a torrid climate, insecure harbours which face the threat of becoming silted up, navigable channels scarce and dangerous. Nevertheless, the balance is not entirely negative: the Gulf abounds in fish, coral, pearls (favoured by the shallow waters of the river) and above all in oil deposits, with the narrow strip of 'Irāk territory being enclosed between the oil-fields of Kuwayt and those of Khūzistān. Finally, it should not be forgotten that the situation of the Gulf, in terms of modern geography, far outweighs the shortcomings of its position: a main channel of important long-distance maritime trade with India and the Far East, the Gulf is in fact an extension of Lower Mesopotamia, with the maritime traffic forming a connection, at al-Baṣra and in the direction of Baghdād, with the railway traffic alongside the Euphrates and also with the river traffic carried on the Tigris.

'Irāk in the works of the Arab geographers. The physiognomy of the water-courses and canals of 'Irāk in the Muslim Middle Ages has already been examined in the articles Bāṯīma, Diyaʿa, Diyaʿāl and Fūrāt. Here, only the best reclaimed and properly speaking will be described.
of the Arab domain, is regarded as the centre of the fourth region, that of Babylon, renowned for its temperate character and the moral or intellectual qualities of its inhabitants. The description is arranged round two main themes, water (the rivers and canals) and the evocation of the capital, whose decline is however emphasised. From the literary point of view, the Irâk theme is thus developed on the two levels of panegyric and elegy.

By the term Irâk, the Arab geographers in fact meant merely Lower Mesopotamia. The northern part of the present Irâk, with some regions belonging to the modern Syria and Turkey, formed part of the Diáatra [q.v.]. Being thus delimited, Irâk ended in the North in the region of Takrit on the Tigris, and a little above Hit on the Euphrates. From there and in a south-easterly direction, the boundary followed the approaches to the steppe, towards ʿAyn al-Tamr, al-Kudisiyya, al-Hira and the region of the South of al- Başra. Along the mountainous side it mainly followed the present frontier between Irâk and Iran, but it extended further to the South, on the left bank of the Shatt al-ʿArab.

The general features of the country emerge fairly clearly. The climate is given as temperate along the mountain border in the North-East, and often torrid but changeable in the rest of the country, especially in al- Başra, caught between the borders of the Persian Gulf and the winds from the North which temper the effects. In general, however, the worst is the humid hot climate of the Marshes (thaṭâḥ), where mosquitoes abound.

Distances are on the whole measured quite correctly: al-Muкалâddasì (134) gives 125 parasangs as the distance from the Gulf to al-Sinn, north of Takrit, or a little less than 750 km., a distance hardly less, in fact, than that between the mouth of the Tigris and the Shatt al-ʿArab and the confluence of the Tigris and the little Zâb. For the greatest width, from Hul- wân, east of Sâmarrâ, to the steppe, al-Muкалâddasì gives 80 parasangs, that is about 450 km., a figure covering exactly the distance between the Iranian frontier in the region of al-Sulâymaniyya on the one side and, on a line drawn from al-Sulâymaniyya at right angles to the basin of the Tigris and Euphrates, a point situated on the right bank of the Euphrates, 60 km. inside the Syrian steppe, on the other side.

Great attention is given to the problems concerning water: in al- Başra, where water is scarce, it was for some time brought by boat from the nearby town of al-UBYlla. Elsewhere it is provided by the two rivers, their tributaries and the canals, of which the most important are the Nahr al-Islâkî, the Dujdaylî, the Nahrawân, the Khâlîs, the Nahr Ṭîsa, the Nahr Ṣargâr, the Nahr al-Malik, the Nahr Kûthâ and the Nîl.

The most precise account of the territorial divisions is given by al-Muкалâddasì (114-5). According to his system, Irâk constitutes a geographical entity, a province (iklim), of which Baghdât is the metropolis (miyâr). The whole country is split into six regions (kwâar, sing. kâra) of which the chief towns (musulûm, sing. madina) are respectively al-Kûfâ, al- Başra, Wasît, Baghdât, Hulwân and Sâmarrâ. This division of the country does not however entirely blur the lines of another division, deriving from the fact that the country was rich enough for uninterrupted cultivation, at least in its central zone, to have earned the name Sawâd, the dark land. The units of land for taxation purposes (fasâšâdî, sing. fasâšâdî), most necessary by the limit between the land tax (kharâdî), generally bear Iranian denominations, evidently earlier than Islam: in al-Mukâddasì, they are given as Hulwân, Shâdhabbâd, Barmâšiyân, Bâk-bâkân, al-Awârât, Ardashîr-Bâkân, Shadbâbâr, Shadbâhmân, Astân, Shâdhaburmuz and al-Nahrwânât. The magnitude of the transactions may be gauged incidentally from the openly criticized number of indirect taxes—tolls, dues and taxes on animals, sales and pilgrimages.

Religious geography takes an important place, at least in certain writers: they note the existence of large colonies of Jews or Christians and of survivors of fire worship. The strength of Irâk Shiʿism is emphasised, but, reading between the lines (cf. al-Mukâddasì, 126), one has the impression of the vigour and vigour of the Sunnis. In a more general way, the partisan passions and their political background are a characteristic feature, noted in every town of Irâk.

There are records of certain wonders (sagâdâb) and of the sanctuaries; among the most notable might be included the arch of Ctesiphon (Iwân Īskrâ), the ruins of Babylon (Bâbûl), the burial-places of ʿAll and Ḥusayn, the remains of al-Ḫira, of the Sâsûnī Dastāджîrã and of Sâmarrâ, the “ashes” of Abraham’s fire at Kûthâ, and lastly the tombs of saintly personages in al-Kûfû, al- Başra and Baghdât.

Under the heading of manners and customs, one invariably has to be noted is the commerce, urbanity and charm of the inhabitants and the undeniable piety of large elements of the population. The chief topic, however, is always commerce, based upon the needs of the towns, and carried on by Baghdât in essential goods. Agriculture concentrated upon the three basic products, cereals, date-palms and fruit, especially grapes; the cultivation of forage-plants, rice and sesame appear less frequently. In the realm of craftsmanship, al- Başra dealt in fine fabrics, luxury articles (pearls and jewels), antiquity and libthage, which were exported, as were rose-water, essence of violets and henna, although the most important article of trade remained dates. Baghdât too dealt in luxury products and clothing, but also in dye-stuffs. The Marshes produced matting, Takrit was known for wool, Wasît (which also relied on fishing) for hangings, the marshes for reed-bracelets, violet and turbans, and al-Ubulla for cloth and bricks.

Taken as a whole, the geography of Irâk as seen by the writers of the Muslim Middle Ages, far more in human than in physical terms, connected the physiognomy, the life and the destiny of the country with water, the source of its wealth and trade. No author discerned or evoked this phenomenon more successfully than al-Mukâddasì, the master of this genre in the 4th/10th century. Referring to the Tigris, he wrote (124): “It is a source of profit, thanks to the laden boats which travel up and down the river ceaselessly; upon these vessels, in Baghdât, men arrive, depart, or cross the river, in a deaening tumult. Two-thirds of the charm of Baghdât resides on its river-banks”.

For classical antiquity, see M. Besneri, Lexique de géographie ancienne, Paris 1914; for the Muslim Middle Ages, cf. bbl. of the articles already mentioned; G. Le Strange, The Lands of the Eastern Caliphate, 2nd. ed., Cambridge 1930; A. Süsa, al-'Irāk fi 'l-baḥrāt al-badīma, Bagdad 1939. Miquel) ii.—DEMOGRAPHY AND ETHNOGRAPHY The alluvial plain of the Tigris and Euphrates in ‘Irāk, like that of the Nile in Egypt, could only be extensively cultivated and colonized when techniques of drainage and irrigation were sufficiently advanced in late Neolithic times. Since then, the ethnic history of ‘Irāk has been much more troubled and eventful than that of Egypt, partly because the rivers of ‘Irāk are less easy to control than the Nile, and partly because the lowlands of ‘Irāk are not removed from invasion, as are those of Egypt, by barren deserts on either side. On the contrary, there is no natural barrier between the irrigated plains of ‘Irāk and the steppes of the Hamad on one side, and the foothills of the Zagros ranges on the other. In summer, the beduin are attracted from the parched scrubland of the Hamad and Dzair to the valley-pastures irrigated by the floods of early summer, while in the winter the tribes of the Zagros come down from their high alps to warmer quarters in the riverine plains. The two main ethnic elements in the lowland population of ‘Irāk can be traced to the above two adjacent regions. From the steppe comes the long-headed, in general lightly built ‘Mediterranean’ stock; from the hills, the broad-headed and taller elements of ‘Alpine’ ancestry, such as the early Sumerians. A third constituent is the somewhat taller and more aquiline-featured ‘Eurafrican’ variety of the ‘Mediterranean’ race, and a fourth would be a ‘Negroid’ or ‘Veddoid’ substratum, which Keith confirmed in his brilliant analysis included in Field’s classic and anthropometric study of 1925 of ‘Irāk army recruits. According to the measurements of Baxton, Field and Penniman of the earliest skeletons from Kish and other archaeological sites, the ethnic constitution of the valley population has altered little since the earliest times, except for a possible slight increase in the ‘Alpine’ element. In the hill country of the north-east of present-day ‘Irāk, the Kurds and allied tribes incorporate two strains, both of tall stature: the long-headed and fair ‘Nordic’, which doubtless brought in the main features of the language and culture of the people in the second millennium B.C.; and the very broad- headed ‘Alpine’ or ‘Armenoid’, with dark hair, brown eyes and prominent, often aquiline, nose, which is doubtless ‘aboriginal’ in these mountains. Von Luschan showed that this ‘Armenoid’ stock is extremely persistent and tends to crystallize into a very homogeneous type in conditions of marked topographic and social isolation, as for example among the Yazidis [q.v.] of the Sindjar mountains of northern ‘Irāk or the Assyrian Christian communities of the Zakho district. It may be that there is a topographic limit to the successful spread of the ‘Eurafrican-Mediterranean’ desert stock, for it is remarkable that the Arabic language, the beduin tribal system, and even the characteristic architecture of the steppes cease abruptly at the rise of elevation marked by the Kurdish escarpment of Northern ‘Irāk and by the Zagros foothills to the south. The presence of this barrier to movement contributed, to this problem, that the ‘Eurafrican-Mediterranean’ stock of the deserts may, on movement to high altitudes, be prone to chest troubles which the indigenous mountain folk are better equipped, through natural selection, to resist. Throughout recorded history, it is clear that the economic prosperity and, as a corollary, the density of population of the river plains of ‘Irāk have fluctuated markedly according as the rivers were controlled and irrigation extended, or alternatively as the dams and canals fell into disrepair and cultivated land reverted to swamp, or at best to seasonal pasture. The Mongol invasions of the 7th/13th century initiated a long period of such decline, during which the plains were largely owned by or held in fealty to the great beduin tribes of the Hamad and Dzair, notably the ‘Amār and the ‘Harda’īn [q.v.]. The present settled population still widely recognizes its tribal constitution and its allegiances and blood-ties with the beduin communities, and it has been a hard task for successive governments to overcome a long aversion to settled agriculture amongst substantial and influential elements in the population. Nevertheless, it is clear from demographic statistics that during the present century, and notably since the Second World War, ‘Irāk has entered firmly on a new period of prosperity based on a renovated system of irrigation and a thriving industrial economy. In 1930, the population was calculated at 2.8 millions; in 1943 the figure had reached very nearly 4 millions; in 1950, 4.8; in 1957, 6.3; and in 1965, 8.2 millions. Even allowing for improved techniques of taking the census during this time, there has clearly been a quite remarkable rise in numbers, which can only be accounted for by natural increase. In the latest census, it is notable that the urban section of the population has become almost as numerous as the rural, doubtless owing in large measure to the increasing importance of the oil business and its ancillary industries. The recent remarkable expansion of the capital city is a phenomenon which is observable in other countries of South-West Asia. While for long the censuses showed females outnumbering males in the country as a whole, this
situation was reversed in 1965. At present there is a marked concentration of population in the prosperous canal districts around the capital city, and less pronounced clusters in the districts of Basra and Mosul. The rivers generally exert an attraction to settlement, though their banks are still by no means uniformly reclaimed to cultivation. The marshes of the lower Euphrates in the district of Samawa, for example, are occupied only by a thin population of Marsh Arabs, distinct in custom and economy. The quite high density of settlement in the mountains of the north-east of the country should be noted, especially around Sulaymaniyya. This is the only part of Iraq where the rainfall is adequate for agriculture without the aid of irrigation, and here live the bulk of the Kurdish tribes, estimated to number about one quarter of a million. Less numerous minority groups are the Yazidis of Sinjar, calculated at nearly 56,000, and the Mandaeans or Christians of St. John, who inhabit a few villages along the banks of the Shatt al-'Arab.

III.—HISTORY: (a) ANCIENT HISTORY [see Bakr b. Wā'il, al-Hira, Iwān, Lakhmis, al-Madīna, Nabat, al-Ubada, etc.]

(b) FROM THE ARAB CONQUEST TO 1258

'Irāk, a fertile rich region from very early times, had attracted some Arab groups before the appearance of Islam. The Christian Lakhmis [g.v.] had settled around al-Hira [g.v.] as early as the 3rd century, and had been entrusted by the Sassanids with the task of defending the territory of Mesopotamia from any possible incursions by the Byzantines or their allies. In the 6th century, moreover, certain tribes from central Arabia, the Taghilib and the Bakr b. Wā'il [g.v.], as a result of economic difficulties not fully known to us, left their original home-land for the steppes of the Lower Euphrates, to be followed by some members of the Tamīl [g.v.]; they even began to move upstream, establishing themselves between the territories controlled by the Lakhmids in Mesopotamia and those ruled by the Kinda [g.v.] in northern Arabia; some of them appear at that time to have been converted to Christianity.

The conquest of Iraq, which the caliph may or may not have already had in mind when he started to enter into relations with the Arab tribes who were established in that country, was begun during the caliphate of 'Umar [g.v.].

When Arabia had been entirely pacified through the efforts of Abū Bakr, Khālid b. al-Walīd [g.v.], after putting an end to the Ridda [g.v.], is said to have been invited by a leader of the Bakr, al-Muḥāammad b. Haritha, a recent convert to Islam, to come and join him in invading the fertile lands of 'Irāk. It was in the spring or summer of 12/633 that Khālid appeared with a small force outside al-Ḫira, which he surrendered rapidly. But operations became slower when, in 13/634, Khālid was sent to the Syrian front, leaving the Muslims under the command of al-Muḥāammad. A war of skirmishes, with various incidents, then followed for some months between the Muslims and the Persians; defeated at the "battle of the Bridge", al-Muḥāammad won a victory in the following year at Badawiy, but he died soon afterwards. And it was a new leader, Sa'd b. Abī Waḳṣa [g.v.], a former Companion, who in the spring of 16/637 had to face the attack launched by the Sāṣānid general Rustam: the decisive battle, which lasted three days and three nights and in the course of which the Muslims encountered forces two or three times as numerous as their own, took place at al-Kādisiyah [g.v.], 30 km south-east of al-Ḫira. The victory finally won by the Muslims opened 'Irāk to them. Now, the whole province from 50/670 until his death in 153/672, Khālid, who, after being responsible for the death of al-Husayn at Karbala, had entered the service of the Abbasids, occupied the whole of the country whose inhabitants, being of Aramaic origin, seem to have welcomed the conquerors, semi-otic-speaking like themselves, without displeasure. The fortified camp of al-Ḵabra [g.v.], on the Shatt al-'Arab, was established in 17/638, subsequently being gradually improved and strengthened, while the camp of al-Kūfa [g.v.], to the south of the modern Baghda which also on the right bank of the Euphrates, was established in 17 or 18/639, and was destined to constitute the new capital of 'Irāk, replacing Ctesiphon, the site of which was abandoned and which gradually lost its inhabitants. The final conquest of 'Irāk was assured by the victory at Nihawand (21/642) which opened the Iranian territories to the Muslim troops. Al-Ḵabra and al-Kūfa, now entrusted to separate governors, became the twin capitals. It was in the next year, 22/643, that Ali b. Abī Talib was appointed governor of al-Ḫira and al-Kufa that 'Ali held his court during the conflict in which he opposed, on the one hand, Muṣṭafā, and on the other, the Khālid, whom he crushed at al-Nahrawān [g.v.] in 35/658; it was there also that 'Ali was assassinated by Ibn Muljam [g.v.] in 40/661.

The triumph of Muṣṭafā, the governor of Syria, and the appearance of the Umayyad dynasty together resulted in Syria being given pre-eminence over 'Irāk, although 'Irāk at that time was a richer and more populous region whose inhabitants were perhaps more experienced than the Syrians in the problems of administration and government that confronted a great empire.

In the time of Muṣṭafā, 'Irāk had a single governor in the person of Ziyād [g.v.] who, after being first appointed governor of al-Ḫira in 45/665, ruled the whole province from 50/670 until his death in 53/673. In 53/675, his son 'Ubayd Allāh b. Ziyād [g.v.] continued his work. It was he who was in part responsible for the death of al-Husayn [g.v.] at Karbala [g.v.] in 61/680, at the beginning of the reign of the caliph Yazid [g.v.].

The years that followed were marked by the revolt of the anti-caliph ʿAbd Allāh b. al-Zubayr [g.v.] who...
had the support of the majority of the inhabitants of al-Kufa and al-Basra (the Tamim in particular). 'Irak was then entrusted to Mu'āshib b. al-Zubayr [q.v.]. His primary task was to oppose the revolt of al-Muhallab [q.v.] which began in 66/686 and which was repressed some months later in 67/687 [see HARûK], and he himself died shortly afterwards in a battle against the armies of 'Abd al-Malik [q.v.]. In 72/691, the Umayyads re-established their authority over 'Irak. However, in view of the hostility of the Khâridjîs who did not disarm, the caliph in 75/694 entrusted the governorship of al-Kufa. It was at this period that al-Hâdîdîdîjî, after restoring discipline in the 'Irakî forces commanded by al-Muhallab [q.v.], and then crushing the revolt of Ibn al-Ash'âb [q.v.] who had occupied al-Basra and al-Kufa, founded the new town of Wāṣît [q.v.] in 83/702. During the same period, the administrative and monetary reforms of 'Abd al-Malik came into force, as a result of which new coins were minted at Wāṣît; the period also brought to light a grave problem, the abandonment of holdings of land by agricultural workers converted to Islam, who refused to continue to pay the same taxes as they had done before their conversion [see KHâRâDî]. Rivalries between tribes manifested themselves in 'Irak, as in Syria; while al-Hâdîdîjî supported Rays [q.v.], one of his successors, Yazid b. al-Muhallab [q.v.], persecuted them until he was imprisoned by order of the caliph 'Umar b. 'Abd al-'Azîz [q.v.]; escaping from prison, Yazid stirred up a rebellion which was crushed in 102/721 by the Umayyad prince Mâsîlamâ [q.v.], to whom incidentally credit is due for the reclamation of new marsh lands close to the Shatt al-'Arab [see al-Bâṭîn]. Order in 'Irak was restored in the time of the caliph Hîshâm [q.v.], under the governorship of Khâlid b. 'Abd Allâh al-Kâṣîrî [q.v.], later executed in the time of al-Walîd II [q.v.]. The end of the Umayyad epoch was marked by increasing troubles, due to the turbulence both of the 'Abbâsîd faction and also of the Khâridjîs who for some time occupied al-Kufa. The governor Ibn Hûbyâr [q.v.] was unable to oppose the invasion by 'Abbâsîd troops; besieged in Wâṣît, he finally surrendered after the defeat of the Umayyad armies, in return for a promised safe-conduct which was not respected. On the other hand, the Abbasid caliph al-Mahdî, incidentally, the collection of these taxes from the financiers who were expert in fiscal matters and who had already had occasion, before their accession to the vizierate, to resolve the delicate problems generally raised by the calculation of taxes in this region. From the time of the caliphate of al-Mahdî, incidentally, the collection of these taxes was made on the principle of a proportional advance payment in kind.

The nomination by the caliph al-Râdî [q.v.] of an amîr al-umârâ in the person of Ibn Râhîk [q.v.] opened a new era which extended from 336/945 until 44/1055, in the course of which 'Irak, still disturbed by dissensions and military campaigns which impaired its agricultural prosperity, ceased to be the centre of the empire and became merely a single region in the political complex controlled by the Buwayhidîs [q.v.]. The Shi'î, probably Ima'mi, convictions of these amîrî led them to favour the celebration of Shi'î festivals [see MUSHâRAM] and to have mausolea erected or reconstructed on the tombs of imâms then existing in 'Irak [see MAṢ'Â]. But this policy met with opposition from the Sunni elements in the population and soon also from the caliph himself [see AL-RâD], Moreover, the tax concessions granted to the amîrs on the so-called khârîdî [q.v.] lands did not improve the situation of the agricultural workers, upon whom the wealth of the region partly depended.

In 'Irak, which for a time was disturbed by the episode of the pro-Fatimid revolt of al-Bešârî [q.v.], the arrival of the Saljûqîs [q.v.] established until the Mongol invasion a new régime essentially characterized by its efforts to restore Sunnism. But this tendency did not pass without disagreements, on the one hand without new dissensions between Shâfi'îs and IJa'âfâris [see AL-SHAFI], on the other hand between the caliphs and the sultans, who had incidentally made Isha'ân their capital, or on the other hand without new dissensions between Shi'îs who won over to Aṣ'ârîs and Hanbalîs [see al-ṢÎJÂ'I, AL-ÂSH'ÂRIYYA, AL-MAṢ'Â]. The Saldjuks continued to dominate 'Irak in the 6th/12th century, but their empire was then rapidly disintegrating. The branch which established an autonomous principality in 'Irak went back to Mûmhîd b. Mûhâmâd [q.v.], nephew of Santîlîr, who came to power in 511/1115. This branch remained there until the coming of the Khâwarîzmshâhs [q.v.] in 590/1194; but already by this time the authority of the Saljûq amîrs of 'Irak had been attacked by the 'Abbâsîd caliphs who were attempting to shake off their tutelage. As a consequence, there were struggles for influence, the most serious taking place in the reign of the sultan Mas'ûd [q.v.], and they brought about the execution of the caliph al-Mustâdshîd [q.v.] in 529/1135 and of the caliph al-Râhîd [q.v.] in 530/1136, and the accession of al-Mu'taṣâfî [q.v.], chosen by the sultan. However, the sultans'
power declined continuously, and the caliph al-Nasir [q.v.], who reigned from 575/1180 to 622/1225, even distinguished himself by trying in vain to keep the principal Sunni States in the East the organization of the futuwwa [q.v.], which seemed to him the best method of re-establishing, under his own direction, the moral and political unity of the old 'Abbasid empire. The undertaking did not however have the expected success, and the 'Abbasid caliphs ceased to dominate 'Irak when the Mongols conquered the country in 656/1258 [see Al-Musta'in]. Bibliography: No history of 'Irak for the period under consideration exists. See the articles indicated in the text, particularly with reference to the dynasties, caliphs, sultans, governors and also the towns. For the episodes of the conquest, see F. Gabrieli, Muhammad and the conquests of Islam, London 1968, 128-26 and bibl., 245.

(c) 1258-1534

The period extending from the Mongol conquest to the Ottoman conquest does not reveal any unity, unless it be in emphasising, by the rapid succession of dynasties, that, with the disappearance of the Caliphate, 'Irak entered a period of political decline which was to last until after the 16th century, and witnessed the intensification of an economic decline which reached one of its lowest points in the 15th century, the process of this decline being still insufficiently understood. The period of about three centuries covering the Mongol (Ilkhanids, Jalayirids, Timurids) and Turcoman rulers (Kara-Koyunlu, Ak-Koyunlu, Safawids) has not been the subject of any comprehensive study; detailed works on historical geography, the administrative system, and social and economic structures are inadequate, and the political history has been only relatively better reconstructed. Extracts from the most important sources are grouped chronologically in 'Abbâs al-'Azrâwî, Ta'rikh al-'Irak bayn iltisâlîyân, iili (and iv), Baghdad 1935 sqq. The principal sources are, for the Ilkhanid period, the works of Ibn al-Fuwâî [q.v.]; for the Kara- and Ak-Koyunlu period the Ta'rikh al-Qâhîyâ (unpublished) and Abû Bakr Tîrnârî, Tîrikh-i Diyârbakriyya, ed. Faruk Sûmer, 2 vol., Ankara 1962-4.

Under the Ilkâns [q.v.], although it had fallen into the status of a provincial capital, Bagdad still retained a certain intellectual and religious lustre, but was the seat of a government which ruled only Lower Mesopotamia, while Upper Mesopotamia was governed by the Mawâli [q.v.]. The division of 'Irak into two large, distinct and frequently rival administrative units was to be maintained until the Ottoman occupation. Like the other regions of the Ilkhanid empire, the 'Iraki provinces had at their head a Mongol governor (disparate and incomplete lists in Spuler, Die Mongolen in Iran, 348-52), assisted by a non-Mongol nâib, a senior Muslim, Christian or Jewish official, generally a member of one of the viceroyies who struggled for influence in the Ordo. Bagdad and southern 'Irak were held in this manner for twenty years by the group of Khûrâsanî administrators whom the Djûwaynîs controlled. After the disgrace of the latter, the social tensions which became apparent throughout the whole Ilkhanid State were complicated in 'Irak by the presence of numerous Christian and Jewish communities and when the Mongol sovereigns, converted to Islam, vaunted their religious opinions because of the aspirations of Shî'î circles.

At the time of the dismemberment which followed the death of the Ilkhan Aba Sa'dî (715/1315), the provinces of 'Irak at first remained within the Mongol orbit, but 'Hasan Jalayyrî, though faithful to the legitimate succession of the Djengikhanids until the end of his life (1356), nevertheless is known as the founder of a dynasty. Having established themselves in Bagdad, the Djâlayîrids [q.v.] succeeded in ousting their Cubânîd rivals and in extending their authority over Upper Mesopotamia. However, with its two capitals, Bagdadh and Tabriz, their State was more Persian than Arab. After Timur's first campaign in 'Irak (795/1393), a route march punctuated by various halts at places where there was urban resistance, there followed periods of shortlived Timurid domination (796/1393-4, 804/1401-2, 806/1403-5) and Djâlayîrid restorations in which the equivocal support of the Kara-Koyunlu Turcomans played the essential part and foreshadowed their domination in the 15th century. The sack of Bagdad by Timur in 803/1401 (cf. Arabica, ix/2 (1962), 303-9), dealt the already declining capital a blow from which it was never to recover. In fact, the tribalism (Bedouins in the South, Turcomans and Kurds in the North) from then onwards completed the disorganization of the economy and drove away the routes through Persia and Anatolia the caravan traffic between the Persian Gulf, the Black Sea and the Mediterranean. It was a lifeless region that, after the Djâlayîrid dynasty were dispossessed (1410-11), the Kara-Koyunlu were to dispute for two decades (1411-31) with the successors who had been driven back into the southern districts (Khûzîstân, Basra, al-Hilla). The political fragmentation became more pronounced, not only on account of rivalries between Turcoman federations but also as a result of the fact (illustrating the lack of historical unity of a country traditionally divided into distinct zones) that rulers of Bagdad and rulers of Mawâlî were in armed competition, and that the politico-religious movement of the Mîsha'îs [q.v.] who had emerged from the last Djâlayîrids in Lower 'Irak, and, while it there blocked attempts at expansion by the Timurids of Fârs, also safeguarded the country from Turkmen tutelage. The only native movement of sufficient vigour to challenge the authority of the Turcomans, the Mîsha'îs [q.v.] revolt remained limited and, despite the difficulties of its opponents, it did not succeed in capturing Bagdad; even al-Hilla was occupied for only a short time (1466-8). Under the Ak-Koyunlu
who supplanted (1468-9) the Kara-Koyunlu, the condition of 'Irāk was less turbulent. They maintained themselves there for some years after their eviction from Iran by the Şafawid Kızılbaşşah.

The Şafawid domination of 'Irāk (1508-34) was characterized, there as elsewhere, by economic stagnation and by feeble central government. Upper Mesopotamia remained within the orbit of the Mawzili amirs, who had already been powerful there in the time of the Ak-Koyunlu; by securing for themselves authority to govern Baghdad, the Şafawids assured themselves in fact of control of the whole of 'Irāk. At the beginning of the reign of the young Şah Tahmāsp I, one of them, Dhu 'l-Fi'kār, even attempted to secede (1528-9).

(d) The Ottoman Period

The 'Irākī territories from the early 10th/16th to the early 19th century were primarily a bastion of Ottoman power against not only the rulers of Persia, but also the refractory Kurds in the northeast and the Arab tribesmen to the west and southwest of the Tigris-Euphrates plain. In contrast to the western Fertile Crescent, which was conquered in a single campaign in 922/1516 and was never until the late 18th century seriously threatened by an external enemy, the 'Irākī territories were acquired piecemeal, lost and retaken, and held over a long period only by an extensive concession of autonomy to the governors of Baghdad. The 19th century witnessed here, as elsewhere in the Ottoman Empire, a phase of administrative reorganization.

The first Ottoman acquisitions (Mosul, Diyār Bakr [q.v.] and the Kurdish regions east of the Tigris) were obtained in 921-3/1515-7 in the sequel of the Çıldırân [q.v.] campaign. The renewal of hostilities between Sultan Süleyman and Şah Tahmāsp resulted in the Ottoman capture of Baghdad [q.v.] in 941/1534. The Arap dynast of al-Basra [q.v.], Rüşşād b. Mughālim, became a vassal of the sultan, and his territory was later (after 953/1546) fully incorporated in the Ottoman Empire. 'Irāk comprised the three central eyalets of Mosul, Baghdad and al-Basra, and the Kurdish eyalet of Shahrizor to the east, and the eyalet of al-Hasa [q.v.] on the Persian Gulf coast of the Persian Gulf [see Baḥr Fāris]. The eyalet of Diyār Bakr, although lying outside modern 'Irāk, was closely associated with its history in the Ottoman period.

As elsewhere in the Empire, the weakening of central control in the 11th/17th and 12th/18th centuries was reflected in the 'Irākī provinces in the rise of local despotisms and the domination of the garrison-troops in the towns. The governorship of al-Basra, purchased (c. 1021/1612) by a certain Afrāsīāb [q.v.], became hereditary in his family. Another gubernatorial family ruled in al-Hasa from the late 10th/16th century until c. 1074/1663-4. The garrison-troops of Baghdad, by this time a privileged and powerful section of the urban community, produced a faction-leader, Bakr Şu Bāšā [q.v.], who, in order to consolidate his position, negotiated with Şah Abbas [q.v.] of Persia. Baghdad and central 'Irāk thus passed under Persian rule (1033/1623), but the Şafawids failed to hold Mosul and Shahrizor. The Persians were finally ejected from Baghdad by Sultan Murād IV in 1048/1638. The ensuing Ottoman-Şafawid settlement (the Treaty of Zuhab) indicated the border between the two powers (14 Muḥarram 1049/17 May 1639). It was to be reaffirmed after subsequent hostilities until the 19th century.

The Ottoman reconquest brought no lasting stability. The garrison-troops of Baghdad continued to be turbulent and insubordinate. Although the autonomy of the house of Afrāsīāb in al-Hasa was finally suppressed in 1078/1668, the rise of the Mūntāfik confederacy of the marsh and desert Arabs of the south threatened Ottoman control. This was restored by two governors of Baghdad, Hasan Paşa [q.v.], who ruled from 1116/1704 to 1126/1714, and his son and successor, Ahmad Paşa [q.v.], who ruled (with西部) in the interval including the massacre of the Şafawids in 1120/1707. Their authority, like that of other powerful Ottoman governors of the period, rested on a new military and administrative basis. Georgian by origin, Hasan and Ahmad established in Baghdad a Georgian mamlūk household, through which they controlled and administered their province. In consequence of the threat from the Mūntāfik, al-Hasa became in effect a dependency of Baghdad. A more serious danger appeared in the years following 1135/1722, when first the Afghans, then Nādir Şah, succeeded the Şafawids as masters of Persia, and hostilities with the Ottomans were reopened. The key importance of Baghdad in the ensuing campaigns partly explains the acquiescence of the sultanate in the prolonged tenure of power and autonomous position of Ahmad Paşa. It was at this time also that members of the Şafawid 'ulama, who had established themselves as quasi-hereditary governors of Mosul, Baghdad was besieged by Nādir in 1146/1733, and Mosul in 1156/1743, but the long struggle as a whole was indecisive, and the settlement of 1159/1746 merely confirmed the Treaty of Zuhab.

On Ahmad Paşa's death, shortly after that of Nādir Şah (1160/1747), his Mamlūk household was firmly entrenched in power, and formed a self-perpetuating military and administrative elite. The Mamlūks were able to thwart the attempts of the sultan's government to displace them, but failed to develop a regular system of succession to the governorship. The period of the Mamlūk Pāshalīk (1160-1247/1747-1831) witnessed a clash with the Persian ruler, Karim Khan-i Zand, and the temporary loss of al-Hasa (1190-3/1776-9), but the danger passed with Karim Khan's death. The long rule of Ahmad Pāsha, who governed Baghdad together with al-Hasa and Shahrizor, marked the apogee of the Mamlūk Pāshalīk, but his later years were preoccupied with unsuccessful attempts to curb the expansion of the Wahhābis into al-Hasa and the fringes of 'Irāk, where they were resisted by the Mūntāfik confederacy. The great Wahhābi raid of 1216/1802 and the sack of Karbala showed the importance of the Mamlūk Pāshalīk in this respect. It survived, however, until Sultan Muḥammad II succeeded by force of arms in ousting Dawūd Paşa [q.v.] and ending the autonomous governorship (1831).

Ottoman administrative reform and increasing European penetration are the principal themes in the history of 'Irāk from 1831 to 1928. Dawūd's immediate successor, Hayreddin undick, undertook reforms, partly for the benefit of the Mamlūk pashas in enforcing their authority upon the tribes. The real turning-point came with the governorship of Midhat Pāsha (1869-72), who saw the application to Baghdad of the Law of Wiḥyets (1864) and the Ottoman Law Land Law (1858). Both of these were westernizing reforms, one creating the framework of a provincial administration of European type, the other establishing individual freehold ownership in tribal lands. Sultan Mehdī Pāsha (1908-12) brought extensive estates in 'Irāk under his private
The emergence of Arab nationalism in the Young Turk period was less evident in the 19th century. The British had superseded the Dutch (as earlier had the Dutch the Portuguese) as the dominant European power in the Gulf. From 1763 Al-Basra was the centre of British trade and the seat of an agency of the East India Company. Baghdad itself was of secondary importance to the British until Bonaparte’s expedition to Egypt, but in 1798 a permanent British resident was appointed there. Interest in the development of communications with India led to surveys of the Euphrates route in the 1820s, and to the beginning of modern river-transport in ‘Iraq. Telegraphic communications followed after 1861, when Istanbul was linked with Baghdad. The German-sponsored project of a railway from Anatolia to the Persian Gulf was resisted by the British government, and only the line from Baghdad to Sannarré was constructed under Ottoman rule.

At the outbreak of the First World War, European political and economic penetration of ‘Iraq was still very limited. In November 1914 an expeditionary force from India occupied the head of the Gulf and al-Basra. A first attempt to capture Baghdad ended with the surrender of the British at Kut al-Amara in April 1916, but a second advance succeeded in taking the city in March 1917. Mosul, however, held out until after the armistice of Mudros ended Ottoman participation in the war. Meanwhile an administration, mainly composed of British and Indian officials, had been established in the occupied ‘Iraqi territory, and formed a transition to the formal assumption of British responsibility for the country under the Mandate of 1920.

**Bibliography**: For detailed bibliographies, see the articles referred to above, especially Bagdad, and also the principal modern works: Abbás al-Azāwā, Ta’rīkh al-‘Irāq bayn ṣilmāy, iv–viii, Baghād 1949–58; S. H. Longrigg, Baghdad, London 1928. (P. M. Holt)

---

By 1918 the British occupation of present-day ‘Iraq was completed, when British forces entered Mosul in November, seven days after the signing of the Mudros Armistice between Turkey and the Allies. However, the contradictory attitudes of British official opinion regarding the political future of the conquered territory caused administrative confusion and led to the rise of anti-British nationalist agitation for the establishment of a Muslim Arab state in the country. When the Mandate over ‘Iraq was awarded to Great Britain in 1920, it sparked off an insurrection led by the Traditionalists of the Alas and fomented by the Ṣāliḥ ‘Awdāl of Nadjaf and Karbalā, the first demand of which required considerable force and was completed early in 1921. The suppression of the insurrection was preceded by the appointment of Sir Percy Cox as British High Commissioner, who set up an Arab Council of State to perform the functions of government, thus ending military rule in October 1920. In March 1921 the Cairo conference was held under the presidency of Winston Churchill, the Colonial Secretary. In dealing with the situation in ‘Iraq the conference resolved to offer the rulership of the country to Faysal, the second son of Sharīf Ḥusayn of Mecca, who had been ousted from Syria in July 1920 by the French. The choice of Faysal as King of ‘Iraq was approved by the Council of State and confirmed in a referendum, and he was crowned in August 1921 as a constitutional monarch with a representative and democratic government (see DUSTūs, 659). ‘Iraq remained with the mandatory power was regulated by a series of agreements, the last of which was signed in 1930 and gave ‘Iraq formal independence and provided for a close Anglo-Iraqi alliance to last 25 years. Thus in 1932 ‘Iraq was admitted to the League of Nations as an independent sovereign state.

When ‘Iraq became independent, the country had not attained the social cohesion among its various religious and ethnic groups necessary to make a modern nation. There were too many disruptive local forces representing the various conflicting interests. To control and harness these interests for the good of the state required wise leadership and the ability to strike a balance between the British and the nationalists on the one hand, and the different nationalist groupings on the other. Faysal succeeded in maintaining such an equilibrium, and his sudden death in 1933 was an irreparable loss.

It came at a very troubled period in ‘Iraq’s modern history, when the Assyrian massacre, tribal uprisings and strong anti-British agitation threatened the very foundations of the new state. Ghazi, Faysal’s successor, was inexperienced and lacked the authority of his father to maintain political stability. He was drawn to take sides in the turbulent and faction-ridden politics of ‘Iraq. While certain groups were inclining tribal rebellions to displace their rivals from power, others sought the cooperation of army officers to obtain political power. Thus in 1936 a military coup was carried out by General Bakr ‘Aṣālim in collusion with Iḥkāmat Sulaymān and supported by the reformist political group known as al-Ahdāl. The movement ended within ten months as it began, in another coup. The military intervention in politics set a dangerous precedent that was to follow the republic of 1958. In November 1937 al-Ahdāl came to power, and in April 1938 they were replaced by the Gaylānī regime, which seized power in April 1941 and proceeded to disregard ‘Iraq’s obligation under the Anglo-Iraqi treaty of 1930. This led to the occupation of Bagdad by the British-led Arab Legion of Jordan in May 1941. Following the suppression of the Gaylānī régime and the restoration of constitutional rule, the Iraqi political leader Nūr al-Sa‘īd emerged as the strong man of subsequent cabinets. In 1943 ‘Iraq declared war on the Axis powers and thus became qualified as a charter member of the United Nations Organization, and in 1945 ‘Iraq was admitted to the United Nations.

The end of the war saw a revival of political activities in the country, when political parties were allowed to operate freely. Several parties came into being, all representing the politically aspiring groups of the intelligentsia. All these political organizations demanded the abolition of the Anglo-Iraqi Treaty and called on workers and students to support their demands. Student demonstrations and industrial troubles led to the suppression of these parties.
The early 1950s saw an increase in Iraq's oil revenues, which were channelled towards the building of irrigation dams. The failure of these projects to yield rapid economic advancement caused wide-spread discontent and reinforced the ranks of the opposition. The emergence of a new and radical leadership in Egypt enhanced the opposition groups in Iraq, who continued their campaign against the treaty with Great Britain. Instead they advocated neutralism and an alliance with Egypt. Iraq, however, in the face of strong opposition at home and in the Arab world, joined the Baghdad Pact, the Western-inspired defence system, in 1955, and expressed lukewarm support for Egypt during the Suez crisis of 1956. Egypt's diplomatic triumph and the rise of Abd al-Nasir as an Arab national figure marked a turning-point in the history of royalist Iraq. When Syria and Egypt merged to form the United Arab Republic in 1958, Iraq and Jordan were federated under a Hashimite Crown. In July the monarchy was overthrown by a group of army officers under the leadership of Brigadier Abd al-Karim Kâsim, who declared a republic. Kâsim enjoyed the support of a wide coalition of political and other interests representing the fragmented social structure of Iraqi society. The coalition lacked cohesion and it disintegrated a few months later. For almost five years Kâsim attempted to hold a balance between the contending factions of military and civilian groupings. Under his regime Iraq withdrew from the Baghdad Pact and the Sterling area, and established diplomatic relations with all the communist countries. Kâsim was overthrown in February 1963. His legacy was the complete factionalization of Iraq's internal politics, the alienation of Iraq in the Arab world, and a Kurdish rebellion. He was succeeded by a regime representing the pan-Arab Ba'ath party, which was ousted by President Abd al-Salâm Arîf only seven months after it had assumed power. Arîf was killed in an air crash in 1966 and was succeeded by his brother Abd al-Rahêm, who was in turn overthrown by a group of army officers, a coup that led to the return of the Ba'ath Party to power in 1968.

### IV.—LANGUAGES

The official language of Iraq is Arabic (see *‘Arabiyâ*). But on the one hand the Arabic-speaking area is not at all homogeneous, and on the other hand some Iranian dialects are still much alive, in particular Kurdish, to which recent agreements have accorded an official status in Kurdistan.

#### (a) ARABIC DIALECTS

Two distinct dialect types, representing a variant of the Pan-Arabic division into *gâl* dialects and *gâl* dialects, coexist in the Mesopotamian area. They may be called *qiltu* dialects and *gilit* dialects, using the 1st pers. sing. of the perfect of the verb 'to say' to highlight three of its distinctive features: the reflexes of Old Arabic *q*, the shape of the suffix, and the degree of segholation. The division is partly regional, partly social: *qiltu* dialects are spoken by

the sedentary populations North of a line Sâmarrâ–Fallûjâ, and by non-Muslim sedentaries South of that line; *gilit* dialects are spoken by nomadic, semi-nomadic and Beduinized populations everywhere, and by Muslim sedentaries South of the aforesaid line. The *qiltu* dialects are closely akin to the Arabic spoken in Eastern Anatolia (provs. of Mardin, Diyarbakir, Sîrît and Urfa), whereas the *gilit* dialects extend into Kuwait, the Persian Gulf and Khoristân; they also bear some resemblance to the dialects of Nadîd and to those of Uzbekistan. The kindred *gilit* dialects spoken by relatively recent immigrants from Nadîd, such as the Şammar and *Anaza* tribes, are here left out of account.

A good deal of reliable material has, in the past decade, become available on the dialect of the Baghdad Muslims (hereafter, MB) but of the other *gilit* dialects, only that of Kwêrîs, prov. of al-Hilla, (hereafter Kw.) has received detailed treatment (see the bibliography), though material on al-Gilla, al-‘Afasî and al-Basra has recently become available. Of the *qiltu* dialects, Jewish Baghdamdi (JB) and Christian Baghdamdi (CB) have been described in some detail, while the dialect of Mosul (MO.) is less well-known, and there are only a few scattered notes on *‘Ana, Tikrit and Hîl.*

**Phonology.** The *qiltu* dialects are characterized by *q* for OA *q* (*qâl* 'he said', *gâm* 'he rose', *bâq* 'he stole') and by *k* for OA k (*kân 'he was', *kalb* 'a dog', * şeka* 'he spoke') though *‘Ana* has *î* in these and some other items. The *gilit* dialects have *g* for OA *g* (*gâl, gâm, bâq* though MB has *q* in a good many instances (*qira 'he read', *buqa 'he remained', *qabil* 'he accepted') and *ê* in a few cases (*rîfîj* 'companion', *sargâlraq* 'Eastern'); and *ê* for OA k in many cases (*êbîr 'big', but *kâd* 'big, pt.', *êdân 'he was', but *yên* 'he will be', *šalûb* 'your (m.s.) dog', *talbî* 'your (f.s.) dog'); MB contrasts with the rural *gîlit* dialects as to the amount of affrication: MB *êkîh* 'food', *gêlîd* 'sitting', vs. Kw. *aêl, aêlîd. The Southernmost *gîlit* dialects have *y* for OA *g*. Most of the *qiltu* dialects (MO., CB, JB, Tikrit) have *ê* for OA *r* in many instances (*êsî* 'head'). They also have, again with the exception of *‘Ana, a strong *imâla* (MO. and CB *bîsîd* 'cold', JB *bîsîd*) whereas the *gîlit* dialects, especially MB, tend toward a low, central and even back â in all positional environments (*ba’d*). *Gîlîd* dialects of both types preserve older *ay* and *aw*, but these are more generally represented by *ê* and *ërâ* rather than high, with, for *ê*, a characteristic positional variant [ê] in Baghdad and other Southern dialects. Older *ê* and *ê* are represented by a single *ê* phone, usually heard as a mid central rounded [ê], in the *gîlit* dialects (*êkil* 'all', *kimâma we were', *kêlit* 'writing', *wêqîf* 'standing') whereas MB has both *ê* and *ë*, though they have been redistributed (*bûl, çêma, kêlit, wêqîf*). The fate of short *ê* is extremely complex; it does not, on the whole, follow the *qiltu-gîlit* split, except in the case illustrated by MB *kêma* 'camel', *gêmar* 'moon' vs. MO. *kâmâl, qâmâq. The *gîlit* dialects show practically universal segholation, the quality of the epenthetic vowel varying with environment: *tîb* 'dog', *darwâsh* 'way', *sûtûba* 'breast', *bâd* 'still', the *gîlit* dialects vary in degree of segholation, the most conservative, such as JB, having practically none: *kabûl, dabûţ, xîbâ, bâd*. Common to all dialects, except CB, is the retention of the interdentals *ê, û* and *êê*, the frequent occurrence (esp. in the *gîlit* group) of the emphatic *l*, and the new phonemes *ê* and *êê*, even in the *qiltu* group; a new phoneme *êê* is well established at least in the urban dialects of both types.

**Morphology.** The pronominal suffixes character-
istic of the qiltu group are illustrated below by the Mosul paradigm, those of the gišû group by MB, using the words for 'brother' and 'house':

Mosul  MB
1s. abûyî bêti abûya bêti
2ms. abûl bétak abûl bétak
2fs. abûû bêtî abûû bêtî
3ms. ašûnu bêtu ašû bêta
3fs. ašûna bêta ašûna bêthâ
1p. ašûna bêta ašûna bêna
2p. ašûkîm bêtîkîm ašûkîm bêthum
3p. ašûhim bêtîm ašûhim bêthum

The nominal fem. suff. varies between i (or e) and a in the qiltu group, but is a stable a in the gišû group: Mo. kalbi 'bitch' (for some speakers, kalbeh), bêda 'egg' (JB kalba, bêdî), MB kalba, bêda. In annexation and with suffixes, this suffix has different allomorphs in the two groups: Mo. kalbi abûyî, kalbî, kalbinâ, vs. MB kalbi ašûya, kalbi, kalbatina. Common to the area are plural patterns of the type kâlka (MB), kâlî (Mo.) 'lazy', for adjectives in -ăn, and ḫûyî (MB), ḫayyî (Mo.) 'tailors' for qattîl nouns. Feminines of adjectives of colours and infirmities end in a long, stressed vowel in the gišû group, a short vowel in the qiltu group: Mo. šûda 'black', šumya 'blind', vs. MB šûda, šumya. In the verb, the usual ten form class occurs, with form i rather spacedly represented. Form I has a single pattern qitâlqitâl (the alternation depending on the environment) in the gišû group, e.g., kitab 'he wrote' vs. swbah 'he cooked', a single qatal pattern in some gišû dialects, whereas others have the common twofold qatal vs. qisil, e.g., Mo. katal 'he wrote' vs. šisib 'he drank'. Conjugation of the form I perfect and imperfect is illustrated by the Mosul paradigm (qatal only) and the MB paradigm respectively:

Mosul  MB
1s. katâbu aktîb kitâbat aktîb
2ms. katâtîb aktîb kitâbat aktîb
2fs. katâtîbi aktîb kitâbat aktîb
3ms. katâtib aktîb kitâbat aktîb
3fs. katâtîb aktîb kitâbat aktîb
1p. katâbna nikîb kitâbna nikîb
2p. katâtîm nikîb kitâbta nikîb
3p. katâtîb nikîb kitâbtîn nikîb

The -ăn forms of the imperfect are characteristic of the whole area, as well as Eastern Anatolia, Northern Arabia and Uzbekistan. The rural gišû dialects (and some speakers of MB) maintain a gender distinction in the 2nd and 3rd pers. pl. both in the verb and in the object pron. suff.; the distinction is absent in the qiltu group. A present indicative marker (e.g., Mo. qa, MB da) occurs in most dialects.

Syntax. Indeterminate nouns are, over much of the area, often marked by a morpheme derived from OA *fard (MB qadd, farâd). Determine direct objects are, with varying regularity in the different dialects, marked by an anticipatory pron. suff. plus *i, e.g., MB šîma lâhîh 'I saw your brother'. Also of frequent occurrence in the area are constructions of the type waçaâ lâzîm 'the good boy', i.e., a sort of construct phrase replacing the determinative noun plus adjectival phrase. Peculiar to CB, though it occurs also in Eastern Anatolia, is the use of a postposed copula, e.g., hâda šîlah yânu 'that's your business'. Negation is marked by ma- without postposed *i, by la- in negative imperative.

Vocabulary. Many items are characteristic of the area as a whole; they include a large number of Turkish and Persian loans. The following sampling is in MB unless otherwise indicated: âdîm 'person, individual', âtlâ, 'light', bâzûnâ (a) 'club, bâz, to steal', bûbû 'grandmother', tufqa 'rifle', timman 'rice', fôdi 'rat', cârak 'one-fourth', âtal 'fork', hâlîg 'mouth', hûnîa 'wheat', hâsim 'nose', hûsûga 'spoon', hîtâl 'to hide (intri.),' hû 'good', daaz 'to send', âbâ 'to throw', âbûm 'to hide (trans.),' 'agurruga 'frog', hâlmân 'to trick', giôbba 'room', gadda 'to beg for alms,' lûb, lûb 'another' (marrt ilûb 'again)', maz 'table, mewa 'fruit', niqa (Mo. âa) 'to give', hâdam (Mo. hâm) 'clothes', hâmû 'cow'. Among particles, note âku 'there is', neg. mûhû, the possessive marker mâl, and such adverbs as kam 'also', kudû 'much, many' (Mo. kõtîg, Southern wâgûd), nâmû (ya) 'here' (Mo. nõmi, nâmû 'there' (Mo. nõhîn, nâmîka), hîti 'thus' (Mo. kâhî, bâeb hûtû)'yesterday' (Mo. mbêhêa, bâeb 'tomorrow' (Mo. mûdâ), the interrogatives minus 'who', sî, 'what' (Mo. âa), lôn 'how' (Mo. akûn), wên 'where' (Mo. âa). Among characteristic interjections are i, bâi 'yes', ââ (observation of accomplishment fact: ââ sô 'so here you are'), sô (implying hope or concern: bô ma Paâdet 'you didn't get hurt, I hope?'), yêzî 'that's enough'.

(H. Blanc)

(irâk) (b) Iranian dialects

Although Persian is spoken by large communities in the holy cities of the Şîa, Karbala, Kâtiyman and Nadjaf, the main Iranian language of 'Irâk is Kurdish. Almost the entire population of the iwa'id of Sulaymânîyâ and Arbil and half that of Kirkûk is Kurdish, speaking Central Kurdish dialects. In Mosul iwa'id the Bahdînî dialect of Northern Kurdish is spoken. In the wâsâ'id of Aqâ and Amâdîyâ, Duhûk and Zûhû, and a related dialect is
used by the Yazidis of Sindjar. Southern Kurdish dialects are represented in the Khânakla and Mandall areas of Diyarl.; [see kurdu, Language].

Two other Iranian languages, often erroneously classed as Kurdish, are Gûrânî and Luri. The former is represented in 'Irâk by the Bûdânî dialects [see bûdânî] and the Hâwrânî spoken in a few villages near the Persian border north of the R. Sirwân [see haùraman; gûrân, Language]. Luri, the most closely related to Modern Persian of all Iranian languages, is spoken by the Fâyiyyâla, best known as porters in Baghêdâd.

### v.—Arabic Literature

The history of literary activity in 'Irâk is closely connected with the history of the caliphate, in the sense that Arabic literature, which had been almost exclusively 'Irâki both under the Umayyads (although Damascus was their capital) and also under the 'Abbâsid caliphs during the period when they were the real rulers of the empire, began to be dispersed as soon as more or less independent dynasties became established in various provinces. Since a distinction is drawn in the strict sense, a distinction dependent on the one hand on patronage, in respect of poetry, and on the other on the existence of administrative departments which employed kut llam as far as prose is concerned, the pre-eminence of 'Irâk suffered as soon as poets of talent began to look for patrons at the provincial courts and when the most talented scribes placed themselves at the service of the local rulers. A further point to be noted is the emigration to the West, and to Muslim Spain in particular, of writers and scholars of all disciplines as soon as the politico-religious situation appeared to be dangerous. Thus it can be said that from the 4th/10th century onwards 'Irâk, although still at the head, was increasingly rivalled by the other provinces of the empire; the decline which had already started was accentuated still more under the Seljuqs, and so, at the beginning of the 6th/11th century the Mongols dealt a mortal blow to Arab culture in 'Irâk.

There then began a long period of obscurity, which was to end in the 15th century; incidentally, 'Irâk merely followed, somewhat tardily, the Nâhda of the countries on the shores of the eastern Mediterranean, but after the second world war it embarked upon a deliberately revolutionary course.

Even in the pre-Islamic period Arabic poetry was practised in 'Irâk, especially in al-Hira [q.v.], where an Arab dynasty, the Lakhmis [q.v.], attracted poets who were natives of Arabia, for example al-Nâbiyya al-Dhûbûrî, who encouraged the flowering of local talents, particularly among the Christians, of whom 'Adî b. Zayd al-'îbâdî was outstanding. To judge by fragments considered to be authentic, the poetry which flowed there at Hîra was one of town life, with the inevitable panegyrics but also with bacchic themes which seem to have been characteristic. The end of the Lakhmîd dynasty (A. D. 602), soon followed by the preaching of Islam, seriously checked this poetic activity, but the founding of Başra [q.v.] and Kûfa [q.v.] made Lower Mesopotamia into an Arab colony, with the establishment of tribal elements coming principally from central and eastern Arabia; the Arabization took place rapidly, although the Persian captives composed no poems at that time. They were at least the newly sedentarized Bedouins who are now almost no non-Arabs to be found among the Muslims and gave rise to bloody conflicts, which are echoed in the writings of poets who were supporters of the 'Alids (al-'A'shâ of Hamdân; al-Kumâyit; Khuwayyîr 'Azza, etc.) or the Khârîjîs ('I'mrân b. Hîştân; al-Tîrîmînawî, etc.); their common hostility to the Umayyads has, as its corollary, the praising of the chiefs followed by these men, for whom poetry retained something of its magic character; and it is not uncommon, in such poetry as has survived, to detect an epic quality which makes us regret the loss of the greater part of this literary output which was, for once, inspired by sincere sentiments. There are still almost no non-Arabs to be found among the poets of talent, but perhaps it is as such, although his true character has not been established, that Ibn Mufarrîgh should be regarded; the implacable enemy of the sons of Ziyâd, he was already a member of the band of masâfî who were soon to challenge the Arabs successfully in a field in which the latter claimed to be unrivalled.

The bacchic tradition of al-Hira was maintained, particularly by Êî$hîl b. Badr al-Ghuddânî, but although erotic subjects were in no way neglected, there was still nothing in 'Irâk comparable with the love poetry which flourished during the same period in
in the towns of the Ḥijāz; and it was only with al-ʿAbābī b. al-ʿAbnāʾ (d. in about 190/805) that the Ḥijāz tradition penetrated into ʿIrāk. On the other hand, al-ʿAqlī b. Ḥudūlī of Kūfā is credited with the invention of the ṣurdiṣa [q.v.], which was practised with some success by his compatriot Abu ʿl-Nādīma, and by al-ʿAṣaṭīdī and his son Ruʿba, of Baṣra. For the town-dwelling poets of ʿIrāk, works in ṣurdiṣa subsequently offered a means of proving that they were acquainted with the life and vocabulary of the Beduins, before the ṣurdiṣa became the favourite form of didactic poetry.

In comparison with the pre-Islamic poetic tradition (at least, as one may imagine it to have been), the changes are thus not very spectacular. However, panegyric writing was henceforth addressed to personages who were no longer necessarily tribal chiefs; political and religious themes—though outside the bounds of orthodoxy—assumed a new importance, ṣurdiṣa began to take the form of short epigrams and, although the traditional forms were for the most part respected, some shorter works characterized a transition to a poetry less closely linked with the classical baṣīda.

In a more general way, this first period of intellectual life in ʿIrāk, the end of which coincided with the disappearance of the great Umayyad poets and the close of the true ʿarabiyā as defined by the lexicographers, was a period of adaptation to the new conditions of life for the Arabs settled in ʿIrāk, and of cultural adaptation for the foreign elements absorbed by Islam. In fact, it was this period which saw the beginnings of the development, in both Baṣra and Kūfā, of that Arabo-Islamic culture which was later to embrace the whole of the Muslim world and the assertion of ʿIrāk in all fields of intellectual activity, even though the political centre of the empire was still in Syria.

It is not possible here to describe the part played by ʿIrāk in the elaboration of the religious sciences; in a related sphere, however, it should be noted that grammar, in which the pioneer was probably ʿAbd Allāh b. Abī Ṣaḥāk (d. 1177/776), was an ʿIrākī field of study and remained so. Moreover, it was in ʿIrāk that the main lexicographical and philological investigations were undertaken, work which, together with the systematic collection of ancient verse, proverbs and traditions of a more or less historical character, was to inspire a crowd of scholars or of ruwsī [see ṣawī], among whom Abī ʿAmr b. al-ʿAlī (d. about 154/771), al-ʿĀṣima (d. 213/828) and Abū ʿUbayda (d. 209/824) became well-known a little later, as did many others. The documents thus collected together were to constitute the principal foundation of literary culture, adab [q.v.], the origin of which must likewise be placed in ʿIrāk.

The coming to power of the ʿAbābīs merely accentuated the lead already taken by ʿIrāk in the intellectual sphere, by providing the poets and men of letters of that country and of the other regions of the empire with an opportunity to display their talent before these enlightened patrons. After the found-ering of Baghdad, the two metropolitan cities of Baṣra and Kūfā, whose literary activity was greater and more diversified than in the Ḥijāz, Syria or Egypt, for a time retained the position they had succeeded in attaining, but they soon came to play a less prominent part, merely supplying the new capital with an élite who were assured of finding fame and fortune there. From the second half of the 2nd/8th century there were indeed very few Kūfians or Baṣrans who, through modesty, fear or lack of ambition, did not at least try their luck in Baghdād. In this way a rivalry came into being which produced the most fortunate results for the development of literature.

Another phenomenon also accompanied the transfer of the centre of the empire to ʿIrāk—the introduction of the maḍāḥī [q.v.] not only to Arab culture but also to belles-lettres. A number of ʿIrākī Muslims of non-Arab origin had indeed already held a controlling part in the offices in the administration which, from the earliest time, had been a forcing-ground for men of letters; but a sort of democratization of culture, together with a more or less openly avowed desire to supplant the Arabs, considerably increased the numbers of these maḍāḥī who, having been brought up to use the Arabic language and possessing no other means of expression, adopted their conquerors' idiom and composed poetry and prose with felicity.

Imbued with the Arab poetic tradition, these maḍāḥī willingly sacrificed to custom and, when occasion required, wrote panegyrics which the Bedouin poets would not have rejected; but they tended to impose a "modernistic" poetry, characterized by the abandonment of classical forms and the adoption of themes consonant with the new way of life of the Muslims. The Kūṭāb al-Aḍāhāni, which devotes a very large part to ʿIrākī writing, contains instructive notices on poets of Baṣra or Kūfā who are regarded as modern authors by literary criticism, perhaps because they failed to respect the traditional rules, but who nevertheless deserve lasting attention, since they expressed sincere sentiments, in language of great simplicity, and at times did not scruple to hurl biting invective, the originality of which is unfortunately too often exceeded by its obscenity. All this work, which would, since it is true poetry, repay serious study, has in general been neglected for the most part, merely supplying the new capital with an élite who were assured of finding fame and fortune there. From the second half of the 2nd/8th century there were indeed very few Kūfians or Baṣrans who, through modesty, fear or lack of ambition, did not at least try their luck in Baghdād. complete and needs to be supplemented, despite the diffi- ulties of the task arising from the disappearance of a large proportion of this oral poetry and from the numerous interpolations made during later periods.

Although the evolution of poetry during the period in question is of undeniable importance, the fact which must be equally emphasized is the establish- ment of Arabo-Islamic culture and the accompanying development of Arabic prose; it is no exaggeration to say that Arabic literature, which hitherto has consisted almost exclusively of poetry, entered a new phase as soon as it was felt that prose lent itself better than verse to the expression of thought, however rudimentary, and that this new instrument deserved being taken into consideration; from that time, one has the impression that an equilibrium was reached and that the balance inclined towards prose.

In this field also the influence of Persia was de- cisive; and if the credit of the epitostyle genre, at the end of the Umayyad period, is to be attributed to ‘Abd al-Hamid b. Yahya, it was naturally enough in ‘Irak that this genre was to attain some measure of perfection, so long as the ‘Abbásids of Baghdád held power and employed kutáb (who incidentally were mainly non-Arab); thanks to the risála [q.v.], derived from the official letter, the genre was even to find a characteristic feature of erudite literature.

It was a kātib of the caliphate, Ibn al-Mukaffā’ (d. about 139/757), who with his translation of Kāliya wa-Dimmá and his own writings in fact created Arabic prose, both didactic and entertaining, by introducing into literature adab of the Sásanid type, whose purpose was the moral and so to speak “professional” instruction of the rulers and the people. The apologies of Kāliya wa-Dimmá inspired only one imitation by another Persian kātib, Sahl b. Hārūn (d. 244/858), but the adab of Ibn al-Mukaffā’, supplemented by elements of Persian origin, introduced to the ‘Iráks by translations from the Pahlavi, for a long time was to feed adab works of edification and popular encyclopaedias, first in ‘Irak and then in the other countries of the Arab world. Shortly after Ibn al-

Mukaffā’, translations from the Greek reached Baghdád or made their way into the Bayt al-‘ilmá (q.v.) of the capital, and the adab became limitumin [q.v.], later the fālāsfa [q.v.], while also providing adab with certain new maxims.

One activity which cannot be dismissed too strongly is that of the rauwt, who, coming after the generation which had devoted itself to collecting the elements of the Arab “humanities”, started to classify this vast documentation in a series of monographs, a surprisingly rich inventory of which is provided by the Fihrist; after al-Asma’i, Abu ‘Ubayda and their colleagues, Abu I-Hasan al-Madá’in (d. after 275/889), whose true influence it would be interesting to be able to assess, made available to later generations (though in a still obscure form despite the evident care he gave to classification) an enormous mass of information, traditions, verse, etc., derived from material collected among the Arab tribes.

It fell to al-Dījahž (d. 255/868) to apply critical study to this documentary material, in order to draw from it the necessary elements to constitute a large- scale, clear literary culture, to reject the legendary features and to indicate the methods by which it could be developed by reflection, research and experi- 

ment. Al-Dījahž described himself as a rauwt, but nevertheless was more than that, for although in the Bayt al-‘ilm the adab had limited itself to quoting traditions, he treated ethical adab in a more personal manner, which already amounted to a psychological analysis of qualities of character and a portrayal of society. His work, which should have marked a transition or stage, was in fact regarded as an end in itself by his admirers, or as a kind of betrayal of the Muslim ideal by his detractors, who endeavoured to lead culture and prose literature back to something more utilitarian and more com- patible with the requirements of the average Muslim. Although al-Dījahž had a remote successor in the person of ‘Alí ‘Abd al-Hayván (d. 312/923), he was supplanted, shortly after the collapse of the Mut‘azít movement, by a fāhib, Ibn Kütayba (d. 276/889), who brought a methodical and disci- plined intellect to the service of a more restricted and a less dangerous culture, one in which the religion and inheritance of the Arabs formed a coherent whole, open to the greatest numbers but preventing any kind of access into the outside world. Ibn Kütayba’s adab, represented by the ‘Uyun al-‘akhbár, the Kīdāb al-M arteries and the Kīdāb al-Shīr wa ‘l-‘ubwara, is composed mainly of quotations and traditional material, the greater part of which was to pass into later literature and to contribute largely to the popular encyclopaedias. The literary adab, made fashionable by al-Dījahž and systematized by Ibn Kütayba, was still represented by works such as the Fāmil al-Hawāwiyin (d. 285/898), before descending into the anthologies of verse, of which the Muwashsháth of al-Washshágl, which concentrates on the traditions relating to the dandies of Baghdad, is a typical and relatively original example.

While the works here referred to have survived, for they conformed with the tastes of a clientele which enjoyed short traditional accounts that were easy to memorize and to introduce into conversation, only a few very inadequate fragments are left from what was no doubt a more original literature, although still a subsidiary branch of riwdya, of erudition; to judge by the Fihrist, which records a considerable number of titles, it included true romances of love and adventure, burlesques (mostly obscene), and collections of amusing anecdotes, and in short was a purely literary genre in which imagination played a certain part. But no doubt as a result of a reaction among pietist circles, these works very soon ceased to be copied and merely made their way, in the form of extracts, into later collections where the lack of references makes identification impossible. However, the dual aspect of adab, as both diversion and instruction, can be seen also in a number or works of an intentionally serious character, such as al-Faraj b. ‘abd al-‘ghdá of al-

Tanákh (d. 384/994), which combines proverb, anecdote, and collections and narrative accounts mainly related by kātibs, on the theme of “relaxation after tension”. It is probably significant that it was in ‘Irak that the first stories of the “Thousand and one nights” [see ALF LAYLA WA-LAYLA] were collected together.

The Fihrist (written in 375/987-8) makes it possible to evaluate the richness of Arabic literature in Baghdad towards the end of the 4th/10th century, even allowing for the fact that the book-sellers of the capital may also have sold works written in other countries; in order to estimate the number of works, it would be necessary to reproduce a summary of this invaluable catalogue, a reading of which inspires the greatest admiration for the work of the scholars, writers and poets of ‘Irak.

The Fihrist also shows that the rich legacy of the philologists and rauwts of the early centuries deserves the merit
of collecting and transmitting the greater part of what we know of the Arab heritage, it was also the irdak who set themselves the task of reconstituting the divans of the ancient, the classical and the modernistic poets, and it is quite certain that this erudite work had the most far-reaching consequences on the development of Arabic poetry in irdak and elsewhere; perhaps even it immediately favoured the neo-classicism which followed the modernism. In fact, the modernist movement was only short-lived, and the triumph of Persian influence was far from conclusive since, as early as the end of the 2nd/8th century, the first manifestations of a reaction made their appearance, a reaction characterized by the return to classical forms and the use of more carefully chosen language than that of the modernists, and of more complex rhetorical figures of speech; the mausil themselves did not hesitate to plunge into neo-classicism, since the earliest representative of the movement, Muslim b. al-Walid (d. 287/899), was a mausil and his successors, Abu Tammam (d. 232/845), Ibn al-Rumi (d. 283/896), al-Buhturi (d. 284/897) and Ibn al-Muttazz (d. 294/907), were not all pure Arabs. These poets were finally to incorporate the thematic contributions of modernism in the traditional forms.

Neo-classicism, which originated in irdak, was soon to spread elsewhere, and the best known successor in regions of the Muslim world from the time when Baghdad was no longer its sole, undisputed capital and when the provincial courts attracted the greatest talents; the most celebrated representative of this type of poetry, al-Mutanabbi (d. 354/965), became famous principally in Aleppo, and many others stayed only very briefly in Baghdad. The decay of the Caliphate consequently brought with it a decline of irdak poetry, but the impression remains that the poets of irdak, among whom there was no longer any outstandingly great name, tended to fall back on themselves and to produce a more personal, more lyrical and perhaps more sincere poetry. One of them, Ibn al-Hamadhani (d. 351/961), represents this tendency very clearly, although his work is marred by its intolerable obscenity.

In the field of prose, it was probably towards the end of the 8th/10th century that Muhammad b. Ahmad Abu 'l-Mutahhar al-Azdi, inspired by al-Djahiz, created a new genre by delineating in his Ilkhya a satirical picture of life and manners in Baghdad, but his innovation, though very successful, produced no sequel. During the same period the scribes of the Bâyid chancellery customarily used rhymed prose in the epistolary style and made fashionable an original literary genre, the makâma [g.v.]; but al-Hamadhani was not an irdak, and although one of his most illustrious successors, al-Hariri (d. 516/1122), was a Bâyid, his "Sessions", through the very mass of their lexicographical erudition, bear the stamp of a period when philology had reached its highest point. It is still too early to judge the irdaki literature which has developed particularly since the second world war, but it should be noted that although in comparison with other Arabic-speaking countries irdak seems to show a slight backwardness, it nevertheless remains true that irdak is in general manifesting original and specific tendencies, which will perhaps enable the country to play again such a part as it held in the early days of Islam, at a time when attention was directed first towards Başra and Kifâ, and then towards Baghdad.

Blachère, La poésie arabe au irdak et à Bagdad jusqu'à Maârîf al-Rusâfi, in Arabica, III/5 (1962), 434-54; G. Troupeau, La grammaire d'Bagdad du IXe au XIIIe siècle, ibid., 397-405; J. Lecerf, Poesie dialectale 'irdagienne dans
At a very early date, immediately after the conquest of the country which was embarked upon during the caliphate of Abü Bakr (11/632-13/634) and completed during that of 'Umar (13/634-23/656), 'Irak became the scene of violent clashes among the various parties which were contending for power. From the reign of the caliph 'Uthman (23/644-33/655), a party in opposition to the caliph and the Umayyads came into being in 'Irak, and particularly in Kufa, one of their most energetic military leaders being al-Naṣir b. Jud, who had come from Egypt; he himself ranks as one of the "besiegers of the House" (muṣṭafā) and sometimes even as one of the caliph's murderers.

Under the caliphate of 'Ali b. Abü Ṭālib (33/656-60/680), 'Irak was for a time the stake of a new secession, between the Ḥijāz which for the most part favoured 'Ali, and Syria where Muṣ'awwiya had succeeded in gaining recognition. ʿAṭṭāṣa, Taḥfa and al-Zubayr, who had succeeded in winning over Baṣra to their cause, came into conflict with 'Ali near that town, in the famous battle of the Camel (al-Qāmīl [q.v.]) on 15 Djiumdād II 1369 December 656. Taḥfa and al-Zubayr perished in this confused battle, while the former wife of the Prophet had to return to Medina under a strong escort.

After the inconclusive encounter at ʿSiffin [q.v.], the acceptance by 'Ali of the arbitration (ṣaḥīṣ) proposed by Muṣ'awwiya in 37/657 was the starting point for the establishment of a new Muslim sect, that of the Ḥanafīya [q.v.], one of whose origins, like that of its history, are still extremely obscure. The secession extended to Ḥarḍara; the speech which 'Ali delivered in Kufa in justification of himself led to further desertions among his supporters. The insurrection soon possessed its own territory, its leaders and an embryonic political organization. 'Ali's inability to win back his former supporters, despite a few successes, made a clash inevitable; it took place in the battle of al-Nahrawan [q.v.], on 9 Safar 137/1 July 658. Khwaṭīridj, as a politically-religious movement, was not however destroyed.

The assassination of 'Ali, in 40/661, in the mosque of Kufa, by the Khwaṭīridj Ibn Muḥajjim [q.v.], left Šīʿism weakened and divided. It is to about this time that Muslim heresiography dates the appearance of the "Penitents" (al-Ḥaḍā'īr), a sect of the Sabiʿiyawā, whose founder 'Abd Allāh b. Saba [q.v.] seems to have been a Jew of Kufa, converted to Islam (H. Laoust, Schīʿism, 15-6).

During the reign of Muṣ'awwiya (40/661-60/670), the province of 'Irak was incorporated in the new caliphate of which Damascus became the capital, but it was the centre of opposition from two elements, the Šīʿīs and the Khwaṭīridjīs.

The leader of the Šīʿī resistance, in Kufa, was Nuḥja b. ʿAdi [q.v.], who first clashed with the governor of the town, al-Muṣḥira b. Shuʿba [q.v.], and soon came into open conflict with Ziyād b. Abīth [q.v.]. Charged with rebellion, Nuḥja was arrested and executed in Mardj ʿArbaʿa, near Damascus.

Khwaṭīridj agitation still remained active. Several revolts caused anxiety to the Umayyad caliphate—

- one led by Farwa b. Nafīl in 41/661, another under al-Mustawrid in the following year, and in particular the revolt by two of the men who had fought at Nahrawan, towards the end of the caliphate of Muṣ'awwiya.

The death of Muṣ'awwiya in 60/680, the disputed succession of his son Yāzid and the succession of 'Abd Allāh b. Zubayr [q.v.] favoured the revival of the Šīʿī and Khwaṭīridj opposition parties. The drama at Karbalā [q.v.], where the imām al-Husayn [q.v.] met a martyr's death on 10 Muharram 61/10 October 680, finally confirmed the rupture between the supporters of the Umayyads and those of the Family of the Prophet, although Husayn had met with only reluctant and uncertain support from the inhabitants of Kufa.

The revolt of the Penitents (taṣawwūbihā [q.v.]), an improvised and poorly-led affair, ended with the disaster of ʿAya Waarda, on 22 Djiumdād I 165/1 January 685, but it delayed the Umayyad reconquest of 'Irak.

The revolt of Muṣ'awwiya b. Abī Ubayd [q.v.], which was accompanied by an extremist ideology which was soon to be rejected by Sunni heresiography, was an improvised and poorly-led affair, ended with the disaster of ʿAya Waarda, on 22 Djiumdād I 165/1 January 685, but it delayed the Umayyad reconquest of 'Irak.

The first appearances in public life of the sect of the Kaysāniyya [q.v.] date roughly from this period, when that sect, as well as the 'Abbāsid claimant, Muṣ'awwiya b. 'Ali, on the occasion of his journey to Ḥumayma, the residence of the 'Abbāsids in Jordan. This thesis, of which the 'Abbāsids made use in their anti-Umayyad campaign, was still admitted in the 8th/14th century by such historians as Ibn Kaḥṣir, but it was not revived by the great theoretiors of the caliphate, such as al-Mawardi or Abu ʿI-Maṣfāl al-Ḍiwāyuni.

At the end of the Umayyad period, Šīʿī agitation reappeared with the revolt of Zayd b. 'Ali [q.v.] who rebelled in Kufa in 122/740 and met a tragic death in the town mosque where he had taken refuge with his last supporters. The revolt, though crushed in 'Irak, broke out as a little later in 'Umarāsā; during the caliphate of al-Walid II, under the leadership of Yabāy b. Zayd, whose mausoleum in Dīμāzajdān soon became a place of pilgrimage. With Zayd b. 'Ali there appeared a militant form of Šīʿism, known as Zaydism [q.v.]; according to its theory, authority passed lawfully to every qualified descendant of Fāṭima who called for insurrection and armed struggle (daʿwa and qiyād).

Another rebellion broke out a little later, once
again at Kufa, under 'Abd Allâh b. Mu'tawiya [q.v.], who was descended from neither Fâtimâ nor 'Abî, but from a brother of the latter, Dia'far al-Jayyâr [q.v.], whose death had occurred in 8/629 at the time of the expedition of Mu'ta. The revolt began in Kufa in 127/744, shortly after the accession of Marwân al-Himâr [q.v.]. Finally, crushed, the movement ended in circumstances not fully known. Several of its adherents are placed in the category of ghulât (Dianibiyya, Hârîniyya).

The problem of the Abbasids did not bring calm or religious unity to 'Irâk. Indeed, 'Irâk was pre-eminent the centre of the Mu'tazila [q.v.] movement, which had already made its appearance with the ending of the Umayyads, but which developed more particularly under the caliphate of al-Mâ'mûn and those of his two successors, in the two great schools of Basra and Baghdad. In the school of Basra, it is customary to include among its adherents such men as Abu '1-Hughayl al-'Allâd (d. 227/841 or 235/850 [q.v.]), al-Nazââm and Hîgîmân al-Fuwâštî (d. in about 200/816). In the school of Baghdad, of which Bishr b. al-Mû'tamîr is often considered to be the founder, there were found men of such different personalities as Abû Mûsâ al-Mûrdarî and Thumâmâ b. Ashras.

The two Dia'fars—Dia'far b. Mubashhîr and Dia'far b. Hârîb—are sometimes counted by certain hieographers, such as al-Mâla'tî [q.v.], not as Mu'tazila but rather among the Zaydiyya of Baghdad.

The Mu'tazili faction was to meet vigorous opposition, in the course of various confrontations among which the misna [q.v.] was doubtless the most dramatic episode, from the party of traditionalists, whose most militant representatives may be said to have included, among others, Abûn b. Hanbal [q.v.] and his first disciples [see HâNAsîLA].

The third major characteristic feature of the history of the firaq in mediaeval 'Irâk is found in the considerable importance acquired by imâmî Shi'ism, which sprang to life during the long crisis of the caliphate starting with the death of al-Muta-wakkil, and which was defended by theologians of the very first order, such as the Banû Nawbakht, or al-Kulaynî (d. 359/970), the author of the Kitâb al-Kâfi which deals with both wi'îl and fuvûs. Of the various attempts at construction, it is essential to remember the names of Ibn Bâbîyûsh (d. 381/991), known as al-Shaykh al-Sadûk, al-Mu'îdî (d. 413/1023) and the two brothers al-Ra'dî (d. 406/1016) and al-Murtâdî (d. 436/1045), equally famous as men of letters and as theorists of Imamism. The Shaykh al-Tâ'îla Abû Dia'far al-Tûsî (d. 460/ 1060) is the last great representative of this school.

The arrival of the Sabûkks in Baghdad in 447/1055 marked the start of a revival of Sunnism, punctuated at times by violent crises, such as that of al-Bâsâlî, or by a renewal of Shi'i agitation. Even within Sunnism itself, opposition between the A'Shî'îs and Han-balîs led to fairly frequent clashes, one of the most notorious of these, in 469/1077, being known as the fitna of Ibn al-KuShâyri. In the last two centuries of the caliphate, Mu'tazilism although in its decline still kept its place in Baghdad in the Bu'ayd period, it is easy to remember the names of Ibn Bâbîyûsh (d. 381/991), who is known as al-Shaykh al-Sadûk, al-Mu'îdî (d. 413/1023) and the two brothers al-Ra'dî (d. 406/1016) and al-Murtâdî (d. 436/1045), equally famous as men of letters and as theorists of Imamism. The Shaykh al-Tâ'îla Abû Dia'far al-Tûsî (d. 460/ 1060) is the last great representative of this school.

The geographical conditions peculiar to 'Irâk were long enjoyed and which in fact it began to acquire at the end of the Umayyad period certainly makes it difficult to speak of it as if it were a typically local art which had developed throughout the centuries with a well defined personality springing from the constant factors, aesthetic or technical, imposed on it by the physical character of the country. It should nevertheless not be forgotten that the very character of 'Irâk—as a route between other countries and an irrigable alluvial plain enriched by agriculture and by the traffic of its great rivers, but too frequently devastated by invasions and floods—was suited to particular methods of building, of architectural decoration and of other crafts, methods conditioned by the use of the economical and abundant but not very durable material—clay. This clay, packed together in the form of unbaked or baked bricks for the construction of the buildings themselves, applied for their decoration in facings (which might also be in plaster or stucco), and also worked into coarse pottery or rich enamelled porcelain, permitted the rapid completion, by typically Mesopotamian methods, of works satisfying the demands of a large urban population and of rulers seeking ostentation. But its use at the same time prevented such constructions from being sufficiently solid and durable to survive to the present day except as shapeless ruins. One may therefore distinguish as a characteristic of 'Irâk that its products were simultaneously magnificent and insubstantial—a characteristic appearing in all foundations of the 'Abbâsid period and later imitated in the princely constructions of various provinces of the empire, even when these provinces offered builders better and more durable materials. The two factors combined to make it impossible to 'Irâk (but also varying within its present frontiers according to the different zones of climate and living conditions) must be considered responsible also for the parallel development, throughout its history, of several local schools of art, basically represented by those schools of Baghdad-Samarra on the one hand and those of the Lower Delta on the other, together with that of al-Mawâsil [q.v.] or Upper Mesopotamia, which came more under the influence of the neighbouring

II.—Art and Archaeology

The importance of the role played by 'Irâk in the evolution of Islamic art is directly related to the historical role which 'Irâk assumed from the time that it was the central province of a flourishing 'Abbâsid empire, between the end of the Umayyad period and a period of dissolution, which is generally considered to begin in the 4th/10th century. A methodical description of this role of 'Irâk would involve tracing, through its architecture and also through its minor arts, the various stages of the development of an imperial 'Abbâsid art which began in the capitals of the caliphs as a result of various causes and influences both political and commercial, and which spread to the outer regions of the empire—from which in fact some of its characteristic features had originally stemmed. The progress of this arts is the main title to fame of the craftsmen who worked at that time within the geographical limits of 'Irâk but at the same time made use, in this melting-pot, of all the earlier or contemporary efforts pursued in other Islamic countries.

This "imperial" character which the art of 'Irâk long enjoyed and which in fact it began to acquire at the end of the Umayyad period certainly makes it difficult to speak of it as if it were a typically local art which had developed throughout the centuries with a well defined personality springing from the constant factors, aesthetic or technical, imposed on it by the physical character of the country. It should nevertheless not be forgotten that the very character of 'Irâk—as a route between other countries and an irrigable alluvial plain enriched by agriculture and by the traffic of its great rivers, but too frequently devastated by invasions and floods—was suited to particular methods of building, of architectural decoration and of other crafts, methods conditioned by the use of the economical and abundant but not very durable material—clay. This clay, packed together in the form of unbaked or baked bricks for the construction of the buildings themselves, applied for their decoration in facings (which might also be in plaster or stucco), and also worked into coarse pottery or rich enamelled porcelain, permitted the rapid completion, by typically Mesopotamian methods, of works satisfying the demands of a large urban population and of rulers seeking ostentation. But its use at the same time prevented such constructions from being sufficiently solid and durable to survive to the present day except as shapeless ruins. One may therefore distinguish as a characteristic of 'Irâk that its products were simultaneously magnificent and insubstantial—a characteristic appearing in all foundations of the 'Abbâsid period and later imitated in the princely constructions of various provinces of the empire, even when these provinces offered builders better and more durable materials. The two factors combined to make it impossible to 'Irâk (but also varying within its present frontiers according to the different zones of climate and living conditions) must be considered responsible also for the parallel development, throughout its history, of several local schools of art, basically represented by those schools of Baghdad-Samarra on the one hand and those of the Lower Delta on the other, together with that of al-Mawâsil [q.v.] or Upper Mesopotamia, which came more under the influence of the neighbouring
Anatolia and Adharbayādn. But such distinctions should not lead to too strict a topographical classification of an artistic development which, as always in Islamic countries, also underwent the influence of political events leading to the temporary triumph of minor dynasties. Thus Islamic art in 'Irāk, both architecture and industrial art, should rather be considered in a chronological perspective, particular regard being paid to the fact that probably in no Islamic country has there been a more complete change in its landscape between the Middle Ages and today.

The few archaeological data which may be gleaned from sites which too often have reverted to desert are not in fact enough to provide any certain information on the various phases of population which the region passed through when the progressive decay of the irrigation network after the Abbāsids golden age led to the abandonment of villages and small towns, the exact sites and dimensions of which it is today sometimes difficult to determine (for an attempt at this, which applied extensive research to a limited area and which might well be extended to cover the whole of the ancient cultivated basin of the Tigris and the Euphrates, see R. Mc. C. Adams, Land Behind Baghdad, Chicago-London, 1965). Similarly it is at present impossible, in most cases, to provide an accurate history of 'Irākī Muslim towns, which were exceptionally important both in their population and in their economic activity, but which had grown up on an unstable soil, where usually there cannot now be found such remains of monuments as would enable us to reconstruct their topography at different periods (on the present state of such researches, too often based only on literary sources, see Baghdād, Al-Basra, Al-Kūfā, etc.).

There has nevertheless been some progress recently in the study of early Islamic architecture in 'Irāk, based on hitherto neglected evidence. This progress justifies our referring, in order to complete it in some points, to the table in the article Architecture showing its development during the first centuries of Islam, a period when its development was one with that of the whole of Islamic art.

The most positive if not the most spectacular contribution has probably been in the field of utilitarian objects, such as little attraction to the art historian, but providing material for the historian of civilization. Recent investigations on the systems of canal building and the division of irrigation-water which permitted the exploitation of the land during the Umayyad and Abbāsids periods, have produced a new documentation on this subject, based on aerial photography as well as on stratigraphical soundings and sections. At the same time there was revealed the existence of a type of great mosque on the one hand and a type of royal residence on the other, dating from the very early Islamic occupation of the country and differing from the Syrian specimens of the same period, which until then had been regarded as the only examples of the art of the period. The primitive mosque discovered at Uskāf Bānī Dīnunayd, on the west bank of the Nahrawān canal, and also the mosque at Wāsīt excavated on the site of the capital built in a single operation between 83/973 and 86/976 by the famous governor of 'Irāk for 'Abd al-Malik, al-Hadījjādī [q.v.], now provide plans more reliable than those based on debateable interpretations of the famous great mosques of al-Data and al-Kūfā. In addition, the interesting palaces which have been identified in these same localities of Wāsīt and Uskāf Bānī Dīnunayd and also in the neighbourhood of the great mosque at al-Kūfā, although excavations are so far incomplete and the results not fully published, provide as many examples of those dār al-imāra or bāšr al-imāra which were built at that time within the new Islamic cities. These palaces were already distinct, in the arrangement of their interior appartments or bāšr (similar to those found later in the Abbāsids houses and palaces), from the models current for the bāšrs in Syrian territory. The conclusions which may be drawn from these facts have so far been merely hinted at, but they should lead to a greater recognition of the part played in the development of early Islamic civilization by this Mesopotamian province, in which the Abbāsids revolution merely consolidated an economic and intellectual supremacy which had for long been acknowledged.

It is sufficient here to re-state only the main features of the Abbāsids architectural flowering in 'Irāk. The classic details on the subject, mainly derived from the study of the exceptional site provided by the ruined capital of the caliphs, Sāmarrā [q.v.], are to be found in every analysis of traditional Islamic art (see Architecture, Fann), so far as regards both the structure of the main buildings and also the various styles of decorative facing in painted or moulded stucco drawing on a repertoire of floral arabesques, interlaced geometrical patterns and even of representations of figures; these were to continue to appear throughout the later changes of early imperial art. Useful indications on various particular points may result from the research and restoration in progress at Uḫḫayādī [q.v.] an isolated castle of uncertain date which today stands in the desert steppe to the west of al-Kūfā, or from the continuation of investigations which up to now have been limited to a few selected new sections within the enormous area of Sāmarrā. They will not however greatly alter the present view of the width of the conception and the amazing richness characteristic of the religious and civil architecture of the period, which also saw the high points of such industrial crafts as glass-making and ceramics (the latter competing with Chinese porcelain, then imported in great quantity for the use of the caliphs), or carving on valuable woods, of which a few rare specimens have survived. Pottery continued to be usually made to an original Abbāsids school of Mesopotamia which flourished in the 3rd/9th and 4th/10th centuries before the craftsmen emigrated, probably to Fatimid Egypt, and which owed its fame mainly to its productions in cream porcelain with a painted decoration in cobalt blue or lustre.

Separate reference cannot be made here to the art of Dūwayhid and Saldāiates 'Irāk, the architectural features of which have completely disappeared and the productions of whose craftsmen are not sufficiently distant from those found at that period in the Iranian provinces, as a result of the revival of various earlier local traditions. The following period however was marked by a new advance in Islamic art in 'Irāk; this was, it is true, in a "provincial" form and had little influence outside the country, but it possessed a vitality comparable with that of the neighboring countries. It is from this post-Saldāiates period, covering the 6th/12th and 7th/13th centuries, that date the majority of the monuments which today form the architectural heritage of towns such as Baghdād and al-Mawsīl. In Bagdad, they are the results of the efforts made by the Caliphs al-Nāṣir [q.v.] and al-Mustanṣir [q.v.] to regain a temporal power, admittedly limited, but based on their territorial indepen-
dence and on a partial recovery of the former prestige of the caliphs. In the region of al-Mawsil, they are proof of the existence, at the small court of Zangi and his successors the Atabegs [q.v.] including the famous Lu'tu' [q.v.], of an artistic centre which was certainly neither negligible nor without an original vigour, in spite of the variety of influences which had produced it.

We shall refer here to the main features of this period of architectural development in Baghdad as shown by a rapid survey of the most important remains: fortifications (e.g., monumental gates such as al-Bāb al-Wastānī and Bāb al-Talism, of which the latter disappeared at the beginning of this century); fragments of civil buildings such as the Ḥarba bridge, the ruined remains of the former palace of the caliphs (incorporated in what later became the Ottoman citadel); or religious buildings in various stages of ruin, like the Mustansiryya madrasa, the mosque of the Sūk al-Ġhaţal (of which only the minaret has survived), or the mausoleum of al-Zubayda; we may also note such remains, outside the boundaries of Baghdad proper, as the sanctuary of Bāb al-Ḡaybā at Sāmarrā or the tomb of al-Ḥasan al-Ṭaṣri at al-Ṭāṣara. All these buildings display an extreme technical perfection in the use of baked bricks, according to the tradition already in use during the Ṣalṭjukid period, but in addition a new taste for the picturesque and a sumptuous treatment (of exteriors only), manifesting itself in the replacement of free forms by complicated compositions, either structural (honeycomb corbals used even to support domes of characteristic profile) or decorative (reduced motifs of arabesques and interlaced polygons moulded in baked clay and indecipherable now that they are seen out of scale).

This homogeneous architecture of Baghdad may be contrasted with the inequality to be found among the monuments of Upper Mesopotamia of the same period, such as the important but insufficiently studied group existing at al-Mawsil (ruins of the palace of Lu'tu' or Kara Saray on the banks of the Tigris, many small sanctuaries or tombs of saints, and a great mosque with one solitary and imposing cyp- drical minaret of brick) or the archaeological remains still at al-Rakka, outside the boundaries of present-day Iraq), but at least for the non-glazed pottery of this date (the immediate result of this disaster should, perhaps, not be exaggerated), a fate which was inevitable in a province which was now subordinate and no longer a conquering power. It is true that this more restricted life was still accompanied by activity in architecture and crafts. Throughout several centuries various noteworthy buildings were erected, in particular around the great Shi'ī shrines to which embellishments were continually added, in Baghdad as in Sāmarrā, Nadjar or Kārbala, and whose domes, covered with square porcelain tiles in glowing colours, may still be seen. But these various monuments which stylistically either from the art of Ilkhanid Persia (e.g., the Mirdānīyya madrasa or the Khan Mirdān of Baghdad) or Ṣafawid Persia or from Ottoman art (represented mainly by mosques, and by utilitarian buildings such as markets or hammams) have not been the object of studies or investigations enabling them to be assigned to their correct places in the line of a tradition which is both local and yet marked by many foreign influences, and thus conforms to one of the constant features of the history of Trāk.

**Bibliography:** All the general works on Islamic architecture and minor arts contain material on the various artistic developments of Trāk's from the time of the Islamic conquest but which did not survive the slow economic and political decline setting in after this date (the immediate result of this disaster should, perhaps, not be exaggerated), and thus in a province which was now subordinate and no longer a conquering power.

The capture of Baghdad by the Mongols in 1258 appears to have marked the end of the artistic supremacy which had been Trāk's from the time of the Islamic conquest but which did not survive the slow economic and political decline setting in after this date (the immediate result of this disaster should, perhaps, not be exaggerated), and thus con- trasts to one of the constant features of the history of Trāk.
'Iraki, Fakhr al-Din Ibrahim 'Iraki Hamadan, eminent Iranian poet and mystic. In spite of its lack of precision, the best source of information on this author, who gives very few autobiographical details in his own works, is an anonymous *muḥaddidima* (introduction), composed in the manner and style of 'Iraki's own period (the end of the 7th/13th century) or the beginning of the following period. *Djamī* (Nafāsāt al-uns) and Mir Ḭamān (Ibrāḥīm al-siyyār) have quoted their information on 'Iraki from this introduction. According to Ḥamīd Allī Mustawfī (Nafāsāt al-uns), Kazwīnī, who wrote his *Ṭārīkh-i guzīda* forty years after the death of 'Iraki (and there is no reason to suspect his witness), 'Iraki's father's name was Buzurgmīr b. 'Abd al-Ḥaẓūfī Dīwālīkhī Hamadānī, and his son was born in the village of Kūmjān, near Hamadān. In his introduction (dībājche), he reproduces the errors of Dowlātshāh, and states that there is no foundation for what the latter says about 'Iraki's attachment to a young boy and the punishment imposed by Shahrāzūrī, who is said to have sent him to Bahā al-Dīn Zakariyāyī in India, to mend his ways. In short, the later writers add many debatable details to 'Iraki's biography.

According to the *muḥaddidima*, he was a precocious youth. One day while he was uttering a commentary on the *Kur*7 in some *balandars* (wandering dervishes) came to listen to him; they persuaded him (in 627/1230) to give up teaching and to follow them to 'Iraki's 'Ādamī, and then to India; at Mūltān, they visited the scholar Bahā al-Dīn Zakariyā (q.v.), who, recognizing 'Iraki's ability, wished him to remain with him, but when 'Iraki realized this, he departed with three companions. On his return to Shīmānāt, where they were separated by a storm; after wandering for some time, 'Iraki and one of the *balandars* met again by chance in Delhi; then 'Iraki, having decided to join Bahā al-Dīn Zakariyāyī, returned alone to Mūltān and sat at the feet of the master, later becoming his son-in-law; soon afterwards, he had a son named Kabīr al-Dīn, and he remained for twenty-five years with his master, about whom he wrote several *diwāns* and *matnawāt*. On his return to Delhi, but, driven out by the jealousy of some of his colleagues, he departed for the Hijāz, whither some of them followed him. He was welcomed by the sultan of 'Umnān, who attempted in vain to detain him, and the travellers completed the Pilgrimage. Next, 'Iraki travelled in Asia Minor and put himself under the authority of Ṣadr al-Dīn of Kūnyā; after hearing his commentaries on the *Faṣūṣ* and the *Futuḥāt al-Makbiyā* of Ibn al-ʿArabī (q.v.), he gained the master's confidence. It was at this time that he wrote his *Lamāsī*; he submitted them to Ṣadr al-Dīn, who praised them highly (they must therefore have been completed before 673/1274, when the latter died). Many pupils attached themselves to 'Iraki; he gained the favour of the amīr Muʿin al-Dīn Sulaymān Parvānā (q.v.), who offered him a monastry at Dūkt (Tokāt). A series of anecdotes in the *muḥaddidima* concern 'Iraki's stay in this town, and in particular with his meeting with the master (Shams al-Dīn Dīwāynī [q.v.] (Mub. 14-6), who is said to have come there in the company of a brother of the Hīghānī Abākāt, in order to check on the actions of Muʿin al-Dīn (before 676/1277), when the latter was probably secretly in contact with Baybars, the sultan of Egypt. One day when he was uttering his last words (in the same year). Soon after this meeting, it seems that the enemies of Muʿin al-Dīn and of his protégé 'Iraki turned Shams al-Dīn against them, though the latter, recognizing 'Iraki's worth, assisted his hasty departure to Sinōp. Thence 'Iraki went to Egypt—which led to his being executed, at least in part, under the influence of the works of Ibn al-ʿArabī; however, at the beginning of the book (*Kulliyāt*, 328, l. 1) we read; "Now therefore these few words, setting out the degrees of love, have been dictated according to the mood of the moment, in the manner of the Šāmānī [of al-Ghazzīlī (q.v. Ahmad)], so that for whoever loves God they may be the mirror showing him the One Whom he loves, although the rank of love is too sublime for one to be able to approach by means of reason, understanding and eloquence, the royal Court of His Majesty . . . ." E. G. Browne (iii, 132-3) has translated the introduction giving the content of the work (cf. text: *Kulliyāt*, 327-9); he summarizes as follows (p. 124) his judgement on 'Iraki's character (of which S. Nafīsī gives some typical illustrations in his introduction to the *Kulliyāt*, p. xviii ff.): "He is the typical qalandar, heedless of his reputation, and seeing in every beautiful face or object a reflection, as in a mirror, of the Eternal Beauty" (cf. the end of the dialogue of Socrates and Dioumis: Plato, Symposium, Greek text, 209-12).

**Bibliography:** *Kulliyāt*, complete works, ed. Saʿd al-Nafīsī, with important introduction, Tehran 1355/1957; Dīwān, ed H. Ritter (Bibl. Islamica, XVI)—Translations: *The Song of the Lovers*.
A tribe called Iram is mentioned several times in ancient poems (over a dozen references are given by J. Horovitz, *Koranische Untersuchungen*, Berlin 1926, 89 f.). It is mostly coupled with ād, but sometimes also with Thamūd, Ḥimyar, etc., and is said to have been destroyed by a man called Ḫudar al-Ḥimmar (Uljaymir). In this meaning Iram is an ancient Arabian tribe. In his *Muṣallaha*, 68, al-Ḥārith b. Ḥillīzā uses the adjective *iraml* in the sense of 'a man of ancient race' (cf. al-Tibrīzī, *ad loc.*). When Muslim scholars came to link up traditional Arab genealogies with those of the Bible, they identified Iram with Aram the son of Shem (*Genesis*, x, 22 f.; 1 *Chronicles*, i, 17), and made various ancient peoples of Arabia descendants of Iram. Thus ād [q.v.] is the son of āws b. Iram (cf. Biblical Us) and Ṣanūd [q.v.] the son of Ṣābir b. Iram. The Ṣamālik [q.v.] or Amālikīs are the descendants of Ṣamālik (or Ṣalmālik) b. Lāwudh (cf. Lūd) b. Iram; and another son of Lāwudh, Uwaym, is said to have gone to Persia and is sometimes identified with Gāyomart (Ibn Ḥīṣām, 5; al-Masʿūdi, *Murūdī*, i, 77 f.; etc.).

(a) As a geographical term Iram is properly a pile of stones erected as a way-mark. Yākūt (al-Masʿūdi, *Murūdī*, i, 212-6) mentions a mountain and another place of this name in Arabia (cf. Th. Nöldeke, *Fünf Monllaaqai*, i, 78). When Muslim scholars regard Iram Dḥāt al-ʿimād as a town, they mostly identify it with Damascus, presumably because this part of Syria is called arām in Hebrew. Some, however, make it Alexandria or a place in the Yemen (Yākūt, *loc. cit.*).

(3) The word occurs once in the Kūr ṣān (LXXXIX, 6): a lam lara kaya faʿala rābu-ka biʿādī irama dḥāt l-ʿimād ... The passage has caused great difficulty to the commentators, both in respect of the meaning of the words and of their grammatical construction. Some read ʿādī, making ʿārama a dependent genitive, and then took Iram to be the capital of ād. The most likely view is that Iram designates a tribe and is in apposition with ʿādī, and that ʿimād means tent-pole or tallness. Iram may then be a subdivision of ād, as al-Ṭabarī suggests (*ad loc.*). Later Muslim scholars preferred to take Iram as a town, and Ḍhāt l-ʿimād could then mean 'with the pillars'; this was said to be the marble columns of Damascus. It is fascinating to observe the increasing elaboration of the accounts of this Iram Dḥāt al-ʿimād. One common story tells how it was built near Aden by Ṣhaddād b. ād as an imitation of Paradise, and how he was then, as a punishment for his pride, destroyed by a tornado and the city buried in sand (Yākūt, *loc. cit.*). In another story Alexander the Great finds at Alexandria the ruins of a great building with marble columns and an inscription telling how it was built as a replica of the first Iram Dḥāt al-ʿimād. Yet another story tells how in the reign of Muʿawiyah a bedouin found wonderful ruins in the sand.
